5804. And you have upon the southern side of the river even, a greater accumulation of these sands, and when you come within the Spurn you have a succession of large sand banks; the Foul Holme, the Middle, the Upper Middle, the Sunk Road, and the Holme Sands, and the Skitter, and all the various sands up to Hull?—Yes.

5805. And in some places, I believe, the channel for large ships is very narrow?—Yes, a couple of hundred yards.

5806. A large vessel getting out of that channel would get upon the sand?—Yes, any material deviation from mid-channel must inevitably bring her to the sand.

5807. You say that the sands vary very much indeed?—Yes.

5808. They shift, and the depth of water varies upon them?—That is not of so much importance as the shifting of the position of the sands.

5809. In point of fact, is not a constant investigation of the river necessary to ascertain the exact position of the sand at any given time?—Yes.

5810. Of course the approaches to the Humber are very much exposed to the easterly and north-easterly gales?—They are the most prevalent and fatal winds, the north-east and south-east.

5811. And are ships during a severe winter wrecked both on the northern and southern entrance of the Humber?—We never get through a winter without some.

5812. In your opinion, if there were not an efficient pilotage service with boats stationed outside the Humber, ready to board ships and take them into the Humber, would those accidents be greatly increased?—Yes; it is, in my opinion, a very deadly and fatal place to attempt without any official staff of pilots. I speak as to strangers.

5813. We have got it in evidence, that as far as the shipowners of Hull are concerned, they are virtually exempted from compulsory pilotage by the fact of being able to get licenses for their masters and mates?—All who have applied, and proved themselves eligible and competent, have obtained licenses from the Trinity House.

5814. Is it not the fact, that if an owner has a master or a mate competent, who is willing to take a branch, a letter is addressed to the Trinity House by the owner, asking the Trinity House to be good enough to examine the mate or captain, as the case may be, and should the Trinity House find him competent he gets his license at once to serve on board that particular vessel; and in the event of his leaving that vessel his branch is good for another vessel belonging to the same owner?—On the payment of a certain fee it is renewed to any other vessel belonging to the same owners.

5815. Do both English and foreign owners avail themselves of that to a considerable extent?—Yes.

5816. But with regard to strangers who have not a licensed man on board, the pilotage is compulsory; the masters either take one or pay a fine?—Yes.

5817. During the long period you have commanded this service, have you found many cases of those pilot boats outside skulking?—I have had complaints during the period of 17 years, of course, but I think the men's own interest prompts them to keep as much out to sea as possible.

5818. Have you good system of log, so as to be able to fix upon the position of the cutter at any time?—A perusal of the log book will show the position of the cutter at any hour, or several times during the day, and every record is made when a pilot is put on board a ship of what position the cutter was in at the time.

5819. From time to time you have, of course, complaints made about the pilots?—Yes; with such a large number of men it must be so.

5820. Are the complaints always examined into?—Yes; very probably before the vessel leaves

leaves the port, and they are very promptly and severely dealt with if the case is a bad one.

5821. The pilots are severely dealt with if necessary?—Yes; I have reported men to the Commissioners, and they have fined them penalties of from 2 *l.* to 20 *l.*

5822. A penalty of 20 *l.* would be a very severe penalty, would it not?—It would be nearly one-seventh of a pilot's average earnings, which are 150 *l.* a year.

5823. The position of a pilot is fully equal to that of the master of a moderate-sized sailing vessel, is it not?—As regards pecuniary position, I think it is quite equal to that of a master; respectable and well-conducted men will take an equal status with the masters of coasting vessels.

5824. How large are your cutters?—About 60 tons.

5825. With one exception, are they not owned by private owners?—Yes, with one exception; the Commissioners have an interest in one, as trustees for others.

5826. Do they derive any personal advantage from it?—Not a farthing.

5827. I presume the Pilotage Board derives this advantage, that the ship is treated merely as stock in trade?—They have no profit in any shape or way; the share goes to the funds of the office.

5828. But with the boats that are under private ownership, there is a benefit to the ship-owners?—Yes; the pilot cutter gets one share and five-eighths.

5829. What is the amount; is it excessive?—No; the cutter only gets 6 or 7 per cent. after the insurance is paid; I do not think that is a very large remuneration.

5830. Do you agree with Mr. Bannister that if the principle of the Bill were to be carried out, as respects the Humber, it would disorganise the system?—I think the good men who are best worth keeping would not have sufficient remuneration to induce them to remain in it, and they would seek employment elsewhere.

5831. Do you know that the commissioners have power to reduce the number of men, so as to keep up the earnings?—Yes.

5832. Do you think it is necessary to keep three cutters at sea?—Yes.

5833. If the number of men was materially reduced, you could not do that, could you?—No; it might arise that there was a deficiency on the sea station. I presume that you are aware that the easterly winds bring us a great influx of shipping in a very short period from the Baltic, Norway, and Sweden.

5834. The continuance of westerly winds throws the pilots out of employment, does it not?—Yes, to a certain extent.

5835. But a sudden change to the east in a couple of days brings very large fleets of vessels to the Humber?—Yes; more than the pilots can attend to occasionally.

5836. You send down the pilots by tugs as fast as the vessels come up, and you have a boat at Grimsby to supply the deficiency; you make this arrangement if you are short of men; you form the vessels in line, and the pilots lead and the other vessels follow?—Yes; the law considers that to be sufficient service; it is held to be a legal pilotage.

5837. So that without having a pilot on board, you are justified in charging pilotage if another vessel is following a ship with a pilot?—Yes.

5838. So that without loss of time the vessels are brought up to Hull practically in safety, whether their number is large or small?—Yes.

5839. I believe you have had as many as 60 or 70 vessels up in one tide?—No, not in one tide, but in one 24 hours.

5840. Are you no longer connected with the commission?—No, except as a commissioner.

5841. You have no official connection with the commission, and therefore you are speaking now more as a gentleman interested in the general trade of the port, having an important official position with the Dock Company?—Yes.

5842. Mr. *Price.*] Do you consider the navigation of the Humber from Spurn Point to Hull a very difficult one?—Yes.

5843. What is the distance between those two points?—Twenty-one miles.

5844. It seems to be remarkably well buoyed according to this map?—It is; but the buoys are not visible at night.

5845. It also seems to be very well lighted?—It is.

5846. I see from Spurn Point there seems to be a perfectly straight course up to Killingholme?—Yes.

5847. I suppose that the light from Spurn Point is visible at night in ordinary weather?—It depends upon the state of the atmosphere; you are pre-supposing a fair wind.

5848. A fair wind would not affect the light being visible, but it would affect the navigation; is not that so?—Yes.

5849. I understand that you have a peculiar system of pilotage there, and you expressed a doubt whether, if the system were interfered with, you might not lose the best men; but why do you suppose you would lose your best men under the operation of this Bill; why should they leave you?—If the voluntary system was adopted, it would reduce their income so much that it would not be worth their while to continue there.

5850. Is not that rather a foregone conclusion; admitting, of course, that if their income was reduced the men would not remain in the service, why do you think their income would be reduced?—There would be less employment in the summer time and in fine weather.

5851. Therefore, if there were less employment, of course there would be fewer pilots; but there is no reason to suppose that the number of pilots would not adapt itself to the trade; it would find its level, like most other things, would not it?—Yes, after a lapse of years.

5852, You anticipate the temporay intermediate difficulty of having a rather larger number of pilots than you would have employment for?—Yes.

5853. That might be met, might it not, by compensation?— If the compensation was sufficiently liberal and adequate.

5854. Do you know what the system of pilotage at Grimsby is?—It is under the same governing body.

5855. Have you ever had any experience of any place where the pilotage was non-compulsory?—I have not been in command of a ship for several years, but in Liverpool, London, and the different ports that I have been in, we have always had compulsory pilotage.

5856. Therefore you have not seen what the effect of the voluntary system is?—No.

5857. Do you think that, supposing that pilotage was non-compulsory, many ships would attempt to go to Hull without taking a pilot?—In

Mr. *D. Brown.*

11 May 1870.

In fine weather and in fair winds they would; as an honourable Member suggested it is a very straight course.

5858. What they would do would be this: they would go without a pilot when they could do so safely, and they would take a pilot in bad weather, if they could find one?—Yes.

5859. They would take a pilot when they wanted one; but they would not take a pilot when they did not want him?—That is my opinion.

5860. Supposing the consequence of that mode of procedure were to be that the pilots on the station got less work to do, or that there were fewer pilots, I suppose the price of their services would naturally be enhanced?—No; the price of their services is limited by Act of Parliament.

5861. It is limited now; but, of course, if the price of their services was not satisfactory to them, and they left the service, you would be obliged to raise the scale of prices for their services to induce them to remain?—I imagine there would be an outcry on the part of shipowners.

5862. The shipowners could not make an outcry so long as they could take pilots when they wanted them; people make a great outcry when they take a thing which they do not want, rather than when they have to pay a large price for a thing they do want?—Few people part with money willingly; one difficulty would be, that in fine weather and in a straight course they would get beyond the cutter when they are on the station, and when they came to an intricate channel they could not pick up a pilot.

5863. Supposing that the pilotage became non-compulsory, your opinion seems to be that the men would not be bound to maintain their stations upon the chance of finding ships?—No; I think it would be altogether a speculation upon their part, and a very hazardous one in the winter time, as to whether they would be wanted or not.

5864. We heard a good deal in the case of Liverpool about the hardship and danger of pilots maintaining their stations, and it was held out as a sort of advantage of the compulsory system of pilotage, that the pilots were under a sort of moral obligation to keep the sea under all circumstances, when, if they followed their inclinations, they would not do so under the system of voluntary pilotage; but that does not apply to the case of the Humber, because it does not appear that any pilot stations there are in very rough water, or where the pilots are exposing their lives?—I am afraid that you do not quite understand where the limits are; you cannot imagine a more exposed station than this; this is exposed to the whole of the German Ocean and to the north (*pointing to the chart*).

5865. Is it a position of discomfort or danger?—I know Liverpool; I have been in there, and I should say that the entrance of the Humber has as strong and as dangerous a sea as the Mersey.

5866. Do you know the Bristol Channel at all?—No.

5867. Should you think, looking at it upon the map, that the position is much more disagreeable or dangerous than the mouth of the Channel below Lundy Island?—I only speak from hearsay upon this matter; but I should imagine that the rapidity of the tides in the Bristol Channel increases the danger very materially, but they have not that extent of water and that heavy sea that we have in the entrance of the Humber, with the easterly and south-easterly gales.

5868. Might they not with westerly gales?—With westerly gales it is perfectly smooth water.

5869. It is not a question at all as to whether it is desirable to keep up a staff of pilots; the question is whether you would not lose the staff of pilots, supposing the system was now compulsory, or, in other words, whether the compulsory system is necessary in order to enable you to maintain the pilots?—I think a man who is now earning 150 *l.* annually under the compulsory system, might perhaps get 70 *l* or 80 *l.* under the voluntary system, and that man can make more money elsewhere with less risk.

5870. May there not be another alternative. Supposing the number of ships requiring pilots diminishes, may not the number of pilots diminish, so that each pilot may get the same as he does now?—I replied to Mr. Norwood to the effect that the easterly wind brings us such a number of ships in a single tide that we could not keep the station sufficiently well supplied with pilots, under all circumstances, to meet the demand.

5871. I will ask you a question which I have asked most of the other witnesses before this Committee. You say you do not know anything personally of the British Channel, but if you are told that the pilotage of the British Channel is non-compulsory, or has been made non-compulsory, and that the pilots have still maintained their stations in equal numbers and with equal efficiency, would that at all modify the view which you have expressed, that the non-compulsory system would destroy your staff of pilots in the Humber?—I am not aware whether the coasting vessels are compelled to take pilots.

5872. They are not?—Neither are they in the Humber.

5873. My question, of course, has reference only to one point, that is the great point in the contest, whether or not the substitution of the voluntary for the compulsory system would have the effect of destroying the staff of pilots?—My opinion is very clear upon the point. I believe it would very seriously impair its efficiency.

5874. My second question is, if you are told that in the Bristol Channel, where the experiment has been tried, and where the voluntary system has been exchanged for the old compulsory system, the staff of pilots has not fallen off, but that they maintain their stations in equal numbers and equal efficiency, would that or not at all modify the opinion which you have expressed as to the experiment if tried in the Humber?—I am bound to believe it if you say it is the case; otherwise I should question the fact, and I do not know how long it has been tried.

5875. From 1866. I ask this question for this reason, that nearly all the witnesses who have expressed the same opinion which you have done (and the majority do express the same opinion), have expressed it without any personal experience of the system which they condemn. That is the reason why I am obliged to put it in that hypothetical form, and ask you if you were told that the experiment had been tried successfully in other places, would that modify your opinion that it would not be successful here?—It may be as you say, but I am much surprised at the result if it is so.

Mr. *D. Brown.*

11 May 1870.

5876. Mr. *Malcolm.*] Can you tell me the usual size of vessels trading to Hull?—They vary from 1,800 and 2,000 tons to 60 or 80 tons; the small Danish vessels are from 60 or 80 tons.

5877. Are they generally steam or sailing vessels?—The majority of the large ships are steam ships; we have lately had a large class of sailing vessels from Peruvian ports with guano.

5878. Is it not the case that when you most want a pilot is when it is most difficult for a pilot to keep the sea; you want them mostly in an easterly or south-easterly gale, which is bringing the vessels on a dead lee shore?—It is most difficult to keep the sea with the wind upon the land.

5879. The pilots, in the winter, are called upon to risk their lives to the greatest degree, are they not?—Yes, and that has been done fatally; we have lost men in the last two or three years.

5880. Can you bring up in Hawk Roads in a south-easterly wind?—Yes.

5881. Safely?—Yes; the Spurn Point affords shelter.

5882. Mr. *Cave.*] When you talked of the upper part of the river at the beginning of your evidence, did you mean the river between Hull and Goole?—No, below Hull; eastward of Hull.

Mr. William Henry Brewis, called in; and Examined.

Mr. *Brewis.*

5883. Mr. *Norwood.*] I believe you have been a Humber pilot for 30 years?—Yes.

5884. For the last seven years you have been master of one of the cutters, have you not?—Yes.

5885. You are one of the most experienced men, as far as your time of servitude goes?—Yes.

5886. Have you been in the room and heard the evidence of Mr. Bannister and Mr. Dale Brown?—Yes; I have.

5887. Do you concur with their evidence?—Yes.

5888. Do you agree with them that the danger of entering the Humber with certain winds is very great?—Yes; under certain circumstances it is very dangerous.

5889. Vessels are lost upon the Stoney Binks on the northern coast, the Yorkshire coast, and very often vessels, particulary light colliers, are lost upon those sands below Grimsby?—I have seen seven or eight vessels go in the same gale for want of sufficient knowledge of the tide.

5890. Just now an honourable Member asked a question about the sad fact of pilots losing their lives; has that been the case lately?—Not very lately; about four or five within my experience have been lost by accident.

5891. Has not there been a case within the last year or two?—It might be about three years ago.

5892. What were the circumstances of that case?—In leaving the vessel the sea upset the boat, and a man was drowned.

5893. In keeping out at sea cruising off your station, off Dimlington and the north in the winter time with heavy weather and a north-easterly gale, there you are exposed to danger?—Very great danger; I have known a cutter stay out until the men have refused to go in a boat at all to be put on board a ship.

5894. The sea has been so high that they have refused to leave their cutter to get into a small boat to board a ship?—Yes.

5895. That would be an extreme case?—Yes, that would be an extreme case.

5896. Is it the case that in very bad weather there is considerable risk in the performance of your duty?—Yes.

5897. When a vessel gets inside the Spurn, in a gale, it is not very clear sailing, particularly at night?—It is very dangerous on account of the strength of the tide and the narrow channel.

5898. And the shifting of the sands?—Yes, in gales of wind; we usually cruise under the bank in north-easterly gales, and when we see a vessel wanting a pilot we go to meet her and fore-sail her out of difficulty.

5899. You mean that you run down by the outer banks of these sands?—Yes, to the north of the Spurn float.

5900. There is one succession of sands all the way up from Spurn to Hull?—Yes, you are never clear of them.

5901. At low-water spring tides these sands are uncovered, are they not?—They are very nearly dry.

5902. And sometimes you have very little water indeed upon them?—Yes, there is a very heavy sea there, on the Bull Sands, so that you can scarcely come over them at high water; the banks are not approachable at all at any time of the tide outside the river.

5903. The sea breaks over them?—The sea breaks over them continually.

5904. What are the principal sands in the river between the Spurn and Hull?—The principal sands are the Bull Sand, the Upper and Lower Middle, the Burcom Sands, the Holme Sands, and the Skitter Sands.

5905. And Stallingborough Flats?—Yes.

5906. And the Holme Middle?—And the Holme Middle.

5907. In some parts you have only about 200 yards of deep water channel, have you?—That is all, in which a large vessel can proceed.

5908. That is not a great deal of room for a sailing vessel?—No, it is not.

5909. Are you aware that a letter was forwarded some time ago, signed by a very large proportion of the Hull pilots, to the Board of Trade?—Yes; I am aware of it, though I was never shown it, and I believe those who sent it were very sorry afterwards; they anticipated that they would be exempt from control, and would have considerably less expense in the working of the service; but I believe they are thoroughly mistaken upon that point, and I think many of them are very sorry for having sent the letter.

5910. Have you read the Bill yourself?—Yes.

5911. Do you see there that it is proposed to retain the control?—Yes.

5912. There would be the same Commissioners and the same licenses as at the present time?—Yes.

5913. The pilots who signed that letter were under a misapprehension, were they not?—Yes.

5914. They had an impression that the service would be entirely thrown open, and that they might charge what they pleased, and go out when they chose?—Yes.

5915. Or not go out at all?—Yes.

Mr. *Brewis.*

11 May 1870.

5916. And you state distinctly to the Committee, that from your information, the pilots who signed that letter, signed it under a misapprehension, and that they are not of the same opinion now as they were then?—None of them are of the same opinion.

5917. The principle of the Bill before the Committee is chiefly this, as affecting the Humber, that now all foreign-going vessels above six feet, which have not got a licensed master or mate, would not be compelled to take a pilot; it would be optional; are you aware of that?—Yes.

5918. Do you think that they would avail themselves of that exemption?—I think in fine weather the vessels would proceed into the Humber without pilots; it often occurs that the tide has been so strong against them that they are most of the day in getting any distance up the river, and it is quite possible that they may require pilots when they cannot get them.

5919. You say this, that in fine weather when the buoys could be seen, it would be possible for a man with sharp wits, having been once or twice in the Humber, to find his way up to Hull?—Yes.

5920. Do you think that in such fine weather a man might be induced to save 30 *s.*, or whatever the pilotage may be, and not employ a pilot?—Yes, I think it is possible; but I think he would run a very great risk.

5921. We have been talking of what is likely to occur; your opinion is that there would be men who would avail themselves of the power of not taking a pilot, and who would find their way up to Hull without one?—Yes.

5922. In bad weather they would be only too anxious to get one?—Yes.

5923. You, as a pilot, complain of that; you think that it is scarcely fair for the men to be expected to keep the sea in all weathers, and to be out of employment a portion of the year, and only have employment when they run a great risk of their lives?—Yes.

5924. And you think they would not be sufficiently remunerated under such a system?—Not under our present charges.

5925. And you are at your maximum now, are you not?—Yes.

5926. Do you consider the fact of your having constant employment, summer and winter, indemnifies you to a certain extent for that great risk of life which you have experienced in keeping the sea in bad weather?—Yes.

5927. Do your masters get more than the ordinary pilots?—We have 10 *l.* more.

5928. The average earnings are something like 148 *l.* a year?—Yes.

5929. That is not more than the master of a sailing brig would get, is it?—No; and then we have our provisions to find out of that.

5930. Have you to pay for your own provisions?—Yes; that is the gross earnings that we receive, and out of that we find our victuals.

5931. And of course your clothing?—Yes.

5932. The vessels get their share of the earnings, and of course the outfit of the vessels is defrayed by the owners; you have nothing to do with the cost of the cutter?—No; she takes her share along with the rest, and pays for wear and tear.

5933. Is your establishment now sufficient to do the work properly?—Yes.

5934. Have you any fault to find with your management?—Not any; the Commissioners are very strict with us.

5935. And they consider fairly your position?—They consider fairly our position, in every case.

5936. And when the men conduct themselves improperly, they are pulled up, are they not?—Yes, and they are, generally, severely punished; and I think it is this severity which has caused them to wish to alter the establishment.

5937. And you have a very respectable body of men among you, I believe?—Yes.

5938. You soon get rid of incompetent or unsober men by the system of complaint on the part of the merchants and the action of the Commissioners?—Yes.

5939. And you think, as an experienced pilot and the master of a boat, that the system cannot be improved?—I think not.

5940. Can you make any suggestion for improvement?—Not any.

5941. Mr. *Price.*] What was the purport of this letter to which you refer, as having been sent by the pilots to the Board of Trade?—I believe it was in favour of the abolition of compulsory pilotage altogether.

5942. Was it signed by a large number of pilots?—A great number of their names were attached to it, but I do not think they signed it themselves.

5943. Has that letter ever been recalled at all?—No; but the majority of the pilots have signed a requisition to the Commissioners to oppose the Bill; they are the very same men who signed the letter.

5944. Would not that letter seem to imply that the opinion of the pilots was not of much value?—It is not upon this question; I believe they sent it without consideration.

5945. Mr. *Norwood.*] I will read the letter. This is a copy of a letter, dated the 17th of March 1870, to the Secretary of the Board of Trade: "Sir,—We beg most respectfully to make a few suggestions to you on the subject of the Pilotage Bill, seeing that our livelihood is to some extent at stake. We Humber pilots are licensed by the Elder Brethren of the Trinity House, and after being licensed, are under the control of 72 commissioners, composed of shipowners, Trinity Board, town councillors, and others; there are many pilots who would welcome the abolition of the compulsory system if such abolition would also include the abolition of pilotage authorities, and we think that if the present Pilotage Bill is to pass, there should pass with it a corresponding remodelling of the whole constitution, as we think one authority would be quite sufficient, say, our Trinity Board alone, or (which would be sooner preferred) your own authority, namely, the Board of Trade; for besides making it better under the free system, it would make it more to our individual interest to carry on the work to the best advantage; our machinery also is much more expensive than is actually necessary; we have seven cutters employed in the service; three of them only have been under weigh at one time, the remaining four being laid up eight months out of 13 (reckoning four weeks to the month); attached to which four cutters are one captain and three boys each; our past experience proves to us that our Commissioners would be slow to make any reduction in the shape of cutters, &c., though we think each reduction

duction might safely be made. From the interest every pilot has in the service (more or less according to his length of servitude), we feel satisfied that under the new system our earnings would considerably diminish, and, such being the case, would also proportionately lessen the superannuation fund; we have, at the present time, seven men on this fund, varying from 14 *s.* to 1 *l.* per week; 20 widows and 13 orphan children are chiefly depending upon us and our exertions." You have heard me read that letter?—Yes.

5946. Do you believe those allegations are correct; there is one allegation here that "there are many pilots who would welcome the abolition of the compulsory system if such abolition would also include the abolition of pilotage authorities": what complaint have they against the pilotage authorities?—They are impatient under control, and they do not like any supervision; they want to do what they like.

5947. Do you agree with these pilots, that seven cutters are too many?—No; each vessel has its crew, and she goes along with them; when the crew are ashore she is ready to receive them when it is their duty to go to sea.

5948. Do you think that the service could not be efficiently performed under a different system?—I think the service could not be efficiently conducted.

5949. Do you think that it is an improper thing that each cutter should have a captain and three boys?—No.

5950. You do not agree with them there?—No.

5951. They say, "Our past experience proves to us that our Commissioners would be slow to make any reduction in the shape of cutters"; what do they mean by that, have you any idea?—No; I do not think they know themselves; they have never made a complaint to the commissioners upon that subject, that I know of. I believe the Commissioners would be glad to entertain anything that was for the benefit of the service or the shipping interest.

5952. Is that your real honest belief?—That is my real honest opinion; if it could be shown that it was a benefit, they would do it.

5953. They say, "From the interest every pilot has in the service (more or less according to his length of servitude), we feel satisfied that under the new system our earnings would considerably diminish, and, such being the case, would also proportionately lessen the superannuation fund;" do you consider that the management of the Hull pilotage is extravagant in any one point?—No.

5954. Can you lay your finger upon any extravagance?—No.

5955. Are you speaking your full mind?—There no extravagance attached to it at all, that I am aware of.

5956. You do not agree with them, that under the new system there could be economy exercised?—No, not with efficiency.

5957. Have the pilots signed any other document but that?—Yes, they have signed a requisition to the Commissioners to oppose the Bill.

5958. These very men?—Most of them, with the exception of four or five.

5959. Mr. *Price.*] You do not agree with the pilots who wrote this letter?—No.

5960. I suppose they expressed their own opinion at the time?—I would not give much for some of their opinions, because I believe it was signed in many instances without being seen. I believe it was signed by deputy.

5961. Then it is hardly worth while to put in the other, because it is signed under the same circumstances?—The other has genuine signatures.

5962. Are not these genuine signatures?—No, not in many instances.

5963. Do you dispute the authenticity of the signatures?—Yes, in many instances; that is from what I have heard the men say themselves.

5964. Have you any knowledge of your own that any man's name was put to it without his consent?—No, not without his consent; but he has had no knowledge of the contents; it was merely said that such-and-such a document was coming up.

5965. Are you certain that all those who signed the counter-memorial had a knowledge of the nature of the document they signed?—It has been after a thorough talking over of the matter that they have signed the other one.

5966. Do you know who drew up this letter?—I believe the originator of the matter was one of the pilots who had been a pilot of the Trinity yacht, and he had some conversation with Mr. Lefevre upon the matter. I think he was on board the Trinity yacht when he had the conversation; that is what I have heard.

5967. Do you that of your own knowledge?—It is from hearsay that I speak.

5968. Do you know who drew up the letter; one of the pilots did not write the letter?—No.

5269. Do you know who wrote it for them?—No.

5970. Do you know who wrote the letter that was sent in by way of a counter-memorial?—No.

5971. How many pilots have you altogether?—Sixty-eight.

5972. Out of this 68, 40 seem to have signed this letter?—Yes.

5973. Their first impression, then, seems to have been that the pilotage could be managed more economically, and equally efficiently, under a better system of organisation?—Yes; that was their first impression.

5974. But their second impression seems to be that by the provisions of this Bill they would get rid of the advantage of the compulsory system without getting rid of the bad management?—Without getting rid of the expenses and control which they seem to object to.

5975. I will say objectionable management then, if you desire it?—I cannot speak to the motives for sending that letter; I know, from conversations that I have had with many of them, that they are very sorry for having done so.

5976. Having had a conversation with them, and gathering from that conversation that they are sorry for what they have done, you must know why they are sorry?—Because they did not understand the matter; they could do nothing better.

5977. Was not what they had in view this, that they were willing to take voluntary pilotage, provided they could get rid of their masters?—Yes, and get compensation.

5978. When they found that the Bill gave them the voluntary system, but did not change the management, then they thought they had better remain as they were; is that so?—Yes.

5979. It seems to come to this, that 40 out of the 68 Hull pilots think the pilotage might be conducted

Mr. *Brewis.*

11 May 1870.

conducted more advantageously for them, and equally efficiently for the public, under the voluntary system, but under a better management; is that so?—They thought so at that moment, but they do not think so now.

5980. I thought you told us just now, that the reason why they changed their opinion was that they found the Bill does not give them what they imagined the Bill would give them, a new management, or freedom under the existing management?—My first impression is, that they signed it without a thought at all, merely from being asked by some of their fellow-pilots to do so, without a knowledge of its contents.

5981. Still, as the letter stands, it seems to imply (whether they have changed their opinion or not since), that at the time they thought that voluntary system of pilotage would have been sufficiently efficient, and that they would be satisfied to take it if they could change the system of management; you say that there are 68 pilots at Hull; are there pilots at Grimsby as well as at Hull?—Yes, Grimsby, New Holland, and Hull.

5982. Not above Hull?—No.

5983. Is there any pilotage above Hull?—To Goole and Gainsborough, but they are different pilots.

5984. Are steam-tugs used at all for the Humber?—Yes, they are for very large ships; and, I believe, by employing a pilot in many instances money is actually saved to the shipowner. An instance came under my notice three months ago, where a pilot being on board a ship saved the owner 30 *l.* in towage, and under circumstances of difficulty in a gale of wind; we put the pilot on board, and the tug asked 50 *l.*; after the pilot got there, he asked 20 *l.*

5985. Still, steam-tugs are used to a considerable extent, are they not?—Yes.

5986. Are there many steam-tugs in the Humber?—Yes, I should think there are 20.

5987. Are there as many as the trade requires?—Yes.

5988. The ships are not compelled, under any circumstances, to take a tug, are they?—No.

5989. Are you of opinion that if this Humber pilotage were made non-compulsory, it would break up the staff, and that a sufficient number of pilots would not be found?—I think it would have that tendency.

5990. Do you think that there would not be a sufficient number of pilots under the voluntary system?—No; I think you get a better class of men under the present system than you would under the voluntary system; the remuneration would be so intermitting, that no one would like to join the service.

5991. You say that there are a sufficient number of tugs under the voluntary system, why should not there be a sufficient number of pilots under the voluntary system?—I am sure I do not know how to draw the distinctions.

5992. Is it not the fact that you have an ample supply of steam-tugs, although the employment of steam-tugs is not compulsory?—Yes.

5993. That is so, is it not?—Yes.

5994. And yet you think there would not be an adequate supply of pilots if the system were not compulsory?—I think not.

5995. Can you give any reason why you think not?—Sometimes so many vessels come at the same time in the different changes of wind, and now we have not a sufficient staff to meet all circumstances; sometimes 60 or 70 vessels arrive in the river within a very few hours.

5996. But you say there are tugs enough?—If there are 60 or 70 sail of vessels at one time, they must wait if they want tugs; many vessels do not take tugs.

5997. Have you ever heard of a ship wanting a tug and not getting one?—Yes.

5998. Did you ever hear of a ship wanting a pilot and not getting one?—Yes.

5999. You have heard of both?—Yes.

6000. Can you give any reason whatever why you think that, under the voluntary system, there would not be an ample supply of pilots?—I think the remuneration would not be sufficient to make the men join a service of that sort.

6001. Though the remuneration is enough for the tugs?—Yes.

6002. You know that the present system is satisfactory and you do not want to change it?—That is it.

6003. Mr. *Malcolm.*] Is it not your opinion, that if this pilotage became voluntary, pilots would be very apt to do what tug masters do, wait till they saw a fellow in a scrape and go down and make a bargain with him?—Yes.

6004. And that would do away with the regular body of pilots and you would only have men who went out on those occasions for that purpose?—They would be obliged to combine some other business with the piloting to make it pay them. In fine weather they would have to be fishermen.

6005. Do they ever fish now?—No.

6006. You say the narrowest part of the river is about 200 yards wide; they do not beat up that much, do they?—No; by the time they are there the water has flowed, and it is a little better. Small vessels do beat up; it is only the very large vessels that are generally towed.

6007. Speaking of the loss of life, was not there one of the Hull pilots lost at Donna Rock this last winter?—Yes, a vessel went ashore from her anchors; he was not lost in boarding.

6008. You were not asked the question as to boarding?—I understood it to apply to boarding; there was a man drowned from a vessel that went ashore; she broke her chain and was driven ashore by stress of weather.

6009. Mr. *Grieve.*] Have you read this Bill?—Yes.

6010. Are you aware that if this Bill passes, the existing pilotage authorities will still be preserved?—Yes.

6011. Do you suppose the pilots would be able, if the Bill passes, to dodge and suit their convenience in piloting a ship?—The men who have signed the letter were under that impression; I was never under that impression.

6012. The existing pilotage authorities being still in existence, they would take care that you did not dodge and look out for salvage services?—Yes, I understand so.

6013. You said that some of the officials of the Board of Trade visited Hull, and influenced some of these parties in signing this document?—I did not say so much as that.

6014. You insinuated as much?—No, I said after a conversation which a pilot had with Mr. Lefevre, that pilot was the chief instigator of it.

6015. Does that pilot adhere to his original idea?—I do not know; I asked him no questions upon the matter.

6016. Who

6016. Who influenced the parties who put up the counter-letter?—I do not know that they have been under any other influence more than hearing a general conversation upon the matter.

6017. Did you influence them at all?—I have talked the matter over with them most carefully; whether I have had any influence over them or not, I do not know.

6018. Mr. *Cave.*] Was it a Hull pilot that had a communication with the Chairman of this Committee?—Yes.

6019. With regard to that extreme case that you were talking of in the beginning of your evidence, when the pilot could not get on board the vessel on account of stress of weather, what happened; you say that you have known cases in which pilots have refused to board vessels in consequence of stress of weather?—We have to come further into the mouth of the river till we are sheltered by the Stoney Binks.

6020. You show the vessel the way in?—Yes, we fore-sail the vessel in.

6021. When you talked of the gross earnings of the boats, you meant to exclude from that all the expenses of the cutters, I suppose?—Yes, and all the expenses of the establishment.

6022. Is it your experience that the small foreign vessels with six feet draught frequently take pilots?—Yes, in bad weather.

6023. In bad weather only?—In bad weather only.

6024. Then a man who is ignorant of the navigation of the river still works his way up without a pilot in fine weather?—I believe in all cases of vessels coming to the port for the first voyage or two they will take pilots until they obtain a little knowledge of it.

6025. And that knowledge is not sufficient to enable them to go up in bad weather, is it?—No.

6026. Under those circumstances one would imagine that all vessels, the masters of whom are not capable of navigating the river, would take pilots?—I believe they would in bad weather, in fine weather I believe they would not; they would be induced by a wish to save money to run the risk of coming into the river alone.

6027. Do you think that would be the case where a vessel has a valuable cargo?—Yes, I think a master would have an objection to be found fault with by the owner for this item appearing in his account. I know that to be the case.

6028. From your experience do you not think that masters of vessels with valuable cargoes, the pilotage of which must be a much more trifling item than in the case of small vessels, would generally have orders from their owners to run no risk at all?—I do not know that it might be so; that would have to be a matter for future experience.

6029. You have expressed an opinion that even with reference to passenger vessels the masters would rather run the risk than allow this item to appear in their expenses?—There is no doubt some masters would take pilots. Many vessels come to Hull, the masters of which are strangers, and they would take pilots, but that would not be sufficient to keep up a staff of men so as to make the service efficient in bad weather or under extraordinary circumstances.

6030. Upon what do you base that opinion, that with regard to valuable vessels there would still be a number of masters who would run the risk in fine weather of going up without a pilot to save pilotage?—Because we find them trying to evade the rate of pilotage now; our rates alter with a very few miles, and we find them in fine weather trying to avoid the pilotage.

6031. They go round a little further without a pilot?—Yes.

6032. Do you find that that is done with regard to valuable vessels?—No, not with the most valuable vessels; some of the owners really wish to use every endeavour to get a pilot.

6033. I suppose you would say that it is only with reference to inferior vessels that this risk is run?—No doubt of it.

6034. And you think there would be a sufficient number running that risk in case the system was changed, as seriously to interfere with the earnings of the pilots?—Yes; and cause confusion in the trade, too.

6035. In what way would it cause confusion in the trade?—They would go so far up the river, where the rates of the pilots would be so small that the pilots would not be there.

6036. Supposing vessels going up some distance to avoid the rates found no pilots, and got into difficulties, would not that prevent their doing the same thing a second time?—The weather very often changes in a very few hours; we have a very variable climate.

6037. And all that would, therefore, tend to prevent vessels running the risk, would not it?—It would prevent them being competent to pilot their own ships if the weather changed unfavourably.

6038. And they would very soon know it?—Yes.

6039. Under those circumstances, would not that tend to bring employment to the pilots?—Yes; under those circumstances it would, no doubt.

6040. Then your evidence tends to show that; at first you think the masters of vessels would try the experiment of doing without pilots, but after a short experience they would find that they must go back to the old plan?—There is a great deal of trade to our port that is conducted by strange vessels.

6041. And all the strange vessels take pilots, do not they?—Yes; they are obliged to do so now.

6042. Even the small ones?—No, the small ones do not; at first they do, but after a little experience they do not take pilots.

6043. *Chairman.*] Can you tell us what proportion of your employment, as a pilot, comes from foreign vessels?—Very nearly the whole of it.

6044. The masters of the steamers from Hull get certificates, do not they?—Yes, all of them; and many foreigners too.

6045. So that the whole of your employment is from foreign vessels?—Very nearly.

6046. Do you know the navigation of the north channel of the Thames at all?—No, I am not acquainted with it.

6047. You do not know whether it is more difficult than the Hull navigation?—No.

6048–9. You are not aware that all the foreign vessels coming from the north of Europe, though not bound to carry pilots when they approach the Thames by the north channel, do take pilots?—I have heard so.

6050. Are you aware whether foreign vessels

Mr. *Brewis.*

11 May 1870.

are bound under their policies to carry pilots?—Some of them are.

6051. Do you know that all the vessels in the north of Europe are so bound as a rule?—I believe not the whole.

6052. But you distinctly say, that a great portion of your employment is from foreign vessels?—Yes.

6053. I think you told the Committee before I came into the room, that you believed these 40 men who signed this petition in favour of the Bill, were influenced by a visit which I paid to Hull?—No, I did not say so; I understand they were influenced by a conversation which they had with you.

6054. You said they were influenced by a conversation with the one pilot, who was influenced by a conversation which he had with me?—Yes.

6055. Are you sure it was not this, that the pilots influenced me, by saying that the majority of the pilots were against the present system?—It is quite possible he may have said so.

6056. Then the influence was the other way?—It is quite possible he may have said so.

6057. And that the younger and better pilots were dissatisfied with the present system; do you think it is possible that he said that?—I think it is possible that he said so, but if he said so he was decidedly wrong.

6058. Are the 40 men who signed the petition the younger and abler of the lot?—I do not consider that the younger are the abler.

6059. Are they the younger?—Yes, they are the younger, but I consider them the worst pilots.

6060. They are the younger men of the lot, are they not?—Perhaps it may be so.

6061. You say that, with the exception of five, they have recanted their opinions?—Yes.

6062. Have they signed any memorial on the subject?—No, I was not aware that it would be of any use.

6063. Who has persuaded them in the other direction?—I do not think they have been persuaded at all. I think they have seen the error of their ways upon consideration.

6064. At one time they were in favour of the Bill, and in favour of the abolition of compulsion, were they not?—I do not think the great majority of them understood it at all, and they told some one else to put their names to that letter. It is not worth the paper it is written upon, in my opinion.

6065. Mr. *Grieve.*] Do not you think they were told that the same pilotage authority would be over them under the voluntary system?—I cannot say; if you ask them what it is, you will find that they cannot tell you.

6066. Mr. *Cave.*] As I understand you, you want free trade in rates?—Yes. I have asked them how they would alter the system for the benefit of the shipping and the service, and they cannot give anything definite. I would have been willing to assist them in anything that would have benefited myself or the service. I have been all my life in it, and I hope to be a few years longer there, and anything that would have benefited them would have benefited me.

6067. *Chairman.*] What are the exemptions from pilotage at Hull?—The exemptions are certificated masters and mates, and vessels under six feet draught of water.

6068. With those exceptions I believe all vessels from foreign ports are obliged to take pilots?—Yes.

6069. Are all coasters exempt?—Coasters are all exempt.

6070. Then, in fact, it is practically only the vessels coming from the north of Europe or foreign ports that are bound to carry pilots?—Yes.

6071. All foreign vessels are bound to carry pilots?—Yes.

6072. They are commanded by men who know very little about the port, are they not?—Yes; some of them acquire a little knowledge in time.

6073. In your opinion would not a prudent man always take a pilot?—I cannot say; it is possible they may or may not.

6074. Do not you think it most probable that they would take pilots; you must be able to form an opinion upon that point?—I believe they would, under certain circumstances, but in fine weather they would endeavour to evade it.

6075. Do not you think that prudent masters of foreign vessels, knowing nothing of the port, would, as a matter of prudence, take a pilot whether the weather was good or bad?—He would wish to save his owner's money as well as the cargo of the ship.

6076. Do not you think that as a prudent man, knowing nothing about the port, he would take a pilot even in fine weather?—If he knew nothing about the port, he might do so, but with a little knowledge he might be led into error.

6077. The great bulk of them know nothing about it?—No.

6078. Mr. *Graves.*] Do you know the Tyne at all?—No.

6079. Nor Sunderland?—No; I have been in the harbours, but I have no knowledge of them.

6080. Mr. *Norwood.*] Did you see the letter sent by the pilots to the Board of Trade before it was sent?—No.

6081. Have you seen this counter letter which has been alluded to?—Yes.

6082. And you saw the signatures?—Yes.

6083. Of course you do not know how far the signatures were identical in the two documents, because you did not see the first?—No.

6084. You cannot speak positively?—No.

Mr. JOHN LUMSDEN, was called in; and Examined.

Mr. *J. Lumsden.*

6085. Mr. *Norwood.*] YOU are an Alderman and ex-Mayor and Justice of the Peace, of Hull?—I am.

6086. You are a large steamship owner, I believe?—Yes.

6087. And Chairman of the Hull Steamship Owners Insurance Association?—Yes.

6088. And you are also a member of the Chamber of Commerce?—I am.

6089. I believe you are an undrwriter at Lloyd's?—Yes.

6090. In Hull as well?—Yes.

6091. Of course, as a shipowner, you have a thorough knowledge of the pilotage system at Hull?

Hull?—Yes; and I am one of the Commissioners as well.

6092. Are you perfectly satisfied with it?—I am.

6093. Do you avail yourself freely of the licensing of masters and mates?—Yes; all our masters are licensed.

6094. In point of fact, your vessels are not piloted by the staff of pilots, because you have your own men?—They are piloted by our own captains and mates.

6095. Then, as far as you and the local shipowners and those shipowners whose vessels are constantly trading to Hull are concerned, there is no compulsory pilotage?—No.

6096. It only exists towards strangers?—Yes.

6097. It does not exist towards your local shipowners, because you get the captain's licensed?—Yes.

6098. You are aware, of course, that you forfeit your protection as far as shipowner's liability is concerned, by adopting your system?—I believe we do.

6099. You do it with your eyes open?—Yes.

6100. And you are content to do it?—Yes.

6101. Have you heard the evidence of Mr. Bannister and Mr. Dale Brown?—I heard Mr. Bannister's evidence to a small extent.

6102. Did you also hear Mr. Dale Brown's?—Yes.

6103. Did you also hear Mr. Brewis, the pilot's evidence?—Yes.

6104. Do you agree with them as to the difficulties of the navigation?—Yes, entirely.

6105. Are you of opinion that the present system is well managed and efficient?—I am.

6106. And do you think that a change in the form which the Bill proposes would be a disadvantage to the port?—I do.

6107. Do you attend the meetings of the Pilotage Commissioners?—I do occasionally; not very regularly.

6108. But there is always prompt investigation into complaints, is there not?—Yes; we have oftentimes persons reported, and when we have such cases, a thorough investigation is made.

6109. And you have been satisfied with the results?—Thoroughly so.

6110. Do you concur with the previous witnesses, who have stated that all interests in Hull, public and private, are well represented upon this board?—Yes.

6111. And, in fact, the basis of it is a liberal representative body; is it not?—It is.

6112. Have the Hull Chamber of Commerce and Shipping considered this Bill, and do they approve of it?—The two departments have considered it, the Shipping Committee as well as the Chamber of Commerce Committee, and both of them disapprove of it.

6113. I believe you are a large steamship owner, and you have other interests besides that of the port of Hull?—Yes.

6114. Do I understand that you approve of compulsory pilotage as a general system, setting aside Hull?—Yes, I approve of it generally.

6115. And that your system is a modified system, being perhaps the most liberal compulsory system in existence?—Yes.

6116. Setting aside that, you think that it is desirable, in the interests of the shipowners and the merchants, and the country generally, that there should be compulsory pilotage?—Yes, I do.

6117. Of course you know that there are ports which are not so difficult of entrance as the Humber?—Of course they vary very much in that respect.

6118. And you would not object, when your master was competent to take a vessel in, to pay compulsory pilotage?—No, I would not.

6119. Have you considered the question which has arisen very much in our investigation, with regard to the shipowner's liability; did you hear Mr. Bannister express an opinion that the employment of compulsory pilots should not exempt a shipowner from responsibility?—I was just entering the room when I heard that.

6120. What is your opinion upon that point?—It is very desirable with compulsory pilotage that the ship should be free from liability.

6121. You think that the general law of the land, the common law, which is to the effect that a man cannot be held responsible except for his own deeds or that of his servant, should be held good in shipping as well as in everything else?—Yes.

6122. And you do not see why a shipowner should be made responsible for the acts of a man thrust upon him without the power of selection?—No.

6123. Then you differ with Mr. Bannister upon that point?—I do.

6124. The theory in favour of compulsory pilotage, I presume, is this: that there is an exceptional and difficult navigation which an ordinary master is not acquainted with, and with which he is unable to cope?—Yes; there are peculiarities in every port, and those men who are trained are thoroughly aware of all the peculiarities of the port, and they are therefore the best qualified to pilot a ship in.

6125. If the compulsory employment of these men is considered necessary in the interest of the public at large, are you not of opinion that the men you are compelled to take on board the ship should have the control of the ship within that district?—Yes.

6126. You do not see your way to having a divided authority; that the master, notwithstanding his ignorance, should be presumed to be superior to a qualified man?—No, I think not; I think the pilot should be made responsible.

6127. Do you consider that the navigation of the Humber and its approaches is so exceptional and dangerous and difficult, that it ought to be excepted in this Bill?—I should like the other places to conform to Hull.

6128. You would have a universal system similar to Hull all round the coast?—Yes.

6129. Irrespective of the less or greater difficulties?—Yes; I think the same rule ought to apply to all.

6130. You would like to see the Hull system extended?—Yes; I think it would meet all cases.

6131. Of course you know that there are many ports, especially in the north, Sunderland, Newcastle, and other places, where there is no compulsion?—Yes.

6132. And where there is a pilotage system?—Yes.

6133. And notwithstanding that, you would like to see the Hull system universal?—Yes.

6134. Do you speak as an underwriter as well as a shipowner?—Yes, I speak as an underwriter in that respect.

6135. You would feel more satisfied in settling

Mr. *J. Lumsden.*

11 May 1870.

a loss which occurred in home waters, if the vessel was in charge of a pilot?—Decidedly so.

6136. Have you made any suggestion for the improvement of the Hull system in the details of management?—No; I think it is as perfect as anything of the sort can be.

6137. Is there any extravagance, that you know of, in the management?—No.

6138. I believe the men are fairly remunerated and highly respectable?—Yes.

6139. And you consider their calling a risky one, outside in bad wetaher?—Yes.

6140. They get north-easterly winds in Hull, do not they?—Yes.

6141. And at that time it is not very pleasant to be cruising outside with a lee shore?—No.

6142. With the Stoney Binks close upon them?—By no means.

6143. Mr. *Price.*] You said that you gave that opinion as an underwriter, as well as a shipowner?—Yes.

6144. Do you underwrite largely in the port of Hull?—Yes.

6145. Do you make any condition in the policies issued, as to the taking of a pilot?—Never.

6146. Supposing you were to underwrite a foreign ship going to some port where you knew that the non-compulsory system of pilotage prevailed, would you insert any condition in their policies, as to taking a pilot?—Almost all the ships we insure in Hull, are trading foreign.

6147. They come to Hull from some foreign parts?—Yes; or they go to some foreign parts.

6148. Supposing a Hull ship, for example, were going to the Baltic to take a cargo to some port where you know that pilotage was not compulsary, would you think it necessary, if you were the underwriter of that ship, to insert a provision with regard to taking a pilot?—We insure them for twelve months without knowing to what particular places the ships may be going.

6149. It is natural to you as an underwriter, to prefer that the ships should be under the charge of a man who thoroughly understood the navigation where the navigation was difficult?—Yes.

6150. You do not claim Hull to be an exceptional case; you do not say that it is more dangerous than some other ports?—It is more dangerous than some ports.

6151. If the system of non-compulsory pilotage were thought necessary for the country altogether, you would not plead that you should retain your system in Hull because it was more dangerous than some places?—In Hull there is less danger arising from the fact that we have a well-qualified body of masters who are licensed pilots of the port, who have great experience, and are well acquainted with the navigation.

6152. You do not consider that the navigation of the Humber is more difficult, and more dangerous than the ordinary navigation of a river of the same size?—Probably not of the same size; of course it is so more than many rivers.

6153. You think it important that you should maintain there a sufficient staff of duly qualified men?—Yes, I do.

6154. I think you said you were chiefly owner of steamships?—Entirely.

6155. You never have occasion therefore to take steam tugs?—Rarely.

6156. With regard to the sailing vessels resorting to the port of Hull, do many of them employ steam tugs?—They do occasionally; but they would frequently employ steam tugs if they were always available in coming up the river. The steam tugs are not often on the outside, and the pilots therefore get hold of the ships before they have the chance of getting under the care of steam tugs.

6157. I believe in the case of adverse winds ordinary sailing vessels do frequently avail themselves of the assistance of steam tugs?—Yes; to prevent delay.

6158. Have you plenty of steam tugs in the Humber?—There are a good many.

6159. Are there as many as the trade requires?—I think that there are as many as the trade usually requires.

6160. But the employment of a steam tug is not compulsory, is it?—No.

6161. If there are a sufficient number of steam tugs as the trade requires under a perfectly voluntary system, why should not there be a sufficient number of pilots under the same circumstances?—Because the parties coming up there would desire naturally to get rid of the expense of the pilots.

6162. Why should they desire to get rid of the expense of pilots if they wanted them, any more than they would get rid of the expense of steam tugs if they wanted them?—In many cases they would run risks in order to avoid expense.

6163. You do not understand my question; you say that there are a sufficient number of steam tugs for the service of the trade, although the employment of steam tugs is not compulsory, but you say that you are afraid, if the employment of pilots was not compulsory, there would not be enough pilots; what is the difference?—The steam tugs take hold of them in the river when they have got partially up; the pilots take hold of them upon the outside and take them into the river.

6164. That is because the pilot is wanted outside the river, but a steam tug is not wanted outside the river?—The steam tugs do not often go outside the river; if they went, it would be a heavy expense, and they do not know that they would be required.

6165. Does a man ever want a steam tug when he cannot get one?—Yes.

6166. And does a man want a pilot when he cannot get one?—Sometimes it happens, but very rarely.

6167. Did you hear the evidence of the last witness, the pilot?—Yes.

6168. Did you hear the whole of it?—Yes.

6169. He said that they did sometimes want a pilot, and they could not get one?—Yes, occasionally, when the state of the river was such that the boats could not get out.

6170. Your opinion as to the system of pilotage does not seem to be confirmed by the opinion of the pilots themselves, because 42 of them out of 68 seemed to have expressed their opinion in writing by a memorial to the Board of Trade, that they would prefer the voluntary system of pilotage, with certain alterations in the management?—I have heard that it was entirely from a misunderstanding of the Bill that they sent that, and that they are now, almost to a man, in favour of the continuance of compulsory pilotage.

6171. Although they may have been misled, or may have misunderstood the scope of the Bill, the opinions which they did express are probably their

their opinions still upon the general question?—The ground upon which they were disposed to get rid of compulsory pilotage was, that they would all receive compensation from the Board of Trade for loss of employment.

6172. That is not what they state in their letter; as I understand their letter, they say that a smaller staff and a less expensive system would be adequate for the purpose; and that under an improved management, and more especially under the management of the Board of Trade, a less staff of pilots and a less expensive machinery would be adequate for the purpose. You do not agree in that opinion?—No.

6173. Still they would probably understand the necessities of the case, being engaged in the service?—No doubt they would prefer a reduction in the number of pilots, knowing that their pay would be so much more. If there were 50 pilots instead of 68, and they could do the work, the 50 would receive the same amount of money that the 68 now receive.

6174. But you see, according to the expression of their letter, they would be willing to accept the non-compulsory system of pilotage, with an improved management?—Yes.

6175. You understand that implies that they would run the risk of the voluntary system if their organisation could be brought into harmony with it?—Yes; very likely they were under the impression that a smaller number would then be employed, and that the receiving of the same amount of pilotage would give them more money. I think that is the ground of their wishing compulsory pilotage to be done away with.

6176. It did not seem to be supposed by them that by making it non-compulsory they would never be employed at all?—They would be employed, there is no doubt of it.

6177. Are you satisfied yourself with the existing system?—Yes, I am.

6178. *Chairman.*] I do not see anything in this memorial of the Hull pilots with reference to compensation?—I had not seen the document until I heard it read now.

6179. Just look at the document (*handing the same to the Witness*); it is printed upon our minutes. Is there anything in that document which leads you to believe that they had compensation in view when they wrote it?—No; there is nothing in that document to lead me to do so.

6180. Would it not seem from that document that they thoroughly understood the nature of the Bill; namely, that it was a substitution of the voluntary system for the compulsory system?—No; I think it is a very confused document, so far as I am able to judge of it.

6181. Still the pilots must pretty well understand at once what is the difference between a compulsory employment of their services and a voluntary one?—Yes.

6182. And that they could very soon make up their minds as to which was most likely to be for their benefit?—They would no doubt make up their minds very soon; but it appears that they have changed their minds.

6183. You are a steamship owner?—Yes.

6184. May I ask whether the steam-shipping trade of Hull has been increasing very much of late?—Enormously.

6185. Almost the whole of the British trade from Hull is carried on by steamers, is it not?—Yes, nearly.

6186. And all the British vessels now leaving Hull for foreign ports are steamers?—Yes; mostly.

6187. On the other hand the foreign trade is mostly in sailing vessels, is it not?—No, the inward foreign trade is carried on principally by steam.

6188. Still there are a considerable number of foreign sailing vessels coming to Hull, are there not?—Yes, but they are very small comparatively; those importing wood of course continue to use sailing vessels, but almost all other goods come in steam vessels.

6189. Are the masters of your vessels certificated?—Yes.

6190. Do you agree with the last witness that nearly all the British vessels sailing from Hull, have certificated masters or mates on board?—Not all the British vessels, nearly all of the Hull vessels have.

6191. So that the employment of pilots is mostly confined to foreign vessels, and those few vessels belonging to other ports?—Yes.

6192. Do the pilots occasionally get any employment from the vessels owned in Hull which have got certificated masters?—No.

6193. They very rarely want a pilot?—No, of course the steamers have not always certificated masters on board, strangers coming in, have a little time given them to qualify them for passing.

6194. What time is given to them to pass?—I do not think any pass, except they have had from one to two years' experience going up and down the river.

6195. Do the Trinity House give certificates to foreign masters?—Yes.

6196. You are aware that the owner whose master is certificated for pilotage is responsible for any damage if he comes into collision with a vessel which is under compulsory pilotage?—Yes.

6197. That is supposing his own vessel is to blame?—Yes.

6198. Has there been any inconvenience felt by the owner of one vessel not being able to recover from the owner of another vessel, under the compulsory pilotage system?—It very rarely occurs that the vessels get damaged.

6199. There are very rarely cases in which accidents occur in the Humber?—That is so.

6200. The shipowners of Hull have not felt that inconvenience?—No.

6201. Your idea is that exemption from liability, under compulsory pilotage, ought to remain on the owners?—Yes.

6202. That is, where he is bound to carry a pilot he ought not to be responsible for his negligence?—Yes; I speak of the vessels frequenting the port.

6203. You are of opinion that the exemption ought to remain, where the master is bound to carry a pilot, and that the owner ought not to be responsible for his negligence?—We are satisfied that it should be so; we prefer the ships to be freed from all liability.

6204. But if there is to be a liability, you think the owner should be exempt if he is compelled to carry a pilot?—Yes.

6205. Have you any experience of ports where pilotage is voluntary?—No.

6206. Do you know anything of the North Channel, of the Thames, to which vessels come from the north of Europe?—No.

Mr. J. Lumsden. 11 May 1870.

6207. As an underwriter, are you aware to what extent, in foreign policies of insurance, vessels are bound to carry pilots?—No; not being resident in London, I am not personally acquainted with it; I have a writer, on Lloyd's.

6208. Do you know whether the masters of vessels from the north of Europe are bound, under their policies, to take pilots?—I presume they are all bound to take pilots, by the compulsory pilotage system.

6209. I mean, independently of whether compulsory pilotage is the law in a port, are you aware whether, under their policies of insurance, they are compelled to carry pilots?—I do not know that.

6210. Mr. *Norwood.*] Did you ever know a policy of insurance to contain a clause of that kind?—No.

6211. Mr. *W. Martin.*] You say that you only referred to the Humber when you said that accidents rarely occurred in running-down cases?—Yes, I said so.

6212. Is that because there are comparatively few small vessels going in and out of the Humber; are there not many brigs and schooners that frequent the port?—Nothing equal to the number of steamers.

6213. While the pilot is on board getting the vessel up he is the servant of the shipowner, is he not?—I do not wish to consider him so, and I have not considered him so.

6214. You employ him to do a certain thing?—Yes; but we are compelled to employ him.

6215. You say that you have no power of selection?—No.

6216. Are not all these Humber pilots licensed by the Trinity House regularly picked men?—Yes.

6217. And very superior to your own masters, are they not?—No, we do not think so.

6218. Would not you like to be free from taking pilots at all, and let your own masters pilot their own vessels?—We are free from compulsory pilotage; we have licensed masters in our ships.

6219. I thought you said that you were obliged to take a pilot, and had no power of selection?—Our own steamers trading from Hull are not compelled to take them.

6220. *Chairman.*] You say that pilotage is free with regard to Hull vessels, because they are all commanded by masters who have got pilotage certificates?—Yes.

6221. So that, practically, compulsory pilotage does not fall upon the Hull owners at all?—No.

6222. They are free from it?—Yes.

6223. And it only affects foreign-going vessels, or vessels going to other ports, whose masters are not certificated?—Yes.

6224. We have been told that a vessel that has to take a compulsory pilot pays the pilot 30*s.* for taking the vessel up to Hull; do you think that any owner has the right for the sum of 30*s.* to get rid of his responsibility?—Yes.

6225. We are told that the average income of a pilot is about 150 *l.*; if a compulsory pilot runs down an innocent vessel lying at anchor, in its proper place, is not the remedy of the owner of the innocent vessel against the pilot a perfect farce?—Undoubtedly.

6226. Do you think that just towards the innocent vessel?—It would be equally unjust towards the other vessel that ran her down with a compulsory pilot on board.

6227. As some innocent party must suffer, do not you think the most guilty party should suffer?—Who is the most guilty? I do not consider that a master who is compelled to take a pilot is the most guilty.

6228. I speak of a vessel going to anchor at the anchorage appointed by the Trinity House; I take an actual case that has happened, namely, that of the "Sentinel;" a vessel with a pilot on board was run down by her; it was a total loss, cargo and everything else; do not you think, as far as either is guilty or innocent, the vessel that came into collision is more guilty than the one that was lying still?—Yes; as a matter of degree.

6229. Somebody must suffer, and do not you think that the proper person to suffer is the man who runs her down?—But in the case you put there was a pilot on board, and the pilot ran the vessel down; she was under the command of a pilot.

6230. These is a dispute as to whether she was under the command of the pilot; according to you a master may just as well go to bed as soon as he gets a pilot on board?—No; I think he ought to exercise proper caution, but not to make himself responsible.

6231. Here there are two parties, both to a certain extent innocent; but as a vessel running down the other which is *primâ facie* the more guilty of the two, do not you think that vessel ought to pay for the accident; it is quite clear that the vessel at anchor was innocent?—I think it is clear that the party being compelled to have a pilot on board should be exonerated.

6232. Then you think the person who obeyed the orders of the Trinity House, and went to the moorings ordered by the Trinity House, and who in broad daylight, and in the broad part of the river was run down ought to bear the total loss; do you mean to say that the underwriters of the lost vessel ought to suffer, and the "Sentinel" go scot free, which is according to the present law?—Yes, I think so, if they had a compulsory pilot.

6233. A compulsory pilot was only there because the law says that a passenger vessel should carry a pilot; do you think it is just under those circumstances that the mere fact of an incompetent pilot being on board should free the owner from all blame?—Yes.

6234. *Chairman.*] Have you formed any idea as to what extent the employment of pilots would fall off if this Bill passed?—It would fall off to a large extent.

6235. What is your ground for saying so?—That vessels not requiring to take a pilot would naturally wish to escape the expense of taking one.

6236. In your opinion would foreign vessels that had not frequented the port, come in without taking a pilot?—I think they would to a large extent; of course the risks in the river are considerable even in fine weather, and if the weather were fine I think they would take the chance of getting up safely themselves.

6237. I suppose the foreign vessels coming to Hull are mainly from the north of Europe?—Yes.

6238. Would not your opinion be considerably modified if you found that the same class of vessels approaching the Thames, though not compelled to take pilots, do invariably take pilots; vessels from the north of Europe, between the Elbe

Mr. J. Lumsden. 11 May 1870.

Elbe and Brest and from the Baltic, are not compelled to take pilots up the Thames?—I was not aware of that.

6239. Are you aware that all these vessels do take pilots when they approach by the North Channel?—I cannot say.

6240. Would not, then, your opinion with regard to the effect of the Bill upon Hull pilotage be considerably modified if you were fully convinced upon that point?—Do they, in point of fact, take pilots.

6241. They do take pilots, though they are not bound to take pilots; and those are the same class of vessels that frequent Hull?—Yes; but the chances of collision in the Thames are much greater than in the Humber.

6242. We were told to-day that the navigation of the Humber is more difficult?—Yes; but the number of vessels in the Thames is so large that the risk of collisions must be greater

6243. But the navigation is easier?—Yes.

6244. Balancing the two together, do not you think that they would all take pilots in coming into Hull?—I think not.

6245. Would your opinion be at all modified if you were informed that they are compelled to take pilots under their policies of insurance?—Of course, if they are bound to take them.

6246. In fact, the question of the Hull pilotage turns upon the extent to which foreign vessels coming there would take pilots; is not that so?—Yes.

6247. The employment of pilots in the Humber will depend upon the extent to which foreign vessels will continue to take pilots if this Bill is passed?—Yes.

6248. If it is shown that they will continue to take pilots, Hull will be practically unaffected by this Bill?—Yes; if the vessels that are now compelled to take pilots continue to take pilots, the thing remains unaltered.

6249. If the great bulk of them continue to take pilots, Hull will be unaffected by this Bill?—Yes.

6250. Mr. *Cave.*] Supposing it turned out that, under the voluntary system, fewer vessels took pilots, do you think the underwriters would provide against that by inserting in their policies an obligation to take pilots?—Yes, or by increasing the premium.

6251. Which of the two do you think would be done?—It is difficult to say which would be done; it would be a matter of consideration; some people might adopt one and some the other.

6252. Have you considered the question yourself very much?—Not particularly so.

6253. We had very strong evidence from the Liverpool underwriters, who said that they could not insert such an obligation in their policies; that it would be embarassing, and that people would not like it, but that they would simply place a general war risk upon the vessels, and increase the premiums; would that be your opinion?—Decidedly it would increase the premiums, because if you put a clause in the bill of lading, saying that they should be compelled to take pilots, and there were not pilots ready to do the service, they would be detained. Supposing the number of pilots fell off and they became an inefficient body, it would cause great delay.

6254. And by inserting such an obligation in your policy you might increase that risk which you are endeavouring to avoid?—Yes.

6255. Mr. *Norwood.*] The honourable Member for Gloucester put a question to you, endeavouring to elicit from you that there was an analogy between the law of supply and demand in the case of steam tugs and pilots; is there not this essential difference between the two, that a pilot has to work for a fixed remuneration, whereas the owner of a tug boat can make his own bargain, and would be induced to go out in bad weather for the extra remuneration; the pilot would not have the power of doing that under a fixed rate?—No doubt the pilot has a fixed rate.

6256. And it will be extremely desirable, for the interests of the shipowners and everybody else, that the pilot should not have the power of making a bargain?—Yes.

6257. It would then come within the nature of salvage arrangement?—Yes.

6258. So that the law of supply and demand is not precisely analogous in the two cases?—No.

6259. With regard to the question put by my honourable friend the Member for Rochester; the vessels themselves are mere inert matter, and they cannot do harm or good without the motive power, and therefore the "Sentinel" was not so much to blame as the man who directed her motion, and he was a compulsory pilot?—Yes.

6260. And though it was a hardship upon the vessel that was run down, there would be an equal hardship upon the owner of the "Sentinel" being compelled to pay for the laches of the pilot?—Yes, and a much greater hardship, in my opinion.

6261. Mr. *J. S. Hardy.*] If the "Sentinel" had not been sailing in compulsory pilotage waters she would have been responsible for the ship she ran down, would she not?—Yes.

6262. Supposing she were coming in in rough weather, she would be practically obliged to take a pilot, and have no choice of the man she was to take, even if she were in non-compulsory waters?—No.

6263. And she would be obliged to take the first person who came?—Yes, she might be.

6264. And in that case there would be no grievance in the owner being responsible for the ship his vessel ran down?—If he chose to take one.

6265. If he has a compulsory pilot on board, he is not bound to employ him, and he need not take his advice, as long as he pays him?—Then he is taking the responsibility upon himself.

6266. Then, though he is obliged to take a pilot in consequence of stress of weather, and has no choice, in the one case it is no grievance that he should be responsible, but in the other case it is a grievance?—It is a grievance in another way, that is, from the stress of weather.

6267. He is not obliged to take the pilot's advice?—Then he takes upon himself the responsibility.

6268. If he thinks the man is going wrong, he has the power of not taking the man's advice?—Of course.

6269. Mr. *Price.*] Are the steam-tugs chiefly held by companies?—No, they are held by private individuals.

6270. I suppose in most cases one man will hold several?—Yes, as a representative man. One man may have three or four tugs, but there are other parties with him in the ownership.

Mr. *J. Lumsden.*

11 May 1870.

6271. Where are the tugs stationed?—They are about the dock gates mostly.

6272. They are not cruising about, but waiting till they are wanted?—They are in the neighbourhood.

6273. Do you know the course of proceeding if a ship coming up wants a tug; how does the master get a tug if he wants one?—I do not know.

6274. Do not you know that there is a scale of charge for a tug; if they send for a tug, does not a tug come out at a small recognised rate?—No.

6275. If that was so, it would bring the pilot and the tug to the same condition, and an analogy would exist?—There is no scale that I am aware of.

6276. You do not know the fact?—I know that when we have employed tugs, we have paid on a different scale.

6277. You pay a different scale according to the size of the ship; is it a matter of bargain?—It is a matter of bargain on all occasions, so far as I understand. My experience is not large in that, because our steamships rarely require tugs; but where we require them, which we do occasionally in taking them to the slips, or from one dock to the other, it is simply a question of bargain.

6278. Mr. *Norwood.*] I suppose if there was a large ship she would be moored in one of the roads in the lower part of the Humber, in a place of safety, and upon a communication being made for a tug-boat would be sent down, and she would be towed up?—Yes, and they are often going down to look for a job themselves.

6279. Mr. *Price.*] As I understand, your answers about the compulsory system are not given for yourself, because it does not affect you?—No, except as an underwriter.

6280. As a shipowner, you are anxious for the good of the trade and not for your own ships?—Yes; we are perfectly satisfied with the present system, as far as regards our own ships.

6281. Because your ships are exempt?—Yes.

6282. And, probably, the other people would be satisfied if they were exempt also?—Yes, I daresay they would.

6283. *Chairman.*] All vessels in ballast from Hull to other ports are not bound to carry pilots, are they?—Not for the coast.

6284. I suppose a considerable number of vessels come into Hull with timber, and they have to go elsewhere for cargoes?—Yes, they have to go to the north frequently.

6285. Many masters of vessels do not know Hull at all?—No.

6286. Do they take pilots when they go out in ballast?—Whether they practically do or not, I am not able to say.

Mr. John Harvey, called in; and Examined.

Mr. *J. Harvey.*

6287. Mr. *Norwood.*] I believe you are a Humber Pilot?—Yes, and I have been for 24 years.

6288. Are you a master?—No.

6289. Were you in the room when Mr. Brewis was examined?—Yes.

6290. You heard all he said?—Yes.

6291. Was he correct in what he said?—I quite agree with him in all he said.

6292. Do you agree with him about the danger, under certain circumstances, of cruising outside?—Yes.

6293. And about the sandbanks inside?—Yes.

6294. Are you one of the gentlemen who signed that letter to the Board of Trade?—No; I did not know anything about it till it was gone, and have not known much about it since. I did not know the purport of it till I heard it read here.

6295. Do you know that many of the men who signed that letter regret having signed it?—I have heard them say so themselves.

6296. *Chairman.*] Are any of them here to speak for themselves?—No.

6297. Have any of them come up as witnesses?—No.

6298. Mr. *Norwood.*] I ask you whether you yourself have heard them say so?—I have heard some of them say that they are sorry they signed it, and that they signed it under a wrong impression.

6299. I understand you distinctly to say that you confirm what Mr. Brewis said?—Yes.

6300. And he said nothing but what you agree with?—No.

6301. Have you any fault to find with the management of the Commissioners?—No; the service is as good as it has been since I have been in it; I have been quite satisfied with it since I have been in it.

6302. And you believe that the shipowners are also satisfied?—I believe so, as far as I have heard them say.

6303. *Chairman.*] Do you agree with the other pilot that your employment is mainly from foreign vessels?—Yes.

6304. And that you are very seldom employed by any British vessels?—We are not employed by a great many; not by so many as we used to be, in consequence of the increase of steamers.

6305. Can you tell me what proportion of vessels that come into Hull take pilots?—I should say that at least three-fourths in number take pilots; not in tonnage.

6306. I understand you to say that three-fourths of the tonnage of all the vessels take pilots, and that the British vessels very seldom take pilots?—I mean foreign-going vessels; not coasters.

6307. It is mainly foreign vessels from whom you get employment?—Yes.

6308. Are you under the impression that your employment would fall off if the Bill is passed?—I think so.

6309. Is that on the ground that the foreign vessels would not take pilots?—Yes.

6310. Supposing it was shown to you that foreign vessels would take pilots, what would be your opinion?—If you could prove that to me, it would alter the question.

6311. The effect then would be nil?—If the vessels took pilots the same as they do now, it would make no difference.

6312. It would depend upon whether the foreign vessels would take pilots or no?—Yes.

6313. Is

6313. Is it not the case that many of these vessels have not come to Hull at all before?—Yes.

6314. Do you think, as a prudent man, that it would be wise for one of the foreign vessels to come in without a pilot?—No; no prudent man, being a stranger, would come in without a pilot.

6315. I presume that most of the foreign sailing vessels are now towed in by tugs?—The larger vessels are, but not the smaller ones; that is to say, from the inner part of the river; sometimes they are towed in from the sea entirely; sometimes they take a tug four or five miles down the river.

6316. In your opinion, is it equally necessary for vessels in tow of tugs to carry pilots as vessels without tugs?—Yes.

6317. Do you think it important that sailing vessels should have a pilot on board, even though they have a tug?—Yes; I have often more difficulty with a tug ahead of a ship than without one.

6318. Is it the general practice of a pilot on board of a vessel, to direct the course of the tug?—Yes; the masters of the tugs are generally very careless.

6319. The rule is, that the tug takes its direction from the sailing vessel?—Yes, as a rule.

6320. Is it not the invariable rule that the master of the tug takes his directions from the vessel, and not the vessel from the tug?—When I am on board a vessel drawing any depth of water, I always give a caution to the master of the tug to keep ahead of the ship.

6321. Do not you think that the masters of foreign vessels that take tugs would, as prudent men, take pilots also?—If they were prudent they would.

6322. Is it not the fact, that the great bulk of the masters of foreign vessels are more prudent than our own masters?—I know many of them would go without pilots until they get into difficulty.

6323. Is it not generally the case that the masters of these foreign vessels are rather more prudent than our own masters?—A great many of them are.

6324. Is not that the general character of the north country masters?—Yes; it is so.

6325. They are more prudent, as a rule, than our own masters?—As a rule they are, I admit that; but still, there are many of them not prudent.

6326. Do you agree with the memorial which the 40 pilots sent to the Board of Trade, that there might be a considerable reduction in the expense of management?—No, I do not agree with that; I do not think there could be a reduction; it seems to me a very lame argument, because only six or seven years ago we increased the size of our cutters to make more accommodation for the pilots.

6327. That letter points to a fewer number of boats?—We could not do with less to do the work properly.

6328. And provided that the same number of pilots is required, you would also require the same number of boats?—Yes.

6329. I believe the pilots of Hull share and share alike; the whole proceeds are divided amongst all?—Yes.

6330. So that the old men get the same as the young men?—Yes; the young men, when first made pilots, get the same as the old men.

6331. Is it not the fact, that most of the men who signed this memorial were the younger men of the lot?—They were mostly young men.

6332. Do not you think that they might like to break up the present system, under which the pilots share and share alike, and have a system in which a man would get what he earns for himself; should not you think that influenced them?—I should not think so at all.

6333. Should you be surprised to hear that it was the wish of the young men to be allowed to earn as much as they could, and not to put their earnings into hodge-podge?—It has been our opinion for some time that the young men ought to be on the second class; they ought not to get so much as the older ones.

6334. Possibly the young men have a different opinion upon the subject; they think that they ought to have more?—I suppose they do.

6335. This arrangement of all dividing equally is not a very popular one amongst the young men, is it?—I think it ought to be; they do no more than older men do.

6336. Would not they like to do more?—I do not think they would do more, from what I know of them.

Friday, 13*th May* 1870.

MEMBERS PRESENT:

Mr. Thomas Brassey.
Mr. Cave.
Mr. Gourley.
Mr. Graves.
Mr. Grieve.
Mr. John Stewart Hardy.
Sir John Hay.
Mr. Shaw Lefevre.
Mr. Malcolm.
Mr. Philip Wykeham Martin.
Mr. Norwood.
Mr. William Philip Price.
Sir Henry Selwin-Ibbetson.
Mr. Charles Turner.
Sir Charles Wingfield.

MR. JOHN SHAW LEFEVRE, IN THE CHAIR.

Mr. ANTHONY BANNISTER, was called in; and further Examined.

Mr. *Bannister.*
13 May 1870.

6337. Mr. *Norwood.*] IN the course of your examination on Wednesday you made a reference to a document produced by Mr. Farrer, Secretary to the Board of Trade, emanating from certain pilots at Hull, complaining somewhat of the management of the pilotage, and expressing an opinion in favour of this Bill, you stated in your Evidence that a counter document had since been signed by several of the pilots, who had signed the original document, and that in point of fact the opinions of the greater portion, if not all, of the pilots had changed; have you got that document?—Yes.

6338. Will you read it?—"We, the undersigned pilots of the River Humber, do hereby express our desire that a petition be prepared from us to be presented to the House of Commons, praying that the pilotage of the River Humber may be exempted from the operation of the Compulsory Pilotage Act. That Messrs. Holden & Sons be desired to prepare such petition, and represent us as our solicitors." That is signed by 56 of the pilots, the greater portion of whom had signed the previous document which Mr. Farrer produced here at the first meeting of the Committee.

6339. Will you state the date of that document?—It is dated the 14th of March 1870.

6340. Are you able to state the date of the document handed in by Mr. Farrer?—No.

6341. You know that the date of this document is subsequent to the other?—Yes.

6342. Mr. *Cave.*] You do not know how long after it was drawn up?—I do not; I never saw it, and I do not know anything about it.

6343. Mr. *Gourley.*] Who caused the pilots to change their opinions?—The pilots did not understand what was in the Bill, and as soon they had it explained, and had the Bill read over to them, they changed their minds and they said, "We must be represented in order that we may have our just rights," and they came to this resolution to petition against the Bill.

6344. What was their opinion of the Bill, when they signed the first petition?—They said that it arose from a misapprehension on the part of a man of the name of Richardson, who was sent on board the Trinity yacht during the autumn of last year, when this question was talked over, and he came to the conclusion that the pilots were going to be their own masters, and all sorts of things were to happen to them, and they thought it a good thing to get rid of the commissioners and every body else; and they signed this document, which was presented to the House by Mr. Farrer, or somebody else.

6345. They believing that by the voluntary system the management would be taken out of the hands of the Pilotage Board?—Yes, they thought they could have it all their own way, and do what they pleased, they thought it the best thing.

6346. Sir *Henry Selwin-Ibbetson.*] When they found that the Bill did not carry that out, they changed their minds?—Yes, they did not know what was in it.

6347. Mr. *Grieve.*] How many have changed their minds?—I am not in a position to say; 56 have signed this document, there are only 68 pilots altogether; the greater portion of those that signed the first petition signed this, and 40 here signed on the other side.

6348. *Chairman.*] Do you say that these persons who signed this document are the same persons who signed the petition to the Board of Trade?—I believe so, I understand the greater portion are.

6349. Do you know how many?—I have never seen the other document, therefore I cannot say; but the men themselves told me that they had signed the other document.

6350. Which men?—The men who signed it.

6351. Were you present when this was signed?—Fifty-six signed it.

6352. How many of the men told you that they had signed the other document?—Several of them, I cannot say how many.

6353. You say there were 40 who signed the other document?—I believe the greater portion of the 40 have signed this.

6354. Do you know how many?—No, I cannot say, because I have not seen the other document.

6355. Are any of the men who signed the original document here to give evidence?—No, all I had to produce was this document. Within

five

five or six, those who signed the second document have signed the first one.

6356. Mr. *Gourley.*] Where was that petition signed, was it signed in the Pilotage Board Office in Hull?—It was signed at a meeting of all the pilots.

6357. Was that at the Pilotage Board Office in Hull?—Yes.

6358. *Chairman.*] This document does not express any opinion upon compulsory pilotage, does it?—Yes, it expresses the opinion that they would like to be left out of this Bill altogether.

6359. But they do not express an opinion of satisfaction at the present state of things at Hull?—They do not want any change to be made; they believe compulsory pilotage to be all right.

6360. Those are not the terms of the document?—As I read it, that is what it means.

6361. Are any one of those pilots who signed the original document, who have changed their minds and signed this document, present to give a reason for that change?—I could have them here, but they have not come.

6362. Though you brought two of the pilots up here on Wednesday, you did not think it worth while to bring up any of the pilots who signed the original document?—The commission cannot afford it.

6363. Though you brought up two pilots to give evidence against the Bill, yet you did not think it worth while to bring up one of the men who having signed the petition for the Bill has changed his mind?—We did not think it necessary.

6364. You did not think it desirable to do so; was that it?—Yes.

6365. You thought it desirable to have two of the pilots here to give evidence against the Bill, but you did not think it desirable to have one of those who having signed the petition for the Bill, has changed his mind?—We were advised to cut it as short as we could.

6366. Were not you advised that it was not desirable to bring up one of those pilots?—No.

6367. Why did not you bring one of the men?—We did not think it necessary.

6368. Surely it is very material that one of those men having originally signed the petition for the Bill, and who has since changed his mind for reasons satisfactory to himself, should be here to explain his reasons; but you did not think it desirable to bring him up here?—We did not think it desirable, because we thought that when the two things were put together, they could be easily proved.

6369. Is it not very material to the Committee that the men who had originally signed the petition for the Bill, having subsequently changed their minds, should be here to give their reasons for so doing?—We did not think it necessary to clog the evidence with more than we could help.

6370. You thought the evidence immaterial?—All they could say if they were here is, that when they signed the first document, they did not know what they were signing.

6371. Is it not probable that they did not quite understand it, when they signed the subsequent one?—It was read over to them; but the other document was not read over to them; half the people signed it, and did not have it read over to them.

6372. Mr. *Grieve.*] Did you hear any of them say so?—Yes.

6373. *Chairman.*] Did not you think that evidence upon that point, should be brought from the men who were parties to it?—It is easily got over.

6374. But your opinion is that it was not material to bring any of the men up?—We did not think it desirable to take up the time of the Committee.

6375. You thought it desirable not to bring them here?—We did.

6376. Sir *Henry Selwin-Ibbetson.*] I understand that it was a pilot of the name of Richardson who got the pilots to sign this document?—That person was a pilot on board the Trinity yacht last autumn, when it was on the Humber; the people on board gave him a glass of wine, and treated him very well.

6377. Mr. *Norwood.*] You mean to say that it was the yacht on which the honourable Chairman was on board?—Yes.

6378. *Chairman.*] What do you mean by suggesting that he was behaved very well to?—He said he never enjoyed himself so much in his life; he was on board a capital ship, and he was very comfortable.

6379. Sir *Charles Wingfield.*] The heading of the petition would lead one to the impression that those who signed it did not understand it. They pray to be exempt from the Compulsory Pilotage Act. The Compulsory Pilotage Act is now in force, therefore this reads rather as a petition in favour of the Bill for abolishing compulsory pilotage?—I do not read it so; they do not want a change.

6380. The present Bill is not a compulsory pilotage Act; it is a Bill for the abolition of compulsory pilotage?—They think it is better to leave it as it is.

6381. Mr. *Gourley.*] Who explained the provisions of the Bill to them?—We got a copy of the Bill and laid it before the men at a meeting. The Bill was read over to them, and they saw that they would not have compensation for what they were about to give up.

6382. *Chairman.*] Then it was on the question of compensation?—That was one of the points.

6383. That was the main point, was it not?—No; I do not think it was.

6384. They were not satisfied with the compensation under the Bill?—No; they were not satisfied with the Bill at all.

6385. The main point was compensation, was it not?—No; I do not think it was. The main point was that when they signed the document originally they did not understand what the Bill was for.

6386. They must have signed the original document for some reason or other. You have told us now that they are not satisfied with the Bill, and you said that one of the grounds of their dissatisfaction was that they were not properly compensated under the Bill?—That was one of the points.

6387. Now was not another point this; that the Bill as now proposed did not sufficiently free them from the pilotage authorities of Hull?—Yes; they wanted the pilotage authorities done away with.

6388. Then they are not satisfied with the pilotage authorities?—They did not say that they were dissatisfied, but they thought that if they were to have compulsory pilotage done away with, they had better be left to take their chance, and of course the public might suffer.

Mr. *Bannister.*

13 May 1870.

6389. Was not one of the reasons of their originally being in favour of the Bill, that they thought they would be entirely free from the pilotage authorities of Hull, that they are dissatisfied with the pilotage authorities?—No doubt that was one of the reasons.

6390. Was not another reason that a good many of the pilots did not agree with the system under which all their earnings are put into hodge-podge, and divided amongst the men?—I never heard that discussed; all the pilots, whether young men or old men, share and share alike.

6391. Is it not your opinion that some of the pilots do not approve of that?—I believe they approve of the system.

6392. You believe they do approve of it?—I never heard a complaint, and I have been chairman 20 years.

6393. What were their grounds for dissatisfaction with the existing state of things, when the pilots signed the first petition?—They were told by Richardson that there were going to be certain alterations made, and that the Pilotage Commission was to be done away with, and that they were to be on their own hook, and when they had no restraint upon them they could do as they pleased.

6394. Forty out of the pilots of Hull thought they would be better off if pilotage was free?—No, that document in your possession is only signed by 40.

6395. The 40 pilots who signed the original document thought that they would be better off if the pilotage was entirely free?—No, they thought that some would get compensation from the Government, and, as the pilotage was to be made compulsory, they would have to give up their appointments, and they thought if they gave up their appointments they would get some compensation, and go into some other business.

Captain JOHN DREW, was called in; and Examined.

Captain *J. Drew.*

6396. Mr. *Cave.*] I BELIEVE you are Harbour Master of the Port of Bristol?—I am.

6397. And you have been so since 1841, I think?—Yes.

6398. Are you well acquainted with the navigation of the Bristol Channel?—I have known it since the year 1812.

6399. Are you also Younger Brother of the Trinity House?—Yes.

6400. What was your occupation before you were appointed harbour master?—I commanded a ship to the West Indies.

6401. For how long?—For nearly 20 years.

6402. Were those your own ships?—They were my own ships, part of the time.

6403. What is the pilotage authority of Bristol?—It is constituted under an Act of 47 Geo. 3; it is a private Act.

6404. What is the pilotage authority?—The pilotage authority consists of certain members of the town council, forming the docks committee, 19 in number.

6405. They act under the 47 Geo. 3, and also the Act of 1848, which is the Bristol Dock Act?—Yes.

6406. Those Acts regulate the pilotage of vessels to the eastward of Lundy?—Yes, from Lundy to Bristol.

6407. We need not go into the particulars of those Acts, because there has been an alteration in the system since 1861, has there not?—Yes; the Act of 1861, as far as Bristol was concerned, did away with the pilotage to Newport, Cardiff, and Gloucester.

6408. Did it in any way interfere with the pilotage to Bristol itself?—No.

6409. Did it interfere with the jurisdiction of the corporation?—No.

6410. How far does their jurisdiction extend?—For pilotage, it extends to Lundy.

6411. And for other purposes, I believe, it extends to the Flat Holmes?—That is the magisterial jurisdiction.

6412. Under the present system, all vessels of every kind bound to Bristol are compelled to take pilots from Lundy, are they not?—Yes.

6413. Is there any exemption?—None, except for vessels under 80 tons; and if the pilots force their services on board it is half pilotage.

6414. A vessel under 80 tons is not bound to take a pilot, unless he tenders himself, and if he does, they are obliged to pay half pilotage?—Yes.

6415. *Chairman.*] All vessels under 80 tons pay half pilotage?—Yes, if a pilot insists on going aboard her.

6416. Mr. *Cave.*] They are not obliged to wait for a pilot?—No.

6417. *Chairman.*] Does that apply to coasters?—No, coasters and Irish vessels are free from pilotage.

6418. Mr. *Cave.*] Are there also vessels that have certificated masters or mates as pilots?—Yes, all the masters of the coasting steam navigation are certificated men.

6419. The steamers running to Ireland, to the coast of Cornwall, and to the coast of Wales, do not take pilots, but they have licensed masters on board?—They have certificated masters on board, having passed an examination.

6420. Under whom do they pass that examination?—Myself, and the officers of the Mercantile Marine Board.

6421. Is there any limit placed upon licenses given to masters or mates who apply for examination?—No, for the south side of the channel.

6422. There is no difficulty placed in the way of any master or mate obtaining a certificate, if he offers himself for examination, and passes?—No.

6423. Are the pilots examined before the same authority?—Yes.

6424. Is their number limited?—We have sufficient for our work; at one time the number was 84, and now it is 60.

6425. Has that diminution been since the passing of the Act of 1861?—In a great measure.

6426. In consequence of pilotage which was formerly ranked as Bristol pilotage, being now ranked under Cardiff, Newport, and Gloucester?—Yes, the channel having been given to them independent of their local waters.

6427. I believe you have a plan of the port of Bristol showing the extent of the jurisdiction?—I have (*producing the same*); that is for magisterial purposes.

6428. And you have also a plan of the Avon, have you not?—Yes (*producing the same*).

6429. Where is the chief difficulty in the navi-

gation

gation of the Bristol Channel; is it from Lundy to Kingroad, or from Kingroad upwards?—From Flat Holmes to Kingroad isthe most difficult part of the channel.

6430. Should you say that it was more difficult than from Kingroad to Bristol up the Avon?—No, it is much more difficult than it is from the Holmes to Kingroad.

6431. The Avon, from Kingroad to Bristol, is much more difficult than from the Holmes to Kingroad?—Yes.

6432. Why is that?—From the limited distance which the vessels have to move in; the points are so sharp, and the river is so narrow.

6433. What is the rise and fall of the tide at the dock gates of Bristol?—Thirty-two feet spring tides, and 17 feet neap tides.

6434. Are there improvements in progress in the navigation of the river?—There are, to the extent of 200,000 *l.*

6435. Therefore, even under the present system, the difficulties of the navigation are very considerable?—Very great indeed.

6436. What sized vessels come to Bristol itself?—We have had vessels from 1,200 to 1,400 tons, drawing 22 feet of water.

6437. And I believe occasionally you have even larger vessels than that?—We have had one 1,600 tons.

6438. And I believe even larger than that?—We have had the "Demerara" and the "Great Britain."

6439. You produce a table of the pilotage rates and bye-laws, do not you?—Yes (*producing the same*).

6440. I think you said that the present number of pilots is 60?—Yes.

6441. How many boats do they own?—Forty-four boats.

6442. What is the tonnage of those boats?—From 16 to 40 tons; the cause of that is that the entrance of the channel is so wide. We go from Culver over to Hartland, a distance of 40 miles.

6443. The reason of there being such a large number of boats is that they are so long away?—Yes, they are obliged to spread over so large a field.

6444. How do those pilots that are above the number of 44, which is the number of the boats, manage to do their work?—They go with the others.

6445. Are those boats owned in shares?—No, they are owned by the pilots, but the men who have no boats pay 3 *s.* in the pound boat hire and find themselves.

6446. Are those pilot boats well found?—Yes.

6447. And can they keep the sea?—Yes, we have had three losses in 30 years, crews and boats foundered.

6448. I believe they go as far as Falmouth sometimes?—Yes.

6449. In all weathers?—In all weathers.

6450. And the pilots themselves are a respectable body of men?—Very much so.

6451. Is that their sole business?—Entirely.

6452. And besides the pilots employed, how many seamen and boys are employed on board those boats?—There are 80 men and 40 boys; a crew consists of two men and a boy.

6453. Supposing the exclusive privilege of piloting vessels to Bristol was done away with, do you think that the pilots would be found westward of Lundy as they are now?—I fear not.

6454. Do they pilot as many vessels out of Bristol as they pilot in?—Yes, all vessels that are piloted in are piloted out.

6455. Do they take them as far as they go to wait for vessels coming in?—No, Newport and Cardiff is where the mineral is to be had; they go for freight, and we pilot them from Bristol to Newport and Cardiff.

6456. They always pilot up?—Yes.

6457. And then the pilots go seeking for inward-bound vessels, bound for the port of Bristol?—They do.

6458. *Chairman.*] I suppose your vessels go to Cardiff and Newport for cargoes?—Yes, for coal and iron.

6459. Then they are out of the compulsory district?—Yes.

6460. Mr. *Cave.*] I believe the imports of Bristol are very considerably larger than the exports?—Yes, the import duty amounts to 1,200,000 *l.*

6461. And the cargoes of the large vessels coming there are very valuable cargoes, are they not?—The value of a sugar cargo is 20,000 *l.*

6462. At present the Bristol pilots have the monopoly of the Channel, with reference to all vessels bound to Bristol, have they not?—Yes.

6463. With regard to other vessels, they can be superseded as soon as they get within the Lundy?—No; if a vessel was bound to Cardiff, and they had a Bristol pilot on board, the Cardiff man could not supersede him till he left the Penarth Roads; that is, the inner waters of Cardiff, but a Cardiff pilot is licensed also to Lundy.

6464. Supposing a vessel was bound to Bristol, and took a Cardiff pilot on the other side of the Lundy, as soon as he got eastward of Lundy he could be superseded by a Bristol pilot, could he not?—He could.

6465. I think, by the Act of 1861, Bristol pilots have the option of being licensed for those other ports?—Yes.

6466. Have many of them taken advantage of that?—I think 16 or 17 have taken advantage of it for Cardiff; they applied for Newport, but so many obstacles and difficulties were placed in their way that they gave up the idea.

6467. You would say that it has not been the means of influencing pilots to get supplemental licenses from other ports?—No.

6468. The tendency of the system is, that the pilots of each port are licensed to the port itself, and confined to that port?—Yes.

6469. Looking at it from a pilot point of view, and the keeping up of a sufficient staff of pilots, I believe you would see great objection to doing away with the compulsory system from Lundy inwards?—That is my private opinion.

6470. I think, besides being the manager of the pilots, you are also harbour master of the Avon?—Yes; under the Dock Act of 1848.

6471. But there is another harbour master for Bristol itself, I believe?—Yes; there is a harbour master of the inner water inside the dock gates.

6472. Then you may say, practically, that the Avon, from the dock gates, as far as Kingroad, may be considered another harbour?—Under different guidance and management.

6473. But it is under a harbour master?—It is under myself, as harbour master.

6474. The difficulties of the navigation there are such that you require not only the supervision of the pilots but the marshalling of the ves-

Captain *J. Drew.*

13 May 1870.

sels, which, of course, is the essential duty of the harbour master?—There is a certain amount of judgment to be exercised, as to when a vessel shall pass up.

6475. Looking at it simply from a harbour-master point of view, supposing there was a voluntary system up to Kingroad, would you see any stronger objection to a voluntary system from Kingroad to the dock gates of Bristol?—Yes, decidedly.

6476. On what ground?—Because the navigation is so intricate and difficult.

6477. I believe you have to inquire, in all cases, as to what draught of water the vessel has?—Yes; a report is made to me upon the arrival of a vessel.

6478. And she lies at Kingroad until she is allowed to proceed?—Yes.

6479. I believe, in many parts of the river where there are curves, the channel narrows and widens very rapidly, does not it?—It does.

6480. And if a vessel is meeting another, in some cases, though there may appear to be a fair way, she has to stop for some distance before the other vessel meets her, in order to give an opportunity of passing in a wide place?—Yes; we so manage the ships that they shall not pass at these points if there is a possibility of avoiding it.

6481. I need hardly ask if such a system as that does not require a very accurate knowledge of the river?—No question about it.

6482. And a strict system of discipline?—Yes; it requires practical men thoroughly acquainted with it.

6483. I suppose the passage from Lundy to Kingroad can be made, in fine weather in the summer, without very much danger?—Yes; it is 60 miles; there are difficulties in the way; the sets of the tide are very uncertain, and, without local information, vessels are likely to get aground.

6484. I believe the estuary is well buoyed and lighted?—Yes, thoroughly.

6485. In bad weather of course it would be much more difficult?—Yes.

6486. Do you think, in ordinary cases, that the master of a valuable vessel would run up from Lundy to Kingroad without a pilot, unless he had a person on board who held a license?—I think not; I do not think that he would run that risk; I think that he would take a pilot gladly.

6487. Do you think that that risk would be run by another class of vessels?—There are some small vessels that would run the risk until they got into the narrow waters.

6488. There is a good deal of competition, is there not, in the trade by shipowners; there are a certain class of shipowners to whom a very small excess in their expenditure would almost make the difference between a voyage paying or not?—The Channel pilotage is very moderate; as much so as in any place anywhere; the highest is 10 guineas, from Lundy to Kingroad, and the lowest 4 guineas; that is for the whole 80 miles.

6489. Do you think that there is any class of vessels the masters of which would run the risk to save the four guineas?—Yes; I have known instances where they have done so.

6490. Not only to the danger of their property, but to the lives of the sailors?—Yes; the Scare-weather and the Nash Sands are very dangerous.

6491. There have been many wrecks on the Nash Sands, and even steamers have been wrecked there, have they not?—Yes; there was one very recently.

6492. In the river itself steam tugs are required in almost all cases, are they not?—Yes; they cannot pass up without them.

6493. Under what control are the steam tugs?—Under the control of the pilots.

6494. Are the masters of the steam tugs competent to take vessels up without a pilot?—I suppose they imagine they are, but they are not permitted to do so.

6495. Supposing a tug was drawing a vessel up the river without a pilot, would it increase the danger of the vessel?—I imagine so; I always find that these men throw liability overboard directly anything happens.

6496. Supposing that voluntary pilotage was established in the river itself, could you manage the marshalling of the vessels as you do, without the power you have at present?—No; I should have no power over them.

6497. In case an accident happened to a vessel in the river, I presume the whole trade of the port would be stopped for some time?—Yes; for a week or 10 days.

6498. Do you recollect how long the "Demerara" laid across the river?—About three days; and she stopped the whole navigation of the river the whole time.

6499. That is a most serious impediment to the trade, is it not?—It is a most serious loss.

6500. I believe some vessels cannot go up or down except at spring tides?—Vessels of 60 feet of water require spring tides; five feet more than the ship draws is the amount of water which they require.

6501. I believe it is the duty of the corporation of the port to keep the channels of communication uninterrupted, is it not?—It is.

6502. And do they state that they could not do so unless they have the most entire control over the vessels coming up and down?—That has been the feeling.

6503. Do they gain anything by the pilotage?—No; I believe there is an expense attending it.

6504. Has there been any movement in favour of the abolition of compulsory pilotage in the port of Bristol?—No, I have not heard of any; I believe the Chamber of Commerce would do it.

6505. In what way?—I believe there was a difference of opinion there; they were desirous that the channel should be free.

6506. When you say "the channel," do you mean the channel from Kingroad?—From Lundy.

6507. Did they express any opinion as to the river itself?—They are in favour of the present system continuing for the river.

6508. Would you imagine that you could keep up the present staff of 60 pilots, if voluntary pilotage was established in the channel?—I think not.

6509. You think, in that case, you would have to establish a supplemental set of pilots for Kingroad and for the river itself?—No; I think the lower part of the channel would be neglected, and the pilots would be looking out for ships where they could find them, and be paid a pilotage.

6510. Whenever vessels were boarded, of course there would be pilotage to pay?—Yes.

6511. But you think the pilots would consider it too uncertain to go out far?—Yes.

6512. And that they would remain at Kingroad?

road?—At all events they would not go far below it.

6513. Would they, under those circumstances, earn anything like what they earn now?—No.

6514. Would it not be difficult to keep up a sufficient staff for the Avon itself?—I do not think there would be any difficulty, but the number would not be a fourth of what we have at the present time for the river.

6515. Would it be sufficient for the river?—Yes; 20 would be quite enough.

6516. Without delaying vessels at Kingroad?—Yes; I think 20 would be enough.

6517. Speaking as a harbour-master, you do not very much care if the number of pilots is reduced?—No; when we had the entire channel, it was necessary to have a very large staff, and I doubt whether we could not spare some of the pilots now.

6518. With regard to the men themselves, it would be a matter of compensation?—Quite so.

6519. Has there been a decrease in the trade of Bristol?—No; there has been a large increase.

6520. Has there been a diminution in the pilotage taken by the Bristol pilots?—No; there was an increase of nearly 1,200 *l.* in the year 1869.

6521. Since when?—From the year before.

6522. There has been an increase of from 1,000 *l.* to 1,200 *l.* in money actually taken by the pilots during that year?—Yes; in consequence of the increase of trade to the port.

6523. It is said that in consequence of compulsory pilotage at Bristol, the Bristol pilots earn less than they did, and that in consequence of voluntary pilotage in Cardiff and Newport, the Cardiff and Newport pilots earn more than they did; would you accept that statement?—No, I would not. My answer would be that the trade of the port has been the cause of the great increase of pilotage to Cardiff and Newport. The trade of the channel has increased within the last seven years 75 per cent.

6524. Have the earnings of the pilotage, under the voluntary system, kept pace with that increase of trade?—No, it has not; one would be about equal to 14 per cent., and the other would be equal to about 75 per cent.

6525. Your impression is, that under the voluntary system less is earned than under the compulsory system?—Yes; from the figures that I have had in the Returns of the Board of Trade. I will put in this statement with regard to the increase of tonnage.

6526. Have you heard any complaints against the present system in Bristol?—No.

6527. Neither by the pilots nor by the shipowners?—No; I have heard no complaints for some considerable time.

6528. Have you turned your attention at all to the question of responsibility of the owners of vessels, in case compulsory pilotage was abolished?—No, I have not.

6529. Have you heard it discussed at all?—No, I have not.

6530. Then you cannot express any opinion upon that point?—No.

6531. Is there any other statement that you would like to add to what you have stated to the Committee?—No; I think I have said all that is necessary.

6532. Sir *Charles Wingfield.*] I observe that the petition from the mayor, aldermen, and burgesses of the city of Bristol, expresses an opinion that between Lundy Island and the Holmes, pilotage might be voluntary?—Yes, that is the opinion of the city.

6533. It is not your opinion?—No; I give my opinion as a practical man, of course; I have given way to the city's opinion.

6534. What is their reason for giving that opinion?—They imagine that is unnecessary.

6535. Why; is it because the navigation is so easy?—I suppose it must be so, in a degree.

6536. I suppose that can be the only reason?—I suppose that is so.

6537. You say that the tugs towing vessels to the Avon are obliged to employ pilots?—No, they are under the direction of the pilot on board the ship which is being towed.

6538. There is not a pilot on board the tug as well?—No.

6539. I believe at Cardiff and Newport the pilotage is voluntary?—Yes.

6540. Ships may take pilots or not, as they please?—Yes.

6541. That system has been found to answer there very well, has it not?—I believe so; a man at Cardiff can earn as much in a day as one of the unfortunate Bristol Channel pilots can earn in a week; a man at Cardiff can take two vessels in and two vessels out of Cardiff docks, and anchor in the Penarth Roads.

6542. Do the great majority of vessels (notwithstanding it is optional to take pilots) employ pilots in going into Cardiff and Newport?—I think they all take pilots into the port, or generally so.

6543. Though they are not obliged to do so?—Yes.

6544. Why do not they take them going out?—I mean in and out; it is a very limited distance.

6545. It being entirely optional with the masters of vessels, whether they take pilots or not, and the fact being that they do take pilots; does not it follow that they will still take pilots in a difficult river like the Avon?—No, I think not; I have seen men who would undertake the navigation of the river.

6546. Still, when you have the fact before you, that in an easy river all masters of vessels do take pilots, though not obliged to do so, it seems to follow as a logical deduction, that in a difficult river they would equally take the precaution of employing pilots?—I would not give them the chance of the option; I would not run the risk of having the river blocked and the trade stopped.

6547. You cannot dismiss the apprehension from your mind, that some masters or owners of ships would be foolhardy enough to attempt the passage without a pilot?—Yes, and they might obstruct the navigation for a week or 10 days.

6548. *Chairman.*] Do you recollect the change in 1861?—Yes, quite well.

6549. I think the Bristol Channel Pilotage Bill was opposed by the Bristol Corporation?—Yes.

6550. Did you come and give evidence on that occasion?—I did.

6551. You opposed that Bill?—Yes.

6552. Will you tell the Committee on what grounds you opposed that Bill?—Because, as a practical man, I would take a pilot wherever I could get one.

6553. You thought it would be dangerous to the port of Gloucester and Cardiff, that their

Captain *J. Drew.*

13 May 1870.

vessels should no longer be compelled to take pilots?—The Cardiff, Newport, and Gloucester Bill went for the most stringent compulsory pilotage that they could possibly have; it was made free in Committee.

6554. But you were opposed to it?—I was opposed to the Bill as an officer of the corporate body of Bristol.

6555. The Gloucester Bill proposed to make pilotage voluntary, did it not?—No, the original Bill was not so; it was the Parliamentary Committee that made it free.

6556. Are you certain that both Cardiff and Bristol people brought in a Bill leaving it compulsory for those ports?—They went for the most stringent compulsory pilotage that was possible to have in a Bill, and it was made free pilotage by the members of the Committee.

6557. At whose instance was it made free?—By the gentlemen on the Committee.

6558. Was there no evidence given in favour of free pilotage?—I cannot say.

6559. Do you mean that the Gloucester and Cardiff people came for a Bill to enact a stringent compulsory pilotage for their waters; but to separate it from that of Bristol, and that the Committee, without hearing evidence in favour of free pilotage, made it free?—They heard evidence no doubt; but the result was that instead of getting the Bill as they originally had it before the Committee, the Bill was made free and non-compulsory.

6560. I suppose the Committee came to the opinion after hearing the evidence that it was advisable to make pilotage free for those places?—Yes.

6561. Were you examined upon that point, and did you give evidence?—I gave evidence with regard to the channel.

6562. Did you give evidence to the effect that it was desirable to retain compulsory pilotage for both Gloucester and Cardiff?—Yes, I think it advisable now, and I thought so then.

6563. You gave evidence there?—Yes.

6564. And I believe you were opposed to making it free?—Yes.

6565. It was made free, was it not?—Yes.

6566. Has any evil resulted, in your opinion, from it?—No.

6567. Have you heard any complaints of it?—No.

6568. Have you heard of any disaster having happened to vessels in consequence of the pilotage being free?—No.

6569. Have you studied at all the result of the change as regards Gloucester and Cardiff?—No.

6570. Have you formed any opinion upon the subject?—No.

6571. Have you heard of any complaints?—No.

6572. And you have no reason to believe that any evil has resulted from the change?—No, I have not heard anything of the kind.

6573. Do you still think that pilotage should be compulsory as regards Bristol?—That is my opinion as a practical sailor.

6574. Have you made any personal investigation into the the change as far as Gloucester is concerned?—No.

6575. But you come here to express a strong opinion that compulsory pilotage should be retained as far as Bristol is concerned?—I think it sufficient to confine myself to my own port.

6576. You did not think it material to inquire into the results of the change at Gloucester?—No.

6577. Although every vessel going up to Gloucester passes through the Bristol pilotage waters?—Yes, it must do so.

6578. As far as Kingroad and Lundy the districts are practically the same; every vessel must pass through the Bristol pilotage waters to get up to Gloucester, is not that the case?—Yes.

6579. And, notwithstanding that, you did not think it desirable or necessary to inquire into the result of the change as far as Gloucester is concerned?—No.

6580. And you still hold the opinion that pilotage should be compulsory, as far as Bristol is concerned?—That is my opinion, as an individual.

6581. Why do you say, "as an individual"?—Because, I look at it in a practical sense, and in a practical way; I fancy if I was coming into Bristol from the Western Ocean, I should be glad to get a pilot as soon as I could.

6582. Why do you say, "as an individual"?—Because the City of Bristol takes a different view of the subject.

6583. They think the channel pilotage should be free?—Yes, for the channel at all events.

6584. Your opinion is divided as to the river, is it not?—Yes, we are anxious to maintain the present system for the river.

6585. The great bulk of the people think it should be free as far as the entrance of the river is concerned, but their opinion is divided as to the river?—There is no division of opinion as to the river.

6586. There is a unanimity as to the pilots up to Kingroad, is there not?—I suppose so.

6587. It is only your own individual opinion which is against free pilotage up to that point?—Yes.

6588. As far as pilotage, up to that point, is concerned, the general opinion of Bristol is in favour of the Bill?—I suppose so, from their petition.

6589. You told the Committee, that in your opinion, the pilots would not cruise out as far as Lundy Island, if the Bill passes; is it not the fact that a considerable number of the Bristol pilots do cruise further than Lundy Island?—A considerable number go to Falmouth.

6590. They meet the vessels there, and bring them round?—Yes.

6591. Is there any reason to suppose that they will not do that if the Bill should pass?—No; when they get to Lundy Island they will know that they are secure of their pilotage.

6592. If a vessel takes a pilot from Falmouth to Lundy Island, is it not clear to you that they would also take a pilot from Lundy Island up to Bristol?—Any ship may call there for orders.

6593. Do not a considerable number of vessels coming into Bristol take a pilot at Falmouth?—The greater number at all events.

6594. I want to know whether that is not likely to continue if this Bill is passed?—I do not know; I fancy not.

6595. Why?—When they reach Lundy, they get into their own waters, and they would pass from Lundy to Kingroad.

6596. I mean, from Falmouth, would they continue to take their pilots at Falmouth, as they do now?—Perhaps they would.

6597. Does

6597. Does not the danger of the navigation commence after Lundy Island for the Bristol Channel?—Yes; from Lundy upwards.

6598. Therefore is it not probable that vessels, as they want pilots, will find them there?—It may be so.

6599. You told the Committee that you are gradually reducing the number of pilots, in consequence of the change which took place in 1861?—We have not increased the number; they decrease themselves by death and other causes.

6600. Have you made any further appointments?—No.

6601. But you are gradually reducing the number?—Yes.

6602. With a view of restoring their incomes to what they were before the change?—It was not with that view; there was no idea of increasing the income.

6603. Is it not the fact that their incomes are falling off?—Yes.

6604. Is it not the fact that previous to 1860 the average income of the pilots was 150 *l.* a year, and now it is reduced to 80 *l.*?—Yes.

6605. In consequence of the work that has been taken off them and given to the voluntary pilots of Gloucester and Cardiff?—Yes.

6606. So that you have at present a superabundance of pilots?—Yes.

6607. And you are gradually reducing their number?—Yes.

6608. And you will not make any appointments until you think that the proportion of pilots is insufficient for the trade?—No.

6609. And you will estimate that by their incomes?—Yes; and by the trade.

6610. But mainly by their income?—It will depend upon whether the trade requires a greater number at present; we do not require more.

6611. Take the navigation of vessels going up to Gloucester, is not the navigation of Kingroad upwards more difficult than it is from Lundy Island to Kingroad?—All vessels are towed with tugs ahead, and that does away with the difficulty.

6612. Looking at the navigation, is it not more difficult after passing Kingroad, going up to Gloucester, than it is from Lundy Island to Kingroad?—Yes; it is more intricate.

6613. Are you aware that for the most part vessels going up to Gloucester do take pilots?—I believe so.

6614. Have you any doubt in your mind that vessels will continue to take pilots as far as King road from Lundy Island?—I think, in fine weather, vessels coming from the westward may say to the pilot, when his services are offered at Lundy, "I shall not require your services till I get up higher;" there is a certain less sum charged for the pilotage there; they come up as far as Minehead, which is 40 miles from Lundy, and they then save 4 *l.* 4 *s.*

6615. You think they will take pilots eventually, though not so soon as Lundy Island?—Yes.

6616. Will they take pilots when they get up to the Holmes, notwithstanding the passing of this Bill?—As I said before, there are men who would do so.

6617. But you think the great bulk would take pilots there?—I think the great majority of the men would do so.

6618. But you are afraid that they would not take pilots so early as Lundy Island?—Yes.

6619. Is it not the practice of vessels going to Gloucester, not to take pilots so soon as at Lundy Island?—We pilot a great many.

6620. What do you mean by that?—We pilot vessels from Lundy Island to Gloucester.

6621. What number of vessels of that kind do you pilot?—I am not prepared to say at this moment.

6622. The great bulk of Gloucester vessels do take pilots at Lundy Island, do they not?—Yes.

6623. But they often take them at Kingroad, do they not?—Yes, they come higher up.

6624. I presume that will be the course pursued by the Bristol vessels; if this Bill were to pass a certain number would take pilots at Lundy Island, and a certain number would not take until they get higher up?—Yes, and there would be no inducement for the men to come far to the westward, cruising, because the first two stages would cut off the larger amount of the pilotage.

6625. Then there will be a greater employment of Gloucester vessels that would want pilots at Lundy Island, and there would be a proportion of Bristol vessels that would want pilots at Lundy Island?—Not a fifth of the Gloucester vessels would be piloted from Lundy Island.

6626. I presume a greater proportion of Bristol vessels would want pilots at Lundy Island?—I think a great number would.

6627. The Bristol vessels are larger in proportion?—Yes.

6628. The larger number would want pilots at Lundy Island?—Yes.

6629. And just as now, a certain number of Bristol vessels would want pilots at Falmouth, so in the future a certain number only will want pilots at Lundy Island, and a certain number only higher up than Lundy Island?—It must be all imaginary.

6630. Will not the result be this: that pilots will be found just in proportion as they are wanted?—Perhaps so; the supply may be equal to the demand.

6631. I understood you to make a distinction between the river and the outside pilotage?—Yes.

6632. You think the river more dangerous?—Yes.

6633. It is an extension rather of the harbour?—Yes.

6634. I think at Gloucester there is a different set of pilots for the river and the sea channel?—Yes.

6635. Is not the navigation of the Avon from Kingroad up to Bristol very much in the nature of a canal?—No; look at the rise of the tide; a canal is stationary water.

6636. It is a very narrow channel from Kingroad to the entrance of the basin, is it not?—Yes, it is very limited.

6637. And it is very much like a canal, with the exception of the rise and fall of the tide?—That is everything; if you have 20 feet of water at the commencement of the canal, you will have 20 feet of water at the end, but you do not know what you will have at the rise and fall of the tide.

6638. You think that the great bulk of vessels will take pilots before they come into the river?—Yes.

6639. But if this Bill passes, do you think the great bulk of vessels will take pilots?—It may be so.

6640. If the dangers of the river itself are greater than they are outside the river, will not more vessels take pilots when they come into the river?

Captain *J. Drew.*

13 May 1870.

river?—I would not run the risk of letting a man who was not competent navigate the river without having a pilot on board.

6641. You said that you would not allow any but competent men to navigate the river?—Not to navigate the river as a pilot.

6642. Do the certificates which are given to these coasting vessels cover the river as well as the outside channel?—Yes.

6643. Are certificates taken out by the masters of the vessels that go in the coasting trade to Ireland and other places?—Yes.

6644. And they now navigate the river without a licensed pilot?—Yes; they pass up and down each week.

6645. Mr. *Graves.*] I understood your main reason for wishing compulsory pilotage in the Avon to continue is, in order that the river might be kept clear and free for navigation?—Yes.

6646. Not so much for the protection of an individual vessel, as for the protection of the whole?—Yes; and the trade.

6647. You look on it, in fact, more as a harbour regulation?—Yes.

6648. And you think that it is necessary, in order to preserve clear traffic in so crowded and peculiar a river as the Avon, that every vessel going up and down should have a competent and qualified person to conduct it?—Yes, that is my view.

6649. Have you any practical knowledge of the port of Cardiff at all?—No, not much.

6650. Have you sufficient to be able to contrast the passage in and out of Cardiff with the seven miles of the Avon, from Kingroad to Bristol?—The one is a cutting of a few hundred yards.

6651. So that there you have the same accessory for preserving the harbour regulation as you have in the Avon?—They can take pilots if they like at the Penarth Docks.

6652. I look at it solely as a harbour regulation. I ask you whether, from your own knowledge, you could compare the Cardiff Cut with the Avon, from Kingroad to Bristol, and whether you consider there is the same necessity at Cardiff for having on board every ship a pilot, as there is in the Avon?—No, there is no comparison between the two places.

6653. Now with regard to Gloucester, I suppose you have been frequently up and down the Severn?—No, I have only been as far as Chepstow.

6654. Have you been as far as the entrance to the canal?—No, never.

6655. Can you speak from your own general knowledge?—I forbear giving any opinion upon general knowledge.

6656. Are you not able to answer this question from general knowledge; whether there is any necessity for a harbour regulation in the Severn, such as exists in the Avon, for a pilot being on every ship. I do not now talk of tides, weather, or any physical condition, but simply as a harbour regulation?—You can hardly call the Severn the same kind of river as the Avon, as the other has a bolder and greater span; though the tides are so rapid there, and the difficulties are great, there is no question about that.

6657. I do not want you to look at it from a difficult point of view, but I want to know, would a vessel grounding in the Severn, be the same obstruction to the trade and commerce of the Severn, that it would be to the trade and commerce of the Avon?—Assuredly not.

6658. *Chairman.*] You have never been there, I believe?—I have never been there, but I know that there is a greater span of water there, and vessels can pass.

6659. Mr. *Graves.*] Then you would argue that there is something exceptional in your own river, which demands a greater vigilance in bringing the vessels up and down in the interest of the port itself?—Unquestionably.

6660. You said in answer to the Chairman, that it might not be desirable to make any more appointments of pilots; have you apprentices in your pilotage system in the Avon?—We had 40, but we have none now; the men who go in the skiffs are qualified after seven years' servitude to be pilots, if they can pass their examination.

6661. Is there any statutory obligation?—The bye-laws state, there shall be apprentices, but they cannot get the boys.

6662. I presume you have some boys in the skiffs?—One boy in each skiff, but they are not apprentices.

6663. Is there any statutory obligation in your bye-laws, to compel you to give a man a license, when he has served a certain number of years in the service?—Yes.

6664. How can you, if that is the case, refuse to license those men when their turn comes?—It depends entirely upon the want.

6665. Then you have it in your power?—Yes.

6666. Mr. *Wykeham Martin.*] About what do your pilots earn a-piece?—From 85 *l.* to 90 *l.* a year, that is the net average.

6667. For that do they go out to sea in all weathers?—Yes.

6668. Do they go cruising after ships or merely take ships to sea?—They go looking for them, independently of taking them down the Channel.

6669. Are not some of these boats very small to keep the sea; only 16 tons?—I think they are above that; they are river boats; the larger ones go down the Channel.

6670. Do you have many collisions in the river?—Yes, frequently.

6671. Have you ever had your attention turned to the immunity of owners when a pilot is on board?—No.

6672. Have you heard of any difficulty arising between the owner of a large craft and the owner of a small craft owing to those collisions?—I think the owners of large craft are desirous of keeping things as they are, and the smaller ones are against it.

6673. Is the motive for that that the larger ones like the immunity from responsibility which the pilot gives, and the smaller vessels suffer from it?—The freights are less, and they can afford it better.

6674. Do you think this desire to keep things as they are, upon the part of the owners of larger vessels, arises from the wish to do away with the liability of owners?—I cannot say.

6675. Do you think that the owners of smaller vessels want to get rid of it upon that ground?—No; I think it is a question of £. *s. d.* with them.

6676. How does the question of £. *s. d.* affect them; the smaller vessels are not obliged to take pilots?—Yes, they are.

6677. Is there no exemption in the river?—Only 80 ton vessels; and in them the pilots gets half pilotage.

6678. Are the people owning the 80 ton vessels

sels the people who wish for the abolition of the present system?—I have hardly heard anything about that.

6679. And they have no motive, if they are exempt from pilotage, to wish for the abolition, except the one I have suggested?—I think not.

6680. Mr. *Graves.*] With regard to exemptions, I believe there are exemptions in Bristol from compulsory obligations?—No; all vessels are obliged, under the 9th section of the 47th of Geo. 3, to take pilots.

6681. All vessels?—Yes.

6682. *Chairman.*] I understood you to say that vessels under 80 tons were exempt?—They are so far exempt that if a pilot forces his services on board they pay half pilotage.

6683. Are coasters exempt?—Yes, they are free, and the Irish traders as well.

6684. Sir *Henry Selwin-Ibbetson.*] What proportion of vessels is comprised in the coasters and the Irish trade?—We have a very large trade to Ireland.

6685. Mr. *Graves.*] What class of people bring these coasting vessels up and down the Avon?—Men that are accustomed to pass up and down the river constantly.

6686. They are a kind of unlicensed watermen or bargemen?—No; captains are permitted to pilot their own vessels.

6687. In practice do they take any local guide with them?—Yes.

6688. A kind of hobbler?—Yes, they would take them, if they took any.

6689. Do you know whether the masters complain at all of these vessels without licensed pilots on board offering more obstruction to the navigation of the Avon than the vessels that have pilots on board?—No, if these men are on board, it is in the power of the licensed pilots to supersede them.

6690. That is not the question. Do these vessels cause a greater obstruction with no pilots on board than vessels with pilots on board?—No, but they are all small craft.

6691. Mr. *Price.*] I had not the advantage of hearing your evidence in chief, but I know pretty well the points involved in this controversy between Bristol and other ports, and I can assume a good deal, though I have not had an opportunity of hearing it. We know that there is a petition from the Corporation of Bristol against this Bill?—Only as far as the river is concerned; it is only from the Holmes.

6692. I am afraid it is not so?—From the Holmes it is so; there is a difference of opinion upon this.

6693. We met in the examination of this question in Bristol some years ago, and at that time the Corporation of Bristol, and all the authorities connected with the navigation, were opposed to any alteration in the then existing system?—Yes.

6694. Since that time it is the fact, is it not, that the pilotage has been rendered completely free in the Bristol Channel, as regards the ports of Newport, Cardiff, and Gloucester?—Yes.

6695. And that has been at the instance of the Newport, Cardiff, and Gloucester people, has it not?—I think not at their instance exactly. I think you went for strong compulsory pilotage in the first instance, and it was the Committee who gave you the voluntary system.

6696. Do you know that the pilotage of those three ports was made free by a Bill introduced by the joint authorities?—They altered the Bill here in the Committee; your present Bill may be so, no doubt, but that is not the Bill you went for.

6697. Do you recollect the investigation into this subject by Admiral Beachy in Bristol?—Yes.

6698. Do you remember that at that investigation Gloucester was represented on more than one occasion?—Yes.

6699. And do you remember the great contention there was that the pilotage should be free from Lundy Island over the whole course of the channel?—I do not remember that; I remember that you wanted an alteration, but the question was what the alteration should be.

6700. Of course if your recollection does not serve you upon the point, I do not know how I can push that question any further, because that matter is susceptible of proof out of the mouths of other witnesses; August 1861, is the date of the Act to which I refer, and you say, it is not within your recollection that that Act was promoted by Newport, Cardiff, and Gloucester in the form in which it was ultimately passed by the authorities?—That was not the original shape of it.

6701. That is your opinion?—Yes; I think so.

6702. At the time that this Act was passed, and during the whole of the contention between the Channel ports and Bristol, the corporation of Bristol, and all the pilotage and navigation authorities there, were opposed to any alteration in the existing system?—Yes.

6703. Since that time, the pilotage has been made non-compulsory as respects the three ports to which I have already alluded?—Yes.

6704. Is it not the fact, that since that time the Corporation of Bristol and the other authorities have come to the conclusion that it may safely be made free as between Lundy Island and the Holmes?—I do not know anything beyond the city having done so.

6705. By the "City," do you mean the corporation?—Yes.

6706. Have not the merchant venturers also come to that conclusion?—No.

6707. I think the persons who appear here who are the city, represented by the corporation, and who have memorialised this Committee, are of opinion that pilotage may be made free as between Lundy Island and the Holmes?—Yes.

6708. And you also are of opinion that it might be made free as between the Holmes and the mouth of the river at Kingroad?—No; I gave an honest individual opinion upon the question asked me, and then I gave an opinion with regard to the city; I have given way in my opinion and have followed the opinion of the authorities.

6709. What is your opinion now?—The authorities say that it may be made free, and I suppose I say so too.

6710. How far?—There is a difference of opinion between them; some are advocating free pilotage from the Lundy to the Holmes, and others from the Holmes to Kingroad.

6711. If they are of opinion that it should be free from the Holmes to Kingroad, they must be of opinion that it should be free from Lundy to Kingroad, because there is no question between Lundy and the Holmes that they all agree about?—Yes.

6712. Then the only question is whether it should also be free from the Holmes to Kingroad?—Yes.

6713. As respects that, if I understood you rightly,

Captain *J. Drew.*
13 May 1870.

rightly, your own opinion is that it should be free because the opinion of the authorities, was that it might be free from the Holmes to Kingroad?—As a practical man, I would not have it free.

6714. Then would you rather retain the voluntary system even as far as Lundy?—I used to take a pilot at Lundy.

6715. You did so in former days, and should do so still?—I should do so to-morrow.

6716. But the opinion of young Bristol (if I may use that expression) is rather in favour of greater latitude and greater freedom in that respect?—Yes.

6717. I am quite sure that you are giving your fair opinion upon the matter, and I gather from what you say, that the general feeling of the port of Bristol now, apart from the authorities, would be in favour of free pilotage up to Kingroad at all events?—Yes, I fancy so.

6718. Do you know at all what the results have been as respects Newport, Cardiff, and Gloucester, since pilotage has been free there; have there been more accidents?—No, not that I am aware of.

6719. Have you ever heard any complaints of there not having been a sufficient number of pilots to be found?—No.

6720. Have you ever heard of pilots being on a station incompetent to discharge the duties of their calling?—No.

6721. Have you ever heard any complaint of any kind or any expression of opinion of any kind, which would go to show that undue risk had been run in the experiment there, or that the experiment has not been satisfactory?—The only complaint that I heard was that the Gloucester pilots were not always to be found at Lundy, but the Bristol pilots were.

6722. Have you heard that a Gloucester pilot was not to be found where a Gloucester pilot was wanted?—No; you see when they reach Kingroad they can soon find one.

6723. Does not that tend to show, that under the non-compulsory system, the pilot goes just as far as he is wanted, and no further?—I am not prepared to reply to that question.

6724. You do not say that it is not so?—No.

6725. You draw this distinction; you say that the Gloucester pilots (and of course the same thing applies, I suppose, to the Newport and Cardiff pilots) are not to be found below the Holmes, although the Bristol pilots are to be found down at Lundy?—Yes.

6726. Is it not the fact that Bristol ships are still bound to take pilots at Lundy?—Yes.

6727. The Bristol pilot goes to Lundy, because he knows he will find a ship, and finding a ship, he is obliged to board her?—Yes.

6728. And the Gloucester pilot does not go there, because he is not wanted?—That is so.

6729. Supposing Bristol ships were not compelled to take pilots at Lundy, would the Bristol pilots go down to Lundy?—No, not to the extent they do now.

6730. Is it not fair to assume that, since Gloucester, Newport, and Cardiff ships can come up without pilots, Bristol ships can do the same?—They do come up without pilots.

6731. Is that the fact to any extent?—I should think so.

6732. Do you know that that is the fact?—If you look at the pilotage returns, you will see that the Bristol pilots brought 200 vessels from Lundy to Kingroad last year on their way to Gloucester

6733. Do you believe that they were Gloucester ships?—Yes.

6734. Is that an Admiralty return?—It is a pilotage return of the Board of Trade.

6735. They were Gloucester ships?—Yes.

6736. Is it the fact that a Bristol pilot may board a Gloucester vessel, but that he may be superseded by a Gloucester pilot, if one comes alongside?—He cannot be superseded on the way up to Kingroad.

6737. Do the Bristol pilots still participate in the Gloucester trade?—In a measure; I wish they did a little more.

6738. Why?—Because it would be better for the Bristol pilots.

6739. Would it be better for the trade?—The pilots would be better off, at all events.

6740. You look at this matter altogether from a pilot's point of view?—I do not; I take a much more general view of it.

6741. You said it would be better for the pilots, but you do not know that it would be better for the trade?—These vessels which I speak of were piloted, and the trade was satisfied to pay the pilots.

6742. I do not understand why you said you wished it was so to a greater extent; you said you wished that the Bristol pilots had a larger proportion of the Gloucester trade; I ask you in what interest, is it the pilots or the trade, and you say in the interest of the pilots?—The pilots would be benefited by it; they are very badly paid.

6743. Do you think it would be better for the trade, because it is a question between the non-compulsory pilotage and the compulsory pilotage; in what respect do you think it better for the trade if the ships were navigated by compulsory pilotage?—The trade would have to pay the pilotage, and that would tell against the trade.

6744. Were you looking at the pilotage view or the trade view?—My first view was that of the pilots.

6745. It comes generally to this, that all these things end in the interest of the pilots?—Yes.

6746. Now, will you tell us any way in which you think that Newport, Cardiff, and Gloucester could be better off if they were to abandon their non-compulsory system, and revert to the compulsory system?—I am not prepared to give an opinion upon that point.

6747. So far as they are concerned, you do not contest the benefits or the advantages which they themselves may derive from the non-compulsory system?—No; I do not enter into that question.

6748. As far as Bristol is concerned, the authorities being of opinion that compulsory pilotage might safely be abandoned as far as the Holmes are concerned, are you of that opinion also?—No, I am not of that opinion individually, but I give way to the authorities in opinion.

6749. At all events, the authorities are of opinion that it may be safely abandoned as far as the Holmes, and that young Bristol and its trade, energetic Bristol, is also of opinion that it might be abandoned as far as Kingroad?—Yes, that is the feeling.

6750. And I suppose they are pretty competent judges of what is of advantage to their trade?—They keep on with the times.

6751. You draw a distinction between the pilotage up to Kingroad and the pilotage from Kingroad up to Bristol?—Yes.

6752. Do you think that it is desirable that you

you should still retain pilots up to Bristol?—Yes.

6753. I suppose you do not contend that the pilotage of the Avon is at all analogous to ocean pilotage in any way?—Certainly not.

6754. The Avon is now more or less an artificial navigation, is it not?—To a certain extent.

6755. I believe a large sum of money has been expended of late upon it?—We are laying money out now.

6756. I believe it is something in the same way as the expenditure upon the Clyde?—Yes.

6757. There is not quite so much embankment, but rather more blasting of rocks and cutting off of points?—Yes.

6758. One of the great difficulties of navigating the Avon now is a difficulty incidental to the length of modern ships?—Yes.

6759. And the circuitous course of the Avon?—Yes; and the rise and the fall of the tide.

6760. What is paid for pilotage from Kingroad up to Bristol per ton; supposing a ship of 600 tons took a pilot from Kingroad to Bristol, how much per ton would she pay?—£. 1 15 *s.* for a 600 ton ship from Kingroad to Bristol.

6761. Do you think that 1 *l.* 15 *s.* is a reasonable sum to pay for taking a ship up from Kingroad to Bristol?—That is what they have been accustomed to receive, and what has been ordered.

6762. Do you think, having regard to the wages and the ordinary remuneration for professional skill of that kind, that that is a fair and reasonable charge?—I must leave that to the authorities.

6763. You have great reverence for the authorities?—Yes, very great when it is necessary.

6764. What is the distance from Kingroad to Bristol?—Nine miles.

6765. What time does it take for a vessel coming up on a tide?—The pilot goes out from Pill to take charge of her at the last ebb, and the first run of flood tide, and that would occupy six or seven hours.

6766. Is that from the time he goes out to the time he goes into Bristol harbour?—Yes.

6767. And for six or seven hours work, he has 1 *l.* 15 *s.*?—Yes.

6768. That seems pretty good pay, does it not?—It is not every day's work with him.

6769. I suppose when the docks are completed at the mouth of the river, the question of river pilotage will be a subsidiary one altogether?—The question then will be a question of £. *s. d.* The one is admitted into the port of Bristol for a shilling, and the other will be 3 *s.* per ton into the new docks.

6770. I suppose the larger class of steamers would in all probability avoid the river altogether?—I suppose that is the intention in placing the docks there.

6771. So that the important question would then be, the pilotage up to Kingroad, and not the pilotage up to Bristol?—Yes.

6772. You stated just now, that you were a great deal influenced by the opinion of the authorities. I know you have a great deal of experience of nautical matters; I will not press you to answer this if you do not like to do so; but will you tell the Committee what your real honest opinion is, from your long experience of the matter, as to the safety or otherwise of leaving the pilotage free up to Kingroad?—I can only give the answer that I have given before, that if I were at sea to-morrow, and came into Lundy, I would take a pilot.

6773. But you are not prepared to tell the Committee that the experiment of non-compulsory pilotage from Lundy has been found conducive to inconvenience, as far as those ports are concerned?—No.

6774. Of course you know Lundy very well?—Yes.

6775. It is rather a rough place for pilot boats to be in, is it not?—No, not with westerly winds; it is sheltered.

6776. But with easterly winds is it not a rough place?—In that case they have to go to the other side and wait.

6777. Is it a safe ground for the pilot boats to lie in?—Yes.

6778. You do not consider it a great hardship in laying there at Lundy?—No.

6779. Do you know the pilotage of the Mersey well?—No.

6780. Not theoretically?—No.

6781. We heard a good deal of the great hardship to which the pilots were exposed, and the hazard and risk of life to which they were exposed in keeping their stations at Point Linas; are you aware of that?—Yes.

6782. Do you think that there is anything analogous to that, in the position of the stations which the Bristol pilots have to keep?—I have stated to the Committee that, since I have been in office, we have lost three boats and their crews, which have foundered in keeping the sea.

6783. Are you of opinion that if compulsory pilotage were abolished altogether in the Bristol Channel, there would be any difficulty in getting the pilots to cruise as far as Lundy?—I do not think the inducement would be enough to take them there: in the summer weather I think the men would come up as far as Minehead, that takes 4 *l.* 4 *s.* out of the 6 *l.* 6 *s.* for the pilotage. The pilots get 6 *l.* 6 *s.* from Lundy Island, and 6 *l.* 6 *s.* from Minehead.

6784. Do not you think the pilots would still go as far as there was any reasonable probability of their being employed?—There is a great doubt about that, inasmuch as the captain would have the power to say, no, and now he is obliged to say, yes.

6785. Have you ever heard of any complaint with regard to those ports, in respect of which the pilotage has been made non-compulsory?—No.

6786. Then I ask, is it not a reasonable inference, that if it were non-compulsory in the other ports, they would have no course of complaint?—I do not draw inferences.

6787. On reconsidering the matter, do not you remember that this Bill for the establishing of a separate system of pilotage for the several ports in the Bristol Channel, Gloucester, Newport and Cardiff, was promoted by the pilotage authorities of the port of Bristol, for the express purpose of making it a non-compulsory pilotage?—No; I remember coming here, and I remember upon the preamble we were dismissed from the room, and then when we came in it was declared that it was to be free, non-compulsory pilotage.

6788. At whose instance?—At the instance of the Honourable Committee.

6789. Do you think that if the Committee had been asked to establish a system of compulsory pilotage, they would have taken the com-

Captain *J. Drew.*

13 May 1870.

pulsory pilotage power out of the Bill, and made it non-compulsory, excepting at the instance of some party or the other?—I do not think that was done.

6790. You do not remember?—No.

6791. Mr. *Malcolm.*] You said that the Chamber of Commerce was against compulsory pilotage outside?—They are against it.

6792. But still they are for keeping it up in the river?—I believe so.

6793. In fact, it is admitted on all hands that it is necessary for the good of the trade to keep it up in the river?—Yes.

6794. What is the width of the navigable channel?—The broadest part is not more than a quarter of a mile; about 400 yards.

6795. And what is the narrowest part?—It is regulated by the tide, from 17 feet to 32 feet; the tide gives a great span of water; it is entirely out of my power to say what it would be, except at certain tides.

6796. Take it that there are 17 feet of water; what is the narrowest part then?—Two vessels cannot pass each other then.

6797. You have not got 60 feet?—No; there is not enough room without one or the other going ashore.

6798. You said there was a good deal going on in the way of improvement in the river?—Yes, we are laying out 200,000 *l.*

6799. That is chiefly for dredging, is it not?—In dredging, cutting off the points and making a fresh entrance into the basin; instead of being at right angles, we are to have a straight entrance into the basin.

6800. That is merely an entrance into the docks?—Yes.

6801. It has nothing to do with the general course of the river?—No, but we are improving the regular course of the river by cutting off points.

6802. Under what body is that being done?—The Docks Committee; part of the municipal body.

6803. They are the same body that regulate the pilotage?—Yes, precisely.

6804. You said that all your coasters and Irish traders were free of pilotage?—Yes.

6805. That is if they carry licensed masters, is it not?—No; by Act of Parliament they are free.

6806. Do you know what proportion they bear to the whole trade?—No.

6807. Something very considerable, is it not?—If you take the Irish trade into it, it is very considerable; the Irish trade is carried on by steamers, and they have always licensed men on board; their captains are certificated as captains of home passenger ships.

6808. You say, first of all, that the coasters and Irish traders are not obliged to carry pilots?—No, because they carry no passengers; the steamers carry passengers.

6809. And yet you say that the main part of the Irish trade is done by steamers, and that they do carry pilots?—Yes; because they carry passengers. Pilots' certificates are granted to the captains of Irish boats because they are home passenger ships.

6810. Mr. *Gourley.*] Do you know the north-east coast in the neighbourhood of the Tyne and the Wear?—No.

6811. You know nothing of the dangers of that coast?—No.

6812. What are the peculiar dangers in the navigation of the Bristol Channel?—The Bristol Channel is full of shoals of sands.

6813. What is the distance between the shoals at the entrance to the channel?—The first we come to is the Helwicks, 20 miles from the entrance.

6814. What distance is that from Lundy Island?—Twenty miles.

6815. Are there no pilots at that shoal?—No; they are taken at Lundy before they come to it; but the Helwicks are more in the way of Swansea.

6816. Do you consider that all ordinary captains are capable of navigating their ships up the Bristol Channel without the aid of pilots, and simply with the aid of their chart?—No; the sets of the tide are so uncertain in the Bristol Channel.

6817. But large numbers of vessels do navigate the Channel without pilots?—Not a large number.

6818. Do not all the vessels going to Cardiff navigate the Channel without pilots?—No.

6819. Are those vessels that navigate the channel without pilots as safely navigated as those that carry pilots?—That is a mere matter of opinion.

6820. As a rule, are they?—No, I should say not, as a rule; vessels that are navigated by persons acquainted with the Channel could stand a much better chance of being well navigated.

6821. As a rule, I believe you have very little loss in the Bristol Channel?—Not much.

6822. Have you more loss in the River Avon than in the channel?—We have continually vessels being put ashore in the river; they are not lost; we get them off.

6823. Are those vessels which are put on shore in the charge of pilots?—Yes, occasionally.

6824. If they were left in the charge of captains, do not you think they would be navigated more safely than under the charge of pilots?—No, certainly not.

6825. When a pilot is on board a ship, whom do you think ought to be responsible for the navigation of the vessel in pilotage waters; do you think the captain or the pilot should be responsible?—I think that the captain has still the responsibility, but the pilot has to direct him.

6826. Supposing the captain should refuse to follow the instructions of the pilot, and there happened to be a pilot on board such a ship, what would you do in such a case?—Of course the captain would take the responsibility, whatever it might be.

6827. Then the pilot really would have no responsibility?—He would be relieved of it.

6828. In all cases the pilot should be relieved, you think, whether the captain is following his instructions, or refusing to follow his instructions; you said that the pilot had no responsibility, and that he should simply be on board the ship for the purpose of giving directions to the captain?—I think it has been ruled that the pilot is to conduct the vessel, but the captain is the responsible man.

6829. How can the captain be the responsible man when the pilot is giving orders?—If the captain saw the pilot running any risk, he would be justified in taking means to prevent the risk.

6830. And justified in taking the charge out of the hands of the pilot?—Yes.

6831. Is the master not in all cases competent to take the charge of the piloting of the ship just as well without as with a pilot?—The captain may

may be at a place where he has never been before, and which he has never known anything about.

6832. In that case he should follow the instructions of the pilot, if he took one on board, should he not?—Of course the pilot would then conduct the vessel.

6833. Would you make the owner responsible for the negligence of the pilot, in the event of the pilot putting the ship aground?—No.

6834. Would you make the pilot responsible?—Yes: and I think under the 388th section of the Merchant Shipping Act, he is responsible.

6835. What is the value of the boats which you have in connection with the Bristol Pilotage Board?—The men themselves value them much higher than I do. I take it that the real value would be what they would fetch in the market; they value them at 20,000*l.* I think that is beyond the real value.

6836. Who do they belong to?—The pilots themselves.

6837. Mr. *Cave.*] I will just ask you a few questions as to the Irish trade; when you say the Irish trade is exempt, that exemption is more nominal than real, is it not?—The Irish trade is carried on by steamers, and they carry passengers; and the Merchant Shipping Act compels all home passenger ships to carry pilots or certificated men on board; either masters or mates.

6838. Then vessels that are really exempt from pilotage altogether, not having at the same time a certificated master or mate, are small coasters?—Small coasters.

6839. It amounts to no more?—No more.

6840. Those are very small vessels?—There is seldom ever one reaching 80 tons.

6841. You were asked whether it was not a pilot's question; I suppose you would consider that it is better for the trade to have a good supply of pilots than a bad supply?—Yes.

6842. Therefore the interest of the pilots and the interest of the trade is the same?—Yes.

6843. You were also asked whether you had been in the upper part of the Severn, and it appears that you have not been much of a traveller?—I have been a very great traveller, but not upon the Severn.

6844. I suppose you have been in the habit of looking at charts?—Yes.

6845. I suppose a practical man like yourself does not need to go up a river to judge of the navigation of it, if he has a chart to look at?—No.

6846. And it does not require a very competent man to see, by looking at the chart, that there is a considerable difference between the navigation of the Severn and the navigation of the Avon between Kingroad and Bristol?—There is no doubt of that.

6847. Is it not the fact that in the Severn the tide varies very much with the wind?—Yes.

6848. And therefore no tide tables are to be relied upon as to the tide?—No; the easterly wind cuts down the tide, and the westerly wind increases it.

6849. Would the westerly wind bring in a "bore" sometimes as much as six feet high as far as Newport?—Yes.

6850. The honourable Member for Gloucester asked you about the new port at Kingroad; when the docks are fully established for vessels there, the Avon will be a means of communication between one part of the port of Bristol and the other, will it not?—Yes.

6851. And it will be more like a canal than a public river?—I think the river will be made use of as much as it is now with vessels which can navigate it free and without difficulty.

6852. There will be docks at one end and docks at the other, with the Avon as a communication between them?—Yes.

6853. Therefore the necessity for keeping the channel between one part of the harbour and the other clear, would be still greater than if the docks were only at one end?—Yes.

6854. The honourable Member for Gloucester also asked you whether old and obstructive Bristol was not in favour of keeping the compulsory system in the Severn, and whether young and energetic Bristol was not in favour of having it voluntary in the Severn: now, I ask you whether young and energetic Bristol is not unanimous in desiring the compulsory system to be retained in the Avon between Kingroad and Bristol?—Yes, both young and old desire it.

6855. Mr. *Grieve.*] You have, of course, read the Bill which proposes to do away with compulsory pilotage?—Yes.

6856. Are you aware that if the Bill passes, the existing pilotage authorities will be preserved intact?—Yes.

6857. Supposing that to be the case, do not you think that vessels would still take pilots from Kingroad up to Bristol under the voluntary system?—I think, generally speaking, they would do so; but I think there may be exceptions to it, and one exception may block our river for 10 days together.

6858. Why should not voluntary pilotage be as good as a compulsory one?—If a man had the choice of saying, "I will not take a pilot," that man may put his ship on shore, and stop the river up.

6859. You say you are satisfied that, under the voluntary system, vessels would still continue to take pilots between Kingroad and Bristol?—Yes.

6860. There is a clause in the Bill that no man can navigate a ship between Kingroad and Bristol, but their vessels must be navigated by pilots; all vessels must take a pilot?—The captain can act as pilot if he is certificated.

6861. Supposing this Bill passes, if a man wants a pilot he must take a licensed pilot?—Yes.

6862. Then what is the difference between the voluntary system and the compulsory system?—A man may bring up his vessel without the assistance of anybody, under the voluntary system.

6863. But you say they will still continue to take pilots under the voluntary system?—Yes, a man of any prudence or caution would take one.

6864. Mr. *Gourley.*] Was your river blocked up when the "Demerara" was across the river?—Yes.

6865. Was she in charge of a pilot?—Yes, she was; there was a great error in judgment upon that occasion.

6866. Then your pilots are not always safe navigators?—There was a want of judgment in the affair of the "Demerara."

6867. You said that you thought that many masters would run great risks in order to save a few shillings of pilotage; do you think that masters of vessels, having not only their own lives at stake, but those of their crews, for the sake of saving

Captain *J. Drew.*

13 May 1870.

saving a few pounds would not take pilots?—There is no risk of life in the River Avon.

6868. But I speak of the Bristol Channel generally; do you think that the master of a ship would really risk his own life and the lives of his crew that are on board, when it was actually necessary to take a pilot, by neglecting to take one?—I think that the man at the time would not take that into account.

6869. Do you think that he would run the risk of drowning himself?—I do not think he would think of that at the time.

6870. I suppose you never run such a risk?—No.

6871. And I presume the majority of shipmasters are all as prudent as yourself?—I think they take all the caution they can of the lives and goods which are entrusted to them.

6872. *Chairman.*] Do you think the navigation of the Avon will be maintained in as good a state as at present?—Yes, it will be kept in as good a state as we can keep it.

6873. I presume there are a considerable number of small coasters coming up the river?—Yes.

6874. A very large number?—We have a large coal trade from Newport and Cardiff.

6875. All that is exempt from pilotage, is it not?—Yes.

6876. And the vessels do not take pilots?—No.

6877. And notwithstanding that, the navigation is kept tolerably clear, is it not?—Yes; sometimes they go ashore and cause obstruction, but not sufficient to prevent a large vessel passing.

6878. At present the fact that these small vessels do not take pilots, does not really interfere with the navigation of the river?—Not much.

6879. Mr. *Cave.*] But you do see small vessels frequently ashore, do you not?—Yes.

6880. But they are not of sufficient size to obstruct the navigation of the river?—No.

6881. Mr. *Gourley.*] Who acts as policemen over sunken vessels?—I have the power to get them away.

Captain JOHN ROSSER, called in; and Examined.

Captain *J. Rosser.*

6882. Mr. *Cave.*] I BELIEVE you are harbour-master of the port of Swansea?—I am.

6883. How many years have you been harbour-master?—I have been nine years harbour-master. I was five years deputy harbour-master, and for 14 years before that I was a master in the merchant service in the coasting and foreign trade.

6884. I believe you have the entire control and management of the pilots and pilot boats in the port of Swansea?—Yes.

6885. Will you describe the port of Swansea, and how many docks it has?—It has two docks and a tidal harbour.

6886. What is the average depth of water in the Channel?—Twenty-one feet springs and 15 feet neaps; it depends entirely on the wind and weather.

6887. There is a considerable difference in the tide according to the wind, is there not?—Yes.

6888. Can you rely upon the time tables for the tide?—In moderate weather we can; but in strong winds from the westward we have a large increase of water. I have known it as much as seven feet above the flow of the tide; that was in November 1865; and with an easterly gale I have known a difference of three feet.

6889. How many vessels come in every month?—About 450.

6890. What is the tonnage?—They would average about 130 tons, but vessels come in up to 1,000 or 1,200 tons with cargo.

6891. They bring in 450,000 tons of cargo, and take out 900,000 tons of coal, and 100,000 tons of general cargo?—Yes.

6892. Is there any peculiarity in the port of Swansea in consequence of the works which have been performed of late years, which makes it more difficult?—Yes; the port of Swansea is dry from half ebb to half flood, and the entrance Channel is 150 feet to 170 feet wide from the entrance of the harbour to the docks.

6893. Has there not been some extension in the piers?—Yes; the piers have been extended to 1,000 feet; the south dock is 1,700 feet from the end of the extension.

6894. How long is it since the alterations were made in the piers?—The extension was completed two years since.

6895. Do you consider that that makes the entrance more difficult than it was before?—Yes.

6896. Are your docks always open for vessels?—In bad weather they are; our harbour is more a harbour of refuge than a river harbour; we dock ships in any weather.

6897. You have vessels come in with the wind from the south-east or south?—Yes; when they cannot get up the channel they take our harbour, and run into it as the harbour of refuge. I have known 100 sail of vessels come in with a tide. Some bound to Swansea and others bound up the channel, chiefly seeking.

6898. Are there railway bridges across the harbour in various places?—Yes.

6899. How many of them are there?—There are three railway bridges, and two bridges for foot passengers, and a tramway.

6900. There are five bridges altogether?—Yes; but there are three bridges that are worked by railway companies' locomotives.

6901. Are those bridges drawbridges or swing-bridges?—Drawbridges; they are under my control.

6902. There is no headway under any of them for a vessel to pass, is there?—No; they have to be opened at all times of the tide for vessels to pass.

6903. I suppose the channel is the narrowest where the bridges are?—Yes.

6904. I suppose they require the greatest care?—Yes. The width of the channel where the bridges are is 200 feet, but between the piers it is 64 feet.

6905. I believe at every tide the pilots are informed what large vessels will be going out?—Yes.

6906. And those who bring them in know what outward-going vessels may be expected?—Yes, they know it by their tug-boats that go out; we give instructions to the tug-boats when to go out, and when to bring the ships in, and whether to bring them in before the other ships go out or not.

6907. When the water is falling, if the vessels do

do not get to sea immediately, they are detained, are they not?—If detained on falling tides it might happen they would be detained for a week.

6908. If it happens to be close to neap tides the detention may be for a great many days, I suppose?—If a vessel gets ashore in the Channel she may be detained a week.

6909. That is a great inconvenience to other vessels, is it not?—Yes, the vessels may be detained for a week; and one vessel may interfere with all the work of the harbour should she bring up in the channel.

6910. In the winter are the highest tides generally by daylight or at night?—At night; they flow late and early; the highest tide flows generally at seven o'clock.

6911. So that the work is constantly done after dark during the winter?—After dark and before daylight.

6912. How many hours before high water, and what time after high water, are the dock gates open?—We are generally ready for docking ships two hours before high water, and we work an hour after high water.

6913. Then you may say that on the average you have only three hours in which to work in each tide?—Yes.

6914. In certain times, I suppose, the harbour is quite dry?—Yes, from half ebb until half flood.

6915. You have also a system of signals, have you not?—Yes; we know when we see a ship coming, night or day, what dock she is for.

6916. The pilots are signalled from you, and they signal to each other and to the vessels, is not that so?—Yes.

6917. The pilots, I suppose, get orders as to what docks the vessels are to go into?—Yes, the orders are put up in the pilot office; the orders are first sent to the harbour office, and are then sent to the pilot office.

6918. Supposing a master was a good navigator, but was not acquainted with the dock signals, he could not give the usual signals to the port, and he could not come in without difficulty?—No; in coming in, if a vessel signals, we keep the entrance clear; and if a vessel does not signal, she would have to bring up and stop the navigation.

6919. That has nothing to do with a man knowing the navigation, but is simply from his not knowing the signals of the harbour, and the pilots' signals as well?—Yes.

6920. The water runs away very fast from the vessels, does not it?—Yes.

6921. And very little hesitation will put a vessel on the ground?—Yes; the first hour it generally ebbs, on the average, 2½ feet.

6922. Are there many trains going across these bridges which you have mentioned?—Generally four or five passenger trains regularly during the day, and many coal and goods trains; we have eight or ten of them, and in summer time we have two or three excursion trains as well.

6923. You have from 15 to 20 trains in the course of the day?—Yes.

6924. It would be possible, would it not, for a vessel which was not properly handled, to get aground between the bridges?—Yes, and a vessel may drag between the bridges and stop the whole of the traffic of the trains.

6925. Do you dock vessels in any weather, night or day?—Yes, we always dock them end on.

6926. Could you do that if you were not certain that there was a pilot on board who had ropes and anchors, and everything ready to bring up?—No, if we were not satisfied that a pilot was on board, the vessel would have to wait.

6927. You dock vessels end on, do you not?—Yes, sometimes they come in four or five knots an hour; we have no means of rounding them to; we must take them end on.

6928. If they miss but ever so little, they go ashore?—Yes, and there they remain for the tide, sometimes for longer.

6929. Is that the case with other ports in the Channel, such as Cardiff and Newport?—No; in Cardiff they remain at the Penarth Roads till they are ordered in, and they never dock a ship in Cardiff until she is ordered in.

6930. A vessel first brings up in the Penarth Roads, and then finds out when she can get into Cardiff Docks?—Yes.

6931. Could not you have a system of the same sort with regard to the Mumbles?—Yes, but that would be a great inconvenience to the shipping.

6932. What would be the inconvenience compared with Cardiff?—Generally speaking, the Cardiff ships are light, and the ships that we have are generally laden with copper ore and different other minerals.

6933. Therefore, it is of more consequence for them to get into port quickly?—Yes, I mean that it frequently happens that a ship comes right up from the sea with all her canvass loose and worn out; we can see her coming three or four miles off; generally at night time, they are tended by two tugs; and first one of the tugs comes in and gets orders whether they are to come in or not.

6934. Is the Mumbles further off from you than the Penarth Roads are from Cardiff?—There is not much difference, but we are more exposed than they are at Cardiff.

6935. Is the Mumbles a safe place to bring up in?—We are open to the south-west wind.

6936. Is it much safer to lie under Penarth than under the Mumbles?—Yes.

6937. It would not be safe for vessels habitually to lie in the Mumbles Roads for orders to get into the docks, would it?—No, they do frequently lie in the Mumbles Roads in certain winds.

6938. As a system, would it not be far better to come direct in?—Yes.

6939. Because the Mumbles Roads are much more unsafe than Penarth?—Yes, much more.

6940. Is it more difficult for a vessel to go on shore from the Mumbles than it is at Penarth?—Yes, they have much more sea to contend with.

6941. So that no boat can communicate with the shore?—They could communicate with the shore, but they could not get off to the ship again; they could not get alongside; they are sheltered from the westerly wind at Penarth.

6942. Do you hear of any objection from the trade of Swansea to the present system?—No, the shipowners and masters generally are satisfied with the present system.

6943. And the coasting vessels?—They very seldom object; there is not a single coasting sailing vessel which has taken out a certificate.

6944. If they have not taken out a pilotage certificate, are they navigated by pilots?—All coasting vessels are exempt under 50 tons register, with a cargo, and all vessels under 100 tons with ballast, are exempt.

6945. Are they exempt altogether?—Yes.

Captain *J. Rosser.*

13 May 1870.

6946. Are they not obliged to have a licensed master or mate on board?—No.

6947. Do they, as a matter of fact, come in navigated by their masters, or do they take pilots?—They frequently take pilots, especially in bad weather; if the weather is very fine, they can get a steamer, and come in without a pilot.

6948. And into the dock?—No, very seldom into the dock; they generally lie in the tidal harbour.

6949. They lie on the mud?—Yes.

6950. You have not heard complaints from them, have you?—No, we have very seldom had complaints.

6951. There is not so much trade in small vessels at Swansea as there is at Cardiff?—No, we have not so many vessels in ballast as they have at Cardiff.

6952. You know that there is a tidal harbour at Cardiff?—There is a tidal harbour at Penarth.

6953. And there is another tidal harbour at Cardiff, outside the docks, is there not?—There was, but it is done away with.

6954. Has it been done away with since the new dock has been made?—Yes.

6955. How many pilots have you?—Forty-nine sea pilots, and besides them we have six harbour pilots.

6956. What is the difference between the two?—The harbour pilots generally move the ships from dock to dock, or move them from one part of the river to another.

6957. But the sea pilots bring the vessels into the dock and the harbour?—Yes.

6958. So that they do all the pilots' sea work and the harbour work besides?—Yes; but they seldom move a ship in a dock from any part of the dock to another.

6959. How many superannuated men have you?—Seven or eight.

6960. Upon what principle do you superannuate them?—After 60 years of age, if they are unfit for duty.

6961. Whether they are competent or not?—No, if they are active men; after 60 years of age we allow them to bring in ships under 400 tons.

6962. You pass them under review after 60 years of age?—Yes; they are not compelled to go to sea as the other pilots are.

6963. How many pilot boats have you?—Nine.

6964. What is the tonnage of those pilot boats?—They average from 22 to 35 tons.

6965. You have a superannuation fund, I believe?—Yes.

6966. What have you in it?—I think we had 1,700 *l.* in hand. Pilots pay 2½ per cent. on their gross earnings, and two guineas annually license money.

6967. And you allow 7 *s.* a week for all your superannuated pilots, and 10 *s.* a week for your sick pilots?—The pilots receiving 7 *s.* a week now have not paid into these funds.

6968. What are your gross earnings?—They average 100 *l.*, and six of the pilots average 214 *l.* Those are the net receipts.

6969. What do you take out of the annual earnings?—One-fourth of the gross earnings for the pilots and the pilot boat's crew; 2½ per cent. poundage, and two guineas annually for license.

6970. Do you provision the crews?—No; they find themselves.

6971. When you say 100 *l.* is the net earnings, out of that they have to pay for provisions and clothing?—That is the earning of all, on the average; some get more and some get less; some pilots would not get more than 50 *l.* or 60 *l.* He that does the most work gets the most money.

6972. That is the system; the man who does the most work gets all that he earns?—Yes; with the exception of the poundage.

6973. There seems to be some little discrepancy between your amount, and that published by the Board of Trade; are the pilots compelled to go to sea in their turn?—Yes.

6974. Do they go at any other time?—They do as often as they think proper. The men who get the most money go to sea when they can get a chance.

6975. How many pilots are there in each boat?—Four.

6976. What is their cruising ground?—Four miles west of the Helwick light ship.

6977. How far is that from the Mumbles?—Twenty miles.

6978. Do they go to Lundy?—They frequently go to Lundy; they are frequently on the coast of Devonshire.

6979. And the Nash Sands?—They seldom go up Channel unless they expect something. Those are their limits. There is no place to be between the Mumbles and Lundy; but that is their cruising ground.

6980. Do they go much down to the south of Ilfracombe?—Very little, unless the wind is to the south-east.

6981. Your object is to serve vessels bound for Swansea alone?—Yes; but when the wind is to the eastward they frequently speak vessels bound up Channel. When they are likely to be going to Swansea, of course they would speak her.

6982. Supposing you put a pilot on board a Cardiff vessel, would he be liable to be superseded by a Cardiff pilot?—Yes; the hobblers and pilots board ships, and they remain in charge till they are superseded by Newport, Cardiff, or Bristol pilots.

6983. Then they naturally go to that tract which the Swansea vessels keep?—Yes; it frequently happens that vessels, when they cannot get a pilot about Lundy, come round our way and cruise about. It depends entirely upon the wind and weather.

6984. Vessels bound to Swansea from the westward keep more to north?—Yes.

6985. And for that reason your pilots go to the north rather than the south?—Yes; our pilots are not allowed to go down to Lundy.

6986. Why not?—We applied for our limits to be extended in 1866, and they were not extended.

6987. Your pilotage limit does not extend there?—No.

6988. You cannot charge rates from Lundy?—No.

6989. Your rates begin at the line between the Nash Sands to the Helwick light ship?—Yes.

6990. You always examine masters when they apply for certificates, and you grant them if they are qualified, do not you?—Yes, I have always granted certificates.

6991. Is there a regular steam trade to Swansea?—Yes.

6992. Where from?—From Glasgow, Liverpool, and Bristol.

6993. And

6993. And the masters of those vessels hold certificates I believe?—Yes.

6994. There are some parties who complain of compulsory pilotage in your port, are there not?—The screw collier owners do, but the masters very seldom do; they complain of inward pilotage.

6995. Why do they complain?—Because they come in light; they draw but very little water, and they pay according to the tonnage.

6996. They think they ought to pay according to the draught of water?—Yes, the outward pilotage is a mere nothing compared with the inward pilotage.

6997. *Chairman.*] What is the difference between the two rates?—The difference on a vessel of 200 tons would be between 2 *l.* 17 *s.* 6 *d.* and 1 *l.* 2 *s.*

6998. Do many vessels come in light to Swansea?—Yes, and a great many come in loaded.

6999. I believe the greater proportion come in light?—Yes.

7000. And all the masters of these vessels complain of compulsory pilotage?—The only parties who complain are the screw colliers, for they are very light.

7001. You stated that vessels under 100 tons in ballast are now exempt?—Yes.

7002. Do a considerable number of vessels under 100 tons come in in ballast?—Yes, in fine weather.

7003. Do a considerable number come to your port under 100 tons?—Not many.

7004. What number would you say?—5,226 came in in 1869, and 3,586 took pilots.

7005. Of those that took pilots, how many were vessels not bound to take pilots?—I do not know.

7006. You stated that the greater number of vessels that were not bound to take pilots did take them?—Yes; in bad weather they always do; even the smaller vessels under 50 tons are glad to get pilots in bad weather, but the regular steamers never take pilots when the wind is to the southward and blowing strong.

7007. That is pretty often, is it not?—In winter time it is.

7008. Most vessels take pilots in winter time, do they not?—Yes; most vessels take pilots in winter time.

7009. Mr. *Brassey.*] Do you give any advantage to steamers with regard to rates over sailing vessels?—No; they are all the same rates.

7010. Mr. *Price.*] Your pilots do not cruise off Lundy much, do they?—No.

7011. They do not cruise there as a matter of course?—No; they go down there frequently, but it is not their regular cruising ground.

7012. You do not consider that it is necessary that ships should take pilots at Lundy for the port of Swansea?—The ships are always glad, in bad weather, to get a pilot at Lundy for the whole of the Bristol Channel; but in fine weather, where they can save the distance, they will evade pilotage.

7013. How is it that Swansea pilots do not go down there in bad weather?—The distance money is a mere nothing; it would not pay for the wear and tear of the boat.

7014. They would not get paid for it, except within the limits of their jurisdiction?—No.

7015. Do you remember the inquiry into the pilotage question of the Bristol Channel, conducted at Bristol by Admiral Beechy?—No; I was not in office then; I was a master of a vessel at that time.

7016. I believe Swansea was represented on that occasion by Mr. Thomas?—Yes; the clerk of the harbour trustees.

7017. Have you any knowledge of what took place before that commission?—No.

7018. You never knew?—No.

7019. I suppose you know generally that all the upper ports of the Channel claimed before that Commission that they should be relieved from compulsory jurisdiction?—Yes; the great objection was to monopolising the Bristol Channel pilotage.

7020. Do you remember that they had two distinct objections; the one to the compulsory jurisdiction of Bristol, and the other to compulsory jurisdiction at all?—I do not remember it at all.

7021. You say that you have some knowledge of Cardiff; I suppose you have a pretty intimate knowledge of it, have not you?—I know most of the ports on the Bristol Channel.

7022. Do you know what the opinion of the merchants and others at Cardiff is, with respect to this question of compulsory pilotage?—No, I do not.

7023. Supposing they are dissatisfied with their present system, should not you be likely to hear of it?—The whole of the Bristol Channel complains of not being able to get pilots in bad weather at Lundy.

7024. Does Cardiff complain?—Yes, and Newport.

7025. Do you know that they are coming here to say so?—I do not know that.

7026. We only hear that from Swansea?—I fancy you will hear it from everywhere, but I know it as a fact, that all ships are glad to get pilots in bad weather, when there are no pilots to be found.

7027. Can you specify any complaint?—I know that several vessels were taken up the Channel by hobblers from Ilfracombe up to Cardiff and Newport; the only men who keep to the westward are the Bristol pilots.

7028–23. Do you find that your own ships have a difficulty in getting pilots at Swansea?—Yes, to the westward our ships always complain.

7033. Your objection to the present system is not that you cannot find the pilots, but that you have to pay them too much?—That is the great objection of the shippers. If one of our pilots fell in with a 450 ton ship at Lundy he would get 15 *s.* If a Bristol pilot fell in with that ship he would get 3 *l.* or 4 *l.*

7034. Your objection is to the rate that you are paid, and not to the system, because it does not give you sufficient pilots?—We have no objection to doing away with compulsory Channel pilotage; all we want is harbour pilotage.

7035. Would you desire to retain compulsory pilotage within the present limits, or within narrower limits?—From the Mumbles inwards, within the harbour limits.

7036. Can you show it upon the map as distinguished from your present jurisdiction?—Yes. (*The Witness explained it on the map.*)

7037. We understand that you are perfectly willing to abolish compulsory pilotage altogether, so far as the Channel is concerned, provided that you can have it within Swansea Bay?—Yes.

Captain *J. Rosser.*

13 May 1870.

7038. Why do you wish to have it compulsory within Swansea Bay?—On account of the working of the harbour; not for the pilots.

7039. Supposing it were not compulsory, do you think the pilots would be out in winter?—No, I do not think they would be often out in bad weather.

7040. Do not you think they would be at the Mumbles?—They are compelled to go out now.

7041. Can you give us any reason why you think they would not go out in bad weather, because I find that a great many are of a contrary opinion; are your reasons founded upon any experience; why do you think the pilots would not remain at the Mumbles waiting for ships coming in?—If pilotage were not compulsory, I think any pilot who was refused in fine weather, would shirk the work in bad weather; I find by the working of other places, that it is so.

7042. You say that from the numbers, it is necessary for a ship to have a pilot, and she would always take one if she could get one?—Yes, in bad weather; but a ship would not take a pilot in fine weather when he could see the lights all about, especially a ship that would lie aground.

7043. You compel a ship to take a pilot in fine weather, in order that the pilot might be there for the ship in bad weather?—Yes.

7044. What would a pilot get for taking a ship of 600 tons from the Mumbles into the harbour?—For a ship of 600 tons they would get 4*l.*

7045. That is for going from the Mumbles to Swansea Harbour?—Yes.

7046. Do you mean to say that for the chance of getting 4*l.* a pilot would not always be found at the Mumbles when it was likely a person would require his services?—Yes; if he knew that a 600 ton ship was coming up.

7047. The pilots are always to be found at Gloucester, Newport, and Cardiff, are they not?—They are up Channel, but not down at Lundy.

7048. You do not ask to have it compulsory down at Lundy, you only ask to have it compulsory from the Mumbles to Swansea Harbour; you abandon Lundy altogether?—The Gloucester pilotage is almost entirely river pilotage; there is no sea to interfere with a ship bound to Gloucester.

7049. As a matter of fact, a master of a vessel finds a pilot as soon as he wants to get one, does he not?—In fine weather he does, but not in bad weather.

7050. You say that in bad weather he does not find a pilot at Lundy?—No.

7051. But you are not asking to have compulsory pilotage from Lundy; you abandon that altogether?—I am willing to give up Channel pilotage.

7052. The only question now is with regard to those points within which in your opinion it ought to be compulsory, and you say as far as Swansea is concerned, it is the Mumbles; and I suppose as far as Newport, Gloucester, and Cardiff are concerned, it would be the Holms?—Yes, for Gloucester, it would be so.

7053. Now take this case: you say that although they may not always find a pilot at Lundy, where it is not necessary that pilotage should be compulsory, yet they do always find them at the Holms?—No, I have not said so; they are not always to be found there.

7054. Do you know whether there are any complaints of pilots not being found at the Holms?—The pilots of Gloucester are different; the ships have to bring up at Kingroad, and wait; and what we want is that the ships shall not be detained, but come into the harbour with pilots on board; and in a gale of wind, with a pilot on board, we dock them; ours is the only port that docks ships in a gale of wind. Swansea is more of a harbour of refuge than any other place. I do not know of any tide for years past that we have not opened our gates to receive ships.

7055. Is it not true, according to your view, that there should be no such thing as a pilot between the Mumbles and Swansea. I want to know why, in your opinion, an ample supply of pilots would not be found if it were free from pilotage ground?—My reason is, that in stormy weather, with a southerly gale, pilots would not go out.

7056. Do you consider that it is much worse to lie in the Mumbles than to be in the Holms?—Much more so.

7057. Do not vessels lie in the Mumbles for orders?—Very seldom.

7058. They used to be there till they had the Penarth Roads?—By chance, some of them do; but it is very seldom.

7059. They did lie there till they had the Penarth Roads; is it not the fact now that there are more ports up the Channel?—Yes.

7060. Large fleets formerly used to be there, did not they?—Not in my time.

7061. What is your time; since when?—I was the master of a vessel to Gloucester in 1842.

7062. What is the distance from the Mumbles to Swansea?—3¼ miles.

7063. That is the only ground that you think ought now to be covered by compulsory pilotage?—I think the whole of it ought to be; but that is all we intend going in for. I think the whole of the Bristol Channel ought to have compulsory pilotage; then we should have a good system of pilotage, the same as they have at Liverpool.

7064. I do not understand you; you said that you would have no objection to have the whole Channel free?—I think the whole of the Bristol Channel, in the interest of all concerned, should have compulsory pilotage.

7065. What do you mean when you say that you would have no objection to have the Bristol Channel free?—We do not wish to argue it; but the pilots prefer it.

7066. Do the trade prefer it?—I think, on the whole, if our pilotage were compulsory, pilotage rates would be reduced, to a certain extent. Remember the distance which we go for our money to what other pilots do. If our distance was extended to Lundy, and all ships were compelled to take pilots, we could form a station there.

7067. You think that would be the best for the pilots?—Yes, and for the trade as well; we could reduce the fees, and have a better class of pilot boats.

7068. That is if you could consolidate the jurisdictions?—Yes; since the compulsory pilotage has been done away with, the number of pilot boats has been reduced in the Bristol Channel; there used to be a large number of pilot boats in the Bristol Channel.

7069. Would not they be more likely to do it if

if the pilots were free to combine and get a better class of pilot boats?—The whole of the Bristol Channel pilots, with the exception of Swansea, are passed for the Bristol Channel, Gloucester, Bristol, Newport, and Cardiff.

7070. What I understand you now to say is, that you think under a compulsory system of pilotage you might get the union of these different jurisdictions, and by that means you might get a better system of pilotage for the whole Channel?—Yes.

7071. Are you aware that by Mr. Cardwell's Act of 1853, power was given to Bristol to incorporate all the other jurisdictions?—But there is a wonderful increase of trade to Cardiff; it is more than the whole Bristol Channel put togegether.

7072. Was not one of the reasons why Gloucester, Cardiff, and Newport went to Parliament for an Act in 1861, that the pilotage authorities of Bristol would not avail themselves of the power given by Mr. Cardwell's Act to form one jurisdiction for the whole Channel?—I do not know. The reason they went was to do away with the monopoly of the Bristol pilots; all ships which were bound to Newport, Swansea, Bridgwater, or Bristol were compelled to take Bristol pilots.

7073. You think, if all the pilotage authorities could be combined into one, each port being represented, you might have a better service altogether for the Channel?—Yes; at a much lower rate of pilotage.

7074. I understand you to say, though you do not think compulsory pilotage necessary in the Channel for the safety of the navigation, you think it might lead to that result?—Yes.

7075. Now I will ask you is it not the fact that these three ports went for a separate Act of their own because, although during the existence of the compulsory jurisdiction on the port of Bristol they had ample power to unite these different authorities, they abstained from doing so, and refused doing so?—I do not know that, but I think they refused compulsory pilotage to Cardiff, Newport, and Gloucester in 1861.

7076. Do not you know that at that time those three ports desired to have the pilotage free from Lundy up as far as the Holms?—Yes; free of the Bristol pilots.

7077. Did not they also ask that the pilotage might be altogether free between Lundy and the Holms?—I am almost sure that they wished compulsory pilotage themselves, but they wished to have the limit extended.

7078. If they wished for that, they would have asked for it in their Bill, would they not?—I fancy they did; I fancy they were the same as we were in 1866; we asked for an extension of our limits to Lundy, but we did not get it.

7079. May we take it from you, that so far as the navigation is concerned, you see no objection whatever to the whole Bristol Channel being free, but you think if it were compulsory it might lead to a combination of the different authorities, so as to give a better service?—Yes; and I think it would be better for foreign-going ships.

7080. Supposing there was a combination of the different authorities under the voluntary system, would that answer your purpose equally well?—If it was voluntary, I do not think you would get the pilots to work to the westward; there are no pilots to be found in bad weather, except the Bristol pilots, and they are not always to be found.

7081. Even the compulsory system does not appear to keep them there?—They are a very small body, and by taking Newport, Gloucester, and Cardiff from them it reduces their position, and they are not in a position to keep their boats to the westward. If the whole of the Bristol Channel pilotage was compulsory, the Bristol people would be able to keep a station for pilot boats and pilots at Lundy equally with the Liverpool pilots.

7082. Mr. *Brassey.*] Supposing the distance money was increased, and your pilots were paid in proportion to the trouble and expense they incurred, by lying off Lundy, would not your pilots be disposed to earn more money in that case?—Yes.

7083. It is because the distance money is not sufficient that they do not go there?—Yes; our pilots board vessels in all sorts of weathers, in heavy gales of wind; they are out with their own pilot boats in the heaviest weather.

7084. Mr. *Price.*] Supposing you had the compulsory system of pilotage, and your pilots were obliged to stay in Lundy, would you not have to pay more then?—Yes.

7085. Then it is a question of pay, and not a question of compulsion?—Yes; but if all vessels were compelled to take pilots at Lundy, the rates of pilotage could be reduced.

7086. There are a great many masters of ships who gave in evidence before Admiral Beechy that they never require pilots till they get to the Holms; would you make that vessel pay pilotage from Lundy, in order that you might get your pilotage cheaper at Swansea?—If all ships were compelled to take pilots, the pilotage would be reduced.

7087. Do you think it fair to make all vessels take pilots who do not want them, in order that the vessels that do want them may get them cheaper in bad weather?—I think so.

7088. Do you know Captain Marshall?—No.

7089. Do you know Mr. Yeo?—Yes.

7090. He is a considerable shipowner, I believe?—Yes, I believe he is almost the largest shipowner in the Bristol Channel.

7091. Do you know that he gave evidence before Admiral Beechy to the effect that his masters did not require a pilot at all till they got up to the Holms?—I do not remember it.

7092. Mr. *Graves.*] What is the name of the authority that has charge of the pilotage at Swansea?—The Harbour Trustees.

7093. How are they appointed?—They are appointed by the shipowners, and by the traders of the port. You will find that 10 of them are corporation trustees.

7094. Is there an annual election?—Yes, the trustees are elected every two years.

7095. Do you say that the members of the trust represent the trade and commerce of the port?—Yes, and they are chiefly shipowners.

7096. Can you speak at all as to what the feeling of the trust is upon this question?—They are in favour of the pilotage to remain as it is.

7097. Is that the unanimous feeling of the trust?—Yes, it is.

7098. Has the trust any pecuniary interest in the pilot service of the port?—None whatever.

7099. Then it is chiefly to represent this pilot question from a harbour regulation point of view that you come here to-day?—Yes.

Captain *J. Rosser.*

13 May 1870.

7100. It is not in the interest of the pilots that you come?—No.

7101. Will you explain a little further to the Committee what are the peculiarities of the navigation in your river, which make you think it desirable that every vessel going in and out should have a pilot?—Our harbour is a tidal harbour, dry from half ebb till half flood, with two floating docks. We dock vessels two hours before high water and one hour after high water. From the end of the extension seaward to the first dock is 1,700 feet, and to the north dock 2,000 feet; and if a small vessel coming in were to bring up in that channel, with a large vessel coming in after her, or a large vessel going out, it would stop the whole channel. We are obliged to have the channel clear before we can bring a vessel in or out.

7102. What would be the result of a vessel getting aground from improper navigation?—She would break her back.

7103. There is no place of shelter or safety to get into?—No.

7104. There is no place where she could lie afloat?—No.

7105. So that the great anxiety of your trust is to ensure such an amount of care in bringing in and taking out a vessel that it shall be in no one's power by any accident, if it is possible, to avoid it, to obstruct the navigation of your river?—That is it.

7106. What are the bridges you have spoken of?—The bridges I speak of are the bridges across the tidal harbour entrance. They are railway bridges. The Vale of Neath and the Swansea Vale Railway bridges cross the tidal harbour.

7107. Do you think that with those difficulties in the way masters of vessels would be likely to run in there without pilots?—Some vessels would.

7108. And you are afraid that the consequence of that would be that they would create an obstruction to others?—Yes; small vessels who are well acquainted with the port would not interfere with us; they would go in on the mud where it is dry in low water; that is between the entrance of the pier and the railway bridge; Fabian's Bay; if they knew the signals they would not require pilots.

7109. Is it usual with you as it is with Cardiff, that no vessel should go into dock until she receives an order from the harbour master?—We dock vessels in any shape.

7110. Are you aware that no vessel comes into dock in Cardiff until she has received an order from the dock master?—I think so.

7111. So that there is a different principle at work there to what there is at Swansea?—Yes; they have more water at Cardiff than we have at Swansea.

7112. What control have you as a harbour trust over the pilots?—The harbour trust governs the pilots entirely; they are the body who govern the pilots. I represent the harbour trust, and I have the sole management of the pilots.

7113. Do you arrange their cruising ground?—Yes.

7114. And their stations?—Yes.

7115. And have you any daily knowledge of where each pilot boat is?—We know that the pilot boats are out of the harbour; but we do not know their position.

7116. Are the pilots allowed to hold shares in the tug boats in Swansea?—No; they are prohibited from holding shares in tug boats.

7117. Do you think that a desirable prohibition?—We have never known any of our pilots holding shares.

7118. It is not prohibited by an actual bye-law?—No, but I should not think it would be allowed.

7119. It is stated in the official paper that I have got before me, that in one port of the Bristol Channel the pilotage has been paid in a public-house; is that so in your port?—No.

7120. Where are your pilots paid?—They are paid by the foreign ships in the broker's office, and the smaller classes pay on board their ships when they go out.

7121. Do you know of any port in the Bristol Channel where they pay in a public-house?—No.

7122. It has been stated that your boats do not go so far westward as the others?—We are not allowed to go beyond our limits.

7123. Your limits are not so far to the westward as the limits of the Pill pilots, are they?—No; the Pill pilots, the Cardiff, Newport, and Gloucester pilots limits go as far as Lundy; ours do not.

7124. Do you know any of the other ports in your own neighbourhood well?—I know them pretty well.

7125. Do you know Neath?—Yes.

7126. Is there as much peculiarity about the entrance into Neath Harbour as there is at Swansea?—They are different. They never go into Neath in bad weather, or in the night time.

7127. They choose their own weather and their own time for going in?—Yes.

7128. There the system is compulsory, is it not?—I think the Neath pilots are Trinity House pilots.

7129. Do you know Llanelly?—No, I do not know it much.

7130. Do you know Cardiff well?—Yes.

7131. Would you consider that there is any difficulty in the navigation in and out of Cardiff to the roads?—There is very little difficulty altogether. Cardiff is a tidal harbour.

7132. It is a perfectly straight cut through the mouth?—Yes, and completely sheltered from westerly winds; they have no winds to contend with except the south-east.

7133. *Chairman.*] I suppose the navigation of the Channel up to the entrance to Cardiff is much more dangerous than from that to Swansea?—The Channel itself is much more dangerous from the Nash Sand to Penarth.

7134. Swansea is almost in the open sea, is it not?—Yes.

7135. Whereas Cardiff is some way up the Channel?—Yes.

7136. From the Nash Light up to Cardiff the navigation must be dangerous. Compared with the navigation of the open sea opposite Swansea, the navigation up to Cardiff must be much more difficult than the navigation to Swansea?—To a certain extent it is, but not much; the tide runs much stronger from the Nash upwards than it does below; but when ships get up to the Nash Light there is nothing but a clear shore to go along. The chief danger after passing Swansea would be the Scarweather Sands and the Nash Sands.

7137. Mr. *Cave.*] You speak chiefly as a harbour-master?—Yes.

7138. And

7138. And your object would be, supposing pilotage were made voluntary over the greater part of your present district, to retain that which is close into the harbour for harbour purposes?—Yes.

7139. You think you could not allow vessels to dock without orders if that was not the case?—No.

7140. And vessels would be obliged to lie under the Mumbles, which is an unsafe roadstead?—Yes; we could not think of docking a ship till we had a pilot on board; we have to depend entirely upon ropes and the bower anchor of the ship to bring her up; if we failed docking the ship with a gale of wind at south east, she might remain in the Mumbles roads a week or 10 days.

7141. The difference between the question as to whether a man may be allowed to risk himself with his vessel in the open sea and your harbour, is, that a single rash act of a man in your harbour would stop the whole trade?—That is it.

7142. *Chairman.*] But you state that vessels which are not bound now to carry pilots, do carry them when the weather is severe?—In bad weather wind-bound ships take them.

7143. Does that lead you to believe that all the vessels you speak of would take pilots whenever the necessities of the case warranted it; if there are dangers to that vessel, does not the same argument hold good, that that vessel would find itself compelled to carry a pilot?—They would not take pilots in fine weather.

7144. Would not the principal loss fall upon the master of the vessel?—Not only the vessel itself, but it would fall upon other vessels as well; outward-bound ships would be equal sufferers.

7145. In the other case, you represent that the principal loss would fall upon the vessel itself?—She might be a vessel that would lie aground.

7146. Mr. *Cave.*] In the case of a small vessel there would be no loss, but there would be detention to the larger vessels?—Yes.

Captain *J. Rosser.*

13 May 1870.

7147. *Chairman.*] The smaller vessels are not bound to carry pilots, are they?—They are light, and do not draw more than seven or eight feet of water; such a ship would not obstruct the Channel.

7148. If she is deep in the water, in all probability she is valuable also?—Yes, she would have a cargo in her.

7149. Then it is the interest of the owner to take a pilot in order to avoid the danger you speak of?—In bad weather they would take a pilot, but in fine weather they would not.

7150. Mr. *Cave.*] In fine weather nine out of ten would do so, but the other one would not?—It is the case in the whole of the Bristol Channel, and everywhere else, that they try in fine weather to shirk the pilots, and in bad weather they take them.

7151. Mr. *Price.*] The great complaint made formerly by the shipowners, when pilotage was compulsory, was, that they had a difficulty in getting pilots in bad weather?—That would always be the case.

7152. Then compulsory pilotage does not seem of itself to be sufficient to secure an efficient supply of pilots in bad weather?—It is impossible for some boats to keep the sea in gales of wind. They could not keep the sea in bad weather on the east coast of England.

7153. You said you thought we should have a much better system if the small local jurisdictions were suppressed, and if there was one general jurisdiction for the Channel?—Yes.

7154. Have you heard that what Gloucester always asked for was that there might be one jurisdiction under the superintendence of the Board of Trade or of the Trinity House at that time?—I do not know that.

Mr. Thomas Ford, called in; and Examined.

7155. Mr. *Cave.*] I believe you are a shipowner and merchant at Swansea?—I am.

7156. Have you ever commanded a vessel?—Yes; I commanded the largest vessels to the port of Swansea for about 14 years.

7157. And you know the Channel well?—I know the Bristol Channel as far as Swansea well.

7158. Are you also a harbour trustee?—Yes.

7159. And therefore you know the port of Swansea well, and the management of the pilots?—Yes, I know the port of Swansea well.

7160. Have you ever heard any complaints about the Swansea pilots?—The only complaint I have ever heard has been from the masters of our vessels, complaining that the pilots do not go far enough. It has been very exceptional.

7161. Have you heard the reason that they do not go down further?—Their limits are not extended to Lundy.

7162. Therefore they cannot charge beyond their own limit?—No; the difficulty that the Swansea pilot boats are under is, that there is no shelter between Lundy and the Mumbles for pilot boats to lie in in bad weather. They must either lie at Lundy or the Mumbles. There is no shelter at Helwick, which is our limit, in very bad weather.

7163. When they take a vessel from Lundy, do they ever make a bargain from Lundy to their own limits, or do they charge the same?—They charge the same as if they had boarded them within their own limits.

Mr. *T. Ford.*

7164. What is the feeling in Swansea with reference to the present system?—We think that it works satisfactorily.

7165. Do you agree with the last witness about the danger that there might be in the case of vessels coming in without pilots?—Yes, that is what the shipowners feel in Swansea.

7166. Swansea is a very peculiar harbour, is it not?—Yes; it is what is termed a blind harbour. You cannot see the harbour until you are round the pier head, and if you found any obstruction in the way it would be too late to remedy it.

7167. It is a sort of Balaclava?—Yes; you cannot see the harbour till you are round the pier head and within a few hundred yards of the entrance to the dock.

7168. Mr. *Gourley.*] Is not the assistance of the steam-tug the best safeguard?—Yes.

7169. Mr. *Cave.*] If a vessel with a steam-tug was rounding into the harbour, unless the system of signals was complete, it might meet with an unexpected obstruction?—Yes.

7170. You lay great stress upon your system,

Mr. *T. Ford.*

13 May 1870.

on account of the pilots being accustomed to be signalled from the shore, and to signal to each other from the ships?—Yes; if a tug was towing a vessel in the harbour without a pilot, the tug belonging to the port may know the entrance, and know that the docks are clear, but the master of the tug would find a difficulty in not knowing whether any temporary obstruction had come in the way between the time he went out and the time he came in.

7171. In the case of a vessel going to sea, even in fine weather, without a tug and without a pilot, the signals might be misunderstood, or be altogether unknown?—Yes.

7172. Therefore what you require is very strict discipline?—Yes.

7173. Do you think that that discipline could be kept up under the voluntary system?—We fear not. We believe that under the voluntary system most ships would take pilots, but there are a lot of men who, either on the score of economy or carelessness, would not take them, and one careless man getting aground in the entrance would stop the whole trade of the port.

7174. You think, with reference to comparatively open sea, it might be left to the master of the ship to judge for himself whether he would run the risk or not?—Yes.

7175. But with reference to a channel like that into the harbour of Swansea, you could not allow that risk to be run, because it implies risk to a great many other vessels?—Yes; that is our principal reason. We do not care, as shipowners or as harbour trustees, so much about the compulsory Channel pilotage; all we want is to protect our harbour.

7176. If out of 100 vessels under the voluntary system, 99 took pilots, where it is necessary, which they probably would do, the 100th might get aground in your harbour, and cause indefinite delay and obstruction?—Yes, and prevent the others entering the harbour at all, or perhaps do an immense amount of damage. The peculiar situation of Swansea is, that it is the outside coal port of the Bristol Channel, and vessels coming into the Bristol Channel frequently come in there. They do not care which coal port they go to, but they are guided, to some extent, by the wind. A wind blowing to the south-east drives them into Swansea; and we have a great influx of ships in those tides, and we allow them to run in any time of the tide, knowing that there will be a pilot on board; but if a rush came in and one or two were without pilots they would block the whole inward traffic of the port.

7177. You find your present system working satisfactory, therefore you fear a change?—As shipowners we do not complain of it.

7178. I will ask you with regard to the non-liability of shipowners for damage done in pilotage waters; what is your opinion as to the duty of a pilot; ought he to supersede the master?—Decidedly not; I was the master of a ship for 14 years, and I never allowed a pilot to supersede me.

7179. You think that a pilot's duty ought not to be to assist in the navigation of the ship, but to point out the way?—Yes; I consider that a pilot is in the same capacity as a chief officer, he is very often left in sole charge of the vessel, but the master is responsible for the acts of his chief officer, and so he should be with regard to the pilot to a certain extent.

7180. Under those circumstances, you think that the shipowner ought to be liable in the case of an accident that happens through the fault of the pilot?—I think so.

7181. How do you get over the difficulty about his being answerable for the acts of a man whom he is compelled to take?—I account for it in this way, the owner is answerable for the acts of the master, and he is answerable for the acts of his chief officer; he is compelled by law to take a properly-certificated chief officer, and that does not liberate him from his liability.

7182. In that case the shipowner has a wide field to choose from, but in the case of a pilot he has to take the first who comes?—But the pilot has passed an examination; I consider that the shipowner places the master there to protect his property, and he picks out the best officer who will take charge of the property; by the same law he picks out a pilot who is thought properly qualified to navigate the vessel into a certain port. Besides, it is an insurable risk, just as much as any damage that may accrue to his own vessel.

7183. You see no difference in principle between his being liable for an accident caused by his master or chief officer, and his being liable for an accident caused by the pilot?—No.

7184. Would not it to some extent affect the pilots in this way, that it would make them more careless than they are now?—No, I do not see why it should. A pilot will always be liable to have his license taken away, and he may lose his bread. There are very few pilots, in the case of a ship doing damage to another, who is able to pay for that damage. They are liable to lose their license; that is the only punishment you can give them.

7185. The present law is that in pilotage waters, if a vessel is run down by another in charge of a pilot, it can only come upon the pilot for the damage?—Yes.

7186. And in many cases the pilot has nothing to pay?—In most cases.

7187. Do you think there is more injustice in that, than in obliging the master of the vessel to be liable for the incapacity of the pilot, who can only to some extent be called his servant?—I think so.

7188. The maxim of the law, is that no man is liable for the acts of another, unless that other can be called his servant?—He is for the time being the servant of the shipowner.

7189. It is stated that he is not his servant, because he is somebody whom the law puts on board the vessel, and in the choice of whom the master of the vessel has no voice?—I think it should be altered; I think the pilot should be considered as the assistant of the master, and not to supersede his authority.

7190. Even though you admit that, to some extent the pilot is not the servant of the master, because the master cannot choose him?—No, he cannot choose him, but he can select his chief officer, as I have said before, from a certain number.

7191. You think it is only a difference in degree, but not in principle?—I think so; the pilot has to pass an examination, and he is passed as a competent person before he can be trusted with a ship.

7192. Are you aware what the law is in other countries upon this point; do you know that in other countries the law does fix that liability upon

upon the shipowner?—No, I am not aware of that.

7193. You, speaking as a shipowner, would be quite willing to assume that responsibility for the acts of the pilots?—Yes.

7194. Is that the general feeling of the shipowners at Swansea?—Yes. If I had a ship of my own run down by another one, it would be very hard to refer me to a man who has nothing to pay me: the owner, who has done the wrong against me, can insure against the risks.

7195. It has been stated that the practice of a master being superseded by a pilot is more likely to lead to accident, than if the master is left in command of the ship?—Yes, I think so; if the pilot knows the depth of the channel, and all those things, he should consult with the master; but he is not as capable of taking the command of the ship as the master, who knows all the crew, and who knows the capabilities of his vessel far better than any pilot can do.

7196. *Chairman.*] I understand you to say that you are not generally in favour of compulsory pilotage; you do not think that it is necessary in all cases?—No.

7197. And certainly not in ports which are upon the open sea?—No, I do not think it is.

7198. All Swansea vessels are bound to take pilots at Helwick?—Yes.

7199. In your opinion, is it necessary to take a pilot there, or not until they come immediately in front of the town?—I should not require a pilot for myself in fine weather, although in bad weather I should be glad to take one.

7200. Is it necessary that they should be compelled to take pilots so far out as that?—No.

7201. Then you confine your observations with regard to compulsory pilotage merely to the entrance to the port itself?—Yes.

7202. In fact, to the docking of vessels; does not it come to that?—Not quite to the docking of vessels, because we have no harbour; the minute we get inside the pier head, we have no place but the dock.

7203. It is just at the entrance of the harbour until they get into the dock?—Yes.

7204. Then there it is a very small operation?—The Mumbles Head, which is a projection, being only 3½ miles from us, would be better cruising ground for the pilots; they would intercept all vessels coming into the harbour.

7205. You think compulsory pilotage should be only enforced upon vessels after they pass the Mumbles Head till they get into the dock?—Yes.

7206. And not to extend as far as it now does, to Helwick?—No; I do not think it is necessary.

7207. You think it is only an exceptional case on the part of Swansea, for docking the vessels?—Yes.

7208. There is no other place where they can lie, but they are to come at once into the dock?—Yes; what we feel is, if voluntary pilotage were established, as far as Swansea is concerned, we should be obliged to make the vessels lie out in the Mumbles Roads till they should have permission to enter; now they come right in from the sea; some of the vessels come in with valuable cargoes, and the pilots know that they can bring them right in.

7209. You are afraid that the dock authorities would compel the vessels to lie out till they had permission to come in?—Yes, the same as they do in Cardiff; but at Cardiff they have a safe roadstead to lie in, and we have not.

7210. Do not you think that would be a great inducement to vessels to take pilots inwards?—Yes; but we doubt whether they would get them.

7211. Why would not they get them?—In fine weather we think that vessels, not being compelled to take pilots, would with the assistance of tugs, go into Swansea harbour; it would not be necessary to have a pilot belonging to the port. In winter time, everybody would require them, and it would be impossible for them to come in.

7212. It is therefore for the supply of pilots, and not for the safety of vessels, that you require it; I believe a large number of small vessels are not bound to take pilots?—They are not bound to take pilots up to 50 tons if they have cargo on board, and under 100 tons with ballast on board; the difference with the light vessels would be this: our harbour is a perfect mud-bank, with the exception of the narrow channel going up, and that a small vessel would have water enough to go over the mud-bank without doing itself any injury or impeding the traffic of the harbour.

7213. Do you agree with the last witness, that most of these vessels do take pilots now in severe weather?—Yes.

7214. And would not it be also the case with the larger vessels?—The large vessels would always take pilots, but we fear that they would not be able to get them.

7215. You have already told us that the smaller class of vessels that are not bound to take pilots, take them in bad weather; I presume, therefore, that if the Bill passes, even the smaller vessels, which are bound to take pilots, will take pilots in bad weather, so that the exceptional cases will be few?—We have a regular class of vessels trading to our port, which are very different to those trading to Newport, Cardiff, or Gloucester. Newport, Cardiff, or Gloucester have not many large shipowners. We are a large shipowning community. We have our own ships trading to the port, and our own ships will probably take pilots; but we believe that if the pilots went out in fine weather and were not taken, they would not go out in bad weather; they would not go out, and the supply would be diminished.

7216. Your own vessels would always take pilots?—Yes, as a rule.

7217. Is that on account of the difficulties of getting into dock?—Yes.

7218. You think that vessels that do not know the harbour are not so likely to take pilots?—They would not know the difficulties.

7219. Do you think that the fact of not knowing the difficulties would be a great inducement to take pilots?—From the state of competition, men are willing to run a great risk to save a few pounds.

7220. Would not the effect of competition be as great upon vessels knowing the harbour and belonging to the harbour as upon others?—Yes.

7221. If, therefore, vessels belonging to the port, and knowing the difficulties of the port, and having some knowledge of the navigation, are likely to take pilots, is it not more certain that vessels that do not know the port, and know nothing about the navigation of the port, and do not know the difficulties, will also take pilots?—I think

Mr. *T. Ford.*

13 May 1870.

I think they would not take them in fine weather, feeling that they could come in without them.

7222. In your opinion, are not vessels that do not know the port more likely, in the long run, to take pilots than those that do?—I think they would.

7223. What then is the fear of the occupation of the pilots falling off?—There may be an obstruction inside our harbour which would not be known; if the harbour were clear, and a vessel could get in with safety, it would be a different matter, but there may be a vessel coming in from sea, and we may not know of some temporary obstruction in the harbour.

7224. Is not that one of the inducements to take a pilot, that a vessel outside approaching the port for the first time does not know what difficulties there may be in the way of getting into the dock?—I speak of vessels that may have been there before.

7225. And you tell us that vessels that may have been there before, that belong to the port, would take pilots?—Yes, to keep the number of pilots up, that they may have them when they want them.

7226. Not because they want them at a particular time?—All heavy ships belonging to the port bring up in the roads; unless they come up exactly at the time of high water, they must lie till the next tide; there are only three hours in a tide; unless they hit the three hours they must bring up in the Mumbles Roads before they come in. If a tug went out it would apprise them whether there was any danger inside or not; and though there may not be an actual necessity in fine weather to take pilots, yet to keep up the number they would take them.

7227. Is there a considerable number of foreign vessels that come to Swansea?—Yes.

7228. Do not you think that foreign vessels would take pilots as a matter of course?—The careful ones would, but the reckless ones would not.

7229. Is it true that the masters of foreign vessels are as careful as our own masters?—It depends upon what nation they are. I think the Norwegians and Danes are very careful men; they sometimes run a very considerable risk to save a few pounds; they sail their ships very close.

7230. If the masters belonging to Swansea are not likely to run risks why should the masters of foreign vessels run risks?—Our masters are trading backwards and forwards to the port, and they are more anxious to have the pilots kept up than the foreigners, who only come there for a voyage; and to encourage the pilots we should take them in fine weather, though we may not think it necessary.

7231. Mr. *Price.*] I gather from your answer to one of the honourable Members that the only risk you run in having a system of voluntary pilotage is, that you may not get a pilot when you want him?—Yes, or that a master who ought to take a pilot would not take one.

7232. You know the navigation of the upper part of the Channel, do you not?—I know something about it, but I do not pretend to understand the navigation of any port but Swansea.

7233. You know, generally, that the navigation of the upper part of the Channel between Kingroad and Gloucester is of a dangerous character?—Yes, I have had a ship there.

7234. And you generally take a pilot, do not you?—Yes, generally.

7235. Have you ever had any difficulty in getting one?—No, you have to bring up in Kingroad before you can get one; in going to Gloucester a vessel has to bring up in Kingroad; I have known one of my vessels to be half a day in Kingroad waiting for a pilot.

7236. It is perfectly safe anchorage, is it not?—Yes; in Swansea we have not safe anchorage the same as they have at Cardiff, Newport, Gloucester, or Bristol.

7237. Do you think that it happens frequently that vessels have to lie in Kingroad, waiting for a pilot?—I only know of one instance of my own.

7238. Was that long ago?—Last year.

7239. You never had any previous to that?—I never had a vessel there before.

7240. Have you ever heard any complaints that, since the pilotage of that part of the Channel has been free, there has been any difficulty in getting pilots?—No.

7241. Are you aware of the state of the law, that a ship having a pilot on board in compulsory waters is not responsible for any damage that may be done by it?—Yes, I consider it a bad law.

7242. But where pilotage is voluntary, then the ship would be liable?—I consider it a distinction without a difference.

7243. Supposing a Gloucester ship and a Swansea ship came into collision within the jurisdiction of the Swansea pilotage, the pilotage being compulsory, as far as the Swansea ship was concerned, and voluntary, as far as the Gloucester ship was concerned; is it not the fact that the Gloucester ship would be liable, although she had a pilot on board, because it was not compulsory, whereas the Swansea ship would not be liable because in her case the pilotage was compulsory?—It is a bad state of the law.

7244. Is it not more; is it not an anomalous condition of the law?—Yes.

7245. And do not you think that for that case alone it is desirable that pilotage should be altogether free, or altogether compulsory, or altogether non-compulsory in the Channel?—I am giving my own individual opinion; with a proper competent pilot on board, I do not see what difference it should make whether there was voluntary or compulsory pilotage.

7246. That being the state of the law, whether wisely or not, would it not be better that the whole system of Channel pilotage should be the same?—No; as I said to one of the honourable Members, I think in some places voluntary pilotage would suit, and in other places it does not suit; I speak of course only from my knowledge of Swansea, and there we are so peculiarly situated with our harbour, that unless every ship of a certain size or a certain depth takes a pilot, he would be endangering the trade of our port and do a great deal of damage.

7247. If you could be sure of having compulsory pilots at the Mumbles at all times, you would have no objection to pilotage being non-compulsory?—No, if the ships took them.

7248. It is no matter to you whether they take them or not, so long as the pilot is there; I understand your difficulty is, that they might not be there if pilotage were not compulsory?—I think so, because pilots would be less used; many

many ships that are compelled to take pilots now would not take them then.

7249. Do you think it would be much better for the Channel if there were one pilotage authority for the whole Channel?—No; I think every port has its own peculiarity, and is the best judge of its own requirements.

7250. Did you know of the inquiry before Admiral Beechy at Bristol about the pilotage of the Channel?—I was sailing from Swansea at the time.

7251. You were not present there?—No.

7252. You do not know that the upper part of the Channel at that time were very anxious that the whole of the pilotage jurisdiction should be under the Board of Trade?—No, I am not aware of that; I understood that Swansea, Gloucester, Cardiff, and Newport, objected to having their ships compulsorily boarded by the Pill or Bristol pilots; that is what they fought against. I have been obliged in former years, before the law was altered, to take a Pill pilot, provided he offered. We thought it a hardship, because our own boats came down within the limits where we thought we required them. The boats came down as far as the Helwick and the Nash, which was quite as far as we required them.

Tuesday, 17th May 1870.

MEMBERS PRESENT:

Colonel Bourne.	Mr. Shaw Lefevre.
Mr. Thomas Brassey.	Mr. Phillip Wykeham Martin.
Mr. Cave.	Mr. Norwood.
Mr. Gourley.	Mr. Pemberton.
Mr. Graves.	Sir Henry Selwin-Ibbetson.
Mr. Grieve.	Mr. Charles Turner.
Mr. John Stewrt Hardy.	Sir Charles Wingfield.

GEORGE JOHN SHAW LEFEVRE, Esq., in the Chair.

Mr. John B. Millen, called in; and Examined.

Mr. *J. B. Millen.*

17 May 1870.

7253. Mr. *Brassey.*] How long have you been in the Trinity service as a pilot?—I have been in the service of the pilots 19 years.

7254. How were you employed before you entered the service of the Trinity House?—I was sailing in ships going foreign to all parts of the world; I was in T. W. Smith's employ; I left in 1847; I was second officer of his ship then.

7255. Is it true that a Trinity House pilot is required to be 12 months master, or three years mate of a square-rigged vessel of 150 tons burden, and that he is also obliged to pass an examination so as to qualify before he enters the service?—Yes.

7256. Having entered the service, he has to pilot vessels of a small draught of water for three years, has he not?—Yes

7257. And then he has to undergo a second examination for all draught vessels?—Yes.

7258. Before you entered the Trinity service, your rank in the merchant navy was that of a second mate?—Yes, up to 1847.

7259. I suppose these rules which have since been introduced did not exist at that time?—No.

7260. What is the average income of a first-class pilot?—Taking the average income of 64 working men, as seen by myself, the gross earnings amount to 340*l.* per annum.

7261. Their position is fully equal to that of the average masters in the merchant service?—Equally so.

7262. And unless their prospects are as good as that of a master in the merchant service, men who otherwise would have been filling the important duty of master in the merchant service, of course would not enter the service of the Trinity House as pilots?—They would not give up the probability of their becoming masters of ships, and obtaining a good position in life.

7263. While you are in the charge of these large ships, piloting them from the Ness to London, you have the responsibility and you require to have all the knowledge which a first-class master in the merchant service ought to possess?—Equally so.

7264. And probably the navigation from the Ness to Gravesend involves more difficulty in the handling of a vessel than in an equal period of time in the open sea?—In the open sea there is plenty of room, and if a ship mis-stay, there is no particular harm likely to occur. They can put the helm up and wear the vessel round.

7265. Though the vessel is always in charge of a pilot, the difficulties are very great, and they require special knowledge and aptitude in handling ships?—Yes, because many masters of ships, though able to work their ships in wide water, might possibly in narrow waters work the ship too narrow, and cause it to miss stays, and before the ship could have way gathered on her, she might go ashore.

7266. It is because there are these difficulties to be encountered, that the Trinity House have used a particular care in selecting the best men to the pilotage service?—That is the reason.

7267. With reference to cruising stations, what are the limits of the cruising stations for cutters?—We do not go below Dungeness in an easterly wind; we cruise in the west bay.

7268. How many vessels are employed in this service?—Four.

7269. I believe that three of them are continually at sea?—Three of them are continually at sea, and one in the harbour generally refitting to take her turn once in three months, as the others go in.

7270. Do you encounter great risks in boarding ships?—Very often.

7271. As far as you are acquainted with the officers of the merchant service, do you believe that if the compulsory pilotage system were abolished, it would be possible to have the same efficient staff of pilots, and to obtain the same number of recruits from the merchant service as are willing to enter now?—I do not believe that you would find men to come forward to enter the service at all.

7272. Do you think that if a deterioration were to occur in the class of men who enter the service of the Trinity House as pilots, that any great additional risk of life would be incurred?—I think so, because we now see vessels very often try to escape pilotage. There are imprudent men in all grades of society, and, of course, there are many men who, for the sake of getting in their owners' favour, near men, would save a five-pound

five-pound note, and run the risk, and life might be lost through it.

7273. Do you think that if the compulsory pilotage system were abolished that there would be any serious falling off in the employment of pilots in fine weather?—I believe we should lose half of our present income.

7274. Do you think the extended use of steam-tugs for towing vessels would interfere with your calling, if the compulsory pilotage system were abolished?—I think so, very materially; we have had one or two instances of it, even as it is now.

7275. With reference to the existing number of pilots, I suppose there are frequent occasions when the wind is long prevalent from the eastward, and suddenly chops round to the westward, when large fleets come up the Channel, and every man in the service is required; does that often occur?—Very often; we are obliged to send to the Trinity House, to send some of the London pilots down, to assist us with heavy fleets.

7276. It has been proposed, has it not, to preserve to the pilots their present average income by superannuating a certain number, if, after an interval of two years, it is found that the income falls off?—That is a provision of the Bill which would be unsatisfactory to the present body of pilots.

7277. Supposing the number were reduced, with the view of preserving the same average income for the men remaining in the service, would not great inconvenience sometimes arise to the merchant shipping under the circumstances which are indicated in my last question?—Just so. We should not find pilots enough to man the fleets, and they would fall into the hands of men who would make a very great harvest out of them.

7278. What does it cost to maintain the present fleet of cutters?—£. 1,200 each vessel, per annum.

7279. Have the pilots any control over the command of those vessels?—None whatever.

7280. What does the crew of the vessels consist of?—The master, mate, and five hands.

7281. Do you believe that the present system of cruising could be maintained if you were to abandon the compulsory system?—I think not. I do not see which way the cutters could be kept up.

7282. If the cutters were not found on their stations in bad weather, would not it result in great danger to the shipping?—Very materially so.

7283. And to the loss of life and property?—Yes. Ships running into the mouth of narrow waters would find no one there to take charge of them. They might find themselves upon the Goodwin Sands, and we know what the circumstances would be then.

7284. If pilots who have been for some years in the service are superannuated, they would find great difficulty, would they not, in returning to their former employment?—Yes, the men who had been some years in the service would find it impossible to renew their former connections or enter into them in any way.

7285. Is it the case that many of the pilots have made future provision for their families by way of yearly contributions to various societies, and the purchase of annuities, and so on?—Many of them contribute large sums.

7286. And in many cases by insurance of life, and so on?—Yes.

7287. It would be difficult, would it not, to keep up the payments if the income were seriously reduced for so long a period as two years?—If our income is reduced we should not be able to maintain those contributions to the societies, and we would forfeit the policies of insurance and the annuities that we might have in prospective.

7288. And therefore you think that it would involve a cruel hardship to the pilots if they should have to await the result of this experiment, in pilotage, for a period of two years?—Yes; I think it would be very hard upon them and their families.

7289. Mr. *Grieve.*] Then if pilotage was likely to fall off by the discontinuing of compulsory pilotage, there would not be any difference in compulsory or non-compulsory pilotage by the employment of pilots?—I presume not. We know it would be so in fine weather. Masters of vessels in fine weather would take a tug down below the Ness, and by getting hold of a tug they would be towed past the station, and would not stop to take pilots.

7290. In light summer weather, with light winds, they would still take a tug, whether you had a pilot or not, would they not?—In the summer weather they very often take the tugs below Dungeness before they come up to the pilot stations. We have known them in the night time to tow ships right away; we have complained of it in several cases.

7291. Mr. *Cave.*] What are the tonnage of your vessels?—Sixty tons register. I think it is about that.

7292. A large number of vessels that pass Dungeness now are not obliged to take pilots, are they?—A very great many of the coasting vessels and vessels exempt by the previous measures that were introduced, with regard to masters and mates, are not bound to do so.

7293. Do you find that many of the vessels that are exempt still take pilots in bad weather?—Sometimes; not many of them.

7294. Do you know whether any accidents happen between Dungeness and the mouth of the Thames?—I know that a very great many occur.

7295. Do you know whether there are more accidents with vessels that have pilots than there are with those that have not?—I should say where there is one vessel lost with a pilot, there are 10, or even more than that, lost without pilots.

7296. Do you speak from mere guesswork?—No; I can speak from facts; Lloyd's returns will give it; we had five vessels wrecked on Deal beach last February, and if there had been a pilot on board each of the vessels they would not have been there.

7297. What were they?—One was a fine ship of 1,200 tons; an iron ship; she got off, but the other four went to pieces.

7298. How did they get on Deal beach?—They kept driving in upon the beach; the wind was blowing hard from the eastward, and when it was too late to slip their anchor those vessels had nothing but the beach before them; they could not have cleared the South Foreland.

7299. You think if there had been a pilot they would have slipped their cable sooner?—Long before, because a pilot has some little weight when he is on board a ship; the master will take his advice in most cases, and the pilot would advise slipping the ship and running for Dungeness or Sandgate Road long before.

Mr. *J. B. Millen.*
17 May 1870.

7300. If a pilot is on board, the master is obliged to take his advice: he is under his command, is he not?—He would not like to decline doing so.

7301. Is it not the case that it is considered when a pilot is on board the master has no longer any responsibility?—Just so.

7302. Do you think that a good plan?—I do, because I am satisfied that no two heads can have one command.

7303. Do you think that the pilot knows the capabilities of a vessel as well as the master?—Yes; a man does not require to be on board a ship half an hour before he knows the ship's capabilities; the master would say to the pilot, "Pilot, she is rather hard in her weather helm;" that is sufficient precaution; the pilot would ask the captain, "Is the ship quick in stays;" if he said yes, the pilot would not take his word, but the first time he tacked the ship he would tack her short of the sands, that he might have sufficient proof of the ship's capabilities.

7304. You do not agree with the witnesses who say that it is safer for the vessel that the master should keep the control of the ship, and that the pilot should only be his guide?—No. If that law was passed, I am satisfied that it would never be abided by.

7305. If the law was passed which exempted the pilot from responsibility, and fixed it upon the shipowner, do not you think that in that case that the master would retain the command?—No, I do not. It is impossible for two men to have the charge of the ship in these narrow waters, and there is not time for consultation.

7306. You think that the orders ought to go at once from the pilot to the man at the helm?—Yes.

7307. I do not understand your objection to the compensation scheme under the Bill?—It proposes to compensate one part of the body by making use of the other, as far as I can understand it, which I think is very unjust to the younger portion of the fellowship.

7308. Is there not under the clauses of the Bill an actual payment proposed from the Treasury?—I do not see much in that. I think if the Government of the day are of opinion that we shall not lose anything by the change, we only ask them to guarantee our income. I was in an agent's office the other day and met two shipowners; one of them said, he thought the passing of the Bill would be a great thing for him, for he would save 400 *l.* a year by it; and the other said, he should save 800 *l.* a year. Those are two instances of what we should lose by the change.

7309. If the Government guaranteed your present earnings, perhaps you would not take so much trouble to earn it?—Yes, we should.

7310. You do not agree with the system of superannuating the older members, and reducing the number till the present earnings were preserved?—No, I do not.

7311. Sir *C. Wingfield.*] I believe your business liès entirely in the south channel?—Yes.

7312. You say if pilotage were voluntary, few vessels would take pilots, and the supply of pilots would fall off?—Yes.

7313. Are you aware that in the north channel all vessels engaged in British or foreign trade are exempt from compulsory pilotage, but that they all do take pilots?—I am not aware of that. There is a clause in the policies of insurance compelling all foreign ships to take pilots in pilotage waters.

7314. *Chairman.*] What proportion of vessels which you get employment from in the south channel are foreign vessels?—I suppose about, perhaps, one-third.

7315. Is it not more than that; is it not rarely half?—I do not think so.

7316. Mr. *Cave.*] When you talk of these policies of insurance, do you mean policies of insurance taken out in England upon foreign vessels?—No; I speak of the underwriters abroad, on the Continent.

7317. You mean foreign policies of insurance?—Yes.

7318. *Chairman.*] Then the result is that all the foreign vessels that come to the Thames by the north channel, practically do take pilots?—They do?—I suppose there are other vessels occasionally that take pilots.

7319. Are there other vessels that take pilots, English vessels, for instance?—I am not acquainted with it.

7320. Have you never made any inquiry about the pilotage in the north channel?—I have not. I am satisfied that the foreign ships do take pilots.

7321. Are you aware that those 60 pilots stationed off the north channel, make much the same incomes as you do?—I do not know that.

7322. I believe the difference is merely this, that the 60 pilots in the north channel make 274 *l.* a year, whereas your pilots make about 310 *l.* a year, that is the average of your pilots from Dungeness?—I suppose they have taken the island pilots into it; there are six pilots there, and I do not suppose they reach more than 100 *l.* a year.

7323. Is not the average of your income about 310 *l.* a year?—The average of my own income has been 330 *l.* for the last five years.

7324. That is a little above the others?—No; some of them are above that; the average of 62 men's earnings amount to 340 *l.* per annum.

7325. We have had it from the Trinity House that the average earnings of the 128 pilots employed from Dungeness to Gravesend is 310 *l.* a year?—That is taking in the island pilots who have nothing to do with the pilotage from Dungeness.

1326. You say, excepting those pilots, your average is rather higher than that?—Yes, it is rather higher.

7327. Are you aware that the pilots in the north channel make an average of 274 *l.* a year?—I am not aware of that.

7328. I suppose I may take it as a fact that the vessels that come to the north channel are the smaller class of vessels, the larger vessels come by the south channel?—Some of them are.

7329. The great bulk of them are small vessels compared with those that come to the south channel?—Good-sized vessels come from the Baltic.

7330. Is not the average size of the vessels coming by the north channel very much less than the average size of the vessels coming by the south channel?—Yes; but there are many large ships in the Baltic trade; the timber ships draw 18, 19, and 20 feet of water.

7331. There are no vessels like the Indian and Baltic vessels, are there?—No.

7332. In your opinion, is it probable that vessels

sels that come from the East Indies and Australia will pass up by the south channel without taking pilots?—I think many of them will; it is a matter of £. *s. d.*, that is my opinion.

7333. You do not agree with Sir Frederick Arrow, who stated that in his opinion the great bulk of the vessels would take pilots?—Sir Frederick Arrow is not aware of the difficulty we have in getting aboard ships. I have gone aboard a fine ship from Calcutta, the mate of the ship has denied her port, but I have insisted upon boarding the ship, and I asked for the master; the master was in the cabin, and he has had a waterman aboard.

7334. That was a case where they had a waterman on board?—Yes; they would have gone away with the waterman to shirk the pilotage from the Ness.

7335. Then the supposition is that the waterman was properly qualified, though not a licensed man, but that he was quite able to navigate the vessel?—He thought that he was going to save a few pounds by it.

7336. Is it not the fact that a large number of people along the coast are able to pilot vessels who are not licensed?—I was not aware of that.

7337. Is it not the fact, take the Deal boatmen, are they not as able to pilot vessels through the Downs as you are?—I should think you must know better than that, sir.

7338. Are not the Deal boatmen quite as valuable to pilot a vessel, though they are not licensed men, as you are?—No; these men go aboard the ship, and there have no responsibility or risk, and it does not matter to them if the ship goes ashore and is lost.

7339. The Deal boatmen are largely employed, are they not?—Some of them are employed, but not largely.

7340. What you wish to do is to supersede them whenever you can?—Yes, whenever we can; but we lie in very wide waters, and we are not able to go off to a ship and see whether she has a licensed or unlicensed pilot on board.

7341. You find considerable difficulty in superseding these men, do you not?—We do.

7342. There are numerous cases in which you have tried to supersede them?—If we get a clear case there is no difficulty; we know that there are men who go away with ships, and of course we have not found it out till afterwards, and we have punished the captain of the ship for it when we have found it out.

7343. That makes one of the difficulties of your position the necessity of superseding these men?—There is a great difficulty attached to it.

7344. Does not it also show that there is a considerable employment of men who are not licensed?—No, there is not a considerable employment of these men because there are not many of them. There are a great many watermen, but there are not many men capable of finding their way up the river or running ships through the Gulf stream.

7345. You have told the Committee that, in your opinion, the compensation clauses are unsatisfactory; what do you, on the part of the pilots of Dungeness, think ought to be inserted?—I think if the Government are so sanguine that we shall not lose anything by the change, we do not ask them for anything but a guarantee that our income shall be kept up.

7346. You think that you ought to be guaranteed your income for the rest of your lives?—Yes.

7347. What security would there be that you would perform your work?—The men would be compelled to go to sea as they are now, and they would soon give a proof that they have been at sea by the ships that they had piloted up in that time, and if the men are really taken ill, a doctor can easily judge whether a man is ill or not; that is a matter with which the sick funds and the sick clubs are obliged to deal now. I think any little difficulty attached to that might soon be got over.

7348. The present Bill is framed on the supposition that your incomes will not be reduced; is not that so?—Yes.

7349. Supposing, after a certain time, I will not say two years, but after one year or six months, a certain number of you are reduced, and taken off the service, and the number of those remaining is considerably smaller, may it not be that that number which remains would make the same incomes as those in the service before?—And will the Government carry that out to the last man in the present body.

7350. I want your opinion?—I think that the present body should have the right to be cared for. We have had the right to pilot ships inwards, time out of mind. We have thrown away our position in life, and entered the service believing that it should be kept the same during the whole of our lives, so long as we conduct ourselves in a proper manner; and I think, now, that our present income should be guaranteed to us.

7351. There is nothing to prevent the Trinity House licensing any additional number of pilots they think fit, under the law as it now stands, is there?—Yes, I think there is, with reference to the Cinque Ports.

7352. Why are you of that opinion?—When the Cinque Ports were amalgamated with the Trinity House, in 1854, it was promised that there should be no increase; and Mr. Cardwell stated, himself, that the body should be as well cared for as it ever had been.

7353. Was that stated in writing?—It was stated in the speeches that were made at the various meetings that took place.

7354. There is no security in any Act of Parliament to that effect, is there?—I do not know that there is; but there is nothing in the Act of Parliament that says that they shall increase the number either.

7355. Is there anything in the Act of Parliament compelling the Trinity House to license only a certain number of pilots, or restricting their rights to license pilots?—There is not.

7356. Is it competent for the Trinity House to license any number that they think fit?—I do not think that they have got that power.

7357. It is in that way, is it not, that you consider that you have got the right to be guaranteed your present income?—It is. I entered the service under the idea that so long as I conducted myself in a fit and proper manner in throwing up all my former connections, and entering the service, I had the right to expect that a certain income should be maintained to me during my life.

7358. Are you here on the part of the Dungeness men generally?—I am.

7359. Have you been watching the proceedings of this Committee?—I have.

7360. Have you been asking the shipowners

Mr. *J. B. Millen.*

17 May 1870.

to come here and give evidence, or not?—We have; and there are many of the shipowners who agree with the present system.

7361. Is there any shipowner from London of any importance coming here to give evidence for you?—No; they do not care about entering into it.

7362. Have you also applied to the underwriters of Lloyd's?—There are some of them coming.

7363. Who is coming?—Mr. Tozer is one, and Charles Windsor is another.

7364. Have you also applied to the members of the Trinity House to come here?—Yes; and we have letters here all favourable to the present system; but they do not want to come into the witness-box to be cross-examined by so many gentlemen.

7365. At all events, nobody is coming here?—I do not know whether Captain Drew will be here or not.

7366. Sir *C. Wingfield.*] You say sometimes that you cannot find out that the ships have taken a waterman pilot until after they have gone up?—No.

7367. And when you find it out, you get the captain punished?—Yes.

7368. But unless he refuses to take your services in superseding the watermen after you have offered, then he cannot be punished?—Yes; he can be punished for not complying with the Act of Parliament in flying his jack.

7369. Where is that provision; is it in the Merchant Shipping Act?—Yes, it is in the Merchant Shipping Act.

7370. You must be under a misapprehension?—No, I am not; there is the 348th clause, by which the master of a ship is obliged to hoist his jack and keep it flying from Dungeness to the South Buoy, of the brake in a line with Sundown Castle.

7371. *Chairman.*] There is nothing to prevent him taking a waterman and keeping him on board so long as a pilot does not offer himself?—No.

7372. Sir *C. Wingfield.*] Do you recollect the instance of a master being punished merely for taking a waterman on board?—No.

7373. Mr. *Graves.*] You say you received some letters from the members of the Trinity House; are those letters private, or are they official letters?—They were to Mr. Mallett, one of our deputation.

7374. Have you received any yourself?—No, Mr. Mallett, my colleague, has.

7375. Is the examination for the north channel the same as it is for the south?—I believe it is.

7376. You are not licensed for the north channel, are you?—Yes, under the Cinque Ports we were licensed for the north channel and the coast of Holland.

7377. Could you take a ship through the north channel?—Yes.

7378. Do many of the Cinque Ports pilots take vessels through the north channel?—No, they are not called upon to do so.

7379. It is only those who are specially privileged for the north channel who confine themselves by arrangement to the north channel?—It is merely for the time of war; we were compelled to pass an examination at the time for the north and south channels and the coast of Holland, as far as the Texel.

7380. In practice you are not called upon to do so?—No; except occasionally we go across to Antwerp with Her Majesty's yacht.

7381. Do you know whether there are a class of unlicensed men that take vessels up and down the north channel?—I believe there are many fishermen who take ships up and down the north channel.

7382. You do not know it yourself?—No.

7383. Shall we have any of the north channel pilots here to give evidence?—That I do not know.

7384. Are there boats attached to the north channel pilot service, the same as there are in the south channel?—The cutters there I believe belong to the pilots themselves; the Trinity House has no control over them.

7385. But there are pilot cutters attached to the north channel service?—Yes.

7386. Are they of the same class and size as your own?—I do not know that they are quite as large, but they may be.

7387. Do you receive your license from the Trinity House?—Yes.

7388. Who collects the earnings of the pilots in London?—Mr. Wood, our agent.

7389. Do the earnings go into the hands of the Trinity House at all?—No, only foreign ships are compelled to pay into the Trinity House; the Trinity House pay their pilotage to Mr. Wood.

7390. Why is that?—I suppose it is paid into the Customs; there is a law compelling all foreign ships to pay it into the Customs, so that they shall not escape the pilotage.

7391. In what way are you responsible to the Trinity House when you have once received your license?—They make certain bye-laws and regulations for the maintenance of order and discipline in the body, and for the cruising of the cutters; and they keep up the establishment of the cutters, and the superintendence at Dover and Deal.

7392. Do the Trinity House maintain the cutters?—The ship has to pay for it.

7393. But no part of the cost of maintaining the cutters comes out of your earnings, does it?—No.

7394. Is the cost of maintaining the cutters an additional cost to the pilotage, which the shipowner has to pay?—Yes, according to a scale; 60 tons and under 150 tons, it would be 1 *l.* for boarding and shipping money, 150 tons and under 250 tons, 1 *l.* 5 *s.*, and so on, up to 3 *l.* 3 *s.* for 1,000 ton ships, and upwards.

7395. Who appoints the masters to those boats?—The Trinity House.

7396. What control have the pilots over these boats?—None whatever.

7397. Under what head is the charge made for maintaining these boats; what do they call the charge, is it pilotage or boarding money?—Shipping money.

7398. Who controls the movements of these vessels when cruising?—The masters of the cutters.

7399. Do the pilots simply take a passage up and down, and remain in them till a vessel comes for them?—Yes; they cruise about in the cutters till they are wanted.

7400. Is that considered a good system?—I do not consider that it is.

7401. Has it ever been complained of to the Trinity House?—Many times.

7402. What has been the reply?—The Trinity House would not sanction any alteration.

7403. Have

7403. Have they given any reason for it?—They consider if the pilots had the control they would shirk small vessels; it being compulsory upon all they would shirk the small vessels, and merely look out for the large ones, and so it was taken out of the pilots' hands; but the present system is a very bad one.

7404. That would rather tend to lead to the supposition that with a voluntary system of pilotage with the boats in your own control, you would probably pursue the same sytem?—If it were a voluntary system we should.

7405. That is the one advantage of the compulsory service, as far as the shipowners are concerned?—Yes; we must go to small vessels if they put a jack up; but under the voluntary system I think it would apply only on one side.

7406. Would the service, on the whole, be worked more vigilantly or more efficiently if the boats were under your own charge, and you had the appointment of your own masters to these boats?—I think it would; the present system takes away all the energies and abilities of the pilots.

7407. Is it a part of your duty when cruising to be constantly sounding the channel?—No, because the cutters do not go over our pilotage district; it is only from Dungeness to the Downs; the cutters do not go further than the Downs.

7408. It is no part of your duty to take soundings as regards the alterations of the channels?—Our cutters do not enter them; they come only from Dungeness to the Downs; if we thought there was anything particular in the bay, we should survey it and sound about there, but the cutters do not come into our channels at all; only to the Downs or Dover, as the case may be, for a supply of pilots, and then they return westward.

7409. Mr. *Wykeham Martin.*] You do not come into the Thames?—Our cutters do not.

7410. Mr. *Graves.*] You are out of the jurisdiction beyond Dungeness?—Yes.

7411. And northwards it is the Downs, I understand?—No, it is compulsory now to the Ness, both in and out.

7412. Do you see any objection to having the limit the same, supposing it was Dungeness out and the Downs in?—If the system was to be altered, I should say, make it compulsory from the Downs.

7413. Are you acquainted sufficiently with the matter to answer questions of law upon this point?—No; I am satisfied that it is compulsory, and has been since 1825.

7414. What is the practice with regard to pilotage; do you leave a vessel generally in the Downs?—Outwards, most pilots do; some of the large shipowners take their pilots down to the Wight, and some further.

7415. Nine out of every 10 masters get rid of their pilots at the Downs, do they not?—Yes.

7416. You have a superannuation fund, have you not?—Yes.

7417. What are your contributions to that fund annually?—Eleven shillings per turn upon every turn that we carry, and 6*l.* per annum besides. 11*s.* per turn gives to every superannuated pilot a superannuation of 50*l.* a year. It is 50*l.* a year on the whole, but he has to pay the 6*l.* a year as well as a working pilot, so that it is reduced to 44*l.* a year.

7418. Does that include poundage?—No, we do not pay a poundage.

7419. Are you speaking of the Cinque Ports?—Yes.

7420. Do the Cinque Ports pilots contribute poundage?—No, they contribute dues.

7421. What do you contribute annually in the shape of dues?—The average would come to about 15*l.* a year in dues; 6*l.* a year for contribution, which we call death-money, that is, for the widow to receive 143*l.* at death, which I should have been glad to have got rid of long ago, for I could get 300*l.* for the same money.

7422. Is your contribution 22*l.* a year?—It is about 23*l.* a year.

7423. What is it that you will be entitled to when superannuated?—The gross is 50*l.* a year, but I should be compelled out of the 50*l.* a year to pay 6*l.* a year to the Trinity House.

7424. That is 44*l.* a year, which you would get net?—Yes.

7425. Is it obligatory upon the Trinity House to give you that amount?—It is; they are compelled to do it by Act of Parliament.

7426. That is only with regard to the Cinque Ports pilots, is it?—Yes.

7427. *Chairman.*] The actual amount is defined by Act of Parliament, is it not?—Yes, and they cannot go from it; and the widow gets 143*l.*, and 12*l.* 12*s.* per year for life.

7428. Mr. *Graves.*] Is it obligatory upon you to keep up that payment?—I believe so.

7429. Mr. *Brassey.*] Do all the pilots pay?—All the Cinque Ports pilots pay, and all the Trinity pilots pay their 2½ per cent. as poundage, and 3*l.* 3*s.* every year for their license.

7430. *Chairman.*] The arrangement of this pension fund is very favourable to out-port pilots, and very unfavourable to the Thames pilots, is it not?—It is, with regard to those who pay poundage, very unfair indeed, because some of the out-port pilots pay nothing, and yet they are all pensioned from that same fund.

7431. Even though they have received only a small amount for pilotage on active service, when they are superannuated they get the same as men like yourself, who have made very large incomes?—Yes.

7432. And you are taxed for the benefit of the out-port pilots?—Not myself individually, or any of the Cinque Ports men.

7433. The burden falls less upon you than upon the Trinity Cinque Ports pilots, does it not?—Yes.

7434. Do the Cinque Ports pilots pay 11*s.* a turn?—Yes.

7435. Instead of poundage?—Yes.

7436. But the other pilots pay poundage, do they not?—Yes.

7437. What is the poundage?—Two-and-a-half per cent.

7438. I suppose it falls very heavily upon some?—Yes.

7439. And it is for the benefit of the out-port pilots who have contributed very little, but they get the same superannuation eventually as the other pilots?—Yes.

7440. Mr. *Graves.*] Is there any special fund now to meet this superannuation?—Yes; the vested funds amount altogether, upon the whole, to something like 90,000*l.*

7441. Is that applicable to all superannuations made under the Trinity House, or have you, as Cinque Ports pilots, any special claim upon that fund?—Yes; when the amalgamation took place in 1854 we handed over to the Trinity House 23,000*l.*,

Mr. *J. B. Millen*
17 May 1870.

23,000 *l.*, besides other properties, amounting in the whole, with the value of future contributions, to about 51,000 *l.*, and they then said our funds were not solvent, and they allowed us 3,000 *l.* for our cutters; and there was a grant made from the Mercantile Marine Fund, amounting to 6,000 *l.*, which made the fund solvent at that time; and since 1854 the same body of pilots have paid upwards of 32,000 *l.* in contributions to the Trinity Board.

7442. Besides the 51,000 *l.*?—Yes.

7443. And the 3,000 *l.* for the cutters?—Yes.

7444. That is 84,000 *l.*?—Yes, altogether placed to our credit, including interest on stocks, it should amount to that.

7445. Probably it would be the opinion of the Cinque Ports pilots that no scheme of reduction of pilots by superannuating any number of them would be quite just, if it interfered in any way with the obligations to pay the Cinque Ports pilots their superannuation?—I do not know how these funds would all be kept up; the payments are individually the same in each one, and if you take off the upper part of the list, they would all be Cinque Ports pilots; then on those Cinque Ports pilots remaining, the contributions would fall very heavily to keep the fund solvent.

7446. *Chairman.*] Are all these contributions put into the same fund, or is there any distinction between the different funds?—No, there is not.

7447. And out of that fund the superannuations are paid all equally?—Yes.

7448. Is there any distinction between the superannuations of the Cinque Ports pilots and the superannuations of other pilots?—Only so far as regards the amount.

7449. What is the difference?—I think the highest that a Trinity pilot can get is 28 *l.* a year, after a very long servitude.

7450. And your Cinque Ports pilots get 44 *l.*?—Yes.

7451. Then the Cinque Ports pilots pay less and receive more eventually?—No; we pay much more if you take 11 *s.* upon every turn into consideration.

7452. Mr. *Graves.*] How often does the pilot committee of the Trinity House sit?—Twice a week.

7453. And there is a continual intercourse kept up in the control of the local authority over the pilots?—If they have any cause, they write down to the superintendent; there is a superintendent at Dover.

7454. Are the proceedings taken in public?—No; the Trinity House is a close court.

7455. Can you bring a vessel up to the London Docks?—No; to Gravesend only.

7456. Can you take a vessel from the London Docks?—Only from Gravesend.

7457. How is it arranged with regard to the boarding of the vessel; does the master of the cutter say who is to board?—We all go by turn; the senior pilot has the control of the pilots on board the cutter and maintains order, and he sees that the pilot required for a vessel is sent to that ship.

7458. Outwards, how is it done; is it by turn?—Outwards, there is great deal of choice.

7459. Is it usual for owners to select their own pilots outwards?—In a great many cases it is.

7460. Do your earnings go into one common fund, and is it then divided, or has each man his own earnings?—Each man has his own earnings.

7461. The selection probably would account for the reason that some earn so much more than the others?—That is so.

7462. *Chairman.*] In the case of inward pilots, it is merely a matter of chance, is it not?—Yes.

7463. They are directed what vessel to go on board of, and it depends upon whether it is a large ship, or a small one, what they get?—Yes.

7464. Do you pilot many vessels outwards, or is your whole pilotage inwards?—Inwards.

7465. As soon as you have piloted a vessel inwards, do you go back again and take another vessel; you do not practically pilot vessels outwards?—No.

7466. And I believe none of the Deal pilots do that?—No.

7467. Are they all engaged in piloting inwards?—Yes.

7468. As soon as they have finished their work inwards, they go back to their vessel?—Yes; they come back and enter their names in a book at the bottom of the list.

7469. Practically, the outward pilots and the inward pilots are a separate body?—Yes.

7470. Mr. *Graves.*] Do steamers, as a rule, take pilots generally through the south channel?—No; they are mostly passed men; they would not think of it; many of them while in the foreign trade do, because the law compels them; but when they enter on a voyage in the coasting trade they do not think of it.

7471. *Chairman.*] Is it the fact that a considerable number of vessels take pilots off Scilly?—Not that I am aware of.

7472. Did you never know of such a case?—No.

7473. Not licensed pilots?—I do not know that any man from there would go down so far.

7474. But when you go on board these large vessels, do not you supersede men who have been on board?—Occasionally.

7475. Is not that the case very frequently?—It is not very frequent.

7476. Are you not aware that there is a body of pilots at Scilly employed solely in piloting the vessels up to the Downs?—I am not aware of it.

7477. Is it not the fact that there are men at Scilly who are solely employed in piloting vessels up to the Downs?—No; I do not suppose I relieve one man out of a dozen ships on boarding them.

7478. Not one Scilly man?—No; in the whole 19 years, I do not know that I ever was on board a ship with a Scilly man as a pilot.

7479. Do not other vessels take pilots off the Isle of Wight, whom you again supersede?—Some foreign vessels go in for orders, and they bring a man up with them, but their employment is not frequent.

7480. Why is it that the present system of the ownership of the boats takes away all the energy and ability of the men?—If a man is on board a vessel, and feels himself only to be a passenger in a vessel, let his energies be ever so great, he is not called upon to put them forth.

7481. What happens now is, that he is directed what vessel he is to go on board of?—The master of the cutter has all the arrangements of the crews and the cruising, and when he sees a vessel with a Jack, up she is pointed out, and the senior pilot directs whoever is on turn to go to her.

7482. Supposing a vessel was owned by the pilots,

pilots, what should you say?—We should think Dungeness would be better supplied than it is at present.

7483. How would you do it?—I would keep the cutters more at Dungeness. They are scattered from the South Foreland to Dungeness, and are compelled to be upon these cruising grounds at all times. Supposing it a flood tide, and strong westerly wind, with a fleet of ships at hand, before the eastern cutters can get to the Ness, the western and middle cutters are empty, consequently there are no pilots at Dungeness for the vessels coming there.

7484. You mean if they pass by the empty cutters?—They are run out.

7485. You think the supply of pilots would be better maintained if the boats were owned by the pilots?—Yes.

7486. Do you think they would cruise further out to sea?—We should not go further than the west side of Dungeness, the waters are too wide; and vessels haul in when they come to Dungeness; they must do so, on account of two dangerous shoals lying to the eastward.

7487. If the boats were owned by the pilots, do not you think they would station them much the same as they are now?—They would keep them more to the Ness than they do now.

7488. Would all the three boats be nearer to the Ness?—There are occasions when they might be scattered about; but if they were more under the control of the pilots they would not be found knocking about Dover so much.

7489. They find fault with the stations of the boats rather than anything else, do they not?—Yes, and altogether with the management of the cutters; that causes a very great deal of unpleasantness.

7490. Mr. *Cave.*] You pilot to Gravesend, do you not?—Yes.

7491. And you are there superseded by the river pilots?—Yes.

7492. Mr. *Brassey.*] You said something about a contribution of 6 *l.* a year, which is applied for the benefit of the widows of the pilots?—Yes.

7493. Is that contribution paid by all the pilots?—It is paid by all the Cinque Ports pilots.

7494. You said that they get a lump sum of 143 *l.* at death, and 12 *l.* 12 *s.* pension for life?—The 12 *l.* 12 *s.* has nothing to do with the 6 *l.*; we pay the 6 *l.* a year for the sake of the 143 *l.* at death.

7495. As to the license money, did not you say that you paid 3 *l.* 3 *s.* a year for the license money?—£. 3. 3. annually, Trinity pilots do.

7496. What becomes of that money?—It is added to the Trinity House funds. Mr. *J. B. Millen.* 17 May 1870.

7497. And applied for your benefit?—It is applied to the superannuation of the pilots.

7498. So that, in fact, you make that additional payment to get that fixed superannuation which you have already spoken of; it goes into the same fund, as far as you know, and you get no other benefit from it except the superannuation?—We do not know that we receive any benefit whatever; we hand over so much of the funds to the Trinity House.

7499. You were asked whether the Deal boatmen were not competent to pilot large vessels through the Downs, and you said that they would be acquainted with the channels; but where they would fail would be in the knowledge of handling large ships?—Yes, and more; they are not accustomed to the work; I think you would find that very few of them would be capable of conducting a ship through the Gulf Stream in dirty weather.

7500. A man may be well able to manage a Deal lugger, and not be able to manage a ship of 3,000 tons?—No; he would not know what to do with her.

7501. You were asked about the Trinity House; they have no doubt the right to license any additional number of pilots that they please?—I do not think they have, inwards.

7502. Are there other reasons why they should not license an additional number besides any legal difficulty; for instance, with regard to the income which the pilots now receive, you stated that that might be more than a sufficient inducement for masters from the merchant service to enter the pilot service, but they would not come for smaller sums?—They would not come for a small sum.

7503. And therefore, if you wish to have a man as experienced and competent, and having the same prospects in the merchant service, as those who now join the Trinity House pilot service, you must give them as good prospects as they now enjoy, or else you will not induce them to leave their other occupations?—No; if you want to maintain a respectable body of men, you must pay them a certain sum which will enable them to live respectably, and to hold a respectable position in life.

7504. The Trinity House are rather restrained from adding to the present number of pilots, because they are obliged to consider the efficiency of the service?—Yes; and we are not allowed to enter into any other trade or occupation whatever; we are obliged to confine ourselves entirely to piloting.

Mr. JOHN CAPON MALLETT, called in; and Examined.

7505. Mr. *Brassey.*] YOU are a Trinity Cinque Ports Pilot, are you not?—Yes.

7506. And you are licensed for the River Thames in both the north and south channels, as well as the coast of Flanders and Holland, and as far to the westward as the Isle of Wight?—Yes.

7507. When did you enter the pilot service?—I entered the pilot service in 1849.

7508. And when did you pass your final examination under the Trinity House arrangement?—In 1854.

7509. What qualifications had you to show before you could be appointed a pilot under the Trinity House, under the first examination?—I had to prove that I was duly qualified in every respect to work a square-rigged vessel; to show that I was a perfect navigator, and also to prove my efficiency in the knowledge of the channels of the river. Mr. *J. C. Mallett.*

7510. Had you commanded a square-rigged vessel before you entered the pilotage service?—Yes, I had for 10 years before that.

7511. What class of ships did you command, and in what service were they employed?—I commanded a square-rigged vessel in the Hud-

Mr. *J. C. Mallett.*

17 May 1870.

son's Bay Company's service, and also in the trading to the East Indies.

7512. When you were yourself captain in the merchant service, did you always find that the assistance of a pilot was exceedingly necessary in the channels and the approaches to the Thames?—Yes; I always thought it exceedingly necessary, and I always found great relief, when I came on to a pilot station, to be relieved from the responsibility and anxiety which I had previously experienced.

7513. Have you heard shipmasters complain of being by law compelled to take a pilot?—I have not.

7514. Have you heard any of them express a sort of apprehension at the threatened abolition of compulsory pilotage?—I have heard several express such a feeling, that their owners would oblige them to go in this difficult navigation when they would not feel inclined to go by themselves.

7515. Do you consider that a great loss of life and property would ensue from the abolition of compulsory pilotage?—I think so, indeed.

7516. Does the record of wrecks that have occurred in the channel of the River Thames tend to show that where no licensed pilot was in charge of a ship accidents occurred much more frequently than in the cases where ships were in charge of pilots?—Indeed, that has come out very fully in the record of wrecks; that is, very few cases have occurred of loss of life or loss of property on occasion when pilots had been in charge of vessels: in other cases it has occurred when there have been no pilots on board.

7517. Do you consider that the south channel of the River Thames is one of the most dangerous and intricate in the world?—I do, indeed.

7518. On what grounds?—On the grounds of the narrowness of the channels and intricacy of them; the cross tides that are setting in there, the dangerous bar that there is. With reference to that, I believe large ships cannot pass through; they cannot pass over it until the water has risen sufficiently high to allow them to do so, so that it requires a pilot's knowledge, and a very intimate knowledge of the locality, to understand how, and at what time, a ship can pass over this particularly dangerous locality.

7519. On these grounds, you think the south channel of the River Thames ought to be made an exception under this Bill?—I think, looking at the Bill in its entirety, that it is really necessary that a person should have passed his examination, and thoroughly inquired into the particulars connected with the navigation of these channels, in order to insure the lives of those on board the vessel he is conducting, and also that the vessel will be conducted in a most efficient manner.

7520. Your evidence goes to prove that the pilots in the Cinque Ports had been all in good situations in the pilot service before they took up the appointment under the Trinity House?—It was necessary in order to enter it; a candidate would not be allowed to be examined unless he could prove these qualifications.

7521. Would you have given up your prospects in the merchant service, except with the understanding that the terms and conditions of the Trinity service were established by Act of Parliament, and therefore were not likely to be changed?—I should not have done so, and I believe many of my colleagues would not have done so either.

7522. What contributions do you make for the purpose of securing superannuation?—We have to pay 6*l.* a year; that was the established rule when we were united with the Trinity House. I speak of the old Cinque Ports system, when it was united with the Trinity House; that was the arrangement made in our body, that 6*l.* a year should be paid to keep up the Annuity Fund, the Superannuation and Widows' Fund.

7523. And that contribution you continue to pay?—Yes.

7524. For that contribution what sum do you get as a superannuation?—We are not certain of any; for instance, if I, as a pilot, were to do anything wrong, say, if, by any mismanagement of mine, I was brought before the Trinity House and suspended, or my license taken away from me, I should receive no benefit at all from the contributions I had made.

7525. Supposing you are suspended for a limited period, say for six or nine months, would that injure your prospects of superannuation?—It would not injure it finally, if I were restored to my position again.

7526. Can you give any instances in which a pilot who has been for a series of years contributing the sum of 6*l.* a year, has been ultimately disappointed in his prospects of superannuation, without having been guilty of any gross misconduct?—I can produce a few instances, but I have not got them here at present.

7527. You cannot speak from recollection?—No.

7528. *Chairman.*] It is at the discretion of the Trinity House, is it not, whether to give the superannuation or not?—No; on the Cinque Ports old establishment with the Trinity House it was not left to the discretion of the Trinity House that they should do this; it was made compulsory with the Trinity House to make these arrangements only at a certain age.

7529. You, I think, have gone rather fully into the subject of the abolition of compulsory pilotage, and you have made some calculations, have you not, and proved a result in the way of loss of employment if this Bill is carried?—I have.

7530. What is the result of those calculations?—I think we should here lose at least one-third of our income, and I think more, in fact; but I am quite certain that one-third would be sacrificed.

7531. It would arise from the great number of vessels which take pilots under the compulsory system, ceasing to take them?—Yes.

7532. Do you think those vessels would, by ceasing to take pilots, incur any serious risk of loss of life to the crews?—I think very largely, judging from my own experience, and what I have seen under different circumstances. When I had passed my examination under the Cinque Ports system, I took a frigate out for the Russian Government; in doing this, I was allowed the pilotage if I could save it. I went into several places up the Mediteranean withot taking a pilot at all, simply because I was tempted by the money which I could charge for pilotage, and which accrued to myself instead of being paid to the pilot.

7533. Mr. *Wykeham Martin.*] I suppose you do not know the Mediterranean ports?—Only by the charts.

7534. Mr. *Brassey.*] It was stated in the Parliamentary Paper referring to the loss of the "Spindrift," that the pilotage in that case was compulsory?—It has been stated so.

7535. What

7535. What is the limit of the compulsory pilotage service outwards?—The compulsory pilotage service outwards is only as far as the Downs; consequently the captain of the "Spindrift," on arriving in the Downs, could, if he had pleased, have landed his pilot there; that is to say, the pilot of the "Spindrift" could not have insisted upon the captain of the "Spindrift" carrying him any further than that.

7536. Mr. *Graves.*] Supposing another pilot had offered himself at the Downs, would the master have been justified in refusing his services on to Dungeness?—I think so.

7537. Mr. *Brassey.*] Is it not the practice that 99 out of 100 vessels discharge their pilots at the Downs?—Yes.

7538. Is it always in the Downs?—Yes.

7539. Therefore the captain of the "Spindrift," in continuing his voyage as far as the Downs with the pilot on board, was not under compulsion to take a pilot; he took him voluntarily?—No, he was not under compulsion; in all my voyages to India I could safely say that I hired a boat before arriving in the Downs for the purpose of landing the pilot; consequently, there can be no compulsion; it is simply a matter of choice entirely.

7540. Do you consider that a pilot is relieved, by the employment of tugs, from the responsibility or the risk which he incurs when in charge of a vessel under canvass?—As an individual, I should say my responsibility is increased, because then the tug becomes part of my charge.

7541. So that it occurs that tugs, in towing vessels when not under the charge of pilots, frequently tow them into improper and dangerous positions?—I think it is extremely likely they may do so.

7542. Does that often occur?—I will not say that it has occurred in my experience; that is to say, I would not like to say that any tug ever towed me into danger, because I, as a pilot, would try to prevent it; but I have heard of many cases in which tugs have towed vessels into danger, and come upon them for salvage for rescuing them from the danger they had towed them into.

7543. Can you state any case in which a pilot was in charge of a ship and the ship was in tow of a tug, and through the misconduct of the tug in refusing to obey the instructions of the pilot, very serious consequences ensued: do you remember the case of the barque "Sarah"?—In that case the tug was overpowered; it was in consequence of the action of the tug which led the pilot to go on with his vessel till he came to a part of the river where a storm arose, and the tug could no longer tow the ship, and consequently the pilot was obliged to anchor. In that case, the ship herself was left to the anchors alone to protect her; the tug was of no use whatever, and that ship was lost.

7544. Now as to compensation: you have, of course, very carefully studied the clauses of this Bill, providing for the compensation of the pilots; what is your opinion of the proposed scheme of compensation?—I do not see that there is any compensation allowed, and I cannot see that any compensation to pilots will arise from that Bill.

7545. You think that what is proposed under the Bill is entirely inadequate to meet the justice of your case?—I think so. I cannot see how it meets anything connected with our case at all; the fact is, that we come into the service under the idea that we were to protect life and property passing through the dangers of the channels of the Thames. The compensation spoken of in the Bill does not meet the case at all, because it will withdraw that protection that we came into the service with the idea of.

7546. Have you anything to suggest as to what would be a satisfactory scheme for the loss which you apprehend under this Bill?—I have not considered it in that light at all. I think that for the withdrawal of the competent class of persons from the protection of life and property passing through these channels, no compensation in the world, which any Committee could give, would make it up.

7547. You talk in the interest of trade, and the general interests which may be affected by this Bill; but as regards yourself personally, and as a pilot, have you anything to suggest to the Committee that will satisfy you?—I have not considered it in that light, because I never thought when the question was brought before the Committee that they would sanction it.

7548. You simply looked at it in the interests of the trade at large?—I look at it in the case of life alone. I really do think that no compensation that any Committee could award me, would compensate me for anything that could possibly take place under the operations of the Bill, because the protection would be removed, and danger to life would occur.

7549. Mr. *Pemberton.*] Have you seen the clauses relating to compensation in the Bill?—Yes.

7550. You do not think they are sufficient?—I think not.

7551. What you would suggest would be to guarantee half the amount of income that you have hitherto on the average been in the habit of earning?—I think it ought to be guaranteed to us.

7552. That is to say, that so long as you are able and willing to perform your duties?—Yes.

7553. You said, did you not, that there was a certain sum guaranteed by the Government by way of superannuation?—Yes.

7554. You said you fancied it was under some Act of Parliament; do you know whether it is under any Act of Parliament?—I am not certain as to the exact date of the Act, but it is under Act of Parliament.

7555. Cannot you tell us what Act it was?—No, I have not my papers with me. I was called up to give my evidence before I expected to be.

7556. You said, did you not, that each pilot, on the average, contributed about 17 *l.* a year to the fund?—Between 16 *l.* and 17 *l.*

7557. And in return for that, when you are superannuated, you say you get 50 *l.* a year less, on payment of 6 *l.*, so that there is 44 *l.* net?—Yes.

7558. I suppose the Trinity Board are compelled to grant you this superannuation allowance, unless you have forfeited it by misconduct?—Yes.

7559. They have no option?—No; they have no option, unless any change takes place in the law.

7560. Is there any particular age at which a man is superannuated, or does it depend upon each particular case?—In some instances they have taken individual cases into consideration; if

Mr. *J. C. Mallett.*

17 May 1870.

a man has become lame, or incapacitated in any other way, they have superannuated that man upon that same allowance; but then it has been well proved to them before they did so that he was really incapable of performing his pilotage duties.

7561. Otherwise it is a question of age, is it not?—Yes; but we may or may not allow it; still the payments have to be kept up.

7562. In addition to the 17*l.* a-year, do you pay something towards the widows' fund?—No; that is all included; it amounts to 16 *l.* 10 *s.*, I think.

7563. Do you think that the Trinity House are compelled to pay this superannuation, whatever may be the state of the funds?—I do not know that; I am not quite certain about that; the two funds were amalgamated; the Cinque Ports fund was amalgamated with the Trinity House fund in 1864.

7564. You have no option; you are obliged to contribute the 17 *l.* a year?—Yes; we are not allowed to go to sea unless the contribution is made.

7565. Do you think, generally, that if you could be secured your average earnings for the past three years, that would be sufficient compensation?—As regards myself, perhaps it would be compensation enough.

7566. I speak as regards the pilots generally; will the compensation clauses, in your opinion, be sufficient if they secured to each pilot the average of his earnings for the last three or five years?—I hardly know what would compensate me, as an individual, or my compeers; I do not know what amount would compensate us, short of guaranteeing the income that we left when entering this service, under Acts of Parliament that have been passed in succession, guaranteeing that a certain amount of material was required for the safe conduct of vessels through intricate and dangerous channels. If another Government chooses to overthrow that protection to life and property, then I think that the amount that I was in the habit of receiving at the time that I left the one service to engage in the other ought to be guaranteed to me now.

7567. That you should be put in the same position as you were in before you went into the service?—Yes; I ought not to lose by it. Had I been left in that position, I could possibly have risen to something greater than that, but being confined to this position, where I cannot be anything greater than a pilot (I may be a good one or not, as my employers think right), I think that if the Government chooses to remove me from that position, they ought to put me in the position I was removed from, or that I might have arrived at if I had been allowed to keep in the other service.

7568. As regards the compensation clauses as they stand, do you think that the term of two years is too long a time for you to ascertain whether there has been a loss or not?—As regards the compensation clauses *in toto*, I quite disagree in the arrangement of them; because I cannot see that the Government are going to compensate the pilots at all by the compensation clauses. They propose that a portion of the pilots should be removed, to compensate for the losses of the others.

7569. In the first place, they provide that at the end of two years a calculation shall be made to see whether they have lost?—That is the principle of it; then supposing a loss takes place, and a portion of the body are to be removed in order that the others shall get a living, I cannot see how that is any compensation to the pilots themselves; it is simply removing the elder portion; the more superior class of pilots will be removed to make a provision for the others; that is removing the protection for life and property which the present system conduces to.

7570. Do not you think that two years is too long a time for you to calculate whether there is any loss or not?—I think one year is sufficient; I think the true solution for the Bill would be to throw the thing open for one year, and see whether others would not gladly revert back to the present system; guarantee us our present income. If you want the real trial of the question, throw it open, and let everybody go and pilot vessels that pleases, and let everyone who wants a pilot get a pilot when he can; we would willingly submit to the result.

7571. You do not think the nation would stand the system of voluntary pilotage?—It is voluntary already; there is no compulsion in it; the fact is this, there is no compulsion at all; it is simply compelling a man to undergo an examination; and where is there a man in this world that would not gladly undergo an examination if he thought he could pass through that examination properly? There is no compulsory pilotage; compulsory pilotage does not really exist. This is the question upon which everything hangs; there is no real compulsion, only that life and property passing through dangerous districts shall have an individual in charge of it who is the best person for conducting them through those dangers.

7572. Mr. *Cave.*] I believe you have written a book about pilotage?—I wrote a small treatise upon it.

7573. And therefore you have given much attention to the subject?—I have given much attention to it, and I have tried to do my duty as a pilot since I have been in the service.

7574. What is your opinion as to the liability of pilots in case of collision or accident?—I think the liability as regards collision ought to rest upon those who get the best material to conduct the vessel through any intricate or dangerous place.

7575. That is the master of the vessel?—The master of the vessel might be the one under certain circumstances, and would be the one under any circumstances if in pilotage waters he had passed his examination, to conduct a vessel through those dangers.

7576. Would you say the responsibility should lie upon the person who took the best means to get the vessel carried safely through?—Yes.

7577. That is the shipowner eventually?—I do not know that it is a shipowner's question at all; I think it is the underwriters on whom it would eventually fall.

7578. The shipowner and the underwriter are the same people in this case?—The shipowner would try to relieve himself from the payment of it, and leave to the other the responsibility of it; I do not think they ought to be co-existent.

7579. Do you mean that the shipowner or the pilot should be responsible in case of accident?—I think the shipowners, most decidedly, because the pilot is a mere addition to his work.

7580. Now you can illustrate it, if you like?—I should like to illustrate it, because it seems rather a difficult point connected with the question of compulsory

compulsory pilotage. We will take a vessel below Dungeness; she is in charge of her captain, and of course his officers and crew; he appoints the second mate to take charge of the captain's watch; say that she is off Beachey Head, running up Channel; and he says to the second mate, "I am going below to lie down on my sofa; you keep a good look-out." A collision occurs; she meets with some other vessel. The shipowner or the underwriter is responsible for that accident. By-and-bye the vessel arrives at Dungeness, where it has been thought that a better system should be established; that is to say, that the ships arriving in those difficult parts should have the best material that can possibly be afforded to them. A pilot is put on board. I do not see why the liability should be removed to the pilot when it is the best material that can be obtained; I do not see why it should be removed from one to the other simply on that account; it is rather changing terms to think that the better material should relieve the responsibility of the underwriters.

7581. The Dungeness pilots go up to Gravesend, and are there superseded?—Yes.

7582. Is that a good system, in your opinion?—I do not see any harm in it, because in the case of a ship arriving at Gravesend there is quite a different danger; it is more the danger of collision than of being driven on sands or shoals.

7583. How is it that you do not pilot vessels downwards from Gravesend?—We are allowed by the Act of 1854 to pilot both ways, but we do not do it; it is inconvenient to do so; it would involve having two homes, a residence in London and a residence in the Cinque Ports.

7584. As soon as you have got a vessel into her moorings at Gravesend, you start down the river at once again to meet another vessel?—Yes; we go down and sign on the rota list as soon as we can.

7585. Sir *C. Wingfield.*] Is the south channel of the Thames, in your opinion, more difficult than the north?—I think it is much more difficult than the north.

7586. You are aware that pilotage has been voluntary with most of the vessels that frequent the north channel, but that most of them take pilots; why should not the result be the same in the south channel, if pilotage was voluntary there?—I do not think it would be, for this reason, that in the north channel of the Thames, it is now compulsory.

7587. It is not compulsory with all the vessels in the Baltic trade, is it?—Not by the English law, but it is by the law of the countries from which the vessels come.

7588. The larger number of the vessels in the Baltic trade are English vessels, are they not?—No; the great majority are foreign vessels, who are bound by their policies to take pilots.

7589. The vessels you take in the south channel are equally bound by their policies, the French and other foreign vessels, are they not?—I do not know of any instance where they are bound; they are not usually bound; a vessel from Calcutta may be insured at Calcutta, the underwriters may be resident there; they know that she will go up the south channel of the Thames, and they know that a duly qualified person is ready to take charge of the vessel on her arrival there; consequently they do not insert anything of that kind in their policies, though it is inserted in the north channel pilotage.

7590. *Chairman.*] I understand that the underwriters of the vessels from the north of Europe proceeding to London take care that they insert a clause in their policies to the effect that the vessels are bound to carry pilots?—Yes.

7591. And they do so because they know that pilotage is free for the north channel?—It is on account of that, I believe, that they do it; they take that precaution in order to insure their property.

7592. Is it not likely that the same class of people will take the same precaution when pilotage is free in the south channel?—The majority of the vessels do not come by the south channel.

7593. The underwriters of foreign vessels would take the same precaution with the vessels proceeding by the south channel, when they know that the pilotage is free there, as the underwriters do now for vessels coming to London by the north channel?—It is possible that they will do so.

7594. It will be a greater inducement, because the south channel is a more dangerous channel?—Yes.

7595. The dangers of the south channel are much greater than the dangers of the north channel?—Yes, just so; but if you withdraw the compulsion then it would not be so.

7596. There will be a great inducement to put that clause into their policies when the compulsory pilotage is abolished?—Yes.

7597. Mr. *Gourley.*] Who told you that such a clause existed in the north of Europe policies: if policies were produced showing you that no such clause existed, would you be prepared to prove that any such clause existed in the policies?—I should be prepared to prove it in one instance.

7598. Did you ever see a policy with such a clause in it?—Yes.

7599. How many have you seen?—I have seen one or two; I will not say that I have seen very many.

7600. *Chairman.*] The employment of pilots by foreign vessels coming to the north channel of the Thames is so frequent, that you are under the impression they are bound by their policies to take pilots?—Yes.

7601. Have you any doubt in your mind as to whether foreign vessels will or will not take pilots by the south channel when the pilotage is free?—They may or may not.

7602. Do not you think that, most probably, they will take pilots in the same way as they take pilots by the north channel?—Yes; I think they might do so.

7603. You gave the Committee an opinion that your employment will fall off when this Bill comes into effect, and you think you will lose one-third of your income?—Yes.

7604. That is upon the supposition that one-third of the vessels now bound to take pilots will not take pilots when the Bill is passed?—Yes.

7605. You think that one-third of the vessels that now take pilots will not take pilots when the Bill is passed?—I think it will be more in British vessels.

7606. You give it as your opinion, that your income would fall off one-third?—Yes; I am quite certain of it.

7607. And that would be in consequence of one-third of the vessels discontinuing to take pilots?—Yes; but that is with regard to the British vessels. I do not think that foreigners

Mr. *J. C. Mallett.*

17 May 1870.

would do so, because they would put on a compulsion in another sense.

7608. And therefore they would continue to take pilots?—Yes.

7609. And therefore the great falling off will be in the British vessels?—That is my idea.

7610. What is the proportion of your employment now due to foreign vessels?—I am not exactly prepared with the figures.

7611. You might be able to give us a pretty good idea of what number of foreign vessels are piloted compared with British vessels; is it not nearly one-half?—No, I do not think it is one-half.

7612. Is it not the fact that a very large number of British vessels of all kinds pass by there free from pilotage?—There are very few licenses, as regards the Thames; that is one of the reasons why I should say they should be compelled to be examined; they find a great difficulty in passing their examination, otherwise they would do so.

7613. What is the proportion of your employment due to foreign vessels?—I cannot say exactly.

7614. Is it approaching one-half?—I think you know more about it than I do.

7615. I want your opinion?—I left my papers at home.

7616. Is it not approaching one-half?—No; two-thirds are English vessels, I should think, judging from appearance.

7617. I presume the class of vessels that would decline to take pilots would be the small vessels?—They would try to evade the pilotage dues; I do not say that they would try to evade the pilotage qualification.

7618. After this Bill is passed, your opinion is that one-third of the vessels would decline to take pilots; is that so?—I think they would endeavour to save the pilotage.

7619. What class of vessels would those be?—The small schooners and steamboats, and those who choose to run cheap at the public expense.

7620. But the larger vessels would continue to take pilots, would they not?—They might or might not; I am not certain.

7621. Your calculation is based upon the small vessels declining to take pilots, and the larger vessels continuing to take pilots?—I think some of them would.

7622. With regard to vessels coming from the East Indies, where the captain had very little experience of the pilotage waters, is it not certain that that man would take a pilot?—It is not quite certain; he might be tempted to go without one.

7623. Is it not most probable that he would take a pilot?—It is not quite certain.

7624. Is not your calculation of two-thirds of vessels continuing to take pilots based upon the fact that the larger vessels would continue to take pilots?—The larger vessels would be more likely to do it than the smaller vessels, but the captains of the larger ships might even be tempted, because there is a larger amount to save by evading the pilotage. For instance, he engages a tug; say that he gets 50*l.*, and he gives the tug 50*l.* to tow him up; if he can get up on a very fine day, and so pocket the pilotage, he will do so.

7625. Are there not a considerable number of vessels that go from the Thames in ballast up to the ports on the west coast of England?—Yes.

7626. They are not bound to carry pilots, are they?—No.

7627. Do not they, as a rule, take pilots?—They take watermen.

7628. Do not they take pilots?—I have heard of instances where they take watermen, and get the ship ashore.

7629. Do not they take pilots; you must know that Mr. Smith's vessels do go round in ballast from the Thames to Glasgow; do not they take a pilot on the voyage to Glasgow?—I believe they do take men, but they are not licensed pilots.

7630. But you are entitled to supersede them, are you not?—Yes, if we can get on board of them.

7631. Do not you look after them with the view of superseding them?—No; we do not like to interfere with any such arrangement as that; we have an idea rather superior to it. If people do not want us, we do not like to force our services upon them.

7632. You are entitled by law to supersede these men, are you not?—Yes; we do not take advantage of it.

7633. Is it not the fact that these big vessels going round in ballast do take pilots?—I do not know it as a positive fact.

7634. You must know it pretty well?—I cannot say for certain.

7635. Have you not a shrewd suspicion that it is so?—No, I have not a shrewd suspicion; I cannot say for certain that it is so.

7636. Assuming that the larger vessels continue to take pilots, and the proportion of vessels continuing to take pilots is two-thirds, and let us suppose that one-third of the present pilots are superannuated, will not the position of those remaining as pilots be much the same as it is now?—I cannot see that it will be; their moral standing would be removed entirely.

7637. I am speaking with regard to income?—I think the income would depend very much upon the moral standing; it generally does.

7638. I assume that only one-third of the vessels decline to take pilots, and two-thirds continue to take pilots; and I also assume that one-third of the pilots are superannuated and two-thirds remain; will not the two-thirds be as well off, if not better off, than they are at present?—I do not think so; they will not have the same position in society.

7639. I talk of income?—Income results generally from position in society.

7640. Is it not often the reverse; I want to know whether, in your opinion, your position in point of income will not be as good then as it is at present?—No, it will not be.

7641. I assume that one-third of the number are reduced?—One-third of the number being reduced would throw discredit upon the system entirely.

7642. Why?—It would show that there was no necessity for them.

7643. I talk of two-thirds of the men who remain as pilots?—I cannot say that such would be the case.

7644. I want to know what the difference would be to the pilots?—The difference to the pilots must eventually be a loss of standing; a loss of position.

7645. How would it show itself?—The public would be the first to feel it.

7646. Is there any difference now between the standing of the pilots of the south channel and the

the pilots of the north channel?—I do not know that one is in any way superior to the other.

7647. Is not their position very much the same?—I hardly know whether it is or not; I have had very little acquaintance with the north channel pilots.

7648. You must know pretty well about them as to whether their position is not very much the same as your own?—It may or may not be the same.

7649. Are not they taken from the same class of people?—I think that very likely they are; they are nautical men.

7650. Are not their incomes very nearly approaching your incomes?—Yes; but it is necessary that they should be equally qualified as those of the south channel.

7651. You do not think that they are equally qualified?—I did not say that; I said it is necessary that they should be so qualified.

7652. Why; because the pilotage is easier?—The pilotage of the south channel is much more difficult than that of the north channel.

7653. Mr. *Gourley.*] You are at the head of the pilots of the United Kingdom, in a social scale, are you not?—No; I do not assume any superior position of that sort; I only speak as an individual pilot.

7654. *Chairman.*] Do you agree with the last witness, that the present system of ownership of pilot boats is not a good one?—I should be very sorry to give any decided opinion upon that; I think that all pilotage establishments ought to be under one head and rule, therefore I should not like to say it was wrong.

7655. I want to know your opinion with regard to the system of management and ownership of boats; do you think it better that the pilots should manage their own boats?—I do not think I can give a decided opinion upon that.

7656. You do not agree with the last witness?—I agree with the last witness, and for this reason, that the best amount of intellect ought to be displayed where it is most necessary.

7657. Do you think that it is displayed in the best manner now?—If I must give an answer to that question, I must say no.

7658. What is the defect of the present system?—I say that the greatest amount of nautical intellect ought to be brought to bear upon the cruising system of our stations.

7659. I talk of the ownership of the boats, and the system under which the boats are managed; ought it to be in the hands of the pilots, or ought it to be kept separate; would it be better that the pilots should own and manage their own boats?—I think they ought to have control over the boats.

7660. Why?—Because there is the greatest amount of intellect brought to bear upon the management of them.

7661. Do you think if they managed their own boats there would be greater energy displayed?—I think it must be better, under those circumstances, because each pilot is interested in the cruising.

7662. Would the greater interest which the pilot would have give rise to greater energy?—Of course they would be more interested in it than they are under the present system.

7663. And it would induce greater energy?—Yes.

7664. Would they cruise a little further out than they do now?—I do not think it advisable that they should do so; I think it would be one of the worst things they possibly could do.

7665. The three cutters would be kept closer together?—I think the three cutters being kept upon the different stations eastward of Dungeness is the best; for this reason, that if they went further down channel the water of the channel there is so much wider that ships might pass outside of the cutters, and when they came into real danger, where a pilot is most necessary they would not be able to get one. We have frequent instances of that in the case of foreign cutters. The Dutch cutters are allowed to go where they please. We have frequently seen six or eight, or perhaps 10, Dutch vessels after a strong wind arriving at Dungeness, and not a pilot to be obtained.

7666. It is the fact that the Dutch pilots cruise much further to the westward than you do?—Yes.

7667. And they pick up their vessels further to the westward than you do?—I believe that they go there and get a little *douceur* from the owners or masters of the ships for coming on board before that; but it would be much better that the presents should be distributed to them to keep on their stations, where they are certain to be found.

7668. What is your experience of the employment of pilots before they come to Dungeness; do you often find, on going on board vessels, that they have taken pilots on board at Scilly or the Isle of Wight?—Yes; I have done it myself in many cases in coming up the Channel, but I have found no relief from it.

7669. What is your experience of the extent of the employment of pilots before the vessels come up to Dungeness; do you find, when you go on board large vessels, that they have picked up their pilots at the Scilly or the Isle of Wight?—Some do; but the most experienced captains would rather be without such pilots.

7670. Mr. *Gourley.*] Who gives the word of command to vessels in charge of a pilot going from London to Deal?—The pilot generally issues the command to the officers of the vessel.

7671. If the captain or officer of the vessel should refuse to obey the order, what would the pilot do in such a case?—I should round the ship and anchor her.

7672. You would not take the command out of the captain's hand altogether?—I think that would be the least risk for me to run.

7673. Who should have the command of the ship when the pilot is on board?—I think the pilot ought to have the command in a measure, but not to the fullest extent.

7674. Why should he have the command?—Because he is best acquainted with the difficult passages the vessel has to pass through.

7675. Do you think that the navigation in the channels between the Thames and Dungeness is so difficult as to require the assistance of a pilot?—I think it is very necessary for the safety of life and property. There is no security for life, except such a qualification as a pilot ensures. I think that a pilot ought to be on board every vessel coming into narrow waters.

7676. When vessels are in charge of steam-tugs, are they not more safe than when they are in charge of pilots?—No, I consider them rather less safe.

7677. How do you make that out?—I consider that when a tug gets hold of a ship of which I am

Mr. *J. C. Mallett.*

17 May 1870.

I am pilot, my responsibility is directly more than doubled.

7678. Does not the master of the tug direct the navigation not only of his own ship, but also of the ship that he is tugging?—In most cases that I have seen, all his energies are worn out before he takes a vessel in tow; he generally goes to bed.

7679. How does he find his way between the sands, if he does not know the navigation?—His business is to get employment, and sufficient remuneration for it. The business of a master of a tug consists in getting a job; and if he gets it he cares no more about it, because he knows that the pilot is responsible for all the accidents to his tug and the vessel he is towing.

7680. If his responsibility is so little, he is not accountable in any way whatever if he tugs the vessel on the banks?—He is not accountable for anything.

7681. And there is nothing that the pilot could do to prevent his tugging the vessel on shore when he is in charge of it?—The pilot, in a majority of cases, can prevent it.

7682. At all events, it is your opinion that whether pilotage be compulsory or voluntary, when a pilot is on board a ship, he shall have the sole charge of it in pilotage waters rather than the captain?—Not exactly. I look upon the business of a pilot to be to advise the commander of the vessel. I look upon him as an additional officer placed there for the purpose of giving additional protection to life and property, which was formerly under the master's charge.

7683. The commander of a ship is not commanded by his officer, he commands the officers?—Yes.

7684. According to your reasoning, when a pilot is on board the master should command the pilot?—Not quite.

7685. The captain commands the officers, and if the captain commands the officers, according to your reasoning he should also command the pilot; therefore, if he is to command the pilot, there is no reason why he should be compelled to take a pilot if he could do without him?—I think you misunderstand me; I will explain it again: I look upon the pilot as being another additional instrument in the hands of the captain for the safe conduct of his ship.

7686. You have altered your position; you are of opinion that when the pilot is on board he must be entirely subject to the captain?—I did not say that. When I engage my pilot, as a captain of a ship, I do not resign the command of the ship entirely into the hands of the pilot, I only get an additional safeguard for the conduct of the ship through the dangerous waters that I am obliged to pass through.

7687. I believe you hold the opinion that pilotage ought to be free, and that any number of men should be licensed who are able to pass an efficient examination?—No, I do not hold that opinion at all; I expressed an opinion that the better way to arrive at the public opinion of pilot services would be to throw the matter open.

7688. And adopt the free-trade principle?—I would not recommend that; I say that it would be a better proof of what the pilots are worth.

7689. Would you be prepared to adopt that principle?—I should be prepared to adopt it.

7690. If the watermen who now navigate so many ships from London down to Gravesend can pass an efficient examination, you would be quite prepared to allow them to have licenses; is that so?—No, I should not

7691. Then you are in favour of two systems, one, a monopoly, and another, free trade?—No, I am only in favour of one, with reference to compulsory pilotage.

7692. What is the number of examinations you have to undergo before you can be qualified as a pilot?—We have to show that we have been in command of a vessel for three years.

7693. On showing that, you are immediately placed in charge of vessels as pilots, whether you have been up and down the channels or otherwise?—No; we have to be examined in nearly 200 bearings of different objects, and to show that we have a perfect knowledge of them.

7694. Who examines you?—A Master of the Trinity House.

7695. Are they all nautical men?—Yes.

Mr. Frederick Augustus Castle, called in; and Examined.

Mr. *F. A. Castle.*

7696. Mr. *Brassey.*] I believe that since the year 1841 you have commanded ships of considerable tonnage sailing out of the port of London?—I have.

7697. And you have therefore had many opportunities of forming an opinion of the general conduct of the pilots, and the efficiency of the system of pilotage as it now exists?—I have had many opportunities of doing so.

7698. What has been your experience, as a general rule, as to the facility for obtaining pilots when at or near their cruising station off the Ness?—Excepting on one or two occasions, I have never had cause to make a complaint. I have come into the Channel with ships drawing 25 feet of water. I have run up with perfect confidence when it has been blowing a gale of wind, knowing that when I got near the cruising ground I was almost sure to get a pilot. If I had not had that confidence, I should have hove-to in broader waters till the weather cleared.

7699. When pilots have boarded the ship in which you have been in command, I believe you have found them efficient in the discharge of all the duties devolving upon them?—Yes; I have, on one occasion only, many years ago, in the year 1842, when I first took the command of a ship.

7700. Since the date you speak of, the examination of pilots has been much more stringent, has it not?—Yes; they appear to be a superior class of men in the last 15 or 20 years.

7701. Do you consider that the duties of the pilots require that they should be thorough seamen, and competent to work a large ship in all the various evolutions required by the navigation of our narrow waters?—Yes.

7702. And you therefore consider that those duties can never be satisfactorily discharged except by a man who has had considerable experience in the command of a square-rigged ship?—No man ought to take charge of a ship, more particularly in the waters from the South Foreland, without he is a thorough practical seaman, otherwise he would undertake a duty which he was not capable of performing.

7703. You

7703. You require, for the time being, as much seamanship in a pilot as you do in the masters of vessels?—More so, I think; a pilot has to navigate the ship through narrow waters, whereas, till the ship comes there, there is no occasion for a pilot. The captain is in broad water, and he can get observations daily; the ship may be going a little wrong from one noon to the other, which is able to be corrected; but if the pilot of a ship goes wrong for five minutes he may lose life and the ship too.

7704. It requires special care?—Yes.

7705. You think that no man should be allowed to become a branch pilot until he has passed the Board of Trade examination for chief mate?—Yes; by his doing that he has proved himself capable of working a ship in all the evolutions a ship has to go through; it is only by practical experience that a man can do it.

7706. All the pilots you have employed in approaching the port of London have possessed the qualifications that you consider essential, have they not?—Yes, I have never had cause to find fault; I always consider it my duty to be wary and on the look out; in the event of observing anything I might fancy would tend to danger, I bring it under the pilots' notice, and I have found that they immediately take notice of it, and if it is necessary to make alterations they do so. I never found them at all at variance with me in my opinion in doing what I considered necessary.

7707. We may infer, therefore, that from what you have seen of the pilots employed under the Trinity House at the station off the Ness, they are men who, if they had remained in the merchant service, would have had a fair prospect of promotion to the command of merchant ships?—Yes, I do. Take myself, for instance. In the year 1841 I was a young man and I commanded a ship, and I have gradually worked myself up till I have a few ships belonging to myself, whereas a man leaving the merchant service and going to be a pilot has to be contented with a stipulated salary.

7708. He may rise if he continues in the merchant service?—Yes; it depends upon a man's connections.

7709. Do you think that under the proposed change of the abolition of the system of compulsory pilotage there is a danger of incurring loss of life and property?—I would not say it is certain, but I should think there probably would be an increase both in the loss of property and life; it is almost a certainty.

7710. You think that ships will in many instances fall into the hands of inexperienced men, some of whom may not be over-scrupulous as to what difficulties the ship may get into, and therefore you will be liable to dangers which you have not now to fear, because the pilots you now employ are men of responsibility, who have their reputation at stake?—No doubt of it. We are all pretty well aware of what boatmen are if they can get the opportunity; other people's misfortunes are the boatmen's advantages. I do not say that they take advantage of them, but those who go to sea see wonderful things. In my short career I have been on one or two arbitrations, where I have proved beyond a doubt, from boatmen who have been examined on oath, that it was their fault that ships have been led into difficulties and put into Ramsgate Harbour from the vessel having a boatman on board instead of a pilot.

7711. You think many men who would present themselves to discharge the duties of pilot would be more interested in the salvage of the ship than the pilotage?—Yes; it is the same as putting a seaman in charge of a ship instead of yourself, if you take a boatman. The men are sharp fellows in a lugger, but they are not fit to be masters of a ship. You might as well take one of your seamen and put him in command of the ship; and why should you put a boatman in comparison with a pilot any more than you should a seaman?

7712. Do you consider that the employment of a tug does not lessen the necessity for the services of a pilot?—Not the slightest; on the contrary, I think it increases the necessity for having a pilot.

7713. In the event of a gale coming on, when the ship is in tow of a tug, would it not be extremely dangerous for the master to try to dispense with the services of the pilot, and proceed up the river by himself?—Yes. If the captain of a vessel coming to Dungeness takes a steamboat instead of a pilot, he has got a boat that will tow him to a certain distance; the tide and wind may change; the tug hails him, and says, "I cannot tow you any further; my coals are gone"; he lets go the warp, and the ship has to anchor, and the tug goes in-shore for coals, or for other purposes. During the night a gale of wind comes on, and the ship, instead of being under a weather shore, is under a lee shore; a gale comes on, and he slips his anchor; what is the captain to do, in narrow waters; how can he get the ship out; it is a certain loss of the ship, and all hands on board. If the pilot is on board, he knows the lights, and he can box the ship about till he gets her into the North Sea, and the ship is safe.

7714. All this is not imaginary?—No; I have had a ship with 24 feet of water, the "King Lear;" we were brought up, and the wind changed round in the night; it came on to blow the next morning; we got the two tugs, and in getting our anchor we broke up our windlass; had we not signalled for another boat the ship would have been lost; had I not had a pilot I should not have known what to do, and I was as glad to have a pilot on board that day as any man would be on being saved from death.

7715. With regard to the point of law of the liability, in the case of collision, or rather the sum to be paid for damages, do you think that that liability should be paid by the owner of the ship in fault?—The ship in fault is like you running against me; I look upon the person who causes the accident to be the liable party.

7716. Do you think that the damage should be paid by the pilot, or by the underwriters?—If the other ship is in fault, the man who is in fault ought to pay. But all these damages, except they amount to an average, are settled by the pilot, but if they amount to an average, they come upon the underwriters.

7717. Mr. *Wykeham Martin.*] The ship is exempt if it has got a pilot on board in compulsory pilotage water, is it not?—If the damage is so much that the pilot cannot meet, it falls upon the underwriters.

7718. I think you are wrong?—I admit that the underwriters are willing to get out of the risk as well as they can, but they will take the premium, and it is a matter of argument afterwards as to the liability. If my ship was coming up and had a pilot on board, and was run into and sunk, I should claim from my underwriters, and they would have to pay.

Mr. *F. A. Castle.*

17 May 1870.

7719. Mr. *Brassey.*] When a ship arrives off a port, and wants a pilot, practically the owner of that ship has no power of selecting the man that he himself would prefer, he is glad to take the first pilot on turn?—The owner is in London, and supposing a ship arrives at Dungeness at 2 o'clock in the morning, and has made a quick passage, the owner does not know that the ship is there; how can he arrange for that? Now going down the river, every shipowner has his own particular pilot; either from connection or interest, or from having a better opinion of his abilities. In London a man knows when his ship is going away, and he can apply to a man to take charge of her.

7720. And whether the system of pilotage be voluntary or compulsory, a ship inward bound from a long foreign voyage, approaching the port of London, must necessarily take the pilot who offers himself in turn, it being impossible for the owner to anticipate the arrival of the ship, and send down a man of his own selection to meet the ship?—I do not see how he could do it, unless he sent a man down to wait for it, he may have to wait a month; it is no use a man being on shore, if he is, the captain must heave-to his ship off Dungeness, and send a boatman on shore, and say, "You go to such-and such a house, and get Mr. Johnson who is waiting there, to pilot my ship." How is he to know that the pilot is there, when he has been away two or three years.

7721. Under such circumstances it is better for the owner to place reliance upon a man selected and examined by competent pilotage authorities, rather than attempt to select a man for himself?—Yes. When a pilot comes on board a ship, the captain says, "What is your name; are you a branch pilot?" He asks to see his certificate to know whether he is a branch pilot, which he is ready to show.

7722. Having reference to the nautical necessities, you cannot defend the rule in law, that the ship in case of collision is absolved, because she is in compulsory pilotage water?—No. In nine cases out of 10 a ship gets into a difficulty by accident, not by any neglect.

7723. Mr. *Gourley.*] Who do you think ought to have the charge of the ship when the pilot is on board; the pilot or the master?—I consider that for the actual practical working of the ship, common sense would dictate that the pilot is the responsible man, although the master ought not to consider that he has thrown up all charge when a pilot is on board. He ought to have a watchful eye over him. He is the agent of the underwriter, and it is his duty to his owner to watch everybody on board the ship, and nothing ought to take the responsibility of the ship out of the captain's hands.

7724. When a pilot is on board a ship, does not he always give the word of command?—On board a man-of-war the pilot says to the officer in charge, "She will go about, sir," and it is done; but in the merchant service we have confidence in our pilots. If the captain says, "I will work the ship, as I know how she will answer her helm better than the pilot," the pilot says, "Very well;" but the pilot generally does it himself.

7725. The primary object of having a pilot on board is merely to point out the dangers of the navigation, is it not?—Yes, that is it.

7726. Not the steerage of the ship?—The steerage is the thing that would run her into danger; the pilot gives the course to the man at the wheel.

7727. The steerage has nothing to do with the danger the pilot has to point out; if a pilot is to point out the danger he must have a certain amount of command on board the ship, must he not?—He does have a certain amount of command; for instance, in coming through the south channel there is a tide setting right across the channel; there are two dangerous sands there, and of course a captain could not steer a ship through them; he does not know the cross set of the tides as well as the pilot.

7728. In such a contingency as that, you would give the pilot charge of the ship, would you not?—The pilot has the charge of the ship, but the captain keeps an eye upon him.

7729. You cannot have two masters on board the same ship?—You do not give the entire charge of the ship to the pilot.

7730. If you are upon the poop, and you have a pilot with you, the pilot gives the word of command, and you do not interfere with him; is not that so?—Not as long as he is going right; you keep an eye upon him, and if you think anything is going wrong you suggest it to the pilot; you know that the man is a respectable man, and that he comes there not to put you into danger, but to put the ship in safety.

7731. If the master is to be to some degree responsible for the navigation of his ship in pilotage waters, would not it be better to permit the master to take a pilot, or dispense with him according to his own pleasure?—That would depend upon circumstances; if you are a shipowner you know that there is no property in the world subject to so many circumstances as shipping; such as the changes of wind and tide, gales, and the extraordinary conduct of seamen, and all those things.

7732. In all those changes, would you consider yourself competent to take the command of your own ship, and navigate her through the most difficult waters with the assistance of charts?—No.

7733. Would you be able to navigate her with the assistance of your sailing directions?—No, not up the River Thames from the Gull Light.

7734. Could not you yourself, as a nautical man, work a ship up the estuaries of the Thames without the assistance of a pilot?—Not unless I had studied and had undergone an examination, and had gone through the practical part of that particular branch of my duty, and felt confident, from having passed a proper examination at the Trinity House, that I was morally fit to do it. Though I have taken ships through every nook and corner of the world I have been into, yet I would not attempt the River Thames.

7735. Do you consider the River Thames more dangerous than other places?—No; I do not consider it more dangerous than the River Hooghly.

7736. Do you consider the Thames more dangerous than the Mersey?—Yes, I do; there are more intricacies in the channel, although the tide does not run so strong.

7737. Sir *C. Wingfield.*] You say that you consider the Hooghly a very difficult river?—Yes.

7738. Are you aware that 20 years ago the Government discontinued compulsory pilotage there, and gave certificates to any man who could

Mr. *F. A. Castle.*

17 May 1870.

could pass the examinations?—It is not 20 years ago. There has been more damage in consequence of some of these young men getting charge of the ships than ever there was before. It is very seldom you hear of an experienced pilot getting into difficulty in the River Hooghly; and in nine cases out of 10 where vessels get into difficulties, it is from an inexperienced pilot being on board.

7739. I have had some experience of the river, and I have never heard, since the change in the pilotage system, that the accidents were more frequent in the Hooghly than before?—I think they have been.

7740. At all events, the Government have shown no inclination to go back to the old system?—What can more prove the necessity of having good pilots than this: you go to the pilotage office at Calcutta, and a man is appointed to you; you look at the name, and you know that he is a junior man; you immediately ascertain if any branch pilots are at home, and if so, you go to their house and say, "I should like you to take me down"; the man says, "I do not want to leave my family"; you say, "I will make it all right," and you give 500 rupees to get a good man.

7741. *Chairman.*] Why not give him the extra sum?—We do; and every ship of any draught that comes to Calcutta does it.

7742. Sir *C. Wingfield.*] Does it not happen in any body of men that some are better than others, and if people can get the services of those they specially like they will try and do so?—Yes.

7743. That does not affect the system; it would exist equally under any system; some would be more preferred by the shipowners than others?—Perhaps it would be so; no doubt in coming into the channel, if we could get a particular man who has been with us before, we would place more confidence in him from having an actual knowledge of him.

7744. *Chairman.*] Have you had any experience of ports where pilotage is voluntary?—I have not had a great deal; I have always sailed out of the port of London.

7745. You do not know much of the north channel of the Thames?—I know a little.

7746. You are not able to form an opinion as to how far voluntary pilotage has succeeded in the north-eastern parts?—No.

7747. And you have not been able to make any comparison between the system of compulsory pilotage and the system of free pilotage?—No; not to compare the two.

Mr. Henry Tillman, called in; and Examined.

Mr. *H. Tillman.*

7748. Mr. *Brassey.*] I believe you have had for many years command of ships trading to the port of London, and elsewhere?—For 25 years.

7749. And in approaching the port of London in command of ships, have you, on all occasions, been able to procure a pilot from the vessels stationed off Dungeness?—Yes, with perhaps one or two exceptions, and that was my own fault in keeping too far off the cruising ground, on account of the wind being scant.

7750. At the same time, in very stormy weather, I suppose it would be impossible for a pilot to board a ship off the Ness?—I have run up in the winter time in some very heavy gales of wind, and I never missed in all that time getting a pilot; in the summer time I do not care so much.

7751. Have you ever known any instances of boatmen presenting themselves, and offering their services to act as pilots?—Yes, many a time; and I have been led into danger by them if I had taken their advice; I was misled once in the transport service with women and children on board; if I had taken their advice I should have gone on shore and gone to pieces during a thick og.

7752. Do you think that if compulsory pilotage were abolished much loss of life and property would ensue?—Most certainly it would.

7753. And partly in consequence of the misconduct of these irresponsible persons, who might, if compulsory pilotage were abolished, and the system were less complete than it is now, present themselves to undertake the duties which now devolve upon experienced pilots?—Yes.

7754. When a shipmaster has been absent from this country on a long voyage for some months, do you consider that a pilot is essential to him on approaching the Downs?—Yes.

7755. He cannot know the large fleets that may happen to be in the Downs; he cannot know the position of the ships at anchor, and the sands which have shifted from time to time with the action of the tide; all these important changes require the assistance of a pilot?—Yes; there are many cases where a man has been on his passage for three or four months; he has seen nothing but the horizon, and when he comes into narrow waters he is not a good judge of distance, on going into the roadstead, in bringing a ship to anchor; many accidents happen in going into a harbour from the bad idea captains have of distance, having been for so many months accustomed to a large range of water.

7756. And that peculiar difficulty makes a pilot especially necessary for the safe navigation of large ships in narrow waters?—Yes.

7757. If the pilots were no longer employed as much as they now are in fine weather, do you think that you could reasonably expect to find the pilots as invariably at their stations in stormy weather as you do now?—I do not think you could.

7758. Do you think that in stormy weather you would suffer in consequence of not taking them in fine weather?—Yes, as a rule. I have had an interest in the ships for 20 years which I have commanded, and I have made a rule in fine or thick weather to take them, so as to encourage them in fine weather to look out in bad weather.

7759. Even when you were not bound to take them?—Yes.

7760. You did that in order that you might contribute, as far as in you lay, to maintain a thoroughly complete and efficient service at all periods of the year?—Yes.

7761. *Chairman.*] What port do you refer to?—Leaving London. I have taken a pilot upon the pilotage ground up to the Downs; if I am leaving in the summer time I do that. I have taken one in the winter down to the Isle of Wight, or Beachy Head; and in bad weather when we have had gales of wind, and in the summer

Mr. *H. Tillman.*
17 May. 1870.

time when we have had fogs, I say, "Now you must have the sweets as well as the bitters, and I will take you down now."

7762. Did you pay them more for taking them that distance?—Yes, certainly, according to a regular scale, according to the Trinity House schedule.

7763. Mr. *Brassey.*] If the present income of the pilots suffered any reduction, do you think the present state of efficiency could be maintained?—No.

7764. Do you think they are not paid more than they ought to be for the important services which they render to shipping?—I do not think they are.

7765. Do you think it wise to insist that the pilots of the Thames should have served as masters of merchant ships before they became pilots?—Yes; they ought to be efficient in every way to work and manage a ship.

7766. The manœuvring of a ship becomes an operation of a special difficulty in the narrow channels which the pilots have to navigate?—Yes.

7767. Is it your opinion that the station off the Ness is the very best that could be selected for the pilots to board inward-bound ships?—Yes.

7768. If you were to change the station, and the cutters were to cruise off Beachy Head, do you consider that it would not be so convenient for boarding inward-bound vessels?—No, for this reason; that off Beachy Head you could not get into smooth water in heavy gales in the winter time to get pilots on board. At Dungeness you have smooth water to get the pilots on board; at Beachy Head the channel is about 40 miles wide.

7769. If the system of compulsory pilotage were abolished, do you think that the cruising system could be maintained in its present efficiency?—No.

7770. Do you apprehend that in consequence of the diminished number of pilots which would follow from the abolition of compulsory pilotage, many valuable vessels would sometimes be placed at the mercy of the hobblers, who cruise about to get employment as pilots?—Yes, that would increase very much, if compulsory pilotage were done away with.

7771. You think that in bad weather these men would expect to make a fine harvest from the salvage services which they would render to shipping?—Yes; no doubt of it. That has been well known as long as I can remember.

7772 Do you think that the difficulties attending the navigation of the southern channel of the Thames are far greater than those of any other port of the United Kingdom?—I cannot say; I should say it was as difficult as any. I consider that it is certainly more difficult than the Mersey.

7773. *Chairman.*] Have you had any experience of the Mersey?—Yes.

7774. Do you think the Thames is more difficult of navigation?—Most decidedly; there is no question about that.

7775. Sir *H. Selwin-Ibbetson.*] Have you greater facility for anchoring in the Thames than you have in the Mersey?—The only difficulty in the Mersey is in crossing the Bar, and then you are in safety, as far as life is concerned.

7776. In certain winds the Mersey is not a very pleasant coast to be on, is it?—No, nor are certain winds in the English Channel at Dungeness, to my knowledge.

7777. Mr. *Brassey.*] Does the practice of employing a tug, in your judgment, obviate the necessity for the employment of a pilot?—I would not allow a tug for any vessel that I had any interest in without a pilot on board; nautical men could never bring forward a theory like that that could be carried out in practice.

7778. Will you just illustrate your view, with reference to what might arise in the event of a gale coming on, in the case of a vessel in tow of a tug?—Suppose you are going up a channel which you are not conversant with, and you trust to a man who is 100 fathoms ahead of you with a rope; if the rope breaks before your anchors are let go you are on shore; the man will not tell you of the danger; he is your pilot; just as you got into danger he might cut the hawser and say it broke; then you are ashore and lost.

7779. In a channel like the southern channel of the Thames, the distance over which the pilot service is required is very considerable, and it would be impossible for any master of a ship to form any idea, on approaching Dungeness, what weather he might anticipate before his voyage was completed to Gravesend?—No.

7780. If a man relied upon the appearance of the weather off the Ness, and therefore effected an economy by refusing to employ a pilot, he might get into difficulty before reaching Gravesend?—It would be false economy.

7781. Mr. *Gourley.*] What do you mean by "hobblers"?—The boats that go about the Channel to pick up anything.

7782. Shipmasters generally in this country are sufficiently aware of the fact that the men whom you call hobblers are dangerous men to have anything to do with, and they avoid them, do they not?—Yes, I have had them on board; they come on board a ship now and then; they are very useful for taking letters on shore.

7783. Their primary use is to take pilots and letters on shore, is it not?—Yes.

7784. I suppose no master would entrust his ship in their charge?—It is done now and then.

7785. Mr. *Wykeham Martin.*] Do not they take them to help the ship if she is short-handed?—No doubt, if a ship comes home with seven or eight men sick, the captain would take them to help to work the ship.

7786. Mr. *Gourley.*] Are you of opinion that steam-vessels cannot safely navigate in the Thames pilotage channels without pilots?—If a captain has passed the examination as pilot, he can do so.

7787. You mean, if he has passed his examination as a seafaring man?—He must have a knowledge of the channel.

7788. That, I apprehend, he could procure in the course of one or two trips?—I rather doubt that.

7789. How often do you suppose a captain should navigate the Channel before you would consider him sufficiently capable of taking charge of a ship without a pilot?—It is rather a difficult question to answer. Some people have greater observation than others; one man might learn as much in a twelvemonth as it would take another three or four years to learn; but a man of ordinary capacity ought to be a pilot for the river in a steamer in six months.

7790. In that case, would you exonerate the masters of steamships from taking pilots; would you leave it at their option?—If they are properly qualified, I would do so.

7791. Would

7791. Would not you leave the masters of sailing ships to their own option as to whether they would take pilots or not?—No.

7792. Do not you find a large number of sailing ships navigating the Thames, and the approaches to the Thames, without pilots; in the case of colliers travelling to the westward, none of the masters carry pilots, do they?—No; they are up and down the channel every fortnight.

7793. Even on the first trip they are not bound to take a pilot, are they?—They must have some one on board to show them the channel, because I will defy anybody to go up and down the Thames on his first trip without having a knowledge of it.

7794. Could he not do so with the assistance of the charts and sailing directions?—No; if a ship is going, six, seven, or eight miles an hour, how can a man look out for the buoys; while he is looking for them on his chart, he would be on shore.

7795. All masters are sufficiently prudent, are they not, to drop the lead before they come near the banks?—Yes; but you must remember that some of these channels are not an eighth of a mile wide.

7796. You can work in the eighth of a mile, cannot you?—You will have to make these men, they are not in existence; if you say that a man can go up the Thames the first voyage without a pilot, I should like to see him do it.

7797. I said that captains of colliers did do it?—They have been working up and down the river for years and years, as mates and boys, in colliers, and then they get the command.

7798. With an ordinary knowledge of navigation, would you consider that the captain of a ship is quite competent to navigate his vessel to and from London?—But how long is he to be away from London? A man that goes backwards and forwards every month ought to know the Channel well; if he only goes up and down once or twice a year, he cannot do it.

7799. Sir *C. Wingfield.*] Do Thames watermen ever take vessels down to the Downs, or bring them up from the Downs?—Some of them do in ballast; but I have never been in a ship which has had a Thames waterman on board, except for running out ropes on arriving at the docks.

7800. As a rule, they do not come down as far as the Downs, do they?—I never heard of them.

7801. *Chairman.*] What class of vessels have you been in the habit of commanding?—I have commanded ships of all sizes, from 1,000 tons to 1,200 tons, in troop service and transport service.

7802. Not under one particular owner?—No, in all parts of the world. I have generally an interest in the ship I command.

7803. I understood you to say that you generally took a pilot further than Dungeness, Beachy Head, or the Isle of Wight?—Yes.

7804. And of course you have to pay extra for their services?—Yes, according to the scale of prices.

7805. Is that a common practice?—It is not a common practice.

7806. Still, a considerable number of owners of vessels do it?—A great number of ships embarking passengers or troops at Southampton or Portsmouth take a pilot.

7807. They think that for the general security of the vessel, it is well to omit no precaution, and they take a pilot even beyond the compulsory district?—Yes.

7808. I understand you to say that you have done it in fine weather, though their services were not immediately required?—No.

7809. On the ground that you do the same thing in bad weather, you thought it fair that they should have a turn in fine weather as well as in bad weather?—Yes.

7810. In coming up the Channel, do you often take a pilot at the Scilly?—Never.

7811. Do you take a pilot higher up the Channel?—No, I have never taken a pilot yet till I have got to Dungeness, because I consider myself quite competent to take a ship in any weather as far as Dungeness.

7812. Have you any experience of ports where pilotage is voluntary?—No; not of the English ports.

7813. You have no knowledge of the extent to which pilots are voluntarily employed by vessels in English ports?—No.

7814. Have you formed any opinion with regard to the extent to which the employment of pilots will fall off if the Bill is passed?—I do not think that you will get the same class of men.

7815. What I want, in the first instance, to know is, whether you have formed an opinion as to the extent to which you think the employment of pilots will fall off?—I think their employment will fall off, because in the summer time, in fine weather, the men will not meet with the same employment as they will in the dark winter nights, when they will be wanted.

7816. Do you think that most vessels will employ pilots in the dark winter nights?—Yes. they will be glad to get them.

7817. I may take it also that you think, from your experience, a great many captains, who employ them in the dark winter nights, will employ them in the fine summer days?—I generally take a pilot at Dungeness; I always take one, winter or summer.

7818. I understand you to say that vessels would take pilots in dark winter nights?—I believe they will.

7819. You have told us already that you yourself take pilots when you do not want them to ensure getting them in the winter months?—Yes.

7820. Will not the same influence be brought to bear upon the employment of pilots generally, if this Bill is passed?—I allude to the distance between Dungeness and the Isle of Wight.

7821. Where the pilot is very little wanted?—Yes.

7822. If you are ready, though you do not want a pilot, to employ a pilot from Dungeness down to the Isle of Wight in the summer months, because you employ him in the winter months, will not the same influence be exercised for the employment of pilots from Dungeness upwards?—There is a difference of opinion about that; in giving my opinion about taking a pilot down to the Isle of Wight, a great number of owners will not approve of it.

7823. But, judging from your own experience, what would you say?—It does not rest with the captain of a ship as to the employment of pilots.

7824. You have served under a great number of owners?—Yes; but I have had an interest in the ship, and I have not been under their control entirely.

7825. You have not been manager of the ship?—I have always fitted the ship out myself.

Mr. *H. Tillman.*

17 May 1870.

7826. You have not been the managing owner?—No, I have been the sailing owner.

7827. But the managing owner is at home?—Yes.

7828. Have you found any difficulty in making the owner pay for the pilotage?—No; I have never had a bill disputed because I have had an interest in the ship myself; but a great many would dispute it if I had not this interest.

7829. In your opinion, you think that the greater proportion of vessels will continue to take pilots?—Yes.

7830. You believe that all the higher class of vessels will continue to take pilots?—Yes.

7831. What leads you to believe that the pilots will fall off?—My opinion is that we shall not have the same class of men, and that their employment will fall off one-third or one-half by opening the service.

7832. Are you seriously of opinion that the employment of pilots in the south channel of the Thames will fall off, and that it will be a third less than it is now?—I do; I say that that is my opinion.

7833. Is that with regard to the employment of pilots?—Yes.

7834. Your opinion is that two-thirds will continue to get employment as they do now?—I believe it will be less, because large foreign-going ships must take pilots under any circumstances.

7835. You think that all long-voyage vessels must take pilots?—Yes.

7836. And all foreign vessels that come to a port for the first time must take pilots, must they not?—I suppose they will.

7837. Are you aware that all foreign vessels take pilots when they come by the north channel, though they are not bound to take pilots?—No, I do not know that.

7838. You think that all foreign vessels will employ pilots?—Yes, excepting those vessels from the adjacent coasts of France and Holland, who are constantly trading to London.

7839. And all long-voyage vessels?—Yes.

Mr. Thomas Ralph, called in; and Examined.

Mr. *T. Ralph.*

7840. Mr. *Brassey.*] How long have you been a pilot under the Cinque Ports and the Trinity House?—Twenty-seven years next October.

7841. Do you hold your original license?—Yes.

7842. Did you serve a kind of apprenticeship in the pilotage service?—Yes.

7843. Under different regulations from those now in force?—Yes.

7844. What were the regulations under which you served your apprenticeship?—The first three years after being licensed I was not allowed to take charge of vessels drawing more than 11 feet 6 inches of water. After that I was allowed to take vessels drawing not more than 14 feet for two years more; 17 feet for two years more; making in all seven years; then I was subject to re-examination, and if approved of, I was allowed to take ships and vessels of any draught of water.

7845. Has there been a reduction in the rates charged for pilotage since you have been in the service?—Yes.

7846. What was the extent of that reduction?—Since the amalgamation of the Cinque Ports with the Trinity House there has been a reduction of 8½ per cent. to equalise the rates up and down the river; there used to be 8½ per cent. more pilotage for taking vessels up the river than taking vessels down the river. In addition to the 8½ per cent. that was taken away, there was another 10 per cent. additional, with 25 per cent. further additional for vessels towed or propelled by steam; that is 43½ per cent. in the whole has been deducted from the rates which I was entitled to receive under the Cinque Ports pilotage jurisdiction.

7847. And in spite of this very large reduction in the rates charged for the pilotage, you continue to pay the same dues as you formerly did under the Cinque Ports?—Yes.

7848. I believe the cutters at that time belonged to the pilots themselves?—Yes.

7849. What were the profits you were receiving from the earnings of the cutters when they were taken from you?—After the disbursements were made for sailing, navigating, repairs, and such like, of the cutters, we received, on the average the sum of 33 *l.* a year for the last five years; sick or well, it averaged that from the time I first entered the service.

7850. By the change made in 1854, when the cutters were taken from you, you suffered some loss of income from that change, I believe?—Yes, from 33 *l.* to 31 *l.*, when sick or incapable to do duty.

7851. £. 2 a year?—Yes, 32 *l.*

7852. Each individual pilot made from 31 *l.* to 33 *l.*?—Yes.

7853. What was paid to each pilot when the cutters were purchased by the Trinity House?—Nothing at all. There was 3,000 *l.* handed over by the Board of Trade to the funds of the Cinque Ports, but nothing whatever was given to the pilots personally.

7854. Do you think that the pilots suffered a substantial loss?—Yes, by cutters, sick allowance, and others superseding us in pilotage before seven years' service in smaller vessels, as we were bound to do under the Cinque Ports.

7855. What has been the amount paid by you for dues on your earnings?—The total amount paid in dues under the Cinque Ports was 119 *l.* 18 *s.*, being 11 *s.* dues upon each turn that I took; that is, from the time of my entry up to the transferring of the Cinque Ports pilots to the Trinity House. Then, since I have been under the Trinity House, I have paid 254 *l.* 2 *s.*; but had I been a Trinity House pilot, I should only have paid 116 *l.* 0 *s.* 6 *d.*; but through the change that was made, I paid over and above my brother pilots holding different licenses, the sum of 138 *l.* 1 *s.* 6 *d.*

7856. What are the benefits that you have in prospect arising out of these payments?—The prospect I have, if I live, is that of superannuation. When I am rendered incapable of performing my duty, I shall have 50 *l.* a year from the superannuation fund.

7857. And what will your family receive?—My wife, if I should die, would receive 12 *l.* 12 *s.* a year.

7858. That is all you will get for these payments?—That is all I shall get.

7859. Mr. *J. S. Hardy.*] I thought you said something

something about 143 *l.* ?—It was commonly called death money, and it is so to this day. We used to pay that under the old rule. A Return was moved for in the House of Commons by Lord Chelsea. It appeared that the average number of deaths for a considerable number of years was about 4⅛ per cent., which was 4 *l.* 2 *s.* 6 *d.*, which each pilot had to pay upon the death of a pilot in the Cinque Ports. That came to the wife, or children, or nominees, or representatives, whoever they might be.

7860. Mr. *W. Martin.*] Does it go on still?—On the amalgamation of the Trinity House with the Cinque Ports, it was increased to a fixed sum of 6 *l.* a year.

7861. Mr. *J. S. Hardy.*] Is a pilot able to leave that to anybody?—It goes to his wife, or family, or representatives; a man can leave it to whom he likes.

7862. Mr. *W. Martin.*] Can he leave it to a stranger?—Yes. This is a sum derived at the death of a pilot by paying 6 *l.* a year.

7863. Mr. *Brassey.*] I believe there is an accumulation of 90,000 *l.* in the hands of the Trinity House for the benefit of the pilots?—Yes.

7864. What interest have you in that large sum, except the right of receiving the annuity of which you have spoken?—In the Blue Books I have in my possession, it is fully explained, that at the time of the amalgamation there was handed over to the Trinity House a considerable sum of money.

7865. What Blue Books do you refer to?—The Returns ordered by the House of Commons to be printed every year.

7865. *Chairman.*] The Trinity House having had a sum of money which is due to you, you think that you have a special claim against the Trinity House in respect of this money?—Yes.

7867. It is altogether a separate question?—No; it cannot be a separate question.

7868. You think the opportunity of abolishing compulsory pilotage is a good one for raising that question?—No: I would rather compulsory pilotage be where it is; I cannot see what benefit its abolition can do.

7869. Supposing we took that opportunity of setting right the little grievance which you have against the Trinity House, what would you say to that?—I should be a traitor to my brother pilots if I were to come up to say one thing, and then say another.

7870. All the Cinque Ports pilots are in the same boat, are they not?—No; there are two distinct classes.

7871. How many are there in the first class?—Twenty-seven of the Cinque Ports pilots reside at Deal.

7872. About what number is there altogether?—There are 70 of us altogether of the old class at Deal and Dover.

7873. It is the old Cinque Ports pilots who have got a claim against the Trinity House?—Yes; we look upon these funds as belonging entirely to the Cinque Ports pilots; we have a right to say something about it.

7874. You are in the minority, are you not?—No; we are in the majority.

7875. What would be the pension you would be entitled to when you are superannuated?—£. 50 a year; we have always enjoyed 50 *l.* a year under the Cinque Ports.

7876. What is your present income under the system of compulsory pilotage?—I have got a copy of every farthing I have earned.

7877. What has it been for the last three years?—£. 261 11 *s.* 10 *d.*, 325 *l.* 4 *s.* 4 *d.*, and 339 *l.* 14 *s.* 8 *d.*

7878. When you are superannuated you will only get 50 *l.* a year, subject to a deduction of 6 *l.* a year?—Yes.

7879. So that you will only get 44 *l.* a year?—Yes.

7880. You are not a very young man now; how soon may you expect to be superannuated?—Old as I am, I should be very sorry for anyone to say to me on board any ship that I was getting old as far as my duties were concerned.

7881. I presume a great number of years will not pass by before you come to the time of superannuation?—That always depends upon whether a person is thrifty or not.

7882. Is there any fixed age?—No.

7883. What is the average age at which men are superannuated?—It varies according to the constitution of the men; some have been superannuated at an early age, and some are now on duty over 70 years of age, and performing their duty as well as if they were 20 years younger.

7884. Are there not a certain number of men, somewhat about your standing, who, if this Bill passes into law, might not be rather tempted by larger superannuation than is now given, to retire from the service?—I am not in a position to answer that question; as I said before, I should be a traitor to those who sent me to London, were I to arrange any matters concerning monetary affairs.

7885. Does not the Bill offer you something; supposing, after a year or two years, it turns out that the employment of the pilots is not so considerable as it now is, is there not something in the Bill which would rather tempt men of your standing to retire from the service?—If there was nothing more tempting in my home than there is in that Bill as it stands at present I should never go to my home again.

7886. What do you object to?—I do not like the wording of it; seafaring people not brought up to college education cannot understand it.

7887. What is your objection to the compensation clauses?—I think the compensation clauses should give a guarantee to the pilots that if their incomes should be damaged by the passing of this Bill they will be compensated. There should be something more definite in the words than there is in the compensation clauses; I think that they should understand rightly whether or no they are to receive the compensation which they are led to believe they will receive under the provisions of this Bill.

7888. Mr. *Wykeham Martin.*] If the word "shall" is put in would that do?—"Shall" is the principle thing; seafaring people understand that.

7889. *Chairman.*] Your objection is to the permissive character of the compensation clauses, and not to the compulsory character; you do not object to the principle upon which it is framed?—I do object to the principle. Then with regard to the two years, a man with a large family would be utterly ruined if that is carried out.

7890. Do you think it ought to be one year?—I am satisfied that it ought not to be more.

7891. Do you think that in one year you could fairly tell whether the employment of pilots has fallen off or not?—I am not in a position to state that.

Mr. *T. Ralph.*

17 May 1870.

7892. What is your opinion?—My opinion would be that in less than a year we should see a vast falling off in our income.

7893. Do you think that you could fairly tell in one year what the falling off would be?—I could tell just as well in one year, as in two years. The first year would not be as large as the second year.

7894. Is there not a fear that it might fall off progressively, and that in the second year it might be worse than the first?—No doubt the second year will be worse than the first.

7895. But notwithstanding that you think you will be satisfied by taking the average employment of one year instead of two?—Yes.

7896. If that change is made, may not you be better satisfied with those clauses?—No; not as they are.

7897. I want to take your objections one by one; one objection is that there are two years instead of one; you want one year instead of two years?—Yes.

7898. What are the other objections; you told us of another, namely, the permissive character of the clauses, instead of compulsory, and you would prefer the word "shall," to the word "may;" what is the next objection?—It says here that "the Board of Trade may, if they think fit;" we do not understand that.

7899. You think that it ought to be "shall"?—I think it ought to be "shall."

7900. What further objection have you to the compensation clauses?—I think that the pilot in the passing of this Bill, ought not to have his income damaged.

7901. Do you think that the pilot ought to have secured to him, for the remainder of his life, the same income as he is now enjoying?—Yes.

7902. I want to know what your opinion is?—When you say for the remainder of his life, I might live to 73 or 74 years of age, and perform my duty.

7903. But you know that the average of men are not able to do that?—No; but some of our pilots work to a great age.

7904. The age of 70 is a very rare age for a man to act as pilot?—There are two or three pilots of that age at Dover.

7905. Do not the average men get superannuated before they are 65?—No.

7906. What is the average age?—Over 65.

7907. How many men are there serving over the age of 65; are there any?—Not many.

7908. Are there any?—I think there are six.

7909. Are there more than one or two?—There are six.

7910. I want to get an idea from you, what your view is with regard to the compensation you would be entitled to in the event of the Bill being passed?—It would be simple for me to dictate to the Committee.

7911. You complain of the clauses as they stand; what do you think ought to be done for you in the event of the Bill being passed?—If they were to receive about one-half of their earnings for life, I think that would do.

7912. Then you do not think it right to give them the full amount of their earnings for the rest of their life?—No; I do not think pilots would expect more, but I only say so as an individual. They might, or they might not.

7913. But the superannuation which you would be entitled to at present, as pilot, is very small?—Not the Cinque Ports.

7914. You are now making an income of 300*l.* a year, and whenever the evil day comes when you can no longer serve as a pilot, you will be superannuated; then you will only get a pension of 44*l.* a year?—£. 50 a year. There is no deduction; we pay a contribution of 30*s.* a quarter towards the 6*l.*

7915. Then you will only have 44*l.* a year?—A man can throw off the insurance, if he likes.

7916. We will assume that it is 50*l.* a year; you are now making 300*l.* a year, and after a few years you will only get 50*l.* a year; then I understand, upon that principle, you do not think, if compulsory pilotage is abolished, that those pilots who retire ought to have secured to them their present income for the remainder of their lives?—No, I do not think it would be just. I am not a pilot when I answer the question. I should say that the pilots could not expect the full pay up to the hour of their death.

7917. But you think that they ought to be entitled to ask one-half of their present pay?—I think that half of their present pay would be a just and fair remuneration.

7918. And you would be satisfied if the principal of the clauses was made compulsory instead of permissive, and if the superannuation given was half of the existing receipts or income?—Yes.

7919. And you think if that was offered to a certain number of the pilots, they would gladly accept it?—I must not say a certain number of pilots. I am here to answer for all; but as far as the Cinque Ports pilots are concerned, I am here to represent them.

7920. You think that that would be a fair settlement?—Yes. Shake me off from being a pilot, and let me come to give evidence, I should say so, as a private individual.

7921. As a private individual, you think that a certain number might be tempted to go off the list on that understanding?—Yes; it might be so, or it might not be so; I am here for all.

Friday, 20th May 1870.

MEMBERS PRESENT:

Colonel Bourne.
Mr. Thomas Brassey.
Mr. Cave.
Mr. Graves.
Mr. Grieve.
Sir John Hay.
Mr. Shaw Lefevre.
Mr. Malcom.
Mr. Philip Wykeham Martin.
Mr. Norwood.
Mr. Pemberton.
Mr. William Philip Price.
Sir Henry Selwin-Ibbetson.
Mr. Stevenson.
Sir Charles Wingfield.

GEORGE JOHN SHAW LEFEVRE, Esq., IN THE CHAIR.

Mr. JOHN TAYLOR, called in; and Examined.

Mr. *J. Taylor.*
20 May 1870.

7922. Mr. *Brassey.*] I BELIEVE you are managing partner in the firm of T. M. Mackey, Son and Company?—I am one of the managing partners.

7923. And you are therefore in that capacity interested in ships of a very large tonnage?—Yes.

7924. Will you state to the Committee what the tonnage is?—During the last seven years we have dispatched outward from the port of London over 200,000 registered tons of foreign-going shipping, conveying 28,000 passengers.

7925. And how much of inward?—Of inward we have had 233,000 registered tons of shipping, with about 2,500 passengers.

7926. That represents the total tonnage, in and out, of how much?—433,000 tons in seven years.

7927. I think you have been very fortunate in escaping loss of life and marine accidents?—We have been most fortunate. In conveying from Liverpool and London something like 150,000 passengers to Australia, we have not lost a single life by marine casualty.

7928. What is the tonnage of the shipping in which you are now interested as managing brokers?—The amount of shipping in which we are interested as managing brokers and owners is 50,000 registered tons.

7929. Do you consider that the entrances to the Thames are peculiarly intricate and dangerous?—I consider that the entrance to both the ports which we deal with, Liverpool and London, are particularly intricate and dangerous.

7930. And as dangerous, if not more so, than any other ports which the ships belonging to your fleet visit?—More so; and one great reason is, that there is greater traffic; we are more likely to come into collision with ships in narrow waters; and it is there that particular judgment is required.

7931. You think for the navigation of the channels of the Thames night and day peculiary competent pilots are required?—I think that we not only require competent men, but men who are continually navigating them, whose judgment is upon the *qui vive*, and who are smart. Our masters may be equally clever, but they cannot possibly have the same confidence in entering the port of London once in 12 months as a pilot who enters it every three or four days.

7932. And nobody who was not himself qualified to act as a master or mate of a ship would be competent to act as the pilots of vessels in navigating the approaches to the Thames?—I would say this, that although a master or mate of a foreign-going ship might pass an examination, I, as a shipowner, would not feel as safe with that man in charge of life and property as I would with a man who is almost daily passing through the waters; it requires judgment, and it is not the judgment of hours, but the judgment of moments; a man can only have that by confidence, and he cannot have that confidence if he is not continually passing through the waters he is navigating.

7933. Do you think that such an efficient and competent staff of pilots, as is required to clear the port of London, could be maintained upon the voluntary system?—Certainly not; the result might not be felt in the next month, or in the next twelvemonth; but that it would eventually be felt I am certain, and that we would have a less efficient class of men.

7934. If the compulsory pilotage system, which is now prevalent in the south channel of the Thames were abolished, you believe that from a gradual diminution in the service of pilots, increased dangers would accrue to shipping, especially to foreign ships?—That is my belief.

7935. Do you think that Dungeness is the most fit and proper station for the pilot boats?—I do.

7936. And that no change in the station of those vessels would be an advantage to the shipping?—We are perfectly satisfied with it as it at present stands.

7937. You have found from your large experience that, under the present system, the ships inward and outward coming to and from the port of London, are conducted with perfect safety by the present staff of pilots?—With perfect safety, and with a minimum risk.

7938. With regard to the amount of control which a pilot ought to exercise over the navigation of the ship when he is in charge of her; do you think that should be treated as entirely and exclusively responsible for the navigation of the ship?—Yes.

7939. And that all orders given by him should be obeyed with the same deference as the orders given by the master himself?—Yes, I do.

Mr. *J. Taylor.*

20 May 1870.

7940. Do you think if the voluntary pilotage system were introduced, that in fine weather masters of ships would be largely tempted to dispense with the services of the pilots?—I think many would, and therefore there would be an increased risk to life. I do not think any master can be as competent as a pilot, except in foreign-going steamers, where the captain of the steamer thoroughly knows what his own ship can do, and where he is in and out of the Thames once in a month or two months, I think that the master is as competent, if not more so, to manage his ship than any pilot in the service.

7941. If the voluntary system led to a diminished employment of pilots, in order to maintain the average earnings of the pilots, a very considerable reduction in the number would be necessary in order to preserve the same average income; is that not so?—I think you would find the effect both ways; not only would you reduce the number, but they would not get the same income, and you would get an inferior class of men; men would not follow it as a profession as they do now, feeling secure of a moderate competency.

7942. After a long prevalence of easterly winds, if the wind suddenly changes to the west it causes a large number of ships to come up together to the port of London; under these circumstances is the existing staff found sufficient?—Yes; that is the time every man is required. A ship comes up with the captain and master worn out in trying to make the land, and you want every man in the pilot service then.

7943. Therefore, if in consequence of the adoption of the voluntary system, the number of pilots would be diminished for the port of London, it would lead to very great inconvenience to the shipping, would it not?—It would lead to inconvenience and risk to life.

7944. Mr. *Price.*] Your opinion seems to be that the present system of pilotage in the Thames and Mersey is very satisfactory, and you are afraid that if the compulsory system were abolished, you might not maintain an equally competent staff of pilots?—That is my opinion.

7945. Is that opinion founded upon any experience of ports where the non-compulsory system prevails?—I do not think you can name a port where the non-compulsory system prevails which bears comparison to the port of London. I have had 25 years' experience of London and Liverpool. I have thoroughly watched the pilot service in all its branches in Liverpool. I know every master pilot in Liverpool perfectly, and I know the whole system of tug-boat working. Before I became a partner in the firm I am now in, I was a working manager of the largest tug company in England, and that brought me into daily communication with the pilots, shipmasters, and shipowners, and with the thorough working of the pilotage system of Liverpool. I had thorough and daily connection with them.

7946. I willingly accept your opinion with regard to the necessity of a staff of pilots, and I quite admit all the difficulties of the navigation, but I want to know the ground on which you form your opinion, that you could not have a good staff of pilots under the non-compulsory system?—In the port of Liverpool, with foreign-going ships such as I am interested in, where we have a lot of passengers, and where we have many men in our employ, four-fifths of the dangers of our Australian voyage are leaving the land, and making the land. I think there is only one-fifth of danger in a voyage of 14,000 miles comprised in the open sea. We have men in our service who, for a week before getting to Liverpool or London, will not have their clothes off; they are responsible for the whole navigation and control of the ship. It is essential to those men that they should feel that when they get into narrow waters, there is an efficient and competent man to take charge of the property. I do not believe that, with the large amount of tonnage and trade to the port of Liverpool and London, you would have such a staff to meet the trade of the port, except under the compulsory system. I speak from knowing the amount of tonnage that enters the port after the lapse of an easterly wind, and I also feel that a man cannot be too competent; he cannot have too much practice to take charge of the property of the port. I do not run down our captains; they are very competent; but you cannot look into your chart when you get into narrow waters, and a master ought to know intimately and instantly what orders to give.

7947. I accept your judgment unreservedly as to the facts incident, the dangers of navigation, and the necessity of pilots, but still I must ask you again why do you think you would not have pilots under the non-compulsory system?—For the very simple reason that I think demand begets efficient supply; and if you would only have an occasional demand, you would not have an efficient supply.

7948. It is the natural deduction from that argument, is it not, that the supply would always be as large as the demand?—No, for this reason: that these men are bound to be there, and they know, when they come there, they will be employed; but if the ships come up in fine weather half would slip past without a pilot, whereas in dirty weather they would take a pilot.

7949. I suppose if the number of passengers desiring to go to Australia were largely to increase the number of steamers, would increase in the same ratio?—There are certain compulsory points upon us in taking passengers to Australia. We are bound now to have our ships efficient in every way, and passed in many ways; there are plenty of points compulsory upon us in carrying passengers to Australia. If you took off the compulsory points and threw it open to the trade, no doubt people would take passengers for two or three pounds less than we do, but they would not take them so safely.

7950. Even without taking off the conditions of cubic feet of space to each passenger, and other things, do not you think that the passenger service would increase also?—No, you could not get the same efficient class of men; for instance, in the case of a regular trader bound to Sydney with a well-known master. The underwriters being familiar with the name, and that he goes between the two ports like a pendulum, and thus, by his knowledge, reduces the risk to a minimum, they take his name, to a certain extent, as a guarantee against the risk; but if a man is not accustomed to the port of Sydney, the risk of loss would be appreciated by the underwriters, and they would charge a higher premium. I look at it in this light, we are trying to do away with the risk to life and property. We may abolish compulsory pilotage if we want increased risk.

7951. We are in this condition, that we have an unlimited expansion of traffic, but we have an absolute

absolute limited means of carrying it?—No; I do not say that; I say that it will expand legitimately; it will expand by the people who have been accustomed to the business; it is not worth while for a man to be a pilot unless he knows it will keep him for life.

7952. Supposing your own regular steamers left behind them every time a considerable number of passengers that you could not provide for, would not you, as a man of business, put fresh steamers on the stocks?—I would put it a little broader than that; we fit out a certain number of ships under the compulsory system, with certain requirements which the Emigration Commissioners require we shall do; it would not pay us to do it for one voyage, but we do it because we know she will get the emigrants the next voyage. If you throw the compulsory points off, we should not fit up a ship if every man could come and oppose us. It is the same as a pilot who has passed through the service and learnt his profession. He knows that he has a certain income.

7953. You think that you have a practical monopoly of the trade in consequence of these compulsory restrictions?—No more than this, that other men must comply with the same restrictions.

7954. Do not they do so?—The demand for passengers is just the same as the demand of the ships for pilots; it fluctuates very considerably. We get the preference because we are obliged to fulfil the obligations. If any shipowner who has not fitted up a ship in a particular way were to come in, it would not be a fair competition, and it would throw a greater risk on the passengers.

7955. I want to know whether or not there are not at the present time, and whether there will not always be as many steamers sailing out of the Mersey and out of the Thames as will accommodate all the passengers who want to go, whether by an unfair or a fair competition?—There are times in Liverpool when there are so many passengers that they cannot get conveyance at Liverpool and Queenstown too, and it has been a frequent occurrence that passengers have waited at Queenstown before they could get a ship ready.

7956. Those are emigrants?—Emigrants are passengers.

7957. I speak of the regular trade, of which you have been speaking, the great passenger trade?—There is a great emigrant trade; we consider ourselves the great conveyors of labour to Australia.

7958. Is it now the fact that more steamers are wanted?—It fluctuates; at certain seasons of the year there are more passengers than steamers, and at other times of the year there are more steamers than passengers, just the same as there are sometimes more pilots than ships.

7959. On the average, does the supply equal the demand?—It grows gradually by degrees, it does not spring up like mushrooms.

7960. I do not expect a ship to be built in a day, or a pilot to be made in a day; I want you to tell me whether or not you have any reason to suppose that there will not always be as many passenger steamers as the number of passengers requiring accommodation; draw any deduction you like from it, but answer the question?—If any paying trade springs up, there will be persons to supply that demand; it depends entirely upon that.

7961. Why should there not be, as long as it is a paying trade, as many pilots as there are ships wanting pilots under a perfectly non-compulsory system?—Because, for the very simple reason, that you will not get men who will be pilots of ships the moment there is a demand; they would not go out in bad weather to look out for a ship when there is no pay at all.

Mr. *J. Taylor.*

20 May 1870.

7962. That is a gratuitous assumption of yours. There are men found to peril their lives at sea when they are paid for doing it; why should not pilots peril their lives the same?—It is not gratuitous. I was manager of a tug boat of the port of Liverpool; in fine weather they would go out, but in bad weather they would not. I had the control of them. It is not the question of safety of life; it is a question of making the tug-boats pay.

7963. Surely tug-boats would go out as long as people would employ them at a remunerative rate?—They would not go on a bad night, when there was the greatest risk; why should they?

7964. They would get better pay, would they not?—The pay did not compensate for the risk. The Liverpool pilots have to run many risks they are not paid for, taking the year round. It may pay, but you will not get men who would do it in foul weather if they could not also have the certainty of doing it in fine weather.

7965. It is not assumed, under the provisions of this Bill, that the pilots would not be subject to certain regulations; it contemplates still having licensed pilots, and they would be obliged to comply with the conditions of the service. Unless you suppose that a man cannot be found to serve as a pilot unless he is under the compulsory system, I do not see why, under the voluntary system, you have any reason to doubt there will be a sufficient demand, as long as the men find a sufficient remuneration?—If you pass this Bill, the men are not going to abandon their bread and butter to-day. I do not suppose you would feel any of its effects for a month or twelvemonth; but if you tell these men that they would not have a certain fixed income, then you would not have as efficient a class of men as you now have. I mean it would tend to deteriorate the service, and is very likely to do so.

7966. Do you do what some of the Liverpool steamship owners are in the habit of doing, namely, have so many pilots attached to your own ships?—No; and for this reason: that our vessels go on a twelve-months voyage, and I do not consider that a man would be worth twopence as a pilot after that time.

7967. He does not go the whole voyage, but he goes to Liverpool or Queenstown and stops there, and comes back with another ship; is that your practice?—No; we have three or four ships going together, and one man would be of no use to us. When the wind comes in from the westward, our vessels congregate three or four together; we would do everything we could to maintain the present service.

7968. Do you think the pilotage service would be destroyed and ruined if compulsory pilotage is abandoned?—I do not think it would destroy it in twelve months, but it would deteriorate the service, eventually.

7969. You are satisfied with the present condition of things, and do not want to run the risk for the future?—We have not lost a life in conveying 200,000, and we are perfectly satisfied to let well alone.

7970. *Chairman.*] I understand you to say that

Mr. *J. Taylor.*

20 May 1870.

that you do not think the staff of pilots would be maintained if this Bill passes into law?—Yes.

7971. Have you any experience of the north channel of the Thames?—No, all our ships come from the south.

7972. Are you aware that the staff of pilots there are pilots employed voluntarily by vessels coming by the north channel?—Yes.

7973. Have you inquired whether they are at all inefficient as compared with the other pilots?—No; there are more vessels entering the north channel without pilots than the south, because they are vessels of short voyage, and they come principally in the summer season.

7974. Are you aware that the 60 pilots stationed in the north channel find their employment from vessels which are not bound to carry pilots?—Yes.

7975. They are in the condition voluntary agents?—Yes.

7976. The vessels coming by the north channel are not bound to employ pilots?—There is not the same flood of foreign-going vessels in the north channel that there is in the south.

7977. There is a portion of the year when the trade is comparatively small to the north of Europe, is there not?—Yes.

7978. And there must be a time of the year when there is a great press of vessels coming from the north of Europe?—Yes, but the majority of them are short-voyage vessels; they are people who have entered the river only a short time previously and generally in the long days and short nights. I say that is the reason that it does not act prejudicially. The traffic is just the same there as it is to short ports like Queenstown; the south channel of the Thames and Liverpool stand alone from the great ports of the kingdom.

7979. What is the difference between the south channel and the north channel of the Thames; is it much more difficult?—Yes, but the ships approaching the south channel are ships off long voyages coming from the southward.

7980. The vessels coming by the north channel are vessels that come off short voyages, are they not?—Yes, and a small class of vessels and the majority of them come during the summer season.

7981. Notwithstanding that there is a competent supply of pilots there, is there not?—The supply will meet the demand.

7982. Why should not that be so in the south channel?—In the north channel they are a smaller class of ships, and if a pilot is not there they run up without him; I do not know that; the supply is equal to the demand; but in the one case a man can pilot himself up the north channel in a small vessel, whereas one of our foreign sea-going captains could not do it up the south channel with safety.

7983. You said just now that the supply met the demand?—They being the smaller vessels, and being commanded by men only a short time in the river, many of them take pilots, but if the pilot is not there, they go up without him

7984. A large number of those vessels do take pilots?—Yes; but I cannot tell whether many more would not if the pilots were there.

7985. Have you heard of any complaints there?—No, I am not in the trade, but it is self-evident to me; I know it would be the case in the other channel.

7986. Looking at the north channel, you have not heard of any complaints of there not being a sufficient number of pilots there?—No.

7987. Are you aware that there are 60 pilots in the north channel who are employed voluntarily by vessels?—Yes.

7988. And that they are employed by the small class of vessels making a short voyage?—Yes.

7989. As a shipowner, you must be of opinion that large vessels making long voyages are much more likely to want pilots and take pilots than vessels making short voyages?—Yes, quite so.

7990. Then, if you find a supply of efficient and competent pilots in the north channel, what reason have you to suppose that there will not be an efficient supply of pilots in the south channel?—Because the vessels coming from the north channel, if a pilot is not there, run up; they are a small class of ships; it is during the summer months that they are there, and they have been there a short time previously.

7991. But the pilots are there?—Yes; but I do not acknowledge that they meet the demand.

7992. The whole of your argument turns upon this, that there is not a sufficient supply of pilots in the north channel for the vessels who want them?—The risk would be a hundredfold greater to the foreign-going ships, where the captain has not been in the channel for 12 months before, if he could not get a pilot, than it would be to these small ships coming in the summer time to the north channel. It turns upon the question of risk.

7993. Is it not on that very account that there is certain to be a much greater demand for pilots in the south channel than in the north channel?—Yes; there will be a greater demand.

7994. And all these vessels that you speak of coming in from a long voyage, that have been months away from the Thames, are perfectly certain to want pilots, are they not?—I cannot say. There is another trade I am conversant with which will be altered, and that is the tug trade. If you do away with compulsory pilotage, it will tend to induce the steam-tugs to go further down channel, and offer their services to ships on the plea that by taking them they need not take pilots.

7995. Is that the result of your experience of the north channel of the Thames or not?—Those small vessels do not, as a rule, employ tugs. I mention now what I should do if I was a steam-tug manager.

7996. If you were a steam-tug manager should you take a pilot?—If I was a steam-tug owner, and if you were to pass the Bill, I should order my men to cruise further down to the southward, to induce the men to give them a higher price upon the plea of getting rid of the pilot.

7997. Where the vessels employ tugs, coming by the north channel, do not they take pilots as a rule?—I should think not.

7998. Have you made any inquiries about it?—No.

7999. As a shipowner, do you think a vessel in charge of a tug is also in need of a pilot?—Yes, distinctly.

8000. And even more so than when without a tug?—I do not say so.

8001. Quite as much so?—Quite as much so; as a shipowner, I should be glad of anything that would relieve us from responsibility or cost, because we want to be relieved of every penny we can, but I take rather higher ground in this case, and

and I think that anything that imperils the safety of life and property, is bad legislation.

8002. As a large shipowner, if this Bill is passed, I presume you will always want a pilot, even whether your vessels are towed by tugs or not?—It is not left with me; my captain coming in would take a tug.

8003. Do not you give instructions to your captain?—Yes, but the pilot would not be there.

8004. That is another point; I ask what you would want?—But I could not get it.

8005. That is not the question; I ask, as a shipowner, if this Bill is passed, would not you want a pilot just as much as you do now, even though your vessel is towed by a tug?—I should wish it, but some of our captains are part owners, and might be much tempted to save 50 *l.* or 30 *l.*, part of which would go into their pockets, and I should bear part of the risk.

8006. You would give the instructions to your own captain?—The captain does what he likes, and he can either take a pilot or not; he would say, "I did not see a pilot, and I got a tug, and came up." A shipowner can give instructions, but he cannot insist upon their being carried out.

8007. What is your opinion of the responsibility of the shipowner, as to the law which relieves the owner from the responsibility of acts of negligence committed by his pilot; do you consider that a good law?—My opinion about the responsibility of shipowners is, that I am averse to the responsibility.

8008. I speak of the special responsibility for the acts of the pilots?—I think the shipowner should be exempted.

8009. Is it your opinion that any evil has resulted from the present law which relieves the owner from responsibility?—I am not aware of any evil.

8010. Do you think there is any evil resulting at all?—I have not heard of any evil.

8011. Have you ever heard of complaints of the risk which occur where the owners are not responsible?—I speak from my own personal knowledge.

8012. Do you think that the owner ought to be made responsible for the acts of the pilot whom he is compelled to employ?—Certainly not.

8013. Do I understand you to say that your own masters are part owners?—Some of our masters are part owners.

8014. Do you think in those cases the masters would not take pilots?—They may be tempted to take tugs.

8015. Would not it be competent for you to give the master instructions to take a pilot?—I may give instructions, but I am not there to see them carried out. A captain may tell me that he did not see the pilot boat; that may be the result.

8016. Mr. *Grieve.*] But being the registered owner of the ship he would be responsible for not taking a pilot, would he not?—That is precisely what I think. You will tempt the man to run the risk, and cause a greater risk to life and property by doing so.

8017. Do you mean to say that your shipmaster would disobey the orders given to him to take a pilot?—If he has got a tug, but I would not leave it an open question with him at all. I would compel him take a pilot.

8018. Would it be of advantage if the tugs went further down the channel to pick up ships?—No, the result would be that the ship would be virtually under the command of the man in the tug; she would then be under the guidance of a man who has passed no examination, who may have been a bargeman three or four months before, and who had become mate in command of a small steam-tug. There is a large amount of life and property virtually under that man's guidance, who has passed no examination. He goes further down the channel, and he says to the master of a vessel, "If you take me you will escape pilotage."

8019. Mr. *Graves.*] You have evidently given a great deal of consideration to this question of pilotage; are you aware that the Bill proposes to leave the pilots under all the supervision of the local authority that they now are under, and that it merely makes it optional with the owner to take the services of a pilot or not?—Yes, I am aware of that.

8020. What is it that you fear most if that system were allowed?—Anything which tends to peril a pilot getting a certain income, will tend to create a less efficient class of men, who will in bad weather certainly not be so much on the look-out as they are now. You may pass any rules you like, but you cannot be out in the middle of the channel to see them carried out.

8021. Do you regard income as a test of efficiency?—Yes; and if a shipmaster knows he must take a pilot, and if it is compulsory for the pilot to be there, he will hold on; but if it is not compulsory, then, in the winter time, the shipmaster would take a pilot if he is there, but if the man is not there, and the wind is blowing strong, and it is a dark night, the captain will be tempted against his better judgment to go on without a pilot.

8022. Is it your opinion that if, by any action of this Bill, the income of the pilots is reduced by 100*l.* a year, we should have a less efficient and a less able and intelligent class of men than we have now got in the Thames?—I am of opinion that that would be the tendency, and with regard to the Mersey the same remark would apply.

8023. Have you thought as to whether any improvements could be effected in the system at work in the Thames; say, with regard to steamers; you are aware, no doubt, that a very large number of their masters and mates are now licensed as pilots; do you see any objection to that being allowed to continue and to be extended?—I think it is a very good system when a man has passed an examination, and is in the command of a vessel continually entering the river, and I do not think you could have a more efficient man in charge, and it ought to be non-compulsory on that head.

8024. Would you carry your view so far as to continue the statutory obligation which now exists, that every home-trade passenger ship should have a licensed master or mate on board, or a licensed pilot?—Most distinctly.

8025. Are you aware that it is proposed to do away with that obligation?—I am not aware of it.

8026. If you were aware that it was proposed to do away with that statutory obligation, would you view it as doing away with the safeguard to life in passenger ships?—I should view it in that way; it tends to emperil life on board steamers.

8027. Are you aware that the exemptions in the

Mr. *J. Taylor.*

20 May 1870.

the Thames are limited to 60 tons or under?—Yes.

8028. Would you be disposed to extend that limit at all?—I should on small vessels extend it to 200 tons.

8029. Do you consider that that would do away with any hardship upon that particular class of vessels?—Yes; at night time they are easily handled, and the man can wait for daylight.

8030. As a rule, I suppose you would be influenced by the fact, that those small vessels go much more frequently in and out, so that their masters are much conversant with the channels, but the larger class of vessels are generally going away for 12 months; is that the distinction you draw?—Yes; that is precisely where I draw the distinction.

8031. You have stated that you consider the larger proportion of risk on a voyage is on leaving and making the land?—Yes.

8032. Are you of opinion that, if the necessity for taking a pilot were done away with, you would be increasing the risk to life?—I think you would increase the risk to both life and property in foreign-going ships.

8033. You have many restrictions placed upon you now as a shipowner?—We have many restrictions with the passenger ships.

8034. Do you consider that there is any more valuable one in the interest of life and property than that which compels a man in dangerous navigation to employ a pilot?—With respect to the navigation of the ship, I think it is a restriction that no shipowner ought to grumble at.

8035. The Merchant Shipping Code, in its 644th section, proposes to make it a misdemeanour, on the part of an owner, if he sends his ship to sea unseaworthy; are you aware of that?—I am aware of it.

8036. Are you also aware that the Merchant Shipping Code does not say what constitutes unseaworthiness?—That is precisely what I should like to have defined.

8037. It will be left to the judge to define what is unseaworthiness?—That is not fair to the shipowner.

8038. It has been stated here by a high legal authority, that the judges would rule under the existing law that a ship without a pilot, where it was usual to take a pilot, was unseaworthy?—I was not aware of that.

8039. *Chairman.*] Are you aware that the unseaworthiness in the Bill means unseaworthiness so as to endanger life?—Yes.

8040. Mr. *Graves.*] Does not it follow that any shipowner who lets his ship go to sea without a pilot would be guilty of misdemeanour?—I think so.

8041. In removing the statutory obligation to take pilots, does it not strike you that the Legislature would be promoting rather than preventing unseaworthiness?—I think it would lead to a trap; if I tell my man to take a pilot, and he does not take one, I am guilty of misdemeanour.

8042. Take the case of an inward-bound vessel, where the owner has no control over his captain, and he exercises his discretion, and without any authority from his owner, declines to take a pilot, preferring to take a steam-tug, and save the pilotage, the owner in that case, I presume, would be held guilty of misdemeanour?—I think so.

8043. Supposing the judges, in the exercise of their discretion, ruled that a master of an inward-bound refusing to take a pilot brought his owner under a misdemeanour in consequence of unseaworthiness: would you consider that a fair way to deal with the owner?—Certainly not. I should not like to be a shipowner if any such law applies.

8044. *Chairman.*] You would be rather relieved to find that that is not the construction of the Bill?—Yes.

8045. Mr. *Graves.*] Do you know Mr. Squarey?—Yes.

8046. Do you consider him a high authority upon matters of this kind?—Yes.

8047. Would it be to your interest that you should have a free option to take a pilot or not?—Pecuniarily, I think it might result to my interest as a shipowner; but if the result of future years does not keep me as clear from loss of life and property as it has hitherto done, it might result the other way. I take it as a broad question of safety to life and property. You would imperil life by doing away with compulsory pilotage; and it is my interest, as a shipowner, to keep matters as they are. If there was a greater risk, we should have to pay for it, because any loss would have to be added to our premium the next voyage. The underwriters would not carry on a losing business.

8048. You would save something in pilotage if you had an entirely optional system of pilotage?—Yes; that is where the risk would be run. It might tend to the captain thinking that he was saving 30 *l.*, and he would run a risk to life and property. I should not like that.

8049. It would be to your interest to have no restriction placed upon you as a shipowner, if possible?—We have too many restrictions.

8050. Therefore, considering your own interest, probably you would desire to be free from this also; but you come here with a broader and a higher view?—I think any tendency to injure the present efficient staff of pilots would be bad for the shipping interest, and would tend to increase the risk to life and property. It would be bad for the trade and myself eventually, as a shipowner.

8051. If you were told that the committee of the Shipowners Association of London held a different view, and that they approved of the principle of this Bill, would it alter your view at all of this question?—Not the slightest.

8052. It would not alter your view?—No; I do not believe it would. I scarcely regard them as representing the shipowners of the port of London.

8053. Do you see any objection to the laying down of the broad principle, where there is a properly-constituted local authority representing the commerce of the port, that it should be left to the discretion of that authority to decide what principle would best suit the wants of that port?—Certainly not.

8054. Such as the Mersey Docks and Harbour Board?—Quite so.

8055. Would you think that wiser legislation than laying down one stern line of either perfect voluntaryism or perfect compulsion?—Yes; because the circumstances of the port vary so much. I do not think the management of the ports of Liverpool and London can be compared to any other ports in the United Kingdom.

8056. Who is your local authority in London?—The

—The Trinity House have control over the pilots.

8057. There is no commercial representation for London?—No; but I think there ought to be.

8058. And if you had a commercial representation upon that board, would you leave it to the discretion of that board so constituted to decide what would be the best for the wants of the Thames?—Yes; I think you would have a recommendation from that board to relieve some of the small ships, or to relieve vessels where they enter the port frequently. There may be certain classes of shipping which it is desirable to exempt; but I think upon the broad question of foreign sea-going large tonnage ships, where they are away 12 months, a local board properly constituted would recommend that compulsory pilotage should continue.

8059. Mr. *Wykeham Martin.*] You said that you had heard no complaints owing to this exemption of owners; would you mind running your eye over that document, and look at the number by which it is signed (*handing a paper to the Witness*)?—You see where this is principally from; it is principally from Rochester, where they are all barge-owners.

8060. And Plymouth?—I do not see the name of one large shipowner yet.

8061. It does not pretend to be from the large shipowners; it is from the small shipowners?—I would exempt the small ships, or the small steamers.

8062. Just read their complaints in the prayer of their petition; there are 407,000 tons of shipping represented, are there not?—Of small barges.

8063. I cannot admit that?—Rochester is all barges; nothing larger than a barge can go there.

8064. Have you ever been there?—No; but I know the class of tonnage that I have seen from Rochester.

8065. Have you been up the Medway?—No.

8066. Are you aware that North American timber-ships come there?—They do not trade from the port of Rochester to London.

8067. Are you aware that the largest men-of-war anchor at Chatham?—Yes, men-of-war; but that is not a commercial element; there is no great commercial trade there.

8068. It is the small shipping that complains; do you see what they complain of?—I do not think that they have any right to complain; they are small ships, and they can recover from the pilot, if the pilot has done them wrong; they simply have to go against the right man.

8069. If they go against the right man, every witness that has sat in that chair says the remedy is perfectly illusory?—I do not see that at all.

8070. In one of those cases a pilot was a bankrupt for 5 *l.*?—Then why should the other ship be made to pay it.

8071. It is alleged that large shipowners keep what is called a domestic pilot for the sake of exemption?—We do not do so; it is evidently to our interest, with a large amount of valuable lives, to have the ship navigated as efficiently as we can, because in case of collision, we do not know who would get the greatest damage.

8072. If there are nothing but barges they would not hurt you?—I think they would.

8073. It is like a railway waggon running into my private carriage?—It could not be to the interest of the shipowners to make good the damage.

8074. One firm lost 6,000 *l.* in one tide in the Thames?—They had a remedy against the pilots.

8075. They prosecuted the pilot to bankruptcy, and doubled their loss?—The only result would be in the case of this: a vessel going foreign, and she gets into collision with a barge; Where are our witnesses? Are we to keep the ship waiting? the detention would be as much as the value of the barge.

8076. Those barges go foreign; it depends upon the nature of the barge?—In the case of small damage, would you detain the ship while proceedings were being taken? If we detain our ship, the penalty might be 50 *l.* a day; the result would be that the barge-owners would have the shipowners at their mercy, and we should have to pay to get rid of fighting the cause; but here the man who has done the injury is the pilot, and they can go to him. I think that is a matter which is in the hands of any committee which rules the pilots, because if the pilot is brought into blame, let his future earnings be imperilled for the damage.

8077. His earnings are proved to be 3 *l.* a week?—Whatever it may be, if he is brought into blame, let him pay a certain portion of the damage out of his earnings; do not let him escape it by coming bankrupt.

8078. Mr. *Stevenson.*] Do you approve of the recent distinction established by the Merchant Shipping Act of 1854, between the pilotage above Gravesend and the pilotage below Gravesend, in having it conducted by two different sets of pilots?—I do, and I believe in the present system of pilotage of the port of London, even over Liverpool. I will tell you why; the man who goes down from Gravesend is taking ships down every day. It is a matter of judgment and it requires confidence to navigate ships safely in crowded waters, such as the waters leading to London; therefore, you cannot divide the pilotage too much. We have men who go down to Gravesend only; we have men who are always going out to sea. We have another class of men, inward pilots, who do not take ships outwards; they are a distinct class. We give orders to the captains of our ships to take pilots out to the Wight. We have no household pilots, but we have certain men in whom we have confidence; they come back by turn and they go down again in another ship; they know the set of the tide. We keep them to one branch and that must tend to make them clever in that branch.

8079. Do you approve of the difference in the charge by which a master has to pay more when he employs two separate pilots than when he employs only one pilot for the whole distance?—If a pilot had to come from Gravesend up to London as the ships are very often detained at Gravesend, you would require a larger staff of sea-going pilots, and you would not have them so efficient, because a man who comes up once in a month cannot be as efficient as a man who is coming up every two or three days; he has not the same confidence in his judgment.

8080. Are there certain pilots who have the privilege of piloting the whole way?—Yes, but as a rule the sea-going pilot keeps to his own district I believe, in the classification which keeps a man to his own district, and the longer he is in it the better man he will be.

Mr. *J. Taylor.*

20 May 1870.

8081. How do you select the pilot who is to take your ship from Gravesend to the sea; do you take the first in turn?—No; for the outward pilotage we take three or four men whom our captains recommend as the most efficient men; you cannot call them household pilots, because one man will do for two or three firms; he will take the first ship of the firm, which is ready when he comes back.

8082. That is not consistent with the system of rotation of the pilots?—There is no system of rotation going outwards.

8083. Mr. *Norwood.*] Do you or not, believe that the demand regulates the supply in mercantile matters?—I am perfectly clear that demand regulates supply in all matters, but with this exception, that, supposing there is a very active and sudden demand for skilful doctors to-morrow, you cannot create them in a moment.

8084. I take it from you that, as a general rule, in matters of ordinary life, especially of trade, demand does govern supply?—It would not govern the pilots.

8085. Does the demand regulate the supply or not?—It regulates it in timber, cotton, and corn, but it does not regulate it in skill.

8086. Do you mean to say that, should the principle of the Bill become law, and there was a demand for pilots off Dungeness to bring up large ships from the west to London, that you would not find pilots?—I think not.

8087. With regard to the north channel of the Thames, I understand you that is only used in the summer time?—No, I did not say that.

8088. It is chiefly used in the summer time?—The larger amount of tonnage will naturally come in the summer time.

8089. Are there more vessels coming to the port of London by the north channel than by the south?—Colliers are not the class of ships I speak of; I speak of seagoing ships.

8090. Do you know anything about colliers and the coasting trade?—No.

8091. You know, I suppose, that colliers do come to London by the north channel?—Yes, and they must have pilots.

8092. Licensed pilots?—No; a man who is accustomed to command a collier coming into the port of London must naturally be a pilot. I say he has more experience of the port of London in a twelvemonth than our captains would have in a lifetime.

8093. I understood that only small ships come up the north channel?—No, I did not say so; I say that they are a smaller class of ships on the whole than those which came up the south channel.

8094. Is there more traffic with regard to tonnage up the south channel than there is up the north channel, upon the whole?—I cannot answer that question, but I should say most distinctly that foreign-going ships, where the voyage averages reached 12 months, to the East Indies, Australia, and the Mediterranean, come up the south channel.

8095. I presume they would entirely go by the south channel?—That is the valuable trades.

8096. The vessels to the Baltic and the coal ports go by the north channel?—Where the vessels run short voyages, and where the master is accustomed to make the port often, he virtually becomes a pilot himself.

8097. Taking your view of the case, I suppose it is rather an absurd distinction to make, that a steamer coming from the Baltic should be compelled to take a pilot if she has a couple of passengers on deck, and yet that she need not take a pilot when she has no passengers?—It is a most absurd distinction.

8098. Then you would rather increase the exemptions to the port of London?—I speak of any port; I do not know what the exemptions are at present.

8099. You say that as far as the north channel is concerned, the trades which pass through the north channel are short trades, and whether those vessels convey merchandise or passengers, they should be exempted from compulsory pilotage; for instance, the Baltic trade coasters and colliers?—I should limit the tonnage, not of steamers, but of sailing vessels going foreign; but there is this exception, if they have a competent man in charge of the ship, they should be exempt, that is, if the man had entered the waters within some certain period; I do not believe that because a man was examined for the waters five years ago, he is competent to navigate them five years afterwards.

8100. I thought your argument was, that the trades passing through the north channel are such short trades, and the masters are so constantly passing through the channel that they are pilots?—Yes; there is no rule why shipowners to the Baltic and the north could not get themselves practically exempted from pilotage.

8101. The Shipowners Society of London is an obscure body, is it not?—I think it is rather obscure as representing the shipowners' interest of London.

8102. How long have you been in London?—Nearly 10 years.

8103. Would you be surprised to hear that the Shipowners Society had been in existence three or four times as long?—That is exactly its fault.

8104. It has been in existence too long?—Without any fresh element being imported into it, it has got rather too antique.

8105. Have you ever heard of a gentleman called Mr. George Duncan?—Yes; I was speaking to him yesterday.

8106. Is he an obscure individual?—No; Mr. George Duncan is a very large shipowner.

8107. And a big man?—Yes, much bigger than I am.

8108. You do not call him an obscure man, do you?—No.

8109. Do you know Mr. Anthony Robinson?—Yes.

8110. He is a steamboat manager, is he not?—Yes.

8111. Is he an obscure man?—No. They are not obscure individuals; it is the body itself I speak of.

8112. You made a statement in your evidence, and I wish to test the value of that statement; is or is not Mr. George Duncan the chairman of the society this year?—I do not know who the society is composed of. I think if the Shipowners' Association of London were called upon to give their opinion upon this, they ought to have gone among the shipowners and ascertained their views, and not only have taken the evidence of their own committee.

8113. Do you know that Mr. George Duncan is a member of the General Steamship Owners' Society?—You say so; Mr. Robinson is.

8114. Do you know whether Mr. George Duncan

Mr. *J. Taylor.*

20 May 1870.

Duncan is a member of the General Shipowners Society?—Yes, as you say so.

8115. Are you aware that he is the chairman this year?—No, I am not aware of it.

8116. Are you aware that Mr. Anthony Robinson is a member of the committee?—No.

8117. Are you aware that Mr. Lidgett was a member of that society?—Yes.

8118. Did you know Mr. George Frederick Young?—Not; I knew Mr. Young was connected with it.

8119. He was chairman?—Yes.

8120. Are you aware that they have the privilege of appointing representatives on Lloyd's Register Committee?—I suppose they have.

8121. Are you aware of the fact?—No.

8122. I put it to you candidly, with your very small information as to the Shipowners' Society, do not you think you were rather hasty in saying they were a small and insignificant body?—I did not say that; what I said was this, that I scarcely looked upon them as representing the shipowning body of London.

8123. You do not?—No, I do not know how they are appointed and how they are voted for, that is what I said.

8124. You are entitled to your opinion, but I want to test the value to be attached to your opinion?—I could name shipowners equally large as those you have named who are not members of it.

8125. Possibly they do not choose to be?—I suppose they have never been asked; people do not wish to push themselves into a body who say they represent the shipowning interest of London; if it is the shipowning interest of London it ought to be a public association got at by voting, or in some other public way.

8126. Are you not aware that it is a public establishment?—I do not know how it is constituted.

8127. Does it consist of a large number of shipowners who pay an annual subscription, and who have public meetings, and elect a committee year by year?—I am not aware of that.

8128. You come here as a great authority, you have been in London 10 years, you want to put us all right upon shipowning matters, and I want a little information upon one or two points; your objection to the optional system of pilotage in the Thames is this, that your captains might be induced not to take a pilot when they ought to do so, and your view is that a pilot ought to be taken?—Yes, by a man who has been 12 months away from the port.

8129. Your opinion is that most shipowners of respectability, with large valuable vessels, would take pilots?—I think it would be their wish that the captains should take pilots.

8130. You think they would desire it?—Yes.

8131. Your experience is that your captains are desperately economical, in fact, they grudge even the expenditure you like to see?—I think that follows from the owners desiring to see some profits, although they are getting smaller and smaller continually.

8132. You tell me, that though your instructions to your masters would be to take a pilot on approaching the Thames, your captains are so desperately economically inclined that they will not do it?—I do not know that our captains would do it more than any others will do it.

8133. Captains generally are so economically inclined?—No, the captain might get a tug-boat lower down the channel, and the ship would then be under the control of the tug-boat.

8134. Do you find that your captains, as a rule, are too economical on a voyage?—I did not say that any of them are.

8135. I understood that your argument was that the captains were so averse to spend the money of their owners, that you could not get them to spend money legitimately when you wished them to do so?—No, a captain is very apt to think that he is rendering his owner a service.

8136. Do you find that captains generally are anxious to take upon themselves the responsibility which their owners desire they should not take, or is not the rule, that they avoid all personal responsibility that they can safely avoid?—I do not say that captains do that; I have not found that to be the rule. I do not think they shirk responsibility; each man feels that he has a certain amount of responsibility.

8137. Your knowledge of captains is great, and yet you tell us that you believe a captain would voluntarily take upon himself the responsibility of navigating his ship up the Thames contrary to his owner's wish?—I say he might be tempted when he has a steam-tug ahead. We complain that they take steam-tugs too low down.

8138. You really fear that the captains would be induced to do without a pilot contrary to the wishes of the owners?—I think that the result would be that they would get steam-tugs lower down, and that they might be tempted to do without a pilot if they had the option of doing so; and they would think they were doing a service to the owners, because there is no captain that is not anxious to get a steam-tug or a pilot, and he would take the first that presented himself to him.

8139. Then, in point of fact, the captains of ships, as a rule, would rather like to see the principle of the Bill now before the Committee confirmed?—No, I think not.

8140. Would not they take advantage of it?—No; when it is once left open, the steam tugs would go further down the channel, and, after a long voyage, a man would be glad to take whichever came first, and upon taking a steam-tug he would do without a pilot.

8141. Do you think that the principle of the Bill would be taken advantage of if it is passed?—It is the natural result that would follow. I think it would be taken advantage of by steam-tug owners. If I were a steam-tug owner I should do the same; I should simply look to my own business. I should say to my men, if I were a tug owner, "Go a little further down, and see if you cannot save the pilotage."

8142. With regard to the Trinity House, they have the entire control of the navigation of the Thames and the pilotage waters of a considerable portion of the coast?—Yes.

8143. I think you stated distinctly your opinion that it was an unsatisfactory state of things that there should be a self-elected body, and a close corporation having the important functions which they now discharge, irresponsible to the trade?—Yes.

8144. And you think that a mixture of the trade element, in the shape of representatives of shipowners and merchants, would be a great improvement?—There ought to be a responsible body of men connected with the port at each port.

Mr. *J. Taylor.*

20 May 1870.

8145. Are you aware that there is a peculiarity in the Thames, that the Trinity House not only is the licensing body, but the administrative body as far as pilotage is concerned?—Yes.

8146. That is an anomaly, is it not?—Yes, it is an anomaly quite.

8147. In some ports the two functions are entirely separate. You have a licensing body and an administrative body; do not you think that would be a great improvement in the Thames?—I do.

8148. And, in fact, that one of the greatest improvements in connection with the navigation of the Thames would be a large popular body, not a hole-and-corner affair like the General Shipowners Society, but a general, liberal, large body, in which you could take a seat?—I think it ought to be more open than it is at present.

8149. A large representative body would be of very great advantage to the trade and commerce of the Thames?—Yes, I know many shipowners in the port of London who I believe are not connected with the Shipowners' Association.

8150. With regard to the Trinity House, may I take it from you clearly and distinctly that an alteration of the constitution of the Trinity House with a view of enlarging its constitution, and making it a representative body, is absolutely essential for the benefit of the trade of London?—I do think so; and in recommending compulsory pilotage, clearly understand me that I do not think a ship on long voyages should have compulsory pilotage at the expense of ships on short voyages, or steamers. That is why I think that a properly-constituted body would give recommendations to that effect.

8151. Are you aware that in the navigation of the Thames, barges very often get in the way of ships?—Yes, they do, often.

8152. Have not they a tendency to keep the middle of the water?—Yes.

8153. They do not get out of the way?—No.

8154. Do not they sometimes bring-to against vessels moored in tier?—They are extremely obstructive.

8155. They are not always the innocent sufferers?—No, I am afraid that if the owners of small barges had a remedy against the shipowners, we should either have to pay them off, or be detained; we should be at their mercy.

8156. They are frequently in fault themselves?—Yes.

8157. Colonel *Bourne.*] You said that you had been connected with some large steam tug company?—The Liverpool Steam-tug Company.

8158. You reside in London now, do you not?—Yes.

8159. Were you long in Liverpool?—I was 15 years connected with it, and I had the management of that company for several years,

8160. Do you know the pilot system there?—I know the men intimately.

8161. Had you ever any fault to find with them while you were there?—None whatever; I think they are most efficient, hard working, and certainly not an overpaid body of men.

8162. Are you a shipowner yourself?—Yes.

8163. You do not object to any of the dues levied on you on behalf of any of the pilots?—I do not think that the larger foreign-going ships should have a compulsory body of pilots kept up at the expense of the small ships. I think that the small masters do manage their vessels as competently as they can, and they ought not to pay compulsory pilotage, but the compulsory pilotage to foreign-going ships when they are away 12 months is an absolute necessity.

8164. I suppose the reason why vessels using the north channel of the Thames do not take pilots is, simply that from the frequency of their voyages they become acquainted with the banks, and are themselves?—Yes, that is the reason.

Mr. Alfred Tozer, called in; and Examined.

Mr. *A. Tozer.*

8165. Mr. *Pemberton.*] I believe you are the Secretary of the Universal Marine Insurance Company?—Yes.

8166. That is a very large marine insurance company?—Yes.

8167. You have been engaged in business relating to marine insurance for a great number of years?—All my life.

8168. What is your opinion with regard to the question relating to the pilotage of ships, so far as concerns the underwriters of the cargoes of the ships?—We look upon the question of a properly-constituted and well-qualified pilot service as of vital importance in narrow waters, for the safety of property.

8169. Both with reference to underwriters of the cargoes, as well as the underwriters of the ship?—Yes.

8170. Are they different classes of business?—No, we underwrite both.

8171. Sometimes you underwrite one and sometimes you underwrite the other?—Yes; sometimes we underwrite the cargo of the ship, and sometimes the vessel.

8172. And the insurance is sometimes effected by different persons?—Yes.

8173. One being the owner of the cargo and the other the owner of the ship?—Yes.

8174. Have you considered the question at all, not only with reference to the value of the ship and cargo, but also to the safety of lives?—Yes.

8175. Looking at all those considerations, are you of opinion that the present system is a satisfactory one?—To this extent, that I would extend the compulsory system much more than it is.

8176. You consider that the qualifications which a pilot under the present system usually possesses, is very different from the qualifications of the masters and mates of a ship?—Yes; it is often the case that a master is a qualified pilot, but then he has to undergo a special examination for it, but an ordinary master is not of the same character.

8177. I suppose that the ordinary qualification of masters and mates has more reference to the management of ships out at sea, and the stowage of cargoes, and so on?—My experience teaches me that.

8178. As a rule, you consider that they are not qualified for the navigation of intricate channels of which they have no special knowledge?—I should doubt a man's conscientiousness if he undertook it without he had undergone special examination.

8179. Do

8179. Do you, speaking as an underwriter of property to a very large amount, consider that there is a necessity for retaining the system of compulsory pilotage with reference to ships coming into the port of London?—I think so quite.

8180. Are you of opinion that the navigation of the channels of the Thames is very difficult?—I am quite sure of it, particularly the south channel.

8181. And that is the one in which what is called the compulsory pilotage system exists?—Yes.

8182. Have you had any experience or means of forming a comparative estimate of the accidents or casualties which have happened between Dungeness and Gravesend with reference to vessels which are in charge of licensed pilots, and those which are not?—I have not had a very large experience, but should say that decidedly we are safer by far with a pilot on board than without one; that is my general recollection of what has passed before me. I see a large number of claims in the course of the year.

8183. What is your opinion with regard to the liability of the owners of ships with reference to accidents. There are two questions involved, one as to the loss of the ship itself, and the other as to the accident caused by the ship in the hands of a pilot to another ship?—I have never seen the reason why a shipowner should be released from his liability, the pilot being on board. I always look upon a pilot at the time of his being on board as equivalent to a master, and if he is so, I cannot see why the owner (the master ceasing at that time to be in office) should be released from his liability. I am bound to say that I should be prepared to release the owner from the liability altogether with certain restrictions.

8184. Mr. *Price.*] Do you mean with a pilot or without a pilot?—With a pilot or without a pilot; both in pilotage waters, and out at sea.

8185. Mr. *Pemberton.*] What is your opinion of the liability of owners of ships when their ships are in the hands of a pilot and an accident happens by collision with another ship?—I have never seen the reason why the owners should be released from liability when a pilot has been on board. I look upon the pilot as the master for the time being. The master has given over his authority to the pilot for a time, and, as regards the liability of the owner, it is simply that he has a pilot in charge of the ship instead of a captain. But I should like to see the owner released from the liability for the acts of either his captain or his pilot; at the same time I should say that the man who does the fault should be punished in a much more efficient way than he is now.

8186. Probably you are aware that the effect of the owner being released from liability when he has a licensed pilot on board, is rather the result of decisions of law than of any positive enactment?—Yes; I have never seen an enactment, but I know that it is the fact.

8187. The principle is this, a pilot being on board in a compulsory way, he is not considered to be the servant of the master, and therefore the master is not liable for the acts of a person who is not his servant?—Yes.

8188. But if a pilot be the absolute servant of the owner, you would not wish to release the owner of the ship from liability?—Not as it now stands.

8189. Of course it would be unjust to the person whose ship was damaged?—Yes.

8190. Do you think that if the present system of compulsory pilotage was done away with, that the services of a sufficient number of men would be secured to conduct the pilotage?—I cannot give a very decided opinion upon that, because that is outside my business; but my opinion is that it would be so, and the men would not be so highly paid as they are now; they are obliged to be men of high character, having undergone an examination, and I should doubt whether if a sufficient remuneration was not offered, you could get the men.

8191. And a sufficient amount of certain employment not being offered, would affect the question?—Yes; over and above that there is a reason why I wish to see it continued; in the south channel, between Dungeness and London, there is a large mass of men called the Deal boatmen, who do not exist on other parts of our coast, and I have a great dislike to those men coming on board the vessels, and acting as pilots without they are duly qualified.

8192. You mean that the Deal boatmen are not licensed pilots?—They are not licensed pilots.

8193. Is it at all the fact that those men do at present come on board the vessels, and act as *quasi* pilots?—Yes, I have known cases where it has been so.

8194. And has that been to the exclusion of licensed pilots?—I cannot say that, but I have known them come on board as pilots.

8195. *Chairman.*] A licensed pilot would have the right to supersede him, would he not?—Yes.

8196. And he would have that right under the Bill before the Committee?—I am very glad to hear it.

8197. Did you know that?—I did not know it.

8198. Then you have not looked at the Bill?—I have not seen it.

8199. You have not considered what the proposal of the Bill is; is that so?—The proposal of the Bill is to do away with the compulsory pilotage that exists in the southern waters.

8200. Is it your impression that it is to provide absolute free trade in pilotage?—That is my impression.

8201. You never looked at the Bill to inform yourself of the real proposal?—No; my object in coming before the Committee was to state how the underwriters would look upon the compulsory pilotage system being abolished.

8202. Is it not very material to that view that you should know what the proposal of the Bill is?—Yes.

8203. You have not taken the trouble to look at it?—I have not had the time since I was asked to appear as a witness.

8204. Mr. *Pemberton.*] Your answers to my questions have been simply with reference to the abstract principle, as to whether it would be a desirable thing to do away with the system of compulsory pilotage, as it exists at present?—That is all I have paid attention to.

8205. Without any reference to any particular remedy or alteration, that may be adopted in lieu of it?—Yes.

8206. You have considered that you are merely prepared to answer the questions as to whether it is desirable or not to continue the system of compulsory pilotage?—Yes.

8207. And you do not see your way to any other

Mr. *A. Tozer.*

20 May 1870.

other system but the present one, under which the services of an efficient body of men could be always absolutely obtained?—I cannot see it myself.

8208. You think it probable, if compulsory pilotage is abolished, that masters of ships, with a view of saving pilotage, would often dispense with the employment of pilots when pilots ought to be employed?—I think it is probable.

8209. Do you think it is very likely that in fine weather they would always do without them?—I think so.

8210. And, therefore, the pilots on finding that there was no certain employment for them in fine weather, would not be so vigilant in their attendance in winter?—I think they would degenerate.

8211. Colonel *Bourne.*] Would you make any difference in the premium, whether a vessel took a pilot or not?—No.

8212. *Chairman.*] Have you any experience of ports where pilotage is voluntary?—No, I have not.

8213. You have not formed your opinion upon any experience?—Not upon those kind of ports.

8214. Are you aware that the pilotage is, practically, voluntary in the north channel of the Thames?—Yes, I am aware of that.

8215. In your experience, has any evil resulted from it or no?—I can understand a great deal of reason why pilotage is not compulsory in the north channel as compared with the south channel.

8216. In your experience, has any evil resulted from the fact of pilotage being voluntary in the north channel of the Thames?—No.

8217. I presume you must insure a considerable number of vessels coming by the north channel of the Thames?—Yes.

8218. And you have not, in your experience, found any evil resulting from it?—No.

8219. And you have not taken the trouble to inform yourself of the proposal of the Bill before the Committee?—No.

8220. When you stated that you had a great dislike to the Deal boatmen going on board vessels, is that under the impression that a perfectly free system of pilotage was to be adopted?—Yes.

8221. And that the Deal boatmen were to be allowed to go on board, and that licensed men would have no longer the right to supersede them?—No.

8222. Are you a member of the committee of Lloyd's?—I am not.

8223. Are you a member of Lloyd's?—My company is. I am member of the committee of the Salvage Association.

8224. Are you aware that the committee of Lloyd's are in favour of this Bill?—I am not aware of it; I am not cognisant of any of their matters; they only allow private underwriters to be on the committee.

8225. You only give your own opinion?—Yes.

8226. Mr. *Pemberton.*] What is your opinion of the salvage company?—It has never been before them as a committee.

8227. Mr. *Norwood.*] It has never been discussed there?—No.

8228. I think your opinion with reference to the liability question, was rather to this effect, that you would not alter the state of the law with reference to the shipowner's immunity from the consequence of the acts of the pilots, but would extend it to the act of anybody in charge—Yes.

8229. You think that any man who commits an error by carelessness should be punished in person or in body?—Yes, my own opinion is, that it would work in the long run infinitely better than the present system.

8230. The present system is, that in important cases an inquiry is entered into under the authority of the Board of Trade, and a punishment in the shape of six months' suspension of certificate is inflicted; in your opinion that is not sufficient?—I do not think so.

8231. You do not quarrel with the immunity of shipowners with reference to pilots; you would like to see it extended?—I should like to see it increased.

8232. Do you imagine that shipowners who are responsible, particularly with reference to valuable cargoes on board their ship, would abstain from taking pilots?—I do not think they would for their own sake.

8233. Do you believe that if a serious disaster occurred which entailed a heavy claim upon the underwriters, and if upon investigation the underwriters found that it was the habit of an owner not to allow a pilot to be taken, that he would be looked upon with distrust, and would be charged a higher premium?—Yes; if it came to a question of law I should set up unseaworthiness; that is, if I found that the ship had been lost from the want of a proper amount of knowledge aboard ship.

8234. You scarcely anticipate then a falling off in the employment of pilots, whether pilotage is compulsory or not?—Yes I do, for this reason, that I always felt the necessity of legislation does not arise with reference to the respectable shipowner, but with reference to vessels which we have to insure, belonging to all kinds of people. I want to insure that those who would otherwise go without a pilot should have a pilot. Respectable shipowners are not the whole class that we have to do with.

8235. Mr. *Price.*] I understood you to say that you do not object to the immunity of owners of a ship, and that you would even be willing to extend that immunity somewhat?—Yes.

8236. Whenever the owner is liable, the ship being insured, the underwriter is liable?—Yes.

8237. And if you get rid of the owner's immunity you get rid of your own liability as an underwriter?—That is certainly the fact; but that is not the ground on which I speak. I take a higher ground than that.

8238. You put it upon the ground that you think the guilty person ought to suffer?—Yes.

8239. And as it is, the owner would be liable for an accident arising from no neglect on his own part?—Yes.

8240. But it is a matter of fact that anything which frees him from liability frees you as an underwriter from liability?—It frees us from three-fourths of it in that case.

8241. But you say you would also, in extending immunity to the owner, if you could, extend the liability to take a pilot; you would make it more compulsory to take a pilot?—Yes.

8242. And that is because that would conduce to the safety of the ship and cargo, of which you may be the underwriter?—It is a selfish motive as regards myself.

8243. A selfish motive lies at the foundation of

of all commercial operations, and therefore I do not know that we should call it selfish, except in modified sense; but what I meant to ask you is this: is that greater safety to you in the conduct of your business a fact that you would measure by any difference in the premium you would charge upon the insurance?—I cannot say. I do not think we have ever come across it; but I do say this, that if we knew of any shipowner who consistently, whether compelled or not, fitted up his ships in first-class style, and who, in case the compulsory pilotage was done away with, would always carry a pilot, he would get his premium at a lower charge.

8244. That is in the case of a particular owner always navigating his ships in a particular trade?—Any known owner.

8245. I speak of an ordinary case of a shipowner wishing to insure his ship, or a merchant insuring his cargo, both of which are equally affected by a pilot being on board; let me take the case of a merchant desiring to insure his cargo from a North American port to Liverpool; there is a current rate of insurance prevailing at the time, according to the time of the year, and so on, and he writes to the insurance broker, and at that rate with almost absolute certainty he can insure the ship; is it the practice of underwriters to make any inquiry as to the habit of such owner of taking pilots or otherwise, or is it not the practice to take the bill of lading and insure the cargo according to the market rate?—No; the first question I put is as to the owner of the ship; is it one of Smith's ships, or is it one of somebody else's ships.

8246. Supposing a ship belonged to an owner in British North America, would you ask who he was?—Yes; and if he was known as a good man he would have the turn of the market.

8247. You are not able to say that the fact of taking a pilot or not taking a pilot is a matter that comes to your knowledge in any such way as to enable you to charge a higher rate of insurance upon a ship that does not, than you would upon a ship that does take a pilot?—It would have that tendency.

8248. If you trust it?—Yes.

8249. Do you take any trouble to ascertain the fact?—It becomes part of the general inquiries; I am certain of this, that if it came to pass that there was perfect free trade as regards taking a pilot or not at Deal, coming up to London with an East India ship, the underwriters would ask whether she was a ship that went without a pilot or whether she would take a pilot.

8250. At the present moment you do not inquire?—No.

8251. You assume that the system of pilotage being compulsory, as a rule they do take pilots, and you never thought it worth while to charge a higher rate to those who do not than to those who do?—No, we have looked upon it as a thing that is always done.

8252. Therefore you have never made it a condition of the contract between yourself and the shipowner that he should take a pilot?—No.

8253. I understand you that if compulsory pilotage were done away with, and it were open to the owner of the ship to take a pilot or not as he pleased, you would make it a positive condition that he should take a pilot, or you would have one rate for a man who did and another rate for a man who did not take one?—Yes.

8254. Do not you think that that would be a very wholesome form in which this compulsion could be administered?—A very indirect one, because taking a pilot on board is a matter connected with the master; the largest amount of insurances always have to be taken with reference to the cargo, because, as a rule, the cargoes are four, five, and six times as valuable as the ship, and therefore we receive four, five, and six times as much insurance upon them, and it would be a very irregular mode of getting at the necessity of a pilot by asking the cargo owner.

8255. The machinery is a very simple one; if you put the compulsion upon the owner of the cargo, would he not at once put the compulsion upon the owner of the ship, who is the charter-party?—We insure on a cargo from Calcutta to London. The question whether a pilot is to be taken on board arises upon the last 200 or 400 miles; our insurance being upon the cargo all the way from Calcutta, how are we to bring force to bear upon the man who ships his cargo?

8256. Would not the effect be this, that the moment the underwriter made the exception in favour of a cargo shipped on board a ship which is compelled to take a pilot; do not you think that the merchant in his charter-party would make it a condition with the owner; if the underwriter imposed that extra condition upon the shipper of the cargo, would not the shipper of the cargo impose it as an extra condition upon the owner of the ship?—He might do it.

8257. Would not he do it in the ordinary course of business?—No; I do not think he would.

8258. When he charters a ship he provides that the ship shall be in a certain condition with certain provision of sails, and so on; and in the charter-party it would be no great difficulty to add among the other conditions that upon her approach to any harbour in England, to which she might be consigned, he should take a pilot in any waters in which there was a pilotage jurisdiction?—In fact, you would come round to compulsory pilotage in another form.

8259. It would not be compulsory pilotage except in an indirect form; that is to say, that a man would take a pilot because it was his interest to take a pilot; what I want to get from you is this, whether you do not think that the underwriter, for his own protection, will not in that case impose such a condition upon the shipper of the cargo as would compel the shipper of the cargo to impose a similar condition upon the owner of the ship?—I doubt, from the enormous mass of business that has to be done, whether it could be carried out with anything like efficiency.

8260. The only difficulty you see is that it would be a departure from the usual custom, and that it would take a little time to introduce the new system?—It would be a long time.

8261. That would be the tendency, would it not?—It would be put in the policy, but it would be a hardening of the premium, and people would find themselves in difficulties with the underwriters.

8262. Whether by the hardening of the premium or by a special condition in the policy, in one or other of the two forms, the pressure would ultimately be brought to bear upon the shipper of the cargo, which would compel him to feel a corresponding pressure upon the owner of the ship?—Yes; I think that would be the tendency.

8263. *Chairman.*]

Mr. *A. Tozer.*

20 May 1870.

8263. *Chairman.*] Did the directors of your company instruct you to come here to give evidence?—No.

8264. Have they passed any resolution upon the subject of the Bill?—No.

8265. Mr. *Malcolm.*] We have heard a great deal about the compulsory system by underwriters instead of by the Board of Trade; do not you think that there is a great competition going on at the present moment among underwriters, and that possibly for that reason they could not make the difference you speak of in the premiums?—We would endeavour to do it.

8266. The leading firms might?—Yes; the leading companies would do it.

8267. You do not think that the competition would be so great as practically to make it impossible to enforce it?—I hardly dare answer that question. The tendency of competition is, of course, to make things difficult, and there is a very great amount of competition among underwriters.

8268. Mr. *Wykeham Martin.*] If a ship runs another down, does the underwriter of the ship which causes the accident incur any responsibility?—We have in our policies a collision clause, which makes the underwriter of the ship that does the damage pay three-fourths of the claim. One-fourth has to be paid by the owner and three-fourths by the underwriter. It is a special clause put in the policy.

8269. That is not the case unless it is specially inserted in the policy?—I never knew of a ship's policy in which it was not inserted. It is not in the ordinary reading of the policy; it is inserted afterwards.

Mr. William Barfield, called in; and Examined.

Mr. *W. Barfield.*

8270. Mr. *Pemberton.*] You are a licensed Pilot?—I am.

8271. You are licensed from Gravesend, are you not?—From Gravesend to Dungeness in the South Channel, and Orfordness in the North Channel.

8272. Your station is Gravesend?—Yes.

8273. What is your opinion, if compulsory pilotage is done away with, as to the employment of pilots?—There will be a very great reduction.

8274. You think, if the law is altered in such a way that the shipowners may do as they like about taking a pilot, the employment of pilots will be much diminished?—Yes.

8275. I dare say you have some reasons for that opinion?—Yes, we judge from the practical experience of the late exemptions by Orders in Council from 1855 to 1861. Large exemptions were made then, and we found that they made a large reduction in our income; and if it comes on to the total abolition of compulsory pilotage, as regards the Gravesend branch, I think it will make a very serious reduction.

8276. The Orders in Council to which you refer exempted from compulsory pilotage all ships in ballast, did they not?—That was the result in 1861. It reduced our income one-third, or thereabouts.

8277. It not only reduced your income, but it diminished the employment of pilots?—Yes.

8278. To what extent do you think that was the case?—I should think nearly one-third, but not quite.

8279. You think if this Bill is passed there will be no longer a living to be got at Gravesend?—No, not at Gravesend; we go from practical experience with regard to the late exemptions in ballast ships. If you exempt all ships, I think it will take the largest part of our living away.

8280. I suppose there is a difference of opinion about it in Gravesend?—Yes, in all bodies there is a difference of opinion.

8281. Many of the electors of Gravesend have a difference of opinion. Was not it a question very much discussed at the last election?—I am not an electioneering man.

8282. Now, with regard to compensation, what do you consider would be a fair remuneration. Have you seen the compensation clauses of the Bill?—Yes; I do not call them any compensation at all. I do not see any compensation in them.

8283. Should you be satisfied if the average were taken of the earnings of the pilots during two, three, or five years?—I should think that would be almost the only way you could compensate us. With reference to the compensation in the Bill, I do not think it is any compensation at all.

8284. In the first place the compensation in the Bill postpones any compensation with regard to loss for two years?—It is all permissive; there is nothing certain.

8285. The Bill only gives the Board of Trade power to it when two years have elapsed; it does not compel them to do it?—Yes, and in that two years what are the pilots to do; a man may be ruined in the meantime.

8286. The clauses, as drawn, do not provide for a positive remuneration?—No.

8287. But it is merely this sort of provision, that they may knock off a certain number of pilots?—Yes; if we are to have any compensation, let us know what it is to be.

8288. You think that some sort of compensation, founded upon the average of past earnings, would be a fair provision?—Yes. I think if you took the average of the last three or five years, and guarantee that whatever we fall short in our income shall be made up to us to that amount, of course we should be satisfied if you pass the Bill. The Government say we shall lose nothing by it, and therefore there cannot be any objection to the guarantee to make it up to us.

8289. There is some fund to which you contribute, is there not?—We have a superannuation fund at the Trinity House.

8290. It is all under the same system?—Yes.

8291. As to the unlicensed men, is not the port of London infested a great deal with them?—Very much.

8292. What is your opinion about that?—I think if you do away with compulsory pilotage they will go much faster ahead, and there will be nothing to stop them. You take the piloting away from men that are well known and efficient, and have gone through a thorough examination, and have good employment under the existing Acts of Parliament; when you do away with compulsory pilotage, you will take it out of their hands, and the greater part of it will be put into the hands of unlicensed men.

8293. Or,

8293. Or, at all events, into the hands of men who have not proved their efficiency?—Yes.

8294. Is the navigation of the Thames between Gravesend and Orfordness and Dungeness very difficult?—Any nautical man will allow that.

8295. Do you know what the custom of the law in Norway is, with regard to the compulsory taking of pilots?—I have no positive knowledge of it. I have information from the captains of many of the Norwegian ships, to the effect that there is a law in Norway that if a ship receives any damage in licensed waters, and she has not a licensed pilot on board, a certain amount is to be taken from her policy of insurance. In the policy of insurance, there is a clause that they must employ a licensed pilot in licensed pilotage waters.

8296. Has there been any recent change in the law, as far as you remember?—There has. I have heard from the Norwegian captains that a new law came into force on the 1st January 1870.

8297. Does not it make it compulsory over all ships of 20 tons and upwards to take pilots?—Yes.

8298. What is your opinion of the liability as between the pilot and the owner of the ship?—My opinion is that the pilot ought not to be liable at all for damage. He should be no more liable than the shipmaster is. There ought not to be any more liability upon him than there is upon the shipmaster.

8299. Is the general result of your opinion that you think it would be very detrimental to the public service and the safety of life, to pass this Bill?—I think so, very much.

8300. *Chairman.*] I want to understand what your view is of the compensation which ought to be given under this Bill; in the first place you are not satisfied with the two years?—No.

8301. What time would you be satisfied with?—I do not think there can be any specified time.

8302. You think it ought to be an absolute guarantee of your present income?—Yes, an absolute guarantee.

8303. For the rest of your lives?—Yes. We come in under one Act, and we are put out under another Act.

8304. What are your expectations now; at what age would you be superannuated?—There is no particular age; as long as I have my bodily health and my intellect I shall continue to work.

8305. But the time will come when you will be superannuated?—Yes.

8306. What is the average age at which men are superannuated?—I cannot tell you the average age.

8307. About 65?—We have pilots in the service working at 80 years of age.

8308. That is an exceptional case, is it not?—Yes.

8309. Should you say that, as a rule, the pilots are superannuated at the age of 65?—No; I should say from 65 to 70.

8310. Then what is the superannuation they are to get?—The rate is very small at the present time. I think their superannuation would be 28 *l.* a year.

8311. What is your average income now?—£316; that is for the last five years.

8312. And when you are superannuated you will only get 28 *l.*?—Yes; but I do not think that my income ought to remain at 316 *l.* a year. I think it should go on; it ought to rise; every other profession does. I ought to expect to get more and more every year of my profession.

8313. Is it your experience that pilots do get more and more as they get older?—Generally speaking they get a better connection. A man comes into the service, and he expects, as he goes along and becomes more efficient, and gets more privileges, to obtain a larger salary.

8314. You do not wish the Committee to understand that, up to the age of nearly 70, the man's income is to go on increasing?—No; certainly not.

8315. Your expectation is that you should get something like your present income; and at the age at which you are superannuated that you should get a pension of 26 *l.* a year?—Yes.

8316. I need hardly point out that under your proposition, if you were guaranteed your present income to the close of your life, your position would be very much better than your present one?—Perhaps it might be, and perhaps my salary would get much higher than 316 *l.* a year, and I might save it, which would make the latter end of my life much easier.

8317. You think, on the whole, that you might take this opportunity of making your position much better?—It is not our fault that you are going to do this. We held good situations before entering the service under the present Act of Parliament, and had good prospects before us.

8318. You are not very well satisfied with the pensions you would get on superannuation?—No; I cannot say that we are.

8319. Mr. *Pemberton.*] You would be glad to have more?—Yes.

8320. *Chairman.*] What proportion of your employment comes from vessels not bound to carry pilots?—Speaking of the station at Gravesend, where they are not compelled to take pilots, I should think nearly half.

8321. I suppose there are a very large number of vessels that come to London with cargoes which then proceed to other ports in ballast?—Yes.

8322. And those vessels do employ pilots though they are not bound to do so?—Some of the foreign vessels do so, not the English.

8323. Half of your present employment comes from vessels which are not bound to carry pilots?—I should think so, down at Gravesend.

8324. It will not fall off, will it?—I think it will.

8325. Why?—If this Act comes into force you will bring a separate class of men into the field altogether.

8326. But all the present pilots will exist?—Yes.

8327. What reason is there to believe that those vessels that are now not bound to carry pilots, and which still employ you to the extent of half your employment, will not continue to do so?—That is only half our employment.

8328. But would not that half of the vessels continue to employ pilots?—No, they require a very great deal of looking after to get that employment now.

8329. Why?—If they could do it they would take another class of men.

8330. Are you aware that there are the same precautions under the present Bill as there are under the present law?—Yes.

8331. Therefore, whatever facilities you have now

Mr. *W. Barfield.* 20 May 1870.

now of preventing men taking unlicensed pilots, you will have under the present Bill?—Yes.

8332. Those vessels will continue to employ pilots, and you would have the same opportunities of forcing them to carry pilots in lieu of other unlicensed persons?—Yes.

8333. Now you say that half of your employment is in respect of vessels which are bound to carry pilots?—Yes.

8334. Those vessels are, many of them, of the same class as those which are outward bound, which are not bound to carry pilots?—Yes, all of them.

8335. A great number of them are foreign vessels?—A portion of them.

8336. What proportion should you say are foreigners?—Perhaps one-fourth.

8337. Not more than that?—No.

8338. Surely, more than that?—No, not of those that are compelled to take pilots.

8339. They would all carry pilots, would they not?—A great many would.

8340. You just told us that the great proportion of those vessels which are not bound to carry pilots, are foreign vessels?—Yes.

8341. And that shows that foreign vessels want pilots more than English vessels, does it not?—Yes.

8342. Does not it follow that the foreign vessels now bound to carry pilots will continue to carry pilots?—Yes, I should imagine so.

8343. Then I imagine that a considerable portion of British vessels that are now bound to take pilots outwards, will continue to take pilots?—No; I think with reference to the Gravesend station, not one would; I was looking over my books for the last nine years, and I could not average two British ships in a year, which if this law should pass, would have taken my services at Gravesend.

8344. You mean from Gravesend to Dungeness?—Yes.

8345. You told us that a considerable number of vessels not bound to carry pilots do employ you?—Of foreign vessels.

8346. Are they all foreign vessels?—Yes; there is not an English vessel amongst them. I should say that there was not one English vessel a year that was exempt from pilotage.

8347. Sir *Charles Wingfield.*] Are you working the south channel, or is it mainly the north channel that you work?—I work both channels.

8348. *Chairman.*] Do you allude mainly to the north channel?—I work both channels equally; I allude to both channels.

8349. Are there a considerable number of English vessels coming to the Thames in cargo which go round in ballast to Liverpool?—Yes.

8350. Those are not bound to carry pilots, are they?—No.

8351. But they take pilots, do not they?—Not one out of 50 did so until lately. Smith's service have employed pilots lately with the Glasgow ships.

8352. Do they employ tugs?—Yes; but not one English vessel out of 50 that leaves London in ballast employs a pilot.

8353. Sir *Charles Wingfield.*] Either north or south?—Either north or south.

8354. *Chirman.*] Even though they employed a tug?—Yes; from 2,500 tons downwards the English vessels in ballast invariably refuse the services of a pilot.

8355. Do they take a pilot down as far as Gravesend?—Some of them, and some do not.

8356. Is it not the fact that nearly all of them do?—I do not pay a great deal of attention to the pilotage there.

8357. Do not they take pilots?—Some do and some do not.

8358. Do you imagine that your employment will mainly depend upon foreign vessels?—Yes; at the Gravesent Station.

8359. What proportion of your employment is now due to the north channel of the Thames?—I think more than half.

8360. Then that employment will not fall off?—I think it will.

8361. Why; they are vessels that are not bound to carry pilots, are they not?—Yes; but they are getting very much into the habit of not carrying pilots.

8362. If they find in practice that they do not want pilots, their declining to take pilots will not be in consequence of this Bill?—The foreigner will imagine that the compulsory pilotage is done away with; at the present time I believe a great number of vessels that go down the north channel believe that they are compelled to take pilots.

8363. Are you aware, as a fact, that they are compelled under their policies to carry pilots?—Not as a fact, but I have been told so; but that is getting very much relaxed.

8364. Do you find, in practice, that the proportion of foreign vessels that carry pilots is getting less?—Yes, we do. Some of them attempt to navigate the channel; some do manage it, and a great many have somebody else to manage it for them.

8365. Still half of your present employment arises from vessels not bound to carry pilots?—Yes, at Gravesend station.

8366. Sir *Charles Wingfield.*] It is provided in the Act of 1854 that pilots should be separately licensed from London to Gravesend, and from Gravesend to the Downs?—Yes.

8367. It has been provided since that time that pilots should not be licensed the whole way from London to the Downs?—Yes, that no pilot should hold a license above and below Gravesend.

8368. In the Bill before the Committee it is proposed to abolish that instruction, and to let a pilot be licensed the whole way from London to the Downs?—I see nothing about it in the Bill.

8369. It is proposed to abolish that distinction; that distinction is not in the draft Bill as it is now before the House?—It will do away with that clause in the Bill.

8370. Would you approve of a change of that kind?—Perhaps I should approve of it.

8371. Are you aware that some of your body, who are licensed from Gravesend to the sea, have brought a paper here remonstrating against the objection which has been made by the river pilots above Gravesend to the pilots being licensed the whole way?—I am not aware of it; still, if they have done so, I do not see why they should not do so.

8372. You would prefer to have your licenses extended up to London, would not you?—If I cannot get a living at the station at Gravesend I should wish to have my license extended to London.

8373. Do you consider that the pilots who are licensed all the way from London to the Downs earn

earn a better living than you do?—Yes, they earn more money.

8374. Therefore, it would be an advantage to you to be licensed the whole way?—Yes.

8375. The unlicensed pilots; that is the men called the free watermen, do not take vessels much below Gravesend, do they?—I do not know much about them; there are a number of unlicensed men who do take vessels below Gravesend; I do not know what class of men you allude to.

8376. I mean the men who, on the Thames, are called the watermen pilots?—I do not know anything about them.

8377. They do not interfere with you below Gravesend?—No.

8378. Could you and your class of pilots who are licensed from Gravesend to the Downs, do more work and earn more money than they do at present?—Yes, a very great deal more; double and treble.

8379. What limits the amount of work which you at present do?—The number of ships that come down.

8380. And the exemptions?—The exemptions limit it decidedly, and the employment of another class of men limits it as well.

8381. I understood you to say that the watermen pilots do not much interfere with you below Gravesend?—I am not talking of the watermen pilots; there is another class of men whom we call coasting pilots; they are quite distinct.

8382. Do you mean the Deal boatmen?—Yes; and likewise other men that navigate down below Gravesend.

8383. On the whole, you would prefer to have your licenses extended up to London?—If the present Bill comes in force, decidedly we should.

8384. Mr. *Stevenson.*] Would not it help you a good deal if you got the liberty of going between London and Gravesend?—Yes, it would help us.

8385. Before you were a pilot did you command a ship?—Yes, 14 years.

8386. Do you know the navigation of the Thames above Gravesend?—For the first seven years I commanded a vessel that was exclusively in the north and the south channel of the Thames, and for which I now hold a license; and during that seven years I do not suppose I employed a pilot more than two or three times. That was the time when pilotage was much more compulsory than it is at the present time.

8387. You considered yourself quite competent to navigate a ship between London and Gravesend?—I think I was during the seven years.

8388. Have you alone among the pilots that capacity?—No; there are half our service that are the same.

8389. The old pilots who have that privilege are in a much better position than you are, are they not?—Yes.

8390. Is it not the case that shipowners have an inducement to employ a single pilot the whole way by the fact of their being able to get the pilotage done at a reduced rate?—By employing one pilot instead of two, there is a considerable difference in the rates.

8391. The saving upon a vessel of 20 feet draught is as much as the difference between 20 *l.* and 24 *l.*, is it not?—I should think it is.

8392. So that the shipowners are induced to prefer the old pilots who take the vessel the whole way rather than employ you?—Yes, it makes a very great deal of difference.

8393. It operates against your employment, does not it?—Yes.

8394. Are you not supposed to be constantly stationed at Gravesend?—We are stationed at Gravesend.

8395. And you are supposed not to leave your station to look for employment?—I cannot answer that question, to say that we are not supposed to do so; we are allowed to look for our living in London.

8396. Is not it considered a hardship for the pilots to have to keep their station?—Yes, the station has to be upheld, and a certain portion have to keep there and uphold the station.

8397. And those men who keep at the station are worse off for employment than those men who leave the station?—Yes.

8398. So that the present system offers a disadvantage towards those men who are at their station most constantly?—Yes.

8399. Not only would it be a great saving to the shipowners to allow you to pilot a ship the whole way, but it would be a fairer thing to the pilots who hold on to their stations?—I think so, under existing circumstances; it is not the feeling of the entire body that they should be removed from Gravesend, but if the present Bill should come into force they must do it.

8400. There are no ships at Gravesend?—No.

8401. They all come from London?—Yes.

8402. Do they stop at Gravesend long?—Not at all sometimes.

8403. They are towed past?—Yes.

8404. Is there any good reason for making a pilot station at Gravesend?—I never knew the reason why it was made, but it was made in 1854.

8405. Do you know the reason of the change in 1854?—No; it was before I entered the service. I entered the service in 1857.

8406. You would like to see all the pilotage thrown open to Gravesend, whereby there would be only a single body of pilots instead of two bodies, all sharing what was going?—Yes; we are all supposed to be of the same ability, and we ought to have the same privileges.

8407. You complain a great deal of the unlicensed men?—Yes.

8408. What inducement have the captains of vessels to employ unlicensed men, who cannot be as qualified as you are to do the work?—£. s. d.

8409. They do it cheaper?—Yes.

8410. If you did it cheaper might not that help you?—Respectable men cannot do it cheaper than at the rate of the present rate of pilotage.

8411. If you had more work, would not it be better to do larger business with lower rates?—I think our rates are low enough for respectable men to work by. I have found it so.

8412. What difficulty practically is there to prevent you detecting the unlicensed men, and punishing them?—The subterfuges they use and the schemes they have to prevent us doing so. We are in a boat pulled by two men; if ships come down with unlicensed men on board, we know that they are there. I have known them passed dressed up with a bonnet and shawl, as a woman; at other times we have succeeded in

Mr. *W. Barfield.*

20 May 1870.

boarding the vessels with these men on board, and we have found them stowed away in different places. I have even found them in the captain's bed; at other times in the closet, and so on.

8413. What steps have the Trinity House taken to prevent these men intruding into your office?—I am not aware of any; I think it is left entirely to the pilots to protect themselves. We have the law to protect us where we find these parties, and that would be our answer if we complained to the Trinity House.

8414. Where do the unlicensed men get on board?—In London.

8415. If you were allowed to get on board in London, would you have a better chance of detecting those men?—These unlicensed men are all in exempted ships, and the captains can refuse your services as the ships come out of dock.

8416. What does the captain actually save in money by employing these men?—Half, generally. These men have, generally speaking, neither character to study nor anything to lose.

8417. They pass no examination?—No.

8418. What kind of experience have they which enables them to do what they do?—Some of them are old masters of vessels; some of them never knew what it was to have the charge of a vessel; some of them have been before the mast; some have been one thing and some another, and by going continually backwards and forwards, they get a knowledge of the channels. There is not a doubt about that.

8419. Then the continuance of compulsory pilotage does not do anything to protect you from what seems to be your greatest source of injury?—It has always been a great source of injury to us at the Gravesend station.

8420. *Chairman.*] I observe from the returns that there are 50 pilots at Gravesend who are licensed to pilot to sea by the north or south channel, and 50 pilots who are licensed from London by the north and south channel?—Yes; 100 altogether.

8421. With regard to the 50 pilots from Gravesend to the sea by the north and south channels, are they all within the rule, that half of their earnings come from the north channel?—I would not say all; several of the pilots come up to London and seek for work.

8422. Take the average of the men getting on board vessels at Gravesend?—The average is very small. I do not suppose, at the present time, that there is more than half the pilots working at the station at Gravesend.

8423. What are the others doing?—They obtain employment up in London.

8424. And they leave their station?—Yes.

8425. They are not piloting, are they?—Yes, they are piloting; they seek their work up in London.

8426. They are choice pilots?—They are entirely choice pilots; the object of choice pilots is that the shipowner or the shipmaster should have an opportunity of engaging or choosing their pilots; that was the object, and it has been so for many years; but I think it is turned a great deal the other way; it is not the shipowners that choose the pilots, but the pilots choose their ships.

8427. Mr. *Stevenson.*] The men, instead of staying in their boats at the station, leave the station and go up to London to canvass for employment?—Yes.

8428. Through what channel do they get employment; from the shipowners themselves?—No; only part of them.

8429. And do not some of them get employment through interpreters?—Yes.

8430. And I suppose they get a commission on the pilotage?—Yes.

8431. *Chairman.*] What is the number stationed regularly at Gravesend?—I should think not more than 20 out of the 50 of us are permanently engaged at Gravesend.

8432. Are you one of the 20?—I am.

8433. Should you say that half the employment of those men is due to the north channel?—Yes.

8434. And more than half from vessels not bound to take pilots?—Yes.

8435. Of those pilots that are up in London seeking employment, a great many of them are also employed by vessels not bound to carry pilots?—No doubt about it.

8436. About the same proportion?—I should say nearly so.

8437. Do you often get employment to take vessels down below Dungeness?—No; there are pilots licensed to the Isle of Wight.

8438. Are there pilots licensed to the Isle of Wight?—Yes.

8439 Are they London pilots?—Yes, many of them.

8440. Do they get employment to some extent?—Yes.

8441. Even beyond the compulsory district?—Yes.

8442. A considerable number of large vessels employ them?—Yes, they are the class of vessels that do employ them, not the other large passenger ships.

8443. Those are outward pilots?—Yes.

8444. Do not you consider that if vessels were to carry their pilots beyond Dungeness, beyond the limit of the compulsory district, those vessels would also continue to employ pilots after the compulsory pilotage is done away with?—I think not.

8445. Why?—I think at the present time they often take a licensed pilot, because they consider that under the present law they are responsible for damage.

8446. They are not responsible beyond the compulsory limits?—I do not know that it is beyond Dungeness, but that is a question I cannot answer.

8447. You know where the limits are?—The limits are down to Dungeness.

8448. I talk of beyond that?—They are all a large class of vessels and passenger ships, and there are certain men that would take them.

8449. I ask you as a pilot, would those vessels continue to take pilots?—Perhaps they may, but there is only a certain number of pilots employed by those vessels.

8450. How many should you say of the outward-bound vessels would employ pilots?—I should say a fourth of them, barely that.

8451. In your opinion, would the employment of those men fall off?—Perhaps not. I believe the Bill, if it passes, will affect some more than others.

8452. Those are vessels that take pilots beyond Dungeness, are they not?—Yes; I do not doubt that a certain quantity of vessels will always take pilots.

8453. Do you speak of the larger class of vessels?—

vessels? — Yes, but still there are a certain quantity that will not take pilots.

8454. In your opinion foreign vessels will continue to take pilots?—I do not think a great many of them will. I think we shall even find a great reduction in foreign vessels.

8455. Sir *Charles Wingfield.*] I believe you said that many years ago, when you were master of a vessel, you used to take your vessel up the Thames above Gravesend?—Yes.

8456. At that time had you a certificate from the Board of Trade as a pilot?—No, it was before certificates came in vogue.

8457. Early in life had you served an apprenticeship in the river?—Not in the river.

8458. You acquired your knowledge of the Thames above Gravesend simply from taking ships up?—Yes, by practice.

8459. *Chairman.*] Do the choice pilots that go up to London to seek vessels pilot them from London downwards?— No, they stop at Gravesend till the vessel comes down.

8460. And sometimes a good portion of them come up to London to look after employment?—They do, or their agents do it for them.

8461. They are not regularly on a station in the way in which you are?—No.

8462. Sir *Charles Wingfield.*] Does the superintendent of pilots at Gravesend allow them to go and seek employment; is it not prohibited?—No, it is not prohibited.

8463. *Chairman.*] Is there any want of supply of pilots for outward-bound vessels at Gravesend?—No, there is never a want of supply. There is sufficient to supply all that come there.

8464. Mr. *Pemberton.*] Is it necessary that a certain number should be there according to the rules of the Trinity House?—Yes, there must be a certain number by the rules of the Trinity House.

8465. And if there is a sufficient number to comply with the order of the Trinity House, that will do?—Yes.

8466. *Chairman.*] You are not licensed to bring vessels up to London, are you?—No, I work the south channel from Gravesend to Dungeness, and *vice versâ*; the north channel only downwards.

8467. Do you pilot vessels beyond that point?—Yes, under certain formalities, if we are required.

8468. But as a rule you do not?—No.

8469. They are left alone?—Yes.

8470. I suppose they would not take you on board a pilot vessel at Dungeness, would they?—By undergoing a certain formality, they would.

8471. What is that formality?—Signing that I am on the roster; that is by putting my name on a list there is nothing to prevent my going down there.

8472. I suppose it answers your purpose better to come home and be ready for another outward-bound vessel?—Yes, I might be there a fortnight or three weeks, or more.

8473. Do the inward pilots confine themselves to inward pilotage?—Yes.

8474. They do not stop at Gravesend?—No.

8475. You think, on the whole, that that is an economical arrangement that the two sets of pilots should be kept distinct?—Yes.

8476. On the whole, there is a saving in that way?—Yes.

8477. Mr. *Cave.*] I thought your objection to the station at Gravesend as compared with London, was that you would prefer having one pilot from London to Dungeness without any change at Gravesend?—Yes, the further you extend my license the better it is for me.

8478. Under the present law you cannot do that?—No.

8479. What would happen if you tried to take a vessel higher up; if a vessel did not want to stop at Gravesend and wanted to go on to the London Docks without stopping at Gravesend, what would the practice be?—They would have to hoist her jack and get a river pilot.

8480. A river pilot would come on board?—Yes

8481. And if she did not do that, she would be subject to a penalty, would she not?—I cannot tell you whether she is obliged to hoist her jack when she arrives at Gravesend coming upwards.

8482. A good many vessels come direct to the London and Victoria Docks, do not they?—Yes; the river pilots are always in attendance on them.

8483. The pilots get on board at Gravesend without stopping the vessel, do they not?—Yes; they generally board the vessels after the Custom House boats have left.

8484. How far do the tugs bring them up?—Some of them bring them up from Beachy Head, and even further than that.

8485. Do they bring them up to the dock gates?—Yes.

8486. The same tug?—Yes, the same tug.

8487. *Chairman.*] Are there many foreign vessels towed in the north channel by tug-boats?—No; they cannot afford it; we seldom have a vessel towed in the north channel downwards, and upwards they seldom take a steam-tug till they arrive above the Nore or Gravesend.

8488. There are very few outward-bound ships that take tugs?—They invariably tow from London to Gravesend; many of them do it to evade pilotage; they tow past the pilotage station; it is much easier to evade a pilot with a steamboat ahead than under canvass.

8489. You know what class of men the inward pilots are in the north channel?—Yes.

8490. Are they much the same class of men as the other pilots?—They are the same class of men.

8491. They do not make quite such large incomes, do they?—I think, according to the statistics I gave you just now, they are earning much the same as I am.

8492. They are much the same class of men as those in the south channel?—They are perhaps a little rougher than we are.

8493. They have rather rougher work, have they not?—I do not know that they have; they have more knocking about in the cutters than we have.

8494. Otherwise they are much the same class of men as you are, are they not?—Yes.

8495. Mr. *Pemberton.*] Is it not possible that the same men may have a license to pilot a ship from London to Gravesend, and also from Gravesend to Dungeness?—No, not under the existing law. The law is, that no man shall pilot a ship above and below Gravesend. If I have a license from Gravesend to London, or from London to Gravesend, I cannot hold a license below Gravesend.

8496. Is that the Trinity House regulation?—No; it is by the Act of Parliament.

Mr. WILLIAM DAINES, called in; and Examined.

Mr. *W. Daines.*
20 May 1870.

8497. Mr. *Pemberton.*] I BELIEVE you are a London sea pilot?—Yes.

8498. You take charge of vessels from London to the Isle of Wight?—Yes.

8499. And anywhere in the north channel, I believe?—Yes.

8500. Beyond Dungeness the pilotage is not compulsory, is it?—No, it is not compulsory beyond the Downs.

8501. I think you have been a pilot 25 years?—I have.

8502. And you are well acquainted with the working of the whole system?—I am.

8503. What is your view with regard to the question of the abolition of the present system?—I think if the Bill passes there will be a great many wrecks and loss of life in the winter time, and I also think that there will be a great falling off in our earnings.

8504. Do you think there will be a great additional danger to life and property if it should be left optional to take a pilot or not?—Yes.

8505. Do you consider that, under the voluntary system, it would be likely that a sufficient number of available men would be found always ready to discharge the duties required of them?—No; it would not pay them to do so.

8506. You feel sure, do you not, that the employment of pilots would fall off if the voluntary system were adopted?—Yes; I am sure that the most skilful and careful man in the service could not hold his position a day, if the Bill should pass.

8507. I believe there have been some changes of late, so far as the exemption of some ships is concerned?—Yes.

8508. And the effect of the change has been to diminish the employment, and thereby the earnings, of the pilots?—Yes.

8509. Have you read the compensation clauses of the Bill?—Yes.

8510. I presume you do not think that there is much compensation in them?—No; I do not think there is any compensation in them.

8511. Have you formed any idea what would be fair in the way of compensation, and what you consider the pilots would be satisfied with?—The London pilots would be satisfied with half of their individual earnings for the last three years, retaining their license to do what they choose with the other half.

8512. *Chairman.*] That is an addition to what you might earn besides?—Yes; because we should not earn much afterwards.

8513. Did you hear what the last witness said about the unlicensed men?—Yes.

8514. Do you agree generally with what he said on that subject?—Yes; they are a great drawback to us. We cannot get hold of them. We cannot find out when they are piloting.

8515. In fact, the regulations which prevent them from being employed, and which give you the power to supersede them, are evaded?—Yes; we have power to supersede them if we can get hold of them; but they have so many means of evading us that the law is practically evaded, and we cannot get hold of them at all.

8516. Have you formed any opinion with regard to the question of liability between the shipowner and the pilot?—Yes, I think it ought to be ship for ship in the way of damage; but the pilot ought to be liable to his employer, not to the owner of the ship he has damaged, to the extent of 100 *l.*

8517. You think that the ship run down ought to be able to recover against the owner?—Yes; and the pilot ought to be liable to the owner for 100 *l.*, assuming that he is in fault.

8518. Probably 100 *l.* will be as much as a pilot can pay?—If he had to pay it two or three times a year, it would affect his earnings; it is enough to make him careful.

8519. A pilot does not often run down a ship, does he?—Sometimes he does damage, and he has to pay it, or he has to resist an action; it is enough to make him careful.

8520. Sir *Charles Wingfield.*] I believe you are licensed from Gravesend to the Downs?—No; I am licensed from London to the Isle of Wight.

8521. There are some pilots licensed from Gravesend to the Downs, are there not?—Yes.

8522. I believe those pilots want to have their licenses extended to London?—They do.

8523. Should you object to that?—No; I do not see why they should not be so extended.

8524. Do you think that it would hurt you?—Yes, I think it would; I do not say I do not object to it.

8525. You say you do not see why they should not?—They seem to think that they have as much right to it as we have; if you think so, I cannot say anything about it.

8526. I understood from what you said, that you believed they had good reason on their side?—The reason is, that they want to get more employment.

8527. But you have better employment than they have, have you not?—We have a little advantage being in London, but as we die off they will get it.

8528. According to the new Act, it would be provided that pilots should be licensed from London to the Downs; that is omitted from the new Act, is it not?—I have not seen the new Act.

8529. So that according to the new Act pilots would henceforth be licensed from London to the Downs, and your number would be augmented instead of diminished?—Yes.

8530. You were talking about the unlicensed men; those unlicensed men do not take vessels below Gravesend, do they?—They take as many below Gravesend as they do above it.

8531. That is another class, is it not; not the Thames men?—The watermen pilot above Gravesend, and the old captains of ships, and another class of men altogether, go below Gravesend; there is as much unlicensed work below Gravesend as above it.

8532. Is there not a different class of unlicensed men below Gravesend to that which is above Gravesend?—I do not know that.

8533. They are different bodies of men, are they not?—One pilot does not go in two ships.

8534. The same ship goes from the Downs to the Port of London, does it not?—Yes; but the same man does not go below Gravesend that goes above it; they are watermen that are above Gravesend.

8535. There are two different bodies of men, are there not; one takes the ship above Gravesend,

end, and one below Gravesend?—Sometimes a waterman goes right down.

8536. *Chairman.*] What proportion of your employment comes from vessels not bound to carry pilots?—All my employment comes from vessels that are bound to carry pilots.

8537. I suppose you are a choice pilot, and your employment takes you sometimes out beyond Dungeness?—Yes.

8538. Are you very often employed beyond Dungeness?—Perhaps about one-fourth of my time.

8539. How far; do you sometimes go as far as the Isle of Wight?—Yes.

8540. I presume you would consider that those vessels would continue to employ pilots?—According to the feeling I hear expressed, I think they would.

8541. Even though they now employ you beyond the limits, they are bound to employ you?—Yes; I think under the new Bill they would not feel inclined to do so.

8542. I suppose they pay you extra?—Yes; there is a certain rate from the Isle of Wight to the Downs.

8543. What is the rate?—The rate to the Isle of Wight would be 9*l.* more than it would be to the Downs.

Mr. *W. Daines.* 10 May 1870.

8544. One-fourth of the vessels take you down to the Isle of Wight?—Yes.

8545. Your employment is in respect of large vessels which are towed down?—We are towed down just as we require it.

8546. Have you any doubt that large vessels will continue to carry pilots?—I think a good many will not.

8547. Do you mean outwards?—Yes.

8548. Do you think the same would apply with vessels going inwards?—I think it will not be so inwards; they will get hold of tugs below, and the tugs will bring them right up past the pilotage ground.

8549. I believe the tug takes its orders from the captain of the vessel, or his pilot?—Yes; the tug does not stand any risk.

8550. If a tug took the piloting of the vessel, the owner of the tug would take the responsibility upon himself?—They would not take the responsibility; they would not pilot the vessels.

Mr. Richard S. Triphook, called in; and Examined.

8551. Colonel *Bourne.*] What are you?—I am Commander of one of the mail packets between Holyhead and Kingstown.

8552. How long have you been in that service?—I have been in my present ship 10 years.

8553. Do you find the Dublin pilot system well conducted?—Remarkably well.

8554. Are the cutters good and efficient vessels?—Very much so; they are kept in very fine order, and the men are very attentive, and the service is very well regulated in every way.

8555. Do you fall in with the pilot cutters cruising at sea in heavy weather?—Almost daily; they keep the sea in very bad weather.

8556. And they keep the vessels well supplied with pilots in heavy storms, do they not?—Yes, remarkably well, considering the weather they are out in; so much so, that they are frequently not able to board the vessels; they run up, but they must run ahead of the vessels and lead them up.

8557. Are there many sand banks in the neighbourhood of Dublin, and of the Wicklow coast?—Yes; a great many.

8558. Do you consider it probable that many wrecks would occur on those dangerous shoals if the present pilot system were less efficient than it is?—No; I do not think there would; because they cannot keep outside the banks in very heavy weather.

8559. Do you find that the Dublin pilots, whom you employ in your steam vessels, are very good and efficient men?—Very much so.

8560. Have you ever had any complaint to make of them?—They have invariably given the greatest satisfaction.

8561. Are they always attentive and obliging?—They are always attentive, obliging, and sober.

8562. What is the length of the Dublin pilotage district?—I think it is from about 50 to 55 miles.

8563. Does it extend from Rock-a-bill to the South Arklow Lightship?—Yes.

8564. Do you think the pilot service of Dublin could be as well conducted with fewer pilots?—It is very hard for me to tell, because I cannot say what number of pilots there are.

Mr. *R. S. Triphook.*

8565. Is it not the case that the neighbourhood of the coast of Dublin is frequently obscured by haze?—Yes, very frequently; so much so that we are obliged to have guns in the Kish Lightship to lead us in.

8566. You think it is essentially necessary that the pilots of Dublin should have local knowledge of all the banks that are there?—Yes.

8567. Do you always find them at their posts?—Yes, we seldom or ever go into Dublin without there are two or three pilot-boats, and sometimes more, cruising about.

8568. Do you think that the entrance to the port of Dublin is intricate and difficult?—Yes, I think it is difficult.

8569. In your opinion the compulsory pilotage system keeps the pilots regularly and practically at their duties; is that so?—I daresay if those men were not compelled by a compulsory Act, they would go out just as well, and do their work just as efficiently. I cannot say a word derogatory of them. The men ought to be well paid if their services are done away with. They are good and efficient men in every way.

8570. *Chairman.*] I suppose the vessels of your company are navigated by captains who have got certificates of pilotage?—Yes, they are all certificated pilots; they have all passed an examination as pilots.

8571. Have they any difficulty in finding their way into the port of Dublin?—None whatever; they could not pass the examination if they had; not more than the usual difficulty of any port.

8572. What is your opinion, in the event of this Bill passing into law, as to the supply of competent pilots. Have you any doubt as to whether there will be competent pilots or not?—I think it is a great question. The pilot body of Dublin are commanded by a naval officer, commander in the Navy, who is extremely strict, and he gets the vessels to sea in all weathers. Whether the men, when acting for themselves, would go out in bad weather, I cannot pretend to say.

Mr. *R. S. Triphook.*

20 May 1870.

8573. You cannot form an opinion upon that point?—No.

8574. In your opinion will a considerable number of masters that now come to Dublin, that are bound to take pilots, still continue to take pilots if this Bill is passed?—Not one of the coasting vessels would; and I think it a great hardship to compel coasting vessels that make 10 or 12 voyages in the year to take pilots; though it is to the benefit of the pilots, it is hard upon the shipping trade to make them pay for pilots when they do not want them.

8575. That is the case now; that a great many of these vessels are bound to take pilots when they do not want them?—Yes.

8576. And when they could easily do without them?—Yes, they could do it themselves.

8577. Then the navigation is really very easy?—It is so far simple that a man who is coming month after month, perhaps a dozen or 14 times in a year, becomes a pilot himself. I would be a great advocate for making it compulsory on foreign ships to take pilots, with this exception, that I am very sure not one foreign ship will come to Dublin, or almost any other point, without taking a pilot who will not be glad to get them.

8578. At present, coasters coming to Dublin are bound to carry pilots, are they not?—Yes.

8579. And you think that they ought not to be compelled to carry pilots?—Yes; it is a hardship for any man to pay for a thing he does not want.

8580. As regards foreign vessels, you think, even if they are not compelled to take pilots, they will take them?—Yes; I know that men will pay double and treble the amount of pilotage to get a pilot there. I should be sorry to think that the Dublin pilots were not going to be provided for; if their establishment is done away with, they ought to be well pensioned.

8581. Colonel *Bourne.*] You say that all coasters have to pay for pilots; is not there a limit for that; do coasters under 50 tons pay?—I think not, to Dublin; I am not sure.

8582. *Chairman.*] Is not the main trade of Dublin the coasting trade?—Yes.

8583. And there are very few foreign vessels at all there?—There are a good many large vessels come there.

8584. Comparatively, there are very few?—Comparatively speaking, with regard to Liverpool, London, or Bristol very few indeed; the number that come there would not pay for the keeping of a good pilotage establishment.

Mr. James Doyle, called in; and Examined.

Mr. *J. Doyle.*

8585. Colonel *Bourne.*] What are you?—A Dublin pilot. I am the master of a Dublin pilot cutter.

8586. How long have you been a pilot?—It is 35 years since I first joined.

8587. Have you received any testimonial from the French Government for saving life in Dublin Bay?—Yes, one; I have got it about me at present.

8588. Do you know when the pilot system was first established in Dublin?—It is over a century ago.

8589. How is it constituted; how many pilots are there?—Forty.

8590. When was the alteration made in the then existing law with regard to pilotage in Dublin; do you remember the date when that was done?—No.

8591. Did not the Ballast Office in Dublin compel you to change the wherries into cutters?—Yes.

8592. Did the Ballast Office insist upon there being longer cutters than previously?—Yes.

8593. Who paid for those cutters?—The pilots, out of their earnings, but the Ballast Office first.

8594. Did the pilots pay a proportion of their earnings for the purchase and maintenance of those larger cutters?—Yes, by deductions.

8595. Did the cutters remain under the charge of the Ballast Board?—Yes.

8596. But they were paid for by the pilots?—Yes, by share of earnings.

8597. How are those cutters supported; are they supported from the earnings of the pilots now?—Yes.

8598. What proportion of your earnings do you pay to support these vessels?—One-fifth of the gross earnings, and 8½ per cent.

8599. Does that go to the Dublin Ballast Board for the maintenance of the cutters?—Yes.

8600. Have you any power over the expenditure of the money?—No.

8601. It is so much taken from your wages?—Yes.

8602. Are the banks covered at low water?—Some are barely covered.

8603. Are the currents very strong?—Very strong.

8604. All over the Bay?—Yes; and about the banks very strong.

8605. Do the sands shift very much?—They do from time to time.

8606. In consequence of floods, and from the sands washed down the river Liffey, they are frequently changing?—Yes.

8607. Is it necessary that the masters of vessels trading to Dublin Bay should be thoroughly well acquainted with the changes in the banks?—They should be well acquainted with them.

8608. Are fogs very prevalent on that coast?—Very often.

8609. Have there been many large ships wrecked or injured by being driven on to the banks in Dublin Bay?—A great number.

8610. Do vessels frequently strike upon the bar there?—Very frequently.

8611. Have the pilots to commence by serving an apprenticeship?—Yes.

8612. For how long?—Four years.

8613. And have you, then, to undergo a very strict examination before you are licensed?—Very strict.

8614. Do you consider that you are a very efficient body?—Yes.

8615. Have you enough pilots in Dublin for the wants of the port?—About enough, not too many.

8616. Are there many ships and steamers passing up the Irish Channel near the Bay of Dublin, without coming into or leaving the port of Dublin?—A great number.

8617. Do they often take pilots?—They never take pilots.

8618. Do they ever ask any pilots for any assistance in passing these different banks into the Bay?—They very often do.

8619. Is any charge made for that?—Not a penny.

8620. Do

8620. Do the pilots of Dublin very often give their advice to foreign vessels going up and down the Channel without exacting any fee or pay for it?—Very often.

8621. What is the duty of the pilots with reference to these vessels when they come near the banks; what have you to do then?—To warn them off; to go and speak them, or dip the colours at the masthead to let them know they are approaching the banks; to go round and wear the ship off the bank.

8622. Are you paid for that duty?—Not a penny.

8623. Are you obliged to be at sea in all sorts of weather?—Always night and day.

8624. And many pilots have lost their lives, have they not?—A great number.

8625. If I understand you right, vessels passing up and down the Channel, although close to the banks of Dublin, are not compelled to take pilots?—No.

8626. They are only compelled to take pilots if they enter Kingstown Harbour or Dublin Bay?—That is all.

8627. But you frequently advise vessels that do not enter into those harbours?—We do.

8628. For which you get no pay?—No.

8629. How many pilot cutters are there?—Five.

8630. What number of men are there in each —Twelve.

8631. What are the services of these men generally; are you the oldest pilot?—I am not.

8632. Have you been the longest in the service?—No; there is one man who has been in our service 49 years; he is the master of one of the boats.

8633. Is he still an efficient pilot?—He is an efficient master; he does not go aboard ships now.

8634. What is the income of the master pilots; what do you get a year?—About 112 *l.*

8635. What does the mate get?—£. 12 less than that.

8636. What does the first pilot get?—From 86 *l.* to 88 *l.* a year.

8637. And what does the second pilot get?—The second would be five-sixths of that.

8638. Do you know the number of persons that depend upon the pilots at present for subsistence?—About 400.

8639. Are those all wives and children of pilots, or pensioners as well?—Wives and children and pensioners.

8640. From what fund are they paid?—From weekly subscriptions from the pilots' earnings.

8641. Is that deducted from their earnings, whether they wish it or not?—It is deducted from their earnings.

8642. And put into a fund?—And put into a fund.

8643. If the compulsory pilotage system of Dublin Bay were abolished, is it your opinion that the pilots would be quite ruined?—It is my opinion that there would be no use for pilots at all. I think that we would not be called on.

8644. Could vessels go in without pilots?—They might run their chance if they liked; the coasters would try it.

8645. Are coasters exempted from pilotage under 50 tons?—Under 50 tons they are.

8646. Do you know the number of pilots and pilots' widows who are now receiving assistance from this fund?—Six pilots and 12 widows, and some orphans; I do not know how many.

8647. They are supported entirely by this fund?—Yes.

8648. Would the abolishment of the compulsory system put an end to this fund?—It would.

8649. And would turn adrift all the present persons who are receiving pensions?—If there were not anyone to give them anything, it would drive them to the poorhouse or the workhouse, or somewhere like that.

8650. What is the amount of that fund at present?—Somewhere between 700 *l.* and 800 *l.*

8651. And the interest of that 700 *l.* or 800 *l.*, and what is weekly deducted from your earnings, is all that these people have to live upon?—That is all.

8652. *Chairman.*] As compared with foreign-going vessels, how much of your employment comes from coasters?—About three-fourths.

8653. What class of vessels are they?—Across Channel vessels.

8654. Coming from Liverpool?—Liverpool, Whitehaven, Bristol, and Scotland.

8655. Making constant voyages?—Yes.

8656. And your opinion is that those vessels would not continue to take pilots if this Bill is passed?—I do not think one would.

8657. That is because they do not want them?—They appear to think so.

8658. Do they complain very much of being compelled to carry pilots?—Yes.

8659. And they think it a hardship?—Yes.

8660. Because they think they are pilots, and can pilot just as well?—They may think so.

8661. You do not think so?—No.

8662. You think your services are necessary to them?—Yes.

8663. They think their masters can pilot equally well with you?—Yes.

8664. Most of these men have been engaged in sailing in and out of the port for many years past, have they not?—Some of them.

8665. Most of them?—A great many of them have.

8666. What sized vessels are they generally?—From 400 tons to 50 tons.

8667. You say that one-fourth of your employment comes from foreign-going vessels?—Yes.

8668. What is that trade mostly?—It is generally the foreign corn trade, and the West Indian trade, and timber vessels.

8669. Vessels with corn from the Black Sea?—Yes, a few.

8670. Those vessels, I presume, would want pilots?—They might or they might not.

8671. I presume the greater number would want pilots?—That would be according to the law; if it was compulsory they might take pilots, and if not they would be left to themselves, and they might not take pilots.

8672. Do you think they might take pilots or not?—Supposing a tug-boat goes there before me, the captain might say the tug-boat will come with me, and I will take no pilot.

8673. You think that if there was a tug-boat he would not want a pilot?—He might with a tug-boat want a pilot.

8674. Are most of the vessels that come into Dublin brought up by tug-boats?—A great many of them.

8675. What are the difficulties of the navi-

Mr. *J. Doyle.*

20 May 1870.

gation into Dublin; where do they commence?—At South Arklow Lightship.

8676. You think the difficulties begin there?—They begin there in our waters.

8677. The pilotage begins there, but where do the difficulties begin?—Just after coming round the Tuskar, and from that into the Liffey.

8678. How many pilots are there now?—Forty pilots and five masters.

8679. Supposing the coasters do not take any pilots if this Bill is passed, how many do you think would be wanted?—I do not think one boat's crew would be wanted.

8680. Mr. *Price.*] I suppose if these superannuations are to be paid, and the pilots could be secured the same income as they are getting now, it would not be of any consequence whether the pilotage was compulsory or free?—Not if we were getting the same pay, it would not.

8681. So that the great object of keeping up the compulsory system of pilotage is to secure the same pay to the pilots?—Yes.

8682. You think that the compulsory pilotage should be maintained for that purpose?—Yes, I think it should. I would as soon work on 80*l.* a-year than go on shore for 80*l.* a-year, sooner than that compulsory pilotage should be broken.

8683. For the sake of those that come after you?—Yes, for the sake of those that come to the service after me.

Mr. WILLIAM WEBB, called in; and Examined.

Mr. *W. Webb.*

8684. Mr. *Cave.*] YOU are a sea pilot, living at Yarmouth, in the Isle of Wight?—Yes.

8685. What services are you chiefly employed in?—In piloting.

8686. In piloting what vessels?—Steam vessels, or any vessels that come there requiring a pilot.

8687. You are not retained by any particular company, are you?—No.

8688. Where is it that vessels going to the port at Southampton take a pilot?—We are now bound to cruise to the eastward of St. Alban's Head; we used to go down as far as Start.

8689. In the case of vessels coming up to the port of Southampton, where does the pilotage limit begin?—The pilotage limits are three miles outside the Needles; the compulsory pilotage begins there.

8690. Where is Eaglehurst?—Near Southampton Water, opposite West Cowes.

8691. Are the pilotage limits beyond that?—We take the vessels to Southampton, except the West India, Peninsular, and Oriental Company's, and Cape Company's vessels; there the Southampton privileged pilots supersede us.

8692. All other vessels you take straight up to Southampton, do you not?—Yes.

8693. When you say these vessels are privileged, in what way are they privileged?—By the interest of the company with the Trinity Board.

8694. What are they privileged to do or not to do?—They take the ships to Southampton dock, or they take them to sea.

8695. Is that in consequence of having licensed masters or mates on board?—No.

8696. It is only a privilege of the port which is granted to them?—Yes; I had a license before the company's vessels were established and before the docks were made, and I used to take them up to the pier.

8697. Since then what have you done?—Since then they have not allowed us to take any from Eaglehurst; now they have thrown it open to all vessels excepting the company's vessels.

8698. All vessels excepting the company's vessels are taken straight up to Southampton?—Yes.

8699. But the company's vessels turn the pilots off at Eaglehurst?—Yes.

8700. And does a Southampton pilot take them up the rest of the way?—Yes.

8701. Do you object to that plan?—Most decidedly.

8702. Why?—They get smooth water and they do all their work in the river; we cruise at sea, night and day, and get the ships in, and we get 3*s.* 9*d.* a foot, and they get three times that; we take the ships in light draught, and they take them out with a deep load; their rate of pilotage is 5*s.*, 6*s.*, and 7*s.* a foot; if it is under 17 feet it is 5*s.*; if it is over 17 feet it is 6*s.*; if it is over 20 feet it is 7*s.* a foot; they enjoy a full draught, and we enjoy a light draught.

8703. You think that the pilots who take the vessels from sea ought to bring them up to Southampton?—I do.

8704. All vessels of every kind and class?—Yes.

8705. That is your opinion?—Yes. I used to do it before the docks were made, and I do not see why I should not now.

8706. How is it that the pilots are selected?—I cannot tell you that.

8707. Who are you yourself licensed by?—The Trinity Board.

8708. Of course they fix the number of pilots on each station, do they not?—Yes.

8709. Are you limited in number?—Yes.

8710. What is your principal station?—I belong to Cowes; I am an Isle of Wight pilot, but the Isle of Wight, and Southampton, and Portsmouth pilots are now all amalgamated.

8711. Where is your principal station?—Our vessels have, first, three weeks outside the Needles, then they go within three miles of the Needles, then they are stationed off Christchurch Head for another three weeks, and then they go down to St. Alban's Head.

8712. The river pilots are stationed at Southampton itself?—Southampton and Lepe.

8713. Is there any favouritism of pilots?—It appears so.

8714. How do you account for that?—I cannot tell.

8715. Who are the people who select the pilots for these different vessels?—I think the superintendent of the West Indian Company at Southampton, Captain Mangles, and Captain Ingledew of the Peninsular and Oriental Company.

8716. Supposing the Bill passes, what will be the effect on you?—I think the captains of the vessels will run into Lepe themselves in fine weather, and if it is thick weather they will be glad to take us.

8717. You take them now, do not you, beyond the pilotage limits?—Yes; we get distance money for that sometimes, as it is optional.

8718. If vessels take you beyond the limits within which they are obliged by law to pay you,

you, will not they take you, if the Bill passes, in the same way that they take you now ?—The company's vessels will.

8719. Will not all valuable vessels do so?—Yes.

8720. But you think the small class of vessels will not do so?—No, I think not.

8721. Are you the owner of a vessel?—I am the owner of a pilot boat, the "Agenoria."

8722. If pilotage was thrown open to competition, do you think you could make your living? —No; we do not make our living now.

8723. What do you earn now?—I pay something like on 100 *l.* a year to the Trinity Board.

8724. What are your net earnings?—That would be the gross earnings; the net earnings would be about 80 *l.* or 90 *l.*

8725. When you say you paythat to the Trinity Board, do they pay you back the net earnings?—I do not pay my earnings to the Trinity Board; I pay 6 *d.* in the pound to them.

8726. Your net earnings are about 80 *l.* or 90 *l.* a year?—Yes.

8727. What do you deduct from the gross earnings to calculate the net, do you deduct the expenses of your boat?—Yes.

8728. Anything else besides that?—No; we take a share and a-fourth for the boat out of the gross earnings after the travelling expenses are paid.

8729. And the balance of that is the net?—Yes.

8730. Have you any particular complaint to make?—Nothing more; I think that is the chief complaint.

8731. What you would like is to keep the pilotage compulsory, and not to be superseded by river pilots, but to take the vessels straight up to Southampton from the sea?—Yes.

8732. And you think that unless you do that your earnings will be largely diminished?—Most undoubtedly.

Tuesday, 24th May 1870.

MEMBERS PRESENT:

Colonel Bourne.
Mr. Thomas Brassey.
Mr. Cave.
Mr. Gourley.
Mr. Graves.
Mr. Grieve.
Mr. John Stewart Hardy.
Sir John Hay.
Mr. Shaw Lefevre.
Mr. Philip Wykeham Martin.
Mr. William Philip Price.
Sir Henry Selwin-Ibbetson.
Mr. Stevenson.
Mr. Charles Turner.
Sir Charles Wingfield.

THE RIGHT HONOURABLE GEORGE JOHN SHAW LEFEVRE, ESQ., IN THE CHAIR.

Mr. FREDERICK PATTISON, called in; and Examined.

Mr. *F. Pattison.* 24 May 1870.

8733. Mr. *Cave.*] YOU are a Trinity Pilot, I believe?—Yes.

8734. Which is your station?—Gravesend.

8735. How far is your district?—From London Bridge to Gravesend, and *vice versâ.*

8736. How many such pilots are there?—Seventy.

8737. And where are their stations?—Fifty at Gravesend and 20 at London.

8738. They are called river pilots, are they not?—Yes.

8739. How long has Gravesend been a separate pilot station?—I think over a 100 years, but it has only been established by law since the year 1854.

8740. Does the proposed Bill affect it in any way?—The proposed Bill will take it away altogether.

8741. In what way would it do so?—The Act of 1854 provided that no pilot should be hereafter passed both above and below Gravesend, and from that time no pilot has been allowed to pass both above and below Gravesend; by this Act of Parliament, those words are left out in the commercial code, which would enable a pilot to pass right through from London to Dungeness, and from Dungeness to London.

8742. *Chairman.*] It would leave it to the Trinity House to exercise their discretion in making separate districts, if they pleased?—They have not had that discretion the last 16 years.

8743. Mr. *Cave.*] You refer to the Merchant Shipping Bill?—Yes.

8744. Was it the Act of Parliament with regard to merchant shipping, or was it the Order in Council of 1854 which established Gravesend as a station?—The Act with regard to merchant shipping.

8745. What was the reason that this change was made at the time, if it was so made?—The shipowners of the port were generally very dissatisfied with this class of men; the men from Dungeness were very often confined to their cutters, and they had no real knowledge of the state of the river; the ships were always coming to grief, and the shipowners became dissatisfied with the system.

8746. Did they take any action upon it?—Yes; they petitioned the Board of Trade, I believe, or the Trinity House, I do not know which, to alter it and to discontinue those men passing right through.

8747. Were those the shipowners generally of London?—Yes; shipowners and underwriters.

8748. Are there many of them who have signed this petition?—It was very numerously and influentially signed.

8749. What effect will the present Bill have on the Gravesend river pilots as a body?—I consider that it will both destroy their living and take their station away.

8750. *Chairman.*] That is to say, for the Trinity House licensed pilots to go from Dungeness up to the Thames?—Yes, or from London right through, which they have not the power now to do.

8751. Mr. *Cave.*] That is to say, under the Merchants' Shipping Bill they have that power?—Yes, they have that power under the Merchants' Shipping Code.

8752. Is there any other class of pilots navigating the home-trade passenger ships?—Yes, there are 22 men who were licensed for the home trade in 1854, and I believe that they have caused a very great amount of evil with regard to barge property, and so on, which has suffered very materially; they are a class of people that, I believe, in many cases put themselves in front, between the injured parties and the shipowners.

8753. You mean that they are an inferior class of pilots to the Gravesend river pilots?—I would not say that they are an inferior class, but I say that very often in the case of a collision, instead of saying that it was not their fault, they put themselves in front and say to the aggrieved party, "It is my fault," and the party has no remedy against the ship, which has been the cause of a great deal of the present agitation.

8754. How had those pilots been trained?—They were what were termed free watermen, partly, who used to navigate those vessels previously to 1854; when the Act came into law, and they were compelled to employ pilots, we were consulted with regard to the propriety of navigating those vessels, and we refused, for we felt that if we did so we should not be free agents, that

that we should not exercise our own judgment, and we declined to navigate those home-trade passenger ships and steamships.

8755. Are those the north channel ships?—The home-trade passenger ships.

8756. They simply continued to navigate the vessels which they had navigated before?—Yes, when they were made licensed pilots.

8757. You do not appear to have anything to do with that class of ships?—No, we felt that the responsibility was too great, and that we should be under the dictation of the companies.

8758. Do you mean that you would not be allowed to take the command of a vessel out of the hands of the captain?—No, we felt that we should be under the dictation of the company, and not, as we ought to be, free to use our own judgment as to the time of leaving or not.

8759. You would prefer only to navigate those vessels of which you might alter the time of starting if you thought it dangerous?—Yes.

8760. All the steamers, as a matter of course, do start at stated times?—Yes, all the home-trade steamers.

8761. You do not like to have the responsibility of navigating that class of vessels?—Certainly not.

8762. Do you have any difficulty in getting the charge of vessels which are exempt from pilotage?—Yes, a good deal.

8763. How is that?—That is principally on account of a class of men who are pretty nearly of the same class as those who are called free watermen; they give us a good deal of trouble.

8764. Would there be enough of the licensed Trinity pilots in Gravesend to take all those vessels which are now partly taken by unlicensed men?—The licensed Trinity pilots could take a great many more, but in the face of voluntary pilotage they are likely to take a great many less.

8765. You think that the voluntary system will reduce their occupation?—It has always had that tendency since I have been in the service.

8766. But those unlicensed men do navigate ships that are not obliged to take any pilots, do they not?—Yes, no doubt they do; they navigate a good many more than they ought; it is a matter of intrigue with the master; of course we do not care to be always in hot water with them, but I think the law is not sufficiently stringent on the point.

8767. Mr. *Graves.*] A large number of ships under the voluntary system do take pilots, do they not?—We have been employed under the voluntary system, but I do not know that that is, strictly speaking, the voluntary system; that is to say, foreign vessels up the North Channel, but they are really compelled by the rules of their club to employ pilots in all pilotage districts; I mean such as the Norwegian vessels, and the Danes, and the Prussians.

8768. You mean the Mutual Insurance Companies?—I do not know, exactly, whether it is positively and certainly in the policy, but I have heard from many captains that the club rules them in that way.

8769. *Chairman.*] You refer to foreign vessels from the north of Europe?—Yes.

8770. And that they are bound by their policies to take pilots?—Yes.

8771. Mr. *Cave.*] Do you think that if the voluntary system were entirely established the shipowners would let their captains take pilots in all cases where a captain did not feel himself competent to navigate the ship?—No, my experience tells me to the contrary; I do not think they leave the captain a free agent, except some few steamship owners.

8772. Do they force the captain to go without a pilot, though he says it is dangerous to do so?—I do not believe that he goes without a pilot, exactly, but he compels the captain in many cases to refuse a licensed pilot, and he has no sooner declined the services of a licensed pilot than he employs an unlicensed pilot.

8773. He gets the unlicensed man cheaper, I suppose?—No doubt.

8774. If Gravesend were abolished as a separate station, what, in your opinion, should be done for the protection of the river pilots?—In the face of loss of station and employment under a strictly voluntary system, I think they are entitled to great compensation.

8775. Are they entitled to anything besides compensation, in your opinion?—I should like to see the station retained, and those words inserted in the new Act of Parliament.

8776. You mean to say that you would like the station compulsorily retained?—Yes.

8777. And the power taken away from the Trinity House to abolish the station?—Yes.

8778. Do you know what the compensation is under the Bill?—I can hardly consider it compensation.

8779. Is that your objection to the Bill?—I object to the Bill on several grounds; it is not sufficient. We have got a young body of men, particularly in the river pilot service, that want employment; they do not want to be superannuated or compensated if you give them work.

8780. Is there anything that can be done to secure work for those men under the voluntary system?—Yes, if the law was made more stringent.

8781. What law do you refer to?—The law of pilotage under the voluntary system; I do not consider the clauses sufficiently strong.

8782. You mean the law to prevent unlicensed men taking ships as pilots?—Yes; but the most difficult job is to establish the proof of superseding. If you can give us a clause in the Merchants' Shipping Act that the presence of one of those men on board should be *primâ facie* evidence that he is in charge, that would answer the purpose. I have heard a great deal of the large earnings of unlicensed men, which is, of course, through the voluntary system. A man can very easily say, "I do not want a pilot," and the pilot goes away; his back is no sooner turned, than in the next reach you see an unlicensed man in full charge of the vessel; that is the tendency of the voluntary system.

8783. You think that if the voluntary system were established, a captain should be either forced to take a licensed pilot or to say that he did not want a pilot at all, and take none?—Yes, just so; if pilots are needed at all it is between Gravesend and London, but with all the exemptions it is merely transferring the licensed pilots' employment to unlicensed pilots.

8784. *Chairman.*] You think that there should have been no exemptions, do you?—Just so, I think it should have been compulsory pilotage.

8785. Mr. *Cave.*] The river pilots' are not competent, I suppose, in your opinion, to take vessels to Dungeness?—Not as a rule, but many of them are.

Mr. *F. Pattison.*

24 May 1870.

8786. How would it be if the whole thing were thrown open, and they were allowed to take vessels from London to Dungeness?—That would not do at all.

8787. You think, do you, that the same man is not likely to know sufficient of the river between London and Dungeness, except in a few instances?—He would not have that amount of confidence which he ought to have; between Gravesend and London it is not a question of yards, it is a question of inches in many cases.

8788. What forms the great difficulty between London and Gravesend?—The great traffic is the principal difficulty.

8789. The shoals have been very much eased of late, have they not?—Yes, they have been very much removed.

8790. Is there any other statement which you would wish to make to the Committee?—I think not.

8791. Sir *Charles Wingfield.*] You say that the free watermen injure you very much between Gravesend and London?—I am sure they do.

8792. Why do you not supersede them; you have the power to do so, have you not?—That would be a most difficult job; I do not think we have the power to supersede them cleverly, we cannot turn them over the side of the ship.

8793. But if the master refuses to make his vessel over to your charge, you can sue him and recover a penalty, can you not?—Yes; most likely I could sue the master if I could prove it.

8794. If you found an unlicensed pilot on board?—But we do not care to have all this trouble and annoyance; we want to get a living respectably.

8795. The real reason why they chiefly employ the free watermen is that they do the work cheaper, is it not?—No doubt.

8796. But if there were no free watermen, your existing number of pilots, 74, could not do half the work of the river, could they?—Yes; they could.

8797. Seventy-four pilots could not take all the ships in the river, could they?—No, certainly not; I admit that.

8798. Therefore, the Trinity House would have to license a vastly greater number of pilots, would they not?—Yes; for which we have plenty of candidates.

8799. You have 64 candidates, have you not?—I do not know the number.

8800. You complain of the omission in the present Act of Parliament to provide that no pilot shall be licensed the whole of the way from London to the sea?—Yes.

8801. The system of licensing pilots separately from London to Gravesend, and from Gravesend to the sea, makes the cost of pilotage heavier to the owner, does it not?—Yes; there is a difference.

8802. I understand that it is rather a large difference in the cases of first-class vessels, and that it might amount to a difference of 7 *l.* in taking a ship from London to Gravesend, and then from Gravesend to the Downs, as against taking a pilot the whole way from London to the Downs?—That could be equalised if there were such a difference.

8803. Was your father a free waterman on the river?—He was.

8804. Were you apprenticed to him?—No; I was not.

8805. Did you work on the river at all?—Yes; I did.

8806. Did you do so before you became a Trinity House pilot?—Yes.

8807. Did you acquire a knowledge of the river from working on it?—No doubt I did.

8808. Do you consider that a man can be a good river pilot from Gravesend to London without serving at sea?—I cannot answer that question, but I think it is necessary he should go to sea.

8809. You do think it is necessary he should go to sea?—Yes.

8810. But not if he worked only on a steamer, I suppose?—Yes, it is still more necessary that he should go to sea if he works on a steamer.

8811. Surely it is local knowledge, and not nautical science, that is wanted in that case?—I think every man appointed to take charge of a steamer should possess nautical knowledge; I think it is essential, in charge of a steamer, that he should be acquainted with the action of vessels under sail.

8812. You think that your employment will fall off very much if the pilotage system is made voluntary?—Yes.

8813. But Sir Frederick Arrow states that the system may be considered as wholly voluntary in the north channel of the Thames, does he not?—Yes.

8814. He says that the cases of compulsory pilotage in the north channel are not 10 per cent. of the whole number?—There are not a quarter of the vessels that come up the north channel that have licensed pilots.

8815. Though they are not forced to employ pilots, they do employ them?—I say that they are compelled by their policies to employ them.

8816. That does not apply to the English vessels, and yet they do take pilots, do they not?—They do not take licensed pilots.

8817. If they employ men to pilot their vessels, though they are not forced to take pilots, the inference surely is, that if you make pilotage voluntary, river pilots would still be taken?—If pilots are to exist at all, you should make the system compulsory; but, if we start afresh, and compensate the present pilots liberally, there is nothing fair in exemptions; with all those exemptions it is merely the transfer of the licensed men's employment to the unlicensed men.

8818. *Chairman.*] It does not prevent vessels taking pilots; it only permits their taking unlicensed instead of licensed men; and they get them cheaper?—Yes.

8819. Sir *Charles Wingfield.*] But experience shows that where the navigation is difficult, you must take a pilot of some kind, does it not; what you might call a waterman, and not a pilot?—I cannot speak for everyone.

8820. *Chairman.*] I understand from you that the only effect of exemptions has been to transfer employment from the licensed men to the unlicensed men?—It has had that tendency.

8821. Does it not follow also that, in fact, all vessels do take pilots from Gravesend up the river?—As a rule, I think they do; not small coasting vessels, but steamers as a rule employ some one.

8822. All vessels of any size take pilots?—Yes, I think so.

8823. When those foreign vessels come from the north of Europe they take a licensed pilot to the

the north channel, and when they come to Gravesend they change, and take one of your men?—Yes.

8824. And when the English vessels come up to the north channel, a few of them take those pilots; but when they come to Gravesend they take either a pilot or a waterman?—Steamers do.

8825. But do not all vessels?—Not all, I think. Many of the vessels from the Baltic do not take anyone until they get up to Greenwich; they are old collier captains, and that makes a great difference; but as a rule, they do employ some one.

8826. You have said that those foreign vessels when they come up to Gravesend change their pilot for one of your men?—Yes.

8827. Therefore a considerable portion of your employment must come from foreign vessels?—Yes.

8828. Is not a certain proportion of your employment derived from English vessels?—There are a few, such as English steamers; we have had a great battle with them to make a job of them.

8829. But you have succeeded?—Yes.

8830. What proportion of the whole of your employment comes from vessels that are not bound to carry pilots?—About one-half.

8831. There is only one-half of your employment in respect of vessels that are now compelled to carry pilots?—That is all.

8832. Mr. *Graves.*] Up to what tonnage can an unlicensed waterman bring a vessel up or down to Gravesend?—I do not think he can take charge of anything; I do not think there is any stipulation with regard to tonnage.

8833. Under what statutory exemptions are unlicensed watermen employed?—Coasting vessels, and all vessels, in fact, not under compulsory pilotage; but he has no standing by law to take charge of anything.

8834. Sir *Charles Wingfield.*] Except vessels shifting dock, I suppose?—Yes.

8835. *Chairman.*] You have the right of superseding any of those men, have you not?—Yes.

8836. And you find a difficulty in doing that which you have the right to do?—Yes.

8837. And that right will remain after the Bill has become law, will it not?—Yes; but it will be difficult to carry it out.

8838. Mr. *Graves.*] It has been stated that half the vessels going up and down the Thames to Gravesend are piloted by unlicensed watermen; is that so?—There are not that amount, but there are a great many.

8839. That is an exaggeration then?—Yes; it is something like 900 *l.* a year earned by unlicensed men.

8840. But there are a great many?—Yes, there are a great many.

8841. Is the Committee to understand that those vessels are navigated by men who have no standing or legal position as pilots?—I think you may take it that that is so; they are navigated by that class of people, but whenever a pilot puts in his appearance they do not want him; they say that the captain is going to navigate his own vessel, but they are navigated, I believe, by that class of men.

8842. Has the number of unlicensed watermen been increasing or decreasing much?—The number of watermen is very large. I suppose they number about 5,000 or 6,000; but there are a very few men who are engaged in this kind of work; perhaps 10 or 12; that is to say, there are 10 or 12 employed in navigating these vessels, these collier screw steamers.

8843. Do you mean to convey to the Committee that there are only 10 or 12 unlicensed watermen engaged in piloting vessels up and down to Gravesend?—Yes, between Gravesend and London.

8844. Sir *Charles Wingfield.*] How can 10 or 12 unlicensed watermen do you so much harm then?—Because they are continually there; that is between Gravesend and London. Of course there is another class of men in London that carry on the same business.

8845. Mr. *Graves.*] Do those men pass any examination?—None whatever.

8846. Is every licensed waterman, out of 5,000 or 6,000 which you have spoken about, considered qualified to take vessels up and down the Thames?—I cannot speak to their qualification.

8847. Do those 10 or 12 men undergo any special examination to fit them for their duty?—None.

8848. Is there any other class below the licensed watermen again that take those vessels, and that are not even licensed watermen?—No.

8849. No class of boatmen that do it?—No; there is only one class that I know of.

8850. What constitutes the qualification to be admitted into the body of licensed watermen?—Seven years' apprenticeship.

8851. There is no limitation to the number of apprentices taken, I suppose?—None.

8852. Can you tell me what it is that regulates the number of licenses granted by the Trinity House between London and Gravesend?—That is limited by the demand for pilots; if the Trinity House saw that there was any necessity for more, or there was more employment than the present pilots could do, they have plenty of candidates, and they could increase the number very soon.

8853. Has the number of men been unvarying, or has it been fluctuating?—It has been pretty regular for the last 22 years, I think.

8854. Has there been no change?—Perhaps about four or five.

8855. So that the vessels which still employ a few unlicensed watermen would be regarded, to some extent, as an increase of trade?—Yes, I think so. I consider that the principal employment of those men is in collier screw steamers.

8856. If the Trinity House licensed men more freely, would not the tendency be to do away with unlicensed watermen?—No, I think not; if they have ever so many licensed pilots I do not think they would take them; I judge from what I see of the class of men that refuse them now.

8857. The shipowner has his choice of a pilot at Gravesend, I suppose, or do you take your turns?—We have a turn, and they can choose besides; a shipowner can select his own pilot, and a captain can select his own pilot.

8858. Is that the case outwards?—Most of them outwards.

8859. It is a perfect choice, is it?—Yes, there is a class of turn men as well as the choice men; but any owner or captain can select his pilot; there is no limit to the choice. The brokers and clerks and interpreters can choose their own pilots; but it is rather loosely carried on.

8860. Is it usual, when it is known that a vessel from, say Calcutta, is expected at Gravesend,

Mr. *F. Pattison.*

24 May 1870.

end, to write to the owner for permission to pilot his vessel?—That is customary.

8861. You said that you would like to see the powers retained for the Trinity House to preserve Gravesend as a distinct compulsory station?—Yes.

8862. Do you say that in the interest of pilots solely, or are you looking at it from a harbour regulation point of view?—In the interest of the public, because this thing was in work for many years previously to 1854; I mean the system of a pilot being passed right through. I do not believe that the public will be so well served by passing pilots from London to Dungeness, and from Dungeness to London, as they will be by keeping the river separate and distinct.

8863. As a rule, do the Deal men bring more vessels up or down?—They do not take any of them down; they bring them all up as far as Gravesend.

8864. Do you consider that that system is a good system which enables a man by piloting only one way to become conversant with every turn in the river?—Yes; I believe you obtain the most efficient men under those circumstances.

8865. Now, as a matter of harbour legislation, you attach some importance to having a pilot in every vessel; is that because you consider that the pilots know each other's movements quicker and better than the mere captain of a vessel would do?—Yes; if I could regulate the Thames I would make every vessel have a pilot, and I believe if that were only done, there would be less collision. I have been 22 years in the service, and I never remember a collision where a licensed pilot has been in charge of the ships. Those collisions have invariably occurred with unlicensed pilots.

8866. What is the limit of your liability?—£. 100.

8867. Is that a nominal liability, or a real one?—I believe it is a real one.

8868. Have you ever known an instance where it has been paid?—Yes.

8869. Have you ever paid anything?—Yes; not to that amount, but I have paid a great deal for damage.

8870. It is a real substantial obligation on the part of the pilot, is it?—Yes, I think so.

8871. Is there any fund among the pilots at Gravesend for meeting those claims?—None whatever.

8872. Have you a superannuation fund?—Yes.

8873. You are parties to the superannuation fund of Trinity House?—Yes.

8874. Mr. *Stevenson.*] You have been 22 years in the service, you say?—Yes.

8875. And you were in the service before the change in 1854?—Yes.

8876. So that if the compulsory system was restored, and we abolished Gravesend as a pilot station, it would put you in no worse position than you were in when you entered the service?—Yes, there is a great deal more trade now than there was then.

8877. And your employment has increased, you say?—Yes.

8878. So that it would put you in no worse position than you were in before the change in 1854 if this station at Gravesend was abolished?—Possibly not.

8879. Did you ever command a ship?—Yes.

8880. In what trade?—In the north country trade.

8881. The coasting trade?—Yes, the coasting trade.

8882. Did many of those pilots who are of the same class as you are ever command ships?—Yes, most of them.

8883. It was not a condition of their entering the service that they should have commanded a ship, I suppose?—Yes, it was.

8884. But all those up and down pilots stationed at Gravesend have commanded vessels, you think?—Yes.

8885. And do you say you consider them not competent to navigate vessels between Gravesend and London?—No, I did not speak about those men; I only spoke of those men who existed when the Act was altered. I say that the Act was altered, and that the shipowners were thoroughly dissatisfied with that class of men at that time. I do not know anything about the present class of men.

8886-9. The objection that applied then would not apply to the existing class of men, you think?—I do not think it ought to.

8890. You know that there is a difference of charge between taking one pilot all the way and taking two services, is there not?—Yes, there is a difference.

8891. Is there no complaint made of that?—I believe there is; it gives the London man a great preference over the Gravesend people, no doubt.

8892. Do vessels which you pilot from London to Gravesend employ pilots for the rest of the way seaward?—Yes, I think most of them do.

8893. Where does that pilot get on board?—At Gravesend.

8894. Does he always get on board at Gravesend?—Yes.

8895. Do none of them go on board at London?—I do not know exactly; they may go as passengers first, and they then act as pilots, and I think it is a very great shame if they do.

8896. You think that as long as the Gravesend station is maintained the pilots should keep their station, and not come to London?—Yes.

8897. What is their object in coming to London?—I suppose they go there to get more employment.

8898. I suppose, therefore, those men who stick to the station fare worse than those who go to London canvassing for a job?—I think that is a question; I think they are not very much better off at the end of the year; it is done on commission by brokers' clerks, interpreters, and so on.

8899. Are the Committee to understand that those interpreters and brokers' clerks, and parties, do act in the names of the owners when selecting pilots?—Yes.

8900. But they select the man who gives the highest commission?—Yes.

8901. Does that practice prevail extensively?—Yes, it does prevail rather largely.

8902. And you would like to see it put an end to, I suppose?—Yes, I should like to see it put an end to, certainly.

8903. You know that one reason why the Gravesend pilots desire to be removed to London, is that they may have a fairer chance of honourably obtaining employment?—Yes, but that does not suit my book quite so well.

8904. Mr. *Brassey.*] You said that even if the Trinity House greatly increased the number of licensed pilots, there would still be an unwillingness

ness on the part of certain captains to employ them?—Yes.

8905. I suppose that objection arises entirely from their objecting to your tariff?—There may be something in that, but the objection would be not so much on the part of the master as on the part of the shipowner.

8906. Of course, the money is a shipowner's question?—Yes.

8907. Have you any idea of the difference in the charge made by a licensed pilot, as compared with the charge made by an unlicensed pilot?—I do not know; I have known cases where an unlicensed pilot has obtained more than a licensed pilot; there is a few shillings difference, perhaps.

8908. But not a difference of half the money, I suppose?—No, nothing like that.

8909. Sir *Charles Wingfield.*] Are you aware that the watermen say that 2*l.* is their maximum charge?—I have never heard that.

8910. Mr. *Brassey.*] If there was a very large difference of charge that would fully account for the disinclination to employ licensed pilots, would it not?—I think there is no great difference.

8911. You have stated that there are only 10 or 12 of those unlicensed pilots who take vessels up and down between Gravesend and London?—Yes.

8912. And that they go on board at Gravesend?—Yes, they go on board at Gravesend.

8913. Is it the practice very frequently for watermen to go down below Gravesend in fine weather to try and pick up a ship?—Yes.

8914. Do you include those men who go down below Gravesend in your 10 or 12?—No, they would be more than that taking those men.

8915. But those large number of men who go down below Gravesend in fine weather to try and pick up ships are quite prepared to take vessels up to the docks, I suppose?—If they got the chance, I daresay they would.

8916. Probably there are more than 10 or 12 men?—Yes, they have between 5,000 and 6,000 free watermen on the banks of the Thames between Teddington Locks and Hope Point; they are cruising about at all points of the Thames.

8917. Sir *Henry Selwin-Ibbetson.*] But to the best of your belief there are not above 10 or 12 of the men to whom you specially referred?—Only about 10 or 12 who cause any annoyance to the pilots.

8918. Mr. *Price.*] In answer to a question put to you by the Chairman, you said that half of your employment was in respect of vessels not compelled to take pilots?—Yes.

8919. Now, if one-half of your employment is in respect of vessels not compelled to take pilots, why should you have any reason to apprehend that if all vessels were perfectly free, you should not get the other half?—There is a great difference in those vessels that are under the voluntary system, they are foreigners, and under a general voluntary system; that part which has hitherto been under compulsory pilotage is English vessels; I do not think that we should get anything like the employment from English vessels that we do from foreign vessels under the voluntary system.

8920. Is that because captains of vessels would navigate their own ships, or because they would avail themselves of the services of fresh water pilots?—I believe it would be connected; some will navigate their own vessels, and many will employ another class of men.

8921. What is the occupation of those watermen, apart from pilotage?—They are lightermen; they navigate lighters and barges; rowing people across the river, and so on.

8922. It is in pursuit of their business as lightermen that they acquire this knowledge of the river?—Yes, I imagine so.

8923. You said just now that the chief cases of collision occurred not when the regular pilot was on board, but when an unlicensed pilot was on board; have there been many cases of collision due to the employment of those men, or at all events when those men were on board?—I have no record of them.

8924. But still from general recollection you can give me some information about it?—Yes, I believe there are more collisions when those men are on board.

8925. Sir *Henry Selwin-Ibbetson.*] But there is no public record of them, I suppose?—No.

8926. Mr. *Price.*] Suppose there was no collision when one of your pilots was on board, and there was one in the other case, it would be true that there were more accidents in one case than the other; but are there many more?—Yes, many.

8927. Every year?—Yes.

8928. But have there been collisions when pilots have been on board?—Yes.

8929. Have you any such record as enables you to say that there have been a larger number of collisions when unlicensed men have been on board than when licensed men have been on board?—Yes, I am certain of that.

8930. You are certain of that without taking any returns of it?—Yes, I am certain of that.

8931. You have also stated that a Deal pilot only brings a vessel up the river?—Yes.

8932. Is that because he is forbidden to take a vessel down?—I do not think he is passed up and down; I am quite certain at all events that his duty ceases at Gravesend.

8933. That is to say, that a Deal man brings a vessel from the Downs to Gravesend?—Yes.

8934. Could he not take a vessel from Gravesend to the Downs?—I think he could.

8935. Sir *Henry Selwin-Ibbetson.*] I understood that it was in evidence that he could do it, but from the circumstances of his having to go to the bottom of the list he would have to stop so long at either station that it was not worth his while?—Yes, those pilots would do worse; I think they would not wish to stop here.

8936. Mr. *Price.*] But why is it better for them to go back; is it because by some rule of your own, you put them at the bottom of the list?—I do not know anything about the rules of the Deal and Dover pilots.

8937. I am speaking now of the Deal men to whom you referred just now, and who you said could only bring vessels up and not down: is the reason that they do not take vessels down as well as up that they would have to wait so long at the station, that it is better worth their while to go back to their own waters?—I cannot answer that question.

8938. Are you not one of the Gravesend pilots?—Yes; from Gravesend to London Bridge, and *vice versâ.*

8939. Do you mean to say that you are not a pilot down below Gravesend?—Just so.

8940. But still being a Gravesend pilot, do you

Mr. *F. Pattison.*

24 May 1870.

you not know as a matter of common interest what the regulations are below?—I do not know that there is any regulation; but the men living at Dover, and those places, would have no opportunity of getting anything from here, because our men are licensed from Gravesend to take ships downwards; there is nothing to forbid him in the shape of a law, I believe.

8941. Suppose a Gravesend pilot took a ship from Gravesend, or the Downs, or Dungeness, and was discharged, he could take another vessel and bring her up, could he not?—I believe not.

8942. I understood you to say that you thought there was a positive advantage in being limited to one direction?—Yes.

8943. And that it was better for the ship that the same pilot should navigate either upwards or downwards?—That is my opinion.

8944. Do you think that equally applies to the pilots between Gravesend and London Bridge?—Yes.

8945. You think it would be better if you had only power to navigate a ship either up or down, and not both ways?—Yes; I think I could do it both ways very well.

8946. But you think a man should not do it as between Gravesend and the Downs?—I daresay they could.

8947. But you said just now you thought it was for the advantage of the trade that a man should only be able to navigate one way, and that you thought by that means he obtained a more competent knowledge of the navigation?—I did not mean one way exactly; I meant to and fro in one district. I do not see why a man should not pilot a ship both ways.

8948. That answer of yours was not exactly what you meant to say, then?—Just so.

8949. You do not see why, if a man pilots a vessel downwards, he cannot pilot it upwards, I suppose?—No reason whatever.

8950. Then, so far as you know, it is not the fact that a Deal man can only bring vessels in one direction?—No, I do not know that it is so; I cannot say. I believe from all that I have heard, a pilot can take a vessel from Gravesend to Deal or Dover, and that he can bring one from Dover to Gravesend.

8951. At all events, whether he can or cannot, you think that he ought to be able to do it?—I think so.

8952. Sir *Henry Selwin-Ibbetson.*] You have stated that brokers, and brokers' clerks as well, have a choice of pilots, and that that is a very objectionable system; have you any suggestion to make to the Committee as to what you would recommend, in order to alter that system?—Yes, I would confine the selection of pilots to owners and masters.

8953. I imagine, from your evidence, that your principal objection to a change is, that it would do away with the Gravesend Station, as you understand the Bill?—I think so; at all events, we say it would be a Trinity House power, which they have not had for the last 16 years.

8954. And that is a power which might be used adversely to your interests?—Yes, I think you must take the Merchant Shipping Code and this Bill together.

8955. Mr. *Gourley.*] I think you stated that nearly all the collisions take place in vessels which are in charge of unlicensed men?—I said that they are more frequent.

8956. How does it happen that we have so many complaints of barges being run down by vessels in charge of licensed pilots?—I do not know; that is not the body I belong to; I suppose that would refer to the certificated men in charge of passenger vessels.

8957. No, I believe that complaints are made of vessels trading from London to Gravesend; that the licensed men think that they have no reason to take notice of the barges, and it is immaterial to them whether they come into collision, or otherwise?—I have gone very carefully through our men, and I did not find one case where a barge owner has suffered from licensed pilots.

8958. I suppose that you can specify some case where a collision has occurred when a vessel has been in charge of an unlicensed pilot?—No, I cannot do that.

8959. You know nothing whatever of the number of accidents which occur to ships in charge of unlicensed pilots as compared with licensed pilots?—No; all I can say is that they are very frequent.

8960. You can give the Committee half-a-dozen instances, I suppose?—No.

8961. Neither on the one side nor the other?—No.

8962. In what is your knowledge as a licensed pilot superior to that of watermen who are in the habit of navigating vessels from London to Gravesend?—We have no particular superior knowledge, but we have passed an examination, and we ask for protection in what we are licensed to do. I have nothing to say against the watermen.

8963. Do you consider that all watermen who navigate ships from London to Gravesend are quite competent to do the work?—I daresay they are quite competent.

8964. You as a pilot would not object to granting them this license on their making application for it, would you?—No, not so long as you give them employment.

8965. You say that the number of pilots at Gravesend are not quite sufficient for the work of the river, do you not?—No; I say that there are too many, and that there is not work enough for the 70 pilots at Gravesend; I most positively say that.

8966. Then under the present system of compulsory pilotage do they divide their earnings, or how is it that one man earns so much more than another?—Yes, I daresay one does earn more than another; but what each earns he keeps; there is no sharing.

8967. Under the existing system of monopoly one earns more than another?—Yes, one has more patronage than another.

8968. Do you think that that is right?—I do not know.

8969. Do you think that one man should have a monopoly when both are working under the same system?—That is a question which I cannot answer; but I know it is the case that some men obtain more patronage than others.

8970. Then under your system you advocate free trade for yourselves but a compulsory system for the shipowner; you leave yourselves at liberty to get as many ships to navigate as you possibly can, but you compel the shipowner in any case to take a pilot?—I do not believe that the shipowner can do without a pilot; I would not compel any man to take me if he can navigate

gate his own vessel between Gravesend and London; that would be taking rather a selfish view of it; but I do not believe that the captain is to be found competent to navigate that part.

8971. You think that the captains are not competent to navigate between Gravesend and London?—I am certain that they are not.

8972. Not even collier captains?—No. If they are competent why do they employ the unlicensed pilots?

8973. I apprehend it is that they consider them as competent as the licensed pilots?—But I say that the captains cannot navigate their own vessels?

8974. But the collier captains do not take pilots or watermen, or anything else, do they?—Yes, the collier steamers do.

8975. How far do they take the watermen?—From Gravesend to the Victoria Docks, where there is little or no navigation to do. I am surprised that they want assistance there; I say that it all should be compulsory pilotage.

8976. You think that the watermen should be employed under the compulsory system as well as the licensed pilots, do you not?—If you can give them employment, I have no objection.

8977. Do many owners of ships carry watermen as well as pilots in the Thames?—Not the class of pilots whom I represent. I believe that there are two or three, perhaps.

8978. But what is the reason for carrying watermen as well as pilots?—I cannot say whether it is a question of inability or a matter of £. *s. d.* between the unlicensed pilots and the pilot, or whether it is the wish of the shipowner.

8979. Do you not consider that all pilots who are licensed by the Trinity House are able to navigate the ships of which they are in charge?—Yes, they are or ought to be.

8980. Then there must be some reason why the owners carry a licensed waterman in addition to pilots in some waters, must there not?—All I can say is that that is not the case where river pilots appear, but I have seen it done myself; no doubt it is the case.

8981. Is it not because the watermen know the river better than the pilots?—No, it is a question of £. *s. d.*

8982. But if a ship carries both, what do you say?—I think the owner is very simple if he does so, for he has no occasion to do it.

8983. It is an extra amount of prudence on his part, perhaps; you stated that the Norwegian owners were compelled to carry pilots by a clause in their policies?—I have been told so.

8984. You have never seen a policy with that clause in it, I suppose?—I only know it from masters of ships who have made that statement to me.

Mr. *F. Pattison.* 24 May 1870.

8985. Mr. *Cave.*] With regard to the rates which you charge to vessels who are not compelled to carry pilots; do you charge those vessels a different rate from those which are obliged to have a pilot?—No.

8986. You charge uniform rates?—Yes.

8987. There is no bargaining between the pilot and the vessel?—No.

8988. What is your liability limited to?—£. 100.

8989. Do you provide sureties besides?—That would be in the new Bill.

8990. But I mean at present?—No.

8991. It is only your own liability for 100 *l.*?—My own liability is 100 *l.*

8992. And no sureties?—No.

8993. Supposing your liability became unlimited, do you think it would make the pilots more careful than they are now?—I do not think it would be fair and reasonable; they could not stand against it.

8994. Do you think that when they are navigating a vessel it would make them more or less likely to lead her into danger?—I believe that a pilot would naturally be careful, under any circumstances, but in putting the liability on the pilot it should be such a liability that he could honestly discharge.

8995. I see, in the printed statement of the pilots, it is remarked that if their liability was unlimited it would unnerve them in case of danger; what do you say to that?—I think it would; the more you shackle a pilot the worse it is for them.

8996. When you were asked about monopoly, did you mean to state that shipowners can choose any pilot they please?—Yes; they have a large selection out of the number already licensed.

8997. If a pilot is a favoured man he makes more than one who is not so favoured?—Yes.

8998. And that would be the same under the voluntary system, would it not?—Yes, it would be the same under the voluntary system.

8999. So that it is not practically a monopoly?—I do not think so.

9000. Mr. *Gourley.*] Who do you think should have the command of a ship when a licensed pilot is on board, the pilot or the captain?—There should be no divided charge in the navigation of a ship. I say that the pilot should have the entire charge in crowded rivers.

Mr. William Speeding, called in; and Examined.

9001. *Chairman.*] You have applied to be examined before this Committee, have you not?—Yes; as to piloting vessels inwards and outwards, there are great complaints among the shipowners and captains, that when we are put on board we do not continue in charge right through.

Mr. *Speeding.*

9002. On what station are you employed?—From London to the Downs, Dungeness, and the North Channel.

9003. Right through the Downs?—Yes.

9004. What is the special point which you wish to bring before the Committee?—When we are put on board ships coming back again under the Order in Council of 1854, we wish to remain in charge right through up to London, but the regulations will not allow that; that causes great complaints, because the difference is about the extra rate varying from 15 to 20 per cent.

9005. You are only licensed outwards, I believe?—Just so.

9006. You cannot take vessels back?—No.

9007. You think that you should be allowed to take them back, do you?—We do it by signing according to the Order in Council; but the question is, whether it should be right through up to the limits of the license, or to give up this matter at Gravesend.

9008. When you pilot vessels backwards, you

Mr. *Speeding.*
24 May 1870.

can only take them as far as Gravesend, and you are forced to leave them there, are you not?—Yes, and that causes a great deal of unpleasantness with the shipowners and captains.

9009. You think that pilots should be allowed to bring their vessels right back to London, as well as outwards from London?—Yes.

9010. Sir *Charles Wingfield.*] You are one of the pilots licensed by the Order in Council in the year 1854, as I understand you?—Yes.

9011. Mr. *Stevenson.*] You only go from Gravesend to the sea, I suppose?—I go from London right through.

9012. *Chairman.*] Are there 50 pilots of that kind?—Yes.

9013. They are gradually dying out, I suppose?—Yes.

9014. That is to say, there are no more pilots of that kind being licensed?—Yes.

9015. Do you think that they should be licensed, or do you think that there should be a distinction between sea pilots and other pilots?—We ought to continue in charge right up.

9016. You disagree with the last witness with regard to making a separate system between Gravesend and London, do you?—Yes; I have been compelled by the captain's wish to bring a ship up to docks, and the Trinity House have ordered me to refund the money to the river pilot in turn.

9017. Is there much time lost in waiting at Gravesend?—Not above a day; sometimes all the pilots are engaged, and then they have to anchor their vessels until the following day, and there is an addition of 15 or 20 per cent.

9018. Mr. *Graves.*] What class of pilots do you belong to?—The first class.

9019. Are you a Gravesend pilot?—No, I am a pilot from London to the sea, right through.

9020. Can you bring vessels from the sea to London?—Yes, under that Order in Council.

9021. *Chairman.*] You are a choice pilot; your whole employment comes from what they call choice, does it not?—Yes, it comes from choice, or from our own seeking. What the river pilots wish is to take the ships all up, and after doing that they ask for the ships down again, so that we have great difficulty in obtaining any employment at all.

9022. I suppose this Bill will not very much affect your employment?—It will not affect mine at all.

9023. You think that your employers will still continue to employ you as they have hitherto done?—Yes.

9024. And there are 50 of you in that condition, are there not?—Yes.

9025. You think that none of them would be interfered with practically by this Bill?—Scarcely any.

9026. They are a large class of vessels that you pilot, are they not?—Yes, they are a large class.

9027. As a general rule they are vessels that would always take pilots?—Yes, as a rule they would always take a pilot.

9028. Therefore, you have no fear with respect to the effect of this Bill upon your employment?—None whatever.

9029. Sir *Henry Selwin-Ibbetson.*] Do you pilot from the northern channel or the southern channel?—From both.

9030. Mr. *Graves.*] As a rule, do you take many ships through the north channel?—Yes.

9031. As many as you do through the south channel?—Rather more.

9032. What class of ships do you take principally through the north channel?—Most of them are Norwegians and Swedes; very few English; two-thirds of them are foreign vessels.

9033. Do many unlicensed men take vessels through the north channel?—Yes.

9034. What class of men are they?—They are what may be called first-class watermen; there are about 2,000 men in the first and second class.

9035. Do you mean all piloting vessels?—No, not all piloting vessels, but assisting in the work; you generally find four or five men on a tug; in fact, it is the crew of the tugs and sailing barges.

9036. But is a man who is not a member of that unlicensed Waterman's Society prevented from doing any portion of this work on the river?—They are prevented doing so if we prosecute them, but it is so difficult to do that, that we let them pass off.

9037. Is there anything to prevent a man who is neither an unlicensed waterman nor a pilot taking a vessel through the north channel, if the captain wishes to employ him?—There is a great objection to that.

9038. What is the objection?—We lose a great many vessels going round to Newcastle sometimes; they ship as cook or fourth mate.

9039. You mean you lose the pilotage on those vessels?—We lose the pilotage.

9040. There is a class of men going up and down the north channel, apart from the pilots, who are neither licensed watermen nor pilots?—Yes.

9041. Is that a large class?—There are about 1,000 of them; they are mostly broken-down captains, mates, and persons of that kind.

9042. Do you consider that it is in consequence of the pilotage of the north channel being voluntary, that those 1,000 men obtain employment in piloting vessels up and down?—Yes, I do.

9043. And that if the southern channel was voluntary, you would have the same state of things there that you have in the north channel?—To a certain extent.

9044. But you, acting for special employers and special shipowners, would be exempt from these contingencies, and, in your opinion, you would still get full employment?—Yes.

9045. What class of shipowners do you principally pilot for?—Almost all the London firms, the West India ships, Dawson's, Hanson, Thompson's, and the great American vessels principally.

9046. Have you ever heard from any of the captains of foreign vessels which you take out that there is any obligation in the policy or register of the insurance clubs to take pilots?—No.

9047. Now, with regard to those broken down captains and mates whom you refer to, and who are employed to pilot vessels, as you say, in the northern channel, are they an increasing or a decreasing class?—They are rather on the increase.

9048. Why is that?—For want of other employment, I presume.

9049. But I suppose they would not find employment in the northern channel unless there was some one to require their services?—Just so.

9050. What

9050. What examination have you passed for a licensed pilot?—I have passed four examinations, for the lower draught of 14 feet for the north channel, and then for the lower draught of the south channel; the upper draught of the north channel, and the upper draught of the south channel.

9051. How many years altogether might you have been at sea before you passed your examination?—I was at sea three years as chief mate and master of a ship.

9052. Were you obliged to serve your time at sea?—I was apprenticed for seven years to a waterman previously; it was optional.

9053. Do you find in practice very much that the unlicensed watermen and the broken-down captains and mates charge very much less than what you do under the regular tariff of pilotage?—They only charge half as much.

9054. Suppose they charged the same as you do, do you think that any man would employ them in preference to licensed pilots?—No; they would not.

9055. You think that it is the price that brings those men?—More especially it is that.

9056. Do the licensed pilots between Gravesend and London interfere much with you?—Yes, among the small vessels; among the larger ones, they are all on the look-out if we are not on the spot, and they fly away with them immediately.

9057. That is to say, going up from Gravesend?—Going down also.

9058. But if they are always on the alert, how would that delay of a day occur?—That is, when there is plenty of ships on a fair night.

9059. Have you often known a ship delayed for 24 hours waiting for a pilot at Gravesend?—I have known them for upwards of 12 hours.

9060. Mr. *Stevenson.*] Do you represent any other pilots; are you deputed by any body to represent their views here?—We had a meeting, but some of them were not there when the day was appointed.

9061. Have you authority to speak for other pilots?—No, I am a volunteer on my own account.

9062. I suppose you have the liberty of taking ships all the way from London to the sea; that is to say, the river pilots do not interfere with you, I suppose?—Yes, they interfere, because we ask for the promise of a ship, and unless by some extraordinary stratagem we cannot get a ship, they get them away; many of them are interested in steamers, and they can get them cheaper than I can.

9063. What number of pilots are engaged in steamers?—Nearly the whole, or over half of them, in the Gravesend department, and 20 out of 50 in the London department.

9064. They are partners in steam-tugs?—Yes.

9065. Do they work in partnership with the steam-tugs, so as to get employment?—In many instances they do.

9066. Have you any share in those steam-tugs?—No.

9067. You depend on your own merits altogether?—Yes.

9068. Sir *Charles Wingfield.*] Have most of the Gravesend river pilots shares in steam-tugs?—Yes.

9069. Sir *Henry Selwin-Ibbetson.*] Do you state that on your own authority, from your personal knowledge?—Yes.

9070. Is there any return or paper which proves the fact?—We know that from the register of the steamers themselves.

9071. Mr. *Stevenson.*] Have the captains of those steam-tugs been pilots themselves?—No; they have been first-class watermen.

9072. Then the pilots who are partners in those steam-tugs are sleeping partners, I suppose?—No; I beg your pardon, they are active partners.

9073. Do they take part in the working of the steam-tugs?—No, not in the working of the tugs, but in obtaining employment for them.

9074. I suppose they make the one service help the other; they use their interest as pilots to help the steam-tugs, and their connection as tug-owners to obtain work as pilots?—Yes.

9075. You say that 20 out of 50 of your class of pilots are so engaged?—Yes.

9076. That would give those 20 an amount of employment as pilots quite independent of their personal merits as pilots?—Yes.

9077. Does that system of tug-ownership prevail in any other branches of the service; do the river pilots obtain business for themselves in the same way as the owners of steam-tugs?—Yes.

9078. You have stated that it was those river pilots who have shares in the steam-tugs that have displaced you from piloting ships?—Yes.

9079. In that case do you lose the pilotage altogether?—Yes, I do.

9080. They do not even take you on board at Gravesend, do they?—No, they work it with their friends at Gravesend.

9081. *Chairman.*] They drop you at Gravesend, and you find your way back to London as you best can?—They have got their own friends at Gravesend, and they ship them.

9082. Mr. *Stevenson.*] Are some of the Gravesend pilots working hand in hand with the river pilots to take the ships over from one to another?—Yes.

9083. Does that practice much prevail?—Yes.

9084. Is that one of the reasons why you said there should not be a station at Gravesend at all?—I never said that.

9085. I thought you approved of the system by which one pilot could take a ship all the way from London to the sea?—Yes.

9086. Then what advantage is there in having a change at Gravesend?—None, except to the river pilots, because they get the ships down as well as up.

9087. But a pilot that can bring a ship to Gravesend is, I suppose, as competent to bring the ship the whole of the way as you are?—Yes.

9088. The other system makes it more costly to the shipowner, does it not?—Yes.

9089. And there is the detention at Gravesend at times?—Yes.

9090. In a regular way do ships stop at Gravesend or do they go past?—A few ride past when they can; at times they do not wait for the pilot who has got a choice letter for them; I have known many cases of ships stopping at Gravesend for 24 hours.

9091. Is it in your opinion worth while to stop at Gravesend for 24 hours in order to obtain the services of one pilot rather than another?—Such is the fact, at all events.

9092. Are you ever obliged to leave a vessel at

Mr. *Speeding.*

24 May 1870.

at Gravesend coming up, in order to give place to a river pilot?—No.

9093. Once on board you stay on board?—Yes.

9094. But you miss the service downward in consequence of the river pilot having obtained the engagement before you appear?—Yes, having obtained the promise of the ship.

9095. Do you know any case of pilots being engaged through the interference of brokers' clerks and interpreters?—Yes, there is something of that kind going on. I have lost many ships myself by it.

9096. That is to say, you would have obtained the pilotage of some of them, only some other pilot, through the interference of the brokers' clerks or interpreters, has obtained the preference over you?—Yes, that is the fact.

9097. You presume, I suppose, that those men obtain a commission out of it?—I believe so.

9098. Is that practice believed to prevail extensively?—Yes, very extensively.

9099. Then there is no proper rotation of pilots?—Not at London.

9100. Is there at Dungeness?—Yes, there is at Dungeness, Deal, and Dover.

9101. But when you come nearer London this system of preferences begins?—Yes, it commences there.

9102. Has any complaint ever been made to the Trinity House with regard to that system of preference which you complain of?—There has been a complaint to the Trinity House, but I suppose they have been charged as interpreters, so much a ship when you want their assistance.

9103. Is that payment for interpreters sanctioned?—Yes, when we say that we need it, but we get through without it usually.

9104. When an interpreter is lawfully employed, where is he employed?—He is employed by the captain, at Gravesend.

9105. Do those interpreters go on board with you?—No, they do not go on board with me, but they go on board with other pilots.

9106. To interpret orders, I suppose?—Yes, to interpret orders.

9107. In fact, are the interpreters carried on board with the pilot?—No, not with the pilot; they are there themselves to obtain orders for the ships from the respective brokers.

9108–9. The interpreters are employed in the interest of the shipbrokers?—Yes, they are employed in the interest of the shipbrokers, and if we want their assistance we have to pay them for it.

9110. Mr. *Price.*] I do not understand that part of the system of which you complain; if I understand you rightly, you are licensed to take a vessel from London to the sea?—Yes.

9111. And to bring her back from the sea to London?—Yes, by taking the turn from the cutter, or from the shore, according to the rule.

9112. Then, supposing you are employed to go out to sea, when you leave the ship, what do you do if you desire to bring her back again?—We have to go on shore to report ourselves and to sign the rotation list; in the meantime, most of the ships have gone past with flags up, whereas, if we were permitted to go right on board, we should save that time.

9113. You have to go on shore and report yourselves on duty, and to be put on the rota for taking your turn?—Yes.

9114. You think that you ought to be entitled to be able to go to any ship that flies a flag, and offer yourself?—Yes.

9115. In that way you could bring a ship up all the way to London, could you not?—No, only all the way to Gravesend; we should be glad to do it.

9116. You can take a ship to sea past Gravesend, can you not?—Yes.

9117. But if you bring up a ship on towards London, you cannot pass Gravesend?—Just so.

9118. How is that distinction drawn?—It was drawn by some mistake there; many merchants read the Act that we ought to pilot a ship right up within the limit of the license; but there is another Act of Parliament which says that we are not permitted to do so.

9119. Is that what you call the Order in Council?—Yes.

9120. Under the Act of 1854?—Yes.

9121. When you come up with a ship you are superseded by the Gravesend pilot?—Yes.

9122. You believe that to be by accident and not by intention, I suppose?—It is by intention, because there is a rule to that effect.

9123. Is that for the benefit of the Gravesend pilots?—Yes, it is for the benefit of the Gravesend pilots, and it is much to the injury of the shipowners, and also the detention of the ships.

9124. I understand you also to say that the cost of bringing a ship from the Downs to London is greater, by reason of this division of pilotage, than it would be if the same man brought her all the way?—Yes, it costs from 15 to 20 per cent. more as the thing is worked at present.

9125. There would be a saving of from 15 to 20 per cent. in the ship's expenses if the same pilot could bring her all the way from the Downs to London, you think?—Yes, and it would also be a saving of time.

9126. The pilot does, in fact, take her one way now, does he not?—Yes.

9127. But not the other?—Just so.

9128. So that the pilotage outwards costs a less sum than the pilotage inwards, on account of the ship going outward with one man and coming inward with two men?—Yes.

9129. You say that the passing of this Bill would in no way interfere with your employment?—It would interfere so slightly that it is scarcely worth naming, because, if a man perseveres, if he does not get one ship he will get another.

9130. Do you look out for the ships, or does the shipowner look out for you?—No, we look out for them.

9131. Do you go to the shipowner's office?—No; we go on board the ship, and then if the captain recommends us to the owner we get our instructions from him; the captain generally refers us to the broker or merchant.

9132. *Chairman.*] I suppose nearly the whole of your employment is in outward vessels?—Yes, nearly the whole.

9133. You do not go on the rota?—Very seldom when there is a quantity of ships coming up.

9134. What proportion of the employment of those 50 pilots should you say was in respect of outward vessels?—There are only about four or five ships inward during the year in which they are employed.

9135. Practically it is all outward pilotage?—Yes.

9136. Mr.

9136. Mr. *Price.*] Is that because it is better worth your while to come straight off than to wait your turn at Dover to bring the vessels inwards?—Yes.

9137. But I suppose that under that system it takes a larger number of men to do the work than if the same pilot worked outwards and inwards?—Yes.

9138. That is to say, supposing the same pilot who took the vessel out could also bring a ship in, a less number of men could do the work than under the present system?—Yes.

9139. So that, in fact, the present system is devised to employ a larger number of men?—Yes.

9140. And a portion of every man's time is wasted?—A portion of every man's time is wasted.

9141. You do not think that system a good one?—It gives us time to squander away.

9142. You would rather be always employed?—Yes; that is to say, as far as the captains require us.

9143. You do not think that there is any reason why a man should be competent to take a ship out and not be competent to bring her in?—Certainly not.

9144. You think if he can do the one he can do the other?—Yes.

9145. Supposing that the system of pilotage were altogether free, would that system, in your opinion, still prevail?—Yes, I think it would still prevail.

9146. You think that you still would have to go out with one vessel and come back with another?—Yes, unless we had an alteration in the law.

9147. Are you yourself afraid that there would be any great falling off in the occupation of pilots generally under a perfectly free system?—In my opinion there would be no falling off at all beyond this, that it would be an open field for unlicensed pilots, who would do the work for less money.

9148. But it would not really diminish the number of pilots who would be employed, I suppose?—No.

9149. But it would get rid of a great many of those objectionable practices?—Yes.

9150. You are in favour of it?—Yes, I am in favour of it, because I think it would do a great deal of good.

9151. Sir *Henry Selwin-Ibbetson.*] The Committee have heard a good deal about the unlicensed pilots on the Thames, do they interfere at all with your business?—Many of them do; we lose many vessels by them.

9152. Another witness has stated that accidents happen more frequently to vessels under the charge of unlicensed pilots than licensed pilots; is that your opinion?—Yes, that is my opinion.

9153. Can you give the Committee any idea of the proportion of accidents that happen to vessels both under the charge of unlicensed and licensed pilots?—I could give the Committee a very fair opinion by taking particulars upon that; there are about one-half more accidents, I think.

9154. Have you yourself had any accidents?—I was run down once by a vessel.

9155. Have you been up before the Trinity House?—Yes.

9156. Often?—Yes.

9157. Have you been censured for irregularity of conduct?—Yes, sometimes.

9158. More than once?—Yes.

9159. Mr. *Gourley.*] You think that the Gravesend pilots should be allowed to take ships from London over the whole pilotage ground, and that the Downs pilots should bring ships from the Downs up to London?—Yes, those that think proper to pass an examination.

9160. You think that the pilotage license should be for the entire ground, and not for a portion of the grounds?—Yes, for the whole of the ground.

9161. Mr. *Cave.*] Are you a Trinity sea pilot?—Yes.

9162. Do you pilot sailing and steam vessels also?—Yes.

9163. When you spoke of 24 hours' delay at Gravesend, that was when the shipowner thought proper to wait for a particular pilot?—Yes.

9164. It was a matter of choice with him whether the ship should proceed or wait?—Just so.

9165. If the vessel were anxious to proceed at once, he could always obtain a pilot in much less time than that?—Yes, by hoisting a flag, unless there was a sudden change of wind; it might happen once in two or three months.

9166. What is the upper and what is the lower draught?—The lower draught is 14 feet, and the upper is all above that.

9167. Those whom you call first-class watermen are members of the Watermen's Company?—Yes.

9168. And licensed by them?—Yes, and licensed by them.

9169. Do they pass any examination?—No.

9170. If your plan was adopted, you would do away with the Gravesend river pilots, would you?—No; those that like to remain could do so.

9171. But if you had the same pilot taking ships from Dungeness to London, and from London to the sea, the river pilots would have n thing to do, would they?—Yes, there would be some of them, because they stop at Gravesend for orders.

9172. There would be a certain amount of employment for them?—Yes.

9173. But it would be diminished, would it not?—Yes, when there are any pilots there.

9174. *Chairman.*] Just a word or two about pilots of your class; they make higher earnings than any other pilots from London, do they not?—Some make 200 *l.* and some 500 *l.* a year, more or less.

9175. But the average earnings are higher, are they not?—Yes, rather higher.

9176. And they are almost wholly employed with outward pilotage?—Yes.

9177. You do not think that they will find any falling off in their employment?—Yes, I think they would find a trifling falling off in their employment.

9178. What proportion of your employment comes now from vessels that are not at present bound to carry pilots?—About two-thirds.

9179. Now, I presume, that all those vessels would continue to take pilots inwards after this Bill is passed, would they not?—Yes.

9180. Therefore, if the outward pilotage is not likely to fall off the inward pilotage is still less likely to fall off?—Yes.

Mr. *Speeding.*

24 May 1870.

9181. Inward pilots, as a rule, are wanted more than the outward pilots, are they not?—Yes.

9182. In your opinion there would be plenty of employment for the men at Dungeness and at Dover?—Yes, I think so.

9183. Mr. *Graves.*] Is there not some allowance made by the printed pilotage rates when a steamer is employed?—One-fourth off is allowed for steam.

9184. What proportion of vessels take steam now up and down the Thames?—Ninety per cent.

9185. *Chairman.*] Either steam or tug, I suppose?—Either steam or tug.

9186. Mr. *Graves.*] So that the printed tariff is no fair criterion?—No.

9187. Have you heard any instance in which a pilot has received a portion of the one-fourth reduction from the steam-tug owner?—Yes, I have heard of that occasionally; there is some commission allowed from certain companies to the pilots, but most of that is discontinued.

9188. You are not aware of that practice existing at the present time?—Not to any extent now.

9189. But it does exist?—It does exist; there is very little of it.

9190. *Chairman.*] Is it your experience that vessels in charge of tugs take pilots?—Yes, all of them.

9191. Even though they are not bound to do so?—Though they are not bound to do so.

9192. Are the pilots employed just as often when the vessels are in charge of tugs as when they are not?—Yes; perhaps there are 5 per cent. of exceptions.

9193. But as a rule the vessels require a pilot equally when they are in charge of tugs as when they are not?—Yes.

9194. Do you mean when they take a licensed pilot?—Yes, that is so.

9195. So that in the event of this Bill passing the employment of tugs is not likely to make any difference in the employment of pilots?—Except those going round in ballast to Cardiff; but not in regard to the loaded vessels.

9196. In the case of loaded vessels, you think that the employment of pilots would be as frequent, notwithstanding the employment of tugs?—Yes.

9197. Mr. *Graves.*] If that is your opinion would you consider that you had no claim for compensation under this Bill?—We should not like to ask for compensation, but when we have exerted ourselves, and got injured or disabled, we should ask for a larger pension; I think that is very small.

9198. *Chairman.*] You think that the pension granted at present under the Trinity House very small?—Yes, I have reason to think there are ample funds to enlarge it.

9199. It is small in proportion to the contribution you make, is it?—Yes.

9200. Is it not rather unfair that those pilots who pay so much more in proportion to their income should receive a smaller pension eventually?—The London pension is altogether small compared with the other.

9201. But you get no higher pension than the out-port pilots?—We get less.

9202. Though your contribution is much greater?—Yes.

9203. That is quite independent of the compensation clauses of this Bill?—Yes.

9204. Do you think there would be no need of compensation, because their employment would be as great as it was before?—No; when men get late in life they are not so active, and they ought to be pensioned off earlier.

9205. Sir *Charles Wingfield.*] With regard to accidents being more frequent in ships under the charge of unlicensed pilots than licensed pilots, is that above or below Gravesend?—Both above and below Gravesend.

9206. Mr. *Stevenson.*] It appears by the Regulations of the Trinity House, that when a choice letter is granted for a vessel that letter must be stamped at the Trinity House?—Yes.

9207. How often is that stamping required?—It is required for every vessel.

9208. And every voyage?—And every voyage.

9209. Is that rule strictly enforced?—It is.

9210. Do you mean to say that in every case in which you are selected out of your turn, that such a letter is signed and taken to the Trinity House and stamped?—Yes.

9211. Is any charge made for stamping it there?—Not for the London pilots.

9212. Is any charge made for other pilots?—Yes, for the sea pilots from Gravesend, and also for the river pilots.

9213. How much is that charge?—It is 10 *s.* for a sea pilot and 2 *s.* 6 *d.* for a river pilot.

9214. For every separate act of a pilot when a pilot is taken out of his turn, that process is gone through?—Yes.

9215. You said that pilots are very often taken out of their turns?—Yes.

9216. Is this rule of stamping the choice letter strictly adhered to?—Yes.

9217. There must be a considerable revenue derived from those charges, must there not?—They get this money back again when they go with the ship, and in the event of their not going with the ship the money is forfeited.

9218. *Chairman.*] Have you anything further to state to the Committee?—No.

Mr. George Thomas Hinton, called in; and Examined.

Mr. *G. T. Hinton.*

9219. Sir *Charles Wingfield.*] You practice as a waterman pilot between London and Gravesend, do you not?—Yes.

9220. But not beyond?—No.

9221. You are a freeman of the Thames Watermen's Company, are you not?—Yes.

9222. You have no Trinity House license?—No.

9223. You are one of the persons referred to in the Act of 1854 as unqualified, are you not?—Yes.

9224. You served your apprenticeship to the business, I believe?—Yes.

9225. For how long did you serve that apprenticeship?—For seven years.

9226. Were you employed during that apprenticeship in piloting ships?—Yes.

9227. What kind of ships?—Sailing vessels.

9228. When you were out of your apprenticeship, you were admitted a freeman of the Watermen's Company, were you not?—Yes.

9229. Does

9229. Does the licence you hold from the company require to be annually renewed?—Yes.

9230. The license runs in this way, that the master wardens and assistants, license So-and-so, to work as a waterman in the navigation of sailing boats and steamboats?—Yes, in all parts of the river; from Teddington Lock to Lower Hope.

9231. I believe that ever since you obtained your licence in 1853, you have been engaged in piloting ships between London and Gravesend?—Yes.

9232. What class of ships were they generally?—Sailing vessels up to the year 1860.

9233. And since then, you have been employed in piloting steamers?—Yes. I was employed in piloting steamers and sailing vessels up to the year 1862, and from the year 1862, up to the present time, I have piloted steamers alone.

9234. Do some shipowners require their ships to be piloted by free watermen between London and Gravesend, as well as by a Trinity House pilot?—We are employed by the owners.

9235. Do the owners take both on board?—Yes.

9236. They have a Trinity House pilot, and you on board also?—Yes.

9237. Can you give the Committee the names of any shipowners who employ you as pilot for their ships?—Mr. Gourley and Mr. Norwood.

9238. Both members of this Committee?—Yes. Mr. Charles Fenwick and Mr. M'Kenzie; but within these two years Mr. Norwood has not employed me with a pilot on board any of his ships.

9239. But other shipowners do so employ you then?—Yes.

9240. They take a licensed pilot and they take you also, do they?—Yes.

9241. And on several ships you are the sole pilot in charge, are you not?—Yes.

9242. Do any other shipowners or masters of ships, besides those four gentlemen, employ you?—Yes, captains employ me.

9243. You have testimonials from shipowners and captains who have employed you, testifying with regard to your skill and ability, have you not?—Yes.

9244. What is your charge for piloting a vessel?—From 25*s.* to 40*s.*

9245. Forty shillings is your maximum charge, is it?—Yes.

9246 What is the maximum charge of a Trinity House pilot?—It would depend on the draught of water.

9247. Take a biggish ship, what would that be?—For a vessel drawing 23 feet of water the charge would be 9 *l.*

9248. Whereas you would only charge 2 *l.* for the same class of ship?—Just so.

9249. You never take more than 2 *l.*?—Never.

9250. What are your average earnings as pilot for the last three years?—As near 500 *l.* as possible.

9251. Mr. *Price.*] As a waterman pilot?—Yes.

9252. *Chairman.*] You are better off than the licensed pilots then, are you not?—I think not.

9253. Sir *Charles Wingfield.*] How many free watermen of your class are now engaged like yourself exclusively on steamships?—There are 20 or 25 of them.

9254. That is to say, exclusively in steamships?—Yes.

9255. Did you hear Mr. Pattison say that there were only 10 or 12 unlicensed watermen between London and Gravesend?—He said so.

9256. But he referred perhaps to those employed only on steamships?—Perhaps so.

9257. But you say, as one of them, that there are 20 or 25?—Yes.

9258. Does Mr. Fenwick, who is a great shipowner, and one of the Elder Brethren of the Trinity House, keep constantly in his employ a staff of six free watermen to pilot his ships?—He employs six free watermen, but there is only one employed with a pilot, that is with a sea pilot down the river.

9259. Is he a free waterman?—Yes, he is a free waterman, and he is employed with a pilot.

9260. And the rest have the full and exclusive charge of the ships, have they not?—Yes, they have the full and exclusive charge of the ships.

9261. Is it true, as has been stated before this Committee, that those free watermen are taken merely to haul up and lower boats, and not to pilot ships?—They are taken to pilot the ships; there is not a licensed pilot on those ships with the five free watermen; I mean on Mr. Fenwick's ships.

9262. In addition to those 20 or 25 watermen employed exclusively on steamships, are there many other free watermen engaged in piloting vessels between London and Gravesend?—Yes.

9263. Are those other free watermen principally employed in sailing vessels?—Most of them.

9264. How many do you suppose are engaged in that way?—From 400 to 500.

9265. Now what do you estimate the earnings of those men at; you say that you earn 500 *l.*?—Yes.

9266. There is one who earns 900 *l.*?—Yes.

9267. There are 25 who earn 200 *l.* each, are there not?—Yes.

9268. And 400 men who earn 50 *l.* each?—Yes.

9269. The total average earnings amount to 26,400 *l.*, do they not?—Yes.

9270. Have those 400 or 500 free watermen served an apprenticeship like yourself to the Watermen's Company?—Yes.

9271. With regard to that pilot who earns 900 *l.* a-year; who is he and what is the reason of his earning so much more than any one else?—On account of the great amount of work which he is employed to do by owners.

9272. *Chairman.*] Has he got some special connection?—Yes.

9273. What is his special connection?—He works for Mr. Fenwick of the Trinity House.

9274. Sir *Charles Wingfield.*] What is that pilot's name?—His name is Raine.

9275. Those 500 are free watermen actually engaged in piloting; but besides those are there watermen who act merely as boatmen, bargemen, and lightermen in the river?—Yes; I believe there are nearly 10,000 watermen, but the number, which I say is between 400 and 500, are actually engaged in the navigation of ships in the river.

9276. Under the Order in Council of the year 1854, 23 watermen were licensed to pilot home-trade steam passenger ships, were they not?—Yes.

9277. But they can be superseded on coasters or on other vessels not carrying passengers?—Yes.

9278. What vessels do the licensed pilots or

Mr. *G. T. Hinton.*
24 May 1870.

Trinity House pilots principally take between Gravesend and London?—Steamships and ships towed by steam.

9279. To what port are those steamships bound, or coming from what port?—From the southward, north of Boulogne, and the foreign Baltic vessels.

9280. Do they go with more foreign Baltic vessels than you do?—I am only employed by the owners to go with the southern-going foreign ships.

9281. But do the licensed pilots take more of the foreign Baltic vessels than the unlicensed pilots?—Yes.

9282. But not the British vessels in the Baltic trade?—No.

9283. The Baltic is closed in the winter time, is it not?—Yes.

9284. Then those same steamers which in the summer time are employed in the Baltic trade are in the winter time engaged in the coasting trade?—Yes.

9285. I suppose the Trinity House pilots do not go on board those vessels when they are on the coasting trade?—No, they never interfere with the coasting trade.

9286. *Chairman.*] But do the Trinity House pilots go on board those vessels which are on the Baltic trade?—Yes, any vessels but a collier.

9287. They are not bound to carry pilots then?—No.

9288. Sir *Charles Wingfield.*] So that, in fact, the owners of those ships have to pay more for pilotage in the summer, when the work is easy, than in the winter when the work is heavy?—Yes.

9289. If a Trinity House pilot took a dislike to a particular free waterman, could he by his power of supersession deprive him of his work?—Yes.

9290. And after the active part you have taken in this question, do you think they will drive you off the ships?—They threatened to do so; they say that they will supersede me at every point; my station is Gravesend which is their station; they go on board the ships there; even if a ship is stopping for me, they would supersede me.

9291. Have you heard that they intend to press themselves on all the Baltic ships that your class of men have been taking?—They say so.

9292. Are they sufficiently numerous to do so?—For steamers they are, but not for sailing vessels; they never touch English sailing vessels; it is only steam vessels that they touch.

9293. *Chairman.*] They have the right to supersede you everywhere, have they not?—Yes.

9294. But they exercise their right only in the case of steamers?—Just so.

9295. Sir *Charles Wingfield.*] What is the reason for their interference with the steamers?—The steamers get done so much sooner; whereas a sailing vessel takes two days, a steamer would only take two hours perhaps.

9296. The quicker they do the job the more they earn, I suppose?—Yes.

9297. If you wish to obtain a Trinity House license, what stands in your way?—I have not served at sea for 12 months as captain, and, as I have passed the age of 35 years, I am not called upon, even had I gone to sea.

9298. You could not now obtain a Trinity House license, though you are prepared to pass the examination?—Just so.

9299. I suppose the requirements of the Trinity House render it impossible for the great majority of the free watermen pilots to obtain a license?—Yes.

9300. Is it the case that the Trinity House have not for the last 12 years licensed any but free watermen as pilots between Gravesend and London?—I think that for the last 18 years none but free watermen have been licensed.

9301. But they must have been to sea also?—Yes.

9302. I believe the Government ships are exempt from forced pilotage?—Yes.

9303. Is it the fact that the Government has appointed two free watermen to pilot their ships between London and Gravesend?—Yes.

9304. They are both watermen pilots?—Yes.

9305. That is to say, they are watermen employed to pilot Government ships?—Yes.

9306. *Chairman.*] Do you think the Government employ those men in preference to the licensed pilots?—I do not know that; all I know is that they are called upon to pilot the vessels.

9307. Have they a licensed pilot as well on board?—No; they have passed an examination at the Trinity House.

9308. The Trinity House examines them?—Yes.

9309. Do they charge the rates of the free watermen or of the licensed pilots?—I do not understand their rates; I think it was formerly under the pilotage rates, but I believe that the Government has increased the rates of those men.

9310. Sir *Charles Wingfield.*] You say that the Trinity House have examined those men?—Yes.

9311. In what way do they differ from the Trinity House pilots?—They have not been to sea, that is all.

9312. Are the Committee to understand that those two free watermen, who are regularly employed to pilot the Government ships, have not been to sea?—Just so.

9313. And yet the Trinity House insist on service at sea as an indispensable qualification to act as river pilots, do they not?—Yes.

9314 And many of the Trinity House river pilots acquire their skill on the river as watermen?—Yes, they did so.

9315. Messrs. Chapman, Martin, Ives and Landour served their apprenticeship as free watermen on the river?—They have served their apprenticeship, but Mr. Ives is not a free waterman; he did not take his freedom. I believe Mr. Pattison was bound to a freeman, but I believe he did not take his freedom up.

9316. What I understand you to wish is that you should not be liable to be superseded between London and Gravesend on coasters and on British ships trading to and from the Baltic, or elsewhere, north of Boulogne?—Yes.

9317. In fact, that you should not be superseded on the vessels that you have practically been in the habit of piloting heretofore?—Yes.

9318. You wish to be allowed to continue to do the work which you have been in the habit of doing, without being at the mercy of any other class of pilots, do you not?—Yes.

9319. You would be ready, if the Trinity House would license you, to submit to an examination, would you not?—Yes.

9320. *Chairman.*] Do I understand you that there are from 400 to 500 watermen earning about

about 50 *l.* a year by piloting those vessels?—Yes.

9321. They take vessels of small size?—Yes, colliers; Jersey vessels and Guernsey vessels.

9322. In fact, all vessels that are exempt from compulsory pilotage?—Yes.

9323. Do I understand you that almost every vessel that does not come within the compulsory size does practically take a pilot, though not a licensed pilot?—Yes.

9324. They take watermen?—Yes, they take assistants of some kind.

9325. They take assistants of some kind for the purpose of piloting their vessels up to London?—Yes.

9326. Is that only done between London and Gravesend?—Yes.

9327. Does it extend below Gravesend?—Some watermen pilots ply for vessels in the Channel sometimes, likewise the Scotchmen; they go below the Nore.

9328. Is that very often done?—Yes, very often.

9329. Should you say that half of them go below the Nore?—No; I know little about those men.

9330. Where does your business begin?—My business begins at Gravesend; I never go below Gravesend, and never have.

9331. Do you go backwards and forwards?—Yes, I go backwards and forwards; I am employed both ways.

9332. Then, as I understand you, there has been a tacit understanding between you and the licensed pilots that they will not supersede you when you are on board certain vessels?—No, there has been no understanding in any way.

9333. But, in fact, they have not done so, have they?—No, they have not done so.

9334. But they have the right to do so?—Yes, they have the right to do so on everything which we go on.

9335. And they have not done so hitherto in respect of a certain class of vessels, coasting vessels and vessels generally exempt from compulsory pilotage?—Just so.

9336. But in the case of the Baltic vessels, though the vessels are not bound to carry pilots, the licensed pilots do supersede you at times?—Yes.

9337. That is to say, when they have not got employment for themselves?—Yes.

9338. So that they have got the preference over you in every way?—Yes.

9339. And if they please they can supersede you at every point?—Yes.

9340. But it has not been convenient for them to do it with regard to a certain class of vessels?—Just so.

9341. You are afraid that if this Bill passes, they will commence a new arrangement, and supersede you whenever they find you, are you not?—Yes.

9342. And you want protection against that?—Yes.

9343. Though you have no legal status, in practice you think that you have a claim for some little consideration?—It is a thing I was brought up to when I was a boy, and I think it would be very hard, after 26 years' work on the water, to take it away from me.

9344. But your fear is that those people will supersede you in respect of those particular vessels, is it not?—I am quite sure they will.

9345. And that fear arises from the belief that they will not get enough employment voluntarily?—No, I think not.

9346. But inasmuch as all the vessels that are not bound to carry pilots take watermen, will not the vessels that are now bound to take pilots, when the Bill is passed, take men of the same kind?—They will.

9347. Then it would be competent to the licensed pilots to supersede the men with regard to those vessels, as they do now?—Yes.

9348. So that they could confine themselves to the same class of vessels?—Yes.

9349. They would have the same means of doing so?—Yes

9350. Then there would be no falling off in the employment of river pilots, would there?—None whatever.

9351. And they have no reason to be alarmed?—Not the least; it will make no change whatever in that respect.

9352. But you are afraid that they may take some employment from you?—Yes, they have said that they will do so.

9353. And do you think that they really will?—I am quite certain of it.

9354. Sir *Henry Selwin-Ibbetson.*] You have said that they supersede you occasionally now in vessels from the Baltic?—Yes.

9355. Are those vessels coming from the northern or the southern channel?—From the northern channel.

9356. I thought the northern channel was compulsory at present?—No, it is not compulsory.

9357. *Chairman.*] But I understand you to say that the practice of superseding does affect vessels coming from the Baltic by the northern channel?—Yes; but then with regard to the colliers that come north they never interfere.

9358. So that with regard to Messrs. Fenwick's vessels when they are employed in the Baltic trade, and therefore not bound to carry pilots, yet the licensed pilots insist on being employed by those vessels; but when those vessels are employed in the coasting trade, even though they find the watermen upon them, the pilots do not trouble them?—No, never.

9359. A licensed pilot has a right to supersede an unlicensed pilot at any time, has he not?—Yes.

9360. And he could supersede you with regard to those vessels when they are employed as colliers, could he not?—Yes.

9361. And you fear that after the passing of this Bill, they will take upon themselves to supersede you everywhere?—I am positive of it.

9362. Inasmuch as every vessel wants assistance of some kind, they would have the right to do it in all cases?—Quite so.

9363. Mr. *Graves.*] Can you explain why it is that a pilot is also engaged as you have mentioned, when you are taking a vessel down?—The pilotage is compulsory; but I am employed by the owner to be with the pilot to navigate the vessel.

9364. Supposing the pilotage was voluntary, would that pilot still be engaged; you say that a pilot is sent on board along with you to take those vessels down, because it is compulsory pilotage?—Yes.

9365. Supposing the pilotage was voluntary, and it was at the option of the owner whether he would

Mr. *G.T.Hinton.*

24 May 1870.

would take a pilot or not, would he still take one?—No.

9366. He would then depend entirely on you to pilot his vessel down the river, you think?—Yes.

9367. So that the law which made pilotage voluntary, would give that amount of preference to the licensed watermen, would it not?—The law gives the preference to the licensed pilots.

9368. But if the law were made voluntary, you think the owner of a ship would not then do that when he is now obliged to do so?—I cannot say how that would be.

9369. Why do you think you would have the preference over the licensed pilots?—They think perhaps that we have had more practice, and that we are better skilled in the navigation of vessels than the pilots.

9370. You charge 2 *l.* against a licensed pilot's 9 *l.*, do you not?—Yes.

9371. But suppose the system was voluntary, and suppose that the owner would dispense with the service of the pilot, and rely entirely on the services of a licensed waterman, I ask whether the preference given to you is not now very much a matter of money?—No, I think not.

9372. You think that it is a preference of skill?—Yes.

9373. In what way do you consider the skill of a licensed waterman superior to the skill of a licensed pilot?—On account of our continual practice from our boyhood; and we serve an apprenticeship of seven years to it.

9374. Is that a servitude of seven years which is required by the rules of the Licensed Watermen's Society, in order to become a member of it?—Yes, that is the servitude required by the Licensed Watermen's Society.

9375. There is no special servitude to enable you to pilot a vessel beyond that, is there?—No, none whatever.

9376. So that that seven years is simply an apprenticeship of admission into the Watermen's Society?—Yes.

9377. And I suppose every one of the 5,000 or 6,000 watermen would be considered by that servitude able to become pilots?—If they were qualified.

9378. What qualifies a licensed waterman to be a pilot?—There is a class of watermen who have been trained to it. We can trace it back for nearly 200 years; it is a branch which we have taken entirely to ourselves.

9379. Do you restrict the numbers?—No, nothing except that we must be free watermen.

9380. *Chairman.*] Is it not the fact that any one of the 8,000 or 10,000 watermen on the Thames may, if he can obtain employment, act as an unlicensed pilot?—Yes, any waterman can so act. But it is a branch of the trade that a certain class has taken up; we sprang from Greenwich, and we went on with the colliery vessels from the Baltic; the Watermen's Company has nothing to do with it, except that we have that freedom.

9381. Mr. *Graves.*] I think I understood you to say that you have passed no examination whatever to show that you are qualified to pilot vessels up or down?—None.

9382. Do you not think that it would be a useful thing if there was to be an examination by the Watermen's Company to enable the men of their own body to become pilots?—I think not.

9383. You would leave it then for any man to come in and say that he could pilot a ship?—Yes.

9384. Supposing a man came from Shields, and he said he had been many years on the river, would you let him pilot a vessel?—Yes, by passing an examination.

9385. But you think that a waterman ought to pass no examination?—A man that has been half his lifetime in the business must know a great deal about it. If necessary they should pass an examination, and every person on the river qualified should hold a license to navigate vessels; but so far as I am concerned I am for free trade in pilots. So far as the river is concerned I would throw it open, and allow anyone to come in by passing an examination on the London river.

9386. *Chairman.*] Would you do that without any regulation with regard to price?—Yes.

9387. You have no regulated price, have you?—No; it is by agreement with the owner or captain.

9388. It is a mere matter of bargain, in fact?—It is a mere matter of bargain.

9389. Mr. *Graves.*] Do the owners at all employ pilots in order to exempt themselves from liability?—I cannot say.

9390. You have stated that two men passed an examination to enable them to take Government vessels up and down the river?—Yes.

9391. What kind of examination did they pass?—The same as any other pilot would pass, I believe.

9392. In fact, those men are regular licensed pilots?—Yes, for Government service only.

9393. You do not mean the Committee to understand that merely as licensed watermen they were authorised to pilot Government vessels in preference to licensed pilots?—They were exempt from going to sea; they passed an examination at Trinity House directly the Government selected them, and they navigate ships belonging to the Government.

9394. *Chairman.*] I understood you to say that the Government took those two watermen in preference to taking licensed pilots?—I cannot say that; but they were selected by the Government to do that work out of the Watermen's Company.

9395. Mr. *Graves.*] Before they were allowed to take charge of the vessels they had to pass an ordinary examination, the same as a Trinity House pilot, had they not?—Yes.

9396. Sir *Charles Wingfield.*] But that proves that the Government did not think that service at sea was indispensable to those men's efficiency as river pilots?—Yes, I think so.

9397. Who licensed you as a waterman?—The Watermen's Company.

9398. The Corporation?—It was incorporated the year before the Trinity House.

9399. Do you pay anything for that?—I pay 3 *s.* a year to renew the license.

9400. What do the Watermen's Company do in return for that 3 *s.*?—They have hitherto given me the privilege of working on the water.

9401. *Chairman.*] Their privileges have been transferred to the Thames Conservancy, have they not, by another Bill?—I think it is about to be transferred to the Thames Conservancy.

9402. Mr. *Graves.*] Now about the rate; in round numbers you charge about one-fourth of the regular pilotage?—Yes.

9403. Supposing the system was perfectly free as you desire to have it, would not the result be probably

probably that those who charge one-fourth would get the preference of the great bulk of the work, and those who charge a greater sum for doing the work would be unemployed?—Yes, I think so.

9404. If you were a shipowner yourself, would you not be apt to employ the cheaper man?—I should be apt to give the preference to the best man.

9405. That, from your point of view, would be the licensed waterman?—Yes, but should a license be granted to me I should be perfectly satisfied with the charge made by me at the present time.

9406. Mr. *Stevenson.*] Do you pilot the screw colliers from the Tyne?—Yes.

9407. Those vessels make a voyage each way in a week, do they not?—Sometimes they make two voyages a week

9408. From the Tyne?—Yes; Mr. Fenwick will sometimes make two voyages a week, and discharge two cargoes a week.

9409. Then those steamers will come up the river a hundred times, and down the river a hundred times in a year?—They have been known to make 70 or 72 voyages in the year.

9410. Therefore, you are employed on each of those vessels 140 times a year; 70 times inwards, and 70 times outwards for each of those vessels?—Yes.

9411. Do you charge the inward and outward pilotage separately?—I think the lowest sum obtained from those vessels is 1 *l.* for a collier, or 25 *s.* for a screw collier; 1 *l.* each way, larger vessels 25 *s.*, that is 2 *l.* 10 *s.* for both ways.

9412. You multiply that by 70?—Yes.

9413. So that your charge for those vessels is about 210 *l.* a year?—Yes, not the vessels that I go with; I do not navigate those vessels, but they are navigated by the free watermen.

9414. So that each of those screw colliers making 70 voyages a year will pay 170 *l.* a year?—Yes.

9415. If those vessels employed a regular licensed pilot, they would have to pay 70 times 9 *l.*, which would be 630 *l.*?—I think each vessel would average 3 *l.* each way.

9416. That would be 420 *l.* a year?—Yes.

9417. So that there is a saving to the owner of those screw colliers of 250 *l.* a year in the employment of a licensed waterman, instead of the employment of a regular river pilot?—Yes.

9418. You say that sometimes a licensed pilot is employed on board a vessel at the same time as you are?—Yes.

9419. Why is he taken on board at all if you are competent to do the work?—It is the state of the law which compels them to be there.

9420. Then why does not that happen in all cases?—In those vessels the pilotage is compulsory.

9421. Do you mean passenger vessels?—No; I mean vessels bound to the southward; in those the pilotage is compulsory; then I am employed with the pilot on board.

9422. How are you paid in that case?—I am paid the same as if I navigated the ship without a pilot.

9423. Are you paid the same as a regular pilot?—No.

9424. How much does a regular pilot get?—I daresay the average would be 3 *l.* each way for that class of vessels.

9425. You get about half of what he gets, I suppose?—Yes.

9426. Mr. *Brassey.*] When you are engaged in one of those vessels with a pilot also on board, do you assist the pilot?—I take charge of the vessel.

9427. What does the pilot do, has he anything to do at all?—His employment would be after I leave him at Gravesend.

9428. But so long as you are on board between London and Gravesend you act as pilot?—Yes.

9429. But the pilot is a mere passenger?—Yes. I work for a certain class of vessels, and the owners employ me whether the pilot is there or not; the pilot does not stand in my way because he knows the owner's wish; we go on smoothly.

9430. The owner has to pay the pilot for nothing in that case, has he not?—Yes.

9431. You are speaking now of a pilot belonging to the class licensed to navigate between London and Gravesend, are you not?—Yes, I am speaking of both classes; the sea pilot and the Gravesend pilot.

9432. And in the waters for which he is licensed you are on board at the same time; you are in charge, and he is merely a passenger?—Yes.

9433. When an apprentice to the Watermen's Company goes to take up his freedom, there is no examination with regard to his capabilities, is there?—No, none whatever; it is merely signed by three freemen.

9434. A man who has served for a prescribed period on one of those dumb barges, gets his license as a matter of course on the payment of the fees, does he not?—Yes.

9435. Do you know what class of men are usually employed by the owners of yachts in sailing matches on the Thames, to pilot their vessels?—Free watermen.

9436. In preference to pilots?—I do not know; pilots are very seldom employed in matches; they are generally free watermen.

9437. Those free watermen are chosen because it is a task of great difficulty, and it is important to get the very best men, is it not?—Yes.

9438. Mr. *Price.*] What is the nature of the examination which you pass before you are admitted as a free waterman?—None.

9439. I thought you said that you passed an examination when you obtained the license for 3 *s.* a year?—No.

9440. You are admitted without an examination upon apprenticeship?—We are admitted after service of seven years, by the signature of three freemen. They give you a license without any examination at all.

9441. Out of the seven years, will the time have been very much employed in pilotage duties?—The whole of it.

9442. But has not the waterman other duties besides pilotage duties to attend to?—Yes; there are thousands employed merely to row barges about, and ply scullers at the different stairs on the Thames, but we are a class who have served on the Thames solely in the navigation of ships.

9443. In fact, anyone who has served on the river in any way for seven years, may be admitted as a free waterman?—Yes.

9444. Your employment is chiefly on the part of the shipowners, or merchants, or captains who employ you from personal knowledge of your qualifications?—Yes.

Mr. *G. T. Hinton.*

24 May 1870.

9445. You are frequently on board also when there is a licensed pilot on board?—Yes.

9446. But that pilot is only a passenger until you have left the ship?—Yes.

9447. But, although he is only a passenger until he has left the ship, he is paid?—Yes.

9448. He is paid as though he were doing work?—Yes.

9449. Then, in that case, the captain or owner of the vessel takes you because he wishes you to navigate the ship, although he is obliged to pay another man who does not navigate the ship?—Yes.

9450. But you said that you were very rarely if ever superseded?—I am superseded sometimes on board the Baltic vessels.

9451. But not often?—Not often.

9452. Is the reason that they do not supersede you because there is nobody to supersede you?—There is always a pilot to supersede those navigating steamers; they confine themselves principally to steam vessels and vessels towed by steam.

9453. Why do they confine themselves to vessels navigated by steam?—Because they get done so much quicker; a steamer takes three hours where a sailing vessel takes 48.

9454. And if you were to go on board a steamer, you would very likely be superseded?—I am superseded now and again on the Baltic vessels.

9455. Is there always a staff of licensed pilots about?—No, not enough to do the work; there is work enough for 200 men in London.

9456. You speak now entirely of river pilots, I suppose?—Yes, I know nothing of sea pilotage.

9457. You think that the present number of licensed pilots are not adequate to perform the duties on the river?—Certainly not.

9458. So that there is room for you?—Yes.

9459. Suppose this Bill were to pass and pilotage ceased to be compulsory in your part of the river, do you think your condition would be better or worse than it is now?—It would be worse from the active part I have taken, because they would supersede me at every point.

9460. They could not do that if pilotage were made free, could they?—I should not be a licensed pilot still.

9461. You think that you would be more suspended than you are now?—I am sure I should.

9462. You are still in favour of free pilotage?—Yes; I think there would be a better class of men coming to the work; I do not think that there is a class of men in the world like the free watermen in narrow waters.

9463. You still think you would find enough to do in that case?—Yes, should the license be granted by passing an examination, but not otherwise; I know that I shall be a great sufferer from the active part I have taken in this matter.

9464. Mr. *John Stewart Hardy.*] Mr. Thomas Raines, the man who makes 900 *l.* a year by pilotage, is a Trinity House pilot, I suppose?—He holds the waterman's license.

9465. But he is also a Trinity House pilot, is he not?—He holds a license from the Trinity House for the home-trade passenger ships, not for colliers.

9466. He is a licensed Trinity House pilot?—Yes.

9467. Do you know whether his charges are high or low?—They are the same as the watermen's.

9468. Then, I suppose his large income comes from large employment?—Yes.

9469. How does he find enough vessels in the course of a year, at 25 *s.* to 40 *s.*, to earn 900 *l.*?—I have known him to go with five ships within 12 hours.

9470. The coasting trade is not, as a rule, interfered with by licensed pilots, is it?—It is not at all interfered with.

9471. The coasting trade is about the only trade in which licensed pilots do not supersede you, is it not?—Yes.

9472. I suppose, if you are on board a ship, you do not let a licensed pilot get possession of it very easily?—I am placed there by the owner.

9473. You say that you have been on board a vessel with a licensed pilot also on board?—Yes.

9474. And, in that case, the pilot was merely a passenger?—Yes.

9475. You took charge of the vessel, did you?—Yes.

9476. Did you board a vessel, called the "Asia," in the Victoria Docks, with a pilot of the name of Mr. Dean on board?—Yes.

9477. Did you take charge of the vessel in that case?—Yes.

9478. We have another question before us, which is the alleged extreme desire of the owners, in compulsory pilotage waters, to avoid liability; do you mean to say that the owners are willing to take a pilot on board, and let you manage the vessels, when that entirely destroys the liability?—Yes.

9479. I suppose that in the water where you pilot there is no danger except from navigation; I mean there is no danger from storms and so on?—Very little; but there is an obstruction in the river, and a pilot towed a ship on to it the other day.

9480 But there is no stress of weather in the waters which you pilot in?—There is no danger.

9481. There may be, therefore, comparatively free trade there, because there is no danger of a pilot coming out in very bad weather, and driving a very hard bargain, which might be the case in the open sea; is not that so?—That is so.

9482. Free trade in the river is in a very different position from what it must be in the open sea, is it not?—Yes, there is no danger of that kind.

9483. You say that there are about 500 of these watermen?—There are over 400.

9484. Out of that number it is only comparatively few who have got a character such as you have in knowledge of the river, and who make this large income, I suppose?—Only a few of them.

9485. And, therefore, if the pilotage system was made entirely voluntary, the men who are well known would continue to make a good income, and a great many would fall off to that 50 *l.* a year which you have mentioned, would they not?—No. There are a class of vessels in the river that pilots would never interfere with; that is to say, small vessels in the coasting trade.

9486. But of the free-trade pilots, the very large majority only earn 50 *l.* or 60 *l.* a year, do they not?—Just so.

9487. Mr. *Gourley.*] Your knowledge of the Thames

Mr. *G.T.Hinton.*

24 May 1870.

Thames is practical knowledge, gained by service on the river?—Yes.

9488. You have informed the Committee that some owners of ships give you the preference in the navigation of their ships from London to Gravesend, and from Gravesend to London?—Yes; I may say that that is on account of their knowing me and of knowing my abilities.

9489. But I speak not of you personally, but of the watermen generally who are employed in that way?—Just so. The owners having great trust in the watermen, they like to have them on board with the pilots.

9490. But why do the owners like it?—On account of the skill of the watermen.

9491. Do the shipowners consider that the skill of a waterman is more than that of the licensed Trinity pilots?—In most cases. But I may say that there are first-class men among the pilots, and there are others who are not so well acquainted with their duties.

9492. How many vessels come up and down the Thames in a day?—I have started from London on low water, and I have passed a thousand sail going to Gravesend; that is to say, a thousand ships of every description, sailing barges, billy-boys, schooners, and brigs, under different directions, some under tug and some under sail, and so on.

9493. The primary reason why licensed pilots have not superseded the watermen who navigate ships is in consequence of the trade having overtaken the supply of pilots from the Trinity House, is it not?—Yes.

9494. That is to say, they are not capable of doing all the work that there is to do; I mean with regard to the number?—Just so; there is work enough for 200 men on the river.

9495. Therefore it is not correct, what another witness said here some time ago, that 70 licensed pilots could do all the work on the river?—No; all the vessels from the Channel Islands are never touched by the pilots; and all the Baltic English sailing vessels are never touched by the pilots; and then there are all the colliers from the north, they never touch them. My opinion is, that there would be sufficient work for 200 men, or more.

9496. Would the watermen who are now in the habit of navigating ships on the Thames be willing to undergo an examination at the hands of the Trinity House, do you think?—Many of them would, but not nearly the number that I stated; I do not believe there are more than 50 out of the number who would ask for a license, because they are working in a direction in which no pilot would ever interfere with them.

9497. How long are you occupied in taking a vessel from London to Gravesend?—The average time occupied is two hours and a half to three hours.

9498. You consider, I suppose, that the remuneration you receive is ample for the time you are employed?—Yes.

9499. Do you know anything with regard to the number of accidents that occur in connection with licensed pilots, as compared with unlicensed pilots on the river?—I do not think that there is much difference between them; but if the licensed watermen or the watermen pilots do more damage than licensed pilots who only go in daylight, then there is an excuse for the watermen pilots, who are supposed to go at all times, night or day; and therefore if they meet with an accident on a dark and stormy night, there is an excuse for them; but the Trinity House pilots never go except in the day time.

9500. The cargo ships are only navigated during the day and not at night?—Quite so.

9501. If this Bill becomes law, what effect will it have on the watermen?—I believe that the pilots will put the law more into force against the free watermen, and that this connection with the steamers would be superseded almost entirely by the pilots; we should nearly lose all of them.

9502. That would cause the watermen to lose something like 20,000 *l.* a year, would it not?—Not so much as that.

9503. How much do you think it would amount to?—£. 10,000 or 15,000 *l.* a year.

9504. If the Bill becomes law as it stands, the watermen would naturally look for compensation at the hands of the Government, would they not?—I cannot say.

9505. You would not think it right that the Bill should suddenly become law, to deprive a certain class of men of the means of earning a living, would you?—No; we consider that the law as it stands, is very unjust.

9506. Mr. *Cave.*] You object to the law as it stands at present?—Yes.

9507. You are not referring to the law as it would be if this Bill passes, are you?—We are asking, I think, for protection for the ships that we are employed upon, that is to say, the coasting trade and the Baltic trade; of course it is left entirely in the hands of the Committee in what way they will afford us protection.

9508. *Chairman.*] I understood you to say that you were not protected by this custom in the case of the Baltic trade?—No, we are not.

9509. Only in the coasting trade?—Only in the coasting trade.

9510. Mr. *Cave.*] If this Bill passes into a law, how will you be situated; will it not leave you very much as you are?—We shall be in a worse position than we are in now, because the pilots say that they will supersede us at every point.

9511. They have the right to do that at present, have they not?—Yes, they have that right now, but they have not put it into force against us with the colliers

9512. But the Bill would not alter your position, since you are now interlopers from their point of view?—But we should be in the hands of the pilots.

9513. And so you are now, are you not?—Yes, so we are now, and we should be then; but there is not a doubt on my mind, from the active part that I have taken in this matter, that they would supersede me at every point.

9514. The reason why they would supersede you would be that their own employment would fall off, I suppose?—I do not believe that it would make the least difference in that respect.

9515. Then you think that possibly they might supersede you if their own employment were to fall off?—There is sufficient work for those that go by steam; if you go with vessels towed by steam, and confine your living to that, there are always men there to supersede us.

9516. But if the present pilots, when the Bill passes, have as much to do as they can do, how can they supersede you more than they do now?—They have never interfered with the collier screws, but they now say they will interfere with everything.

Mr. *G.T.Hinton.*

24 May 1870.

9517. But how can they do that, if they have as much to do as they can do?—There are always pilots on demand, as Mr. Pattison justly said; there are 70 pilots engaged on the river; they are not always engaged at one time, and should they be fully employed their income would be fabulous; in fact, if such were the case they could retire in two years.

9518. If 200 vessels come up at once, how can 72 men navigate them?—That is the very reason they do not interfere with certain classes of vessels.

9519. And after the Bill passes, when 200 vessels are coming up at once, how can 72 men supersede you?—But there is myself and a few others employed as pilots, and time and science have changed us from sailing into steam, and the whole of our time is occupied in navigating steamers; there is no doubt that the pilots could do it at every point.

9520. You refer only to those pilots who navigate steamers and not to others?—Not to others. The sailing vessels are never interfered with.

9521. When you are on board a ship with a licensed pilot you are both paid, are you not?—Yes.

9522. Then the shipowner has a very much higher pilotage to pay than he would have to pay if the Bill passed?—Not as the Bill is framed; because the licensed pilot will supersede the unlicensed pilot, therefore it places us in the same position.

9523. But still it is a very considerable pilotage that the owner has to pay, because he takes both men on board, is it not?—It is a great expense on the owner.

9524. Does he do it to obtain the protection of the licensed pilot in case of collision?—I think not. I think they merely employ the watermen on account of their skill.

9525. The owner employs a waterman on account of his skill, and he employs the pilot because he cannot help it?—Yes.

9526. Mr. *Gourley.*] I believe that the pilots were not aware until very recently that they could supersede you, the unlicensed men?—No; they were perfectly acquainted with the law; but there are a certain class of vessels which they never touched, and never touch now; but others do, and they have threatened us they will do.

9527. There is no doubt, is there, that the Trinity House ought to license a great many more qualified men, considering that the present number are insufficient for the work?—There is room for that.

9528. Sir *Charles Wingfield.*] You know that the Trinity House will have power to make any rules and regulations under the Bill which they may think necessary?—Yes.

9529. Therefore, the Trinity House would have power to dispense with the rules and regulations of previous service at sea?—Yes.

9530. Do you look with any confidence to the Trinity House making any change in the rules which would be favourable to you?—If they do there are 60 odd candidates, and if they were to make extra pilots from those candidates it would be a lifetime before it came to my turn.

9531. Unless the law imposed some obligation on the Trinity House to admit you to an examination, you have no confidence in the Trinity House doing it of their own accord?—No.

9532. You say that when you are on board a ship with a licensed pilot, you are actually in charge of the vessel; the real explanation of that is, that by taking a licensed pilot on board, the owner gets exempted from liability for damage, does he not?—I never knew of a case in point.

9533. Then, what can be the shipowner's motive for having both of those men on board?—The law places the pilot on board.

9534. But a ship exempt from compulsory pilotage takes a licensed pilot and you too, how is that?—If the pilotage is voluntary, the ship is liable the same with a pilot on board as she is with me. The pilot becomes the servant of the owner, and the owner is responsible for the acts of the pilot in that case.

9535. In fact, the reason they take a licensed pilot as well as you is, that it gives the owner freedom from responsibility for damage, is it not?—No, the law is on the pilot's side, and if a pilot summonses a captain after offering his services and being refused, he says, "I will take you to the police court," and he claims pilotage or double pilotage.

9536. But why does he pay two men?—Because he places confidence in the skill of the watermen.

9537. Or is it that he thinks this, "If I do not take on you and a licensed pilot, then a licensed pilot will be coming on board and superseding you"?—I think not.

9538. *Chairman.*] Is there anything else you wish to bring before the Committee?—No.

Mr. George Duncan, called in; and Examined.

Mr. *G. Duncan.*

9539. *Chairman.*] You are a Shipowner and Underwriter, are you not?—Yes.

9540. What amount of ships do you own?—I own partly and wholly 17 ships.

9541. Are they very large ships?—Yes, some of them are over 1,500 tons.

9542. I believe that you were at sea before you became a shipowner?—Yes, I was captain of a ship for 10 years.

9543. How long have you been a shipowner in London?—Twenty years.

9544. You are also chairman of the London General Shipowners' Society, are you not?—Yes.

9545. Are the principal London shipowners members of that society?—Yes, they are generally the ordinary large and small shipowners in London.

9546. Does that society, in your opinion, fairly represent the shipowners of London?—Yes.

9547. Has that society considered the Bill before this Committee with regard to the abolition of compulsory pilotage?—Yes, they have on two separate days considered and argued it, and they came to the decision that they would support the principle of the Bill, but that some of the clauses they thought would require altering, and I was requested to convey that decision to the Board of Trade.

9548. After due consideration, they thought that compulsory pilotage should cease?—Clearly.

9549. Did they give that opinion specially with regard to the Thames, or generally with regard to the whole of the other ports of the kingdom?—

dom?—The pilotage business is one that they thought would be better if it were entirely free, just as other trades are.

9550. Will you be kind enough to state to the Committee, shortly, your own reasons for coming to that conclusion?—My reason for coming to that conclusion is, that if pilotage was non-compulsory, and was entirely free, then, I think, the men would be on their merits, and very likely a number of the men who are now pilots would give it up, and the men who are efficient pilots would find it possible to do twice or three times as much work as they do now; therefore, I think there would be really after a little time efficient pilots, who would earn considerably more money than they do now; I feel satisfied that if there was competition, and we were not forced to take men in turn, instead of getting a pilot at Dungeness as we do now, we would get him, either at the Isle of Wight or Beachy Head; I feel that necessitating us to take a pilot at Dungeness for those large ships is a very great grievance.

9551. What is the average size of your own vessels?—The average size of my ships is about 1,200 tons.

9552. In what trade are they engaged?—Principally in the Calcutta and Bombay trades.

9553. You do not think, I suppose, that the employment of pilots would fall off if this Bill passed?—No; I never send away a ship without a pilot.

9554. You would not do it in any case?—No; if I send a ship to the North, or to Cardiff, I always send a pilot.

9555. When your ships are sent to the northern ports or to Cardiff they are not bound to take a pilot?—Just so.

9556. But you always direct your captains to take pilots, you say?—Yes.

9557. And you would continue to do so on all voyages?—Yes; in narrow waters I feel it is of great importance that we should have an efficient man to take charge of the vessel when one goes below; as a rule, the chief officer would not be a sufficient pilot.

9558. Do your vessels trade to any port abroad where pilotage is voluntary?—I have been to Charleston, in South Carolina, myself; the first voyage I went they had compulsory pilotage.

9559. It is now voluntary, is it not?—Yes, the pilots are all free.

9560. I want to know if you give instructions to your captains to take pilots whenever they come into narrow waters?—As a rule, I tell them to do so whenever it is for the safety of the ship; I send also a pilot to either the Isle of Wight or to the Bill of Portland for all ships going outwards.

9561. You think that by far the greater number of the shipowners would continue that practice, even if compulsory pilotage was at an end?—Quite so; their knowledge of tides, and many other things, in addition to the safety of the vessel, expedites the voyage of the vessel materially in narrow waters.

9562. Your objection is, that the present system compels you to take a man with regard to whom you have no choice, is it not?—Yes; and that with regard to the London pilotage acts very badly; we never see the pilots and they never see us; they have no interest in us, and we are forced to take them.

9563. Your captains are forced to hand the vessels over to them?—Yes; unfortunately the captain sometimes stands by and sees a pilot do that which he believes wrong, because if he interfered he would make the owner liable.

9564. Whereas if the pilot was merely the servant of the owner, as the captain is, it would be the duty of the captain to interfere to prevent accidents?—Yes.

9565. The present law operates as an inducement to the captain to stand by to prevent any liability being thrown on the owner?—To Calcutta I have made six voyages myself, and I have cautioned the masters not to let a pilot do what he likes coming down the river, but to watch in turning the corners in place of letting the vessels shoot out into the tide. I always told them to exercise their judgment. If you see that a pilot is not doing right call his attention to it; "Do you see that ship?" or "Do you see that buoy?"

9566. But notwithstanding the instructions that you give to your own captains, you know, do you not, that the present state of the law has operated ill?—Very badly indeed. I have had some who have acted in defiance of that order; they told me they were satisfied that the pilot was doing wrong, but they knew that if they interfered they would make me liable.

9567. It has been suggested that instead of making pilotage voluntary, and therefore throwing on the owners the responsibility of the acts of the pilot, we should leave the pilotage compulsory, and still throw the responsibility on the owner; what is your opinion about that?—I think it would be a most unjustifiable act on the part of the Government. The pilots are not all men of equal judgment; God has not made them all alike, however diligent they may be; we have no election; we are very much better outwards, where we have a chance of taking a man who has the ability, as well as the desire, to do the right thing, where we have heavy ships to handle.

9568. You wish to have the same choice inwards that you have outwards?—Yes, and we get it now from Gravesend. I have no reason to find fault with the men who take my ships outwards and the men who bring my ships from Gravesend; I never find fault with them.

9569. But you wish for the same choice inwards from Dungeness?—Yes.

9570. Is it your opinion that if pilotage was voluntary, the pilots would seek all vessels inwards more than they do now?—Yes, they would go down to Beachy Head and the Isle of Wight, looking for ships. I have been frequently supplied with a Deal boatman when I have come into the channel, when the east winds prevail. I have beaten up the channel four or five times, and when I got to the Isle of Wight I have taken a Deal boatman on board; he knew the sets of the tides. There were no channel pilots, and I was very glad to get his services, and very efficient services they were in most instances.

9571. Do your vessels ever take pilots further to the westward than Dungeness; I mean Scilly Islands or Falmouth, or Cork pilots?—No, not as a rule.

9572. You do not take pilots until you come to Dungeness?—No, we do not.

9573. You have said that within your experience compulsory pilotage had been abolished at Charleston, and free pilotage established; what

Mr. *G. Duncan*

24 May 1870.

has been the result of that?—The result has been most satisfactory; that is within my knowledge. Charleston has a harbour with a narrow opening, and when pilotage was compulsory, the pilots remained in the roads, they never came outside the bar; but whe nthe vessels were close to the bar they went outside.

9574. They never troubled themselves about it, because they knew that the vessels were forced to take them?—Yes; it is a very awkward place outside there in the warm water of the Gulf Stream, and in very foggy weather I have been beating about there for two days. There were no pilots out at all the first voyage I made there, but on the second voyage they used to come 50 or 60 miles out; one or two of the best schooners trying which should put the first pilot on board.

9575. The change gave a great inducement to the pilots to seek vessels, you think?—Yes; and I believe that it would have the same effect at Dungeness and elsewhere; a pilot could get back to the Isle of Wight by railway just about as soon as he would to Deal, and he would be back to his ground again as soon.

9576. In order to throw the responsibility on the owner for the acts of the pilot, it is necessary, in your opinion, to make pilotage voluntary, is it not?—I feel that in equity it would be very hard to force a man on board, and then make me answerable for his actions.

9577. Was that subject discussed at the meeting of your society?—Yes; it was fully discussed.

9578. And was that the general opinion of the members of your society?—Yes; we felt that that very often operated first on one side and then on the other side; the party who did you damage was defended by saying, "I had a duly licensed pilot on board." In some cases there was greater security, but still the other party was very much aggrieved.

9579. In fact, it was acknowledged that great evil resulted from the present state of the law?—Yes; it was considered very unfair legislation, and the way in which the judges have dealt with it makes it most uncertain, because the judges regularly endeavour to put the blame on the ship, feeling that that is the place where it ought to be; if it can be proved that the ship's crew has contributed in any way towards the accident the judge holds the owner liable.

9580. Or if there is a bad look-out, I suppose?—Yes, if anything was not reported. I had a case a little time ago which is a good example of how the pilotage system operates at present. A vessel came home from New York, and anchored a little above the North Foreland, and another vessel anchored a little astern of her. We had a licensed pilot on board. The tide turned round at three o'clock one morning, and the ship swung round; perhaps her chain had got over the flue of her anchor. There came a squall; the ship started and drifted some distance, and the pilot did not order them to let go the second anchor, and she came down on the other ship. That looked as if it was a case where we had a duly licensed pilot on board, and therefore that the liability lay on him; but in looking at it myself, I felt that if my people were not able to give a good account of having seen that vessel, and when she came there, the judge would have said, "You should have kept a good look out." Therefore I thought it best to pay the other ship's damage; but there was a steam-tug in the case which made it a case of great complication. This other vessel slipped her chain and went astern, and so cleared the other two vessels, and she lost one anchor and 40 fathoms of chain. She had two anchors still on board, with 140 fathoms of chain. The steamboat came and offered to take my ship, which was 400 tons, to London; my captain offered 20*l.*, which the steam-tug would not accept. The steam-tug went over to the other ship, and he offered the same, and they would not agree to it; but the pilot suggested to him, "Why should you trouble about making a bargain with the steamer, because the owner of the ship which did the damage will have to pay for it? Let them settle it in London." The master did so; and I had to settle with the steam-tug also. I said to the master, "Why did you not make a bargain?" He said "The pilot told me that you would have to pay for it, and that it was of no use troubling myself about it." The steamboat made a claim for 500*l.* for doing 20*l.* worth of work, and that no doubt through the suggestion of the pilot.

9581. Was it the opinion of your society that the present state of the law acts with great uncertainty and great unfairness?—Yes, they were clearly of that opinion.

9582. And that it ought to be altered by making the employment of pilots voluntary instead of compulsory?—Yes; they thought it would be a great boon to the shipowner, and, in the main, that it would be better for the pilots.

9583. It has been stated before this Committee that if the employment of pilots was voluntary, their employment would fall off, and that there would not be a sufficient supply of competent pilots; is that your opinion?—No, there is no fear of that, I think; it is a much better paying business and much less laborious than it used to be.

9584. Is that in consequence of the introduction of steam?—Yes; formerly, when a man took charge of a heavy ship drawing 23 feet of water, he might have to wait over the stream, whereas now it is very much quicker and more certain; if they have a beating wind, they never navigate the ship with sails, but in almost every case when a pilot cannot lay his course, a steamer is employed, and the service does not take up more than a quarter of the time.

9585. So that the Thames pilots can get through more work than they used to do?—Yes, they get through more work than they used to do.

9586. It has been suggested to this Committee that the employment of tugs would relieve the shipowner from the necessity of taking pilots; is that your opinion?—I do not think it would in the main; with a certain class of the smallish vessels it might do so; but, speaking for myself, I should never let my captain bring home a large ship without a pilot.

9587. Even with a tug?—Just so. They require a man who is conversant with the width and depth of places in the river; they get up to a certain place, and they are forced to anchor for the night; the channel is not wide, and one of those large ships with 50 or 60 fathoms of chain would drift ashore, unless they had a tolerably wide place to anchor in. Very often those pilots go on board, and do not speak twice until they get to Gravesend.

9588. But

9588. But when it does occur it is for the pilot to say when the vessel is to stop?—Yes.

9589. If it is a narrow channel it would be a question of what length of cable is to be run out?—Yes, and there sometimes comes a gale of wind in the course of the night.

9590. You think it still would be necessary for large ships to take pilots as well as tugs?—Yes.

9591. That you say from your own experience?—That is my experience.

9592. Have you any experience of the northern channel of the Thames where the pilotage to a great extent is voluntary?—Yes, I have navigated ships from the Baltic, and they are not bound to carry a pilot.

9593. Do you instruct your captains to take pilots notwithstanding?—I have none of those vessels; they belong to other parties, and are coming to my consignment.

9594. Are pilots taken in those cases?—They are, as a rule, licensed watermen.

9595. Do they take pilots at the north channel?—They obtain pilots in the Swin channel, below the Nore. There could be no better proof of the way in which non-compulsory pilotage operates than there. Many of those watermen are the most efficient pilots on the river. They have to handle sailing vessels through very narrow places, and they have much experience; there are some notable exceptions among the licensed pilots, but among the unlicensed men there are a number of the cleverest men in the world.

9596. Is there any difficulty in finding competent men of that class?—None at all.

9597. Those men generally work by character or testimonials, do they not?—Yes, they have got a certificate, and they do not, as a rule, go to ask for any ships unless they have a connection, and unless they show certificates from owners or captains, which have upon the face of them: "This man did my work well."

9598. Their certificate is, in fact, their employment?—Yes, their certificate is practically their employment.

9599. Not that they have passed an examination by a particular board?—Just so.

9600. In your opinion, I presume the passing of this Bill would not be really prejudicial to the pilots as a body?—I think not.

9601. Though perhaps it may tell upon some individuals?—I have no doubt it would tell on some individuals. There are some old men, 80 years of age, at Deal who are pilots. I have had a man on board who was upwards of 80 years of age.

9602. Who was forced on board, I suppose?—Yes; and he was quite unfit to have charge of the ship on a dirty night; he would have to retire under the fresh circumstances, and men, however good they were, if incapacitated to do the work efficiently, would have to seek employment elsewhere; but good pilots would earn more money than they do now.

9603. Mr. *Graves.*] Do those watermen whom you have referred to undergo any examination?—I think not.

9604. Do you yourself employ those men?—Yes.

9605. Do you take them in preference to the licensed pilots?—I would take some of them quite as soon as I would a licensed pilot.

9606. They charge a great deal less, do they not?—They charge a great deal less.

9607. Is it not the reduced charge that induces you to take those watermen?—In certain instances it is the charge.

9608. You led the Committee to believe that you, as a shipowner, place more reliance upon the certificate of the captain than you do on a licensed qualification; do you carry that view so far as to say that you would require no examination for a pilot on the Thames?—No, I do not; I would, as far as possible, give those men licenses.

9609. By examination?—By examination; they are perfectly capable of passing an examination; it is the rules and regulations through which the license is obtained that shut these men out.

9610. But still for any pilot service on the Thames, you think that an examination is an essential qualification?—No, I do not think it an essential qualification.

9611. But do you think it would be wise to allow anyone to pilot on the Thames without having passed some kind of examination?—I have no hesitation in saying it would be preferable if the examination was put in such a way that every man of good character, and who could show that he was possessed of the qualifications necessary, if it was sufficiently open in that direction, I think an examination would be desirable.

9612. When you speak of throwing the trade open as any other trade is, do you mean that you would let any man who liked pilot vessels up and down the Thames?—Yes, most certainly; I see no difference between a man qualifying himself to be a master or a mate or a second mate, and being qualified as a pilot.

9613. You would leave it to the shipowner to be the judge of the man who was most suitable to do the work?—Yes, certainly, and as far as he is able he does so now.

9614. You do not think that an examination and a license is any security, if I rightly understand your evidence?—Yes, I do.

9615. I thought you were under the impression that an examination would not be required?—No; I said that most of those watermen, when wanting employment, and were able to show a number of certificates from persons for whom they had done their work well previously, had no difficulty in getting employment.

9616. Putting the watermen out of your mind altogether, do you consider that a man to pilot vessels on the Thames should pass some kind of examination, or would you leave it so that any man who took up the employment of a pilot would have a right to act as pilot if he could get people to employ him?—I would consider that so far, that I would put no penalty on the men who employed him, or the men who took service in that direction.

9617. I must repeat my question, whether you, as representing the shipowners of London, consider that a man, to act as a pilot, ought to have undergone some examination to show that he was qualified to act as a pilot?—Yes, that is the primary rule which we would go for, but certainly not under such stringent regulations as to the qualifications to be examined as at the present time. I wish to put that in the strongest light. I wish to convey to the Committee that the shipowners felt that though a man, however efficient and qualified as a pilot, had not been to sea, or had not any qualification outside of that which was necessary for him; then if he offered himself for examination, nothing of that

Mr. *G. Duncan.*

24 May 1870.

Mr. *G. Duncan.*

24 May 1870.

kind should preclude him from being examined.

9618. Do you carry your views of the freedom of the pilot service so far as to say that every man who offered himself for examination should be examined and licensed, if he proved himself qualified?—Yes.

9619. With no limitation whatever?—None whatever, if he was a man with a good character, and he could show that he had the qualifications necessary.

9620. How far would you go in the way of that perfect freedom of the pilot; would you allow him to charge his own rates according to an agreement with the shipowner?—Yes, I should not object to that at all, nor should I object to a fixed rate; I am quite willing for it to be either way.

9621. Are you largely influenced to that opinion by the belief that if pilots were allowed more to act on their own energies and their own intelligence, they would be more prompt and active?—They would be of much more efficient service to the shipowner; if I had the power of fixing the man who was on board the "Polly," who gave the steamboat such an opportunity of getting a good pull out of me or the underwriters, I should take care and say to my captain, "When that man comes and offers his services, you shall not take him;" and that system would cure that unfortunate position which they take.

9622. You would have perfect freedom on the part of the owner to take a pilot, and perfect freedom on the part of the pilot to offer his services to whom he liked?—Yes.

9623. If there were two vessels running up the north channel, one of 1,500 tons, and the other of 300 tons, you would leave it free to the pilot to go to the one of 1,500 tons?—Yes.

9624. Though the other vessel might be the first in turn?—Yes.

9625. You are, in brief, for perfect free trade in pilotage?—Yes; and I think that would be the best system.

9626. Is that the view, generally, of the Shipowners' Society of London?—There were one or two members a week ago who were not there at the former meetings, and I think one had been waited upon twice by pilots, and his view has been somewhat altered; but when we discussed it at two meetings there was not a dissentient voice.

9627. You wish to impress that principle upon the Committee as the view of the shipowners of London?—Yes.

9628. Have you read the Bill now before the Committee?—Yes.

9629. Are you aware that this Bill proposes no such principle?—I am not answerable for what the Bill proposes.

9630. Are you aware that the Bill proposes really to make no change in the present system, except that it leaves it optional to take a pilot or not?—My instructions from the Committee were to convey to the Board of Trade that those clauses, 5 and 6, which refer to no additional pilots being licensed, would be most injurious clauses as they stand. We agreed with the principle of the Bill, but we felt that those clauses ought to be amended in the direction that the pilotage should be free.

9631. But you have told the Committee that you are an advocate of perfect free trade in pilotage, have you not?—Yes.

9632. You must be aware that the principle of this Bill is entirely different from perfect free trade in the light in which you look at it; are you aware that the local authorities have had power to make the free pilotage which this Bill proposes to give?—They have never exercised that power, at all events.

9633. This Bill, as I read it, proposes to leave the whole system of the pilotage service of the Thames exactly as it is, at least, it does not seek to alter it; but it makes this change, that it is optional on the shipowner to take a pilot or not; now that is a different principle from that which your committee has discussed, therefore I ask which principle is it that you advocate?—The primary principle of the Bill; that is to say, doing away with compulsory pilotage, and that clauses should be introduced afterwards where clauses were necessary. We do not approve of all the clauses, and we are in great hopes that this Committee will require something more than that; we hold that we ought to have some voice in the appointment of those pilots. I am bold enough to say that we are in hopes that the shipowners and others will not be left in the position in which they are in now, and be compelled to take men, in the licensing of whom they have no voice at all; and when those men do what is wrong, and we think that we are aggrieved by them, we have no power or influence, except through the two boards, to deal with them.

9634. *Chairman.*] Still the first step in that direction is the abolition of compulsory pilotage, is it not?—Just so.

9635. Mr. *Graves.*] Do you consider that, speaking as a shipowner, it would be a fair law to leave all the obligations as they now exist upon the pilot, to be on the stations at all times and at all hours, and in all weathers, and leave it entirely a matter of option on the part of the shipowner to take a pilot or not; do you advocate that view?—Yes, I do; I feel that he is just as safe in his occupation as a miller is; he is employed in a trade which is a necessity; wherever there is a demand, there would be a supply.

9636. Is that your idea of free trade?—I will not enter into that question.

9637. Now you have said that you wish compulsory pilotage to be abolished; has the liability of the shipowner anything to do with your view of the question?—None at all with my view of the question.

9638. Why did the shipowners' committee arrive at the conclusion to abolish compulsory pilotage?—We have very serious grievances; I could give you three cases within the last two years, of my own ships with valuable cargoes on board, one worth 170,000 *l.*, that was nearly lost because I could not get a pilot, and that for the reason that it was compulsory; my master was tempted to come up to Dungeness in a heavy gale of wind, thinking that he was sure to get a pilot; the pilot was up in the corner as far away as possible; he sailed up close to the vessel and stood out again, and kept the ship lying-to until it was nearly dark; a Dutch pilot boat had been sailing around him, and could have put a dozen pilots on board; when the night came on with a bank under his lee, he had to make up his mind to do something; he had to go round outside the Goodwin, and haul the ship on a wind, and reach up as far as he could, and let go his anchors, with 80 or 90 fathoms of chain.

9639. What would have been the result in your opinion, if you had a free system of pilotage?—

age?—I am satisfied that the man would have got a pilot in that case 30 miles further down.

9640. But it is not proposed to alter the cutter stations at Dungeness at all, but to leave them exactly as they are?—We hope that when you are dealing with compulsory pilotage, witnesses will give you such information that you may go further.

9641. Sir *Henry Selwin-Ibbetson.*] That is to say, you hope this Bill will lead to a better Bill?—Yes, I thought that the clauses would be amended.

9642. *Chairman.*] You think that we should go further?—Yes.

9643. But you would rather have this than nothing at all, would you not?—Yes.

9644. Mr. *Graves.*] Do you think that in every part of the world, pilotage should be of that free character that you speak of?—Yes.

9645. In Calcutta, for instance?—Yes; it is nearly so.

9646. And in the Mersey?—Yes.

9647. Where would the capital come from for keeping up those pilot cutters, which, according to your view, would go down to the Eddystone?—It would come from where the capital comes from for fishing for oysters and things of that kind; at Brightlingsea there are 150 pilot boats, and they are beautiful craft.

9648. But there is this difference between pilots and oysters, it is not optional with the oysters, though it is with the shipowner?—And it is not optional for ships to lay out in the Atlantic either, they must come into port.

9649. You have said that you consider it a great evil to have no choice of pilots?—Yes.

9650. That only refers to below Gravesend, I suppose?—Just so.

9651. Above Gravesend you have perfect choice of pilots, have you not?—Yes.

9652. You wish to preserve the Gravesend station, and that system of choice above Gravesend?—I should be glad that the pilot who brings a ship from the sea should bring her to the dock, if necessary. There is no reason for putting the pilot on shore at Gravesend.

9653. Is it not the fact that nearly all the shipowners have a choice of pilots at Gravesend?—Yes.

9654. Are there not men who regularly bring down Mr. Green's vessels?—Yes. I have one man who takes all my ships.

9655. Outwards, you have no grievance?—None at all.

9656. It is only inwards?—Just so.

9657. In a dark winter night, running up to Dungeness, how are you to ask for John Smith or James Brown, and wait 48 hours for him?—If he had served me ill before, I would tell my master not to take John Smith or James Brown.

9658. Would you instruct your captain to wait there, under all circumstances, for your own pilot to take the ship?—No. But if I knew the name of that man who was on board the "Polly," I would give my master instructions not to take him under any circumstances, and wait until he got another man, and I will guarantee that he would not do it again.

9659. That is one man out of 150; but is selection possible, under ordinary circumstances, coming inward into the Thames?—There is a certain amount of selection quite possible.

9660. But, in the broad sense of the term, do you mean to say, as a practical seaman, that selection is possible, under ordinary circumstances coming into the mouth of the Thames in heavy weather?—In many cases it would be quite as possible as it is outwards. It is true that I cannot always get the man I want, but in the main I should get the pilots I wanted. I should have no wish to exclude any. A large portion of the pilots are very effective men; but the fact that I had the power of excluding them would make them more careful.

9661. Are the Committee to understand that you see no difference between selection inwards and selection outwards?—There is no doubt a material difference; but the power of selection would have a corrective influence upon them. This is not an isolated case; it is notorious that when we have to obtain help from the cutters, or to get an anchor brought on board, or otherwise, that very likely the pilot is on the side of the person who is coming to give his service; and that because he has no interest in us we never see him, and we can neither appoint nor displace him.

9662. The greater portion of your objection to the principle of compulsory pilotage arises from the fact that those pilots are forced upon you against your will, is that so?—I imagine that is the only ground on which I could object.

9663. Suppose the law was so altered as to require all owners to pay pilotage, and leave it to the owner to take over a pilot or not, would not that get over the difficulty?—That would be most unjust; the shipowners have a very hard battle to fight now, and I cannot understand why the pilots should be justified in putting themselves as a burden on any other class. I cannot see if their services are not required why the shipowner should be forced to take them.

9664. Still you would consider it just to the pilot that he should be required to be there at all times, whether you take him or not?—It is quite fair that a doctor should go to the expense and trouble of getting his peculiar education, and that he should be ready to come to me when I want him; but it would not be fair that I should be compelled to take a doctor whether I wanted him or not.

9665. Did you call the association which you represent together in order to express any views on this Bill; the society, and not the committee?—No, the committee.

9666. The society have never been called together to express their views with regard to this matter?—No. As a rule there are 33 members, and the committee are the society; but, except in a very extraordinary case, we never have a public meeting.

9667. But still what you say to-day represents the views of the committee, I suppose?—Yes.

9668. You have said something about some one making some objections; was it a unanimous resolution that was passed?—Yes, it was; nobody took any objection, and I suppose that would be considered a unanimous resolution. Two gentlemen who were there last week said that they did not approve of it; one of them said that he had been waited upon by two deputations of pilots, which had influenced his mind. Mr. George Marshall was there; he gave evidence before, and he held his old views, and we had a gentleman from Hull who, I believe, had been examined, and he objected; but the body of the committee were of the same mind as they were before.

Mr. *G. Duncan.* 24 May 1870.

9669. Was that resolution agreed to by more than one-half of your committee?—It was agreed to when there were 13 members present.

9670. How many members are there on your Committee?—Thirty-three, but as a rule we seldom have more than 16 present; it was a full meeting.

9671. You have made some remarks about the constitution of the local authority; are you dissatisfied with it?—I am not prepared to say that we are not satisfied with the local authority, in the direction of finding fault with the local authority, because we know nothing about them, that is to say, they conduct their affairs without our having any voice, or any knowledge, or any information, in any way.

9672. Do you consider that the present system of pilotage on the Thames an efficient or an inefficient one?—It works just as badly as it possibly could do.

9673. Do you consider that the local authority is in any respect responsible for that inefficiency?—If the shipowner had to deal direct with the pilot, I believe, it would be very much better.

9674. In your opinion should a change be made in the local authority?—I think so.

9675. In what direction do you think that that change should be made?—I think that the parties who employ pilots should have some voice in the management of their affairs in appointing them, and dealing with them, when they do that which we believe to be wrong.

9676. You consider that there should be more of a representative character in the pilotage authority?—Yes, there is a double authority which operates very badly, that is to say, the pilot vessels are in charge of parties appointed by the Trinity Board, and when we make a complaint to the pilot why he did not come on board our ships, he says, "The master of the cutter would not put me on board," and when we complain to the Trinity House they say the pilot would not go.

9677. Have you ever made any representation to Parliament, or the Board of Trade, on the subject?—No. I once thought I would, but I was sufficiently loyal not to step over the Trinity House. I sent in two representations.

9678. Suppose you had a representative board to attend to the commerce on the Thames, would you see any great evil in leaving that Board to adopt what system of pilotage it pleased in its own waters; that is to say, suppose it was composed of the trade and commerce of the Thames, do you not think it might decide what was the best system of pilotage on the Thames?—I would leave everything to their management and control, except the question whether the pilotage should be compulsory or not.

9679. That you would like settled?—That I would like settled.

9680. Your view is, that compulsory pilotage should be entirely abolished?—Yes.

9681. Are you aware that in waters where it is usual to take pilots, a shipowner sending a ship to sea, without a pilot, renders her unseaworthy?—I think not.

9682. If you thought that was the law, would it alter your view?—I am an underwriter; if I was told that a ship that was lost had no pilot on board, and if I was satisfied with the conduct of the vessel, or that the master had sufficient knowledge of his business, I should not feel that any injustice was done me.

9683. Are you aware that the Merchant Shipping Code proposes to make it a misdemeanour if a shipowner sends a ship to sea in an unseaworthy state?—I should not be disposed to put burdens on the shipowners without considering how they can bear them.

9684. You do not like burdens, I suppose?—We do not like burdens laid upon us by gentlemen who do not understand their bearing; we are willing to bear all legitimate burdens, but not burdens that must produce evil results.

9685. But suppose the law was such that a ship was considered unseaworthy if she went to sea without a pilot in such weather as it was usual to take a pilot, would you regard it as right that the obligation to take a pilot should be done away with?—In that case it could not be, because there would be another law applying in that case.

9686. You have instanced the north channel as an illustration of the advantage of a voluntary system of pilotage; are you at all aware of the number of vessels that come in through the north channel?—I should say that there are many thousands in the course of the year; I think that I have passed 500 vessels in a tide.

9687. Are you aware that the proportion of vessels that take pilots is very much smaller in the north channel than in the south?—I am aware of that, and there is a good reason for it; there are a large number of men who are reckoned as most efficient pilots in the north channel in the coal trade; they have beaten over the Swin, and every part of it for nearly 20 years.

9688. Do you consider it an advantage or a disadvantage that pilots should be allowed to own on shore in steam-tugs?—If we do away with the compulsory pilotage, it would be most unfair to interfere with the men earning their livelihood in the best way they could.

9689. You do not approve of this compulsion?—Certainly not.

9690. Mr. *Stevenson.*] To what should you say the large employment of unlicensed pilots is due?—To the fact that they work the vessels efficiently and reasonably.

9691. Do you ever employ North Sea pilots in taking vessels between the Tyne and the Downs?—Yes, I have a man who goes with my ships from the North regularly, and he is as efficient a pilot as any man that I know; he took a 1,500 ton ship down to Portland, and he came from Sunderland with a new ship, and took her down to Plymouth.

9692. What did you pay him for his services?—£. 12, I think.

9693. What would be the regular charge by a Trinity House pilot for taking a vessel from Orfordness to Gravesend; first, however, let me ask of what draught of water was that vessel?—Twenty feet nine inches; I could not have sent my branch pilot with that vessel without paying him 50 *l.*

9694. Whereas, the North Sea pilot, who knows the way perfectly well, did it for 12 *l.*?—Yes; I may further state that that man goes with small vessels regularly to Cardiff, and I have just as much confidence in him as I have in any of the other men.

9695. Mr. *Brassey.*] There is a considerable difference in the pilotage rates as between sailing vessels and steamers now, is there not?—No, if a ship is towed, it is the same; a sailing vessel, if towed, pays the same pilotage as a steamer.

9696. But

9696. But as between steamers and sailing vessels, there is a reduction, is there not?—Yes, there is a reduction.

9697. But the reduction is not in proportion to the diminished time and labour spent on the work?—Certainly not.

9698. You are very anxious that the shipowner should be represented in the pilotage authority, are you not?—Yes.

9699. Do you see any difficulty in arranging that that representation should take place at the present Board of the Trinity House?—I see no reason against it.

9700. It might be reconstituted, and be a representative board?—Yes, it might be reconstituted, and I have very little doubt that the thing would be very much better managed by having other parties there, as we have a representation at the local board now; we have parties there, and I imagine that arrangements could be made that according to the tonnage of the shipowner he should have a certain number of votes; the Board would be appointed in a measure by those who owned property, and who gave employment to the men.

9701. Mr. *Hardy.*] Do you ever, when compelled to take a licensed pilot, take a waterman in addition, in consequence of your want of trust in the licensed pilot?—We do, to assist.

9702. In that case, does the pilot go as master?—No, the pilot has charge of the ship, and the waterman has more duties than one, and then the master takes both with him, in case it should be wanted to run out a rope, and as he has knowledge of the river as well as the pilot he very often takes the helm.

9703. But you do not let him take charge of the ship?—Certainly not.

9704. Mr. *Grieve.*] How is the Shipowners' Association committee elected; is it from the general body of shipowners?—Yes.

9705. Is there any qualification?—No, they are proposed in the ordinary way.

9706. Are the 33 members on the shipowners' committee the leading shipowners of London?—I think they are.

9707. Do you know Mr. John Taylor, who gave evidence before this Committee; he does not consider that your committee would be a fair representation of the shipowners of London; do you concur in that opinion?—No, not at all. I suppose it is Mr. Taylor of the firm of Mackay and Company.

9708. Do you consider him a fair representation of the shipping interest of London?—No, I should think not; he has not been very long here.

9709. He managed a tug company in Liverpool before he came to London, I believe?—Yes, I believe so. Practically, I should not consider that he was a shipowner; he may hold shares in vessels, but with regard to managing and having knowledge of shipping (and without saying anything to the disparagement of Mr. Taylor's other qualifications), I should not consider he was a representative of the shipowners in any case.

9710. Your committee is quite as well fitted to speak here as Mr. Taylor, I suppose?—I should consider a great deal more so, both by the stake they hold and by the experience they possess.

9711. You have said that you have never allowed your master to give up the entire command of your ship under any circumstances, no matter what the liability?—No, I tell them to keep their eyes about them to see to the pilot's steering, and if they see another vessel coming down, his duty is to say, "Do you see that ship?"

9712. You have been up and down the Hooghly frequently, I suppose?—Yes.

9713. It is not unusual for a pilot to run a ship ashore there, is it?—They are very efficient and clever pilots, but they get somewhat careless in coming round the corners.

9714. Is that one reason why you are very scrupulous in having your master in charge when the pilot is on board?—I have seen cases where a little foresight would save the ship from going ashore, when in the other case she would have made a shoot, and before the anchor could be let go she would be ashore on the other side.

9715. Sir *Charles Wingfield.*] The system in Calcutta was changed about 15 years ago; what was called the Calcutta pilot service, or the close service, was thrown open?—Yes.

9716. And now the result is, that as many men offer themselves as are competent to pass an examination?—Yes; they allow those men to work on their own account, the Government getting a proportion of their earnings.

9717. But there is no restriction with regard to the number?—None whatever.

9718. Were you in the room when Mr. Hinton, a free waterman, gave his evidence?—Yes.

9719. Do you think his apprehensions are well founded, that in consequence of the part he has taken in this matter the licensed pilots will chase him off all the ships in the river?—That is very likely. I have no hesitation in saying that we used to be very much annoyed by them at one time; they are now better behaved; they would offer their services on board vessels that were going to the North, and when they were refused they would go on shore; and they went to the magistrates and sent a summons down to the North after the vessel, and that repeatedly, and acting most vindictively; that was a thing that was most annoying. They do not do it, as a rule, now; because, as a rule, they are better behaved, and there is a better understanding between the licensed and the unlicensed pilots.

9720. But, in consequence of the unlicensed men, Mr. Hinton and other men, who are the leading men among them, having taken a strong part in representing their case before this Committee, do you think that they will have to undergo persecution?—There is something in human nature that would indicate that that would be the case, unless some provision is taken against it.

9721. You would carry out the same principle as prevails in the Hooghly, that as many men as could prove their competency on examination should receive a certificate?—Yes; the number would be regulated by the demand.

9722. The attempt of the Trinity House to regulate the number has been ineffectual, you believe?—Yes.

9723. They have licensed 74 men, whereas it is notorious that it would require three times 74 men to do the work on the Thames?—Just so.

9724. If it is left to the Trinity House to frame any regulations they please with regard to the pilotage of the Thames, do you think there is any reason to suppose they will alter their policy?—I do not know what the pressure from without may induce them to do; but, judging from past experience, we have no reason to believe that they will alter their mode of operation. I think certainly the present arrangement is most injurious.

Mr. *G. Duncan.*

24 May 1870.

One man says, "It is not me, it was the captain of the ship," and when you go to the Trinity House you are told that it was because the pilot would not go with the boat.

9725. With regard to the Thames above Gravesend, do you think it is at all necessary that a man should have served at sea to make himself acquainted with that part of the river?—Not at all.

9726. *Chairman.*] Have you any experience of other ports than London?—The first time I commanded a ship I used to go to Dundee and to the Baltic. The Tay is difficult of navigation.

9727. Do you know Hull and Liverpool?—I know Liverpool; I have gone two or three voyages there myself.

9728. Is there any reason why Liverpool should be exempt from any rule laid down with regard to the Thames and other ports?—I see no necessity for it, although I am bound to bear testimony that the management of pilots there is very much better than it is in the Thames. The stations are well out to the westward, so you get a pilot sufficiently far out to give you room to lay to.

9729. But you see no reason to exempt them from the rule that the employment of pilots should be voluntary, do you?—No; the shipowners would be better supplied, and the pilots would become better men; one would compete with his neighbour and would not have to wait for his turn; competition would induce them to come out and offer their services.

9730. The Shipowners' Society find fault with two of the clauses, but notwithstanding that they adopt the general principle that pilotage is to be voluntary instead of compulsory, do they not?—Yes; but they are in hopes that those clauses will be amended.

9731. Have the Shipowners' Society considered the difficulty of dealing with the question, supposing that everything was made free?—They have, and they think it very possible that you might draw on the general exchequer.

9732. That is a question of compensation that raises some difficulty, is it not?—No doubt it does, although there are many privileges of the same kind that have been done away with by Act of Parliament, where parties did not obtain compensation; still they feel that with regard to those men who have qualified themselves for this occupation, and are somewhat advanced in life, it would be a fair and just thing to consider them in an alteration which may be made for the general good.

9733. I think what they objected to mainly was the restriction in the number?—Yes; it would destroy all the benefit to us.

9734. But that restriction in number is only up to such a time as would enable the Board of Trade, or the Treasury, to determine what number of persons should retire from the list of pilots?—Yes; but the almost certain consequence of that would be, that the pilots who are there would not earn the money which they might do.

9735. But the Board of Trade would not give them compensation unless they could prove that they had exerted themselves during that interval, would they?—It would be very difficult to prove that. To keep a strict watch over them would be very difficult to carry out.

9736. But it would be so provided, that all are to be compensated, after that time; but inasmuch as only a certain number are to be withdrawn from the list, and these are not to get full superannuation equal to their present income, there would still be inducement with the greater number of the men to seek employment?—The Committee thought that if you took the responsibility of compensation, the thing being entirely thrown open, I daresay all the men would not; but if you judge of the earnings of the one by the earnings of the others who had exerted themselves, we do not see how you would be able to do that without having the thing thrown open; I have spoken to some of those men; they have come and seen me, and tried to change my opinion, but I have not changed my opinion. I should state that in my judgment those that were active men would earn much more; I do not mean men each earning 500 *l.* a year, but allowing compensation to be made to those who had really exerted themselves; then we think the compensation would not be much.

9737-8. Then what was the principle of compensation that was advocated in your committee?—We did not form any plan; but we supposed that it should be in proportion to what the men could earn before; if it could be shown that after trying their very best to return to the service again, it was shown that they earned very much less, we think that they should have one-fourth, or something of that kind.

9739. That is the principle of the Bill, is it not?—Yes, we approve partly of the principle of the Bill.

9740. But that question of limitation in the number in the interval you object to?—Yes.

9741. But you understand, do you not, that it is only to apply during such time as compensation is made, and after that the pilotage authority would be free to license any number that they think fit?—No, we did not quite understand that.

9742. But that limitation of number is only to apply to the time when the claim for compensation is made, and after that claim has been entertained, and a certain number of men have been superannuated, the local authorities would have the same power as they now have of licensing any number of men, and they might, if they think fit, throw it open to anybody; did you understand that?—No, we did not take it in that light. I now see that the Bill would carry that, but in the Bill it is stated, that on and after a certain day, no further pilots should be licensed.

9743. You think that the explanation which I have given, somewhat modifies your opinion with regard to the effect of those clauses?—No, I still think that they would operate badly; I do not think that we shall get a good and efficient pilotage service, conducted in a way that would be satisfactory to both parties, until it is made entirely free.

9744. But you recognise this Bill as, at all events, a long step in that direction, do you not?—Yes.

9745. Mr. *Graves.*] Are you aware that the shipowners of Liverpool take an entirely different view of it from your view?—Yes.

9746-7. Are you aware that at New York, where they have got a system of going out hundreds of miles from the shore, the system is entirely compulsory?—That I am not aware of; I know that at Charleston it was not so when I was there, and that they did not go out when it was compulsory.

Mr. Robert Macfaran, called in; and Examined.

Mr. *R. Macfaran.*

24 May 1870.

9748. Mr. *Graves.*] You are a Shipowner at Belfast?—Yes.

9749. You are interested both in the foreign and the coasting trade, I believe?—Yes.

9750. Who controls the pilots at Belfast?—The Harbour Commissioners.

9751. How are they appointed?—They are appointed by the ratepayers.

9752. Do you consider that the harbour commissioners represent the trade and commerce of the port of Belfast?—No, the owners of shipping.

9753. Are you in favour of the Bill now before this Committee?—No, I am against the Bill.

9754. You prefer that the system of pilotage should remain as it is, compulsory?—I do.

9755. Will you be kind enough to give to the Committee your grounds for that opinion?—On account of our crooked river, and the number of vessels coming up in one tide, perhaps there are as many as 20 or 30 coming up in one tide; if a stranger vessel was coming up without a pilot that stranger captain might put that vessel on the ground, and the tide might hang her across the river, and the next vessel in coming up trying to pass her might get aground too, or else do damage; and others coming up might do damage to one another.

9756. Do you know instances in which such confusion has occurred in your river?—Yes, often; this last winter there were two blocks.

9757. Were any damages done to the vessels?—Yes, a great deal.

9758. In what way was that damage caused?—By one vessel rolling against the other.

9759. What is the breadth of your river?—Two hundred feet, about 65 yards.

9760. Is that at high water?—Yes.

9761. What is it at low water?—One hundred and thirty feet.

9762. What length is your river?—It is about three miles long.

9763. I suppose the Lough of Belfast is a perfectly easy one to run into?—Yes, it is perfectly easy to run into.

9764. For that place you require no pilot, I suppose?—None whatever.

9765. What is the limit of the pilot system of Belfast?—It is about 10 miles from the harbour, that is to say, from Gray Point to Carrickfergus.

9766. I suppose the only point in which you consider it necessary to preserve compulsory pilotage is in the river itself?—Yes.

9767. Is that because you conceive it would be difficult to preserve the navigation free from injury if vessels were allowed to go up and down without a pilot?—Yes.

9768. Have you suffered much injury yourself in your vessels going up and down?—Yes, I have suffered a little at different times.

9769. It is where the traffic is crowded and the river tortuous that you would desire to preserve the compulsory system of navigation?—Yes.

9770. The preservation of life does not enter into the question?—No, there would be no danger to life.

9771. Is your view that generally taken by the shipowners of Belfast on this question?—The most part of them take the same view as myself, but, of course, there are some of them who differ from me.

9772. Are you afraid that the owners would not take pilots if the system was made partly voluntary?—I am sure that numbers would not take pilots under the voluntary system.

9773. So that the river being rendered more dangerous in its navigation, a good many of the present pilots would cease to find the same employment, would they not?—I think that all the young men would cease as pilots.

9774. And the old men would remain on?—Yes, the old men would remain on.

9775. Is it your opinion that the efficient pilot service of Belfast would not be maintained under a voluntary system of pilotage?—Yes.

9776. And that the number of pilots would diminish?—Yes, they would diminish very much; we have only 20 or 21 pilots altogether.

9777. Take a vessel of 100 tons, what would be the rate of pilotage for that vessel in your river?—About 12*s.* 6*d.*

9778. The rate of pilotage being so moderate is not considered at all a tax on the shipping, I suppose?—No.

9779. Do many steamers come up and down?—A great many.

9780. And, of course, that adds considerably to the difficulties of navigation?—Yes, very much.

9781. Do those vessels take pilots?—The masters of steamships, if they are not pilots, they take a pilot up or down.

9782. I suppose your vessels are nearly all towed up and down?—Yes, if the wind is ahead; but, if the wind is fair, we sail up and down.

9783. In that case tugs are not employed at all?—No.

9784. What is the tonnage of the largest vessel that you own?—Six hundred and ninety-seven tons.

9785. Mr. *Stevenson.*] Have the Harbour Commissioners met to consider the question of compulsory pilotage?—Not that I know of.

9786. I believe that they sanctioned your coming here to state your own case?—Yes.

9787. But they did not give any opinion themselves with regard to the question of compulsory pilotage, did they?—Not that I know of, but I believe that the Harbour Commissioners are in favour of compulsory pilotage.

9788–9. Mr. *Brassey.*] Have the Harbour Commissioners of Belfast had a meeting?—Yes, they had a meeting last Tuesday, but I do not know the result of that meeting.

Mr. James Cochrane, called in; and Examined.

Mr. *J. Cochrane.*

9790. Mr. *Graves.*] I believe you are a Shipowner at Belfast?—Yes.

9791. How many vessels do you own?—I own seven vessels altogether.

9792. You have come here to give evidence before this Committee in favour of the present system of pilotage at Belfast?—Yes.

9793. You desire that that system of pilotage should be maintained?—Yes.

Mr. *J. Cochrane.*

24 May 1870.

9794. Why do you desire that?—To avoid collision and confusion in the river.

9795. Are you afraid that, without this compulsion on the captain to take a pilot, you would have more confusion in the river than there is now?—Yes, both confusion and collision.

9796. Do many accidents occur now on the river?—Not a great many of any consequence.

9797. Is it your opinion that the present system of compulsory pilotage is necessary to maintain the present immunity from accidents in your river?—Yes; so far as my judgment goes, it is necessary.

9798. Have your vessels met with accidents going up and down the river?—Nothing of any consequence in the last 18 years.

9799. Have you come here as a witness solely because you believe that if the system is altered in the narrow water of the Belfast river, you may be rendered liable to more loss and accidents?—Yes.

9800. Is that your only motive for coming here?—Yes.

9801. Have you had many opportunities of talking this matter over with your fellow shipowners?—No, I have not; the owners have an opportunity of passing there as masters of ships for a small amount, and they give them a pilot certificate.

9802. Any man who can take a vessel up and down has only to go to the Harbour Commissioners and ask for a license?—Just so.

9803. And he obtains it?—Yes; he is examined by the head harbour master.

9804. What vessels have you now in the Belfast river that are exempt from taking pilots?—I think vessels of about 30 tons' register and downwards are exempt from pilotage.

9805. Are vessels in ballast exempt from pilotage?—Yes.

9806. Whether going inward or outward, or both ways, I suppose?—It is generally the cargo inwards which takes a pilot.

9807. Do they go down the river without pilots?—Yes.

9808. Do they go safely?—Yes.

9809. Why would not the others go safely?—Those go down one at a time. When we have long head-winds we have perhaps a large fleet coming up from the English and Scotch side.

9810. The outward-bound vessels are more spread over the tide than the inward ones, are they not?—Yes.

9811. What class of men are your pilots?—Some of them have been seamen for about 23 years; they have to serve seven years' apprenticeship, but before that they are seamen, that is to say, river men.

9812. Was the pilotage of Belfast ever voluntary within your recollection?—I cannot answer that.

9813. Are the pilots of Belfast an intelligent, seaman-like class?—Yes, they are an intelligent and sober class of men, in general.

9814. And the shipowners, so far as you know, are satisfied with them under the present system?—So far as I know.

9815. You heard the evidence of the last witness, did you not?—Yes.

9816. Do you agree with him generally with regard to the danger to the river part of the Belfast navigation?—Yes, I come to the same conclusion as he did.

9817. Is there any other point which you wish to mention?—No.

9818. Mr. *Stevenson.*] I think I understand you to say that you are a shipowner?—I am.

9819. Do you attach any importance to being exempt from liability to damage when you have a compulsory pilot on board?—We are liable to 25 *l.* in the event of a collision when a pilot is on board.

9820. But when you have a compulsory pilot on board, you, as shipowner, are free from liability to anything done in consequence of the act of the pilot, are you not?—No, I think not.

9821. Are you not aware that the law is that if a vessel is in charge of a compulsory pilot and runs down a vessel which is not in charge of a compulsory pilot, the owner of the first vessel is free from liability?—Yes.

9822. Are you willing, as a shipowner, to take upon yourself the liability of any accident caused by a pilot, and still to be compelled to take such a pilot?—Yes.

9823. Do you think that in every case the shipowner should be responsible?—Yes.

9824. That is to say whether the pilot is forced upon him or taken of his own choice?—Yes.

2825. Mr. *Gourley.*] Do you think that the shipowner should be responsible for the negligence of his own officers, for acts over which he has no control whatever?—Yes, if it was done through neglect.

9826. You are willing to take all the responsibility of the acts of your servants upon your own shoulders, are you?—We have to do it.

9827. But do you think it is right?—Not if we had any other way of meeting the difficulty.

9828. I suppose you do not think it is fair you should be responsible for the actions of a captain whom you put on board one of your vessels, and who by negligence causes damage by collision or otherwise?—But where are we to go to to obtain compensation.

9829. Is it not the case that vessels are taken up to Belfast by steam-tugs?—In head-winds only.

9830. Then is the navigation sufficiently easy to go without a pilot?—Yes, but it is dangerous even with tugs; one master might cross another; the pilots assist one another, and keep clear of damage to the best of their ability.

9831. If you had a voluntary system of pilotage, would you not have as good a supply of pilots as you have now?—No, my opinion is that they would leave; they would be so poorly paid that it would not be worth their while to remain there.

9832. If it were a dangerous pilot-ground you would always have a supply of pilots, would you not?—We would not have enough to support them.

9833. You do not find any want of captains for your ships?—No, there are plenty in the coasting trade.

9834. In all trades are there plenty?—Yes, there are plenty now; but at one time there was not.

Friday, 27*th May* 1870.

MEMBERS PRESENT:

Mr. Cave.	Mr. Shaw Lefevre.
Mr. Gourley.	Mr. Norwood.
Mr. Graves.	Mr. William Philip Price.
Mr. Grieve.	Sir Henry Selwin-Ibbetson.
Mr. John Stewart Hardy.	Mr. Stevenson.
Sir John Hay.	Mr. Charles Turner.

The Right Honourable GEORGE JOHN SHAW LEFEVRE, Esq., in the Chair.

Mr. Patrick Benson, called in; and Examined.

9835. Mr. *Graves.*] You are a Pilot in Belfast?—Yes.

9836. How many years have you been in the service?—Twenty-three years.

9837. I believe the pilots of Belfast have petitioned the House of Commons to be heard against the Pilotage Bill?—They have.

9838. Do they feel that there will be a decrease of their receipts if this Bill passes?—They do.

9839. Upon what ground do they come to that conclusion?—On very good grounds. It was tried on not so bad a principle as this, and they lost a great deal of work, till they were reduced to live on half their earnings.

9840. They are afraid that their income would fall off to the extent of one-half if pilotage was made optional?—Yes, that is it.

9841. I believe all outward-bound vessels in ballast are exempt from pilotage?—They are.

9842. Do they take pilots?—They do not all.

9843. What class of men take those vessels down?—The hobblers; they generally lounge about the quay, and they are worse than what we usually term hobblers, for a man that does not know one rope from another will steer a vessel down.

9844. Are you afraid that if pilotage is made optional there will be the same class of men bringing vessels up?—Yes.

9845. If one of these men is capable of taking a vessel down, why is he not capable of bringing her up?—They have served no time to it; and they are men who will take upon themselves to do things that they are not fit to do, to get the lumping or the brokerage of the vessel.

9846. Is there the same difficulty of bringing the vessel down as there is in bring a vessel up?—Yes; but generally vessels go down light in ballast.

9847. Do they go down singly, or in fleets?—They go down in fleets, *i.e.*, two or more in tow, and they go down singly just as they are ready to go.

9848. I believe your river is very narrow for about three miles, is it not?—Yes, very; for four miles.

9849. How many vessels can pass abreast at some parts of the river?—It is dangerous for two vessels of any draught to pass at low water; it requires a great deal of caution.

9850. What number of vessels have you known to come up on a tide in Belfast?—I have seen upwards of 50 sail in the river coming up at once.

9851. Are you afraid that if any block took place, any serious loss of property might occur?—I believe there would.

9852. Have you known these blocks to take place?—I have repeatedly.

9853. What has been the result?—Some get damaged, and some get ashore, and lie there for that tide.

9854. Was this compulsory system always in existence at Belfast?—No.

9855. When was there a free system tried?—I believe it was in 1855-56.

9856. What was then the regulation of the Commissioners; have you got the regulation?—I have.

9857. Will you just read what was the altered rule?—These are the slips which we were bound to show to the masters at that time.

9858. What is the date of it; what year was it in?—In 1855. "Every master or owner of a vessel sailing up or down the channel, shall be at liberty to engage either a pilot or tug-boat at his own option."

9859. How long did that option remain in in existence?—Twelve months, I believe.

9860. How long did that free system remain in existence?—Twelve months.

9861. Why was it altered?—It did not give satisfaction; there was a heap of damage occurring, and there were overcharges on vessels made by outside pilots and tug-boats.

9862. Did the shipowners memorialise the Commissioners to go back to the old system?—They did.

9863. What steps did the commissioners take to consider this question?—They appointed a committee of their own body to make a report to them on the subject.

9864. Have you got that report?—I have.

9865. What year was that in?—I believe it was in 1856 or 1857.

9866. What did that committee state in reference to compulsory pilotage?—They said, "It is further our opinion that it would be found impossible to maintain an efficient pilotage establishment unless it were imperative on every vessel, not having a qualified master or mate, to

Mr. *P. Benson.*

27 May 1870.

receive a pilot. Strangers must of necessity take them for their own security, and the rates would therefore fall very heavily on them unless the contributions towards the support of the establishment were made general, a regulation which could not now be considered a hardship by any party, as it is evident that when neither master nor mate is competent to perform the duty, some one must be employed, and the question therefore narrows itself into that of your retaining the appointment in your own power, as your special Act intends, or of permitting this important function to be performed by the masters of the coasting vessels frequenting the port. You have already felt and endeavoured to remedy the inconvenience of masters employing unauthorised pilots when outward-bound in ballast, an inconvenience that would be greatly increased if pilotage were thrown open, and men privileged to act as such without authority from you or from the Board of Trade."

9867. What did the commissioners do after receiving that report?—They reinstated the pilots.

9868. They carried out the old system?—Yes, and it has remained compulsory since.

9869. Do you happen to know whether the shipowners of Belfast are generally satisfied with the present system?—I believe they are all satisfied.

9870. Have you ever heard any shipowner complaining of it?—I have not.

9871. Is it usual to serve an apprenticeship to the pilot service of Belfast?—Yes, I did, close upon 10 years.

9872. Are you aware if this Bill passes it proposes compensation to pilots?—Yes.

9873. Do the pilots of Belfast approve of the mode in which compensation is dealt with?—No, they complain of it very heavily. They have got no funds of their own, and they will not be fit to maintain themselves for the time specified in the Act if it becomes law.

9874. What kind of compensation would they expect?—They pray that the Government may allow them compensation in six months, if it can be proved to their satisfaction that they have lost a part of their income. All the pilots that are there now came there with the expectation of ending their days there, and they are not fit for any other occupation; and they will have to remain there as long as they are able, and they will have very little to support them, I believe, after this Bill passes.

9875. And what they ask is that the average income of the last three or five years should be kept up to them for life; is that it?—Yes, that is what we ask for.

9876. They think that the two years given under this Bill is too long for decision?—Yes.

9877. Sir *John Hay.*] How many feet wide is the river at low water?—Seventy yards, I think.

9878. That is the breadth of the river?—Yes.

9879. And at low water it is 130 feet; is that right?—You can take it just as you like; the river is narrow at the bottom, and at low water you will have 10 feet up to Belfast. Three vessels drawing 10 feet of water cannot pass in a-breast at low water; the two outside vessels would run the risk of getting ashore, or the middle vessel of doing damage.

9880. Supposing a vessel of 130 feet or more, in length, were to take the ground on one side, and swing across the stream, would it cause a block in the river. I see the evidence of Mr. Farrer states, that at low water the river is 130 feet wide?—I believe there are some points in the river in which a vessel 130 feet could not swing, owing to the banks sloping.

9881. In that case the navigation would be stopped?—Yes.

9882. Are you liable to fogs in the Belfast Lough?—Yes.

9883. The persons who could not pilot the river would find it difficult to get up from Carrickfergus to Belfast, would they not?—Yes.

9884. In that case a pilot would be very necessary?—Yes.

9885. I see it is stated by a previous witness, that you have only some 20 odd pilots?—There are 23 pilots.

9886. You have stated that you occasionally have fleets of 50 ships at a time, coming up and going down the river?—Yes.

9887. How do you manage; if there are only 23 pilots all the ships cannot have a pilot?—That is the fact; we are doing more work than we are properly able to do, and the owners have every right to complain of not getting a pilot in proper time, but the pilotage being so low they are willing to put up with the inconvenience.

9888. If 50 ships are going up and down, and there are only 25 pilots to do the work, it would seem that under the compulsory system there are not sufficient pilots for the trade?—Not with a fleet of vessels; that is only perhaps twice in the year.

9889. For the ordinary service, you think that 25 pilots under the compulsory system are sufficient?—We have made them sufficient, and we have to work Saturday and Sunday night and day when vessels are coming.

9890. Do you propose that there should be an increase to your number?—No, I do not propose that; that is for the harbour commissioners.

9891. If 25 of these ships had pilots on board, and the other 25 had not, would the 25 ships that had pilots on board get safer up and down the river than those that had not pilots on board?—When a fleet of 50 vessels come to Belfast, 23 or 24 can be boarded; we have to board them in rotation. The first six or seven of the pilots that are clear of the vessels then proceed down the river to the others. We board the vessels in the river; we are supposed to go to the vessels, no matter how far they are up the river.

9892. You do not go down as far as Carrickfergus on such an occasion as that?—We cannot go any further than we get supplied by vessels.

9893. I believe three miles of the river is a dangerous navigation?—There is more than that, but that is the narrow part of the river.

9894. As a matter of fact, the whole fleet do not come up together, but they wait for pilots? They can follow each other up; they cannot come up abreast; they can come up a short distance astern of the others.

9895. As a matter of fact, you think 25 pilots do succeed in navigating 50 vessels?—Yes, on one tide.

9896. You think that each man could manage two?—No; but the pilots that are in the first vessels break off from them, and they have a boat

to

to proceed down and get on board the others before they are any distance in the river.

9897. At what part of the river does the pilot who is going down again to take another ship leave his first ship?—As far as the Clarendon Dock; there is a row of buoys facing it, and it is quite handy to pick them up at these buoys; they put the stern and bow rope out, and as soon as the vessel is safe the pilot enters a boat we have for the purpose, and comes down again, and boards the first vessel in turn.

9898. You do not think there are too many vessels coming up together in the narrow channel, so as to make it apparent that 25 pilots are not sufficient for the trade of the port?—I believe the 25 pilots have conducted the business pretty well up to the present time.

9899. Can you state to the Committee whether you have any information as to whether vessels without pilots on board are more in the habit of getting on shore than vessels with pilots on board?—I can; this last winter, in consequence of gales of wind, we were not able to get down past the worst of the narrows, and I counted nine vessels ashore there, because we were not able to get down to board the vessels.

9900. Can you state to the Committee any occasions on which vessels have happened to get on shore when they were in charge of pilots?—Well, I cannot bring it to my memory.

9901. Your brethren are so successful, that you have run no risk whatever?—I do not mean to convey that at all; there are cases in fogs where the vessels come on very quickly, and in the narrows it is almost impossible to prevent a vessel going on shore.

9902. You say that the free system was tried in 1855?—Yes.

9903. And that it was found to fail?—It was.

9904. Did it not give satisfaction to the shipowners and merchants whose ships frequent Belfast?—No.

9905. Is there any system by which the masters of Belfast vessels become licensed as pilots?—There is; they can get a license for 1 *s.*

9906. Do many of them take advantage of it?—Not one of them.

9907. Why not?—They have a halfpenny a ton to pay on the registered tonnage, which amounts to something less than half pilotage.

9908. Who has to pay that?—The owner of the ship, who has a licensed master on board.

9909. That is in consequence of the compulsory system?—Yes.

9910. And in spite of having a tax to pay upon the ships navigated by their masters, they still desire to have compulsory pilotage?—They do.

9911. And in the year 1855, after a twelvemonth's trial of the free system, they determined to revert to the old system of having compulsory pilotage?—Yes, they did so.

9912. Mr. *Grieve.*] What was the charge for pilotage in Belfast for the extreme limit of the pilotage ground, that is by the ton?—A vessel of 30 tons register pays 4 *s.*, and every 10 tons after that pays more.

9913. Are coasters obliged to take a pilot?—Yes.

9914. Do they pay so much a ton, or do they pay on a scale?—They pay so much by the scale.

9915. How much does a foreign-going vessel pay?—She pays exactly the same scale.

9916. Do all the earnings of the pilots go into one purse, and is it then divided amongst the lot?—No.

9917. Is each pilot entitled to his own earnings?—Yes.

9918. Is the first man who boards entitled to the ship?—Yes.

9919. You talk of a number of vessels being on shore; is it not the case that a great many vessels run for Belfast Lough?—Yes, wind-bound.

9920. They take shelter there?—Yes.

9921. Some of these vessels slip from their anchors; could any pilot then save them going ashore?—In consequence of masters not knowing or coming to anchor in proper roadsteads, they drive ashore sometimes, or cut away their vessels' masts, to save them. Two or three years ago, in consequence of two or three vessels coming into the Lough wind-bound, one fine Yankee ship had to cut away three of her masts, and one Cumberland brig had to cut away one of her masts.

9922. If a pilot had been on board, do you think they could have been saved?—Yes, I am confident of it. When that law was passed in 1855 and 1856, a ship called the "Largarton" got ashore, and very serious damage was done to her; they had to give a tug-boat 500*l.* at that time, principally to save her crew.

9923. Are the pilots generally old men or young men?—There are some old men in our establishment.

9924. And you have no superannuation fund or provision for these men when they get unfit for service?—None whatever.

9925. Mr. *Cave.*] What sort of a bottom is there in the Lough at Belfast?—It varies; some of it is freestone, some hard sand, and some clay.

9926. It is chiefly hard, is it not?—Chiefly hard; there is good anchorage ground there.

9927. What is the depth?—You get from seven to two fathoms.

9928. Is there a narrow channel running up to Belfast?—I speak of the outside of the channel; in the channel you can get four fathoms at low water.

9929. What is the rise of the tide?—From seven to 11 feet.

9930. Is the channel a wide or a narrow one?—It is very narrow.

9931. And twisted; it is not straight, is it?—No, it is quite crooked.

9932. *Chairman.*] Where do you board your vessels inward-bound?—From Holywood Lighthouse to Gray Point.

9933. Outside the Lough?—Yes, the river is above it.

9934. Just outside the river?—Yes.

9935. Is your main employment from vessels inward-bound?—And outwards; all vessels with cargoes. All vessels above 30 tons bound to Belfast, or bound from Belfast, who have cargoes on board, take a pilot.

9936. I suppose a large number of vessels go from Belfast in ballast?—Yes, they are mostly colliers.

9937. A great number of them leave Belfast in ballast?—Yes, the colliers do.

9938. Therefore your main employment is in respect of vessels inward-bound?—Yes.

9939. And the vessels outwards-bound in ballast do not take pilots at all?—No.

9940. But they take hobblers?—Part of those who go down come to understand it thoroughly; such as foreign-going vessels, but they generally take pilots.

Mr. *P. Benson.*

27 May 1870.

9941. Many foreign-going vessels take pilots, even though they are not bound to do so?—Yes, in many cases.

9942. Would not they continue to do so after the Bill has become law?—I do not think they would have the men to do it; the pilots would have to look for employment that would support them.

9943. Foreign vessels inward-bound would find pilots just as well as foreign vessels outward-bound, would they not?—I do not know that.

9944. What took place in the year 1857; I do not understand that pilotage was abolished then altogether, but simply that vessels with tugs were not compelled to carry pilots?—That was the case.

9945. Did a certain number of vessels continue to take pilots, notwithstanding the exemption?—Our regular earnings were reduced one-third.

9946. You mean by one-third, that your earnings were one-third less?—No; that they were two-thirds less.

9947. Were you a pilot then?—I was only an apprentice at that time.

9948. You do not speak from your own knowledge?—I had a good knowledge of it.

9949. You say that the earnings of the pilots were reduced in consequence of this change?—They were.

9950. And the Belfast authorities thought it better to revert to the old state of things, and compel vessels to take pilots, though they had tugs?—Yes.

9951. Do most of the vessels coming up to Belfast take tugs, or no?—They take tugs when they want them; but, supposing they take tugs, they take pilots also.

9952. Do most of the sailing vessels take tugs in coming up to Belfast?—Not if they can get a slant of wind.

9953. What is the average income of pilots at Belfast?—They average about 100 *l.* a year.

Mr. Frederick Leyland, called in; and Examined.

Mr. *F. Leyland.*

9954. *Chairman.*] You are the Managing Partner of the firm of John Bibby & Company, of Liverpool?—I am.

9955. That firm, I believe, are proprietors of a very large number of steamers?—Twenty-four steamers; the value altogether coming to 900,000 *l.*

9956. Those steamers are engaged in the Mediterranean trade principally?—Yes, principally the Mediterranean trade; and the trade to the coast of Spain and Portugal.

9957. I presume your vessels are in and out of Liverpool every week?—We have two or three departures every week, and two or three arrivals.

9958. You are also chairman of the Liverpool Steamship Association?—Yes, I am.

9959. Does that association comprise the principal steamship owners of Liverpool?—Nearly all the principal ones.

9960. Has the Bill now before this Committee been considered by that association?—Yes.

9961. I believe there was a meeting specially convened for that purpose?—There was a meeting specially convened for that purpose.

9962. And it was discussed at some length?—It was discussed at considerable length, and the opinion was unanimous in favour of the Bill, and they petitioned to the Board of Trade in favour of it.

9963. Will you tell the Committee shortly the reasons for coming to that conclusion?—I think the reasons that weighed most were these: that they thought that under a voluntary system of pilotage, the best men would get the best employment, and that it would tend to bring a better class of men into the service.

9964. Did they also consider the question of the liability of shipowners under the present state of the law, their exemption from liability when a ship takes a compulsory pilot?—Yes, it was considered unjust that the owner should be compelled to take a pilot and still be responsible for the acts of the pilot, but the feeling was decidedly that they would rather have done with the immunity and be allowed to choose their own pilots; the great thing to which importance was attached was the privilege of choice. The feeling, without exception, is this: that they would all continue to take pilots, provided that they had choice of their own pilots, and could get thoroughly competent men.

9965. Was it admitted that cases of evil resulted from the present state of the law which exempts owners from liability when the vessel is in charge of a compulsory pilot?—Yes; there are instances in my own experience of vessels lying at anchor with all their lights up receiving damage, when they cannot possibly be to blame; they have been run into by pilots, and they have no remedy.

9966. The tendency of the present law is to give the charge of the vessel to the pilot, and take it out of the hands of the captain, is it not?—Yes; some captains will interfere, but the majority of captains will not interfere with the pilots; they leave all the responsibility to them; that is the tendency, no doubt.

9967. Was it the opinion of the Committee that the only means of remedying the evil was by making the employment of pilots voluntary instead of compulsory?—Yes.

9968. And that it would not be just to make the employment compulsory, and throw the liability upon the shipowners?—Yes; that was considered to be clearly unjust.

9969. The officers in your employment, I presume, consist of men thoroughly acquainted with the pilotage and navigation of Liverpool?—We have not a single captain in our employment whom I would not trust without hesitation to bring in his vessel without a pilot.

9970. They are so often in and out of the port that they know it well?—Yes; and I say that from the way in which the channel and the approaches to the river are lighted and buoyed, any intelligent shipmaster, who is conversant with the port and has been there frequently, could bring his vessel in with perfect safety.

9971. Have your masters been in the habit of taking out licenses themselves?—There is only one that has done so; it would hardly suit a shipowner,

shipowner, in the present state of the law, to run his vessels without pilots; he would not be playing a fair game; he would be liable for any damage he caused when he had not a pilot on board; whereas anyone running into him with a pilot on board would not be liable. I did try the system with one of our captains, and insisted upon his passing the examination, and he for the space of two years piloted his ship in and out of the port without the slightest accident, and his was a large ship.

9972. Do you think that the exemption from liability under the present state of the law is a great inducement to masters not to take out licenses?— Yes, and it is an inducement also to the owners not to do so.

9973. What is the draught of the vessel of which you speak?—The captain of whom I speak has had vessels of various draughts; the first vessel was a vessel with a draught of 15 feet; the next was a vessel of 20 feet, and the last vessel he had was one of a draught of 21 or 22 feet, and, in fact, the largest-sized ships that come into the port.

9974. What is the average draught of your vessels?—The Portugal boats' average draught is 14 to 15 feet, and the Mediterranean boats from 18 up to 22 feet.

9975. Have you formed any opinion as to what would be the effect of the Bill now before the Committee, upon the employment of pilots in Liverpool?—I think the effect would be, that a better class of pilots would go out for employment and would get better pay. I think the number of inferior men would gradually get less and less employment, and they would gradually get weeded out; I think also, that the owners of the boats would receive very much less for their proportion of the pilotage than they do at present; I do not think the pilots under a voluntary system would allow them to take as large a share of the pilotage as they do at present.

9976. In your opinion, would the employment of pilots to a great extent continue?—I have no doubt whatever of it; we should employ pilots as we do at present, with the exception that we should choose the pilots. The vice of the present system is, that we are obliged to take the first man who offers, no matter how incompetent he is.

9977. And your vessel is put under the charge of that man, no matter what his qualifications are?—Yes; and we have found that the damage to the vessels in charge of pilots has been most serious.

9978-9. You, as a large shipowner, would continue to employ pilots, provided you had the choice of them?—Yes; when a captain comes up after a Channel voyage he is tired and fagged, and his head is full of what he has to do when he comes into the port, and I think it is a desirable thing to put a man on board who would relieve him, but if I cannot get a competent man, I am better without him.

9980. But, inasmuch as you would have the choice of a pilot, you would only choose a competent person?—Yes, I would only choose a competent person.

9981. You have not now the choice of a pilot coming inwards, have you?—No.

9982. Have you the choice of a pilot going outwards?—There is a choice of pilots going outwards; but I think the general custom is, that the same pilot that brings the ship in takes her out.

9983. That is the usual custom?—Yes.

9984. So that, practically, there is not a choice outwards?—There is a choice undoubtedly; I believe if a man wanted to choose a pilot he could have one; there is no doubt that there are many pilots whom we would not take going out.

9985. A good deal of evidence has been given before this Committee of the peculiar dangers of the navigation in the Mersey; can you express any opinion upon that point yourself?—I do not think the Mersey is exceedingly dangerous; I think the danger has been exaggerated; I think it is put too high at present.

9986. It is exceedingly well buoyed and lighted now, is it not?—Yes; I think there might be some improvement. A light at the Bell Buoy would probably be an improvement; but it is exceedingly well lighted, so well that, as I said before, I would not have the slightest hesitation in trusting any captain of ours to bring his vessel in without a pilot. It frequently happens that our captains in bad weather, especially in the winter time, have come up and waited for a pilot and have not got one. The captains have simply brought their ships in without pilots, and that has been in bad weather. That has occurred more than once; it was the case on one occasion last year. There were five occasions last year in the winter time on which vessels could not get their pilots; they waited at the first station, and then came in until they got gradually to the bar, four could not get pilots till they came to the bar, and the fifth came in and got into dock without a pilot.

9987. And the others found their pilots when they got up to the bar?—Yes, when they had got through all the dangers, because from the bar it is a perfectly straight channel in.

9988. Has the steam trade of Liverpool been greatly increasing of late years?—It is greatly increasing.

9989. Is that the case as compared with sailing vessels?—Yes, the whole trade formerly carried on by sailing vessels is getting rapidly into the hands of steamers, and now that the Suez Canal is open, there is no doubt that the India trade will go by steam.

9990. And I presume the navigation by steamers is much easier than by sailing vessels?—To a man who is competent, it is so; steam ships are more independent of the wind.

9991. You mean if they know anything about the navigation of the river?—Yes, if they know anything about the navigation of the river.

9992. As I understand you, notwithstanding the familiarity which your captains have of the navigation, you would, as a general rule, still continue to employ pilots, if you had the choice of them?—If I had a competent man I think it would be a prudent thing to take a man of that kind on board to relieve the captain.

9993. Under the present rule you have men forced upon you of whom you know nothing, and who may not be competent?—Yes.

9994. Mr. *Graves.*] Are you aware that under this Bill it is not proposed to make any alteration in the direction in which your mind seems to be running, namely, of a free system?—I understand under the Bill that it is not compulsory to take a pilot.

9995. But

Mr. *F. Leyland.* 27 May 1870.

9995. But in all other respects it is left to the local authority to control and conduct the pilotage service exactly as it is now, if they should think fit; there would be no freedom of choice, which you seem to lay so much stress upon, any more than there is at present; I presume you are aware of that?—There is a freedom of choice in this way, that a man need not take a pilot unless he wishes it, but assuming a man wishes to take a pilot at all, he must take a licensed man; that I understand to be the operation of the Bill.

9996. It seems to me that your mind is running upon a free system of pilotage, where the energy and superiority of the men would be able to show itself?—I think a system of that kind would be the best that could be adopted.

9997. That is not at all contemplated by the present Bill in any way?—I think that is the defect of the Bill as it is at present. In our petition to the Board of Trade, it was stated that the only objection that the association had to the Bill was that it did not go far enough, and did not provide for a purely free and simple voluntary pilotage.

9998. What you would desire to see introduced into Liverpool would be a perfectly free system of pilotage, that qualified men might be allowed to go where they thought they might meet with a vessel soonest, and where they could be of the most use to the shipping coming into the port?—Yes.

9999. And so get the largest amount of earnings for themselves?—I do not think a pilot ought to be allowed to charge whatever he likes, that is not my idea of a free system.

10000. I mean earnings for himself?—I think it would be a wise thing to make the earnings of the pilot depend upon his skill and enterprise.

10001. *Chairman.*] You think that there should be a regulated price and a licensed corps?—Yes.

10002. But you think that it would be desirable in granting these licenses that each man should earn for himself?—Yes.

10003. So as to bring the greatest amount of inducement upon a man to do his best?—Yes, to make the inducement as great as possible.

10004. There is nothing in the Bill to prevent that state of things?—No.

10005. And it would be competent for the local pilotage authorities to adopt that system if they think fit?—Yes.

10006. Mr. *Graves.*] You are probably aware that the dock board of Liverpool has all the power now which this Bill will give them to make the system free or not, as they please?—I do not understand that the dock board can do so at present; I do not understand that the dock board have the power to throw the pilotage open, but if they have I do not think it likely that they will exert it.

10007. This Bill gives them no additional power to that which they already possess?—I am not aware of it.

10008. With regard to choice, are you aware that many of the large steam employers have their own pilots in and out regularly?—Yes.

10009. Have you applied for any such privilege yourself?—I could not use it if I had the privilege, because we do not call at Queenstown as the American boats do.

10010. Would there not be a possibility of making some arrangements by which your pilots would be taken at Point Linas and landed and returned to you at once?—It would not do for a vessel to put into Point Linas; the risk of lying off the shore there would be greater than the risk of having an incompetent man on board.

10011. Some of the ships take pilots to Bordeaux and Lisbon, do they not?—I am not aware of it; I go to Lisbon but I do not take my pilots there.

10012. How would the choice be exercised upon vessels inward bound; what greater choice would they be able to have if the Bill passes than they have at the present moment?—I could arrange it in my own case. Assuming that I could choose any pilot that I liked, I should at once communicate with half-a-dozen of the best men, and should say, "Now you know when our ships come in (they come in at certain times); be on the look out for them and you will get the preference." I should issue orders to my captains and they would take these men.

10013. Have you any reason to think that such an arrangement would not be come to by the pilotage committee at the present moment without any Bill at all?—I do not think that such an arrangement would be contemplated, and I do not think the pilotage committee would make such an arrangement.

10014. They would have quite the same power as they have at present?—I do not see how they could. Under the voluntary system I think the best men would get together. The most enterprising men would flock together, because one man cannot have a boat to himself and go out; but a dozen men would get together in a boat, and the most skilful and enterprising men would go further out. As it is at present, you have one good pilot in a boat and half-a-dozen bad ones.

10015. Are you not aiming at something beyond the scheme of this Bill in desiring an entirely free system?—I do not think so at all; because if it were not compulsory upon us to take pilots as at present, I should say, unless I can get the men I want, I will not take them at all, and then if I went to the pilotage committee they would soon make an arrangement to carry out my wishes.

10016. *Chairman.*] There would be then a strong lever to bring to bear against the commissioners?—Yes, but I have not, under the present law, thought it worth my while to make such a proposition to the pilotage committee.

10017. Mr. *Graves.*] Do you think the station system of Liverpool is a desirable one to maintain?—I think the pilots might go further out.

10018. Do you think that it is a great safeguard to vessels running in to have stations where the pilot boats would be, under all circumstances, rather than having a free system of roving all over the Channel?—There is no doubt that in theory it is better to have pilot boats always where you can find them, but in practice the pilot boats are not always where you can find them. My own ships have been coming in, and have not always found pilots upon their stations.

10019. Do you think it would be better to have another pilot boat further to the westward?—I think that you ought to make the earnings of the pilots dependent upon the fact of their catching a ship; at present a pilot gets paid whether he gets his ship or not. The pilot's idea is that if I am not caught by him I will be caught by someone else.

10020. Mr. *Price.*] You said that the great object

object that you desired to aim at was a perfectly free system of pilotage?—Yes.

10021. The honourable Member for Liverpool calls your attention to the fact that this Bill does not destroy the present local pilot authority; I suppose what you look forward to is this, that if you were free to take pilots or not, you think the local pilotage authority would soon adapt itself to that altered condition of things?—Yes.

10022. And I suppose if the local pilotage authority found the pilots were not taken except where the captain of a ship had a certain power of selection, they would then make such provision as would enable that choice to be exercised?—They would.

10023. That is the state of things that you would desire to arrive at?—Yes.

10024. I suppose you would still desire that a man should not exercise the profession of a pilot unless he had undergone some process of examination, and had a certificate of efficiency?—Yes, I think they ought to be licensed.

10025. Just the same as that a physician does not practise unless he has a diploma, or a solicitor unless he has been duly called by the courts in which he practises?—Yes.

10026. There is nothing inconsistent with the principle of free trade in that, is there?—No; I do not consider it inconsistent with the principle of free trade that the men should be licensed.

10027. There is nothing inconsistent with the principles of free trade in the present system, under which medical practitioners practise, or on which solicitors practise, is there?—No.

10028. Nor would there be under a system of pilotage where every man could employ a pilot or not, as he pleased; but you think that such pilots should not be permitted to exercise that calling unless they possess some certificate of ordinary competence?—Yes.

10029. And your opinion is that if such a body of men were licensed by the local pilotage authorities, and you had an opportunity of taking them or not, as you pleased, and taking only such of them as you thought were efficient, you would get a more efficient and energetic race of pilots than those found at present?—Yes, that is my opinion.

10030. That you say as a shipowner?—Yes, that I say as a shipowner.

10031. Sir *H. Selwin-Ibbetson.*] You stated, did you not, that the Liverpool Steamship Association, at a special meeting, were unanimous in support of this Bill?—Yes.

10032. Can you tell me of how many members the committee consisted?—I should think there were present at the meeting perhaps eight or ten, but you must understand that the steam trade of Liverpool is in the hands of very few individuals.

10033. How many does it consist of?—I cannot tell you.

10034. What proportion of the public opinion did the eight or ten represent?—I suppose it would represent two-thirds of the Liverpool steam trade.

10035. It was not by the voice of the whole association?—No, because Mr. Moss, a member of that association, who gave evidence here, told you he was not present, though he was asked to be present.

10036. You stated there were none of your captains employed whom you would not trust to navigate ships up the river?—Not one.

10037. You do not attach any importance to the evidence we have had before us, of the change in the sandbanks and the constant shifting nature of the channel of the Mersey?—Not the slightest.

10038. You think that is exaggerated?—Yes, I think the evidence given here on that point is absurd. No doubt changes take place in the Mersey, but they are neither sudden nor frequent; there are changes in every river.

10039. You say you object to the compulsory power of taking pilots because you are liable, under that system, to get a man that is not an efficient man?—Yes.

10040. Consequently, as it is compulsory at present, it must occasionally happen to you now that you get men who do not know their duties?—We have had them very frequently.

10041. Have you had many accidents?—Very many. During the 15 or 18 years that we have been in the steam trade I have not the slightest doubt that there has been damage done to our ships and to the property conveyed in our ships, from the grossest negligence on the part of the pilots, to quite a quarter of a million; and the extraordinary leniency shown by the pilotage committee, when cases of great negligence have been brought before them, is quite incredible. It seems to me that it is a complete farce to bring any complaints before them. We now simply notify the complaint to the committee, and generally take no further notice of the thing.

10042. You think that under the voluntary system they would get a more efficient staff of pilots?—Yes, because I would not employ them unless they were; it would be the lever that we would use. If a man is not competent, and not able to do his work properly, we will not take him.

10043. You think that the pilots under the voluntary system would go as far in bad weather as they do at present?—I think they would be more skilful and more enterprising, because their earnings would depend upon their skill and their enterprise.

10044. That remuneration being a fixed charge, you would not approve of voluntary charge?—No, there would be no freedom of contract; it would be freedom of contract in my case, and I should be quite willing to let the pilot charge whatever he liked, because if he charged too much I would not take him; but you must give some protection to foreigners and strangers coming to the port; they would be at the mercy of the pilot if the pilot could make his own charges.

10045. Would you make it voluntary, as far as the interests of the shipowners are concerned, but compulsory to a certain extent with reference to the pilots?—It would be to the pilots compulsory to a certain extent. On the other hand, no one would be employed but licensed men.

10046. It would be free trade to one class of men, and not free trade to the other class?—Not exactly so. If the pilot's employment is limited to a certain number, it is clear that the Government have a right to say, "We must make a provision by which a sufficient number will be ready to do the work."

10047. But an open free trade really means letting any man take his chance, and leaving it to the owners to leave him or take him?—I think that is carrying free trade to a most exaggerated length.

10048. Sir *J. Hay.*] Supposing one of your ships was making the lightship in thick weather,

Mr. *F. Leyland.*

27 May 1870.

and a pilot came off and offered himself, and he was not one of the special pilots whom you desired your captains to use, would you think it fair and right that that pilot should be rejected?—I think so; if he was a man whom I had reason to believe was not competent, I think it is fair and right not to take him.

10049. You yourself would not be on board the inward-bound ship?—I would leave it to my captains, who come in so frequently that the details might be left to them.

10050. You would leave it entirely in the hands of the captains to select or reject the pilots?—If you ask me what I would do with my own captains, I would do that certainly.

10051. With reference to your own ships, you would give your captains instructions that they were to elect and reject pilots as they pleased, whether they were pronounced by their certificates or otherwise to be good pilots?—Certainly. The instructions I would give out would be these; I would say, "Here are half-a-dozen competent men; always take them in preference." I would go further. I would say, "If a man presents himself whom you have reason to believe from experience is incompetent, do not take him."

10052. Is not that rather assuming the duties of those whose duty it is to investigate and license the pilots?—I say that the captain himself is perfectly competent to bring in his ship, and he is perfectly competent to judge whether another man is; he soon sees whether the pilot he takes knows what he is about.

10053. Do you know Captain Judkins?—Yes.

10054. Have you seen his evidence?—I have.

10055. He states with all his knowledge, and some 30 years' experience of the port of Liverpool, that he does not conceive himself competent to bring his ship in and out?—He has a lower opinion of his competency than I have. A large portion of the steam trade of Liverpool is at present navigated in and out by men who are not pilots, that is the coasting trade, and there are large vessels engaged in the coasting trade; then I have in my own experience employed a man who is by no means the best of our captains, for he is a young man; and I said to him, "I will give you your promotion, only on the condition that you pass for a pilot," and he passed the examination, and he has gone on two years without the slightest accident.

10056. Did not you pay pilotage?—No, it was part of his business as a captain; it showed me clearly that it is quite feasible for the captains themselves to navigate their vessels in and out of the port of Liverpool; then came a second consideration, which was this; what would be my position if I had a captain on board, and not having a pilot: under the present law I should be liable for any damage done by collision; whereas if another man with a pilot on board ran into me, he would not be liable; therefore it is not fair play.

10057. You are aware that we have it in evidence before us, that only one ship was lost in the port of Liverpool last year with a pilot on board, and 59 or 60 ships were lost without pilots; does that agree with your knowledge?—I have no knowledge of it.

10058. Do you think it is likely?—I have no doubt it is likely, for this reason, that the vessels that are allowed to go without pilots are small vessels; they are undermanned and ill found. The only vessels that are not compelled to take pilots, which are the vessels referred to, are vessels notoriously undermanned and badly found; they are small colliers and vessels of that class chiefly, and I should be quite prepared to expect that the losses among that class of vessels would be much greater than amongst any other class, quite apart from the question of pilotage. I have no doubt these vessels have been lost, but I should not trace their loss to the want of pilots.

10059. Still these vessels would be of lighter draught, and the channel itself would be more available for them at all times of the tide, and the masters of them, as they are coasting vessels, would be persons who would have become very generally acquainted with the port of Liverpool?—I have no doubt it would be so.

10060. And therefore these vessels are of light draught, and do not require any great care or skill in their navigation?—I do not say that at all; I do not say that they do not require care and skill in their navigation; but it is clear that a vessel of light draught of water may go with impunity where a vessel of deep draught cannot go.

10061. Then these coasters would be navigated more easily in and out of the port of Liverpool, and they would be in the command of captains who were trading in that particular locality, who would be supposed to have a competent knowledge of the port?—That is so; but I think statistics of that kind are of very little real use. If you want a fact that would be of use, you would have to ascertain how many accidents there have been to the coasting steamers which don't take pilots (not these little sailing vessels, but steamers of great value, where the owner is compelled in his own interest to put in competent men to manage them). You must then see what are the proportionate accidents to similar vessels that carry pilots, and you would find that the proportions would be decidedly the reverse. I think there are more accidents to ships with pilots on board than to those without.

10062. As I understand, there are very few ships going in and out the port of Liverpool that do now go in and out without pilots?—There are the coasting steamers.

10063. But as I understand the evidence of the witness who gives this information, it was this: that this amount of 50 or 60 ships did apply to the ordinary coasting trade without reference to whether they were coasting steamers or not?—I should not believe in these statistics; I should say they are entirely wrong; I do not know of any coasting steamer that has been lost in the year; the loss of a coasting steamer would create a sensation; they have generally passengers on board and valuable cargoes; I am certain no loss of that kind could take place without my knowing it.

10064. I believe a good many losses have occurred from vessels being unable, in consequence of the weather, to get pilots; take the case of the "Royal Charter?"—I do not think the loss of the "Royal Charter" had anything to do with her not having a pilot; I think that the loss of the "Royal Charter" was in consequence of not having sufficient steam-power to keep off the land; the "Royal Charter" had not got into Liverpool pilotage waters.

10065. I suppose that you are your own insurers?

surers?—To a very large extent; we run a risk to the extent of 200,000*l.* on our whole fleet.

10066. Are there other gentlemen who are not in such a large way of business who are not their own insurers?—There are.

10067. I do not speak of shipowners of the high class, but are there persons who do own ships, and who insure them very largely, and having insured them very largely, cover themselves against the loss?—There is no doubt about it.

10068. Do not you think that those persons who look to a return in a manner which is not desirable should have their crews and property protected by compelling them to take pilots?—I think a man who wanted to lose his ship for the sake of the insurance is exactly the man to take a pilot, for this reason, that if he wanted to lose his ship, he would not lose it in such a barefaced manner as would inevitably bring suspicion upon him.

10069. You think there would be collusion between him and the pilot?—Any man who wanted to do such a villanous thing as that would not neglect any caution, such as taking a pilot, because if the loss ensued through the want of taking a pilot, on the loss being investigated in court, he would be found out. He would prefer to lose his ship far away from the place by scuttling her, or sending her to sea undermanned, or ill found.

10070. No such thing as that could be done at the entrance of a harbour?—No, it could be too easily proved against him; it is too near the place where such matters are investigated. Ships of that kind are lost in distant seas, where it is difficult to get at all the facts.

10071. Some of the witnesses have made such suggestions, and, therefore, I thought I would ask you the question; now as to the power which the captain has when the pilot is on board, I think I understood you to say that in your case the captains do not give up their charge entirely to the pilots?—No. The best men we have, and the most resolute men, simply take the risk on their own shoulders; they do not let the pilots take charge, and with those men there are the fewest accidents; but the youngest men who have not so much resolution, let the pilot take charge. In time of danger there is a conflict of command, sometimes they let the pilot have the control, and sometimes they interfere and give advice, and then an accident generally occurs.

10072. The orders in the Navy are that "The captain is to order everything that relates to the navigating of the ship, to be performed as the pilot shall require, but, nevertheless, he and the master are to attend particularly to his conduct, and if, from his or the master's observations he shall have reason to believe the pilot not qualified to conduct the ship, or that he is running her into danger, he is to remove him from his charge, and to take such measures for the safety of the ship as circumstances may require, noting the time of the pilot's being so removed in the ship's log-book:" and Captain Judkins, on behalf of his company, stated that all captains consider their responsibility similar to that of a captain in the Navy who acts under the order I have just quoted from the Admiralty; would that represent the description of the responsibility which your captain would have with a pilot on board?—No doubt that is pretty much the same order as we give to our captains. I should expect a man, if he saw a pilot grossly incompetent, to turn him out. But then the question arises as to what is incompetency, and one man is more ready to assume it than another.

10073. But, on the whole, you consider that that is an exposition of the direction under which your captains would act?—No doubt, an intelligent man would act under it.

10074. And you, as his owner, would consider that he had performed his duty if he carried out that instruction?—I would, no doubt.

10075. Mr. *J. S. Hardy.*] You said that you got a young captain to take a pilotage certificate; how long was he in and out of the port?—Nearly two years; he had probably navigated the ship 40 or 50 times.

10076. You do not appear to have a very good opinion of the pilotage of Liverpool; but does it not show that there is an efficient pilotage service when we are told that, during the whole year through, there was only one ship lost with a pilot, and 59 or 60 ships lost without a pilot?—I should doubt it. I presume that the 50 or 60 on the one side, and the one on the other, are in the same position; whatever is a total loss on the one side is a total loss on the other, but total losses in Liverpool must necessarily be of very rare occurrence.

10077. *Chairman.*] The total losses of large vessels would be very few, would it not?—Yes, but the accidents of stranding and collisions are numerous enough.

10078. Mr. *J. S. Hardy.*] Of course, collisions are also more numerous in large steamers than in small coasting vessels; as a rule, a steamer is the cause of a collision?—It takes two vessels to make a collision; but small craft are less likely to get into collision with one another.

10079. It is a large ship and a small one usually, is it not, that come into collision?—It is generally so. I think it really comes to this, as a rule, that the collision generally takes place between a competent man and an incompetent man; it is the incompetent man that either does not get out of the way, or runs over the other.

10080. Mr. *C. Turner.*] I want to ask whether you know how many members there are of the Steamship Association?—No, I cannot tell the number; but the amount of tonnage owned by the members of the Association comes to about 400,000 tons.

10081. You said that, at the meeting at which the resolution was passed in favour of voluntary pilotage, there were only eight or ten present?—Yes.

10082. What proportion of the steamship tonnage was owned by those parties?—I should say there would be two-thirds of it.

10083. As much as that?—Yes.

10084. Mr. McIver was not there?—No.

10085. Was there anybody representing his firm?—No; because he and his only other partner were abroad; but he has repeatedly at meetings expressed pretty much the same opinion as we do upon the subject.

10086. You think that he and his captains differ in opinion?—I do.

10087. Mr. Moss is a large steamship owner, is he not?—He is not a large steamship owner; he is a steamship owner.

10088. He was not there?—Mr. Moss was not there.

10089. If the whole were there, you would not be as unanimous as you were with the eight or ten?

Mr. F. Leyland. 27 May 1870.

ten?—I think they would, with the exception of Mr. Moss; what he might have done I do not know; he is the head of the pilotage committee, and there is a good deal of *esprit de corps* among the members; but one member of the pilotage committee, Mr. Harrison, was present at the meeting.

10090. The pilotage committee as a body have nothing to do with the pilots themselves; they are not pilots, are they; they have no connection with the boats, and they have no connection with the pilots, except so far that they are the governing body?—I believe that is so.

10091. As far as they are concerned they have no interest whatever in upholding any system, except that which they think best for the port?—That is so.

10092. And they are unpaid; they are men of large experience and have property, and they have nothing to bias them in their decision with reference to this matter, have they, except what is for the good of the port?—They may not be good judges as to what may be good for the port. I do not charge them with any interest except a sort of *esprit de corps*, which people get when they serve on a committee. I have always found them leaning very much to the pilots, and that is the experience of most other steamship owners that I know.

10093. I do not exactly see what that leaning arises from; they are chosen, as you know perfectly well, in this way: a certain number of them are members of the dock board, and a certain number of them are chosen out of independent shipowners?—Yes.

10094. So far as to constitute a very fair and impartial committee?—Yes.

10095. That is the object of choosing them, is not that so?—I have no doubt that was the object of the choice.

10096. In what way would you get a fairer tribunal to judge between a pilot on the one hand and a shipowner, who may be suffering under any loss he has sustained, on the other, in considering the conduct of the pilot by whom that loss has been caused?—Of the two I would rather have the present tribunal of the Board of Trade than the pilotage committee.

10097. Why?—Simply because I judge of the capacity of the tribunal by the decisions they have given, and the decisions, as I know in my own case, given by the pilotage committee have been perfectly absurd.

10098. You are not quite an unbiassed judge, because you were smarting under a loss; do you think that any man is so good a judge of his own case as an impartial tribunal, such a tribunal as is generally appointed for this particular purpose?—Certainly not; no man is a good judge in his own case; but then I do not form my judgment on that alone. I know of other cases with which I have had nothing to do, in which the grossest acts of negligence of the pilots have been passed over with a leniency which is quite incredible. We had, some years ago, the case of Allen Brothers, in which they had a valuable steamer put on shore by a pilot in the river; it was a total loss; that was a case of the greatest neglect of the pilot, yet the pilot is done nothing to; he is simply reprimanded.

10099. Mr. Allen is a member of the dock board, is he not?—Yes, lately.

10100. I do not see why men of large property and good knowledge of shipping, and men of sound judgment and good sense, should be biassed in inflicting these very lenient sentences, because the evidence we have already had is to the effect that any carelessness on the part of a pilot, or any misconduct on the part of a pilot, is very severely punished by the pilotage committee; that is the evidence we have had, so far?—That is not my evidence at all, nor is it the evidence of any man whom I ever heard speak upon the subject.

10101. Several gentlemen gave evidence here on that fact, and the evidence was to the effect that any misconduct on the part of a pilot was very severely judged by the pilotage committee?—It is not at all my experience.

10102. I think you have said that you believe that voluntary pilotage would produce more efficient men than the present system?—I think so.

10103. The voluntary pilots would have no board over them at all, and nobody to sit in judgment over them?—I do not know why that should be necessarily so.

10104. They will pass an examination, and having passed that examination, in the case of accident there would be no appeal court to resort to?—I should think they could have their licenses suspended.

10105. How could a board be constituted more impartial than the present board?—I see no difficulty in that any more than there is a difficulty in constituting a board to decide upon the losses caused by a captain; the same board might examine both. Whether the loss is occasioned by the captain or by the pilot, the same board is competent to deal with it.

10106. You must be aware that the sentences upon captains for losing vessels are not unquestioned?—They are not; but I think they have probably erred in the opposite direction; they have been very severe. Certainly, I do not know of any case in which a captain who has lost a ship has got off from the undue leniency of the tribunal.

10107. I speak with reference to the examination of captains who have lost a ship or run a ship on shore; you know that shipowners appear before a stipendiary magistrate and two nautical assessors, and the decisions of that board are very much canvassed, and they are thought in many cases to be anything but just, between one and another; how are you to have a tribunal better chosen than the present tribunal, a certain number of whose members are chosen from the dock board, who are thoroughly acquainted with the subject, the other portion being chosen from men outside the dock board who have a knowledge of the subject, and who are known for their impartiality and fitness for the office; you say that the Board of Trade is a more competent tribunal?—The Mercantile Board, I speak of, where the assessors sit with the magistrate; I think that is a better tribunal, first, because it is a public one; when there is an investigation before the pilotage committee at present, two or three members sit down, there is no public admitted, and no report of it is given in the papers; you have no solicitor there to conduct the matter and probably no assessor sits there. That is not a satisfactory way of investigating into the loss of property to the extent of 60,000*l.* or 70,000*l.*, which often enough occurs.

10108. May not you have just as much justice done by an informal examination as by a formal examination; do not you think that by an informal

formal examination of that kind, which allows any question to be put to elucidate the subject, you are as likely to come to a correct decision in a matter of this kind as by a tribunal which will be hampered by the forms you speak of?—No, I think not; I think you are more likely to get at the truth when it is elicited by men who are in the habit of making investigations of that nature. I think if you have a solicitor to examine a witness, he will be more likely to get at the truth than a man who is quite unpractised in examinations.

10109. You think it would be a great improvement upon the present system in Liverpool, supposing the Pilotage Board to remain as it is, if they proceeded in the way of a formal court of justice, and had a solicitor on each side to examine and cross-examine the witnesses, and in case they wished to do so having counsel also; do you think that that sort of system would give more satisfaction to the merchants of the port?—I think so. It would be more satisfactory to myself to be able to employ a solicitor when necessary; but what I think would be a great improvement would be this, to have the proceedings public, not private; and next, that there should be some assessor there who should keep them right as to what is evidence and what is not.

10110. The stipendiary magistrate keeps them right with regard to the law, does not he?—Not on the pilotage committee. There ought to be some one there who is competent to keep them right as to the mode of conducting the examinations.

10111. That could not be merely matter of choice upon the part of the gentleman whose ship had suffered damage, but the pilot would have the power of calling in a solicitor?—Certainly.

10112. It would add much to the expense of the investigation; do you think altogether that that expense would be well incurred?—In many cases I think so. If a master of a vessel gets damage done to the extent of 10,000 *l.* or 15,000 *l.* it is not any satisfaction to him to go before half-a-dozen shipowners, some of whom might attend to the case one day and not attend to it the next day, and who deal with it in that way.

10113. That is hardly a fair representation, is it? As you are aware, I have been the chairman of the dock board, and am a member of the dock board now, and whenever there is a serious matter the members of the board consider it their duty, having attended one part of the examination, to go through with it. I do not think it is a correct representation that when a case of 60,000 *l.* is on, that a man would come and attend to it one day and not attend to it another?—There is nothing to prevent it being so.

10114. That is another matter; the whole thing is a voluntary matter?—The investigations do not go generally over two or three days. I say it is a thing to which we are open at any time. We are talking now of the construction of the tribunal.

10115. In judging of the efficiency of a tribunal, you must take what has happened, and not what might happen?—I thought you asked me what would be the better tribunal.

10116. I ask whether the tribunal has not acted well upon the whole, and you think the other would be the better tribunal?—Yes.

10117. Even your most resolute men sometimes put vessels into danger as well as take them out of danger; resolution is a very capital thing, no doubt, and when masters are serving owners who are men of great ability, having great confidence in them, they are apt to run greater risks sometimes than are justifiable; would all your captains risk a gale of wind and not take pilots?—I gave you an instance in which a man brought his ship in for nearly two years without taking a pilot.

10118. But he might come in in fine weather?—The fact was, that it was not so; it was not always in fine weather. I gave you also an instance in which a captain came in without a pilot in bad weather; there were five instances last year, and they all occurred in bad weather.

10119. Would not they in case a pilot offered his services in a gale of wind take him?—They would take a pilot now, whether there is a gale of wind or not, because they are obliged to take a pilot.

10120. Supposing they were not obliged to take a pilot, or pay pilotage, which amounts to the same thing, would not your instructions be, supposing you had not pilotage to pay, that they should never take pilots under any circumstances?—I told you the instructions I would give; I should make arrangements for a choice of pilots; I should point out, say, six or a dozen pilots, all competent men; I should say to the pilots, look out for the ships when they arrive; and I should say to the captains, give these men the preference, and I have no doubt one or other of the men would invariably pick up the ship.

10121. When your vessels came in a gale of wind, could you always pick up one of the 10 or 12 men; I do not see how it would be possible to do it, when it is very difficult to get a pilot on board, and very difficult to meet one; you would not know what pilot you were going to take?—I should not have the slightest hesitation to trust the pilot to find out our ships when they came in.

10122. Do you mean to say that you would always have a boat cruising off, on the look out; your boats are constantly arriving, would you have a boat always off any one of these points, at the four or five different stations with your choice pilots on board?—I should arrange with one or two boats; I should say, you know our vessels well, you know their course, look out for them.

10123. In heavy wind, and thick weather, it is sometimes difficult, is it not, to pick up at any particular station; you get to the first station you can, the wind may be in a particular quarter, and it is very difficult to fix upon any one station that your ships will make?—The pilots know where our ships will come

10124. You would have to keep further from the land, or nearer to the land, according to the state of the wind or weather, would you not?—That would not have much influence upon a steamer.

10125. With regard to the accidents, you said they have been very numerous?—Very numerous and serious.

10126. Are you speaking of any accidents by which you suffered loss; not a total loss?—Not a total loss. As I tell you, total losses must of necessity be very rare.

10127. Mr. *Grieve.*] Of whom is the pilot board composed; is it of members of the dock board and the shipowners?—There are some shipowners, and there is a certain number from the dock board.

Mr. *F. Leyland.*

27 May 1870.

10128. Are they elected annually?—I do not know.

10129. Is the clerk of the board a legal man?—They have no clerk that I am aware of. There is the solicitor to the dock board. I do not know that he attends.

10130. There must be a clerk of the board?—I am not aware of any legal man that they have as clerk of the board.

10131. If pilotage were thrown open you must have a board to conduct the licensing system and look after the general conduct of the pilots?—Yes.

10132. Have you had many complaints against the pilots?—Yes.

10133. And you do not get proper advice from the board?—The board generally confine themselves to reprimanding the pilots: it is not that they do not arrive at a pretty just conclusion as to where the blame lies, but I object to the amount of punishment. There were many cases in which the pilot ought to have been discharged when he was not.

10134. Is it sometimes the complaint in Liverpool that pilots will not proceed to sea?—I have not had many complaints of that.

10135. You think that some of the pilots are not in your judgment fit to pilot ships?—I think a great number of them are not; there are many skilful men among the body.

10136. I think you said you would continue to employ pilots if it were thrown open?—I should employ a pilot if I could choose him.

10137. For the reason that it would relieve your master?—Yes, and it costs very little.

10138. Mr. *Gourley.*] Whom do you think in such a case should have the command of the ship when you have the pilot on board; the pilot or the captain?—If I had a pilot of my own choice on board, I should say that the captain must be the responsible man, in precisely the same way as if he left the deck in charge of the mate.

10139. You would employ the pilot as an auxiliary, to point out any danger that might exist?—As an assistant to the captain, and nothing more.

10140. You stated that you had a good many accidents to your vessels when in charge of pilots?—Yes.

10141. Did those accidents occur inside or outside the Mersey?—They occurred in pilotage waters.

10142. Did they occur inside the bar or outside the bar?—We have had some inside the bar, and others just as we come up to the bar; then we have had a large number of collisions in the river. We had a case in which a pilot put his vessel on shore when he had barely got her out of the dock.

10143. I believe the bulk of the accidents occur rather inside the bar than outside the bar, do they not?—I should say probably the bulk would be inside the bar.

10144. Would you consider the majority of captains with steamships, or with the assistance of tugs, quite competent to bring vessels into the Mersey without pilots?—No, I say two things are requisite; one great thing is not only that a master should be an intelligent and a first-class man, but that he should be in the habit of frequently coming into the port; he must be conversant with the port; he must not have to go down to his cabin and ascertain what is the meaning of this green buoy and that red buoy, and what is the meaning of that light, or of that headland; he must have such a knowledge by frequenting the port, that he knows what these things mean at once.

10145. You think a captain should be in the habit of trading to Liverpool?—A Mediterranean captain or any captain in the American trade could conduct his ship without a pilot.

10146. You said that a great many losses in the small vessels trading to Liverpool were in consequence of being badly found and undermanned?—Yes.

10147. Does it not arise in a great measure from those vessels hugging the land too closely rather than being undermanned?—I should not think so; it is a notorious thing that vessels of that class, colliers and others, are not so well manned and well found as vessels of a larger class.

10148. Is there no supervision exercised over them on the part of the underwriters?—The vessels are very rarely insured at all, neither are their cargoes; the colliers never insure their vessels; they are often navigated by a man and his wife, and a couple of boys to assist him.

10149. In such a case the loss is a loss to the owners?—To the owners.

10150. And the owners have no interest in losing the ships?—Not at all.

10151. You would license all men capable of passing a competent examination, and you would not limit the number; you would give every man a license to act as a pilot who could pass before a nautical board a competent examination?—I do not think so at present; I think some regard ought to be had to the interests of the men who have been brought up under the old system, and I think the licenses ought, at all events for the present, to be restricted to them alone.

10152. You would limit the number?—I would limit the number.

10153. Mr. *Cave.*] I think you said that you would make regular arrangements with pilots to meet you at the entrance to the harbour?—Yes.

10154. Your vessels come in very regularly, do not they?—Yes.

10155. And, of course, there would be no great difficulty in the pilots meeting you at that point?—There would be no great difficulty with us, and with companies like ours there would be no difficulty.

10156. That would not be the case with reference to ordinary traders?—No, certainly not.

10157. How would such an arrangement as you propose with voluntary pilotage meet their case?—They would have to run the risk; they would have to run their chance of getting a competent or incompetent man; they could not possibly judge; a stranger who has come to the port for the first time would naturally take the first pilot that offered, because he could not judge whether he was a good or bad one; he would take the fact that a pilot having a license was a proof of his competency.

10158. And they would be in precisely the same position as they are now?—Yes.

10159. Do you think they would be in as good a position under the voluntary system as they are now?—I think it would be better; because the class of men we employ at present as pilots get too little out of the thing under the present system. I am convinced that it is a bad system for the pilots themselves.

10160. Their

10160. Their earnings are not sufficient?—Their earnings are not sufficient.

10161. Do you think that their earnings would be greater under the voluntary system?—Yes; in the first place it is not at all a likely thing that the pilots would continue to pay the owners of the boats the enormous sums they are paying at present; there are 12 boats, and those 12 boats make up an aggregate of 700 tons; the average age of the boats is 15 years; we know what the value of 700 tons of property is; it would be putting it at a high figure at 10 *l.* a ton; that would be 7,000 *l.*, but that 7,000 *l.* is producing a dividend every year of 9,000 *l.*, which is quite out of proportion; that is a state of things which could only continue under a monopoly.

10162. You consider that the present expenses to which the pilots are put are extravagant?—I think that the division of the pilotage is a most unfair one.

10163. Do you think there would be more pilots under the voluntary system than under the present system?—I think at present there are too many pilots.

10164. Is it never the case that vessels are obliged to wait outside for pilots?—Yes, but not by reason of there being too few pilots, but because they are not afloat.

10165. You think the pilots are not at the stations at which they ought to be?—Yes.

10166. You believe that under the voluntary system they would be more anxious to get to the stations?—Yes; they would not be paid if they were not; I should take self-interest to be the great motive power, and I should form the whole system on that.

10167. The balance is between the self-interest of people to which they are not always alive, and the discipline which the superintendence of the board gives, and you think that self-interest is the stronger of the two?—I should certainly say so.

10168. We have had evidence that in some ports in which there is the compulsory system the pilots do not pay their earnings into a common fund, but that each man earns what he can get at sea, and that it depends upon his diligence and industry what he earns; if that was the case at Liverpool, would you consider that the objection to compulsory pilotage was done away with?—No, I do not see how that can be. If the captain has not the power of choice, it cannot depend upon the pilot's skill and diligence whether he is employed or not, because he must be taken whether he is skilled or unskilled.

10169. What I was pointing at was, his keeping at sea, and being at his station ready when wanted?—It would depend upon circumstances. If there was compulsory pilotage of that kind in a port where vessels rarely or never went, it is not likely that a man would always be about fishing on ground where there is no fish; but in the case of a port like Liverpool, where there is 60,000 *l.* a year paid in pilotage, it is monstrous to believe that under a voluntary system there would not be plenty of men to take their chance of getting the 60,000 *l.* a year; you must consider what employment there is to be got, and what the chance of remuneration is.

10170. You think it would be all in favour of the men keeping at sea?—No doubt it would be.

10171. Is it necessary to do away with the compulsory system which, we are told, is essential for the safety of vessels, and for the proper keeping open of the Channel when you could, by doing away with the payment into the common fund, arrive at the same result of making a man's earnings depend upon his diligence?—I say that his earnings must depend upon two things, his skill and his diligence; it is quite as necessary that a man's earnings should be made dependent upon his skill as on his diligence; I do not see how, under the compulsory system, you can insure a man's skilfulness so well as you can by making his employment dependent upon that skilfulness.

10172. You stated just now very fairly that a stranger is obliged to depend simply upon the license, and does not know whether a man is skilful or not; your answer does not bear upon the case of your own company, because you know the people?—It would be of great advantage to us, and to all parties having regular trades like ourselves, to have a choice; but to a man who cannot choose, simply because he has not the necessary information to make a choice, it is clear there is no good in giving that man a choice.

10173. *Chairman.*] But even that choice might be exercised through agents?—I am taking an extreme case of a man who had never been to port before.

10174. But a vessel would be consigned to some agent in the port, and the agent might make a choice of a pilot?—Yes.

10175. Mr. *Cave.*] Can you signal from a distance to Liverpool?—Vessels are signalised off Holyhead, a distance of 70 miles.

10176. Do strangers often signal to Liverpool as they are coming up?—Vessels are reported, as a matter of course, whenever the state of the weather permits signals to pass.

10177. You think it is possible in those cases for agents to send out particular pilots?—Yes.

10178. Mr. *C. Turner.*] But they could not send out pilots after they got the information?—I think they could do it. I do not think they would do it; the strangers would go on in the present way; but all the parties having important trades from Liverpool certainly would pick their men, and they would have a far better class of men than they have at present.

10179. Mr. *J. S. Hardy.*] In fact, a stranger would be rather worse off, because the best men would be employed?—Yes.

10180. *Chairman.*] You think that would be a great inducement to the pilots to exert themselves?—I think the pilots, as a body, would improve, and incompetent men would get so little employment that they would gradually drop off.

10181. And there would be an inducement to the whole body to exert themselves in order to get up to the prizes of the profession?—Yes.

10182. Under the present system there are no prizes in the profession; they are all upon an equality?—Yes, they are all upon a dead level.

10183. Mr. *Cave.*] But, practically, a stranger's choice would be more in name than in fact, would it not?—Yes.

10184. Supposing that is so, what do you say as to his taking the responsibility for any injuries committed while the pilot is in charge?—I think the captain ought to be responsible if there is any accident just the same, because it is not compulsory on him to take a pilot. It is the ordinary

Mr. *F. Leyland.*

27 May 1870.

case of a master and servant; principal and agent.

10185. Nominally it is not compulsory, but practically it is?—It is compulsory in the same way as it is compulsory upon any owner to employ a captain in a ship, simply because he cannot navigate the ship without him.

10186. An owner has a considerable choice in taking his captain; but a stranger coming into a port must take the first pilot that offers?—I do not think it is necessary that he should do so.

10187. But would not he, practically, take the first pilot?—No doubt he would, practically.

10188. Therefore, the choice is not real, it is only nominal?—In the case of a man not being able to choose, and not having the necessary information, the power of choice becomes of very little use; but he has none the less the power of choice.

10189. You still think that it would put the pilot in a position, which he is not now in under the compulsory system, of getting rid of his responsibility in case of loss?—I see no injustice in the owner being responsible under that system for the acts of the pilot.

10190. Do you see any injustice in his being responsible under the present system?—Yes, because no matter what a man's power of choice may be he cannot exercise it.

10191. You know that England is the only country in which the pilot is responsible?—I do not know whether that is so; I should much doubt it.

10192. In America and France, for instance, is it not so?—I do not think it is so in America. I have heard it stated, but I should be surprised to find it so on investigation.

10193. In New York is it not so?—I do not know about New York. It has been stated that the pilot is not responsible in the Mediterranean, but pilotage is not compulsory in the Mediterranean.

10194. With reference to the pilotage committee, how often do they meet to inquire into these complaints?—I do not know; I fancy they have regular times of meeting, but I cannot tell you.

10195. What were those cases of which you complained of the neglect of the dock board; were those cases in 1868 and 1869, or earlier than that?—No; we have lately sent in, more as a matter of form than anything else, our complaints to the dock board; but we have rarely paid any further attention to them. I recollect two gross cases some years ago; one was the case of the "Danube," where she was run on shore by a pilot in a most extraordinary manner, in which there was very heavy damage to the ship and cargo; and the other vessel was called the "Meander," she had barely got out of the dock before the pilot ran her upon a bank and she was sunk. This was in perfectly clear weather.

10196. In those cases did you get anything out of the pilot pecuniarily?—I never tried, as I thought it quite a hopeless thing. The loss in one case would have been about 120,000 *l.*

10197. In this list which I have here I see that there was a case in September 1868 of the "Albanian;" the pilot neglected to take the vessel to sea; a complaint was made, and the man was fined 5 *l.*, and reprimanded, in order to make good the loss; I suppose that you would consider that sufficient?—If it would make good the loss to the shipowners it would be satisfactory, but in that case the committee seem rather to have taken care of the other pilot boat. Surely it is a hardship upon the shipowners. It is clear the pilot ought to have taken the ship out, and he did not. What is 5 *l.* to a shipowner who has a ship detained worth 40,000 *l.* or 50,000 *l.*? 5 *l.* would not feed half the people on board the ship.

10198. You must take what the 5 *l.* is to the pilot?—Yes, but you must also take what it is to the shipowner. That shipowner might be compelled to take that man again, and that shipowner has a right to say, "I will not put myself in that position again; I will not have this man."

10199. Have you seen that return of the list of losses from Dungeness upwards?—No, I have not seen it.

10200. Where, out of a very large number of losses, only three occurred to vessels with pilots on board?—I have not seen it.

10201. If you heard of such cases as that, would it make you alter your opinion?—Not that sole fact, unless you can trace the loss clearly to the want of a pilot; but merely to state that there were so many losses, and that there was not a pilot on board, does not make the one the cause of the other. In the cases put to me by Mr. Turner I know there were other circumstances which were the real cause of the loss, and the fact of there being a pilot or not on board would have made no difference whatever.

10202. If you saw a return of 60 losses, 57 of which occurred without a pilot, and the other three with a pilot, would not it be a strong presumption that the want of a pilot was the cause of the loss?—No, I would not presume that, because it does not follow. It is assuming that a pilot must of necessity be a more skilled navigator than the captain, or that the presence of a pilot on board would have saved the ship; you have no ground for supposing that.

10203. It is somewhat remarkable that there were 57 losses without pilots and only three with pilots?—When you consider that the only vessels that are exempt from compulsory pilotage are vessels of the lowest possible class, it comes to be a thing no longer to be wondered at.

10204. *Chairman.*] The probability is, that in such cases the losses were due to other causes?—Yes, to being undermanned and underfound; and it is notorious that all the vessels that are exempt from the provisions of the Pilotage Acts are vessels of that class only.

10205. Of course the number of large vessels totally lost in pilotage waters must be very small, whereas there might be a large number of cases of collision, stranding, and other matters arising merely from the negligence of pilots?—Yes.

10206. Therefore the comparison would not be a fair one?—No.

10207. Mr. *J. S. Hardy.*] Is the proportion between the large and small vessels coming into the port, anything like the proportion between the large and small vessels which are lost?—No, I should think not.

10208. The proportion is not the same in number as in losses?—No.

10209. *Chairman.*] Can you give the Committee any idea as to what is the total amount paid by you for pilotage in the course of the year?—I have not gone into it carefully, but I should

Mr. *F. Leyland.*

27 May 1870.

should think it was between 1,800 *l.* and 2,000 *l.* a year.

10210. It has been pointed out to you by the honourable Member for Liverpool, that the present Bill does not do more than abolish compulsion, and that it does not compel the Liverpool authorities to break up their present system?—I do not see any reason why they should break up their present system, because unless they give me the pilots I choose, I will not take a pilot.

10211. The abolition of compulsion would supply you with a strong lever, with which you could go to the pilotage authorities and say, "These men are not competent to pilot my vessels, and unless you do what is reasonable, and let me have a choice of pilots, I shall withdraw my employment"?—Yes, that is the course I should pursue.

10212. At present you are at their mercy because you must employ pilots?—Yes.

10213. You stated that you estimate your own losses, from the negligence of pilots for the last 15 years, at a quarter of a million?—The loss of property on board my ships, as well as my own property, is to that extent.

10214. What proportion of that should you say was due to collision?—Very small; the greatest losses have been from stranding.

10215. In cases of collisions, there would be losses to other people as well, would there not?—No doubt; because if I have a pilot on board I do not pay for the loss.

10216. I believe, under the present law, you are not responsible?—Yes.

10217. By the new law you would be responsible if the pilot was negligent?—Yes.

10218. And you are willing to take that responsibility, if you have the choice of pilots?—Yes; if I have the choice of a servant, I will take the responsibility.

10219. Mr. *Price.*] I fancy that two or three of the questions put to you by one of the honourable Members, seemed rather at variance with the true principles of free trade; but, as I understand you, the limitation that you would put upon the power of the pilot to charge what he pleased, would be imposed upon him in exchange for a sort of *quasi* monopoly that he is permitted to enjoy?—That is so. It is this: that the trade of the pilot is confined to a number of parties having a license.

10220. If I understand your view with respect to the future system, you think it is desirable that for the convenience of shipmasters wishing to take a pilot and coming probably to a strange port, that there should be a certain number of men upon whom some competent authority should have stamped the evidence of their *primâ facie* fitness for that particular service, and that no other men should be permitted to practise in that service?—I think that it should be so.

10221. And you think that in consideration of this exclusive right to exercise this particular calling, they should come under an obligation to work at certain specified rates?—I think so.

10222. And that, therefore, it should be perfectly free to every master of a vessel to take a pilot or not as he pleased; but if he should take a pilot at all, he should take one of a certain competent class?—That is so.

10223. And that inasmuch as it was perfectly free for a man to be a pilot or not to be a pilot, if he chose to enter the service he should come under the regulations which were devised as well for his own protection as for the protection of the public?—Yes.

10224. In this case, does it occur to you that there is any violation of the principle of free trade where the obligations which are imposed are reciprocal?—I do not see that there is any infringement of the principle of free trade.

10225. Though you do desire yourself to be free as to whether you take a pilot or not, you think that no man should be allowed to practise as a pilot, unless he has passed some examination or other, and has given proof of his efficiency?—Yes; theoretically, it is not perfect freedom on either side, because, under the proposed system, a man is not allowed to take any pilot he likes, but must take him from a certain body, so that it is not theoretically free trade.

10226. The obligations are reciprocal, are they not?—No doubt of it.

Mr. William Inman, called in; and Examined.

Mr. *W. Inman.*

10227. *Chairman.*] You are Managing Owner of the Liverpool, New York, and Philadelphia Steam Ship Company, I believe?—Yes.

10228. What is the gross tonnage of that company's vessels?—About 35,000 or 40,000 tons.

10229. They ply from Liverpool to New York, Boston, and Halifax, calling at Queenstown, do they not?—Yes.

10230. How long has the company been in existence?—Twenty years.

10231. I presume you have had a very large experience in the management of steamers from the port of Liverpool?—Yes.

10232. And I believe you were a member of the pilotage committee of Liverpool for three years?—I was on the pilotage committee of the dock board, as a member of the dock board, between three and four years, until I retired from it.

10233. I presume you have had frequent opportunities of considering the question of compulsory pilotage?—Yes.

10234. You are a member of the Steam Shipowners' Association of Liverpool, are you not?—I was chairman of it last year and the year before.

10235. Were you present when that association came to the resolution in favour of the Bill now before this Committee?—Yes, with the exception of the third clause.

10236. You do not quite approve of the third clause?—No.

10237. Do you agree with the last witness with regard to the report he has given of the opinions of that association?—Yes, I do.

10238. Are you of opinion yourself that compulsory pilotage should be abolished, and that in its place there should be a voluntary system?—That is my opinion. I do not want to give that opinion as to sailing ships, about which I have not much knowledge; but on the whole, I think it is a proper system.

10239. The North American steam trade in Liverpool is in somewhat a different position to other trades in regard to pilotage, inasmuch as they

Mr. W. Inman. 27 May 1870.

they are allowed to chose their own pilots?—Yes, to a certain extent; we had some difficulty raised by the superintendent of the pilots upon the list of pilots which we wished to nominate. I think the Cunard Company have not adopted the system of nominating their own pilots; but the Allan Company, calling at Londonderry, and our company, calling at Cork, and the other companies, have been allowed to have their own pilots.

10240. You yourself exercise that privilege?—We have three pilots.

10241. And you take them on board at Queenstown, do you not?—Yes; we have three at Liverpool, and two at Cork.

10242. You take your Liverpool pilots out from Liverpool, and leave them at Cork, do you not?—We take the Liverpool pilots out by the outward-bound steamers, and they then come back with the inward-bound steamers, and the Cork pilots meet the ships at Cork, and do not travel with the steamers.

10243. What was your reason for wishing to adopt that plan yourself; was it in consequence of complaints you had made?—It was a compromise; I had a very great complaint against the pilotage committee, and I have been dissatisfied with their decisions; and I think it was indicated to me by the superintendent of pilots, that such-and-such things might be permitted, and I have adopted it as the best way "out of the wood."

10244. You think that all shipowners should have the same choice?—I think they all ought to have the same choice.

10245. I presume, however, that they are not all in the same position now to make terms with the pilotage authorities as you are?—I have heard that the pilotage committee has not permitted every one to have their own pilots; I understood that Mr. Leyland's firm were not allowed to have their own pilots; I do not know it of my own actual knowledge.

10246. Have you known many cases in which accidents have occurred when the vessels have been under the charge of compulsory pilots?—I will just state two cases, and grievous cases, which I had against the pilotage committee: one occurred in 1860, in which the pilot was undoubtedly drunk; we complained to the pilotage committee; our captain and our superintendent were present to state the charge; they were then ordered to withdraw from the room; the pilot, the surgeon, and the master of his boat, were then allowed to make their statements, after my people had been turned out of the room; the pilot was honourably acquitted. I made a complaint to the dock board of it; I think the honourable Member for South Lancashire was chairman of the dock board at that time. The pilot was again honourably acquitted, and I have not the slightest doubt that he was drunk, and the vessel would have been high and dry on the great Burbo Bank, if the captain had not sent him off the bridge, and taken command of the ship.

10247. When was this other case which you mention?—It was in 1866; it was a case in which a steamer was coming in at the Rock Light, and the captain asked the pilot to turn her at the Rock; the pilot refused to turn her, and took her further up the river; he then ran her stem on to the Canada Wall and broke her stem, and we had not only to pay for the repairs of our ship, but the dock board not only exonerated the pilot, but made us pay for the damage of the dock wall.

10248. Are you of opinion that the present practice of the pilot taking absolute charge of the vessel has tended to increase the number of accidents?—I would not, under any circumstances, allow a pilot to take charge of a vessel. I should consider that the vessels were unsafe the moment they were in charge of a pilot.

10249. Are you aware that the practice has grown up in American vessels, for the pilot to take absolute command of the vessel?—Yes.

10250. Are you of opinion that many accidents have occurred in consequence of that?—Mr. Guion's steamer was ashore in the Crosby Channel; the ship was in charge of the pilot; we do not take notice of other people's business.

10251. Have you read the evidence which has been given before this Committee, by the opponents of the Bill, upon that point?—I have only seen certain paragraphs which have appeared in the Liverpool newspapers.

10252. Are you aware of the effect of the evidence that has been given?—Yes.

10253. It is generally to the effect that the present law, which exempts owners from liability, has produced a bad result; I mean the exemption of liability in the case of taking a compulsory pilot?—I wish to take the utmost advantage of that that I can get; that is a point upon which we feel that if we are left free to choose our own pilots, we are willing to take the liability; but we are not willing to have a pilot forced upon us and then to be told that we are liable for accidents; I want it all or none.

10254. You are willing to take the responsibility upon yourself, if you have the choice of your own pilots, and if the employment is voluntary; but you are not willing to take upon yourself the responsibility if you are bound to employ a certain man?—Yes, that is so.

10255. Are you aware that the practice has grown up for the pilots to take complete charge of the vessels, and that that practice has conduced to accident?—I do not know that of my own knowledge; but I think it very likely that it has done so.

10256. What is your opinion as to the employment of pilots in the events of the pilotage being voluntary?—I think we should have the men better paid and better men for the service, and more efficient work done; because I think the money which we pay for pilotage does not go into the pocket into which it ought to go; that is one of our greatest objections to the present system, because, as far as I am able to learn, a small number of masters, having 12 or 13 pilot boats, do the work of the port of Liverpool, and are allowed to have an interest in the pilot boats; they do not often go to sea, and the pilot who does the work does not receive the remuneration he ought to have. I have ascertained from my own pilots, that they do not receive more than 180 *l.* a year for their services, and we pay the pilotage committee for each of those men 370 *l.* a year.

10257. Each of the men employed you pay 370 *l.* a year for?—That is what the pilotage dues alone come to; that is the case also in Cork; the difference between the amount we pay and the 180 *l.* goes to the 36 masters, as owners, for the whole port, who take turns at sea and do not do the work.

10258. Does not a portion go to other pilots who share and share alike?—What we pay must go in the same proportion to the boat.

10259. Have you any fear that the employment of

of pilots will fall off to any great amount if this Bill should pass?—Not in my case; we should never cease to take pilots.

10260. Do you think generally that their employment would fall off?—I do not think it would, unless there is another class of licensed pilots. I think the port of Liverpool has altered in the last five years, and I have it on very good authority now that the great majority of vessels over 400 tons register are in tow of steam-tugs before they come into pilotage limits.

10261. And when they come into the pilotage districts, do you think they will also take a pilot as well as a tug?—I cannot imagine an owner not satisfying his underwriter and the law by not having a pilot on board.

10262. Even though the vessel is in tow of a tug?—Yes.

10263. It has been stated here that if this Bill passes into law, the pilots will not go out in bad weather, and that there will not be an inducement for them to go and seek vessels in bad weather; is that your opinion?—It is not my opinion; I think that the coast off the port of New York refutes that, because we there meet our pilots 240 miles out.

10264 It is compulsory there, is it not?—It is compulsory, but the competition is very great there, and the first man who boards has the right to pilot the vessel.

10265. It is not a limited number of pilots?—No, and it is not a station system; but the boat that can catch up the vessel first has a right to her.

10266. They come out 240 miles to find your vessels, do not they?—Yes, and longer distances too.

10267. And they come out in all kinds of weather?—Yes.

10268. At Cork also we are told the pilotage is voluntary; and notwithstanding that, your vessels employ pilots, do not they?—I confess I am ignorant whether it is voluntary or not, but we pay much more than the pilot receives.

10269. Where does the pilot board you at Queenstown?—Just off the Daunt's Rock, or the Old Head of Kinsale.

10270. Do you have any difficulty in finding the pilot you have specially appointed?—No.

10271. What is the total amount paid by your company for pilotage in the course of a year?—We pay at Liverpool about 1,300 *l.*, and at Cork about 1,300 *l.* also.

10272. Sir *J. Hay.*] Are the rates as high at Cork as they are at Liverpool?—I think they are much the same.

10273. *Chairman.*] Is it your opinion that the pilots should get the whole amount paid in respect of their services?—I think so.

10274. Instead of its being paid over to the pilotage authority, it would be divided as you have told us?—Yes. I think if a larger part of the earnings of the best pilots went into their hands directly, instead of going into other hands as it does now, we should have an immensely improved system.

10275. Do you think that that would be an inducement to better men to come into the services?—Yes.

10276. The employment by large firms, such as yours, would be the prizes of the profession?—Yes.

10277. And that would induce men of a higher class to come in?—I think so.

10278. Whereas now there is somewhat of a dead level amongst all?—There is a very dead level, and it is a long time before a young man can get forward from his position as a journeyman.

10279. Do you agree in the main with the evidence given by Mr. Leyland?—I do.

10280. Have you been in the room during the time he has been giving his evidence?—Yes.

10281. Do you consider that that is the general opinion of the steamship owners of Liverpool?—I think that, on the whole, it is. At the meeting when this report, which was adopted and sent to the Board of Trade, was passed, the whole of the members were invited to be present, Mr. Leyland, the chairman of the association, was present; Mr. Bryce Allan, of the Canadian Mail line, was present; he is a member of the dock board; Mr. Harrison, a member of the dock board and of the pilotage committee, was present; I do not remember any more who were present. There was a long discussion upon it, but the decision was quite unanimous in favour of the Bill.

10282. What proportion does the steam tonnage in Liverpool bear to the sailing tonnage?—I cannot say; but I took out the particulars of the steam tonnage of the kingdom, and I find Liverpool is a fourth of the whole kingdom.

10283. And it is every day increasing in that proportion, is it not?—I think that the whole of the kingdom is 1,300,000 tons, and our Steam Association has 340,000 tons of it, and the total Liverpool tonnage is 410,000 tons, I think.

10284. And the proportion of the sailing tonnage owned at Liverpool is every day increasing, is it not?—Yes, very greatly.

10285. Mr. *Graves.*] Will you inform the Committee why the committee of the Steamship Owners' Association objected to clause 3?—I will read what they state in that report: "It is suggested that clause 3 should be withdrawn, as it appears probable that it will create great difficulty in certain cases. 1st. If a ship is in charge of an unlicensed pilot, and a licensed pilot applies for employment and is taken, inasmuch as his employment in that case is enforced with a penalty, it will be said that it is compulsory, and that the owner will have an immunity from the consequences of his act. 2nd. If a Channel pilot is engaged, say, to take a vessel from Liverpool to London, he will, under this clause, be liable to be superseded in every pilotage district which he enters." Our view is, that if a vessel is taken by what we consider to be a competent pilot, who might not be licensed, and another offered, the captain would still be under the necessity of taking the very man he objects to.

10286. You have now a perfect choice of pilots, both inwards and outwards, have you not?—As I said, it was a compromise.

10287. But in practice you have?—We insisted upon having our own pilots, but we had some difficulty in getting them. The superintendent came to me and asked me to take another man, and I did not choose to take that other man.

10288. You have pilots of your own choice now, inwards and outwards, have you not?—Yes.

10289. So that, so far as choice is concerned, you have not the same grievance as Mr. Leyland, the last witness, has?—No.

10290. Do you think it possible to carry that privilege

Mr. *W. Inman.*

27 May 1870.

privilege of free choice to any great extent in the port of Liverpool?—I think it might be done.

10291. I am speaking with regard to the steam lines?—I think it might be done.

10292. But not beyond the steam lines?—I think the efficiency of the pilotage service of the port might be made much greater, and I think that if the pilots had small engines on board their boats, and had to spend more money on their boats and less went into their pockets, there might be a much improved service, and such a thing might be done.

10293. How would you provide for the general shipping of the port; I can quite understand that large companies like yours can have a free choice, but how are you to extend it to the general shipping of the port; I should like to have your opinion upon that point; I speak now of sailing ships as well as steamers?—I think there would be a difficulty in doing that with sailing ships, because if a sailing ship comes up Channel, she is not always expected; she may be 90 days, or 100, or 120 days from Calcutta, and she must take the first pilot that offers.

10294. Do I understand that the first pilot that comes off at New York has the right to pilot the vessel in?—Yes.

10295. Then, practically, there is no choice at New York?—There is no choice at New York, and we have lost more money in New York harbour than in any place.

10296. Sir *J. Hay.*] Through what cause?—Bad pilots.

10297. Mr. *C. Turner.*] And the bad pilots sometimes go out the furthest?—Yes.

10298. Mr. *Graves.*] How long have you had the privilege of having choice of your own pilots?—It began soon after the last accident with the "Kangaroo" running against the Canada Dock wall (in 1867.)

10299. Have you had any occasion to make any complaint since you have had your own choice of pilots?—No.

10300. Before that time, had you occasion to make many complaints?—We were most discontented.

10301. You were on the pilotage committee three years, were you not?—I was.

10302. Did you do anything to reform this bad state of things?—No. I think the pilotage committee was very little better than a police court.

10303. But is not the police court a good place for investigation?—Yes.

10304. Is there not a weekly sitting of the pilotage committee to inquire into all complaints?—Yes.

10305. I believe it is the practice to send on to the dock board weekly a report of any case of a serious character that requires notice?—Yes.

10306. Are not all these proceedings carried on in public; at the dock board is not the discussion in public?—Yes; but you must know that the pilotage proceedings at the dock board are always got over as rapidly as possible, because there were four members upon the pilotage committee who were not members of the board.

10307. Whenever proceedings of the pilot committee are going on, the reporters are present, are they not?—Yes.

10308. And the proceedings of the dock board, through the pilotage committee, are taken in public, are they not?—Yes.

10309. Are you aware that the Underwriters' Association of Liverpool, through their chairman, have taken a totally different view from that which you have taken with regard to this matter?—Yes, I should think it is natural that they should; the underwriters defend themselves in every way they can where their own rights are involved.

10310. Do you think it a saving to them to retain the present system?—I think, under the present state of the law, every man admits that he must have a pilot on board every vessel; and everybody thinks if there is a pilot on board it hides a great many wrong doings.

10311. It is not that you think that the underwriter would have to make good fewer losses if the present system is retained?—No, I do not think the underwriters are people who have practically any knowledge of the matter; the underwriter serves his time to the underwriting business, and it is not likely that he has any knowledge of this matter at all.

10312. Have you formed any idea of the value of ships, and their cargoes and freights, that go in and out of Liverpool in a year?—It must be enormous: many millions, I have no doubt.

10313. It has been estimated at 400,000,000 *l.*?—I have no doubt that is so; I can believe it. I do not think that affects the question.

10314. You made some allusion to the application of steam as an improvement in pilot boats at Liverpool?—Yes.

10315. Would not that add considerably to the expense of working the pilotage service?—I do not think it would, though I speak off-hand. I think that if there was a fewer number of boats the better class of boats there would be, and that a better service would be performed.

10316. Do you think that steamers would be as suitable for running alongside the ships in a gale of wind and boarding, as a vessel under sail?—On the whole, I think, better.

10317. Could such an improvement as you have suggested be effected in any other way than by co-operation?—I think it is extremely likely; if the pilotage of the port were made open, you might have the largest merchants in the port joining together to have their own pilotage service for themselves and a definite number of ships.

10318. You would probably have your own service?—We do not require it; but I would not hesitate to become a co-owner in pilot-boats for the good of the pilot service; it might be a joint stock company who would advance money for it.

10319. But with the voluntary system, without some co-operation of the merchants and large shipowners, it would be difficult to carry out such an improvement as you suggest, would it not?—I do not think it would; I do not want to say anything against them, but my own chief grievance is that if the money, which in my opinion goes into the wrong pockets, were to go into the right ones, the system would be very much improved; it goes into the pockets of the masters and owners of the boats, who are said to get 12½ per cent. only upon their shares, but the shares are infinitely more highly valued than the property

perty is worth. For instance, it has been stated to me that the boatowners among themselves divide 9,000 *l.* a year, whilst anyone can estimate that the value of the boats is not nearly that amount.

10320. What would you consider a fair depreciation per annum upon these boats?—Ten per cent.; but there are a great many boats that are a great deal older than 10 years.

10321. What would you consider a fair percentage for insurance as a charge against income for these boats?—Eight per cent. per annum; that is a liberal allowance. There has never been a pilot-boat lost in the last 20 years.

10322. Eighteen per cent. you think would cover everything for depreciation and insurance?—Yes.

10323. Are you aware that in these divisions of income there is no deduction made whatever for depreciation, and that the shareholders, whenever called upon by the dock board to make good repairs, or to replace a new boat, are bound to do so?—I do not actually know it personally, but it is said to be so in the Act.

10324. Mr. *Price.*] Do you object to clause 3, which allows a licensed pilot to supersede an unlicense done?—The Steamship Owners' Association object to it.

10325. Is that objection a common one; is it taken by yourself for special reasons of your own?—I do not say I specially object to it, because I should never use an unlicensed pilot; the only objection taken is this, if there is one competent pilot on board a ship, they ought not to be called upon to take a second.

10326. You yourself would not personally take a pilot who was not a licensed pilot, would you?—I would not upon any consideration.

10327. Are you of opinion that though you may leave it open to men to take pilots or not, yet if you are to have a body of licensed pilots, if a man does take a pilot, he must take one of them?—To give steamship owners a safeguard, I would give him the power of saying I am not satisfied with the licensed pilot sent to me, therefore, I shall adopt another man until you come in and give me a good man.

10328. The honourable Member for Liverpool asked whether, as a general rule, there would not be great difficulty in applying to ordinary sailing vessels the rules that you might lay down with respect to steamers; I ask rather in the same view of the case, whether you do not think it is necessary if licensed pilots are to be retained at all, that they should have the priority of employment over those men who are not licensed?—I would always give it them as long as they were good men.

10329. Is it not your view that the power to take pilots or not as you pleased, would sufficiently secure that they would be good men?—Yes, I think it would; but that relates more to a channel pilot taking a sailing ship from Liverpool to London; it does not apply so much to a case like ours, or to the case of vessels frequenting the port of Liverpool inward and outward-bound, as it applies to cases of new vessels coming from Glasgow to Liverpool, or going from Glasgow to London or changing their port, during which they would pass through a number of pilotage districts.

10330. What I do not see is this, if a ship has to go from London to Liverpool, or Glasgow to Liverpool, through all these different pilotage jurisdictions, how would one man be able to discharge the pilotage duties in all those waters?—There are a great many persons, I believe, who regularly take it up as a business.

10331. And are they licensed for that purpose?—No, they have no licenses, and they are called channel pilots. An American captain comes in, and does not know the channel, and he takes some man who is hawking about as a channel pilot; he takes him on the faith that he is a channel pilot; he produces certificates from masters he has sailed with before, and the captain takes him on board on the faith that he knows the course.

10332. Excepting in a case of that sort, you yourself would not object to giving a certain exclusive privilege to men in each port who are specially licensed for the service of that port?—I most decidedly would give all the preference to licensed men, and I would not have any man employed who was not licensed; but I would not put upon the shipowners the necessity of taking the men they dreaded.

10333. That is leaving you free to take a man or not, as you please, but still giving to the special class, specially trained and specially certificated, the preference over men who have not been so certificated?—Yes; but a man who had made himself obnoxious on a previous occasion might present himself alongside and say, "You have another man going to help you to sea, you must take me;" that is the point that I object to.

10334. What you would desire would be two things: first, that you should not be compelled to take pilots if you do not wish; and, secondly, that though you should be limited to take on board a particular class, you should not be compelled to take any man that is forced upon you, but that you should have the option to select your pilot?—Yes, that is the view I take.

10335. And you think that under that system you would not only get an adequate staff, but a more efficient staff than you have now?—Yes; and the bad men would be weeded out, and none but the good men would remain.

10336. As to the question of boats, you do not think that, practically, it would give rise to any difficulty, but that in some way or other, either by private enterprise or by joint-stock enterprise you would find a sufficient number of pilot-boats under the free system you advocate?—I never knew a good business yet that did not find a good many competitors for it. I believe it would be a good business, and it would be much run after.

10337. Do you think it is desirable that the pilotage service and the boat service should be distinct from each other?—I should have it all one service.

10338. I thought you were drawing a distinction between pilots who had and the pilots who had not an interest in the boats, and that you thought that those who had an interest in the boats got more than their equitable share of the earnings of the whole?—I was rather speaking of what I considered to be the monopoly of the masters of the pilot-boats. My feeling, to a great extent, is that the injustice lies there. I think the pilots themselves who do the work do not receive the proper amount of money which they ought to receive.

10339. You said that you would be willing to join in establishing these boats, and would advance money to fit out these boats on a joint-stock principle, supposing a free system of pilotage

Mr. *W. Inman.*

27 May 1870.

were adopted. I suppose you contemplate that these boats would belong, not to the pilots, but to some other association who would use them in the pilotage service?—What I think might happen would be this: that 8, 10, or 12 good pilots might join together and say, "Let us have the best pilot-boat that can be had; let us go to some merchants who have confidence in us; let us ask for money to help us to build the boat that we may do a good pilotage service with it."

10340. You contemplate that the boats might belong to the pilots?—Yes, or the pilots may be employed on a salary.

10341. Whether the boats actually are raised in the name of the pilots or not, you think at the same time they should be under the control of the pilots; they should be either their own boats or the boats they have chartered?—Yes, it is so at Cork at this moment; certain merchants at Cork and Queenstown hire out a whale boat, and they say to the pilots, "Hand us over so much of your earnings and we will find you a boat."

10342. You are not at all afraid that the enterprise which brings the New York pilots so far out to sea to meet the ships would be abated by the establishment of a perfectly free system of pilotage?—I do not think it would.

10343. Sir *John Hay.*] You object to the master of the pilot-boat obtaining the lion's share of the pilotage contributed; why is it that some arrangement should not be come to other than abolishing compulsory pilotage, to make a more proper division of the pilotage earned between the pilots who are associated together in the boat?—I can only speak from what has happened in the pilotage committee of the dock board, and the dock board of Liverpool have never adopted it, and have never forced it on the pilots; they have been satisfied in keeping the system as it is, although, in my opinion, the system of conducting the trade of the port has certainly changed.

10344. That system must be regarded by the dock board without reference to changing the system of pilotage, whether compulsory or voluntary?—Yes, that is so. I do not know whether they have power in their Act to alter the renumeration. I think when the recent Mersey Docks and Harbour Act was passed there were certain special clauses inserted in it at the instance of the pilots themselves by which the pilots were very much protected as to their earnings, and I do not think the dock board has power to open that question.

10345. We are here to discuss the Bill which is before the Committee, and the honourable Chairman is here with the view of having it amended; it would be as easy to pass a Bill to amend the Mersey Docks Act as to pass a Bill to alter the system of pilotage, would it not?—I fear that the Steamship Owners' Association would be only too glad if the Government would amend the Dock Board Act.

10346. I gather from your evidence that you consider that the amendment of the law should not be in the direction which is proposed by the Compulsory Pilotage Abolition Bill, but rather that a change should be looked for in the laws which regulate the pilotage in the port of Liverpool?—I will answer the question by stating that I look upon this Bill as a step in the right direction. I do not think that it ends the question; but I think it will, if it is passed, bring the next point to a solution.

10347. What is the next point?—What I have been asked about; about the boats and the profits going to the masters and owners. I think that it would enable the greater part of the trade of the port of Liverpool to say, "We will not submit any longer to this system; we have the power given by Government to say whether we will take the men or not, and we will not continue that system until it is altered."

10348. Gathering, as I do from you that being a very large steam-ship owner, you are of opinion that it is desirable that pilotage should be continued, and that you think it desirable that your ships should always avail themselves of the services of the pilots, granting it to be possible that the Compulsory Pilotage Abolition Bill would deprive you of qualified pilots, should you think that such an alteration of the law as is proposed by this Bill, would be a better step than to take the other step, which you desire at once, without doing away with compulsory pilotage?—I have been examined chiefly upon Liverpool, and the Bill applies to all parts of the kingdom; there are other ports at which I think that pilotage ought to be free.

10349. With regard to the port of Liverpool, do you conceive that it would be desirable to take this step of abolishing compulsory pilotage, supposing it made the pilots less efficient, if you could get the grievance which you see cause to complain of remedied by an alteration of the law in another direction?—I like the freedem better.

10350. You would like compulsory pilotage to be done away with in the port of Liverpool, on the ground that you believe that the pilots would not deteriorate in consequence?—No, I should like compulsory pilotage to be done away with, upon the general basis that I do not like anybody to interfere with me in the management of my business if I can possibly help it.

10351. But you desire to have good pilots?—I do, and then I should choose my own.

10352. Of course, where a shipowner has a great number of ships, and is able to keep a large establishment, and have a sufficient number of pilots of his own, it would not so much matter; but with reference to the trade of the country, where either very important shipowners or great associations are not concerned, and where the owners are in different circumstances, do you think that they would be able to serve themselves as conveniently, and as satisfactorily, under the free system, as under the compulsory system?—I freely admit this; that if an American ship was coming in, or a foreigner was coming in past Holyhead, and he has never entered the port before, it is a desirable thing that he should know that there are a lot of properly licensed pilots to meet him; but the rest of your question simply turns upon whether the compulsory system, or the free system, would get the largest number of men upon the station, and I think a competitive system would bring the best class of men upon that station.

10353. A question has been raised by the previous witness as to how far freedom should be exercised to the pilots as well as to their employers; what is your view upon that point?—My view is that I would give the pilots their freedom.

10354. Would you compel them to have licenses?—I would compel them to be licensed men, but I would make both sides free.

10355. Would

10355. Would you limit them in number at all?—No.

10356. *Chairman.*] Do you think that there should be a regulated price?—Yes; virtually you have a regulated price, because with the old Liverpool Steam-Tug Company at the present moment I have an understanding, that if any of our vessels happen to be broken down in their machinery anywhere between here and Cape Clear or Cork, they are to take hold of the vessel if she wants assistance, with the understanding between us, that there shall be no salvage claims. I think the same would be the case with pilots.

10357. With regard to foreign vessels, do not you think it would be better to have a regulated price?—Yes.

10358. Sir *J. Hay.*] The pilots would be limited as to their charge, but the general trade would not be compelled to employ them?—With regard to their charge, they would be limited; but I think after the first six months or the first year it would soon get to be known by the brokers all over the ports that a certain pilot boat had been making extortionate demands, and they would make a black mark against it, and whatever ships came in they would not go near it; it would remedy itself in a year.

10359. The employment of a pilot if pilotage were free, would probably be avoided in fine weather, and would be desired in stormy thick weather for ships inward-bound?—I think in that case the pilot would do what he does now, that is, choose his ships. I have had complaints from my masters that at the present moment, under the compulsory system, the pilot chooses what ships he will go near; and the captain of one of my steamers which runs once a-week to the Bristol Channel, a screw collier, has complained to me over and over again that if there are two or three ships near, the pilot runs to the 1,000 tons ship, where there is a large pilotage to be got, and leaves him to run into port as he best can.

10360. Supposing the weather to be thick and hazy the pilot boat would not have that opportunity of selecting the ship; he would have to take what came near him; at the light-ship, for instance. In any case, in thick weather, the pilot only ascertains that the ship is near him when she is very near, and he has not the power of selection, because he cannot see the ship on the distant horizon?—In bad weather I cannot imagine a captain running the risk of ever approaching nearer than Holyhead, or Point Linas, or the Skerries, till he has made his pilot. I should say that a captain would stand off between the Skerries and the Isle of Man, and keep clear of everything until he made his pilot.

10361. Those ships that have an arrangement by which they take a pilot from Cork would have an advantage in making the passage, over other ships, would they not?—Yes, undoubtedly; those are steamers; but I consider a steamer, if she missed her pilot, would come up and anchor at the Bell Buoy; a master will pass Cape Clear, and he will, on his lead, and on his soundings, come up the whole of the Channel, and see nothing until he gets up to the North-West Light Ship; he can do that without any pilot. Last week we had a steamer going down with an outward cargo and the mails; she never saw anything after passing Point Linas until she made Cork harbour; they went down with the lead entirely, and she had no pilot on board.

10362. I understood you to say that you had no desire that your captains should pilot your ships?—No, I should never allow a captain to go without a pilot.

10363. Do you think it very advantageous to your interests, and the interests of the public, that the captains should be always furnished for a sea voyage with a pilot?—The captain always stands by the pilot; he hears the pilot give every order, and every order is considered by the captain before it is given; the captain forms his own opinion as to whether he passes that order to the engine-room or to the man at the wheel, or not.

10364. *Chairman.*] Then the captain is in sole charge of the vessel?—Legally, we are under compulsory pilotage; but virtually, I allow my captains to use their own discretion with the pilots.

10365. Sir *J. Hay.*] Is he not bound to avail himself of the local knowledge of the pilot?—No.

10366. The same regulations are observed by you as those in the Navy, with which I presume you are acquainted?—Yes.

10367. Have you any knowledge of the statements which have been made before this Committee as to the number of ships lost last year in the port of Liverpool, one with a pilot on board, and 50 or 60 without?—Very much must depend upon where loss begins and ends. I heard the statement, and I was much astonished. I can quite understand it if it is true; the explanation is this: that in all weathers the small sailing vessels take the Rock Channel, and the North Channel, no matter how the weather is, and if the wind happens to be against them they cast anchor; they are thereby exposed much longer to the fury of the elements than vessels in charge of pilots, which are towed in by steam-tugs and towed out by steam-tugs. Then, again, I know that there was a Cunard steamer on shore on one of the banks, and she was in charge of a pilot; a "Guion" steamer was on shore when in charge of a pilot, and last week there was the "Ida Maria," a large barque of 1,000 tons, on shore on the Burbo Bank, and I believe that she was in charge of a pilot. I can name something like 5,000 to 6,000 tons that have been on shore within the last winter, of vessels in charge of pilots.

10368. *Chairman.*] Then the comparison is an unfair one?—That comparison is an unfair one; the steamers were all got off again.

10369. What would be a total loss to a small vessel, would merely be a stranding to a bigger one?—Yes.

10370. Sir *J. Hay.*] I believe that one of those ships was in charge of a selected pilot, employed by the owner?—I think so; the Cunard Company, *i.e.*, it was a Cunard steamer, and I cannot speak for them.

10371. Have you lost any ships in charge of pilots?—Never; we have had them on shore in charge of pilots.

10372. Have your selected pilots lost you any ships at Liverpool?—We have lost no ships in the charge of pilots in Liverpool.

10373. Have you lost any in Cork in charge of pilots?—No.

10374. You mentioned that the rates at Liverpool under the compulsory system, and at Cork under the free system, are nearly identical?—Yes.

10375. Can you give the Committee any information with regard to the rates at New York?—I do

Mr. *W. Inman.* 27 May 1870.

I do not know without looking, but I think they are nearly the same as at Liverpool.

10376. Even for a long distance out?—Yes.

10377. Do pilots charge any more if they meet you 200 miles out?—They make no extra charge for bringing you in; it is simply competition for the job.

10378. Mr. *J. S. Hardy.*] With reference to the 3rd clause, unless you give a licensed man the power of superseding an unlicensed man, what interest is there to any pilot to get himself licensed; it is not a question which concerns Liverpool very much, but in the port of London there are a great number of unlicensed men, 500 or more, constantly at work, and unless you give the licensed men the power of superseding them, what is the object of getting the license?—I think I answered that question before, by saying that I would not allow an unlicensed man in the port to take charge of a vessel; it is only for channel voyages that I was speaking of.

10379. In the port, unless you give the licensed men the power of superseding unlicensed men, you would have no power of insisting upon the license?—I should not allow any unlicensed man to take charge of a vessel in the port.

10380. With your chosen pilots, when you are in compulsory waters you are free from liability for accidents and collisions, are you not?—Yes, we are; but I had a case decided last week in which that was no benefit to us. We had a peculiar case; we were the first steamer going to sea at the Bell Buoy; it was one of the mail steamers, and another steamer was overtaking us; both our steamers were in charge of a pilot, and a third coasting steamer was coming into port not in charge of a pilot; our pilot ported or starboarded, as the case might be, to get clear of him, and the following steamer ran into us, and the decision was, that both the vessels being in charge of licensed pilots, the licensed pilots should divide the damages.

10381. *Chairman.*] You paid your own damage?—It was awarded so last week, and that is a case which makes me think there is no benefit in having the immunity.

10382. Mr. *J. S. Hardy.*] Of course the immunity, as a matter of fact, if you start fair at any one particular time, is likely to be in your favour on one occasion, and against you on another occasion?—That is the position, and that is why we say that if you let us have free pilotage we will take the risk; but if you compel us to have pilots you must exonerate us.

10383. I see, according to the rules and bye-laws for boats and pilots, that the board may alter such apportionments, from time to time, in such manner as they think conduces to the interests of the service, therefore do you think it necessary to have an Act of Parliament?—If they have the power, I hope they will exercise it.

10384. This law of compulsory pilotage, which is so great a grievance, has done you so little harm in Cork that you were not aware till 10 minutes ago that Cork was a free pilotage water?—No, I was not aware of it before.

10385. Cork is an extremely easy harbour, is it not?—There is one rock in the middle of the entrance, which ought to be blown up; that is the Harbour Rock; and I think Daunt's Rock ought to be blown up; with those two exceptions, I do not think there is an easier harbour to enter in the world.

10386. How is it that the pilot rates in Cork are anything like the same as they are in Liverpool?—Because they take as much out of Englishmen as they can possibly get.

10387. Mr. *C. Turner.*] Bad as the Liverpool system is, Cork is worse, is it not?—I suppose that is so.

10388. You say that all these vessels that were on shore had pilots on board?—Yes.

10389. Those were selected pilots, were they not?—I believe Cunards' did not select their pilots two or three years ago.

10390. Do "Guions'" select their pilots?—I do not know whether they do or not.

10391. One great advantage that you anticipate from voluntary pilotage is, that you can select your own pilots?—Yes, we do now; I have not a personal grievance.

10392. Do you think that one great advantage to the trade would be, that parties could select their own pilots?—Yes, I think that would be so.

10393. Then, you think that it is because the pilotage system is not a good one that these vessels get on shore?—No; I instanced the names of those vessels within my own knowledge that have been on shore within the last six months against the statement that was read to me of one vessel in charge of pilots against 59 others not in charge of pilots.

10394. They spoke of vessels that were lost, and not vessels that touched the ground?—Yes, but I should look upon a vessel touching the ground as just as bad as if she were lost; it is only an act of Providence that she comes off again.

10395. Do you mean to say that whenever a vessel touches the ground, going into or out of the port of Liverpool in bad weather, that there is always blame attaching to the pilot?—No.

10396. Even in cases where you have the best selected pilots it will happen?—Yes, I do not want it to be understood that I am among those wishing in any way to find fault with the pilots who were on board; I am simply reasoning against the statements made to me.

10397. There is a great difference between a vessel getting on shore hard and fast, so that she cannot get off again, and a vessel grazing, is there not?—Yes, I do not attach blame to the pilot.

10398. As regards Liverpool and Cork, you say the vessels are not owned by the pilots at Cork, but they are at Liverpool; there is a great difference between the vessels of Cork and of Liverpool, is there not?—Yes, the Liverpool vessels are very superior vessels in that way, but I am not at all of opinion that they might not be improved upon; I think the New York schooners are finer than the Liverpool boats, and are much larger and more powerful.

10399. As regards Cork, in point of fact, the vessels are but little better than whale boats?—Yes, they are only whale boats.

10400. Therefore it is a very different thing to own a vessel like a Liverpool pilot boat and to own a vessel like a Cork pilot boat?—Yes, there is no doubt of that.

10401. You mentioned 9,000 *l.* as being given to the owners of the boats?—I was told to-day that the boats were valued at 5,600 *l.*, and that the amount that had come to the owners last year, after all the deductions had been made, was 9,000 *l.*; that is the net dividend upon the valuation taken by a shipwright of 5,600 *l.*

10402. From

10402. From your knowledge of the pilot boats, do you think that the whole of the pilot boats at Liverpool are not worth more than 5,000 *l.*?—I do not think they are. I think I remember hearing that one of the pilot boats was built by the Royden's for 3,000 *l.*, and 13 times that is 39,000 *l.*; but it will be within the power of this Committee to know how many years those boats have been running without any renewals.

10403. Are you aware that there is great supervision over the boats, and that repairs are required to be done when needed to make them perfectly efficient for this very perilous service, and if they are too old for the service and cannot be repaired, then the owners of the boats are required to put new boats on the station?—Yes; but my experience is, that there have been very few boats put upon the station for the last 15 years.

10404. You say, from your knowledge, that you do not think the boats are efficient for their duties?—I think they might be more efficient. I think they are very good boats, but I consider that they are small, and, in the present age, there ought to be a much better class of boats.

10405. Are you aware that they are nearly double the size required by the Act of Parliament?—Yes; but I remember a debate at the dock board as to whether the present class of boats should not be superseded by screw steamers, and there was a divided opinion as to whether there ought not to be screw steamers on the station.

10406. What I rather want to call your attention to is this: whether the boats are not in efficient repair, and fit for their position?—I have not any knowledge of that, because, to have that knowledge, one must send a shipwright surveyor to look at them; but I have an impression that the boats are very old, and so old that I do not like to state the number of years without inquiry.

10407. I suppose a boat may be very old and be nearly rebuilt in the course of that time?—Yes; but no doubt that affects the value of the stock.

10408. But so valuable as the pilot boat is, it would be worth very little for any other service. She is built for a particular service, and if a boat is built for a particular service it is very difficult to get her proper value for any other service?—If you got another pilotage establishment, and other parties were allowed to find other boats, their value would go down.

10409. You would not abolish that system entirely without any compensation to the owners of the boats, would you?—I am not so sure about that. I think anybody who has paid the high prices, which are at present looked for, for the shares in the pilot boats, ought to be remunerated; nobody knows the price of a pilot's share among the public; anybody who has paid the price is entitled to have compensation, most undoubtedly.

10410. You collected your estimation of the value of the pilot boats?—Yes; but I do not alter my estimate of their present value.

10411. You do not say that 5,600 *l.* divided by 13 would represent the value of each boat?—What I was told when I came into the room was this: "A pilot is going to give evidence." I am told that the total tonnage of the 13 pilot boats is not 700 tons; then I put it to any shipwright or any builder to say what value they would put upon the tonnage.

10412. That depends upon the build of the boat; you know by your steam-boats that the question of measurement is a question of build in many cases?—I should not think so in a pilot boat; I should think the pilot boats are measured just the same as a gentleman's yacht.

10413. They are not built to carry cargoes, are they?—They must carry a great many stores and men; if there are only 13 pilot boats for 240 pilots, if they are not large boats they ought to be.

10414. To put the cost at 3,000 *l.*, and there are 13 of them, that would be something like 39,000 *l.*?—Yes.

10415. Are not they as good as new now?—I do not believe they are.

10416. But they are in a state perfectly efficient for the purpose?—I should doubt that. If you employ pilot boats on a station which are 20 years old they are not perfectly efficient.

10417. You may have steamers 20 years old, which are nearly as good as new, may you not; they may have had new boilers, and other things; you would not like to value them as running boats in that way, but as running boats the pilot boats are efficient for the service?—But they have no competitors.

10418. Mr. *Norwood.*] Your steamers are iron, I presume?—Yes.

10419. And the pilot boat is wood?—Yes.

10420. Therefore there is a difference in the duration between the two vessels?—Yes.

10421. Mr. *C. Turner.*] New sails in old boats are as good as new sails in new boats, are they not?—Yes.

10422. They are as valuable in one boat as in another, are they not?—I have always been told by one of the best brokers in the City of London, Mr. Ridley, that whatever repairs are put in an old boat you can only add 50 per cent. on them to that ship's value. If you repair a vessel to the extent of 40,000 *l.* you have only a right to consider your vessel improved to the extent of 20,000 *l.*

10423. Mr. *Stevenson.*] What is the length of the pilotage district at Cork; how many miles of pilotage district does a vessel go through?—If it is not compulsory of course there is no distance, but I think it is about two miles from Roche's Point into the harbour.

10424. *Chairman.*] Did I understand you to say that you have taken a Cork pilot to Liverpool?—No, we do not; we take a Liverpool pilot to Cork; we simply receive a Cork pilot on board from the whale-boat, and discharge him into our own private steam tender.

10425. And for that you pay 1,300 *l.* a-year?—Yes.

10426. Notwithstanding that that is a voluntary pilotage?—I know that while we have paid some 700 *l.* a-year for a pilot, he has only received 220 *l.*

10427. Mr. *Stevenson.*] Who gets the rest?—The person who sends him out.

10428. I have before me the pilotage rates of Cork, and they quite confirm what you have said. I have calculated what the probable tonnage of your ships would be, and it does amount to as large a sum as for Liverpool pilotage; is not that so?—Yes. Our pilotage at Cork in 1867 was 1,130 *l.*; in 1868 it was 1,181 *l.*; in 1869 it was 1,309 *l.* Liverpool, for the same time, was, 1867, 1,253 *l.* 10 *s.*; 1868, 1,171 *l.*, and 1869, 1,306 *l.* 10 *s.*

Mr. *W. Inman.*

27 May 1870.

10429. And for the same number of visits to each port?—Yes.

10430. Mr. *Grieve.*] Is there no other service performed at Queenstown besides pilotage?—No.

10431. *Chairman.*] Notwithstanding pilotage is voluntary in Cork you have been content to pay from 1,100 *l.* to 1,300 *l.* a year for the services of pilots?—Yes. We like to give our captains the opportunity, and we should not like the public to feel that we had not pilots on board.

10432. Is not that very strong evidence to the effect that vessels will continue to take pilots after the Bill has passed into law?—That is my opinion.

10433. I think you stated a strong opinion with regard to the present system of boat owning, and that the large payment now paid by pilots to boat owners is unsatisfactory?—I think so.

10434. And you look upon the present Bill as one step towards breaking that down?—Yes.

10435. I believe the system of boat owning at Liverpool is purely local?—Yes.

10436. It does not affect the country generally?—No.

10437. Therefore, it must be dealt with locally?—Yes.

10438. If compensation is to be given to the owners of these vessels, it must come from some local source, I presume?—I think it might.

10439. And it ought not to be dealt with in a general Bill?—Every one likes to get out of the public purse whatever they can.

10440. You think there is not much prospect of the public finding the money which is necessary for dealing with the whole question of the boat-owning of Liverpool?—It is hardly a question which I should like to give an opinion upon here.

10441. Did you say that you owned a vessel going once a month to Cardiff?—Once a week.

10442. Does that vessel take a pilot on board?—Yes, but they complain very much that the pilots do not offer.

10443. You are aware that pilotage is voluntary there?—I have not heard of the Cardiff end at all; I have heard a complaint made that the pilots do not offer off Point Linas coming in; that they take a deeper laden vessel, on which they can get a deeper draught of water.

10444. Your instructions to your captains are to take pilots, I believe?—Yes.

10445. Mr. *Graves.*] With reference to the value of shares in these boats; are you aware that the present owners have paid an average of 120 *l.* for every share they hold?—No, I do not know that.

10446. Are you aware that the last price is 118 *l.*?—No.

10447. And that 20 years ago it was 125 *l.*?—No, I did not know that; these figures are never published to the public in Liverpool. I do not know anybody who knows anything about the pilotage system except those who rule it; no knowledge ever gets into the paper or before the public, of what the value of the shares are, or how the money is divided.

10448. If this has been given in evidence, would it satisfy you that the shares have not been run up in any way, such as you state?—No; but I think there are persons deriving dividends from the pilot boats who ought not to be receiving them.

10449. Are you aware that no one can hold a share in a pilot boat except he is a pilot?—Yes; but a pilot may die, and his family may, under certain circumstances, be allowed to retain shares.

10450. Only under the sanction of the pilotage committee, I think?—Only under the sanction of the pilotage committee.

10451. Can you see much distinction between the interest which an owner of a share so bought would have, and the interest which the owner of a railway share would have, if bought in the open market; can you see any distinction if it comes to be a question of compensation?—No, I do not see any difference; he has paid his money for it. I do not mind how the compensation is made; but the simple basis of my view is this: my feeling is, that we should have a better class of pilots if the earnings of those pilots legitimately went towards their payment, and not to the payment of owners who do not do the work.

Mr. John Sutton Marwood, called in; and Examined.

Mr. *Marwood.*

10452. *Chairman.*] You are a shipowner and ship broker at Liverpool, I believe?—Yes.

10453. I think your vessels are mostly engaged in the coasting trade, and are of a small class?—Yes.

10454. What is their average tonnage?—From 80 to 150 tons.

10455. How many vessels do you own and manage?—I have shares in about eight, and I manage, as agent, about 150.

10456. Those vessels are mostly engaged in the coasting trade?—Yes.

10457. Occasionally they run over to France and the Continent?—Yes.

10458. Those under 100 tons, when engaged in the coasting trade, are exempt from pilotage, I believe?—Yes.

10459. And those above 100 tons are compelled to take pilots?—Yes.

10460. When the 100-ton vessels go across to the Continent they are bound to take pilots, are they not?—Yes, no matter what tonnage they are.

10461. What is the provision; is it that they should be once in six months to the Continent?—If a vessel was to go away from Liverpool to any port between the Elbe and Breste, or anywhere foreign (but I speak more of the coasting trade than foreign), under the Merchant Shipping Act between the Elbe and Breste is coasting, but under the Liverpool Act it is foreign; if she goes from Liverpool to-day, and she comes back within the six months, she is liable to foreign rate inwards, although she may come back from a coasting voyage.

10462-3. Are the masters of these vessels thoroughly competent to pilot the vessels in?—Yes, they have been brought up from boys in the coasting trade; in fact, the foreign trade have to depend upon the coasting trade for their men.

10464. As a rule they are thoroughly acquainted with the navigation, are they not?—Yes.

10465. It has been stated that the navigation of the Mersey is exceptionally difficult?—I have asked the question from 30 or 40 that have come in contact with me at my office, and I find that Liverpool is no worse now than it has ever been. It may be that the channels are altered, but still the buoys and lights are kept up with equal efficiency as they were 20 or 30 years ago; so that the navigation is not more dangerous than it was then.

10466. Is it difficult as compared with the navigation of other ports?—No. They have said to me that they would rather be without pilots than with them.

10467. Do you consider it a hardship that a vessel should be compelled to carry a pilot?—Yes; especially in the cutting times we have now with the steamboats.

10468. How many of your coasting vessels are above 100 tons?—Those that I am agent for are mostly above 100 tons.

10469. Those are compelled to take pilots, are they not?—Yes.

10470. And yet in such cases are the masters equally competent to navigate, as in the other cases?—Yes, they are.

10471. I presume that in other ports to which they go on the coast they are free from pilotage?—No; in some places they have to pay pilotage along the coast.

10472. Which ports do they run to mostly?—The West of England is the most that I am connected with. In the West of England, and between the Elbe and Brest and Yarmouth up to Newcastle, and *vice versâ*.

10473. Do they run in the Bristol Channel at all?—Yes.

10474. There they are free from pilotage, are they not?—Yes.

10475. And yet the same vessels when they run into Liverpool are compelled to take pilots?—Yes, I have been very strong in the pilot committee upon that point; I think every voyage should stand upon its own merits. If I send a vessel over to Hamburg and she can get no cargo, she will then come to the west of England to load clay, freights on which would be 5 *s.* per ton; and the pilotage charged as if coming from foreign, 8 *s.* or 9 *s.* per foot, which would be 5 to 8 per cent. on gross freight.

10476. You find that they charge very heavy in proportion to the freight of the vessel?—Yes; I am at present speaking of the inward pilotage, I am not dealing with the outward pilotage; if a vessel comes in foreign, that vessel pays 8 *s.* or 9 *s.* a foot, as the case may be. I sent a vessel out yesterday coastwise, and they mulcted me in a foreign rate of pilotage because she came in foreign, instead of charging me the coasting rate, which is half the foreign rate; that vessel paid 2 *l.* 8*s.* pilotage, which was 3 per cent. upon the value of her freight.

10477. The same vessel, if she were employed in the coasting trade and were navigated by the same master, would pay no pilotage, would she?—Yes; it is very hard upon us just now, where we are cut up by the steamers; we cannot make a living.

10478. Have you considered what would be the effect of the Bill before the Committee upon the pilotage system of Liverpool?—I will say candidly, that there is not a body of men more efficient than the pilots of Liverpool are; but at the same time I am of opinion, both with Mr. Leyland and Mr. Inman, that the pilots themselves, as men, do not receive the remuneration they ought to receive for what they do.

10479. Have you had an opportunity of ascertaining their opinions?—I have; and I am perhaps rather personal upon that, because I happen to have two or three relations as journeyman pilots at the present time.

10480. What do they complain of?—They complain that they have not the remuneration given them that they earn as men.

10481. If this Bill before the Committee passes into law, what, in your opinion, will be the general effect upon their employment?—I should say, with the efficient boats they have now employed, that a voluntary system, where the men would take a larger proportion than what they do now, would answer admirably.

10482. I presume, a certain number of vessels like your own would discontinue taking pilots when no longer forced to do so; but take the larger class of vessels engaged in the foreign trade, what is your opinion with regard to them?—I should say that not one out of 100 coming from foreign ports but would employ a pilot whether it was voluntary or compulsory, and it would be equally so with those bound outwards.

10483. You think the matter may be left entirely to the demand and supply?—Yes.

10484. And it may be left to the master to decide whether he shall take a pilot or no?—Yes.

10485. If that is done, do you think there will be ample employment for a very large staff of pilots?—I should think so, and there would be equally efficient men as there are now. You will find a few, out of such a body of men as those, that may be called black sheep; but taking them as a whole, there is not a body of men more competent for the service of the port of Liverpool than the pilots at the present time. I have no personal grievance against them, except as regards the compulsory payment of what I think ought to be either optional or voluntary.

10486. In your opinion, it ought to be left to the owner to say whether he would employ a pilot or no?—Yes.

10487. Mr. *Graves.*] You say that the amount of the pilotage rate is a hardship on you?—Yes, on the coasting trade.

10488. And you desire to be free from it?—Yes, I desire to be free to a certain extent; let it be voluntary whether we take one or no.

10489. The meaning of that would be that you would dispense with the service of a pilot?—We are differently situated with coasting vessels to what they are in the foreign trade; our men know the coast. If it is blowing hard coming round Holyhead, they will put in there, and wait the opportunity of coming in; nine out of ten do that.

10489*. In practice, you desire to save the amount of pilotage that you now pay upon your vessels?—Yes.

10490. Supposing that every owner of the same class of vessels that you have charge of, took the same view of the question, would not the revenue of the pilots of Liverpool be reduced to that extent?—It would be like everything else; we are living in different times to what we did

Mr. *Marwood.*
27 May 1870.

did 20 or 30 years ago; competition is now so great, that everything must be done to cut down to the lowest figure to make the two ends meet.

10491. It is not so much the fault that you find with the pilots, as with having to pay the pilotage rates?—That is it; I think it a hardship, and if the vessel comes coasting, let it be charged coasting rates.

10492. Are you aware that the dock board came to Parliament, some four years ago, to seek to alter that law?—Yes; and I spoke to the Member of Liverpool at that time about it.

10493. Are you aware why that Bill was withdrawn?—I cannot say that I can state it from *bonâ fide* facts, but I did hear it at the time; it has escaped my memory.

10494. You are aware that the dock board were desirous of constituting every vessel coming coastwise a *bonâ fide* coaster?—Yes.

10495. And every vessel coming foreign, a *bonâ fide* foreign vessel?—Yes, I am aware of it; because I was three or four times up before the pilotage committee upon the same subject.

10496. Are these the only two real objections that you have against the present system?—Yes; because the staff of pilots could be sustained under another superintendence, as well as it is now.

10497. Mr. *C. Turner.*] As a coaster, you do not pay a pilotage at all?—Yes, I pay wrongfully; if I was going to a shop to buy a yard of silk, and they gave me a yard of calico, I should feel myself aggrieved; if I go a foreign voyage, and come back a foreign voyage, it is well enough; if I go a foreign voyage and come home coasting, I am aggrieved.

10498. If you run exclusively coastwise you do not pay?—If a vessel is 100 tons I do not pay, but if it is above 100 tons I would pay, and I do pay; but I say that coasting vessels ought to be exempt.

10499. You do not agree with Mr. Leyland that the pilotage service would be more efficient if there was a voluntary service?—I never was a free trader.

10500. You do not agree with that?—I say that free trade and voluntaryism are two different things altogether.

10501. Mr. *Grieve.*] Is a coaster required to be six months constantly in the trade to be exempt?—That is the restriction the pilotage committee put upon it, and I think it is a wrong one. You will find a clause that no vessel is to be considered a coaster unless she has been *bonâ fide* engaged in the trade for the space of six months. A vessel built at Workington comes into Liverpool in ballast or with a cargo; she is liable for foreign rates.

10502. Supposing you are a coaster and you get a voyage to Havre, she is classed as a foreign vessel when she comes in?—Yes.

10503. *Chairman.*] A Table has been laid before the Committee showing the difference between the number of vessels lost in the Mersey when in charge of pilots, and when not in charge of pilots; can you give any explanation of that?—I do not think myself that that statement is correct. I listened when you put the question to Mr. Leyland and the other gentleman, and I think it was one foreign vessel against 59 coasters. I should say, most decidedly, that it is wrong; that the majority of vessels that would be lost in coasters would be the flats coming from the River Dee to Liverpool, which get ashore on the banks, something like you see the billyboys or barges coming down the River Thames.

10504. They are lost for reasons quite independent of pilotage?—Yes.

10505. It has nothing to do with the question of pilotage?—No.

10506. I think your largest vessel is 158 tons, is it not?—Yes.

10507. When that is loaded, what would it draw?—From 12 to 13 feet.

10508. Then they would pay as much pilotage as a vessel of 200 or 300 tons?—Yes, according to the length of the vessel; the longer the vessel is, the less water she will draw. I have argued that question before the pilotage committee. At one time, when I had a small vessel coming from St. Michael's with a 70 *l.*-freight in, and a barque was coming in with a 950 *l.*-freight, I paid the same pilotage as she did.

10509. And it tells specially upon vessels of your class and size?—Yes.

10510. Mr. *C. Turner.*] The statement of the losses with pilots and without pilots, was taken from Admiral Evans's special report?—Yes; and he would take flats.

10511. *Chairman.*] And he would not take in the number of vessels stranded, but which were not lost?—No.

10512. I presume you are of opinion that there should be a system of regulated pilots, and a licensed corps?—Yes.

10513. But that the employment should be voluntary?—Yes.

10514. Would your vessels require pilots?—As a general rule, they would not. The vessels of 150 tons, or 200 tons, may be coming from the Mediterranean, and nine out of ten of the captains have been up night after night, and they would be glad to be relieved from the responsibility when they came into pilotage ground.

10515. In such cases, they would take pilots?—Most decidedly.

10516. But they would not take pilots when engaged in the coasting trade?—No.

Mr. Henry Jones, called in; and Examined.

Mr. *H. Jones.*

10517. *Chairman.*] You are a Licensed Pilot of the port of Liverpool?—Yes.

10518. And you have been so since 1855?—Yes.

10519. For the last four years you have been attached to the Inman Company as one of their pilots?—I have.

10520. You join their vessels and take them from Liverpool to Queenstown?—Yes.

10521. And back again?—Yes.

10522. Is your whole occupation confined to that?—My occupation is confined to the steam ships.

10523. You receive only the same amount which the other pilots in the port receive?—The same amount.

10524. Notwithstanding that the payment made in respect of your services by Messrs. Inman is considerably greater?—Yes.

10525. They pay 340 *l.* a year for your services,

services, whereas you only receive 170 *l.*?—About that.

10526. That is the average of your earnings?—Yes.

10527. Have you formed any opinion with regard to the comparative merits of a voluntary and compulsory system of pilotage?—I have.

10528. What is your opinion?—My opinion is favourable to the non-compulsory system; I am for this Bill; that is the best thing that ever stepped in our way to reform the present system.

10529. Do you think that under the voluntary system there will be a sufficient supply of pilots for the service?—I feel perfectly sure upon that point; that is if the men are allowed to buy their own property, and to sail in their own property, but not to be tied to the present expensive property which they now sail in.

10530. That is a question not dealt with under the present Bill; the Bill does not break up the present system of boat ownership?—Then I think they will break it up themselves.

10531. You think the result of this Bill will be to force upon the pilotage authority of Liverpool the necessity of breaking up that system? I think so; I believe it would be judicious on their part to do so, to give the pilot a fairer chance of receiving his own earnings.

10532. You think the inevitable result of this Bill will be to compel the local authorities of Liverpool to break up that system?—I do.

10533. What proportion of your earnings do you consider goes to the owners of the boats in this manner?—All outside the 180 *l.*

10534. I think a portion of the payment made by Messrs. Inman in respect of your services goes into a common fund to pay the other pilots?—It goes to make up the shares of the other men and the boat owners; those are the only two parties; we share alike as pilots.

10535. What proportion do you consider of the whole earnings goes towards the boat owners?—We pay 12½ per cent. for sailing in a boat.

10536. In your opinion the whole of your receipts ought to go to the pilots themselves?—Yes, with a fair remuneration to the boat owners.

10537. But without any sum for the property in the boats, beyond the actual value of the boats?—The actual value of the boats.

10538. If the whole amount of the pilotage was paid to the pilots, would there, in your opinion, be much greater competition than now for the pilotage service?—There would.

10539. And you think that a better class of men on the whole would come forward?—The inducement would be greater, and the men would be more liable to embrace the advantage offered.

10540. What is your opinion with regard to the class of vessels that would continue to take pilots after the Bill has passed?—Very few would care about running the risk of not taking pilots, unless outwards. With the outward-bound there would be a great chance of their availing themselves of the opportunity, and with the inwards, many would not avail themselves of the opportunity.

10541. With regard to the inward vessels, you think that by far the greater proportion would continue to take pilots as they do now?—Yes, as they do at the present time.

10542. But in the case of outward vessels, you think that the larger proportion would not require pilots?—The outward-bound ships might do so, but I do not think that many of them would, unless they were small vessels.

10543. You have no fear yourself of any substantial falling off of employment?—I have not the least fear.

10544. Have you consulted with many of the other pilots, before coming here?—With a great number, half or more.

10545. Should you say that the opinion of these men whom you have consulted, coincides with your own?—It coincides perfectly with mine.

10546. And I believe a large number of them are very dissatisfied with the present state of thing?—There is a general dissatisfaction throughout the business, owing to the proportion of the pilotage which is allotted to the working men themselves, after all demands are paid.

10547. You think they would be better off if this system at Liverpool was broken up?—They could not be worse off.

10548. I think in the course of another year they will lose a considerable sum of money, which is now paid by the Government in the shape of compensation?—In 1872 it ceases.

10549. That is the compensation for the differential rates on foreign vessels?—Yes.

10550. When that payment ceases they will be worse off than they are at present?—Yes, I daresay they will be 30 *l.* a year worse off.

10551. Mr. *Graves.*] Is the dissatisfaction confined altogether to the mode of boat owners?—To the boat owning.

10552. On all other points they are satisfied?—No, they are not.

10553. What other points would there be on which they are not satisfied?—There is the dissatisfaction from their being unfairly dealt with on most occasions. A great deal of partiality exists; that is a dissatisfaction.

10554. In what way would you get rid of this partiality by this Bill?—The only way would be by doing away with the present system of having three masters to each boat, and have a proper recognised man paid annually who should take no part or interest in the pilot boat whatever. Let him be the authorised acknowledged person appointed by the dock board as the master of the boat.

10555. Are you aware that that system is at work in the Thames; that the pilot cutters are all commanded by the masters appointed by the Trinity House, and that is very much condemned, and the pilots are very much dissatisfied with it?—I am not aware of that.

10556. What system would you substitute for the present one; what in your own mind is the kind of system you would advise as an improvement?—To allow a dozen or 16 men, non-owners at the present time, the right to build a boat according to the present value, and sail in the boat and reap the benefit of the boat.

10557. And go wherever he thought he could be most useful in picking up ships?—Yes; extend the distance right down the Channel to Cork, if he wished.

10558. And to be practically free to go where he liked; is that what you mean?—Yes, to keep at sea; he would do that for his own benefit; to go out as often as he does, and pick up ships wherever he could, according to the system in New York; and that system acts well in New York.

Mr. *H. Jones.*

27 May 1870.

10559. There, it is quite compulsory, is it not?—I believe so.

10560. So that it is possible to have the system you are aiming at under the compulsory system?—I do not know whether it would be so under the compulsory system.

10561. Do you think that the four stations' system which is at work at Liverpool, is the best that could be adopted for the interest of the port itself; I do not speak of the pilots; looking at the interest of the port and the shipping that navigates it, do you consider it the best system that could be adopted?—I think to extend the system would be an improvement.

10562. Still you would have stations in Liverpool?—You might have an outer and an inner station.

10563. You would have two in the place of four?—Yes, two instead of four; and let the pilots cruise further down Channel; wherever they could offer the best facility to the captain, or whoever might want them.

10564. Are you an owner of any pilot shares?—No.

10565. Why do not you become an owner?—Because the shares are out of my reach, and I should not like to give the amount, and it is the general opinion among the present non-owners that the shares are run up too high for the present pilots with the dark cloud that is hanging over our business under the present system.

10566. Do you mean with the Bill?—No, independently of the Bill. In 1872, we lose 30 *l.* a year.

10567. It has been stated here by several witnesses that part of the objection to the boat-owning scheme is, that the shareholders get too large an interest?—They do.

10568. If that was the case, would not that be an inducement to buy shares?—No, I should not like to invest.

10569. Are you aware that the dock board has it in its own power at present to make any alteration or division of the shares as between the journeymen pilots and the boatowners?—I would sooner the Government did it.

10570. It is not a question of sooner; I suppose if the dock board did it, you would be as well satisfied as if the Government did it; but are you aware, that the dock board has it in its own power to make any change which is thought desirable, in the appropriation of shares, between the boatowners and the journeymen pilots?—I am not aware of that.

10571. I suppose you would accept such a change, if it was in your favour, as soon from the dock board as from the Government?—Yes; I am perfectly satisfied to meet the owners in a fair way.

10572. Has the dock board ever been asked by the journeymen pilots, to reconsider the distribution of shares, to your knowledge?—No, it would be considered out of place for me, or any other person in connection with the service, to ask that; in fact, the pilots are so tied down in Liverpool, that it is treasonable to give utterance to any such sentence as that they are dissatisfied in any pilot boat.

10573. You won one of the pilot prizes in getting hold of Messrs. Inman's pilotage; you are one of their pilots?—Yes.

10574. Is that an easier life than the regular pilot service in Liverpool?—I do not consider it so, taking the year all round.

10575. I suppose your pilotage responsibility is confined altogether to your own district?—Yes.

10576. And after you leave it, you have no responsibility whatever?—I have no responsibility beyond my own limits.

10577. Do the whole of the earnings go to the general pilot fund of boat No. 12, to which you are attached?—Yes.

10578. Are there no other advantages and perquisites attaching to the position of a pilot in Messrs. Inman's service?—No.

10579. Is there no board money?—The company provide board at Queenstown, while I am waiting for the next ship.

10580. *Chairman.*] Can you get any pecuniary advantage whatever?—I can get no pecuniary advantage whatever; I have to pay for eating in the pilot-boats, though I do not see one meal.

10581. Mr. *Norwood.*] Who eats the food you pay for?—Those that sail in the pilot-boat, has been a sore grievance amongst myself and my brother pilots in having to do that; we asked the pilot board to exempt us from that charge, and they refused to do so; we never complained of paying for the right of sailing in the boat, and the accommodation; but we did complain of being charged with the disbursement, which our fellow pilots said, at the time, they did not think fair.

10582. Mr. *Graves.*] You say that you have consulted the pilots, and that the pilots generally adopted your view, that the whole of the earnings of the special pilots, with the exception of a reduction for remuneration of the management, should all go to the special pilots themselves?—No, I never heard the thing breathed, either by myself or by my brother pilots in the other boats.

10583. *Chairman.*] I thought you meant that each individual pilot should have the earnings in respect of the vessel he piloted?—No; let them be attached to a boat and all divide the pilotage, one with the other.

10584. Mr. *Graves.*] You do not want to make a different principle to the one on which they are working?—Let them all be workers.

10585. *Chairman.*] When there is a man attached to a boat employed in a particular service, do you think he should have the earnings which he makes in respect of the vessels he pilots, or that they should go to the vessel to which he is attached?—It should go to the vessel to which he is attached, and they should share and share alike. I am always willing to share my pilotage with them or any one that will share their pilotage with me.

10586. Your main objection to the present system is the amount of money that goes to the boatowners?—The amount of money that goes to the boatowner, and those that do not earn any pilotage whatever.

10587. Who are those?—The masters of the boats. I am willing to share my pilotage with those who share their pilotage with me.

10588. You think that too large a proportion goes to the masters of the boats?—The master and the owner.

10589. Does the master get more than the pilot's share?—He receive the pilot's share.

10590. Mr. *Graves.*] And only the pilot's share?—And 25 *l.* a year from the owner. I do not know whether it is an established payment or a perquisite, or what.

10591. *Chairman.*]

10591. *Chairman.*] Did I understand you to object to the present system, which compels the boats to keep their stations so closely?—I should think they should extend their district.

10592. You think they should cruise further off?—Yes, I think they should cruise further off, and, as often as a vessel got rid of her pilots, she should come into port and pick them up, and proceed to sea again.

10593. Would you find many vessels who would take pilots earlier down the Channel than they do now?—Yes.

10594. Where do you think the pilot vessels would cruise; would they cruise as far down as off Queenstown?—They would cruise as far down as Tuskar or Queenstown if they thought they could fall in with vessels there.

10595. Do you think many vessels would take pilots off Queenstown?—A great number; I have every chance of knowing that; if the captains of vessels could get a limited pilot in Queenstown they would be very glad.

10596. You know that from masters of vessels calling in there for orders?—Yes.

10597. You think that in that way larger receipts might be made by the pilots?—I think so.

10598. The charges would be larger?—I think in Cork they charge what they term a rate of distance money, but they cannot enforce it; it is a kind of voluntary charge which could be brought into the system with respect to Liverpool.

10599. You would extend the charge for more extended voyages?—Yes.

10600. Mr. *Graves.*] How would you contrast the navigation of Queenstown with that of Liverpool; do you think it is as difficult of access as that of Liverpool?—I do not think it would be right for me to answer the question.

10601. You go in and out of Queenstown every week, do you not?—It is very easy of access.

10602. We heard that the same rate of pilotage was paid in Queenstown as was paid in Liverpool?—Yes.

10603. From that fact, one would conclude that the pilot in Queenstown is much better paid than the pilot in Liverpool?—Yes, he is better paid than the Liverpool pilot; he has no boat to keep; his salary would be 208 *l.* a year, and they have nothing to pay out of it.

10604. It is entirely different from Liverpool?—Yes.

10605. I do not know whether you heard the opinions given with reference to the easy navigation of the port of Liverpool; do you consider that Liverpool, under all circumstances, is an easy port to go in and out of?—It is quite easy to those acquainted with it.

10606. But not to strangers?—But not to strangers.

10607. Do you speak of a steamer or of a sailing vessel?—Either would be difficult to a stranger.

10608. But there are periods of time when the navigation of the Mersey is a most difficult one?—Yes.

10609. Both to pilots as well as others?—Yes.

10610. And generally speaking more with outward bound ships than with inward bound ships?—More with inward bound ships.

10611. Is it not the case that the majority of accidents occur in vessels outward bound, who have just parted with their pilots, meeting with a change of wind?—It is generally the case when a pilot has parted with a vessel that the vessel is suddenly caught.

10612. And they cannot get back?—They cannot return to port.

10613. Are you aware that this Bill proposes to leave all the control that the pilotage authority now possesses in the hands of the dock board; that it does not seek to alter it?—Yes.

10614. And that the only alteration this Bill proposes to make is, to leave it optional with the shipowners to take a pilot or not?—Yes.

10615. In what way would you be better off under the present Bill than if it did not pass. I speak now generally of the pilots of Liverpool. The Bill makes no change at all in the service as now organised in Liverpool; it leaves all the control that the dock board now possesses; therefore, in what way can the pilots be benefited by this Bill passing?—If the present system is kept up, and this Bill passes, I do not see how the pilots can go to sea at all. It is from hand to mouth now at the present time, and if the dock board do not alter the present system under the non-compulsory Act, I do not suppose there will be any pilots at all.

10616. *Chairman.*] What you expect by this Bill is, that the pilotage authorities will change their system?—It will change their system.

10617. And make it a free one?—And make it a free one.

10618. Mr. *Stevenson.*] When you say a free system, what do you mean?—A free system in pilotage, and a free system in the division of pilotage.

10619. Would you not require a man to serve an apprenticeship first and pass an examination?—I do not agree with apprenticeship, although I have served two apprenticeships myself. I have served 12 years.

10620. Do you think that any one who imagines that he can undertake the charge of a vessel should be allowed to call himself a pilot, and get vessels, or would you have him licensed?—I would have him licensed so as to qualify him as being thoroughly capable.

10621. So that a stranger might not be taken in by imagining that he had got a man who, professing that he knew about it, did not know about it?—Yes.

10622. You do not disapprove of the division of the pilotage earnings among the crew of each boat; you are willing that they should continue to share alike?—Yes.

10623. And you are willing that the larger amount which you might earn by being engaged in a steamer should go to help the earnings of the others who keep the sea in their boats?—It is a question in this way: another man might earn more than myself.

10624. But it happens that you have the advantage now?—Yes; I never gave utterance to such a sentence; it is my wish that my earnings should go among the rest.

10625. One great advantage you expect from this Bill would be to break down the system of high prices charged for the ownership of those boats for the fictitious capital with which these boats are charged, which is far beyond what it would cost to put the boats upon the station for the first time?—Yes.

10626. And you hope if the Bill passes that something will be done to give you justice in that respect?—Yes.

Mr. *H. Jones.*

27 May 1870.

10627. And you think that that would be given by what you call a free system?—Yes.

10628. Mr. *Norwood.*] I suppose some of your pilots are more active and intelligent than others, there is a difference in men as a general rule; I dare say you vary in capability and age, and so on?—We vary in age.

10629. Are you all of the same active habits?—Some are more active than others.

10630. Do not you think that your system of share and share alike rather tends to keep men from exerting themselves to the utmost; you are all brought to a dead level as regards your remuneration?—Our divisions are made according to the branch, there are four branches and the parties divide according to rank; I speak as a first-class licensed man.

10631. Your system now is that as far as your class is concerned you share and share alike, is not the tendency of that to reduce the men to the same level, giving little scope for individual exertions?—No, I do not think so.

10632. Then you are satisfied with the system of share and share alike?—That is my idea; all classes in the pilotage department share and share alike. There are different classes and they receive a proportion of the pilotage according to their ability and according to their rank in the service.

10633. The pilotage board are rather dictatorial, are they not?—In most cases they are.

10634. Mr. *C. Turner.*] Has there not been a meeting of pilots with reference to this Bill?—There have been several meetings.

10635. What has been the result of those meetings?—I do not know.

10636. Is it not the fact that the pilots unanimously agreed to oppose the Bill?—They sent up half-a-dozen pilots to oppose it, but I never saw anything of them.

10637. There were meetings, were there not?—Yes.

10638. What determination did they come to at the meetings?—I do not know.

10639. Was not it the fact, that they unanimously resolved to petition and to oppose the present Bill?—At the meeting I attended there was a kind of division; some wanted to let it go, and others wanted to defend it.

10640. Was not there a general meeting, at which it was determined to oppose the present Bill?—Yes.

10641. And there has been no meeting at which they came to any conclusion to the contrary, has there?—Not to my knowledge.

10642. That is the fact, is it not, that at a general meeting of your brother pilots they came to a unanimous resolution to oppose the present Bill, and there has been no meeting at which a resolution to the contrary has been come to?—Not to my knowledge.

10643. Therefore your brother pilots are agreed in opposing the present Bill?—Not all of them.

10644. But that was the unanimous view of the meeting, was it not?—I cannot say so.

10645. With regard to the masters; the masters of the boats share with you, do not they?—Yes.

10646. And they take an equal share with you?—Yes.

10647. The 25 *l.* you speak of is not paid out of your money, but it is paid out of the owners' proportion of the earnings of the boat?—Yes.

10648. Therefore the 25 *l.* payment to the master is a payment by the owners out of their funds and it does not diminish your share?—No.

10649. The masters get their share, and the 25 *l.* is paid by the owners out of their own fund?—Yes.

10650. It does not affect you at all?—The 25 *l.* does not affect the working pilot, only those that have shares.

10651. It does not affect you as you have no shares?—No, it does not affect me.

10652. The receipts of every boat are divided among the men of the boat, I believe?—Yes.

10653. And the masters get their share with the men?—Yes.

10654. Then a certain proportion is set aside for the owners of the boat, and the 25 *l.* is paid out of the share of the owner, is not that so?—Yes, the pilot-boat owners pay the master the 25 *l.*

10655. What is your share per annum; you say that you pay 340 *l.* odd into the common fund of the boat?—Yes.

10656. What is the share of each man in your boat, on the average?—My average earnings have been 175 *l.* for the last 12 years.

10657. Mr. *Grieve.*] Your gross earnings are 500 *l.* a year, and you receive 175 *l.* out of the gross earnings?—Yes.

10658. Where does the balance go to?—To the owners of the boat, and the pilots of the boat.

10659. Supposing you were under the voluntary pilotage at Liverpool, would there be any difficulty in getting a sufficient number of men to join, and build boats, and equip them, and go to sea?—There would be no difficulty whatever.

10660. And that would be a system you would prefer rather than to be tied down by this arbitrary board?—Yes.

10661. *Chairman.*] You stated, in answer to one of my questions, that a considerable number of pilots were very dissatisfied with the present state of things?—Yes.

10662. That is independently of this Bill?—Yes, that is independently of the Bill; they are very dissatisfied with the present state of things.

10663. They think that this money ought not to be paid to the owners, and they also think that the present system is too rigid, which maintains the boats on their present stations, and that they could do better by going further off?—Yes.

10664. And I believe that is the opinion of a considerable number of the pilots?—Yes.

10665. Is it the opinion of more than half the pilots?—Fully half.

10666. And of those I presume a certain number think that this Bill may be of use in compelling the pilotage authorities to break up the system?—Yes.

10667. And they look forward to it in that respect?—Yes; to break up the present system and reorganise another system.

10668. Mr. *C. Turner.*] Then how do you account for the general meeting of the pilots coming to the conclusion to oppose the present Bill?—In the same way as I would account for a lot of pilots in a pilot boat not being allowed to dictate to the master of the boat what they should do, for fear of being guilty of mutiny.

10669. Are the young and the old men allowed to give a free expression to their opinions?—We are not allowed to do so in the pilot boat; you may as well leave the boat if you do.

10670. Mr. *Graves.*]

10670. Mr. *Graves.*] You would be made uncomfortable if you did?—Yes; I speak from experience; I have suffered under what I gave utterance to.

10671. When you speak of extending the stations, you do not mean that it should be done at the present rate of pilotage?—I never heard any complaint of the present rate of pilotage.

10672. You think that the limit ought to be extended?—Yes.

10673. But you would not go down there without being paid extra for it, would you?—We would leave it to the good wishes of those who would employ us.

10674. You would leave it open to make a bargain?—Not to make a bargain; but to settle it amicably between him and the pilot.

10675. You would say what your charge would be, and you would leave him to take you or not?—Yes.

10676. *Chairman.*] You might have a regulated price for the extra distance, and leave it to the owner to say whether he would employ you or not?—Yes.

10677. And you think if that was done, a large number of masters would take pilots?—Yes, they would. We had a case a week or two ago, where one of our own pilots came under the lash of the dock board. A ship took him to sea; he was unable to land; he went down Channel and the captain remunerated him, for which he was censured by the dock board, and the money was refunded.

10678. Do I understand you to say, that if the present system of payment to the boatowners were done away with, and if there was a freer system, and the boats were allowed to cruise much further off, so that the pilots could be employed further down Channel than they are now, you would have no fear of the results of this Bill?—I would have no fear whatever.

Tuesday, 31*st May* 1870.

MEMBERS PRESENT:

Colonel Bourne.
Mr. Thomas Brassey.
Mr. Gourley.
Mr. Graves.
Mr. Grieve.
Sir John Hay.
Mr. Shaw Lefevre.
Mr. Philip Wykeham Martin.
Mr. Pemberton.
Sir Henry Selwin-Ibbetson.
Mr. Stevenson.

GEORGE JOHN SHAW LEFEVRE, Esq., in the Chair.

Mr. William Watson, called in; and Examined.

Mr. *W. Watson.* 31 May 1870.

10679. *Chairman.*] You are the Managing Director of the London and Dublin Steam Company?—The City of Dublin Steam Packet Company.

10680. I belive that company was established in the year 1823?—Yes.

10681. And they are now the owners of 20 steamers, trading between Dublin and Liverpool, Kingstown and Holyhead, and along the Welsh coast into the Menai Straits, and also from Dublin to Belfast?—Yes.

10682. I think your company originated steam communication between England and Ireland?—For purposes of commerce, but not the first for passengers.

10683. And especially for cattle?—Yes.

10684. Soon after the starting of the company was it considered desirable that the masters of your vessels should themselves navigate them into the various ports?—Yes.

10685. Instead of being compelled to take compulsory pilots?—Instead of stopping to take pilots.

10686. Up to that time, the company had been liable to full pilotage charges?—Yes, and long subsequently.

10687. I think your company, in common with the other steam companies, felt a grievance in being compelled to pay pilotage?—Yes, we did; paying for services which we did not require.

10688. And you communicated with the Board of Trade from time to time upon the subject?—Yes.

10689. And you also had interviews with the pilotage authorities of Dublin and Liverpool?—Yes, we had; but that has grown out of certain legislation that took place.

10690. What occurred with regard to Dublin; what arrangements did you make with reference to the pilotage?—After the passing of the Act with reference to allowing the pilotage authorities to free vessels from the use of pilots, or from paying for them in the year 1849, we communicated with the Ballast Board of Dublin; they did not take very long to consider it, but they acquiesced, and carried out the Act, by which they relieved the steamers coming into Dublin or going out of Dublin from the payment of all charges for pilotage, coupled with the condition that for 10 years they were to make a certain annual payment to the pilotage board.

10691. What was that?—£. 150 a-year towards a superannuation fund.

10692. That was to be made for 10 years?—Yes.

10693. And it has long ago ceased?—Yes; 10 years ago.

10694. I believe they now examine the captains, and they give them certificates by which they are relieved from taking pilots?—Yes.

10695. What has occurred at Liverpool?—We have had, all through, the greatest difficulty at Liverpool; and we have failed to get the Liverpool authorities to carry into effect the intentions of the Legislature and the Board of Trade with reference to examining the captains of vessels; we have made a great many efforts, but they have completely failed.

10696. What has been the arrangement which you have finally made with the pilotage authorities?—The year before the passing of the Merchant Shipping Act there was a proposal made that, inasmuch as we never had pilots on board, going in or coming out, instead of charging 4 *s.* a foot inwards, they should make a charge of 1 *s.*, conditional on no service being required; and that was agreed to.

10697. Up to that time I understand you had paid full pilotage rates, although you did not take pilots?—Yes; as a matter of course the vessels were always understood to have been spoken, out at sea, and the pilot bill was invariably signed by the master of the ship.

10698. Although you never took pilots?—Although we took no pilot.

10699. You were going to state the arrangement you had made?—They reduced the charge from 4 *s.* to 1 *s.* a foot inwards, undertaking also not to present themselves for the outward voyage, and we undertaking not to require any service. That arrangement was in force when the Merchant Shipping Bill passed, and the Merchant Shipping Act practically confirmed that arrangement; there was fresh legislation with reference to pilotage in that Act.

10700. What amount have you paid to the pilotage authorities in respect of that arrangement?—About 400 *l.* a-year.

10701. During

10701. During the whole of that time your officers have had charge of your vessels, and the entries and departures from Liverpool have averaged about 6,000 a-year, I believe?—It does not average so many as that from Liverpool; that includes the various ports put together, where the captains take the vessels in and out upon their own responsibility.

10702. What is the average for Liverpool?—The average for Liverpool alone would be half that number.

10703. During that time they had never practically taken pilots?—Never.

10704. But they have continued to pay 400 *l.* a-year to the pilotage authorities?—Yes.

10705. And that for a service they never required?—Yes; that is for ordinary vessels going into Liverpool. When we send the Holyhead mail packets to Liverpool for repairs, of course our officers are not so conversant with Liverpool, and we would not send them without a pilot.

10706. Those are exceptional cases?—Yes.

10707. They are not the regular lines running from Liverpool to the Irish coast?—No.

10708. The payment of 400 *l.* a-year is in respect of the regular lines of steamers which run from Liverpool to the Irish coast, and whose officers never do take pilots?—Yes.

10709. During that time have any losses occurred to your vessels by their being navigated by your own officers?—None.

10710. You know of no such case?—Not one.

10711. What is the average number of steamers, to and from Liverpool, in the course of the year?—I suppose between Dublin and Liverpool we make about 800 voyages; that is, 4,000 entries and departures every year.

10712. Have you considered the Bill which is now before the Committee for the abolition of compulsory pilotage?—Yes.

10713. Will you state to the Committee your opinion upon it?—I think it is perfectly fair and equitable, as between the shipowner and the pilotage authorities; that is, that it should be free to all to use pilots or not as they think it necessary. As it is now, the coasting steamers are free, and there seems to be no reason why the other coasting trade should not be free.

10714. Subject to the payment of 400 *l.* a year for the steamer trade?—Yes; it is such a small sum compared with what we used to pay, that we do not give much attention to it.

10715. It has been alleged that if this Bill passes into law, there will not be a sufficient supply of pilots for the port of Liverpool; do you think that is true?—I do not see how that is likely. There is a vast number of vessels of one kind and another going in and out of Liverpool in a year, and there is comparatively a small proportion of those taking pilots at the present moment. I suppose only one-third of the vessels going in and out of the port of Liverpool take pilots.

10716. Do you consider that a large number of vessels will continue to take pilots?—Yes, it is a matter of certainty that the over-sea ships will take pilots. An employer would not allow his commander, if he was willing, to go in without a pilot, unless he knew the port thoroughly; a stranger cannot be supposed to know it. Some come in that were never there before, and of course they will take pilots.

10717. On the other hand, those vessels that frequent the port constantly, like your own, will not take pilots?—No; they know the road perfectly well into Liverpool, and they do not require pilots.

10718. Do you think there is any necessity to compel them to take pilots?—No.

10719. Do you think it unjust to force the services of pilots upon those who do not want them?—Yes, most unjust.

10720. I believe you are yourself a member of the Dublin Docks and Harbour Board?—Yes.

10721. Has that board considered the Bill which is now before this Committee?—Yes.

10722. What is the decision which they came to upon it?—They decided not to interfere in the matter further than by a petition, in which they brought before the attention of Parliament the necessity for more speedy compensation to those pilots, who will be entirely put out of employment in our port, because we have no great over-sea trade. I assume that the colliers will very seldom require pilots.

10723. You make a distinction, do you not, between the case of Dublin and that of Liverpool?—Yes; very great.

10724. What is the distinction?—Our port is almost a coasting port; I have a return which may interest the Committee, of the tonnage of vessels in the year before they acquiesced in relieving us from the pilotage charges. I find the tonnage of the over-sea vessels, in the year 1849, was 95,825 tons; of colliers, 272,226 tons; of other sailing coasters, generally very small vessels, 63,457 tons; of steam coasters, 365,734 tons, making an aggregate tonnage, entering the port in that year, of 797,242; and the revenue from the pilotage payments was 6,356 *l.* 7 *s.* 9 *d.* I have made inquiry as to the number of pilots that there were on the staff then, and I find there were 44. In the year 1851, the year after steamers were relieved from the charge, the tonnage had not increased very materially, but it had increased from 797,000 tons to 845,000 tons, and the revenue had fallen off to 4,730 *l.*; that was to be expected in consequence of steamers being relieved from the charge.

10725. Were the same arguments about the falling off of the employment of pilots used when you made your recommendation to be made free from the necessity of taking pilots?—Yes; and it was considered that the pilotage establishment would fall to the ground altogether.

10726. Experience has shown that the increase of shipping has made up for that loss, has it not?—Last year proves that in Dublin; I find the over-sea trade had increased to 213,582 tons, and the colliers to 361,448 tons; other sailing coasters, 76,464 tons, making an aggregate of 651,494, as contrasted with 431,508 tons in the year 1849; the steam coasters have more than doubled; the last does not affect the pilotage question, because they have been relieved from it; they have increased to 562,130 tons, and the pilotage revenue has increased from 6,356 *l.*, in the year 1849, to 7,032 *l.* last year.

10727. Still the employment of pilots is mainly in respect of coasters at Dublin; the over-sea trade is comparatively small?—The over-sea trade is comparatively small; the number of arrivals is not one-fifth of coasting vessels.

10728. What is your opinion of the navigation into the port of Dublin?—It is very simple, and comparatively easy.

Mr. *W. Watson.*

31 May 1870.

10729. In your opinion, would the effect upon Dublin be considerable if this Bill were passed?—Yes.

10730. Do you think that a very large number of coasters which are now compelled to take pilots, will cease to do so, and that the masters will find their own way in?—I apprehend that the coasters will nearly all bring themselves in.

10731. There is a large trade in colliers, is there not?—It is the principal coasting trade that is subject to pilotage.

10732. Do you think that none of those vessels would take pilots, but would find their way in by themselves?—I do not think they would take pilots generally.

10733. You think that the effect upon Dublin will be considerable, do you not?—Yes.

10734. It was in that view that the Dublin Dock Board petitioned the Committee with reference merely as to compensation?—Quite so.

10735. They do not disapprove of the principle of the Bill, do they?—They do not.

10736. They petitioned Parliament merely on the question of compensation?—Solely.

10737. Because they were of opinion that the loss of employment would be considerable?—Yes, but for that there would have been no petition; in the petition they state their intention of not resisting the proposed legislation.

10738. In your opinion is there any reason why the colliers and the other coasting vessels should be compelled to take pilots?—Certainly not if they do not require them; it is simply putting a tax on that class of shipping for the benefit of another class.

10739. Do you consider that it is for the benefit of the over-sea vessels?—Yes, for the benefit of the over-sea class.

10740. Have you any doubt as to whether there will be sufficient employment of pilots by the over-sea vessels to keep up a staff sufficient for the trade?—I have no doubt that there will be an ample number of pilots for the service, as there is by the present system.

10741. I see by this petition that it is only directed to the compensation clauses?—That is all, and that petition was agreed to unanimously by our board.

10742. May we take it that the Dublin Dock authorities approve of the principle of the Bill?—Quite so; there was only one member who hesitated about it.

10743. Now let us go to Liverpool; I presume you will admit that the navigation of the Mersey is much more difficult than that of Dublin?—It is longer and more intricate.

10744. Have you heard the evidence given as to the difficulty of the navigation of Liverpool?—Yes.

10745. What is your opinion of it?—I think it is grossly exaggerated.

10746. Do you consider that though it is considerably more difficult than Dublin, the navigation is not so difficult as it has been represented?—To a stranger it is impossible to get in; but to a person who knows the marks there is not the slightest difficulty in getting in. The best proof of that is, that for the last 30 or 40 years our captains have got in without any disaster.

10747. As compared with the Dublin, the over-sea trade of Liverpool is enormous, is it not?—Yes, it is, I wish to remark that the exemption in Liverpool waters, with the coasting trade, is a great deal more extensive than in Dublin; vessels under 100 tons are free in Liverpool, but I do not think there is such exemption in Dublin.

10748. I think it is only vessels under 50 tons that are exempt?—Yes.

10749. Then, again, all the coasting steamers coming into the port of Liverpool are also practically exempt, with the exception of one-fourth of the inward pilotage?—Yes; I should say that no coasting steamers take a pilot in except when there is a strange captain on board.

10750. Those that are in the habit of running constantly do not do so?—No.

10751. In your opinion the navigation is not so difficult as really to necessitate the retention of compulsory pilotage in order to keep up the staff?—That is clearly my opinion. Some years ago we sent our vessels into the River Thames; it seems a far more difficult navigation, and we were perfectly free of pilotage for coasters.

10752. Mr. *Graves.*] You have stated that you have found great difficulty in inducing the dock board of Liverpool to license your captains?—Yes.

10753. What dock board were you speaking of?—Both the old and the new.

10754. Have you ever made an application to the present board?—Yes; we have made several applications.

10755. Are you able to give any date of any particular application?—I can give you the whole of them; I have the correspondence in my pocket.

10756. I am speaking of the existing dock board?—And since 1859. I find here that we had a long correspondence with the Board of Trade on the subject, and with the old board, and we were asked to postpone the matter till the new board came into office; at that time there were applications from two of our masters, who thought they were perfectly competent to take their vessels in, one of the name of Hughes, and the other of the name of Thomas John.

10757. What are the dates of those applications?—The 1st of March 1859, the last answer was saying, "As soon as the said committee shall have appointed a day on which to meet, I will let you know;" that is to their agent in Liverpool. Then there was another application, and still there was no day appointed. In May 1859 the two officers were desired to be in attendance. Here is our letter sent to the Board of Trade, on the 24th June 1859, to Mr. Farrer: "Sir,—In compliance with your letter of 9th September last, all further action in reference to the examination of masters and mates of steamers for pilotage certificates for the port of Liverpool, was deferred until the early part of this year, when Messrs. Hughes and John sent their written applications to the Mersey Docks and Harbour Board, requesting that a day might be appointed for their examination. After considerable delay a day was named for this purpose. Before, however, any arrangement could be made for their attendance, a postponement was ordered by the committee. Another appointment was made after some delay, but as only one clear day's notice was given, the candidates being then engaged in their course of service between Dublin and Liverpool, were unable to attend. The agent of our company therefore requested that another time might be named, with sufficient notice to allow arrangements being made to keep Messrs. Hughes and John in Liverpool, and to appoint

appoint other officers to perform their duties at sea. The Mersey Docks and Harbour Board have, however, finally declined to proceed with the examination. I beg to annex a copy of their letter. On the part of the applicants and of the company I now respectfully urge that the question may be disposed of, on the authority of the Board of Trade, as contemplated by the Merchant Shipping Act, 1854."

10758. Will you read the Board of Trade's letter which is referred to there?—That is a letter from the pilotage committee of the Mersey Docks and Harbour Board, dated the 14th of June 1859, to our agent in Liverpool: "Herewith I forward you copy of a resolution adopted by the pilotage committee on the 6th instant, in reference to examinations of masters and mates of coasting steamers, viz., the question of examining masters and mates of coasting steamers having been taken into consideration on the application of Messrs. John and Hughes, chief officers in the employ of the City of Dublin Company, this committee, referring to the Consolidation of Acts Bill of 1858, section 121, are of opinion, that it is not expedient to undertake such examinations." That is the reply we got; and then we referred the matter to the Board of Trade to carry out the 355th section of the Merchant Shipping Act.

10759. That was in 1859?—Yes.

10760. The board had only just then been formed?—Yes; we waited for the formation of the board.

10761. What steps followed that?—We then put ourselves in further correspondence with the Board of Trade; and Mr. Milner Gibson felt so thoroughly that we had so little chance of having the question properly dealt with in Liverpool, that he agreed to take charge of it, and issue certificates to qualified officers of our company's service.

10762. Are you aware that the dock board did not begin to examine till the 6th of October 1859?—No, all I know is that they declined to proceed with the matter.

10763. Have you sent any application in to the board, since they commenced to examine, in October 1859?—Since that time, I think not.

10764. Has there been any application?—No, there has been no application made to the dock board since, because we considered that the question was taken charge of by the Board of Trade, giving authority to our commanders to take our vessels in, with passengers on board; if we have no passengers on board we require no authority.

10765. So that, in fact, since the present dock board commenced to examine for licensing masters, in October 1859, you have made no application to that board to license masters?—No.

10766. You say you derive no advantage from the 1 *s.* per foot; have you not the privilege, at any time, of demanding the services of a pilot?—Of course, we have, like any other ships, I suppose, in the same way that a coaster who is relieved from payment would be able to ask for a pilot; we have it, but it is an advantage which we have never once availed ourselves of; therefore I do not think we attach much value to that advantage.

10767. Do you consider the 1 *s.* a foot a heavy tax?—No; we do not consider it a heavy tax, but it is a tax to the extent of 400 *l.* a year.

10768. Do you think that being able at any time to ask for the services of a pilot you should make some small contribution for the maintenance of an efficient pilotage service in the port?—I think not.

10769. Do you think that you should bear no portion of the expense of maintaining the pilotage service, though you should be able to avail yourselves of the services of the pilots at any time?—No; certainly not.

10770. Was there not an obligation in the Merchant Shipping Act for all home trade passenger ships to have a pilot, or a licensed master on board?—Yes.

10771. Have you carried that out?—We have never sailed into Liverpool without one; we have studiously carried it out; I may remark that that was an arrangement I had a good deal to do with at the time of the passing of the Act by the Board of Trade; we acquiesced in it because we thought it was fair for the safety of the public, and we have carried it out ever since.

10772. *Chairman.*] When your vessels carry passengers, do they take pilots?—Our captains are pilots; we never sent a vessel with passengers without a captain who has a pilotage certificate.

10773. Mr. *Graves.*] From the port of Liverpool, I understand, the captains have no license?—We get them direct from the Board of Trade, under the 355th section of the Merchant Shipping Act.

10774. What examination do they undergo when you apply to the Board of Trade?—No examination.

10775. Are we to understand that any master who comes forward with a certificate from his owner, gets a pilot license for the port of Liverpool from the Board of Trade?—Under certain conditions,

10776. What were the conditions?—The conditions were that he should have been for two years in active service in that trade; and if as master, holding a certificate, a person whom we would consider perfectly competent to bring his vessel in and out of the port of Liverpool.

10777. Do you consider that the stipulation of two years should be preserved in any mode of granting licenses?—I say that it probably should be more than that, but that is the condition of the Board of Trade in giving those certificates.

10778. Do you consider it a wise condition?—I consider it a very wise condition; in fact, our men have far longer experience than two years before we offer them for certificates.

10779. If you consider it a wise condition to be attached to the license for bringing steamers in and out of the port of Liverpool, how would you apply the same rule to coasting vessels; would you allow them to go without pilots?—Steamers are only required to have them when they have passengers on board; sailing coasters have no passengers.

10780. I suppose that condition was made in the interest of life?—Clearly.

10781. If it were not applied to sailing vessels, you would be rather removing one of the safeguards which Parliament thought necessary with regard to passenger ships, would you not?—There is no doubt of that.

10782. With regard to coasters, I understand you to say, in answer to the honourable Chairman, that you thought they ought to be exempted?—What I said was, that I do not think they ought to be taxed for services which they

Mr. *W. Watson.*

31 May 1870.

they do not require, for the sake of others who do require them.

10783. Do you speak of Liverpool?—I speak generally.

10784. Are you aware that the income derived from the coasting vessels, which you would exempt, amounted in 1868 to 3,321 *l.* in Liverpool?—I have never seen the returns of the Liverpool pilotage, so that I cannot speak upon that subject.

10785. So that, in exempting that class of vessels, you would be reducing the income to nearly a proportionate amount?—I should think so.

10786. The Port Board is heard by petition. You expressed a strong opinion with respect to the compensation of pilots in Dublin?—Yes; our view is very decided that the pilots ought to be compensated for the loss of their income.

10787. Do you consider that the mode of compensation proposed by the Bill is entirely satisfactory?—No, I think it is too remote; and though there is no resolution of the board upon it, it was the view of the board that it was putting it off too far, because experience shows that the loss will be immediate.

10788. *Chairman.*] By "too remote" do you mean that the period at which the compensation is to be made, namely, two years, is too long an interval to elapse?—Yes.

10789. And you think it should not be more than either one year or six months?—Yes.

10790. In other respects, are you satisfied with the provision?—Yes, that is the only objection to it.

10791. Mr. *Graves.*] Would you consider that the compensation should be a guarantee that the man's income should be preserved to him for life?—I would not say for life, because it would be more than a compensation for what he would lose; and a man cannot be earning pilot's wages for life; but it should be a fair compensation for what he is really deprived of.

10792. That his position should be really no worse than it is now?—That is my view.

10793. *Chairman.*] Having regard to the superannuation he would be entitled to, supposing he went on as a pilot?—Yes, that his position should not be deteriorated by the change in the law.

10794. Mr. *Graves.*] I see by the return that you have handed in, that in 1851, when steam coasters were exempted, the revenue fell off from 6,356 *l.*, in 1849, to 4,730 *l.*?—Yes.

10795. And it has advanced again to 7,000 *l.*?—Yes.

10796. Is that in consequence of the trade being greater?—Yes.

10797. I observe that the over-sea trade has doubled itself since 1851 in the port of Dublin?—Yes.

10798. Would you anticipate such a falling off as that now?—I would anticipate a greater falling off, because the proportion of the sailing coasters bears a larger ratio to the whole amount now subject to pilotage than the steamers did in the first year.

10799. With regard to compensation, you have a superintendent, I think, of the pilots?—Yes.

10800. Do you consider that he should be included in the compensation?—That question has not been discussed, but my view is, that the board, in the interest of the port, should maintain the superintendent out of the pilotage fund, and let him, as the examining officer, have the appointment of the pilots in the interest of strangers coming in; that is my own individual view; we have not discussed the question; as long as there is a pilotage establishment he would have no claim to compensation, because his services must be continued and paid for as long as the pilot service is continued; he gets a salary of 250 *l.* a year.

10801. If the pilotage of the port of Dublin was a gratuitous one, and there was no charge made upon a ship, would you think that pilots would be used by sailing vessels, or not; supposing the port of Dublin provided the pilot service, and paid the pilots themselves out of the tonnage dues of the port, do you think sailing coasters would avail themselves of the pilots, or not?—I think it is very possible that they might save themselves; I mean that a man who has been at sea a night or two would be glad to have his work done by another man, if it cost nothing.

10802. Would you consider a vessel safer with one of the Dublin pilots on board, or not?—I suppose it would be safer, because a man who is constantly in the port must be more certain about it than a man who comes in only 12 times in a year.

10803. Your objection appears rather to be based upon the view that one class should not be taxed for the benefit of another?—Yes.

10804. And if you were free from all questions of taxation, you would be in favour of having a pilot on board every vessel going in?—I am not prepared to go to that length, because, unless I thought it necessary upon inquiry I would not advise it. Supposing the colliers of Dublin knew their way into Dublin, I do not see the necessity for putting a pilot on board their vessels.

10805. Now, as to the Port Board; how long has the Port Board existed?—The new board has been in existence about two-and-a-half years.

10806. How is it constituted?—It is elected, at present. We have four sections upon the board, the first section consisting of our mayor, *ex officio*, and three members elected by the municipal corporation without any qualification. We have seven members appointed by the Irish Light House Commission, which is practically the old Ballast Board.

10807. That is similar in Ireland to the Trinity House in England, is it not?—Yes; they had charge of the port of Dublin and the Irish coast lights; seven members are elected by the mercantile constituency of Dublin, and seven members are elected by the shipowners, or persons paying shipping dues in Dublin, making 25 members altogether.

10808. Who had charge of the pilotage service of Dublin, previous to the existence of the Port Board?—The Ballast Board, of which we are the successors.

10809. Why was the change made; the Ballast Board are now the Irish Light Commissioners, are they not?—Yes.

10810. Why was the change made; why was the pilotage service of Dublin taken out of the hands of the Irish Light Commissioners, and placed in the hands of the Port Board?—It was considered part of the duties connected with the administration of the affairs of the port, and the whole of those duties were passed over to the new Port Board.

10811. Do you consider that the change has been a satisfactory one?—I consider it most satisfactory. We have got men now, with one or two exceptions, who are men in active business, and of course they take an interest in the matter, and they understand the question more thoroughly than those who had not necessarily any business qualifications, or any shipping qualifications. In fact, the old board had but two persons on it in any way interested in shipping.

10812. Would you consider it an undesirable policy to leave to a board, constituted as the Port Board is, the decision as to what system of pilotage is best adapted to their own waters?—I think it might be safely left to such a board as ours; and I think what I have already mentioned would justify me in that opinion, as even the old board acquiesced in carrying out the pilotage on very liberal ideas with regard to relieving those who did not want the service, that is, the coasting steamers.

10813. How many shipowners have you on the board?—We have seven members elected by shipowners, or those who pay shipping dues, without actually owning ships.

10814. How many persons representing sailing-ship owners are there on the board?—Only two.

10815. How many are there on the board representing steamship owners?—That would leave the other five of the seven elected by the shipowners, as representing the steamship owners.

10816. Would the representation of five to two at all represent the proportion of the tonnage of steam and sailing vessels?—The representation depends upon the contributions to the port funds, and not on the ownership and tonnage; and I think it does represent the proportions.

10817. *Chairman.*] You have been asked by the honourable Member for Liverpool, whether it would be desirable, in your opinion, to leave it to the Dock Board in Dublin to determine what should be the system of pilotage for the port; that is, I presume, whether it should be voluntary or compulsory, as a general rule?—I do not think the honourable Member for Liverpool asked whether it would be desirable.

10818. Would it be desirable to leave to the Dock Board of Dublin to determine what should be the system of pilotage?—I think that it might be safely left to our board, as now constituted.

10819. Do you think they would find it easy to carry out a change of that magnitude?—They could not do it; they would require an Act of Parliament; they could scarcely pass an Act of Parliament for the port of Dublin alone upon such an important question; and the board would not undertake it.

10820. Therefore, without some pressure from without, you think they would never do it?—No.

10821. Therefore, in your opinion this general Bill is necessary?—Yes.

10822. If left to themselves you think they would not attack it?—No; if it was put upon them no doubt they would do it fairly; but they would not volunteer to do it.

10823. You think that they would not initiate legislation of that kind?—No.

10824. Your opinion is generally that it would not be sufficient to leave it to the local authorities, whether the shipowners were properly represented or not, to maintain compulsory pilotage or to abolish it; without pressure from the State the thing never would be done?—I think not.

10825. Have you had any personal experience of the inconvenience arising from the immunity of shipowners when the ship is under the charge of a compulsory pilot?—No, except in one case of a ship belonging to the Admiralty.

10826. What was that case?—Our ship was lying at anchor in Kingstown Harbour, and an Admiralty ship coming in in charge of a pilot did some damage, but the Admiralty refused to compensate.

10827. Have you had any cases of your own vessels coming into collision with others when those others were in charge of compulsory pilots?—No.

10828. I understood you to say, that before this arrangement was made between you and the Liverpool pilotage authorities your vessels were bound to pay for pilotage?—Yes, on every arrival.

10829. But they never did take pilots, notwithstanding that they had to pay for pilotage?—Never.

10830. What stamp of men are your captains generally; are they a high class of men?—No; our system is that of the promotion of our working seamen.

10831. As regards the pilots, are they superior to the ordinary run of pilots?—Some of the pilots are highly respectable men; the last man we appointed is a Liverpool pilot; he was introduced to me with very strong recommendations from Mr. Simpson, the superintendent; there was a vacancy, and we had no officer of our own eligible for promotion, and we appointed him.

10832. Colonel *Bourne.*] If this Bill becomes law, would you still advocate the maintenance of the superintendent of the Dublin pilots?—That is my own individual opinion.

10833. How would you pay that officer?—Out of the port fund, because we derive a very considerable revenue from the over-sea ships coming in.

10834. In fact, you would be taxing the over-sea ships for the maintenance of this superintendent?—No, that would be taxing the whole shipping of the port; if he is paid out of the general port fund, it would be taxing the whole shipping.

10835. It would be a tax upon certain people not deriving any benefit from it individually?—It would, to the extent of 250 *l.* a year.

10836. Would you think that just?—Theoretically, it is unjust; but out of a revenue of 50,000 *l.* or 60,000 *l.* a year, it does not make much matter.

10837. Have you been much at sea yourself?—No, I am not a seaman.

10838. I understood you to give an opinion as to the difficulty of the navigation of the Mersey?—Yes.

10839. If you are not a seaman, how do you arrive at that opinion?—From conversations with our own officers, and from the immunity from accident to our ships piloted by them.

10840. I believe you said that most of your captains are licensed by the Board of Trade?—Yes, they have Board of Trade certificates, with the exception of the last one I have mentioned.

10841. In answer to the honourable Member for Liverpool, you said that they underwent no examination?—No.

Mr. *W. Watson.*

31 May 1870.

10842. None whatever?—None.

10843. Do I understand you to say that the Board of Trade grant licenses to any man who applies without any examination whatever?—No, I did not say that; I said, on a certificate from his employers, that he had been two years in the service on that line, and that they were perfectly satisfied with his conduct and ability to take a ship in and out; as used to be the case before the passing of the Merchant Shipping Act.

10844. *Chairman.*] Since 1862 have the Board of Trade given any licenses to any of your captains?—Yes; I think they are hesitating now about it, and want to throw us back upon the Liverpool authorities again; but we have not acquiesced in it. I think we have got several licenses since 1862.

10845. Colonel *Bourne.*] Are all your captains licensed?—Yes, all of them. Not all by the Board of Trade; we have one with a Liverpool pilotage certificate, and we have also several who have their service certificates, which they are entitled to under the Merchant Shipping Act of 1854.

10846. Mr. *Grieve.*] A Liverpool pilot, who takes command of one of your ships, gives up all claim to the superannuation fund of the Liverpool pilots?—I think so, but he still holds his certificate; and I believe in his case we do not pay 1*s.* a foot.

10847. Does he return to the pilotage establishment again?—I do not know.

10848. Mr. *Brassey.*] You expressed a very confident opinion to the effect that any pilotage authority, however satisfactorily constituted, and however completely the shipping interest of the port were represented in its constitution, would not of its own mere motion abolish the system of compulsory pilotage; that it would not do so except under the pressure of general legislation?—I said that I do not think it likely that any port would initiate a Bill in Parliament to allow them to get rid of compulsory pilotage.

10849. Supposing Parliament made it optional, assuming there should be a general Bill passed giving that option to the local pilotage authority, do you conceive it to be impossible that the local authority would avail themselves of that?—Quite the reverse, because our Dublin port did take that option in 1850.

10850. *Chairman.*] It depends, even in such a case, upon the board being a properly constituted one, and fairly representing all the interests of the trade?—Yes.

10851. I think you told us that in 1851 the pilotage receipts of Dublin had fallen off one-fourth from what they were in 1849?—Yes.

10852. Was that in consequence of the arrangements which were made of relieving the coasting steamers from payment?—Yes.

10853. I believe there was no compensation then given to the pilots?—Unless the 150*l.* a-year could be said to be compensation, but that could scarcely be said to be compensation.

10854. No compensation was given to the pilots in that case?—No.

10855. From 1851 to 1859 the income has been gradually improving, has it not?—Yes.

10856. From that time the tonnage of the over-sea vessels has doubled itself?—Yes.

10857. I presume that that increase is likely to go on?—It is principally vessels with foreign corn and timber that come into our port; vessels with timber do not materially change, but the corn vessels are sometimes very numerous.

10858. And those vessels generally take pilots?—Yes.

10859. So that there will be a great employment for pilots in that, though not so large as at present?—Yes.

10860. And in course of time the amount may come up to what it has been?—Yes, but I think it will take a long time.

10861. In the interval, you think that by this Bill some provision ought to be made for withdrawing a certain number of pilots?—Yes.

10862. You think that the plan for withdrawal as provided in the Bill is a fair one?—I do not object generally to that portion of the Bill. I only deal with the question of the pilots being compensated for the loss of income.

10863. Your principal objection is with regard to the period of two years?—Yes; it is postponing it too far.

10864. What do you think would be a fair time?—I think, certainly, it could be ascertained within six months what the extent of their loss would be.

10865. Do you think that it would be possible to say, within six months, to what extent the pilotage receipts would fall off in a place like Dublin?—Yes.

10866. But you could not tell in Liverpool, within the space of six months, to what extent it would fall off, would you?—No; in Dublin we depend chiefly upon the coal trade, which does not go to Liverpool; it is that trade which mainly supports the Dublin pilotage.

10867. Mr. *Grieve.*] Would it not be fair to take 12 months of the winter and summer months in order to arrive at the fair earnings of the pilots?—Perhaps it might be; but no doubt the pilots would immediately suffer, and they ought to get some immediate compensation.

10868. *Chairman.*] But that compensation ought to have reference to the superannuations they would receive in the event of their remaining as pilots?—It should be taken into account equitably, what they would lose by the loss of their business.

10869. Therefore it would not be right to give them that annuity based upon their former receipts?—No, it would be making them better off than they are now, and they would have nothing to do.

10870. You ought to take into account that they have no work to do?—Yes; we proposed to the Liverpool pilotage committee to get rid of the difficulty with regard to the examinations for certificates; we made the offer to ship them as second officers in our vessels, at a salary of 2*l.* a week, with the duty of taking vessels in and out of port alone, which offer they declined.

10871. You made that offer to the Liverpool authorities, to relieve them of their surplus pilots?—No; not to relieve them of the surplus pilots, but with the view of getting rid of the difficulty of having to present officers for examination. The Board of Trade being very reluctant to continue the present system, we made that offer, to require no other service, but to take the ship in and out of the port, for which we would give them a salary of 104*l.* a year.

10872. I think you stated that one of the Liverpool pilots has recently been taken into your service as a commander?—Yes, as a commander.

10873. Does such a thing often occur of a pilot going off the list to be a commander?—No; we are not very likely to do it, because our wish is to promote our own officers when they are deserving.

10874. Supposing it were necessary to withdraw a certain number of them, would they get employment in other professions?—I am not prepared to say that; some might do so if they had no other means of living.

10875. But in estimating the amount of superannuation they should receive in the event of this Bill passing, would it be proper to take into account that they might be employed in other services?—I think it would be right to take it into account if they did get employment in other services.

Mr. *W. Watson.*
31 May 1870.

10876. Mr. *Graves.*] Looking at the nature of the services performed in Liverpool by the pilots, do you consider the pilotage rate moderate?—Very moderate; that is my reason for thinking that over-sea ships would never think of saving the pilotage; I believe the maximum charge is 9*s.* a foot; no captain would take the responsibility upon himself to save that.

Mr. JOHN THOMPSON BOUCH, called in; and Examined.

10877. *Chairman.*] I BELIEVE you are a partner in the firm of H. Marshall & Company, Liverpool, managing owners of the Old Black Ball New York packets?—I am.

10878. That line of packets has been established in the emigrant trade between Liverpool and New York for some time?—Yes, about 50 years.

10879. What number of vessels have they?—At present they have eight.

10880. Are they a large class of vessels?—Yes; from 1,500 to 1,800 tons.

10881. You have had considerable experience with regard to the sailing ship trade of Liverpool, have you not?—Twenty years.

10882. Have you often had occasion to consider the subject of compulsory pilotage, with reference specially to the port of Liverpool?—I have.

10883. What is your opinion as the working of that system?—I think it works injuriously, and ought to be done away with if possible.

10884. Will you state to the Committee your reasons for thinking that it is desirable to abolish compulsory pilotage?—I think it is a grievance that we should be compelled to take the first pilot who offers, whether he is a capable man or not; then again, I think, with the voluntary system, a better class of men would come into the calling, that the present useless ones would be weeded out; and altogether it would be an improvement.

10885. At present, in the case of inward-bound vessels, you are bound to take the first pilot that offers, I believe?—Yes.

10886. You think that it should be open to you to select those you think fit?—Yes; you can do that on an outward voyage, but not on an inward one.

10887. You could not do it to the same extent on an inward voyage?—You might do it, because I think, under the voluntary system, the pilots would be found more down the Channel, off the Tusker, and not close to the entrance to the Mersey, where the dangerous part of the navigation is almost over.

10888. You would wish to employ the pilots at a much earlier point if you could get them off the Tusker?—Yes, or between the Tusker and Holyhead.

10889. Or even as low down as Queenstown?—No; our vessels are sailing vessels, not steamers; we do not go to Queenstown.

10890. Do you believe there would be a considerable employment for pilots even lower down the Channel, if the pilotage were voluntary?—Yes; and our captains would be glad to take them.

10891. They would take them lower down, though the charges would be higher?—Yes.

Mr. *J. T. Bouch.*

10892. And to that extent there would be more employment for pilots under the free system than under the compulsory system?—I think so.

10893. It has been alleged here, that if the voluntary system of pilotage were carried out at Liverpool, there would not be a sufficient supply of pilots; what is your opinion on that point?—I think that is a mistake; I think there would be quite sufficient pilots, because it would do away with the system, which there is at present at Liverpool, of a portion of the earnings of the pilots going to the boatowners: after paying disbursements and certain expenses, the pilots receive the balance.

10894. You think that that system is a bad one?—Yes.

10895. And that it makes a heavy deduction from the receipts of the pilots, which ought to go to the pilots themselves?—Yes, to the men who earn them.

10896. Do you think that the pilotage charge is too high at present?—No, I think not.

10897. You think that it is not unreasonable?—It is about the same at other large ports.

10898. You think that the whole of the earnings ought to go to the pilots, instead of a large portion being diverted, as now, to the owners of the boats?—Yes.

10899. Have you formed any opinion with regard to the amount of employment for pilots in the event of pilotage being voluntary?—I have gone into no calculation upon that.

10900. In your opinion would there be a considerable employment for pilots?—As far as employment goes, I think there would be as much as there is at present.

10901. All foreign vessels would take pilots?—Yes.

10902. And also vessels belonging to the shipowners of Liverpool that are not constantly frequenting the port would take pilots?—Yes.

10903. And under a freer system than the present, you think they would be taken at a much earlier point, and that there would probably be larger receipts?—Yes, I think so.

10904. It has been stated that pilots would not offer their services in bad weather; is that your view?—I think they would, because, as I said before, if they receive the entire amount they charge, they would be on the alert, knowing that it would be in bad weather that they would be more likely to be engaged.

10905. You think, in bad weather, there would be a greater inducement for them to go out to seek for vessels?—Yes.

Mr. *J. T. Bouch.*
31 May 1870.

10906. Have you formed any opinion with regard to the effect of compulsory pilotage in making a divided command, between captain and pilot, in pilotage waters?—I think it has a bad effect for it makes the captain careless, because he knows that if his vessel is in charge of a pilot he escapes blame, and his owner also escapes liability.

10907. I believe cases have occurred, within your own experience, in which that evil has resulted?—I have a case now in the Court of Admiralty, where one of the Liverpool pilots, in charge of another vessel, ran foul of one of our ships at anchor in the river in daylight. The case was tried in the Admiralty Court, and the ship was pronounced solely to blame, but it was exonerated on the ground of compulsory pilotage.

10908. You think the practice has grown up for captains to leave their vessels entirely in the command of the pilot, with the view of escaping liability on behalf of their owners?—Yes.

10909. Do you think that has operated badly?—I do.

10910. It has been suggested that that evil might be met by throwing upon the shipowners the liability for the acts of pilots, although the pilots are forced upon them; do you think that reasonable or right?—I do not think that they ought to be compelled to take pilots, and then be responsible for his acts.

10911. If he selects pilots, do you think it reasonable that the owners should be liable for their acts, but not otherwise?—Not otherwise.

10912. Do you think if the pilots were supplied under the voluntary system, that they would be considered by the owner of the vessel simply as advisers?—Yes; as advisers simply on the local features of the navigation.

10913. Do you think that the present immunity of shipowners is a benefit to them?—No, I do not think it is; of course, it cuts both ways. If your ship is to blame and you escape liability, of course it is very satisfactory. But, on the other hand, it is anything but satisfactory.

10914. In your opinion, is there anything peculiar in the navigation of Liverpool which would make it desirable to exempt it from the general rule on the subject of pilotage?—I think not. I do not think Liverpool is at all a difficult port of navigation; it is well buoyed and well lighted.

10915. As compared with the Thames, what would you say?—I have not had much experience of the Thames.

10916. Have you any experience of other ports with which you can compare it?—Yes, I know many of the Irish ports; Queenstown and Dublin.

10917. I presume the navigation of the Mersey is much more difficult than those two places?—I suppose it is much more difficult than Queenstown and Dublin, on account of the banks.

10918. But the dangers are not so great as to necessitate the special exemption of Liverpool from the general provisions of the Bill abolishing compulsory pilotage?—I think not; I think if the present bell beacon was removed and a lightship put there, that the port would be as easy of access as any other port of the kingdom.

10919. On the whole, as a shipowner, are you in favour of the abolition of compulsory pilotage?—Yes.

10920. That is a general abolition without the the exemption of Liverpool, or any other port?—Yes.

10921. As a shipowner, would you be likely to take pilots notwithstanding the abolition?—We should certainly take pilots in all cases.

10922. Your vessels are of a large class, and that would necessitate it?—Yes, they are of a very large class, and for our own security we should take pilots. Notwithstanding that, I believe all our captains are perfectly able to navigate the Mersey.

10923. Mr. *Graves.*] I believe your vessels trade with New York?—Yes, between New York and Liverpool.

10924. Do you prefer the system of pilotage in operation in New York?—They have two systems of pilotage there. You might frequently have a pilot boat 600 miles from New York; that comes under the name of the off-shore pilots. You need not take those pilots without you like; but even the captain of our vessels take them, because they are generally pretty well tired after the passage across the Atlantic.

10925. What is the other system?—The other system is much the same as ours, and I believe there are about the same rates and charges.

10926. Is it not the case that the first boat that boards a vessel in New York waters demands the pilotage?—Yes.

10927. In that respect the system would be the same as ours?—Yes.

10928. And the pilotage there is compulsory, is it not?—Yes, I suppose it is.

10929. Have you read this Bill?—Yes, I have.

10930. Are you aware that the Bill proposes to make no change in the existing state of things at Liverpool, with the exception that it leaves it optional to the shipowner whether he takes a pilot or not?—Yes.

10931. The Bill does not provide for outside cruising, or the free system you have got in your mind?—I believe competition would lead to the introduction of small screw steamers in the pilotage service.

10932. This Bill does not propose to throw open the pilotage service in the way you aim at?—I have not read it so.

10933. The Bill proposes to leave with the Dock Board all the power that it now possesses, and to take from it none of its power, with this exception, that it leaves it optional to the shipowners whether they will take pilots or not?—Yes.

10934. Do you consider it quite fair that the pilot should be obliged to be at his station in all weathers, and that the shipowner should be left entirely free?—I consider that it is the pilot's duty to be at his station. There is very great danger of vessels running on shore, and vessels coming into Liverpool have frequently to run into Point Lynas in bad weather to look for pilots.

10935. You see no distinction, in your own mind, with regard to the free system, as to whether there should be an obligation on the pilot, and no obligation on the shipowner; if you leave it free with the shipowner to take a pilot or not, would you leave it free with the pilot to board the ship or not?—Yes.

10936. You would leave it free on both sides?—Yes.

10937. Mr. *Brassey.*] In your experience as a shipowner,

a shipowner, do you know of any port in which, without any compulsory system, the pilot boats are compelled to keep their stations in exposed weather, in the same way as they are off the port of Liverpool?—No, I cannot say that I do.

10938. You do not apprehend any risk to the shipowners by the adoption of the voluntary system, by its leading to the pilots declining to put to sea in bad weather?—None whatever.

10939. Do you think you would be able to enforce the somewhat strict regulations which now exist in the port of Liverpool as completely under the voluntary system as you now do under the compulsory system?—I do not see why it should not be so.

10940. You think the mere motive of self-interest, and the prospect of obtaining employment, would make the pilots keep their stations in exposed weather with the same regularity then as they do now under the compulsory system?—Yes; because I think they would be better remunerated.

10941. Colonel *Bourne.*] You think that the pilots would be better remunerated; in what way?—They would get the entire amount of the pilotage, and would not be subject to the deduction that there is at present for the person who owns the boat.

10942. But you would still advocate a fixed rate to be levied per ton or foot?—Yes, upon the draught, because a vessel drawing a large draught of water in a greater responsibility.

10943. Are your vessels steamers?—No; they are sailing vessels.

10944. You have eight of them, have you not?—Yes.

10945. How often do your vessels sail?—Our advertised days are the 1st and 16th of each month.

10946. Have you two vessels a month inwards and outwards?—Yes.

10947. You said that you would like to take your pilots much earlier than you get them now?—Yes.

10948. Before you reach Point Lynas?—Yes.

10949. Are they of any use to you before you get there?—The Channel up to the Mersey is a very difficult navigation; after you pass the Fastnet Rock, in the south of Ireland, it is all anxiety.

10950. That is beyond the Liverpool pilots' cruising district, is it not?—Yes; it is 300 miles from the port of Liverpool.

10951. You would take your pilots beyond the present cruising ground, if you had the opportunity?—No doubt.

10952. You would then expect to pay a high rate for his services?—Yes, but it would be optional; you are not bound to take a north-shore pilot without you like; if the vessel comes up with a fair wind, you need not incur the expense.

10953. There are so many changes in the navigation between the rock of which you speak and Point Linas, before you get to the Liverpool cruising ground?—In the Channel, in fine weather, it is a pretty straight course.

10954. And there is not much change in it?—It depends upon the weather, and it also depends upon the wind.

10955. The banks remain the same, and the rocks remain the same?—Yes.

10956. Does the same remark apply to the cruising ground between Point Lynas and Liverpool; is there much change in the banks there?—The banks change periodically, I believe; but they are all well surveyed and marked.

Mr. *J. T. Bouch.* 31 May 1870.

10957. You think that your captains could navigate your vessels through those banks without a pilot?—I think so, considering that they are in and out there every three months; I do not suppose for a moment that it applies to people who are away for years.

10958. You said you did not like the present system of paying the boats; you have never made a complaint with regard to the rates?—No.

10959. Are you aware that the rates of pilotage in Liverpool are amongst the lowest in the kingdom?—Yes; I believe they are as low as any other port.

10960. The system of paying the owners of the pilot boats does not apply to you as a payer of rates, because you do not complain of the rates being high?—No.

10961. The distribution of rates does not affect you, as a shipowner, in any way?—No.

10962. And you do not complain of the rates?—No; I complain of the boats receiving that portion of the money, whereas the pilots would get it themselves if no such charge was made; and a better class of men would be introduced into the service.

10963. How does that distribution affect the shipowner?—It does not affect him pecuniarily at all.

10964. Are you satisfied with the present class of pilots?—Some of them are very good and estimable men; the others are very inferior and very inefficient.

10965. Have you ever complained of any of them?—Frequently.

10966. To the pilotage committee?—To the pilotage committee.

10967. Have your complaints been attended to?—Yes, I believe so; but I do not think that the pilotage committee possess the proper judicial power. I think a case of that sort ought to be brought before the Board of Trade, and there ought to be an inquiry into it.

10968. Have you complained that your complaints have not been properly investigated by the pilotage committee?—The thing has been considered, and when it has been settled we have said no more about it; we get no satisfactory redress. Judging from our own cases, I think it is almost incredible the leniency with which men's gross carelessness has been dealt with.

10969. Can you name any single case in which you complained?—The case I have alluded to was a collision in the river last December; I believe that pilot is still in the employment of the pilotage committee.

10970. Though he was reprimanded and held to be liable for having run some vessel against yours?—Yes; we have made no further complaint to the board as yet, because it is not settled; we are appealing against the decision.

10971. Did you make any complaints, in that case, to the Liverpool pilotage board?—No; except that the pilot made a statement; we are waiting to see the result of the action; when that is terminated we shall make a complaint.

10972. Do you remember any other case in which you have complained to the pilotage board?—I do not remember any at present, but I think I can find many cases.

10973. Mr. *Grieve.*] Supposing this Bill to pass, and the pilotage authority to remain the same

Mr. *J. T. Bouch.* 31 May 1870.

same in Liverpool, have you any doubt that they will at once conform themselves to the altered circumstances of the case, and popularise their movements with reference to the shipping interest?—I think so.

10974. Are you aware the Bill provides that no pilot can be taken unless he is a licensed pilot?—Yes.

10975. Therefore you presume that the pilots in Liverpool would be as much taken under the voluntary system by foreign-going ships as under the compulsory system?—Yes.

10976. Mr. *Gourley.*] How far do you take pilots outwards?—Generally to the outside of the bar, or sometimes to Point Linas.

10977. Why would you take pilots inwards at a greater distance than you would take them outwards?—You have never the opportunity of getting them further out.

10978. But you have the opportunity of taking them further out from Liverpool?—There are channel pilots frequently taken in Liverpool.

10979. Is the danger greater coming inwards than going outwards?—No, I consider it is greater going out, from the simple fact that your crews are better disciplined on arrival than they are on leaving.

10980. I cannot understand why you take pilots a greater distance coming inwards than you do in going outwards?—I simply mention the reports made by our captains, who say, when they have had hard weather, coming across, they would be glad to get a competent man to take charge of the vessel, when entering the channel.

10981. They would take a pilot, to relieve them from the anxiety of having to sit up, and keep watch at night?—Yes, and in order to have a man to confer with who is cognizant with all the lights.

10982. Do you use steam tugs with your vessels?—Yes.

10983. Are the masters of the steam tugs capable of directing the navigation of the ships when they have charge of them?—Yes.

10984. As well as the pilot?—Yes.

10985. When you have a steam tug you have no necessity for carrying a pilot, have you?—We always do carry one.

10986. You always would carry one, although you had a steam tug?—Yes.

10987. *Chairman.*] You think that a pilot is necessary, as well as a tug, with large vessels in difficult navigations?—I do.

10988. The master of the tug follows the direction of the captain or of the master of the ship, does not he?—No; the master of the tug is generally under the instructions of the pilot.

10989. Either the pilot or the master of the vessel gives the orders; the master of the tug does not guide the vessel?—Certainly not.

10990. He follows the direction of whoever is in command of the vessel, does he not?—Yes; that is either the pilot or the captain.

10991. That renders the presence of a pilot as necessary where there is a tug as where there is none, does not it?—Yes.

10992. You stated that you frequently have occasion to make complaints of the pilots?—Yes.

10993. I presume the complaints have not been followed by any action of dismissal?—I am not aware of any.

10994. The men remain as pilots, and you are bound to take them when they offer their services?—Yes, we cannot refuse them.

10995. So that the very man of whom you have reason to complain, you are bound to employ afterwards?—Yes, if he presents himself.

10996. Whereas under the voluntary system you would be able to decline the services of a particular man, or of a particular class of man?—Yes.

10997. Colonel *Bourne.*] Have those complaints been in writing; have you made any formal complaints?—Yes, I have made complaints in writing.

10998. And they have not been attended to?—They have been attended to in their way, but they have not been satisfactorily attended to.

10999. Why have you made no complaint with reference to the collision you spoke of which occurred in December last?—Because the thing is not settled. I wanted the action to be settled before I took any proceedings.

11000. Do not you think it would be better if you complained at once, if you thought a pilot had neglected his duty?—I think so; but the vessel sailed immediately afterwards, and I had not the captain here, and I wanted him.

11001. Did you make the complaint as soon as the captain returned?—No, I have not done so yet.

11002. Was the vessel much damaged?—Very much damaged, indeed.

11003. And yet you made no complaint against the pilot?—I made a verbal complaint. I went to the pilotage office myself.

11004. Mr. *Grieve.*] I suppose your claim against the pilot would be a small amount?—We cannot make a claim.

11005. Therefore, you thought you had better make the other claim before you went against the pilot?—We knew that he was not pecuniarily responsible.

Captain THOMAS REYNOLDS, called in; and Examined.

Captain *T. Reynolds.*

11006. I BELIEVE you are a Master Mariner in the employ of the City of Dublin Steam-packet Company?—Yes.

11007. I believe you have been at sea 39 years, both in foreign-going and coasting ships, sailing vessels, and steamers?—Yes.

11008. How long have you been in the present service?—Twenty-six years.

11009. Since when have you been in the command of a steamer?—Since 1854.

11010. During that time has your business been lying between Liverpool, Dublin, and Belfast?—Yes.

11011. How many voyages do you make on the average per week?—I make four voyages in the winter per week, two in and two out; and in the summer time, when the trade is brisk, we sometimes do six passages a week, three in and three out.

11012. Are you also acquainted with the port of London?—Yes.

11013. How long were you serving there?—I sailed out of London previous to 1852, in the Dutch

Dutch trade, in one of the City of Dublin Company's ships.

11014. Have you had a Board of Trade pilotage certificate during the last 15 years?—Yes; I had the Board of Trade pilotage certificate in 1855.

11015. You were not examined then, but it was given to you for your length of service?—For the services I had performed, and the position I held, they granted me my certificate.

11016. Comparing the approaches to Liverpool with those to London by the Thames, what is your opinion?—There is no comparison whatever between them.

11017. Do you think the approaches to London the more difficult of the two?—A great deal more difficult.

11018. Do you find any difficulty yourself in navigating your vessel into Liverpool?—None whatever.

11019. Have you ever had any accident during the time you have been in command of a vessel?—I had a collision with a fishing smack two years ago, off the magazine in the Mersey, in consequence of his having no lights, but the case went in my favour before the coroner's inquest.

11020. Have you ever felt the want of a pilot in bringing your vessel into Liverpool?—None whatever.

11021. Do you consider your vessel safer, under your own charge, than under that of a pilot?—A great deal. In fact I never would allow any strange man, whether the master of a ship or a pilot, to have any interference whatever with my vessel.

11022. Have you formed any opinion of the Bill before the Committee for the abolition of compulsory pilotage?—I do not think that it would in any way interfere with the present class of pilots in Liverpool.

11023. On what ground do you form that opinion?—Every foreign-going ship will employ pilots as heretofore; but it is a great hardship in the coasting trade to have to pay for what you do not get.

11024. In some respects there would be a falling off as regards the coasting trade?—Yes, there would be a slight falling off as regards the coasting trade.

11025. In your opinion, foreign-going vessels would take pilots, just the same as they now do?—Yes, just as heretofore.

11026. It has been suggested that under the voluntary system pilots will not be forthcoming when they are wanted; what is your opinion upon that point?—I cannot see it; I think they will be forthcoming as much as ever, and the very hope of reward will encourage them to be at their posts.

11027. Particularly in bad weather?—Particularly in bad weather; theirs is like any other business, it requires a little exertion to make it pay.

11028. You think their own interests will put them on the look out, because they will be more certain of employment in bad weather than in fine weather?—That is my opinion.

11029. Do captains in your service apply to be examined by the pilotage committee for licenses?—One or two have done so.

11030. What was their experience?—One failed the first time, and he would not attempt to go in again, as he considered it was impossible to pass; that the mind of the committee was made up not to pass any master mariner as a pilot.

11031. Did you offer yourself for examination before going to the Board of Trade?—No; having the Board of Trade certificate, there was no necessity for my offering myself.

11032. Do you think the experience of the two men who did offer themselves has deterred others from offering?—Yes; it has deterred most of the masters going out of the port of Liverpool in steamers.

11033. Have you a pilot license for Dublin and Belfast as well as Liverpool?—Yes.

11034. Have you read the evidence given by a man named Doyle, with reference to the difficulties of the Dublin navigation?—No; I have not read it.

11035. Mr. Doyle gave evidence before this Committee to the effect that the banks and approaches to Dublin are barely covered at low water, is that the case?—It is not.

11036. Are the currents very strong?—They are very mild; there is only a small rise and fall of the tide, which runs from three to four miles an hour.

11037. Are there shifting sands there?—None whatever; there is a little falling off at Roseburg Point, but there is nothing to signify.

11038. Is it the fact that in consequence of floods the sands are washed down the river, and the banks are continually changing?—I have experienced no change for the last 26 years in the port of Dublin.

11039. Are the floods so prevalent on the coast as to make the navigation unusually difficult?—No.

11040. In your experience have many large ships been wrecked and injured by being driven on shore in Dublin Bay?—None whatever.

11041. Do vessels frequently strike the bar coming into Dublin, or not?—I never heard tell of one in my life, and I go over the bar in all sorts of tides and all kinds of weather.

11042. Do you know anything of the Belfast navigation?—Yes; I was seven years trading in and out there with a passenger steamer.

11043. What is the state of the navigation there?—Very fair; it is very easy to approach, and it is safe.

11044. Comparing it with Dublin, what would you say?—It is something similar.

11045. Is it more difficult than Dublin?—No.

11046. In your opinion there is no more reason for confining compulsory pilotage to Belfast than to Dublin?—No.

11047. And the two parts may be taken together very much?—Yes.

11048. They are very much under the same conditions, are they not?—Yes.

11049. In your opinion, is there any reason for retaining compulsory pilotage, as far as Dublin or Belfast is concerned?—None whatever.

11050. Or for compelling coasting vessels to take pilots in either case?—I consider it a great hardship upon them.

11051. Would you say the same in the case of Liverpool with regard to the coasting trade?—Yes.

11052. I believe coasting vessels above 100 tons have to take pilots?—Yes.

11053. With regard to foreign-going vessels, you think they would still continue to take pilots, notwithstanding pilotage is voluntary?—Yes.

Captain *T. Reynolds.*

31 May 1870.

11054. Mr. *Graves.*] When you speak of Belfast, do you speak of the river or the lock?—The approaches north and south.

11055. Do you consider that the navigation of the river itself is perfectly safe?—Perfectly safe.

11056. And free from all kinds of obstruction from banks?—Perfectly safe.

11057. Is it not very narrow?—Three large ships cannot pass abreast of one another.

11058. Have you seen vessels aground there?—Yes, on the shore side, where they have got on the ebb and lodged there.

11059. I suppose two or three vessels would block up the river, if they got ashore there?—Yes.

11060. What would be the result?—The result would be delay.

11061. No injury?—No; except that arising from collision in the river.

11062. Take the case of a vessel coming up, and being unable to pass up or go down, would not she take the ground?—Not at high-water time.

11063. Take an obstruction on the ebb tide, would not it be so?—It would be necessary not to take the river with a heavy draught ship on the ebb.

11064. Mr. *Brassey.*] The river at Belfast is more like a broad canal, is it not, quite straight, and very wide?—Yes.

11065. It is something like a very wide canal?—It is similar to a large canal.

11066. And the difficulty of navigating it consists in the seamanship required in handling a vessel, more than in knowledge of the navigation?—That is all.

11067. Colonel *Bourne.*] How often do you go in and out of Liverpool?—I make four passages a week, two in, and two out; in summer time when the trade is brisk we make six passages a week.

11068. Do you know how often, on an average, Liverpool pilots go in and out of Liverpool?—No.

11069. Would you be surprised to hear that they do not average more than one voyage a week?—I would not.

11070. Inasmuch as you go in and out of the port four times a week, and the present pilots only go out, on an average, once a week, your experience is really more even than a regular pilot?—It ought to be.

11071. And hence you have more opportunities of being acquainted with the banks than a licensed pilot; is not that so?—No, because the pilots are on the ground at low water; they are there to notice any shift of sand and any alteration of the buoys; whereas our going in and out is principally from half-flood to half-ebb.

11072. But you navigate in and out of the port of Liverpool oftener than an ordinary pilot, do you not?—A great deal oftener.

11073. What water is there over the Kish Bank at low water?—There is six feet for a mile south of the Black Buoy.

11074. Then the Dublin pilot, Mr. Doyle, was right in saying that the banks in the neighbourhood of Dublin are totally covered at low water, was he not?—Six feet is the shallowest water on the Kish.

11075. Would any vessel pass the Kish at low water?—No, no vessel approaches the Kish at any time.

11076. Would not they require some knowledge of the Kish to enable them to get a vessel up and down the channel at any time?—The nature of the sounding will tell a master when he is approaching the Kish.

11077. You do not think that you require more experience upon the Irish coast than upon any other?—Not at all.

11078. *Chairman.*] Have you much communication with the pilots at Liverpool?—Yes, a great deal.

11079. Can you say what their general feeling is with reference to the payments made by them to the boat owners?—Some two or three years ago there was a great deal of bad feeling between the younger branch of the pilots and the masters, in consequence of the way in which the funds were distributed.

11080. Do you think that is a complaint amongst them?—Yes, I have heard many of the young men complaining about it.

11081. Do they think that some of the remuneration that ought to go to them is diverted to the boat owners?—Yes.

11082. Do you think under the voluntary system, they would get better remuneration, and that there would be an inducement for a better class of men to go into the service?—Yes.

Tuesday, 14*th June* 1870.

MEMBERS PRESENT:

Colonel Bourne.
Mr. Cave.
Mr. Graves.
Mr. Grieve.
Mr. John Stewart Hardy.
Sir John Hay.
Mr. Shaw Lefevre.
Mr. Philip Wykeham Martin.
Mr. Norwood.
Mr. William Philip Price.
Sir Henry Selwin-Ibbetson.
Mr. Stevenson.
Sir Charles Wingfield.

GEORGE JOHN SHAW LEFEVRE, Esq., IN THE CHAIR.

Mr. ALFRED HOLT, called in; and Examined.

Mr. *A. Holt.*
14 June 1870.

11083. *Chairman.*] I BELIEVE you are a Shipowner of Liverpool?—I am.

11084. And manager of the Ocean Steamship Company, which trades with China?—Yes.

11085. And also a member of the Mersey Docks and Harbour Board, and a member of the pilotage committee?—Yes.

11086. And also a member of the marine committee of Liverpool?—Yes, I am a member of that committee.

11087. Have you read the Bill before the Committee for the abolition of compulsory pilotage?—Yes, I have.

11088. Do you approve of the principle of the Bill?—Yes, I do.

11089. Will you state to the Committee what is your opinion upon the subject of the abolition of compulsory pilotage?—I think we should probably have fewer pilots but of a better class, and they would be better paid; and also I think that there would be a direct connection between the shipowners, who would be served by the pilot and the pilot himself, which would tend to improve and exercise the fullest powers of the pilot.

11090. You think that one effect would be to reduce their numbers?—I think that effect might be produced after a time.

11091. But that those who were left would be of a superior quality to those at present?—I think that would be the result.

11092. I suppose that would result from the owner being at liberty to employ them or not, as he thinks fit?—Quite so.

11093. Do you think that it would lead to emulation among the pilots themselves?—I think it would.

11094. And to their exerting themselves more than they do at present?—I think so.

11095. Is it your opinion that the master of the vessel should have complete control over his vessel on coming into pilotage waters?—I think it desirable that he should have a complete control over his vessel.

11096. Do you think the effect of this Bill will be to make the captains more careful on behalf of their owners than they are now as a rule?—I think the effect would be to make the master's knowledge of greater avail for his owner's benefit.

11097. Is it your opinion that compulsory pilotage has a tendency to induce the captains to give up the control of their vessels to the pilots?—In some cases I think it has that tendency.

11098. Have you reason to complain at all of delays which attend the present system?—I cannot say that I have in my own case, but I know that such delays have occurred.

11099. What is your opinion with regard to the employment which there is likely to be for pilots after the passing of the Bill?—There will be a very large amount of employment, probably not so much as at present, but a very large fraction of the present number of pilots will be still employed.

11100. What class of vessels, in your opinion, will dispense with the services of pilots after the passing of the Bill?—Most likely the smaller vessels, or those whose masters are well acquainted with the port.

11101. You think that coasting vessels and vessels constantly running into the port from the continental ports would dispense with pilots?—Yes.

11102. But the vessels engaged in the long voyage trade, will, in your opinion, still require pilots?—In my opinion, they will.

11103. Have you any opinion upon the present scale of charge for pilotage services?—I think it is rather high, considering the amount of service rendered.

11104. Is it high for the larger class of vessels, or only for the smaller class?—It is high for both, but it is harder in proportion to the value of the trade which the smaller vessels are engaged in, than it is for the larger ones, being in proportion to the draft.

11105. You think it falls more heavily upon the smaller class of vessels than upon the larger class?—Possibly, as it is regulated by the draft of water instead of by tonnage.

11106. Have you any personal knowledge of the entrance of the Mersey yourself?—Only the knowledge arising from having been a member of the marine committee, and having been frequently outside, and having watched such questions for many years.

11107. It has been represented to the Committee, that the difficulties of the navigation are very great as compared with the Thames and

Mr. *A. Holt.*

14 June 1870.

other ports in the country; is that your opinion?—I think the navigation of the entrance to the Mersey is attended with danger, but I do not think with so much as I have seen represented by some.

11108. Is it, in your opinion, of such a character as to necessitate the special exemption of Liverpool from the Bill now before the Committee?—I think not. I think the effect of the Bill would be to improve the pilots, therefore *à fortiori*, a reason for its application to Liverpool.

11109. Your opinion is, that the effect of the Bill will be rather to improve the pilotage than otherwise?—I think so.

11110. In other words, that the pilots, as a whole, will be more competent for the services for which they are required than they are now?—I am of that opinion.

11111. Then, in your opinion, this Bill may pass, not only without any evil effect to Liverpool, but with great benefit?—As far as pilotage alone is concerned; whether any question of compensation should be taken into account I do not express any opinion.

11112. But you think that, as a measure for the abolition of compulsory pilotage, it would be a great benefit to Liverpool?—It is merely on the ground that I think the pilotage would be improved.

11113. Have any of your masters obtained a certificate from the Liverpool Pilotage Board?—No; all my vessels go long voyages, and it is not necessary.

11114. You, as a shipowner, are likely to continue to employ pilots?—I certainly should.

11115. Do you think there would be any advantage in breaking up the very close system under which the men are confined to their stations, and that it would be better that the men should be allowed to go further off in search of vessels?—I think it should be allowed to find its own level. I cannot at once devise a perfect scheme, if the voluntary system be adopted, but in certain cases I think it advisable that vessels should obtain pilots further from Liverpool than they do now.

11116. Would your vessels ever take pilots further down the Channel than Point Lynas?—Not mine; they are all steamers, and they are all tolerably efficient; they can take care of themselves, and run down to the present pilotage ground.

11117. But as regards large sailing vessels, what would you say?—It is not necessary that large sailing vessels should take them further out, but many vessels are commanded by timid men, Greeks and others, and they might.

11118. And you think that they would be glad to take pilots lower down the Channel, off Queenstown or Scilly?—Yes.

11119. In that way there might be greater employment for pilots than there is now?—Yes, but I do not wish the conclusion to be drawn that, on the whole, there would be a greater employment of pilots.

11120. But to that extent there would be a greater employment of them?—Yes.

11121. Mr. *Graves.*] You have stated that you consider that if this Bill is passed, it would lead to great emulation among the pilots; in what way do you think it would do so?—In this way, that whenever a man is immediately dependent upon a person who employs him for his remuneration, he exerts himself more than when he is not so immediately dependent.

11122. Do you consider that the provisions of this Bill lead to that free system which you have in your mind?—I think they do.

11123. Can you point out in the Bill any clause which in any way alters the present control of the Mersey Docks and Harbour Board, or the regulations under which they conduct the services?—No, I cannot; but there would be no necessity to employ a pilot, and hence I presume, that the owner of a ship could take any pilot he chose; but that is a supposition.

11124. You said there would be no necessity to employ a pilot; do you consider that pilots in such waters as the Mersey; render the navigation of the ships more secure?—The man who knows the navigation of the Mersey best, combined with the power of handling his ship, is the man who renders the navigation most secure; and if the master has the necessary local knowledge, and also the peculiar aptitude which he necessarily would have, I should think he is the best to handle his ship.

11125. Would you consider a ship going in and out of the Mersey, as safe without a pilot as with one?—It depends upon the master.

11126. Supposing the captain does not know the port, what would you say then?—No.

11127. Supposing a captain goes in and out once a year to Calcutta, would you think him as competent as a general pilot?—No.

11128. In those cases a captain exercising the option of not taking a pilot would be throwing overboard the safeguard to life?—If he exercised it he would.

11129. With reference to the Bill, are you aware that the only alteration from the present system which is proposed under this Bill, is simply to leave it optional with the shipowner to take a pilot or not?—Yes.

11130. And in all other respects it leaves to your committee the same power and control, and regulation of the service as exists at the present moment?—I think that is the effect of the Bill.

11131. You have suggested, I think, that the emulation would probably lead men to be more energetic; by that, I suppose, you mean that they would go down the Channel to meet vessels?—Not only that, but they would also, in the service between the Mersey and outside the banks, be more energetic and keener.

11132. Do you mean that each individual pilot should have a boat of his own, by which he could show his emulation and energy?—I do not want to shadow forth what I think it would shake down into.

11133. From your practical knowledge of this matter, you would not wish the Committee to suppose that you would consider such a thing feasible in a port like Liverpool, that an individual pilot could own a boat of his own?—I should not think it would have that effect; there would be some club, probably, got up.

11134. And probably the emulation would be as between boat and boat?—I do not know whether it would take that form or not.

11135. You think that an individual would try to show his emulation?—Yes, he would say, "I will try to get such a character that shipowners will employ me, and I will endeavour to retain this connection for myself. I will be back

and

and ready to wait upon this ship, and will take care that there is no accident."

11136. That could only be done with a large company which had arrivals so regular as that a pilot could tell where the vessel would be at a certain time?—I do not agree with you; most small vessels come into certain brokers' hands who would say, "John Thomas is a very good pilot," and they would recommend him to employment.

11137. Supposing your system was in existence to-morrow, in what way would a captain be able to claim the services of John Thomas; I am not speaking now of the regular steam lines, but of casual vessels arriving at the port?—I imagine that a broker would say to the shipmaster: "This is a good pilot; employ him." And if he is occupied, there is another person whom he would name; the broker would keep a list of the pilots.

11138. Do you think, under those circumstances, that the owner or broker is better able to assume the responsibility of selection than a qualified committee like your own?—I must say that I think he would be able to do so better; we do not select pilots for ships.

11139. *Chairman.*] All you require is a minimum qualification?—All we require is a minimum qualification.

11140. Mr. *Graves.*] Do you find any disadvantage, practically, arising from it?—Not at all, as far as I am concerned; but mine is hardly a fair case. My ships only visit Liverpool once or twice a year each, and they are of small number and large size.

11141. With regard to inward-bound vessels; in what way could a captain, by any possibility, exercise the selection?—It would be very difficult.

11142. Are you aware that that emulation of which you speak exists at the present moment between boat and boat?—I am aware that it does.

11143. I believe that there is no common fund into which the whole earnings of the pilots of Liverpool go?—No; each cruise stands by itself.

11144. Is it not the fact that there is a considerable difference between the earnings of the boats, owing to the very emulation you so much desire?—Whether it is emulation or luck is the question; but there is a difference.

11145. I think you have made some remark with reference to the fact that pilots would get more pay under the system which you have shadowed out than they have under the present system; do you mean by that that the division which the pilots now receive is not a fair one?—I do not say that it is not a fair one, considering the circumstances of the case.

11146. Do you consider that the boat owners got too much?—I consider that between the payment made by the shipowners, and the sum received by the pilots, a considerable amount goes to waste.

11147. Have you at all tested in what way it goes to waste?—I think it would not be hard to show that there are more pilots than are necessary for the service of the port. For instance, a pilot does not conduct a ship both ways; that is one effect of the present system and, of itself, necessitates the keepng up of a larger staff than would otherwise be requisite. Then the pilots are employed for other purposes than mere pilotage. There are many ships, which would rather be without a pilot, but one is set to watch that they do not get away without employing him. This occupies a man's time, which might have been otherwise used in piloting; and all tends to increase the staff, and to make the sum that comes to each pilot smaller in amount.

11148. Is not it in your own hands to regulate that; you need no Act of Parliament for it; is not it in the hands of the pilotage committee?—We should have to get some Act to upset the present system; though I am not thoroughly aware what the foundation of our system is.

11149. We are now speaking of the reduction of numbers. Is it not one of the peculiar provisions of the pilotage committee or the dock board, to regulate the number of pilots according to the requirements of the port?—I believe we have that power.

11150. So that you want no Bill at all to effect the reduction of number which you now advocate?—No; not to cause a partial reduction of the number; but if the present system is continued, a larger staff of pilots must be kept up than are absolutely necessary, because a pilot who has brought a ship in cannot immediately take a ship out. He must go out again as a passenger, or as he best can; I consider that a waste of time.

11151. I want to ascertain clearly, whether the pilotage committee has not now the power to regulate the number of pilots according to their view in a strict accordance with the requirements of the port?—I believe they have that power.

11152. And it is a fair assumption, is it not, that that spirit of control is so exercised at this moment?—It is exercised to a certain extent.

11153. Have you ever advocated a reduction of the number of pilots at the pilotage committee?—I have not pressed a question of that sort to a division; I have often urged upon the committee, the fact that I thought there were more pilots than were necessary, but it has not taken a definite form.

11154. Is it not the case, that the majority of the committee took an adverse opinion to yours, and that you did not press it?—I have not followed the matter up as I should have done.

11155. Let me ask you again with regard to the remuneration of pilots; has not the pilotage committee and the dock board full statutory powers to alter the arrangement for the divisions of remuneration, and if it was thought that the pilots were not getting a sufficient sum, is it not quite within their province to give them a larger division?—I ought to know that, but I do not know whether they have that power or not.

11156. Are you aware that on the 1st of January last an alteration was made in this direction, by which the boatowners get less and the pilots get more?—I do not recollect it.

11157. I will read to you the 144th section of the pilot laws, which states, "But the board may make such alterations, from time to time, in such manner as they may consider most conducive to the interests of the trade"?—It is evident that we have that power.

11158. You were not aware of it?—No.

11159. You are under the impression that the pilot rates of Liverpool are somewhat high?—Yes.

11160. Is that judging by the merits of the service performed, or by comparison with other ports?—By the merits of the service performed; I think that the work performed by the pilots is small, compared with the sum paid by the shipowners.

Mr. *A. Holt.*
14 June 1870.

11161. Have you had any means of contrasting it with other parts of the United Kingdom, such as Queenstown, the Thames, or Cardiff?—I have had occasionally with the Thames.

11162. What is your opinion with reference to the contrast with the Thames?—I have not gone into a calculation that I could rely upon, because the nature of the service, and the much greater length of pilotage in the Thames would necessarily come into question.

11163. Have you compared it with Queenstown, which is a very short navigation?—No.

11164. Are you aware that it was stated by Mr. Inman that the nature of the pilotage was much the same with his vessels in Queenstown as in the Mersey?—I was not aware of that.

11165. Do you consider it desirable to maintain an efficient pilot service in a port like the Mersey?—I think it is desirable that it should be maintained.

11166. Is not such a service as that maintained for the good of the whole port?—Broadly speaking, it is for the good of the whole port.

11167. You would not deprive any one visiting the port of the power of demanding the services of a pilot at any time; at present every owner or captain of a vessel has the power of demanding the services of a pilot?—Yes, he has.

11168. Would you consider it desirable that that power should remain?—Yes, I think so.

11169. Would you then leave it optional with the pilot to say no, as well as with the owner?—In sketching the future, I should be very cautious about what ground I took, but I think that it would be desirable, as far as I can at present see, that the power of the masters to insist upon a pilot should remain.

11170. Probably you would consider that a service so maintained, is maintained for the good of all?—I do not think that is the logical conclusion, because there are many vessels that would receive no good from it. In shadowing forth the future under this Bill, I do not wish to take any firm ground, because I cannot see what form the system might take; but at present I think it would be desirable that any vessel should have the power of insisting on having a pilot.

11171. If you have the power of taking advantage of this highly efficient pilot service, which you think it is desirable to maintain, does it not follow that to a very great extent that service is kept up for the good of all those who have the right to ask it?—Yes, but if there be a large class who never need to ask it, it cannot be said to be maintained for their good.

11172. I ask whether you would carry your views so far as to give the pilot, at all times, the power of saying no?—No, I do not say that.

11173. You think, under all circumstances, that the pilot should be bound to the shipowner, but that the shipowner should not be bound to the pilot?—I say it with some hesitation, but that is my present opinion.

11174. With reference to the pilotage committee, of which you are a member, it has been stated here that there has been too much leniency shown to the pilots, with regard to these complaints which have been made to your committee; is that your impression?—I believe the committee to act conscientiously in every case. I have regretted sometimes that severer measures have not been taken with pilots, I must confess, but I believe that the committee conscientiously, to the best of their power, endeavour to investigate every case, and to come to a decision, such as the majority of an efficient committee formed of gentlemen capable of judging properly, can come to.

11175. I presume every case is very patiently inquired into, and evidence is generally brought for and against?—Yes, but you must be aware that this has all to be done in an hour, or an hour and a half, once a week, when there may be a dozen cases, each having perfectly conflicting evidence.

11176. *Chairman.*] I suppose there is a great unwillingness to deprive a man altogether of his employment?—A great unwillingness, but I have never seen an undue unwillingness to punish a pilot, if default could be traced to him.

11177. What form does the punishment generally take?—Fines, deprivation of profits, suspension, and degradation to the lower grade.

11178. Suspension for a period?—Yes.

11179. Mr. *Graves.*] Would you propose to do away with these investigations?—No; I think there must be an examining board to issue licenses, and that board had probably better continue to have this power.

11180. If their decisions were more stringent, they would be more frequently in conformity with your view of the requirements of the case; is that your view?—It has very frequently occurred to me that a more stringent decision should have been come to.

11181. I suppose the majority carries the decision?—Yes.

11182. Do you consider that the pilotage committee of Liverpool and the Dock Board are more partial to the pilots than they are to the shipowners?—I have not been able to detect anything of that sort; I believe they are a very conscientious committee.

11183. And hold an impartial position as between all interests in the port?—I believe they do as well as they are able to do.

11184. Mr. *Stevenson.*] In the event of this Bill passing, I believe you are aware that it does not involve any alteration whatever, except simply making pilotage, which is now compulsory, voluntary?—And the question of compensation.

11185. It does not necessarily involve the abolition of all the conditions upon which the pilots are allowed to practice their profession, namely, examination, apprenticeship, and the complete discipline which is now upheld in the service?—No.

11186. You thought there was a question whether you could maintain discipline and compel a pilot to go on board a ship which required him?—I do not see where the difficulty in making a pilot take charge would be; I must have been misunderstood.

11187. Are you aware that there are pilotage authorities in different ports in the country where pilotage is voluntary who can maintain all the discipline required?—I do not see why discipline should not be maintained with voluntary pilotage.

11188. Mr. *John Stewart Hardy.*] You think, if this alteration of the law were made, that the pilots would become more active and take greater pains to please their employers?—Yes.

11189. Do not you think that the tendency of it would be that they would take greater pains to please the Liverpool shipowners, and that the extraneous people coming there would be left to the

the worst class of pilots?—An extraneous shipowner coming to Liverpool would, probably, come to some broker who would be keenly desirous of earning his money, and would recommend a good pilot to him.

11190. So that the shipowners would be consigned to someone or other, who would take care that an efficient pilot was employed?—Yes.

11191. And therefore, they would be in as good a position, for, having a local knowledge of the pilots as the ships that naturally belong to the port?—Yes; because, of the ships sailing from Liverpool, a small portion only are actually sailed by their owners.

11192. Colonel *Bourne.*] You said that pilots were sometimes punished by fines and suspension; are they not sometimes dismissed?—They are sometimes dismissed; but not so often as I should think would be desirable.

11193. But they are sometimes dismissed?—Yes.

11194. Mr. *Grieve.*] Have you read the evidence of some of the former witnesses?—I have read it in the papers.

11195. It came out from some of the witnesses that there is a considerable choice of pilots in Liverpool; if you had the chance of doing so, you would endeavour to choose your own pilot; is not that so?—It is new to me.

11196. So much so that Mr. Inman employs a pilot of his own?—Mr. Inman and certain large lines apply to the committee, and have pilots assigned to them.

11197. It came out from some of the other witnesses that there was a considerable preference given to certain pilots in Liverpool who were considered active, smart men?—The large lines referred to have a standing engagement with certain pilots who they consider smart men.

11198. Are you obliged to take the pilot who offers himself when your ship goes to sea?—You are not obliged, but it is almost invariably done; I believe you may refuse a pilot.

11199. If a man offered himself whom you did not approve of, you would still have the privilege of selecting another man, would you not?—I do not know that I would have that power if a man conducted himself properly, and was apparently an efficient pilot; if he was intoxicated, or misconducted himself, I believe I would have the power of refusing him.

11200. A good deal of stress was laid upon a person having no option at sea, that he was obliged to take the first pilot who came on board, while in a port he had the option?—It is rarely exercised, either at sea or in port.

11201. *Chairman.*] I gather from your evidence that you are in favour of a perfectly free system?—I think I am in favour of a free system, but I should take great care, and act very tentatively in changing.

11202. By "free system" I mean the absence of anything like a licensed corps or a regulated tariff?—If you mean that by a "free system," I think there should be a licensed corps of pilots.

11203. You think there should be a licensed corps of pilots and a regulated price?—A regulated price would be established among themselves; it would shake itself down.

11204. And you think that there should be a licensed corps?—I think that there should be a licensed corps.

11205. A licensed pilot should take a vessel out of the hands of an unlicensed man; is that your opinion?—That is provided for in the Bill, but how it is to done, I do not know.

11206. It is done now, is it not?—At present every vessel has to have a licensed man.

11207. But if a vessel is not bound to take a pilot, and if it is piloted by an unlicensed man, a licensed man has the right to take the vessel out his charge, has he not?—Supposing the master says "this is a boatman, I am in charge," how do you know that he is an unlicensed man?

11208. It occurs every day in the Thames, does it not?—It does not occur in the Mersey.

11209. It does not occur in the Mersey, but it does occur in other places, does it not?—I believe so.

11210. You say that there should be a licensed corps of pilots, and that the licensed pilots should have the right of superseding, as they now have?—I think it is well that they should have that right, but I do not see how you could carry it out. Supposing a master of a ship said, "The pilot is no pilot at all, but one of my crew," what would you do then?

11211. Do you think there should be a limited number of pilots?—I would let it shake itself down.

11212. At present the pilotage authorities regulate the number of pilots according to the exigencies of the trade, do they not?—Yes, in a rough manner.

11213. Do you think that that should continue, or should they license everybody who comes?—I do not know why free trade should not apply.

11214. In your opinion it would be necessary to be very careful in making a change from one system to the other?—Very.

11215. In order to prevent hardship to individual men?—Not only to prevent hardship, but to prevent any deficiency of pilots at a particular time.

11216. Are you aware that this Bill does proceed in that tentative manner?—It is rather smashing in the beginning I think.

11217. It only abolishes the compulsion; it does not affect the other conditions of pilotage?—The compulsion is the heart and kernel of the whole matter.

11218. I understood you to say, that you thought there were too many pilots at Liverpool?—I consider that there are too many.

11219. Do you know what amount of employment each pilot on the average gets?—I have heard that the amount of their receipts is somewhere about 200 *l.* a year.

11220. I do not mean the amount of their receipts, but how many days are they employed in work?—I have heard it stated that a man pilots a ship about once a week.

11221. Then he does not pilot more than 52 vessels in the course of the year?—About that.

11222. Is it once out and once in in a week?—I really do not know.

11223. In your opinion, it would be competent for brokers and shipowners to keep lists of efficient men, and only to employ those men, and give instructions to their masters only to employ those men?—Yes.

11224. And in that way, inducement will be brought to bear upon the men which will tend to make them more active in their work?—I think it will have that effect.

11225. And it will be an inducement to the most active and most competent men in the service?—Yes.

Mr. *A. Holt.*

14 June 1870.

11226. Whereas now, all the men, whether competent or incompetent, have the same chance of employment?—Yes, just so.

11227. Have you at all considered the provisions in the Bill with regard to compensation?—I have read them, and thought a little upon the subject.

11228. What is your opinion upon them?—You are aware that only journeymen pilots are provided for.

11229. Apart from that question, what is your opinion upon the whole, of the principle adopted in the Bill with regard to compensation?—It is so exceedingly contingent upon so many authorities being inclined to do so many things each in its turn, that supposing them to be all of one mind, the pilot may possibly be compensated in the end, but I think he deserves to have a clearer idea how the principle is to be carried out.

11230. Assuming that the Board of Trade or the Treasury are willing to carry out the principle upon which the compensation clauses are framed, do you think the principle is a fair one?—I think the principle of compensating a fair one; but it is stipulated to be done in a certain period of one year, which one year will be at a period of two years hence, and I won't pledge myself to the opinion that that arrangement is appropriate.

11231. Have you considered what would be a fair and proper limit to put in point of time?—The fair and proper limit would be as soon as the cause actually produced its effect.

11232. You are aware that it would not be possible until some little time afterwards to decide what the effect of the Bill would be upon the employment of pilots?—No.

11233. Therefore, sufficient time must intervene to ascertain what the effect would be?—Yes, but I cannot say that two years is the right limit; it must take some time until the cause has produced its result; but I do not know how long that will be.

11234. It would not be desirable to take it too soon, because the whole effect may not be ascertained?—No.

11235. Therefore a sufficient interval should elapse to tell what the falling off would be?—Yes.

11236. Would there be any difficulty in withdrawing a certain number of pilots in accordance with the provisions of the Bill, if it turns out that there is not sufficient employment for them?—I think there would be no difficulty; the pilotage committee could lay their hands upon such pilots as they thought it desirable to part with.

11237. From the answer you gave to the honourable Member for Liverpool, I understood you to say that if this Bill passes, it will be necessary for the pilotage authorities to reconsider the whole system of pilotage at Liverpool?—I think it will be very desirable that they should do so.

11238. And that it would also be desirable to break up the system of boat owning there?—I think that the system of boat owning is rotten.

11239. You think it necessary for them to make great alterations in it?—Yes; but, at the same time, I think the boat owners should be compensated if they are disestablished; that is not provided for in the Bill.

11240. It might be a matter for after consideration?—Yes, it might, but I don't think it should.

11241. And it may be a question out of what funds the compensation should come?—Yes.

11242. Have you considered that matter?—Yes; and I find great difficulty in putting my finger upon the fund.

11243. Do you think it a matter that should fall rather upon Liverpool than upon the country generally?—I have thought that the remuneration the boats at present receive has arisen under the sanction of the Legislature; and upon first sight, you would say that the authority which gave the power to receive the earnings, should see the recipients compensated when the earnings are taken away.

11244. But it is, in fact, a charge upon the shipping of Liverpool?—Yes, at present.

11245. Therefore, would it not be right that the shipping of Liverpool should pay for it in some way or other, if it is necessary to abolish it?—The past shipping should.

11246. I will not go into the question of past, present, or future; but the shipping, present, past, or future, should pay for it?—Even if the shipping had to bear it, it would not be a great matter.

11247. There are funds out of which it could come, are there not?—I do not know what they are.

11248. Could not it be made a charge upon the funds of the Mersey Docks Board?—I do not see why it should, because the Mersey Docks Board have only quite lately had charge of the pilots.

11249. Still the abolition or retention of this system at Liverpool does not depend upon the Bill before the Committee; it is a separate question?—Yes; but if you take away the compulsory pilotage, you strike at the root of the whole; you cut the tree down.

11250. And you think that it would necessarily break up?—Yes; and I think, after a time, it would be a great advantage.

11251. You think it would be a great advantage to the trade, and the pilots, and the master?—Yes, it will be a wholesome and a healthy system.

11252. Do you think that the present system is unwholesome and unhealthy?—I do, but must allow that it does not work badly.

11253. But there are features about it which would be much better done away with?—Yes.

11254. Sir *Charles Wingfield.*] Do you know anything of the Hooghly?—No, except from looking at the charts.

11255. Mr. *Price.*] I understand you to say that the benefit which will arise from the breaking up of this system practically will be, that the benefit will be in the future, and not in the past?—Yes.

11256. If the benefit is for the future, would it not seem better that the future should pay for it?—That proposition seems to hold water at first sight, I think.

11257. And the burden that is going to be taken off is going to be taken off the future shipowners who come to Liverpool?—Yes.

11258. Therefore they are the men who should pay for the relief?—I don't see the logic, but speaking as a shipowner, I should be agreeable to pay my share, the advantage would be so great.

11259. *Chairman.*] At present, I believe, the only mode of punishing pilots is practically by suspension?—There is discharge also.

11260. Discharge,

11260. Discharge, suspension, fine, or degradation?—Yes.

11261. The pilots do not get any punishment in the way of loss of employment, do they?—I consider that suspension is loss of employment.

11262. That is, for a time; but when he reverts back upon the list, he is then employed equally with any other pilot?—Equally with any other pilot, except his punishment be a degradation to a lower grade.

11263. If this Bill which is now before the Committee passed into law, will not the effect be that if a man is negligent in the service of the pilots he will lose employment?—Yes.

11264. Is not that a better punishment than any that could be inflicted upon him by the pilotage committee?—Yes.

11265. Mr. *Graves.*] As to the shipping of the port of Liverpool bearing the compensation for the boat owners, is there any amount of tax or higher pilotage that you would propose that the shipping should bear?—I have not thought of any scheme whereby the money should be raised. I only expressed my opinion that if, in order to get rid of the present system, the charge did come upon shipping, I would not be disagreeable to it. I do not see why it should come upon shipping, but if it did, I would be willing to bear my share.

11266. Do you think that the Dock Board would be likely to raise the money on the uncertain security of an optional Pilotage Bill?—I do not know why the Dock Board should meddle with it.

11267. I thought you rather favoured the idea of the Chairman that the Dock Board should do it?—I must have been misunderstood, for I do not see the least reason for the Dock Board doing it. The parish might as well do it as the Dock Board.

11268. Any compensation that would have to be awarded to the owners of these boats would be an obligation of the port, would it not?—I do not know how to answer that question. The charge has been sanctioned by regulations and practices which have grown up in the past.

11269. *Chairman.*] But the benefit resulting would be to vessels or shipowners in the future?—Yes, they would be put upon a fair footing. Whether they should pay for being put upon a fair footing is a question which I cannot answer.

11270. Mr. *Graves.*] Would you not consider that any compensation arising to the boat owners should be acquired out of the pockets of the shipowners visiting Liverpool during the time that the trade was formed?—That appears most reasonable, but I own to great difficulty in saying what fund it ought to come out of.

11271. I want to ask you as to whether it is not inconsistent with that view of the question that you should be releasing at the same time the shipping of the future from the obligations by the voluntary system which you propose under this Bill?—In releasing the shipping of the future, you are merely putting it upon a fair footing.

11272. *Chairman.*] They would be a gainer by this Bill, would they not?—They would be no longer unfairly taxed.

11273. Mr. *Graves.*] Have you made any calculation of what is the net interest which the boat owners receive out of the boats?—No, I have not. I have heard that they receive about 10 per cent.

11274. If it was shown that they received, after deducting for insurance and interest, something like eight or nine per cent., would you consider that they received an excessive rate of interest upon the adventure?—I do not think that that is an excessive rate of interest upon a shipping adventure; but you must bear in mind that there is a very exaggerated value attached to the boats; on the intrinsic value of the vessels a great deal more than 10 per cent. is paid.

11275. Do you think your shareholders would be exceedingly well satisfied if only eight or nine per cent was paid?—I think so.

11276. *Chairman.*] You said that the system of boat owning was unwholesome; I presume that is the case whether the pilotage is compulsory or voluntary?—I do not say that the system of all boat owning is unwholesome.

11277. But you consider that the present pilotage system of Liverpool has been unwholesome?—Yes.

11278. Is that irrespective of the Bill before the Committee, or whether pilotage is compulsory or free?—Yes.

11279. Is it not considered by the pilotage committee that it would not be desirable to get rid of this system?—It has not been considered during the time I have been a member of the committee.

11280. Have you yourself considered whether it would be possible to get rid of it?—I have considered it possible.

11281. Have you considered it quite irrespective of the Bill before the Committee?—I have very frequently thought so, long before the Bill was introduced.

11282. Out of what funds should you consider that the compensation should be made; from what source should you consider that the necessary funds for doing away with the system should be obtained?—I think that that is a very difficult question to answer.

11283. Do you think that there is any right in asking the country generally to pay it?—There is a *primâ facie* ground, as the country has authorised it.

11284. You mean, inasmuch as it is under the Local Act?—Under the license of the Local Act this has been carried on for years, and has been the subject of enactment.

11285. But it has been purely a local matter, has it not?—It has been done in one place, and to that extent it is local.

11286. And the benefit of getting rid of it would fall only upon the local trade?—The benefit would fall upon the consumer, wherever he might use the articles that were carried.

11287. Colonel *Bourne.*] You suggest that the parish should give something, do you not?—I said that the parish might as well do it as the Mersey Dock Board; but the parish has no right to do it.

11288. Are you aware that there is a very small portion of the docks in the parish?—Yes.

11289. You also stated, I believe, that you did not advocate the rates being fixed by statute?—No, I think not; but I speak with doubt and hesitation about the future, because I cannot tell what form it would take; but I see no rock ahead in adopting the voluntary system.

11290. Do you think the present rates excessive?—Yes, I do.

11291. *Chairman.*] Have you considered whether a small charge might be left without doing away with the system of boat owning?—That

Mr. *A. Holt.*
14 June 1870.

That is a question that would require a great deal of thought; but I should not object to it if it was left.

11292. Sir *Henry Selwin-Ibbetson.*] I believe the shipping interest of the port generally, with the exception of some of the owners of the steam shipping trade of Liverpool, is not in favour of the change?—I am not aware of it.

11293. Are you not aware that they have expressed decided opinions against the change?—I believe some have; but I am aware that some very large shipowners have expressed opinions in favour of it.

11294. One or two owners of steamships?—Yes.

11295. But you do not know of any instance of any owners of sailing ships expressing an opinion in favour of it?—I am not aware of that.

11296. I believe the Shipowners' Association has not expressed any favourable views with regard to this Bill?—I am not aware that they have.

11297. Would you think it fair that they should be taxed, not having expressed a decided opinion for a change of this sort?—I do not see any *vis consequentiæ* in the matter.

11298. They think that the present system should be maintained, do they not?—Yes, I believe some do.

11299. And therefore it would be hard upon them that a change should take place which would be a tax upon them for the future?—It would be accompanied by a diminution of charge.

11300. Which is a thing they do not ask for?—No; but it is a thing they would be glad to take; I am sure of it.

Mr. Henry Owens Johnson, called in; and Examined.

Mr. *H. O. Johnson.*

11301. *Chairman.*] You are senior partner in the firm of John Granger & Company, at Liverpool?—Yes.

11302. I believe they are the owners of a line of steamers running between Liverpool and Belfast, and Liverpool and Londonderry?—Yes.

11303. You send six steamers per week to Belfast, two to Londonderry, and two to Silloth?—Yes.

11304. And you have the same same number of vessels inwards?—Yes.

11305. Do you supply pilots for those steamers?—No, we do not employ pilots.

11306. But like the other lines of coasting steamers, you are subject to a charge for pilotage, are you not?—Yes.

11307. Do you have no occasion to employ them at any time?—We never do employ them.

11308. Do you consider your captains more competent to manage the vessels, and to pilot the vessels in the Mersey, than the pilots?—Yes.

11309. Is it not the fact that they have greater experience?—Yes.

11310. Their entries into the Mersey are more frequent than those of the pilots themselves?—Yes.

11311. I apprehend that you consider that the vessels of your company should not be called upon to pay any pilotage at all?—We think so.

11312. Have you heard the evidence which has been given by Mr. Holt?—Yes, I have.

11313. Do you agree with it so far as regards the general principle of the Bill, which is before the Committee?—Yes.

11314. Are you of opinion that the pilotage should be made free at Liverpool, and generally round the country?—I think it should.

11315. Do you think, under the voluntary system, there would be sufficient pilots to meet the demand for them?—I have no doubt of it whatever.

11316. What is your opinion of the effect of the present system?—I do not know very much about it, except the pilots whom we use ourselves.

11317. And as far as concerns your own firm, do you think it unjust?—I think so.

11318. Mr. *Graves.*] Do you consider that there would be sufficient pilots to meet the demand, under any system?—I think there would.

11319. You have stated to the Committee that your captains are so experienced, that they are better qualified to bring their vessels in and out than the pilots are?—Yes.

11320. Is it your opinion that there would be sufficient pilots to meet the demands, at all based upon the fact of you and others claiming exemption from all pilotage?—No, not at all.

11321. But I suppose the more people share your views the more likelihood there will be of your having sufficient pilots to meet the demand?—I do not know anything about that; I suppose it would have that effect.

11322. Why do not you yourself get exemption from the rates; you pay now a shilling a foot, do you not?—Yes.

11323. Why do you pay a shilling a foot?—By an agreement with the pilotage committee.

11324. Why do not you ask that your captains should be licensed, and so save the shilling a foot?—We never thought it necessary to do that.

11325. Are you aware that you have now a most perfect power of demanding that your captains upon showing themselves to be qualified shall receive licenses?—We believe we can, but we never asked it.

11326. Do you consider that the saving of a shilling a foot is so trifling that you are satisfied to go on without asking for your captains to be licensed?—Our captains have an objection to going up to be examined. Some that did go up found difficulties thrown in their way.

11327. Have you ever made any application for any one of your captains to be examined?—No.

11328. Then your idea that they do not like to be examined is based upon some report, and not upon any experience of your own?—It is based upon the report of other captains who have gone up and been rejected.

11329. But is there any reason why your captains, if they show themselves to be qualified, should not receive licenses?—No.

11330. And if they were licensed, would you not be exempt under the present legislation from all taxation on account of pilotage in Liverpool?—I do not know that, but we have some with licenses, and we pay a shilling a foot for them.

11331. *Chairman.*] I believe you have found great unwillingness on the part of your masters to go up for examination?—Yes; but some of our

our masters have a pilot's license, and we pay a shilling a foot for them as well.

11332. I believe you do that under an arrangement made some years ago with the pilotage authorities?—Yes.

11333. And that was at a time when they were extremely unwilling to examine masters?—Yes, we had to apply to the Board of Trade.

11334. And you thought it best to continue the payment rather than to force your masters to be examined?—Yes.

11335. Do you see any reason why you should be called upon to pay the shilling a foot?—No.

11336. Mr. *Graves.*] Have you ever applied to the existing Dock Board since they have received power to license masters and mates, for a license for any of your masters or mates?—We have not.

11337. *Chairman.*] Have you thought it useless to do so, after your former experience?—Yes.

11338. Mr. *Stevenson.*] Do your ships carry passengers?—Yes.

11339. Some of your captains are not certificated are they?—They must have certificates.

11340. Have all your captains certificates?—Yes.

11341. I gathered from you that only some of your captains had pilotage certificates?—Some of our captains have pilotage certificates, and not masters' certificates.

11342. They hold pilotage certificates?—Yes.

11343. Then do you comply with the general law which requires that coasting vessels carrying passengers should either have a pilot on board, or that the master should have a pilotage certificate?—We do not comply with that at all, and very few coasting steamers do.

11344. How do you exempt yourself from the general law?—It is winked at.

11345. Then you pay a shilling a foot to the Mersey Board in consideration of their winking at your violation of the general law?—That is about it.

11346. Are you aware that there is a general law requiring all coasting steamers carrying passengers to have pilots on board in pilotage waters, unless the masters hold pilotage certificates?—There is such a law.

11347. Does not that law apply to the port of Liverpool?—Yes, it applies to all ports.

11348. And you obtain exemption from that law by paying a shilling a foot to the Mersey Dock Board?—No, we do not; that would not exempt us from the action of the law.

11349. But you are exempt from it, are you not?—The question has never been tried.

11350. So that somehow or other in the Port of Liverpool, you get rid of the obligation which rests upon passenger steamers in other ports, even where pilotage is voluntary?—Yes.

11351. You have, somehow or other, more liberty in the compulsory port of Liverpool, than they have in some other ports where pilotage is voluntary?—No we have not, because in other ports the captains get a license very easily; they have nothing to do but pay a guinea, and there is no examination whatever. In Belfast and Londonderry you pay a guinea a year for the captains, and you get a license without any difficulty.

11352. *Chairman.*] Do you get a license without any examination?—There is very little examination; it is only formal.

11353. Mr. *Stevenson.*] It is still impressed upon my mind, that the shilling a foot is exacted from you in order to save your captains going up for examination as pilots?—No, it is not; if we were obliged to wait for pilots, we could not do the work which we are doing; it is to save us waiting for pilots.

11354. That is a very good reason why all your captains should have pilotage certificates, but it seems to make very little difference whether your captains have pilotage certificates or not?—Very little in Liverpool, and that is the reason why we wish to have voluntary pilotage legalised.

11355. Mr. *Price.*] Will you tell the Committee what you get in return for the shilling a foot?—If we took a pilot, we should have to pay four shillings a foot, or even if a pilot offered, and there were disputes whether the pilots offered or not, and over and over again we had to pay four shillings a foot, when we did not see a pilot at all; so we made this arrangement, and all coasting steamship owners made an arrangement with the pilotage committee that we should not be asked for pilotage, and should not have pilots, and that we should pay a shilling a foot as a commutation.

11356. As a commuted rate?—Yes.

11357. And then you did not take a pilot at all?—No, even though the masters had no pilotage certificates.

11358. The object of a compulsory pilotage system is supposed to be for security to life and property?—It is supposed so.

11359. But that security to life and property, is bartered away for the payment of a shilling a foot, is it not?—I do not think so, because we consider our masters are more competent to bring the vessels in and out of Liverpool than the pilots.

11360. That is as far as you are concerned; but to those who have to provide this protection to life and property, at all events, this reduced state, is a sum of money which they receive for the purpose of dispensing with that protection?—Yes; but it does not protect us from the risk, if we send out a vessel without a competent man in her.

11361. To whom do you pay the shilling a foot?—To the pilotage committee; it goes into the pilot fund of Liverpool.

11362. Is that done with the knowledge and consent of the authorities?—Yes, it is by the pilotage committee's agreement.

11363. The pilotage committee is, perhaps, not the pilotage authority of the port; is it with the knowledge of the pilotage authority?—Yes.

11364. What is the pilotage authority of Liverpool?—The pilotage committee.

11365. Do you know who appoints the pilotage committee?—I do not; they are an elected board.

11366. Is it the Mersey docks and harbour board?—The Mersey docks and harbour board appoint some of them, and the shipowners appoint the others.

11367. Do the Mersey board know that the shilling a foot is paid as a commutation of the liability?—The Mersey board do not care whether they do it or not; they are not the pilotage committee.

11368. Does the ultimate authority know the fact that this liability is got rid of by the payment of a shilling a foot?—The pilotage authorities

Mr. *H. O. Johnson.*

14 June 1870.

rities are aware of it; the governing body of the pilots are aware of the agreement; it is made with them.

11369. Mr. *Stevenson.*] Does it go to help the pilot's earnings?—Yes.

11370. And the protection to life which was intended by the Legislature, is not given in those cases, but the pilots get an addition to their pay for what they do not do?—That is so.

11371. Mr. *Price.*] Do you ever take pilots at all?—We have not taken a pilot for 10 or 12 years.

11372. Then all your masters are competent, I suppose?—Yes.

11373. Supposing they had licenses, would you be called upon to pay a shilling a foot?—No.

11374. But you prefer paying the shilling a foot to prevent the captain's undergoing that peculiar examination by which they are made competent?—Yes.

11375. What is the average draught of your steamers?—Twelve feet.

11376. So that it is 12 *s.* a trip which you have to pay?—Yes.

11377. Is that both in and out?—No; in only; we do not pay going out; it is simply that we commute for a shilling a foot per voyage.

11378. Then it is 6 *d.* a foot only in effect?—Yes.

11379. As long as you pay a toll of a shilling a foot, they do not put the law in force against you?—That is so.

11380. But would you not rather be relieved from this liability without any payment at all, even though it be only 6 *d.* a foot?—Yes.

11381. Do not you think that if you can be relieved of it with safety by the payment of 6 *d.* a foot, you can be relieved of it as safely without the payment of 6 *d.* a foot?—Yes; but we are not relieved by the payment of 6 *d.* a foot now.

11382. But you would be relieved by voluntary pilotage, would you not?—Yes; that is one of the principal reasons why we are urging voluntary pilotage.

11383. You desire to have the voluntary pilotage, in order to be relieved of the payment of 6 *d.*, a foot which now exempts you from what you think an unnecessary and uncalled for liability?—Yes.

11384. And you think, if you can safely be relieved of it by the payment of 6 *d.* a foot, you can safely be relieved of it without the payment of anything at all?—Yes.

11385. Mr. *J. S. Hardy.*] By this payment you have the right to employ a pilot, if you think proper?—Yes.

11386. If you took a pilot, would you have to pay him in addition?—We have to pay in addition for pilotage.

11387. Can you tell what is the average sum which you pay in the course of the year for pilotage?—From 350 *l.* to 400 *l.* a year.

11388. And do you really value the feelings of your captains so much, that you pay 350 *l.* or 400 *l.* a year voluntarily, and prevent them passing the examination?—We have made an agreement with the pilotage committee to that effect.

11389. But if you sent your captains up for examination, might you not avoid the payment altogether?—Yes; but we agreed to pay it, and it is part of the agreement.

11390. If you thought proper to send your captains up for examination, you would not be liable for compulsory pilotage, and this agreement would come to an end even though you valued the scruples of your six captains so much that you paid 350 *l.* a year voluntarily to save them the trouble of going up for examination?—No; we value our agreement so much.

11391. The pilotage committee can make any agreement with you if your captains are licensed, can they not?—But they have made an agreement with us.

11392. But that agreement cannot last for ever; if you comply with the provisions of the present law, you can be bound by no agreement against it; if your captains get certificates no agreement would stand against them; I cannot help thinking that you are not aware of the fact that if your captains got certificates you would save the 350 *l.* or 400 *l.* a year which you now pay?—I was not aware of that; but you find that other companies do the same, who have got certificated captains.

11393. Colonel *Bourne.*] Is that so; do they pay the pilotage if their captains have passed the examination?—We pay it.

11394. Mr. *J. S. Hardy.*] But does any company who have all their captains certificated, still pay?—Some of them told me that they do.

11395. If all your captains were certificated, you would not have to pay anything, would you?—I was not aware of that.

11396. Colonel *Bourne.*] Are you aware that the shilling a foot is sanctioned by the Board of Trade?—No; I am not aware of that.

11397. It is so, I can assure you; were you aware of that Order of the Board of Trade (*handing the same to the Witness*)?—I was not.

11398. Are you not aware that you might claim exemption from the shilling a foot by allowing your captains to pass the examination and being duly qualified?—I have heard that to-day.

11399. Have you read the Bill?—No, I have not.

Mr. Robert Chaddock, called in; and Examined.

Mr. *R. Chaddock.*

11400. *Chairman.*] You are a Master Mariner, I believe?—I am.

11401. And I believe you have been at sea for the last 20 years?—I have been master of a ship for 29 years.

11402. During that time have you traded from Liverpool to London and the Bristol Channel?—Yes.

11403. Are you well acquainted with all three of the estuaries?—Yes.

11404. Since 1848, I believe, you have traded from Liverpool in the foreign trade to the Brazils and the Mediterranean?—Yes.

11405. Are you now commanding your own vessel?—Yes.

11406. What is the size of your vessel?—187 tons.

11407. Are you well acquainted with the Mersey and its approaches?—I am.

11408. If you were free to take a pilot or not, should

should you take one?—I should like to have the option of doing so; I may take a pilot in, but I should not take one out, because we are invariably towed out by steam.

11409. Are you so well acquainted with the navigations that, as a general rule, it would be unnecessary to take a pilot outwards?—Yes; but, as a general rule, I should take a pilot inwards.

11410. At present are you not bound to take pilots?—Yes; but in the event of my taking a pilot I would have my choice; that is, I would not be bound to take an apprentice.

11411. You would wish to have a competent man?—Yes.

11412. I think for many years you commanded a vessel called the "Regina," of 237 tons?—Yes.

11413. What was her draught?—She drew from 15 to 16 feet of water.

11414. And her tonnage was under the amount which entitled her to a first-class pilot coming into the Mersey?—Yes.

11415. She was bound to take a second-class pilot?—An apprentice.

11416. I understand you to say that you consider it should be at the option of the shipowner to take a pilot or not?—Yes, I consider that it should be voluntary.

11417. Do you think it a hardship that you were bound when in command of this vessel to take an apprentice instead of a thoroughly competent pilot?—I do.

11418. Is it your opinion that compulsory pilotage should be abolished?—It is my opinion that compulsory pilotage should be abolished.

11419. Have you considered what will be the probable effect of the passing of the Bill which is now before the Committee?—Yes.

11420. Are you of opinion that, under the voluntary system, there will be a sufficient supply of pilots?—Yes, I am.

11421. Would you propose that the system of licensing pilots should be done away with?—No; I approve of the licensing system.

11422. Do you think that, under the voluntary system, the supply of pilots will maintain itself equal to the demand?—Yes; and I think we shall have a more efficient class of pilots than I have been in the habit of getting at Liverpool.

11423. Your impression is, that there would be a more efficient class of pilots than you have been in the habit of getting?—Yes.

11424. Have you always been in the habit of having the apprentices forced upon you?—Yes, except when they cannot help themselves; where there are none aboard. If the apprentices are all gone before I come up to the pilot station, they put a journeyman on board.

11425. You want the option of taking a better class of pilots or none?—Yes.

11426. Have you discussed the question of pilotage with many of the pilots of Liverpool yourself?—I have, frequently.

11427. What is the general feeling among them as regards pilotage?—The general feeling is, that the voluntary pilotage would be the best, with those with whom I have discussed the matter.

11428. Is there any discontent among the pilots as to the present system of boat owning?—There is some discontent, as I have heard from the men who have gone with me on different occasions.

11429. Have you formed an opinion yourself upon the present system of boat owning of Liverpool?—No; I cannot form an opinion as regards the boat owning, except from what I have heard.

11430. It has been stated to the Committee that, in the event of pilotage being voluntary, the pilots would not be found by vessels in bad weather?—I believe they would be found, as much as they are now, and that they would be found further down. I believe we should have pilots at Tuscar, under the voluntary system.

11431. Under the voluntary system, you think that there would be an inducement for them to go out much further, and even in very bad weather?—Yes.

11432. Does your experience of the Bristol Channel extend over both the compulsory and voluntary systems?—It does.

11433. What is your experience of the change which was effected there?—We get pilots now with much more ease than we could previously under the compulsory system; the pilots are more numerous than they were under the compulsory system.

11434. Is that going up the Bristol Channel?—After you get above Lundy you get pilots for Cardiff and Newport, whereas, under the compulsory system, there were only Bristol pilots, and they were very few.

11435. Whereas now they are much more numerous?—Yes.

11436. In fact, there is a difference between having to seek your pilots and the pilots seeking you?—Yes, there is a great deal of difference in that; and I have found the difference in my own experience.

11437. At Queenstown the pilotage is voluntary, is it not?—Yes.

11438. Have you often been into that port with and without a pilot?—Yes.

11439. Have you ever found any difficulty in finding a pilot when you wanted one?—None whatever off Queenstown. We meet them off Cape Clear very often.

11440. Have you seen them at that distance in bad weather?—I have seen them at that distance in bad weather; and there are pilots residing at Crookhaven licensed for Queenstown, and also at Kinsale, and you often see them out in bad weather.

11441. And you have taken them yourself?—Yes.

11442. At Waterford the pilotage is compulsory, is it not?—Yes.

11443. What is the difference you find in comparing Waterford with Cork?—You can seldom get a pilot in Waterford in bad weather; I have known ships blown away from Waterford from not having pilots out. I have been into Waterford and have not found a pilot outside the bar many times.

11444. Comparing Waterford with Cork, do you find that the voluntary system acts as a greater inducement to pilots to go out, than the compulsory system?—Yes.

11445. Are you also well acquainted with the port of London?—Yes, I am.

11446. Have you considered the navigation of the Mersey as compared with that of the Thames?—I have.

11447. Which do you think is the most difficult?—I think, on account of the prevailing winds, nine months out of 12 being from the westward, that the navigation at Liverpool is more

Mr. *R. Chaddock.*

14 June 1870.

dangerous than that at London; but if there were nine months out of 12 from the eastward, I should consider London more dangerous than Liverpool.

11448. In coming up the Mersey, do you think that the present system of stations acts well or not?—It acts well at Point Linas, for steamboats, but not for sailing ships. I avoid it myself, because I remember coming in from Point Linas, and a very strong gust of wind came off there and nearly capsized my ship. I went away without a pilot, and I have never been near there since for a pilot in stormy weather.

11449. Under the voluntary system of pilotage, do you think that the pilot boats would be more numerous, and would come out further to meet you?—Yes.

11450. Have you had any experience of the London pilots yourself?—I have.

11451. I think in the year 1860, you took a London pilot outwards?—Yes.

11452. What was your experience on that occasion?—Another vessel with my own left London Dock together, both bound to same port, Genoa. We were towed down as far as Sea Reach. I am acquainted with the navigation of the port of London. I was trained as a pilot for the Thames.

11453. Were you compelled to take a pilot?—Yes, because I did not take a license out. It was a fine night, and I wanted to get the ship under weigh at 12 o'clock, while the wind was from the eastward, so that I could get her down to the Mouse by daylight, and the pilot said his rules were not to work at night time. I said, "You shall not interfere with me." He said he would not let her get under weigh. I said I would get her under weigh. I told him I would put him in irons if he did not let the ship get under weigh; he went below to sleep. I got the ship under weigh; and before he came on deck, I was down in the Downs.

11454. How long were you acting as a pilot in the Thames?—I was brought up as a pilot between Waterford and London. I got a better situation as a master of a ship, and I preferred that.

11455. Did you take a certificate for the Thames?—No, I did not.

11456. But you qualified for the Thames?—I qualified myself then for a pilot, but I did not think it worth while to pass. I would rather take charge of a vessel going foreign.

11457. Do you realise any difficulty in the navigation of the Thames so as to make the voluntary system inapplicable?—No; my little brig hails from London, and I am allowed to pilot my ship in her own waters the same as at Falmouth, although it is compulsory pilotage; every ship is exempt in her own waters. I am exempt on account of having a vessel hailing from London, from the docks down to Gravesend.

11458. But not beyond Gravesend?—No.

11459. From Gravesend it is compulsory?—Yes.

11460. Do you think there is any reason for maintaining the compulsion beyond Gravesend?—No; I think the voluntary system would act better.

11461. Should you, as a rule, take the pilot outwards from the Thames?—No, I do not do it now; I came once from foreign to London, and I took a cargo of pitch to Cardiff. I took no pilot down, but I was compelled to take one up; but in Liverpool, if you come from foreign and go out coasting, loaded or light, you are bound to take a pilot and pay foreign pilotage.

11462. You come into the Thames from a foreign port light, and you are bound to take a pilot; you go out on a coasting voyage heavily laden and you are not bound to take a pilot?—Yes.

11463. Though in the latter case it is more necessary to have pilots than in the former case, if at all?—Yes.

11464. Then on the whole you are of opinion that the present law which compels you to take a pilot is a hard one?—Yes.

11465. And you think there should be a voluntary system leaving it to your option to take a pilot or no?—Yes.

11466. Mr. *Graves.*] You said you would like to have it optional outwards for you to take a pilot or not?—I should like it optional outwards and inwards.

11467. But you stated that you would generally take a pilot inwards?—If I was away from Liverpool any length of time I should deem it consistent to take a pilot.

11468. But outwards you would not take a pilot?—No.

11469. Is that because you consider yourself qualified to take a vessel out?—Yes.

11470. Is that the view entertained by many of your brother shipowners and captains as regards the outward pilotage?—Yes.

11471. You consider it a hardship to have to pay pilotage dues outwards?—Yes.

11472. Have you been able to persuade the pilots that it would be for their benefit to deprive them of the dues of pilotage outwards?—I have not.

11473. Mr. *Wykeham Martin.*] You say that you know the London river?—Yes.

11474. Has your attention been called to the exemption from liability of steamers with pilots on board in case of collision?—Yes.

11475. If a steamer runs into another with a pilot on board, you can recover no damages?—No.

11476. Do not you think that the fact of the existence of compulsory pilotage tends to make the steamers very careless in the London river?—I do.

11477. Do you consider it is fair upon you, that if you come into collision with a steamer from no fault of your own, you should have no remedy against the steamer if a pilot is on board that steamer; do you consider it fair to yourself?—I do not think it is fair.

11478. May I go so far as to say that steamers are very careless through this exemption from liability?—I could not say that.

11479. But they are not as careful as they might be, in consequence of this exemption?—No, I think not.

11480. Mr. *Price.*] I think I gathered from what you said in the early part of your evidence, that one of your complaints with respect to the pilotage at Liverpool was, that you had very frequently to put up with an apprentice?—According to the present law, I am not privileged to have anything else but an apprentice on account of not commanding a ship over 187 tons register.

11481. Then they have the right to put an apprentice on board?—Yes.

11482. Do they ever put anything besides an apprentice?—Yes, occasionally, when there is no apprentice

apprentice on board off Point Linas, then I have a journeyman pilot.

11483. Have you any reason to suppose that they would single you out, to put an apprentice on board of you?—They have singled me out as far as that is concerned, on account of the register of the ship.

11484. And for no other reason?—No.

11485. They give you the benefit of instructing their apprentices, do they?—I have had to do so.

11486. How many years must a man have served as an apprentice before he can take the command of a vessel larger than yours?—I cannot say.

11487. But at all events, they are entitled in vessels of the size of yours to make you put up with an apprentice pilot?—Yes; although we draw more water than other ships. I have been up many times with ships, but of a larger register, drawing less water than my brig; they can claim a first-class pilot, and I have to put up with an apprentice.

11488. As a matter of fact, you have to teach the apprentice, instead of the apprentice teaching you?—Yes.

11489. And you are a kind of schoolmaster for the apprentice?—Yes; we small vessels out of Liverpool are training ships for the pilots.

11490. You are a sort of education board?—Yes.

11491. But you are not paid for it?—No; but we have to pay.

11492. You have to pay for the privilege of teaching?—Yes.

11493. You told the honourable Member for Liverpool, that you had not been able to persuade the pilots that it was for their good that they should lose the outward pilotage fees; perhaps you have not tried?—I have not made the attempt.

11494. Is it your impression that the pilotage fees were authorised for the benefit of the pilots, or for the benefit of the shipowners?—I should think that they were authorised for the benefit of the pilots.

11495. You think that they get the most out of it?—Yes.

11496. Is that the idea with which the system was received; do they put it forth that the system was devised for the benefit of the pilots, or do they put it forward that it was for the protection of the shipowners?—They say that it is to protect the shipowners.

11497. Therefore the shipowner is a better judge of the necessity for protection than the pilot?—Yes.

11498. More particularly so if, when the master of a ship gets a pilot, he is obliged to teach him?—Yes.

11499. You said that you have had some experience of the Bristol Channel?—Yes.

11500. What ports have you traded to in the Bristol Channel?—Swansea, Cardiff, Newport, and Bristol, and I have been to Gloucester, but not frequently.

11501. But you have been to Newport and Cardiff?—Yes.

11502. What cargo have you taken into Gloucester?—Wheat.

11503. From Liverpool?—From London.

11504. Of late years?—No, that was some years back.

11505. Have you been to Bristol of late years?—I was in Bristol (the Bristol Channel) last September.

11506. Cardiff?—I was last September at Cardiff.

11507. With regard to Swansea, do you think that compulsory pilotage is at all necessary with respect to the port of Swansea?—I do not.

11508. Is there any difficulty at all in getting into Swansea?—Nothing more than sailing in between the pier heads; there is the Mixen outside the Mumbles.

11509. But they are laid down on the chart?—Yes.

11510. It is not a shifting bank?—No.

11511. It is always there?—Yes.

11512. Is there any state of wind which would make it difficult to get into Swansea?—In an easterly wind you must have a nice steering ship to get in between the pier heads.

11513. A pilot does not steer the ship, does he?—No, the captain does that in general.

11514. Would the pilot be of any assistance to you in a gale of wind, in getting in between the pier heads?—He would know better than I when the tide sets on the pier head, some shipmasters may go there more frequently than I and they would know as well as the pilot.

11515. Then, but for getting a pilot to assist you in getting into Swansea Harbour, you would not want to take him till you got to the Mumbles?—No, not until I got inside the Mumbles.

11516. One or two of the Swansea witnesses said that it was very important for a Swansea ship that she should get her pilot about Lundy; do you see any necessity for a pilot at Lundy to take a vessel?—No.

11517. The Mumbles is not a bad place to lie?—No; only in easterly winds.

11518. Under the voluntary system, you would never be afraid of finding a pilot at the Mumbles, if you wanted him, would you?—No.

11519. If you did not find him at the Mumbles with an easterly wind, you would find him at Bideford Bay?—Yes.

11520. At one of these places you would be sure to find him?—Yes.

11521. You have not been to Gloucester since the voluntary pilotage has been in force?—No.

11522. When you were last in Bristol and last in Gloucester compulsory pilotage was in operation?—Yes.

11523. But you have been into Newport and Cardiff since the non-compulsory system has been in operation?—Yes.

11524. Have you had occasion to take a pilot while in those two places?—I take a pilot into Cardiff and Newport.

11525. Whenever you go?—Yes.

11526. Is there any difficulty in finding him?—No.

11527. Do you find him as far down the Channel as you want him?—I have found him down at Lundy, but I do not take them till I get to Penarth Roads.

11528. Where do you take him for Newport?—I take him at Penarth Roads, for Newport also.

11529. Whether it is for Newport or Cardiff, you take him at Penarth Roads?—Yes.

11530. Have you been there often enough to be able to say that, as a rule, Cardiff and Newport are effectually supplied with pilots under the existing system?—They are.

11531. And there is no doubt of it?—No.

Mr. *R. Chaddock.*

14 June 1870.

11532. And you have no more doubt that that would be the case at Liverpool, than you have that it is the case in the Bristol Channel?—That is my opinion.

11533. Have you had to school any apprentices going up to Newport and Cardiff?—No.

11534. You are not a schoolmaster in the Bristol Channel, but only in the Mersey?—Only in the Mersey.

11535. Mr. *J. S. Hardy.*] You say that you think that with the voluntary system of pilotage you would find a larger number of pilots brought into the Mersey, and that it would be more easy to get pilots?—Yes.

11536. Did you hear the evidence of the first witness, who said that it would be necessary to reduce the number of pilots?—I could not hear what Mr. Holt said.

11537. He is better qualified to know what is the proper number of pilots in the port than you are, is he not?—Yes.

11538. With regard to the employment of pilots in the Bristol Channel since the voluntary pilotage has been introduced, has there been a greater selection owing to the nature of the trade in the Welsh ports?—Yes.

11539. Formerly the compulsory pilots had very little to do except for Bristol and Gloucester, and there was not the same amount of trade, was there?—No; but nevertheless the pilots claimed ships from Cardiff and Newport.

11540. Then there were a much smaller number of pilots, because there was not so large a trade?—That is so.

11541. And the increase of pilots may be attributed as much to the increase of trade as to the voluntary system?—Yes.

11542. *Chairman.*] When your vessel is going on a coasting voyage from London to Cardiff, outwards from London, it is not bound to take a pilot?—No.

11543. When going from Liverpool outwards on a coasting voyage you are bound to carry a pilot, is that so?—Yes, and I am bound to pay a foreign pilotage though I am going coastwise.

11544. Do you consider that the present rate of charges in Liverpool are rather hard upon the small class of vessels?—Yes; they pay more in proportion to the others. They pay so much per foot. They pay more than the large vessels, but the most just way of payment would be according to the tonnage.

11545. What water does your vessel draw when fully laden?—The present one is 14 foot, but the "Regina" I had coming from Buenos Ayres drew as much as 16 feet. It was only 237 tons.

11546. Therefore it paid as much for pilotage as a much larger vessel drawing the same amount of water?—I have gone up with cotton loaded vessels drawing less water, with three times the tonnage of cargo on board them that I could carry, and I have had to pay more for pilotage because I have drawn more water; and I have had to put up with a boy when those ships, being more register, claimed a journeyman pilot. There is a great difference in the efficiency of journeymen pilots and apprentices.

11547. So that you have had to pay more for a worse article than the other vessel, which is much more valuable, carrying a greater cargo?—Yes; and the apprentice boys are not so efficient now as they were 15 years ago.

11548. Why is that?—Because we invariably tow out and tow in, and it is scarcely ever that you see a vessel beating in or beating out of Liverpool.

11549. Do you consider that if vessels are in the tow of a tug, it would, as a general rule, relieve them from the necessity of taking pilots?—I do, going out of Liverpool.

11550. But with regard to coming in?—It would relieve them, to some measure, in coming in, too. Some take pilots. A great many would not take pilots when they have a steamboat in tow.

11551. Is it not the fact that a steamer towing is always under the command of the captain or the pilot?—No; it is generally under the command of the captain of the steamboat.

11552. Does not he take his orders from the captain of the vessel?—No.

11553. Is he not directed by the captain of the sailing vessel?—No.

11554. Do you generally take a steamer up the Thames?—I do; from Gravesend up.

11555. But not as far as Gravesend?—Not below Gravesend.

11556. In going into Liverpool, do you take a steamer?—Generally. I always take one out. I engage them a week or ten days before the vessel goes to sea.

11557. Do you think that if the Bill passes into law, you can devise some system of charges into Liverpool which will fall more equally upon the different classes of ships?—Yes; it ought to go by registered tonnage as well as by draft.

11558. But the registered tonnage should be taken into consideration as well as the draught?—Yes, like the light dues, I think that is the fairest system.

11559. Mr. *C. Turner.*] I think you say that the pilotage fee ought to be regulated more by the tonnage than by the draught of water?—I think the best system would be, upon the same principle upon which the light dues are paid, according to the registered tonnage combined with the draft.

11560. Is there any similarity between the two; you are an experienced seaman, and you know that the more your vessel draws the more likely she is to get ashore in shallow water?—Yes; my vessel draws more water, and I am only privileged to have an apprentice.

11561. You are not answering my question; you have given an answer to this effect to the Chairman, that you think the pilotage fee ought to be regulated rather by the tonnage of a vessel than by the draught of water?—Yes; my reason for saying that is, that small ships draw more water in proportion than what large ones do; therefore, by paying by the foot, the smaller ships are heavier taxed than the larger ones.

11562. Is not the risk increased in proportion to the draught of water?—Yes.

11563. Therefore, is it not fair that the pilotage fee should be regulated by the degree of risk that is incurred in taking the vessel in?—Yes, I think so certainly; perhaps both should be combined together.

Mr. FRANCIS CHARLES BECKETT, called in; and Examined.

11564. *Chairman.*] I BELIEVE you are a First-class Licensed Pilot of the port of Liverpool?—Yes.

11565. When did you obtain your license?—I obtained my first license in 1853.

11566. Previous to that you served your apprenticeship seven years?—I served three years in the pilot service and four years at sea.

11567. Did you attend a public meeting of the pilots, held some weeks ago, to consider this Bill?—I did.

11568. Were you appointed by that meeting to come up to London to give evidence in respect of it?—I was.

11569. What was the feeling of the majority of the pilots at that meeting?—It was to oppose the operation of the Bill.

11570. Were they then of opinion that Liverpool should be exempt from the operation of the Bill?—They were of that opinion.

11571. Was it considered, however, if anything was done towards cutting down the pilotage dues or earnings, that their opinion would be at all affected?—Yes; that was the unanimous opinion of the pilots, that if there was the slightest cut off from the pilotage it should be entirely open, and that they were to be compensated.

11572. Do you mean to say that if any of the present pilotage rates were reduced, or if any payment made in respect of coasting steamers was abolished, that then the pilots would be in favour of a voluntary system?—They would rather that the Bill would make pilotage entirely free and open; they were in favour of the Bill, and would look for compensation.

11573. Did you come up to London with the view of giving evidence upon the subject?—Yes.

11574. And you have attended here for the purpose?—Yes.

11575. Were you in communication with the gentlemen representing the Liverpool pilotage authorities?—Yes; I was in communication with the whole of them; there were several from Liverpool waiting.

11576. But you were not called?—I was not called.

11577. Did you hear the evidence given by Mr. Jones, one of the Liverpool pilots?—I did not hear it.

11578. Have you read it?—Yes, I have read it.

11579. Has that evidence been considered by the Liverpool pilots?—There are several pilots down at Liverpool that read the evidence as well as myself.

11580. Have you been in communication with the Liverpool pilots since then?—Yes.

11581. What is their opinion?—None of them contradict it; they have nothing to say against Mr. Jones's evidence.

11582. Did they think that the present system of boat owning for Liverpool is a bad one?—It is one of the greatest grievances the pilots have in the service.

11583. Is that the general opinion of the pilots of Liverpool?—That is the opinion of 164 of them, they are the non-boat owners, there are several of them who are petty boat owners, and one or two others.

11584. Have you ascertained what is the general opinion of those who are now boat owners, against the system?—Yes, they are against the system.

11585. Do they think it desirable that it should be done away with?—They think that the system should be entirely done away with.

11586. Are they also of opinion, as stated by Mr. Jones, that the present close system of keeping the men to their stations, should be modified?—Yes.

11587. Are they of opinion that if a change was made in that respect, the operation of this Bill would not be hurtful to them?—They think so.

11588. Have you formed an opinion as to what would be the effect of a voluntary system of pilotage?—It would be both a disadvantage and advantage; it would be an advantage to the better class of pilots, and a disadvantage to the others, there being such a great number in the service. The service in Liverpool is overstocked.

11589. Presuming that there are no more pilots at Liverpool than are sufficient for the demand, what in your opinion would be the effect?—Under the voluntary system there would be a class of pilots who would earn more money than others.

11590. They would not all be kept at the same level, but the better men would be able to get the larger earnings?—Yes; and that would be the means of their using more energy, and bringing a better class of men forward.

11591. You say that the number of men is too many; what is the average amount of employment a pilot gets at Liverpool; I mean, how many days in the year?—It is not equally divided; one man may have piloted four vessels in three months, and another would pilot 20, and that man receives the same benefit from the earnings as the man who has piloted 20.

11592. How is that?—There is a great deal of partiality and favouritism shown.

11593. But the earnings are the same?—They receive the same earnings.

11594. Is the partiality shown in letting them off work?—Yes; and in compelling those that are not in favour to do work.

11595. How is that managed?—For instance, we have a third captain in the business; he pilots only, on an average, four vessels in three months, and I would pilot 20, for I have to be pilot of his vessels outwards instead of him taking them out.

11596. Do all of your earnings go to one boat?—Yes.

11597. And they are divided among the men belonging to that boat?—Yes, we all receive the same.

11598. Can you give the Committee any opinion as to what the average amount of employment is per man?—I am not employed more than 40 days out of the 365; that is, conducting vessels in and out of the port.

11599. Does that include both inward and outward pilotage?—That includes inward and outward pilotage.

11600. Then you think that there are too many pilots even under the existing system?—Yes, I am certain of it; there is no employment for us.

11601. Do you find that a great many of them

Mr. *F. C. Beckett.*

14 June 1870.

are always waiting about?—There are always from 80 to 100 pilots on the pier-head unemployed.

11602. What number of men are permanently kept on board the vessels at the stations?—There are generally about half of them at sea, and they are at sea a fortnight unemployed, the same as they are on shore.

11603. What is the number kept up in the vessels?—They average about 20 to each boat.

11604. How many men are there belonging to each boat?—There are from about 20 to 22 pilots to each boat.

11605. How many of those men would, on the average, be employed on a boat?—There are sometimes 12 pilots on shore, according to the station she is on; on the first station there are generally six or eight pilots at sea with the boat, and the rest are on shore.

11606. Are you yourself acquainted with the Irish Channel?—I am.

11607. Do you think if the present system was altered you would get employment as a pilot in the Irish Channel from vessels coming up to Liverpool?—Yes; many would employ me further down.

11608. If you had the liberty of being employed down the Channel, the field would be open to you?—Yes.

11609. Is that the general feeling of the pilots?—That is the feeling of the principal pilots in the service.

11610. I think Mr. Jones, the pilot, gave evidence to the same effect?—Yes.

11611. Do you agree with him that if it was done, and if the shipowners were given the option of employing pilots, this Bill would not be detrimental to them?—Not to the better class of pilots.

11612. It would give more employment to the better class of pilots, and somewhat less to the inferior men?—Yes; and I perfectly coincide with Mr. Leyland's and Mr. Inman's views, that it would tend to bring a better class of pilots forward.

11613. Has there been a certain change of opinion among the pilots since the Bill has been discussed before this Committee?—There have been several meetings. I had a meeting with several of them yesterday. I read my deposition to them, and they perfectly coincided with it.

11614. How many were present at that meeting?—I spoke to some 20 or 30 pilots yesterday, and also yesterday at night time there were 40 or 50 on the pier head, and several of them were very sorry to think that the Bill had been opposed at all.

11615. At first they were rather opposed to the Bill?—Yes, but they did not understand the Bill.

11616. But as time went on the Bill has been discussed before the Committee, and upon the whole they come to think that it is rather a good thing to the pilots than otherwise?—Yes, some of them will be better off.

11617. But not the inferior pilots?—Not the inferior ones; the men could and would go further down Channel, and have their own boats.

11618. Do you agree with Mr. Jones that the earnings of the pilots should still go to the boats and be divided among the men belonging to that particular boat, or that each pilot should have his own earnings?—The pilotage should go to the boat, provided there were no idlers in the boat.

11619. How could you prevent there being idlers?—Let them all be first-class men in the boat; there are plenty of first-class men now who would come forward and take a boat and go together.

11620. Then you would favour the pilots owning their own boat?—Yes.

11621. And if that were done there would be more authority brought to bear upon the pilots to prevent idling?—Yes, where they got their earnings they would use more energy, and would interest themselves more in being at sea and looking after vessels.

11622. What is your opinion with regard to the employment there is likely to be for pilots after this Bill is passed, when it is optional to shipowners to take pilots?—There are a great many who will avail themselves of the pilot's services, especially the larger class of vessels.

11623. You think that many of the larger class of vessels will continue to avail themselves of their services?—Yes, particularly inwards.

11624. And many of these vessels would assist to take pilots much lower down the Channel than they now do?—Yes, they would take them to the westward of Holyhead, whereas we do not now go to the westward of Holyhead.

11625. Would there be any backwardness on the part of the pilots to go out in bad weather to look for vessels?—No, not as long as they had their own earnings.

11626. Would the greater certainty of getting employment in bad weather induce them to go out to meet vessels in any kind of weather?—Yes.

11627. On the whole, you are of opinion that there would still be employment for a very large number of first-class pilots?—For a limited number.

11628. And that those pilots would be better off under a voluntary system than they now are under a system under which their earnings are divided with pilots of all classes?—It depends upon what the limitation is upon the number.

11629. But provided that the number is not quite so numerous, you think there would be employment?—Yes.

11630. Mr. *Graves.*] You have spoken of the voluntary system, will you point out what there is in the Bill that points to the voluntary system of pilotage as regards the pilotage authority; can you point out any clause in the Bill now under the consideration of the Committee that points to a different system in Liverpool than now exists?—No, I cannot point out any; it still maintains that we shall be under the same local authority.

11631. Then have you any reason to think that that local authority will change the existing system which is found to work so well, and to allow every boat to go off as she likes down Channel?—Yes, I think they may let us extend our limits down Channel.

11632. Is there not that power now on the part of the Mersey Docks and Harbour Board that if the trade required to extend the stations down Channel the Mersey Board has the power to do it?—I am aware that they have that power.

11633. Is it in the interest of the trade, or in the interest of the pilots themselves, that you would suggest having another boat to the westward?—In the interest of both.

11634. But the trade has never asked for it?—Several of the masters of vessels that come into

into the port of Liverpool have said that they would willingly employ me or others if we met them further down.

11635. Are you aware that there is nothing to prevent the pilotage committee at the present moment sanctioning that if they considered it desirable?—It never was applied for.

11636. But you are aware that it requires no new statutory power to enable the pilotage committee to do it?—I am aware of that.

11637. As far as this Bill is concerned, there is no point in your allusion to it?—No, it was never applied for.

11638. You have expressed dissatisfaction as regards boat owning?—Yes.

11639. Is that because you consider the boats ought to be devoted altogether to the pilot service, and not to have any system of boat owning outside the pilot service?—A great deal of boat owning is held outside the pilot service.

11640. Do the pilots want to have that done away with?—Yes; that is a great grievance.

11641. Supposing that is done away with, would it remove a large portion of the dissatisfaction as regards the present system at Liverpool?—Yes, if each pilot owned into that boat.

11642. Did not you take an active part in opposing this Bill in its earlier stages?—I did.

11643. I believe there was a meeting of the pilots, held on the 9th of March?—Yes.

11644. You were present at that meeting?—Yes.

11645. By the report which I have before me of the proceedings of that meeting, I see you made a speech at it?—Yes.

11646. Does this fairly represent what you said on that occasion: "Mr. Beckett then proceeded to criticise the Bill introduced by Mr. Shaw Lefevre, which stated, that in order to remunerate the pilot, the business must be reduced, so that all the men might have plently of work. Now, they could not reduce the business in Liverpool unless they took off about 60 of the pilots; and if they did, they would have 50 less paying into the funds, and 50 more receiving from them (hear hear), so that by the time the two years were up, when they would have to send returns to Government, their funds would be all exhausted or nearly so; if they only earned 199 *l.* a year under the compulsory law, what would they do under the non-compulsory; they would not earn more than one-half that amount, or something like 94 *l.* or 95 *l.* a year; is that correct?—Yes, with the present number of pilots in the service.

11647. Then further it goes on to say, "At a meeting of the body of pilots held last week, it was proposed that one of their number should be sent up to give evidence before the Select Committee of the House of Commons. He was nominated for that purpose, but no resolution was come to on account of many of the pilots not having been made acquainted with the views he held in reference to this matter. He wished therefore to avail himself of that opportunity of expressing his views, which he thought would be entertained by the majority, if not by every member of the service. In the first place he strongly opposed the Bill for non-compulsion of pilotage (hear hear). There was no doubt however that the Bill was going to be passed, and in that case he went in for an exemption for the port of Liverpool." Does that correctly state what you said?—Yes, it correctly states it.

11648. May I ask you why you have changed your mind?—I stated that they would have to exempt Liverpool entirely from the operation of the Bill; but should any anomalies be cut off from the Bill, even losing the shilling a foot for the steamers, than to let the Bill go and seek compensation from the Government.

11649. Have you had any difficulty with the pilotage committee, since that speech was made?—I had a case before the pilotage board.

11650. What was the nature of it?—It was with respect to this: I was carried away with a vessel, and went beyond pilotage waters; I assisted in the navigation of that vessel down channel, and the master of that vessel remunerated me for it. When I arrived in Liverpool, I had not the opportunity of bringing the case before the committee, because there was a lot of pilots ready to meet me, and I had to proceed up to London. During my being up here, there was a complaint laid against me before the pilotage committee, for not handing over the western pilotage, a thing I had never received.

11651. How much did you receive from the captain of the ship?—£. 7.

11652. Did you inform your messmates of your having received it?—I did not see any of my messmates.

11653. Did you return that amount or refused it?—No; I was in London.

11654. Have you refunded that amount since?—Yes; the committee ordered me to refund it.

11655. Was there any fine inflicted upon you?—Yes.

11656. How much?—Two guineas.

11657. Did you consider it a hardship?—I did; a very great hardship.

11658. By your arrangement with your messmates, or co-partners, were you justified in keeping that money?—I do not know that I was justified in keeping it until such time as I had laid the case before the pilotage committee, but I considered that I was entitled to a greater proportionate share of that money than my messmates, there was a precedent; I asked the pilotage committee to allow me to give a precedent, but they would not allow me.

11659. That has had nothing to do with your change of views, the fact of having had this difference with the committee?—Not at all.

11660. You are aware that this Bill proposes to give the option to the shipowners to take a pilot or not?—Yes.

11661. Do you consider it just, looking at it in a pilot point of view, that you should be compelled under all weathers and under all circumstances, to be on your stations, and that the captains should have the option of taking you or not?—No; I did not altogether consider it just; that is why we complain so much that we are compelled to be on the stations. They all perfectly agree with Mr. Lamport's evidence.

11662. What was his evidence?—His evidence was with respect to free trade.

11663. You mean by free trade that you should have the power of striking a bargain with the captain?—No, not striking a bargain.

11664. That you should say what you would ask?—No; let there be a stipulated price for the pilotage, but do not compel a pilot to be on a station whether he is employed or not.

11665. What you would wish would be that it should be optional with the pilot to be on his station or not?—Yes.

Mr. *F. C. Beckett.*

14 June 1870.

11666. Putting aside altogether your feeling as a pilot, and looking at it from your knowledge of what the pilotage of the port demands, would you consider it a wise arrangement that the pilot boats should be allowed to be off their stations?—I think, if I was not a pilot and looked at it in that light, as I stated before, in coinciding with Mr. Leyland's and Mr. Inman's views, it would be the means of bringing a better class of men there.

11667. Is it not one of the great boasts of the pilots of Liverpool that, under all weathers and circumstances they are upon their stations, and never driven from them?—Yes, it is one of their boasts.

11668. Does not that fact tend greatly to the security of life and property?—It does; but there is nothing to prevent the men being out there when they get their own earnings.

11669. And you would consider it unreasonable to require, under the optional system, that the men should be there risking their lives under that strict obligation to be on their stations?—Yes; such a number of men as there is in the service at present.

11670. And you would consider it unreasonable that the boat should be kept there?—Yes; when it is optional to employ them or not, it would be unreasonable to have such a number of men and such a number of boats.

11671. Are you aware that some objection has been taken to the present system, that the captain is not allowed the free choice of a pilot?—Yes.

11672. Do you see any way by which a greater choice could be given to the masters with regard to the selection of pilots, with reference to inward bound ships?—With the system that I speak of, I think they might have a better opportunity of choosing their pilots inward-bound than they have under the present system.

11673. You mean by going down to meet the vessels, and cruising about?—Yes.

11674. Would not that be removing the boats from the stations, if you allowed them to go down channel?—Cannot the stations be extended?

11675. Yes; there is no reason in the world why you should not have another station?—Then extend the station.

11676. You do not want to disturb the present stations?—No; let those that go to westward receive distance money, the same as they do in New York, and if the masters think proper to avail themselves of the services of those pilots, I do not see why they should not do so; I know there are plenty doing so.

11677. Are you aware that the first pilot boat which goes alongside a vessel in New York claims the pilotage?—Yes.

11678. There is not much selection there?—I suppose it is optional; I have been going into New York with a ship, and the pilot that offered his services first was not employed because he was a New York pilot.

11679. With reference to the present system, you take in turn to board all vessels coming up, do you not?—Yes, with a discretionary power left on the part of the master of the boat.

11680. To do what?—It is optional on his part whether that man should go in his turn or not.

11681. With certain exceptions that has been the rule?—Yes; we applied to the pilotage committee on several occasions before it was granted.

11682. Is there any distinction made by the master of a boat with regard to giving the preference to a large vessel over a small vessel?—Supposing the captain of your boat saw two vessels running up, a small vessel ahead of a large one, would he, under the present system, give preference to the large one, and give the small one the go-by?—Yes, if he could board the large vessel, and let the small one go by, he would.

11683. Do they do it?—They do it as a matter of fact now.

11684. What boat has done that to your knowledge?—I have seen the boat I belong to do it; if they can they very often allow the smaller vessel to go along up to the eastern station.

11685. Are they not bound by their regulations to take the first vessel that wants a pilot?—If she has a flag up for a pilot, they are supposed to go and board her.

11686. Do they not do it?—No, not in all cases; I often see them shirk vessels.

11687. What penalty would the boat incur that does that?—If the case was brought before the pilotage committee and proved, I suppose they would incur a penalty, but I do not know what the penalty would be.

11688. Can you state on what occasion it occurred in your own boat?—I cannot give the day and the name of the vessel, but I have seen her shun several small vessels to the westward; one boat is supposed to watch the other, to see that they do not do it.

11689. Is not that watch very strictly observed?—Not in all cases.

11690. Is there not also a constant and almost hourly system of vigilance from the lighthouses and the lightships?—There is.

11691. So that it could not be done by a pilot without the boat being observed from some of these stations?—Perhaps they may not observe whether they board this vessel or not.

11692. But still you wish to convey to the Committee the opinion that it is frequently done?—You ask me if it is done, and I say, yes; you ask me if small vessels are allowed to go by, and the preference given to the large ones, and I say, yes.

11693. If your own free system was carried out, would you give the preference to a small vessel over a large one?—That depends on what station I would be upon.

11694. Do you think that the tendency under a free system, where there was no regulation to bind you, would be, that you would be more likely to do justice to the small vessel, under the stringent rules which are now in existence?—I think that under the free system they would certainly take a large vessel in preference to a small one.

11695. Mr. *Stevenson.*] I presume you attach great importance to there being a constant supply of pilots waiting the arrival of vessels?—A sufficient supply.

11696. Then you would not break down the stations of the pilot boats, would you?—I would not break them down altogether, but they do not require the number that we have within such a short distance.

11697. Then what you desire besides the question of the boat-owning grievance is to reduce the number of pilots, in order to give better employment to the rest?—Yes.

11698. When you say that you are only employed

ployed 40 days in the year, how is the rest of your time spent?—On board the boat at sea, eating, drinking and sleeping, and on shore, after tide time, walking about the town of Liverpool.

11699. Are you not looking out for vessels when you are on board the boat at sea?—On the different stations, we are certainly looking out for vessels, but vessels have not the opportunity of getting by the first boat; they are boarded by the first boat on the station.

11700. Then the time is not wasted by the furthest boat outside, but by the intermediate boats?—Yes.

11701. Then when your time is spent unprofitably on shore, what are you waiting for then?—I am waiting to be employed by outward-bound vessels, if there are any.

11702. Would there not be necessarily irregularity in the employment in consequence of contrary winds and such like accidents under any system; is it possible to secure regular daily employment for pilots?—No, there is not sufficient employment for the number that there is in the service at present inwards or outwards every day; at tide time there are from 80 to 100 pilots unemployed.

11703. One remedy you propose is to allow an outward station pilot boat to go down channel and look after ships?—Yes; and to reduce the service.

11704. You still approve of maintaining the supply of pilots by means of apprenticeship?—I do not know about apprenticeship.

11705. How will you provide a supply of pilots for the future without apprenticeship?—I would have apprentices, but I would only have one or two; not such a number as they have had in the service. Having so many apprentices in the service has been of great benefit to the boatowners.

11706. *Chairman.*] The way in which the number of pilots has been so much increased is from it being an advantage to the boatowners to have a number of apprentices?—Yes.

11707. And there is a great inducement to them to have as many as they can?—There was till a short time ago; under the present system it is immaterial to the boatowners whether there is one or more; they receive the same number of shares.

11708. The system has been altered as regards that, and now the shipowner is not benefited by the number?—No; but they were smuggled in then.

11709. And it is due to that that the number of pilots is so much increased?—Yes.

11710. Mr. *Stevenson.*] The proportion of apprentices to acting pilots is now diminished?—Yes.

11711. So that you have not so many apprentices coming forward?—No.

11712. And that system will diminish the number?—Yes.

11713. *Chairman.*] I suppose it was forced upon the pilotage authorities by the prospective loss of the 10,000 *l.* a year?—Yes, the prospective loss. That has come into existence in the last six months.

11714. And it was that that forced the pilotage authorities to consider the question, whether there were not too many pilots?—Yes.

11715. Mr. *Stevenson.*] You would allow a few pilots to enjoy a large proportion of the pilotage earnings by the plan you recommended, would you not?—I think every man is entitled to be paid for his labour.

11716. But do you think that is consistent with obtaining the proper supply of pilots outside the port?—Yes; and there are several pilots of the same opinion as myself who are willing to go and buy a boat, and go further down.

11717. Those pilots must always be a very small proportion of the whole body; the great bulk of the pilots must remain nearer the port than that, must they not?—The great bulk of them would remain nearer, and most of them that were not acquainted with the other side of Holyhead or St. George's Channel would remain there.

11718. This proposal might end in a small number of pilots earning very large money, and a large number of them starving; would that be a good system?—I do not know that they would earn so much more, because there would not be such a number down channel on the outside stations to deprive the inner ones of their earnings.

11719. Mr. *Price.*] Although you are in favour of this Bill, I suppose you do not think it would be a good thing to get rid of licensed pilots?—No.

11720. You would still have the pilots licensed?—Yes, undoubtedly.

11721. And you would, of course, be willing that the pilots should be under some authority or other, who should fix their stations?—Yes.

11722. You are aware that as the law stands at present, every shipowner, unless he is specially exempt, is compelled to take a pilot whether he wishes it or not?—Yes, under the present law.

11723. And this Act of Parliament is intended to get rid of that; I suppose you are aware of that?—Yes.

11724. I suppose it is not necessary to have an Act of Parliament to enable the pilotage authority of Liverpool to make any alterations they see fit as regards the stations of their pilots?—It does not require any Act of Parliament, but the pilot authorities have never been applied to.

11725. Supposing that in consequence of getting rid of the compulsory pilotage, so far as the ship is concerned, it should be necessary to make any alteration in the pilotage stations, the pilotage authority can do that without an Act of Parliament, can they not?—I am led to believe so.

11726. There is no restriction upon them; they can make what bye-laws they think fit for the service of the port?—Yes.

11727. The honourable Member for Liverpool asked you whether you thought it fair that the master of a ship should be free to take a pilot or not, as he pleased, whilst the pilot was bound to maintain his station, and you thought it was a hardship upon the pilot his being compelled to maintain his station when the shipowner was not compelled to employ him?—Yes.

11728. But that is a matter within the breast of the Pilotage Board?—Yes.

11729. It is not necessary to take cognizance of that in this Act of Parliament?—No.

11730. Therefore there is no unfairness in the liability of the shipowner being taken off, leaving you still to deal with the pilotage authority as at present?—The pilotage authority will deal with it.

11731. Therefore there is no inconsistency in the fact that the Act deals with a matter which can only be dealt with by an Act of Parliament, leaving

Mr. *F. C. Beckett.*

14 June 1870.

leaving the pilotage authority to deal with the other?—No.

11732. Your view of the case seems to be this, that if the pilots were each man left to enjoy his own earnings, that his own enterprise and the sense of his own advantage would always take him out as far to sea to seek vessels, as a vessel would desire to find him?—I think so.

11733. You do not like the idea that your earnings should be frittered away, so to speak, by paying the boatowners?—I think, if I am willing to try and earn more that I should not be deprived of doing so.

11734. Do you suppose that to be the general feeling amongst the pilots themselves?—Yes, that is the feeling of most of the first-class pilots.

11735. You mean those that are willing to work?—Yes.

11736. And those that are not particularly willing to work like the present system better?—Some would not like to go from the present system.

11737. You told us that the greater part of your time, all except 40 days in the year, was spent in eating, drinking, and sleeping on board, or walking about the streets of Liverpool?—Yes.

11738. Are there a certain class of pilots who like that mode of life?—Yes, a certain number do like it.

11739. And those who would rather be in active employment so long as they were receiving their own earnings would like a different system?—They would not be able to walk about if they had to earn it by their own energy.

11740. You think there are too many pilots under the present system?—Yes.

11741. If there were not so many they would not be walking about?—No.

11742. Do you think it just that the trade of the country should pay a large number of pilots for 325 days in the year for walking about the streets of Liverpool, or eating and drinking aboard their vessels?—Part of the money goes to maintaining the stations.

11743. Of course if that is the case to anything like the extent you represent to us, there must be a much larger staff of pilots than is required, and in order that they may live there must be an unnecessary burden cast upon the trade?—There is a great amount of shipping in and out of the port of Liverpool, but a less number of pilots could work that amount of shipping.

11744. Therefore, if that is the case, if a less number of pilots could do the work, obviously the trade must be overburdened if a larger staff is kept than is required?—If a less number of pilots can work the port of Liverpool, that is one reason why I say the service ought to be reduced.

11745. I suppose you have no doubt in your own mind that if the liability of the shipowner to take a pilot, whether he wants him or not, is got rid of the pilotage authority would modify the regulations at present existing with respect to the pilots?—Yes, this Bill must alter the present system in Liverpool.

11746. You would be willing to go to sea as far as might be necessary to find a ship?—Yes.

11747. And you think a great many others would go with you?—Yes, and we should earn more money.

11748. And perhaps those who would not like to go would be as well away?—Those who would not go would give the chance to those who wanted to go.

11749. Those who were willing to work would get employment under a different system, that is your opinion?—Yes.

11750. But under the present system those who are willing pay for those who are not competent and not willing?—Yes; they would then be paid according to their energies.

11751. Mr. *J. S. Hardy.*] You say you think that there are too great a number of pilots in Liverpool, what is their number?—Two hundred and eighty-five.

11752. How many would be able to do the work?—We could do with from 80 to 100 less pilots.

11753. *Chairman.*] Is that under the voluntary system, or under the compulsory system?—Under the present system we could do with from 80 to 100 less pilots.

11754. Mr. *J. S. Hardy.*] You think that there ought to be 80 or 100 pilots taken off the present number?—Yes.

11755. And if the voluntary system came in, do you consider that there would be a still larger number taken off?—No, I think that that number would find employment with an extension of limits.

11756. Even under the voluntary system?—Yes, with a limited number.

11757. You are employed for fully 40 days in the year; of course it is necessary to be looking out for the ships at certain times, but how many ships ought you fairly to expect to pilot in the course of the year, if you are properly employed. I suppose it is a day's work to take a ship in?—Yes; it is a day's work inwards, and outwards it is only a few hours' work.

11758. You would not expect to take more than one ship a day in or out?—No.

11759. Would it be possible for you to take 365 ships in the course of the year?—No; but I could work 200 on the year.

11760. Would that necessitate your getting a ship at once, when you are outside on a station?—Yes.

11761. But you would not expect under any system to get a ship directly you got out on the station?—No, I allude to inward and outward-bound vessels.

11762. The effect of having an extra station would be this, that those pilots who went out on the extreme station, would get the employment, and those who remained inside would get no employment?—I do not want an extra station; but if men like to use energy and go further down, let them do so; all that remain in the service can do so.

11763. In that case it would be impossible to keep anybody on the station, because if the men who went furthest got the employment, the others would not remain on the other stations?—They are sure to remain on the other stations, because the stations would be so wide apart, that many vessels would come down, and many vessels would not avail themselves of the opportunity of taking a pilot further down.

11764. Would you allow some pilots to go to a distance to pick up the best class of employment, and compel the others to remain on the inside stations where they could only get the small class of vessels?—I would not compel them.

11765. But it is extremely unlikely that they would remain there if the people who went out got the

the best employment. According to your system it would be quite impossible to compel people to remain on the stations, if one pilot was allowed to go further to the westward than the other?—Those men that would go further to the westward would be men that would hold other certificates as well; it would be through their own energy in passing an examination for a master's certificate that they would have the best opportunity of going further down and being employed.

11766. What you really would wish is, that you should have a practically free system, and that the pilots should pilot where they think proper?—No, not that they should pilot where they think proper, but that they should go down to Tuskar or Cork.

11767. *Chairman.*] It would not answer for all the pilots to go down to Queenstown or down the Channel; I suppose it would answer for many of them to remain at Point Linas?—Many of them would get vessels that would not employ pilots further down.

11768. Mr. *J. S. Hardy.*] But if they were not compelled to remain there, many ships might come there and not find a pilot?—There are many vessels that would take a pilot of Point Linas.

11769. I presume those would be a worse class of vessels compared with those that would take them further down?—Yes; many of the vessels would avail themselves of taking a pilot down channel.

11770. *Chairman.*] You think that if it were left to the law of supply and demand, some vessels would require them down channel, and some would not?—Yes.

11771. And the pilots would arrange it amongst themselves; the more enterprising would go down channel, and the others would remain at Point Linas?—Yes.

11772. Mr. *J. S. Hardy.*] But though that would happen if you were free, it would not be just to compel men to remain at these stations, while others would go further down?—No.

11773. Therefore, the compulsory station system would come to an end, according to your proposition?—The system would have to be entirely changed.

11774. Mr. *C. Turner.*] You say that many of the pilots are constantly found idling about the streets of Liverpool?—They are not employed for many days.

11775. And you argue from that, among other circumstances, that there are too many pilots?—Yes.

11776. Is it not the case that, from the circumstances of the business of the pilot, there is a great demand for pilots at one time, and very little at another, from the state of the weather, the wind, and other things?—During my experience, I have never known any time when, though there was a large demand for pilots, there were not still a large number of pilots unemployed.

11777. If the wind should be constantly blowing into the harbour, and a great many vessels have come in with pilots, and from the state of the wind few vessels are going out, would not that cause a great many pilots to be on shore?—Yes.

11778. And, therefore, from the circumstances of the case, anything like constant and regular employment in the pilot service is almost impossible?—It is constant.

11779. It is constantly varying with the state of the wind and weather, is it not?—No; we have a prevailing wind into Liverpool nine months out of twelve.

11780. You have lived a long while in Liverpool and so have I, and we have known the wind blow strong from the westward a long time together, and sometimes from the eastward a long time together?—We have had a long spell of easterly wind this year.

11781. Under those circumstances, it would be impossible to create regular employment for the pilots?—Yes.

11782. The wind blowing strong from any one quarter would, for a time, keep the pilots unemployed?—Yes.

11783. Therefore it does not follow that because there are pilots on shore, that there are too many pilots?—But there are pilots at sea unemployed the same.

11784. That might be the case at other states of the weather; they become unemployed from vessels not coming in, and being kept down the channel; you know that in Liverpool we occasionally have large arrivals at one time?—Yes.

11785. Before the wind changes, so as to enable the vessels to come in, the pilots would have little employment at their stations; they would be awaiting for vessels coming in?—Yes.

11786. And if the pilot vessels were not full of men waiting at those times, the vessels inward bound, when there is a great influx of shipping, would not be able to get a pilot?—Yes, they could at all times.

11787. You have known of some cases when a vessel has been lying off and on for want of a pilot, in consequence of all the other pilots being taken on board other ships?—I do not know that I have known of any cases; we have every facility for getting down to our stations by the tug-boats and by the railway, so that I do not see that any vessel has occasion to remain waiting at any time for a pilot.

11788. In bad weather, if you went down by railway, you could not get off to the vessels, could you?—Yes, we could; if the wind was from the westward.

11789. With regard to partiality, you said that you had been employed 40 days in the year, and that some parties on your own boat were only employed four days in the year?—I did not say four days; I mentioned the number of vessels he was pilot of in three months, that would be an average of 20 days in the year.

11790. Is that the captain's partiality?—Yes.

11791. The regular rule is that every pilot on board the boat is to take his duty in turn?—Yes, on board the pilot boat.

11792. Can the captain of a boat exercise arbitrarily his power of saying that a man is to remain on board if it is his turn to go off?—Not at sea.

11793. How is it that you have 40 days, and other men only four?—I do not say four days, but a man may make four cruises quarterly, and may bring up a vessel each cruise, but each pilot could do more.

11794. If each man is to take his duty in turn, how does it happen that one man does not do as much as another?—They only take the duty as a turn inward bound, not outward bound.

11795. May you remain on shore as long as you like?—No; I may take a vessel today, but when I get back I may be sent for another,

Mr. F. C. Beckett.

14 June 1870.

other, while another man may remain and not take one.

11796. It is optional for a pilot to remain on shore as long as he likes?—It is not optional on his part.

11797. If a man comes back to his boat as soon as you do, he ought to be employed as much as you are, ought he not?—I only take the same number of vessels in from the station, but I pilot more vessels outwards

11798. How is the choice made; is not a man allowed to choose his pilot going outward, without any reference to the captain of the boat, or the pilotage authorities?—No; he must apply to the master of the boat, or the superintendent.

11799. You said something about the question of the stations; I believe you are not for doing away with the present stations?—No.

11800. But you think the pilots ought to be allowed to go down Channel as far as they like?—Yes.

11801. The honourable Member for Liverpool put the question whether the pilotage authorities have the power, if they think it for the advantage of the shipping of the port, to make stations beyond the present stations; they could do anything they wished, could they not; they have legal authority to do it now, under the present law as it stands, have they not?—I believe they have.

11802. That being the case, do not you think that the pilotage authorities, with their great experience, are of opinion that it is not desirable to make stations lower down?—I never heard that view expressed by any of the pilotage committee. It is only by the pilots themselves.

11803. The duty of the pilotage committee, I take it for granted, is to accommodate the shipping of the port to the best of their ability; supposing they thought it to be desirable to have stations lower down, they would make them, would they not, having the legal power to do so?—They have never been applied to.

11804. If they have not been applied to by the shipowners, it is a proof that the shipowners do not want it; the pilotage service is kept up for the accommodation of the shipping of the port, is it not?—Yes.

11805. The great object of the pilotage authorities is to accommodate the shipping of the port in the best manner possible?—Yes.

11806. And if the shipowners were of opinion that, having stations further down channel would be better for the shipping of the port, do not you suppose that the shipowners of Liverpool would apply to the pilotage authorities to have further stations?—They might do so.

11807. Would it not be their interest to do so?—It would. Many masters of vessels have expressed the wish that they would like to meet the pilot further down.

11808. Why do not the masters of vessels take the ready mode of applying to the pilotage authorities?—I do not know why they have not taken it. If they thought that it would be granted, they would apply.

11809. If they do not apply they cannot have it granted; if the masters of vessels merely express that to you, and do not apply to the pilotage authorities, who are owners of ships, and merchants, it seems a very extraordinary course for them to pursue?—I say there are many pilots in the Liverpool pilot service who would go further down Channel, and they would be employed. Many masters of vessels would avail themselves of those pilots, and pay a voluntary rate or distance money, till they came on to pilotage grounds.

11810. Is it not your opinion that the men who would be furthest down the Channel would always be the most efficient pilots?—Yes; I think the best class of men in the service would go there.

11811. Do you think it ought to be compulsory upon a master taking a pilot down Channel to take the first pilot that came to him?—No.

11812. How would an inward-bound vessel know who was a good pilot or not, if she had not been in the port before?—The master would know.

11813. Therefore he could take his chance?—He could go on to Point Linas.

11814. And if a man was not acquainted with the port he could not know whether the pilot was good or not?—As long as he was a duly licensed pilot, it would be optional for him to take him there or go on to Point Linas.

11815. How could he know the qualification of the man whom he meets the first time down Channel; how would he know whether he was refusing a good pilot or not?—He could not know but by his license.

11816. It would be a mere chance whether he got a good pilot or not?—Yes.

11817. I think, in going into New York, as far as I recollect the evidence of other witnesses, a vessel inward bound to New York is bound to take the first pilot she meets, and that the pilots go out a great distance to meet the vessels?—I think that is not the case. A pilot will go on board a ship outside New York, and he will say, "I will go up as far as our station, wherever it is, Sandy Hook, if you give me the preference to take your ship into New York."

11818. It was not so stated; it was stated that the captains were obliged to take the first pilot, and that they frequently got inefficient men; that it was not the men who went furthest out that were the best pilots?—They are not bound to take the first pilot. I have known them refuse a New York pilot, and take a Jersey City pilot.

11819. I think you stated, in answer to a question from the Chairman, that you thought that if the present compulsory system is done away with, pilots would always be found in bad weather at their stations, though the vessels were not compelled to take them?—Yes. I think that if those pilots received their earnings, and had an interest in their own boats, they would be found out at sea in all weathers.

11820. Supposing they were not at their stations before the bad weather began, is not the weather frequently such at Liverpool that it would be impossible for the pilots to get out, unless they chartered a steamboat?—Pilot boats do work out in all sorts of weather now.

11821. Supposing the voluntary system was established, is not the weather such that it would be almost impossible for the pilot boats to work out after it began to blow a gale from the north-west?—There would be the same advantage then in getting out as there is now.

11822. We know that now the boats and men are at their stations at all times; but supposing they tried to get out in bad weather, would not it be impossible for them to do so?—They could get out just the same then as now.

11823. But

11823. But now they are out before the bad weather begins?—They would be then out under the voluntary system.

11824. Mr. *Grieve.*] Supposing compulsory pilotage was done away with, have you any doubt that first-class pilots would be found to club together and get as efficient boats to perform the pilotage services as at present?—No doubt they would do so.

11825. Is there any reason why the boats should not be out under the voluntary system?—I have no doubt that men would come forward and find their own boats, because on one occasion I got a great number of pilots during one tide time on the pierhead to sign a paper appealing to the committee to ask them whether we should have our own boats.

11826. Under this system there is no reason why these boats would not be out at the stations just the same as under the present system, is there?—They would be out just the same, I think, as under the present system.

11827. Mr. *Cave.*] Your evidence is chiefly against the present system of management of the pilots of Liverpool?—Yes.

11828. And it has nothing to do with the question of the voluntary or compulsory pilotage of vessels?—No.

11829. You have not considered that question?—No. Mr. *F. C. Beckett.* 14 June 1870.

11830. *Chairman.*] But do you think that the Bill which is now before the Committee will force upon the pilotage authorities this change which you have recommended?—Yes.

11831. And therefore, on the whole, you are of opinion that the Bill before this Committee will be advantageous to the pilots?—Yes.

11832. And you do not dread the effect of the abolition of compulsory pilotage?—No, I do not.

11833. In that you agree with Mr. Jones, the other pilot from Liverpool, who has appeared here and given evidence?—Yes.

11834. You have felt the evil of the present system of boatowning at Liverpool and the compulsory stations, and you have never seen a remedy for it until this Bill presented itself?—Never before.

11835. Do you think that there is no prospect of it being altered so long as compulsory pilotage is on foot?—No.

11836. But do you think that the abolition of compulsion will force upon the pilotage authorities the consideration of all these questions, and thereby force them to make a change in the system now in force in Liverpool?—Yes, I do.

Sir FREDERICK ARROW, called in; and further Examined.

11837. *Chairman.*] I HAVE recalled you here to ask you a few questions as to the difference between the navigation of the Mersey and that of the Thames; I believe that since you were here before to give evidence you have paid another visit to Liverpool?—Yes, I was in our yacht in the Mersey about a month ago, having gone to Hilltree Island on buoyage duty. Sir *F. Arrow.*

11838. Was that the first time you were there?—No, I have frequently been there.

11839. Are you thoroughly acquainted with the Mersey and its navigation?—Yes.

11840. It has been stated to the Committee, that the navigation of the Mersey is much more difficult than that of the Thames; what is your opinion upon that point?—I think that nothing but what I may call local affections and partiality could bring one to such an idea. I have no partiality in the matter myself, but I think that anyone who could say that the navigation of the River Mersey, when you are once over its bar, presents more dangers than the River Thames, looking at it from its mouths, and from the coast it traverses, must be speaking with partiality rather than as a matter of judgment.

11841. According to your view, the only real difficulty in the navigation of Liverpool is in crossing the bar?—At Liverpool proper, no doubt the bar is the only real obstacle to entering the river, but the difficulties are before you approach the bar; a ship has to wait outside for water, to be able to cross the bar. The difficulty of the pilotage consists in this, that you have to keep a ship to windward from off the bar for a certain time before you can take her inside. With steamers there is no difficulty at all; with sailing vessels it is a difficulty to some extent; but you must remember that there is plenty of searoom. I have heard it said that Liverpool has the great drawback compared with the Thames and other places, that there is no anchorage, but if a ship is coming up the St. George's Channel with bad weather, knowing that when she is approaching Liverpool, she may not have enough water to cross the bar, she can anchor. I conceive that the port of Liverpool has one of the best anchorages known. She has the harbour of refuge of Holyhead under her lee, and there, I think, she possesses an advantage certainly, which very few ports possess. It is true, that if a ship passes that port, if a pilot takes her on further, he must rest upon his own knowledge to keep her sufficiently far from the bar to enable him to cross it when the time comes, in safety; but once over the bar of Liverpool, in my humble judgment, there is no obstacle whatever in the navigation of the river; there are no tortuous channels; you enter by what is now the principal channel, the Queen's Channel; or by the Victoria Channel, sometimes there is a little more water in one, and sometimes in the other; sometimes the sands lap a little one way, and sometimes the other, when the buoys are shifted accordingly, regulated by the buoy master under the authority of the Mersey Dock and Harbour Board. Having entered the river, you run up to the Formby Lightship, and from there you have a clear course and plenty of water without any danger on either side except what you can see conspicuously marked, and there is no port in the world, to my knowledge, so well and efficiently buoyed and marked as the port of Liverpool. The buoys are very large and very conspicuous; in my judgment it is possible that those buoys may be too big, and that there is danger from their very size of their being carried away; indeed, I think one of the principal arguments to show that the sea is never very violent there is, that these enormous buoys can ride such seas as they do. There are bell buoys, pillar buoys, and every other kind of buoy; every buoy in Liverpool is, if I may use the word, an exaggeration upon any buoys commonly known.

Sir *F. Arrow.*

14 June 1870.

known. There is no doubt the Channel is beautifully marked, so that he who runs may read. Even with the wind from the north-west and from the northward you are running out of the sea every moment you are running into Liverpool, and by the time you get up to the Rock Lighthouse there is no sea of any consequence, and you may drop your anchor where you like. Its real danger is that which consists in remaining outside until the time arrives for entering.

11842. I understand from you, as far as steamers are concerned, pilotage is exceedingly easy?—I think so.

11843. And as regards sailing vessels it is more difficult?—Yes.

11844. I presume that is rendered more easy by the more frequent use of tugs?—Undoubtedly the use of steam seems to me to lighten these sort of difficulties; hardly a day passes but I see changes through their instrumentality.

11845. And that renders less necessary an over-abundant supply of pilots?—I should say so.

11846. Comparing what you have described with the navigation of the Thames, from Dungeness upwards, should you say that the navigation of the mouth of the Thames is more difficult than the Mersey?—I should say certainly it is; in the winter time that occurs with us which does not often occur at Liverpool; I really am not speaking in the least degree as a partisan of the Thames, because I have no feeling whatever in the matter; but I am quite certain that, if you look at the accounts of the underwriters, and if you look at the casualties which occur every year, you will find that the loss of anchors that occur, in the Downs and Margate Roads, and the dangers ships are put to there, are greater than occur at Liverpool; a winter does not pass without a serious loss; vessels are not often lost, but they do run considerable risks; some vessels break from the Downs, and have to run through the Gull Stream into the North Sea, and be boxed about there for days.

11847. Some witnesses who have been before us have also laid great stress upon the difficulty to coasting vessels in the Mersey, in consequence of strong tides running across the entrance of the docks, do you think that is at all exceptional?—I imagine that it exists in many places; there are very few places where tides run fair into the dock that would not be a good position for a dock; it would bring a strain upon the dock-gates, and would be an improper place to place a dock in. In nearly every dock that I know of the tides run across the dock, and there is considerable difficulty in getting a long ship into any dock under such circumstances. The most difficult dock that I know of anywhere is Southampton Dock; I do not know whether any Member of the Committee has ever seen a long ship try to get into Southampton Dock; if it is not exactly the right time of the tide it is most difficult to get her in. I cannot really reply to the question from positive knowledge, because I am not acquainted with the mode of docking ships in Liverpool, but I should not imagine that the difficulty is very great.

11848. Judging from your long nautical experience, do you think that there is no great difficulty in that respect in Liverpool compared with places where pilotage is voluntary, such as Sunderland, where the dock opens upon the sea?—No.

11849. Captain Judkins has made a comparison between Liverpool and Calcutta, and has compared the difficulties of the navigation of the Mersey with that of the Hooghly?—One does not like to criticise any other person's evidence; but it seems to me a great stretch of imagination to place the two ports in comparison. There is, however, this resemblance, that the formation of the mouths of the two ports have something of a common nature; but no one who has at all studied the question, or has read the description given by Horsburgh of the Delta of the Ganges could readily compare the two. At the embouchere of the Rivers Mersey, Dee, and Ribble, no doubt, there is a certain amount of detritus and deposit from the Welsh hills and other causes, and a rapid tide, which cause occasional changes; but, in the Hooghly, you have an enormous mass of flood water running for months at a time in one direction, when the snows are melting upon the Himalayas, which, rushing along, tears up the bed and banks of the stream, and, with a velocity of nine to ten miles an hour, brings down the débris to the spot where it is checked by the tidal wave, and there it is deposited, fluctuating from place to place, as it overpowers or recedes from the tide itself, and there forms sands and obstructions, some of which change daily; so much so, that they have to be at one season examined every tide, and the changes made known to vessels before they can pass. The tides also cross and re-cross the river in a very dangerous way, especially where some of the affluents, such as the Damooda and Rirpnerain, fall into it; and for some way below Calcutta, for two or three months, the vessels never swing to the flood. To navigate a ship in the Hooghly is at all times a very difficult task, and to compare it, therefore, with the Mersey does seem to me somewhat extravagant. It is dangerous in all ways; the great extent of the sands, the heavy character of the weather at the period of the south-west monsoon, and the constant changes in the channels themselves, puts the port of Calcutta entirely by itself, and, fortunately, there are few ports in the world that can show such a position of affairs as the mouths of the Hooghly and the Ganges, and the river itself generally.

11850. Some stress has been put by some of the Liverpool witnesses upon the extent to which the changes of the sands at Liverpool are watched and calculated by the pilots, and it was stated that no such watching of the shoals and sands takes place in the estuary of the Thames, or on the east coast?—That must have been stated under a misapprehension, because it is well known that our sands are watched very carefully and narrowly, not over a limited area as the Liverpool Board have, and which they do so well and satisfactorily, but from the Spurn Point on one side, and from the Downs on the other side, right up the river. There are no sands in the Mersey, which change oftener, and which require more careful attention and looking after, than those on the east coast. There is not a month passes but some of the buoys are shifted, some places grow, and some places wash away, and the Trinity House, in addition to its own members who are frequently engaged on that duty, has very competent men who are their district superintendents; the one on the east coast particularly, was selected as being a very excellent surveyor, and a more than ordinary good man; a man who is a surveyor in every sense of the word, and who watches

watches these sands very satisfactorily indeed. But beyond that, on the examining committee, it has the advantage of the skill and experience of Admiral Collinson, a distinguished hydrographer, who takes a great interest in it, and personally assists at most of these examinations. I am quite sure that it is well done; but the changes are very considerable and very frequent, and as for giving you a list of the changes, it is almost impossible to do it

11851. Take the case of the sands off Yarmouth and Lowestoft, what is your opinion of them?—To my knowledge within 10 or 11 years that I have been at the Trinity House, the Stamford Channel has been shut up for a night channel; the Corton Channel has been opened; and the Pakefield Channel so altered that the navigation of the channel is entirely different.

11852. Are all these channels on the east coast?—Yes.

11853. They are districts where pilotage is entirely voluntary, are they not?—There is pilotage there, but practically it is voluntary, through an exemption made by the Trinity House, eight years ago, and you must remember that the ships that traverse this dangerous coast, which I think is quite as dangerous as any part of the Cheshire or Lancashire coast, are ships without pilots, and without certificated masters; they are coasters and other vessels which are not required to carry pilots. I believe if you look at the per-centage of casualties that occur in the navigation of that coast, you will not find that they are any larger than they would be in any district which was supplied with compulsory pilotage.

11854. These sands and channels which you speak of as constantly changing, are being constantly watched, are they not?—Yes.

11855. Then there is nothing exceptional in the state of things at Liverpool, is there?—I think not; I think it is only the ordinary state of things that must occur in all navigation of that sort.

11856. A good deal of evidence has been laid before the Committee with regard to the Clyde; will you give the Committee your experience with regard to the Clyde, as to its navigation?—The navigation of the Clyde is very simple till you get up to Greenock.

11857. I believe the pilotage is only compulsory after you pass Greenock upwards?—When once you get fairly into the Clyde, between the training walls, it is a matter of harbour regulation more than pilotage; I think it may be necessary that a ship should know if there is another ship lying at an inconvenient place in the Channel, before she got up to it in narrow waters; but that is more a question of harbour pilotage than a question of sea pilotage.

11858. You think that hardly comes within the meaning of sea pilotage?—No; I should call that harbour-master's work.

11859. Have you made any distinction of that kind in the pilotage of Liverpool; would you say that the inner parts of the Mersey, after you have entered the river, is harbour-master's work?—When once you are up at the Rock Lighthouse, there ought to be some boat cruising about to tell the ships where to anchor; but it is quite true that they lay all about the stream. The advantage of the Mersey is, that you may let go your hook anywhere; even if it is a dark night there are plenty of places to anchor in; you need not trouble about shoals, because there are not any; and I think a good harbour-master system would regulate the anchorage in the river.

11860. Then again, there has been some evidence laid before the Committee as to the Humber, and it has been stated by some of the witnesses that the navigation of the Humber is rather exceptional; is that your opinion?—I have no wish to give offence to any representative of the Humber or any other place; but a pilot who has got to keep out at sea to bring ships in, whether going to the Tyne or Hartlepool, or the Tees, must be subject to some danger. There is, and must be, always some danger in ships being boarded, but that applies just the same to voluntary as to compulsory pilotage, but the entrance to the harbour is very well marked; there are two lighthouses, and the Spurn Lightship outside to lead you up; and there is another light directly you get in, and a man without a pilot, I should imagine, could put his helm to port, and run into Hawk-road, which is a sheltered roadstead just inside.

11861. In your opinion, are there any exceptional circumstances with regard to any of these places, as compared with the Thames and other ports, which would give a reason for exempting them from the operation of this Bill?—No; you have asked me my opinion before as to the River Thames itself, and I said then that I saw nothing in the configuration of the place or the nature of the duties which, to my mind, requires a permanent and compulsory pilotage, and when I say that, I answer your present question. I do not think that there is any more reason to exempt them than there would be to exempt the Thames.

11862. I asked you the question specially, because, practically, no evidence has been given against the Bill as regards the Thames, except from pilots, so that we may take it that the case of the Thames is practically conceded; but do you see any reason for dealing with the Mersey or the Humber, or the Clyde, exceptionally?—I think not; I think the Clyde may have a greater claim in this way, that it wants a special sort of harbour-master's service for the upper part of the Clyde, or some means of making known what there was in the river; I do not think it wants a compulsory pilotage service.

11863. Something has been said with regard to Liverpool as to the absolute necessity of keeping up the stations in the same way as they have been hitherto; do you see any special reason yourself for that, judging from your own experience of the system in the Thames?—I think the Liverpool pilotage system is remarkably compact, and a very good one, and I do not think there is any place except Liverpool where they are very enterprising, and where the merchants seem to be very willing to spend their money, where the pilotage system is so thoroughly harmonious as it is there; but whether all that is necessary I do not pretend to say. If it satisfies the people of Liverpool, that is sufficient for me. But whether the numbers of vessels which come into the port of Liverpool, which are not owned by Liverpool owners, agree as to the necessity of it, I cannot say.

11864. You have, in the North Channel of the Thames, a system of pilotage which is, to all intents and purposes, voluntary?—Yes.

11865. And yet there a considerable number of pilots are maintained under a system analogous to that of districts where it is compulsory?—You

Sir *F. Arrow.*

14 June 1870

You may call it practically free pilotage in the North Channel of the Thames.

11866. And yet in that district you maintain the pilots at their stations in the same way as you maintain them in the compulsory districts?—Yes; I will not say that there has never been a complaint of not getting pilots, but there are fewer complaints in the North Channel than there are in the South Channel; there are complaints sometimes about Dungeness, but if my memory serves me right, I have not for a long time heard any complaint of the North Channel pilots.

11867. In addition to the authority which you exercise over them, is there not an inducement to them to obtain employment which there is not in a compulsory district?—Yes.

11868. If this Bill passes into law, would there be any difficulty in maintaining in Liverpool, if it is considered necessary, the same kind of system that you now maintain in the North Channel of the Thames?—It depends entirely upon this: if you maintain a pilotage system which is limited, and if you still protect the men in the exercise of their calling, as the law does already, I do not see any reason whatever why there should be a diminution in the number of pilots, nor do I see any reason why the system cannot be kept up, for this very simple reason, that it does not rest with the pilots; it rests with the authorities who are over them. If a man takes a license as a pilot, he takes it under certain conditions to obey the orders given him that he shall do certain things, and if he does not do them the remedy is very simple; he can be suspended or dismissed if his case is a gross one. It is very probable that if any change is made in the law, all pilotage authorities will have to be very strict at first in keeping the men to their stations, but the remedy is in the hands of the pilotage authorities, and it does not lie with the men; their orders are to go to a certain place, and they must do so.

11869. It has been alleged that there would be a certain injustice to pilots in keeping them to their stations and compelling them to give their services when required by any vessel, if, on the other hand, they are not entitled to compel a vessel to employ them; judging from your experience of the North Channel of the Thames, and of other districts, where the pilotage is free, do you think there is any reason to consider that argument a sound one?—I do not think it is a sound argument. I think, from my experience there and at other places, there are quite sufficient ships that want pilots; and I believe wherever one goes, the wish and desire of the masters of vessels is to get hold of a man who knows more about the place, when getting into shallow water, than he does himself.

11870. As long as you maintain a limited number of licensed pilots, there is no great hardship in putting them under certain terms?—I think the question will arise of compensation. There may not be the employment for 200 pilots, for instance; but, if not for 200, there will be employment for 150.

11871. If those clauses of the Bill are put into operation, and the number of pilots is restricted to such a number as is really sufficient for the trade, is there any hardship in compelling the pilots to keep to their stations, and give their services when required?—I should think not.

11872. As long as there is a licensed corps?—Yes; if you leave it to demand and supply that is another story; but as long as there is a good supply of licensed men protected by the law (and I should lay great stress upon that), against the unlicensed men who have nothing to lose, and everything to gain by trying to cut the pilots out, I have no fear of the results.

11873. The Bill before the Committee only places the districts now under compulsory pilotage in exactly the same position as non-compulsory districts are at present wherever there is a licensed corps and a regulated price; have there in your experience been any complaints from the places where there is voluntary pilotage subject to the rules which I have mentioned?—Not to my knowledge.

11874. Have you formed any opinion as to the number of pilots of Liverpool, and also as to the present system of boatowning?—I think they could do with less if it was a question of money, but I do not think it is a question of money with the Liverpool authorities; I think they do everything to facilitate the navigation, and it is not a question of money.

11875. Comparing it with the system of the Thames, should you say that it is rather an extravagant one as regards the number of pilot boats, and so forth?—I heard the evidence of the pilot who was here to-day, and if what he stated, that sometimes a man got four turns in a year, was true, I should say that it must be extravagant. I know nothing of their working, but I know that there are plenty of pilot boats always about in Liverpool. When I was there the other day they seemed to me very numerous; I did not see them getting much occupation upon that occasion.

11876. Supposing that the average employment of pilots is 40 days in a year actually in charge of vessels, should you say that as compared with the employment of pilots in the Thames that is a very small amount of employment?—I am not prepared to answer that question, but I think it is a little. I look at the income which they receive rather than the number of days which they are employed. It is quite right that the man who has few opportunities should have his employment, when he gets it, remunerative.

11877. But the system may be extravagant if a pilot gets good remuneration for a small amount of work?—Yes, I think the system is rather extravagant.

11878. In conclusion, would you say that there is no other reason for exempting Liverpool than there is for exempting any of the other places which I have mentioned, from the general operation of this Bill?—No, not in my humble judgment.

11879. Mr. *Stevenson.*] Do you approve of protecting the licensed pilots in their calling; it appears that that is not very officially carried out in the North Channel of the Thames, and that the pilots complain very seriously of it?—That has not come to my knowledge.

11880. Are there not retired ship captains who have taken up the duty of piloting vessels through all the way to their destination at a fourth of the regulated price?—So I am told, in ships that are not required to take pilots at all.

11881. Whether they are exempt or not, if they do take a pilot they should take a licensed pilot?—Yes.

11882. We have had very strong evidence here

here that they do not obtain that protection from the authorities which you think they ought to have?—The protection is not from the authorities, the protection is from the law; the authorities cannot protect them.

11883. Except by putting the law in force?—The pilots put the law in force; if they come to the pilotage authorities, the pilotage authorities say, "By all means try it; where we are satisfied of the *bonâ fides* of the case, but we have no power to do it; the law provides for that." If they find an unlicensed man aboard, and they can prove that he is on board, they can set the law in force and [enforce the] penalty; but the pilotage authorities have no means wherewith to fight questions of law, that must be left for the pilots to do.

11884. What means have they of doing it?—I suppose they would recover their pilotage; it is not a very difficult process.

11885. Mr. *Norwood.*] With reference to the exemption of the Thames, may I ask you, is it probable that the Trinity House would have extended the exemption in case the subject had not been introduced in this Bill?—Undoubtedly we should, had the Board of Trade agreed.

11886. Can you point out the direction in which the exemptions should go?—When the Merchant Shipping Bill of last year was sent down for us to go into its details, upon looking into it we came to the conclusion that, as a matter of justice, it would be well to increase the exemptions from compulsory pilotage; as you are aware, nearly all the exemptions from compulsory pilotage have been acts of the Trinity House, at one time or other, under an Order in Council, but initiated by them; and as I stated last time I was here, having once made exemptions, it seemed a logical conclusion that more of them must follow. This was a case in point, and it certainly is a very great hardship and one which has been much spoken of. The position in which ships coming from the north of Europe have found themselves with regard to pilotage, and with regard to remedies against losses, has been a very hard one, while as regards ships that come from the south of Boulogne, it is a great hardship to the ports opposed to one another on either side of the Channel. A vessel coming from one port to the other, has been compelled to take a pilot compulsorily, when a little way to the northward they do not do so. We therefore came to the conclusion that we ought to extend the exemption as far as the English Channel extended, and to include all vessels trading between ports on the Continent north and west of Brest and ports in Great Britain. A vessel from Havre would then have had the same facilities as a vessel coming from Antwerp; a vessel coming from Cherbourg to Southampton with a cargo of eggs, would not be compelled to take a compulsory pilot, and it would also tend to increase the trade which is getting up from St. Malo and other places across the Channel. We have come to that conclusion, and we sent to the Board of Trade requesting their consideration as to whether it would not be advantageous to extend the exemption to cover the whole of the English Channel.

11887. That would be traffic in passing over the South Channel?—Yes. The argument is this: there is no doubt that the original idea was that, if vessels were away for any time from the port of London, or other port they belonged to, they would lose their knowledge of the pilotage, and that was quite true when ships were only sailing ships; but now that the coasting trade has been driven into steamers, the question of distance is annihilated almost, and a man can get as quickly up from St. Malo or Brest as he could do formerly from Margate, or Dover. Therefore we thought it reasonable and right that, having extended the exemptions already, we should go on and extend them to such further degree, as we thought the interests of trade demanded, and were consistent with the law now in force.

11888. I think I understood you, in your examination the other day, to lay down the rule that, the exemptions having been once admitted, it was like the opening of waters, the whole must gradually become greater, and the exemptions must become greater?—Yes. I think that, whether you pass this Bill or not, that end will come one day or other; it may be by a gradual or it may be by an exhaustive process.

11889. Mr. *Price.*] You expressed an opinion that the pilotage of the Clyde stood upon a somewhat different footing to the ordinary pilotage jurisdiction, and that is an opinion in which I entirely concur; do not you think that that also applies to all places where the navigation is an artificial navigation; wherever a river has been converted into an artificial navigation by artificial works; does not it occur to you that that is a different case to ordinary sea pilotage?—Yes; I look upon the Clyde as a place where there is no pilotage proper whatever. You know your depth of water; you get in between a couple of walls, and all you have to do is to follow your nose. All you want to know is, that you do not get on to something which was not there when you come down again.

11890. You said that you considered it was rather a harbour master's question than a pilot's question?—Yes.

11891. Do not you think that the same rule will apply to cases, whatever they may be, where the navigation is not a natural navigation, but an artificial one?—Yes, I think so.

11892. Then it is a harbour master's question, and not a pilot's question?—Yes.

11893. The general tenor of your evidence which relates to now compulsory pilotage is with reference to sea pilotage, and not to this artificial river pilotage?—That is so.

11894. Mr. *J. S. Hardy.*] You said that the Liverpool pilotage was conducted on an excessive and extravagant scale: has the pilotage at Queenstown anything to do with the Trinity House?—No.

11895. We have it in evidence that they pay the same pilotage for Queenstown that they do at Liverpool?—I do not know about that.

11896. What is a fair payment for Queenstown cannot be an unfair payment for Liverpool, can it?—I did not mean to leave the impression that the rate of pilotage was extravagant at the port of Liverpool, but rather that the whole arrangement, the number of men and boats, and the service altogether, was on a somewhat extravagant scale; I did not say that the rate of pilotage was extravagant.

11897. Then the pilots are the losers by the disturbance of the system, and not the public?—I think some of them are.

11898. Mr. *Cave.*] Do you know the navigation of the River Avon?—Pretty well.

11899. I suppose you would class that with the

Sir *F. Arrow.* 14 June 1870.

the Clyde as a river navigation, in which there ought to be a harbour master with proper superintendence?—I think so very much; but the "Avon" is not the same as the Clyde, there are no training walls; there is a very great rise and fall of the tide, and it is very rapid, so that I do not think it is quite the same as the Clyde; I think it is more of a pilotage than the Clyde is.

11900. Do you think that pilotage ought to be kept up in the Avon?—Yes, because the time of tide is the great thing to know in the Avon; that makes all the difference; they navigate with the tide in the River Avon, from the great rise and fall it is a bagatelle until they are short of water, and then it requires all the pilot's knowledge to keep the ship in the channel.

11901. Are there not artificial works for improving the navigation of the River Avon?—I do not know that.

11902. Do you know the port of Swansea?—I know very little of it.

11903. We have it in evidence, that in Swansea also, there was considerable difficulty with regard to sailing vessels in getting them into the harbour without pilots; can you pronounce any opinion upon that subject?—I should not like to do so, as I know so little about Swansea; but I can easily imagine that there is a difficulty in a number of ships coming to the dock at one time.

11904. There is a Parliamentary Return issued from the Trinity House about casualties in the south, from Dungeness, and it appears that there were only three casualties to vessels that had pilots; but that all the casualties, with the exception of three, happened to vessels without pilots; but how do you explain that?—I do not think that is a Return of the Trinity House.

11905. It is a Parliamentary Return that came out some months ago?—I am not aware of it.

11906. There was a Return that showed that?—I should think that what it showed was simply that the pilot's skill was very necessary, and that the men in charge of these vessels did their duty; but it does not show to my mind that it was in consequence of pilotage being compulsory.

11907. I suppose you would say that the casualties which happened to vessels without pilots, of course happened to vessels that were exempt from pilotage?—I really do not know the circumstances, but I suppose it is so.

11908. Supposing those vessels had been compelled to take pilots, would not it have been likely that those vessels would have been saved?—It is possible that they might have been.

11909. But you do not know of that return?—No, I have never seen it; I should think it came from the insurance offices; but I doubt whether it is not in the class of vessels that are now exempt altogether that these losses occurred.

11910. And possibly they were an inferior class of vessels?—I think so, most probably: it is the well-found and managed vessels that follow up their business in the proper way, that take pilots, and do that whichis right; and there is no question that there are some vessels that do not do what they ought.

Mr. Robert Lee, called in; and Examined.

Mr. *R. Lee.*

11911. Mr. *Grieve.*] I believe you are a Deep-sea Pilot of the Port of Greenock?—I am.

11912. You have pilotage water from Port Glasgow to Cumbrae Head?—Yes.

11913. How long have you been a deep-sea pilot?—Seventeen years.

11914. Have you had frequent cause of complaint, owing to the bye-laws of the committee in Glasgow; do the river pilots infringe upon your pilotage grounds?—Frequently, and we have had to complain of it.

11915. Will you state in what way the river pilots have interfered with you?—The river pilot's license extends to Newark Castle, Port Glasgow; the deep-sea pilot's license extends from Newark Castle to Cumbrae Heads. In the river pilotage it is compulsory; from Newark Castle out, it is optional. The river pilots frequently go down piloting vessels out in our limits, of which we have to complain.

11916. Do they frequently take steamers to Gareloch, where the compasses are adjusted?—They do that frequently. In the bye-laws there is Clause 18, that permits the river pilots to take the vessels to adjust the compasses, which we have reason to complain of.

11917. I believe the Gareloch is within your limits?—Yes.

11918. I believe there has been a great increase in iron ships of late years?—Yes.

11919. Do all these ships go to Gareloch to get the compasses adjusted?—Yes.

11920. Your complaint is, that the river pilots frequently take those ships which you consider should belong to deep-sea pilots?—Yes; that is what we complain of.

11921. Have you received any redress from the Pilot Board?—No; we have petitioned frequently, but have received no redress.

11922. Was not there a case a short time ago, when a river pilot was suspended for taking a ship from Port Glasgow to Gareloch?—I think in the case of the "Alexandra," one instance of that kind occurred.

11923. But notwithstanding that, they continue to take those vessels to Gareloch, to your prejudice?—Yes, and out to sea, and all round the coast.

11924. And you are not allowed to take a vessel past Newark, Port Glasgow, upwards?—No. We say if they get permission to go out of their limits, give us the same privilege.

11925. Have you any opinion to give with regard to the river being thrown open, that compulsory pilotage should be done away with, and that you should have the opportunity of taking vessels up to Glasgow, if they take them into your waters?—If we were duly protected in our limits, and the compulsory pilots were not allowed to infringe upon us, we would be perfectly satisfied.

11926. But you think, if they come into your waters, you should be permitted to take vessels up the river also?—Yes.

11927. Have you been a river pilot?—No; I have passed my examination, but I have never acted. We think it unjust for these men to go out into waters they are not licensed for.

11928. Have you any opinion to offer to the Committee with regard to the pilotage of the river above Greenock?—No.

11929. Do

11929. Do you consider yourself competent to take a vessel up the river?—Yes.

11930. Are the majority of the deep-sea pilots, if not the whole, competent for that duty?—Yes.

11931. Do vessels usually take a steamer from Greenock up to Glasgow?—Yes; the steamers assist them round the different heads, so that it is nothing but to steer after the steamer. I might state that I have piloted 1,500 ships since I have been a pilot, 156 of which I have piloted to different ports in Ireland, England, Scotland, France, and Germany; and I think I may say, without fear of contradiction, that I have not done five shillings' worth of damage in all.

11932. Have you brought one of the British India steamships from the Clyde to London?—Yes, two.

11933. Have you just arrived in London today with one?—Yes.

11934. Will you just show the certificate you got from the master of that ship?—This is it—

[*The same was delivered in, and is as follows*:—]

"This is to certify that the British India Steam Navigation Company's S.S. of India has been piloted from London to Glasgow, and *vice versâ*, by Mr. Robert Lee, very much to my satisfaction. Further, that Mr. Lee is possessed of first-class abilities, and is extremely vigilant and attentive.

"*W. H. Parker.*

"S.S. of India,
"London, 14 June 1870."

11935. I think you said that you have piloted altogether some 1,500 ships?—Yes.

11936. And that you have scarcely ever met with an accident?—No.

11937. Have many accidents occurred in your pilotage water with pilots who belong to the river?—The only accident that I am aware of occurring in our limits was with the "William Connel." A barge was run down below Port Glasgow, and the "William Connel" was run down, and the "Iona" was run down below Greenock. These were in charge of river pilots.

11938. *Chairman.*] How many pilots are there at Greenock?—There are about 18 deep-sea pilots in active service.

11939. What does your employment mainly consist of; is it in piloting vessels outwards?—Principally in piloting outwards, and to and from Gareloch. We complain of the river pilots taking vessels down there in our limits.

11940. You often pilot vessels a long way to the ports all round the coast?—Yes.

11941. Are some of you stationed in boats, some way out to sea?—Outside; I may say that I was three years in a pilot boat, when I was a youngster.

11942. How many pilots are in the vessels out at sea?—About 18 pilots are licensed.

11943. Besides those you mentioned?—Yes, besides the river pilots; but others act without license.

11944. Do a large number of vessels coming up to Greenock take pilots far out to sea?—A good many.

11945. Sufficient to make a livelihood for a man to act as a pilot?—Yes; a man who pays attention to his duty, and is well qualified, can make a good livelihood.

11946. Do each of the pilots earn for himself?—Each for himself.

11947. What do they make, on the average?—I really cannot say; it depends upon the quality of a man.

11948. What will a good man make?—I would say 200*l.* a year.

11949. Is that what you make yourself?—Sometimes, and sometimes I make more than that.

11950. We have heard already testimonials to your character; what do you make, on the average?—Really, I am not able to say; I should say 200*l.*

11951. You do that without any great difficulty, I suppose?—I am within the mark when I say I make that.

11952. Are there several of you that make an income like that?—Yes; I should make more than that if the river pilots were kept in their own limits.

11953. Even under that disadvantage, you make a very fair income?—Yes: or if they would give me permission to go to and from Glasgow, the same as they permit the river Gross pilots to come into our limits, I should make 200*l.* a year.

11954. Do you see any reason why you should not be allowed to go up to Glasgow?—No.

11955. Many Glasgow pilots do come into your waters and pilot vessels through them, do they not?—Rule 18 permits them to take steamers on trial trips, or for other casual purposes, and that includes steamships and other things.

11956. Is that only for trial trips?—Yes.

11957. Practically, it is for all purposes?—Yes; this is what we complaim very much about.

11958. Your system is a purely voluntary system; no compulsion is wanted to take a pilot?—No.

11959. I presume that only the larger class of vessels take pilots?—Yes.

11960. Small vessels do not take them?—No.

11961. The navigation up to Greenock is a very easy pilotage?—Yes; but there is one thing I would suggest as to where compulsory pilotage would be required, that is in the case of passenger ships and very valuable ships with very valuable cargoes.

11962. But very valuable ships with very valuable cargoes are not bound to take pilots, are they?—No; but if any ships at all should be compelled, it is ships of this sort.

11963. But you do not think it necessary that even those should be compelled?—No.

11964. As a rule, you find that the valuable ships do take pilots?—Yes.

11965. In order to make themselves safe against any chance of damage?—Yes. I have been piloting Patrick Henderson & Company's passenger ships for 14 years.

11966. Where do the inward pilots generally cruise?—Off Pladda, outside the Cumbraes.

11967. How far is that from Greenock?—About 40 miles.

11968. Do those pilots keep themselves distinct from the outward pilots or not?—No; they are out and in.

11969. Sometimes they pilot vessels outwards and sometimes they pilot them inwards?—Yes; it is voluntary either way.

11970. Do they make as good a thing of it as you do, who are mainly employed in piloting outwards?—No.

Mr. *R. Lee.*
14 June 1870.

11971. Do more vessels take pilots inwards or outwards?—More take them outwards, especially iron ships.

11972. They are principally vessels on their first voyage, are they not, after being built on the Clyde, going outwards?—Yes.

11973. That forms a very large item of your pilotage?—Yes.

11974. With those new vessels which are just launched, it is a great object for the owner to send them safely to their destination, I suppose?—Yes.

11975. Therefore they do not run any risk whatever?—No. A man who is qualified is taken as far as Waterford or Cork.

11976. Do many foreign vessels come to Greenock?—Yes, a great many.

11977. Do they take pilots?—A great many of the Cork and Falmouth pilots come with them, and we complain very much of it.

11978. Are you not entitled to supersede these pilots when you find one of them on board?—No.

11979. Are you not under the regular system of pilotage at Greenock?—Yes, we are; but when we complain of these things, we get no redress.

11980. Mr. *Stevenson.*] Have you tried to supersede one of the Waterford and Cork pilots when they come into the Clyde?—Yes.

11981. Have you tried it before a court of law?—No, we have tried it before the pilot board, but we have not tried it before a court of law.

11982. What you would like would be, to abolish the distinction between the two classes of pilots in the Clyde, and make only one class from Glasgow to Cumbrae?—Let them be separate and distinct, and keep to their own limits; where it is compulsory with them, it is voluntary with us; and we say it is hard that they should be allowed to pilot these vessels.

11983. If they are allowed to encroach upon your limits, you want to be allowed to encroach upon theirs?—Yes.

11984. Is it because yours is a compulsory district, that you would like the liberty?—No.

11985. Do you approve of compulsory pilotage in the upper part of the Clyde?—No, I think it is very hard that coasters and small vessels, and men well acquainted with the pilotage, should be obliged to take a pilot, knowing the channel better than the pilot in some cases.

11986. You do not think that the upper navigation of the Clyde is so difficult as to require compulsion in the Clyde?—No.

11987. *Chairman.*] Do you think, for the sake of order, that it is desirable to maintain compulsory pilotage in the upper part of the river?—I have not considered that question.

11988. I believe you are aware that there are a large number of masters licensed for pilotage in the Clyde?—Yes.

11989. And masters of little coasting vessels running down the river?—Yes, a great number.

11990. Mr. *Stevenson.*] What you complain of as regards Rule 18 is not as to the rule itself, but that it is not carried out?—The rule is not carried out.

11991. The rule only refers to trial trips; but they go to the Garelock to adjust compasses?—Practically, it is with regard to trial purposes.

11992. How far do you go down Channel when you take a ship out?—To Waterford and Cork.

11993. How far down the Clyde do you go?—Sometimes to the Cumbraes, and sometimes to Pladda.

11994. You say that the "Iona" was run down below Greenock when in charge of a river pilot?—Yes; he was outside his own boundaries, and there was a river pilot on the "Chanticleer" that run her down.

11995. That accident occurred within limits of river pilots, between two vessels, said river pilots having no right to be there?—Yes.

11996. Mr. *Norwood.*] Is it more difficult to pilot a vessel with a valuable cargo on board than a vessel with a cargo not so valuable?—No; but it is necessary to use every precaution to protect life and property.

11997. There is no more difficulty in the navigation itself; the two ships are the same?—Yes.

11998. It is merely a matter of degree as regards cargo?—Yes.

Mr. William Adams, called in; and Examined.

Mr. *W. Adams.*

11999. Mr. *Grieve.*] You have heard the evidence given by Mr. Lee?—Yes.

12000. Do you concur in it?—Yes.

12001. I believe you have been a pilot for 31 years?—Thirty-one years.

12002. *Chairman.*] What do you make by pilotage?—I used to make a good deal. At one time I had two large boats, but the steamers have done them up, and the river pilots get the best of it.

12003. What used you to earn when you were doing more?—I used to make 200 *l.* or 300 *l.* a year easily.

12004. How many pilots are there at Greenock making 200 *l.* or 300 *l.* a year?—Just now, there are very few; but for myself, I have not made anything like 40 *l.* or 50 *l.* a year.

12005. What number would you say make that amount?—Some that go round to London and Cork, and round the coast, get a good sum.

12006. Are there 8 or 10 making 200 *l.* or 300 *l.* a year?—No; five or six.

12007. What do the others make?—The rest do not average more than 40 *l.* or 50 *l.* a year.

12008. Mr. *Stevenson.*] Those large amounts are not made by piloting in the Clyde, but by going distances?—Yes.

12009. If they were paid by the time they spent in the Clyde, they would not make so much?—No; they would not make more than 50 *l.* on the average; but the river pilots having this compulsory branch, do the deep sea pilots out altogether. They have the advantage of taking the ships across to the Gareloch, and that is one of our best piloting, the Cumbrae Heads.

12010. Mr. *Grieve.*] I think you said that you generally confirm the evidence given by Mr. Lee?—Yes.

Mr. MATTHEW LAMONT IRVIN, called in; and Examined.

12011. Mr. *Grieve.*] I BELIEVE you have been 16 years Master of a Vessel on the Clyde?—Yes.

12012. When did you become a Deep-sea Pilot?—Within the last six months.

12013. You have heard the evidence given by Mr. Robert Lee?—Yes.

12014. Do you confirm him in it?—Yes; I concur in it.

12015. Have you any other observation to make?—I think Mr. Lee erred in saying that the 18th clause extends to sailing vessels, because the 18th clause expressly mentions steamers, and does not mention sailing vessels; and one of the things the deep-sea pilots complain most of is, not of the case of the steamships so much as of the sailing vessels; because in that clause they have got the privilege of taking steamers down to the Gareloch to adjust compasses, and to make trial trips, but not the sailing ships; and after that privilege was given they took advantage of it, and took the sailing vessels down.

12016. Owing to the increase of iron ships, that has become a profitable branch of your business?—It is a valuable branch; a river pilot will get nearly double for adjusting a 1,200 ton ship in the loch, than what they will get for the whole river pilotage.

12017. And they are taking the bread out of your mouth?—Yes; and unless they are put a stop to, and kept within their limits, we might as well be unlicensed altogether.

12018. Have you formed any opinion as to the privilege of taking ships to Glasgow being extended to the deep-sea pilots, if the river pilots are allowed these privileges in your waters?—I would not care about going to Glasgow, because I have done tolerably well; but if the voluntary system was extended to Glasgow as well as down below Greenock, it would act better for all concerned. I do not think that any ship, with few exceptions, would go to Glasgow without a pilot.

12019. From the short time you have been a pilot, do you see your way to making a good living of it?—Yes; if the river pilots are kept within their limits, I see my way clear, not only to making a good living, but making a competency.

12020. Do you concur generally in the evidence that has been given?—Yes.

Mr. *M. L. Irvin.*

14 June 1870.

Wednesday, 15*th June* 1870.

MEMBERS PRESENT:

Mr. Brassey.
Mr. Cave.
Mr. Gourlay.
Mr. Graves.
Mr. John Stewart Hardy.
Sir John Hay.
Mr. Shaw Lefevre.
Mr. Malcolm.
Mr. Phillip Wykeham Martin.
Mr. William Phillip Price.
Mr. Stevenson.
Mr. Charles Turner.
Sir Charles Wingfield.

GEORGE JOHN SHAW LEFEVRE, Esq., in the Chair.

Mr. Howard Fox, called in; and Examined.

Mr. *H. Fox.*
15 June 1870.

12021. *Chairman.*] I believe you are a Merchant and Shipping Agent at Falmouth?—Yes.

12022. And also a member of the Chamber of Commerce, and a director of the Falmouth Docks?—Yes.

12023. Has the Bill for the abolition of compulsory pilotage been under the consideration of the Chamber of Commerce of Falmouth?—Yes.

12024. What is the general opinion of the members of the council upon the subject?—They unanimously agreed to petition Parliament in its favour.

12025. Will you state shortly the reasons you have for thinking that compulsory pilotage should be abolished for Falmouth?—Falmouth Harbour has no outlying difficulties, and is so easy and so free from any danger whatever that many masters can anchor their ships as well without a pilot as with one. The present system results in the pilots staying in port in bad weather and earning all their money in fine weather, when there is no necessity for them.

12026. I believe Falmouth is a great port of call for vessels?—There are 3,000 foreign-going vessels calling every year.

12027. There is very little actual trade at Falmouth?—There is no import or export trade to speak of.

12028. And in that respect, as a port of call, how does it compare with Queenstown; comparing the navigation of Falmouth with Queenstown, what would you say?—Masters often say that they never want a pilot. Falmouth is so easy a port that they would much prefer being without one.

12029. At Queenstown the pilotage is voluntary, is it not?—Yes, and many vessels prefer Queenstown if they can reach it.

12030. Is that on account of being free from this charge?—Yes.

12031. Is the navigation of Falmouth practically as easy as that of Queenstown?—It is very easy, indeed.

12032. You were saying that during fine weather the pilots made sufficiently large sums of money to make them independent, and therefore they were not so active in bad weather as they would otherwise be?—Yes; they often board vessels just as they are anchoring. They hail the vessel, and the master has to pay the pilotage just the same as if he had the pilot's services.

12033. Do they not go out in bad weather?—The complaints are innumerable from masters of vessels, at finding no pilots at sea in bad weather.

12034. Just at the time when the vessels most want them?—Yes.

12035. Is it your opinion that if compulsory pilotage was abolished, the pilots would find themselves compelled to go out in bad weather?—They would have to make their harvest in bad weather instead of fine weather.

12036. Have vessels been delayed in bad weather, from not being able to find a pilot?—Yes, and they have to run up channel to other ports in consequence.

12037. Supposing compulsory pilotage is abolished, is it your opinion that there will be sufficient employment to induce men to follow the pursuit of pilots?—Yes, certainly.

12038. You think that there would be considerable employment for them in bad weather?—Yes; a master who had never come to the port before would often take a pilot.

12039. And even in fine weather?—Many would employ them in fine weather.

12040. There must be a large number of foreign vessels calling there, which have never before been to the port?—Yes.

12041. And in those cases they would want a pilot, even in fine weather, would they not?—Many would take pilots.

12042. Therefore, in your opinion, there would be abundant employment for a large staff of pilots, just as is now the case in Queenstown?—Yes.

12043. Is it the fact that several of the captains of the mail packets, which come to your port, now object to take pilots?—From experience they find that the pilots are so useless, that they will not allow them to take charge.

12044. They prefer to pay the pilotage charge, without having their services?—Yes.

12045. I presume the pilots have not much experience of steamers?—They have not much experience of large vessels.

12046. Therefore

12046. Therefore the captains of the steamers do not like to give over their vessels into their charge?—No; there are constant collisions from the mismanagement of pilots which would not have occurred if the master had not given up the command.

12047. Is it your experience that collisions frequently occur from the inexperience of pilots managing large vessels?—Yes.

12048. On the whole, the Chamber of Commerce of Falmouth is strongly of opinion that compulsory pilotage should be abolished, and that advantage would result to the town from the passing of this Bill?—They are very strongly of that opinion.

12049. They believe that it will bring more trade to the port than at present frequents it?—Yes, it will materially increase the trade of the port.

12050. Mr. *Stevenson.*] Do foreign ships bound to foreign ports call for orders at Falmouth?—Yes.

12051. Is that because the French coast is a bad one to call at?—It is the most convenient port.

12052. Is it not the case that those vessels have been liable to light dues by calling for orders?—Yes.

12053. That is to be altered?—Yes.

12054. Will that increase the number of foreign ships that select Falmouth to call for orders?—Yes.

12055. And that will increase the earnings of the pilots for the future, will it not?—Probably.

12056. So that in that respect, although compulsory pilotage should be abolished, there is a prospect of increased employment for the pilots, notwithstanding the change?—Yes, that is so.

12057. Mr. *Malcolm.*] Do not you think that the fact that the pilots go to sea in bad weather, and not in fine weather, is more the fault of the pilotage authorities than the system of compulsory pilotage?—It is very difficult to remedy it; very few masters will take the trouble to make formal complaints. There are some occasions when a pilot has been suspended for a short time, but the evil occurs again the same as ever.

12058. You say that Falmouth is so easy of access that pilots are not required, and yet you say that vessels are delayed in bad weather because they do not get a pilot?—I refer more to the weather. A master who has once been to Falmouth would probably not take a pilot in future, particularly if he is obliged to give up the command of his vessel to that pilot.

12059. Is that the fact; is he obliged to give up his command?—At present he is.

12060. In point of fact, you think that, as the system is at present constituted, the Falmouth pilots are thoroughly inefficient?—Many of them are very inefficient.

12061. Mr. *Gourley.*] Have you much loss of shipping at Falmouth?—In a gale in March 1867, there was a very great loss.

12062. But I believe the harbour is so capacious at the entrance that vessels can be worked in and out by their commanders without the assistance of pilots?—Very easily.

12063. Is it well buoyed?—The channel is very wide and the steam tugs generally tow the vessels to sea.

12064. With the assistance of steam tugs the pilots are really of no service whatever to the ships coming to your port?—Not going to sea; the ships are delayed waiting for pilots, and that is a very serious loss to the merchants and shipowners.

12065. If this Bill becomes law, I apprehend that the captains would not wait for the pilots, but that they would go into Falmouth navigating their vessels according to their own judgment?—Yes.

12066. The channel being broad, is it also sufficiently well buoyed?—Quite sufficiently buoyed.

12067. What is the primary cause of danger in the neighbourhood of Falmouth; is there any danger in the coast, or is there simply danger of collision from the large crowd of vessels sometimes in the port?—There is no danger, but a vessel making the port for the first time would naturally prefer having a pilot.

12068. But in the absence of a pilot there would be no difficulty in a vessel entering the port?—No; there is the black rock in the middle, with a beacon on it.

12069. Is it lighted up at night?—No.

12070. Can vessels enter the harbour at night without the assistance of a pilot?—Yes.

12071. You said that the pilots are not in the habit of going out to look for vessels in bad weather; is there no pilotage board by which the working of pilots is regulated?—There are three sub-commissioners of pilotage.

12072. Are the pilots subject to those commissioners?—When a complaint is brought against a pilot, the case is heard before the sub-commissioners, and if great neglect is shown the pilot is occasionally suspended for a short time.

12073. Under whose authority are those sub-commissioners?—Under the authority of the Trinity Board.

12074. Would it not be much better that you should have a pilotage board with the elements of merchants and shipowners belonging to the port to regulate the working of the pilots?—There is a Bill now before Parliament to create a harbour authority to regulate the mooring and berthing of ships that use the port, that will do all that is necessary.

12075. And that will improve the pilotage system whether it is voluntary or compulsory?—Yes; I have a letter from the largest shipowner in Falmouth, he is also agent for several insurance clubs. He says, "In reply to your questions on the pilotage at this port, I can only state that during the last 16 years that I have resided in Falmouth, and for six years previous to it, I was constantly trading to the port, it has always been loudly complained of by shipmasters, their being compelled to take a pilot, and in stormy weather seldom one to be had. I have frequently seen ships running in without pilots, and flags up, but could get none, whilst pilot cutters were in at their moorings; those cases were so frequent, as well as the complaints of the masters, that no one made any note of them. The Cape steamers, belonging to Mr. Gray, mostly paid for pilots, but seldom had them. Captains Stark and Edgington always preferred to be without them; the latter had to bring his ship in on a dark stormy night, the first two voyages without a pilot." That is Mr. Handcock; he is the largest shipowner at Falmouth, he represents most of the clubs in the north of England, and he is surveyor for the Bureau Veritas.

12076. *Chairman.*] He has large experience of foreign vessels coming into the port?—Yes.

Mr. *H. Fox.*

15 June 1870.

12077. And I believe he is a nautical man?—He is.

12078. Mr. *Malcolm.*] Are not the Falmouth pilots under the Trinity Board?—Yes.

12079. Then how is this Bill going to improve them?—I think they will be much more active.

12080. But they will be under just the same regulations as they are at present, will they not?—Yes, but when they have to work a little harder for their money, they will do the work better also.

12081. *Chairman.*] They will then seek their vessels, instead of their vessels seeking them?—Yes.

Mr. Henri Josse, called in; and Examined.

Mr. *H. Josse.*

12082. *Chairman.*] You are a merchant at Grimsby?—I am a merchant in Grimsby, and I have resided at Grimsby since 1855.

12083. And you have had considerable experience of the shipping at Grimsby?—Yes, very large, both in steamers and sailing vessels.

12084. The pilotage of Grimsby is practically under the Hull district?—It is under the Hull district management altogether. The Grimsby pilots are appointed by the Hull Trinity House, and the earnings are collected by the Commissioners in Hull, and they do the work for Grimsby.

12085. The pilotage is compulsory on all foreign-going vessels?—It is, going both ways, and it is very stringent, indeed, because the Act of Parliament, which is special to the Humber, I believe, makes the merchants liable for the pilotage. The merchant who clears the ship is liable for the pilotage, so that if a captain thinks fit to go without taking a pilot, the pilotage still would fall upon the merchant; so that when any merchant in Grimsby, or shipbroker in Grimsby clears a ship, he has to charge the captain with the pilotage amount before the pilotage has been earned.

12086. Are there any exemptions in respect of foreign-going ships?—There is no exemption whatever.

12087. The exemptions are only in favour of the coasting trade, I believe?—Yes; I may say that Grimsby has a very easy access, and there are always plenty of tugs at the mouth of the Humber. There are between 15 and 20 tugs which take the vessels in and out, and most of those vessels do not require pilots. These vessels trading to Grimsby are not valuable, like the vessels trading to London and Liverpool, and the cargoes are not so valuable either, and the voyages are much shorter; so a Baltic vessel makes two, three, or more voyages with the same captain, and the pilotage is very heavy.

12088. They are mostly vessels going to the north of Europe, are they not?—Yes.

12089. Vessels which, if they went to the Thames, would be free from pilotage?—Yes.

12090. But coming from the Humber, they are liable to pilotage?—Yes.

12091. What is the total amount paid for pilotage, in respect of vessels coming to Grimsby?—I believe the pilotage paid in Grimsby is between 4,000 *l.* and 5,000 *l.*

12092. How many pilots are employed there?—Twelve. I believe the pilots get half of the money paid, and the other half goes to Hull, and is disposed of by the Commissioners as they think proper.

12093. Upon the whole, is it your opinion that compulsory pilotage should be abolished as far as Grimsby is concerned?—Yes; we have French steamers there, trading between Grimsby and Dieppe; I sail a steamer every two days, and I receive a steamer every two days, so that I have a steamer going out or coming in every day. Those are French steamers built in England. Originally those steamers were subject to pilotage; that was 5 *l.* for each pilotage, which is equal to 150 *l.* a-year for each steamer; but our French captains have been received pilots of the Humber and now we save the pilotage.

12094. They have obtained a certificate?—Yes, and both the owners, ourselves, the insurer, and the French underwriters, prefer the vessel to be managed altogether by the captains rather than the pilots. We never have had a single accident going in or coming out of the harbour since our captains have piloted the ships, but before we had several, and there never was any redress.

12095. Is it your opinion that placing large vessels under the complete charge of pilots, has tended to accidents?—Yes; and very often long delays have taken place, of which the captains have complained, but now we never employ them; I may say also, that there is a large class of vessels which belong to the Humber. Those little vessels which are about 150 to 180 tons go to Dunkirk, or Havre, or Dieppe, and they are liable to pilotage both ways. Those little vessels carry a freight worth about 50 *l.* or 60 *l.* and they have between 2 *l.* and 3 *l.* to pay in pilotage; and most of the captains belonging to the Humber know the river as well as the best of the pilots.

12096. Are the vessels which you speak of vessels engaged in the coasting trade, but which occasionally take voyages to the Continent?—Yes. If a vessel goes to Dunkirk, there is a pilotage of 2 *l.* 10 *s.* or 3 *l.* to pay.

12097. There it is not worth while for a captain to get a certificate in the ordinary manner? None of the captains of sailing vessels are received pilots, because they are not in the port enough. It is only a captain who resides in the place who takes his certificate. The captains of the Hull and Grimsby steamers are generally Humber pilots, but no captain of a sailing vessel, to my knowledge, is a Humber pilot.

12098. What is the reason of that?—I do not know exactly the reason, but there is some difficulty about it. A captain has to pass an examination, and he has to stop on shore two or three days to do so. A sailing vessel comes to Grimsby two or three times a year, and a captain will not take the trouble, of course, or go to the expense of being received a Humber pilot.

12099. Have you paid considerable sums of money for pilotage during the last few years which you consider, practically, thrown away?—I pay an average, now, of over 1,000 *l.* for sailing vessels; but when our steamers had no pilotage I was paying 500 *l.* or 600 *l.* more.

12100. But you still pay at the rate of 1,000 *l.* a year?—Yes, or more than that.

12101. Out of that, how much do you consider you would pay in the event of this Bill being passed?

passed?—I suppose one half or two-thirds of them would still take a pilot, but I think the service would be better rendered if it was thrown open. There is no emulation among the pilots. They know perfectly well that their services are compulsory, and that they will be paid. They only get a certain per-centage of the charges. I believe half of their earnings go in extra per-centage.

12102. In your opinion there would be a considerable employment for pilots after the passing of this Bill, though it would not be so great as at present?—Yes. From what I know of Grimsby, the pilots are anxious that it should be thrown open. The whole of the Grimsby owners, with the exception of one, would like it.

12103. In your opinion, after the passing of this Bill, there will be sufficient employment for a considerable staff of pilots, and those men will be more active, and their services will be better rendered?—Yes.

12104. Have there been any evil results from the operation of the law which exempt the owner from responsibility, where there is a compulsory pilot on board?—The owner is exempted from the damage he causes to another ship, but if he sustains any damage himself, he has no redress with the compulsory system. The pilots are men who earn 120 *l.* a year, and they are not answerable for any damage, so that you have no redress at all; I have known several cases. The Board of Hull does not acknowledge any liability of the pilots; the pilots themselves being poor men, have nothing to answer for, and therefore there is no responsibility whatever. If a pilot does any damage you have to stand by it, for you have no redress whatever.

12105. You stated just now, that the navigation to Grimsby is very easy, and that it is inside the Humber river?—Yes, it is very easy, and it is nearly opposite the Spurn Roadstead, which is the best road on the east coast; and besides that, the tugs belonging to Grimsby and Hull are constantly there, and they get in and out without requiring any pilots. Many captains would not take a pilot when they took a tug, because the tug does the work.

12106. Do you know anything of the navigation of the Humber river up to Hull?—I do not practically; I know what the pilotage is in Hull, because I have an office there.

12107. Are the difficulties of the navigation great or not, from Grimsby up to Hull?—I get a great many vessels coming from Hull to load in Grimsby. The captains complain, because the vessels are obliged to take a pilot coming down from Hull to Grimsby; they are still obliged to take a pilot, even if they move from Hull to Grimsby.

12108. Are they not exempt as coasters?—No, they are not considered coasters, becase it is the beginning of a foreign voyage; if a vessel takes a ballast of coal, or a ballast of sand, and comes down to Grimsby to load, it is not a coasting voyage at all, it is a portion of a foreign voyage. The authorities interpret it in that way; I tried to resist it on behalf of the captains, but it was of no use; they would enforce the pilotage.

12109. Is there not a considerable number of small vessels running up to Goole, and other places?—Yes; but there have not been so many lately.

12110. I suppose the steam trade has rather interfered with them?—Yes; at one time there were a great many small French vessels coming in from Bordeaux, and all that district into Goole, but it has been much reduced, and those men have been complaining fearfully of the expense, in fact, they had no idea of the expense; the pilotage from the mouth of the Humber to Goole is fearful.

12111. It must be a very serious charge to the vessels?—It is more than they expect to earn in a voyage; the captains will not have come, except from having the order and being bound to come, and when they found their mistake there was no end to the complaints.

12112. It is a very serious item on the whole concern?—Yes; it is a great tax upon the shipping, and only one-half of what is collected goes to the pilot.

12113. The remaining half goes in the expenses of boats, and management in Hull?—Yes.

12114. In your opinion, the whole expense connected with pilotage might be materially diminished with great advantage?—Yes, it would be to everybody's advantage; to both the vessel and the pilot as well.

12115. You think that an advantage will result even to the pilot?—Yes; there are a number of poor pilots who would have to give way, but the good pilots who understand their business would make a good living.

12116. Good pilots will continue to make a good living out of it, and inferior ones will be practically taken off?—Yes.

12117. Mr. *Graves.*] Do your vessels trade to France?—My steamers do trade to France regularly.

12118. What is the system of pilotage that you find there?—In France, pilotage is also compulsory; but I believe there is now the same stir in France as there is in this country about pilotage, and I am convinced that it will soon be abolished.

12119. Have you at all compared the rates you pay in France with the rates you pay in Grimsby?—I think they are very nearly the same; there is a very slight difference in the pilotage; I can only give the pilotage in Dieppe; I know nothing of any port except Dieppe. In the port of Dieppe, the pilotage would cost us about the same on the French side as it would cost us on this side if we were to employ a pilot.

12120. Is the navigation of Dieppe more difficult than the navigation of Grimsby?—It would be more difficult, certainly.

12121. Is it?—It is more difficult.

12122. In Dieppe, where your vessel trades, the compulsory system is in full force, is it not?—It is in full force.

12123. You said, you felt that it would be to the advantage of the pilots that this charge should be made?—Yes.

12124. Have you been able to persuade them that it is to their advantage to lose 500 *l.* a year?—I have not persuaded them on the subject, but I heard two or three of the best pilots in Hull speaking on the subject. Those pilots complain that a great deal of their earnings is wasted. When they know that they earn about 4,500 *l.* every year, and receive less than half of it, they do not consider it fair. At the same time, those who are good pilots fancy that, if it is a free trade, they will do better than they do now.

Mr. *H. Josse.* — 15 June 1870.

12125. I think you stated that, from one-half to two-thirds of your own vessels would still take pilots?—Yes.

12126. If all the shipowners of Grimsby took the same view as you do, of course there would be only one-half to two-thirds of the vessels entering Grimsby who would take pilots?—I do not think that there are half a dozen of the vessels which come there belonging to the port; most of them are foreigners, or English vessels belonging to other ports.

12127. I believe your vessels are mostly foreign vessels?—Yes, but not belonging to the port.

12128. If only one-half, or two-thirds, coming to your consignment, took pilots, I presume that from one-half to two-thirds of the vessels coming to other consignments, would do the same?—Yes.

12129. It seems an odd kind of reasoning, that you think it an advantage to the pilots that they should lose one-half of their income?—If they were to lose half their income, and save their expenses, which they actually incur, without any reason whatever, they would be no worse off. The expenses of pilotage, which do not go into the hands of the pilots, is more than one-half their earnings.

12130. *Chairman.*] However, you assume that there would be a reduction in the number of pilots.—Yes.

12131. And you think that those who remain, would be better off than they are now?—Yes, and they would not be subject to those heavy expenses, of which they complain.

12132. Mr. *Graves.*] Am I to understand that your objection to the present system arises principally from being taxed for pilots in your port?—Yes.

12133. Mr. *Stevenson.*] You say that more than one-half of the pilot's earnings go to other people?—Yes.

12134. Who gets them?—There is the commissioner of pilots, in Grimsby, and there is the commissioner in Hull. The pilot performs his services, but he does not collect his money, his money is collected on behalf of the commissioners in Hull, and goes into their hands.

12135. Is it collected at the Custom House?—No, it is independent of the Custom House, The Hull Trinity Board is an independent board of gentlemen, in Hull, who manage the pilotage.

12136. And they collect the money for the pilots?—They collect the money for the pilots, and are paid so much per cent. for collecting the money. The whole of the money goes to Hull.

12137. I find that there is 13,738 *l.*, of which amount 10,599 *l.* was paid to the pilots?—I do not think that that is just.

12138. Besides which there is a payment to the "Clerk and Commodore, Collectors, Incidentals, Pilot Cutters, 1,687 *l.*;" is that a necessary expense?—There are seven pilot cutters; I am not a practical man, but the pilots I have seen say that three cutters would be quite sufficient.

12139. Instead of seven?—Instead of seven.

12140. Then there is another item of 939 *l.*, which is described as being deducted from the outward pilotage for apprentices, victuals, tows, barges, boatmen, tug, and hooking vessels?—I do not know the details of that.

12141. Are those necessary expenses of the pilotage?—I believe myself that they are not; but I understand from the pilots that they consider their expenses very extravagant, and the object they have in supporting this Bill is this: the pilots say, in one point of view, this new Bill will reduce our earnings; we must be in a position to curtail our expenses, because if our earnings are reduced, and our expenses remain the same, we have no control over the expenses. It is the Hull Board who regulate the expenses.

12142. They think that if the Bill is passed it will open the door to the reform of those abuses?—Yes; in fact, that is the pilots' view of the question.

12143. Mr. *Malcolm.*] You have read the Bill, I have no doubt?—I know the meaning of it.

12144. How do you think this Bill is to cure these evils; this Bill does not interfere with the Pilotage Board; it leaves the pilots under the control of the same board, does not it?—It will interfere in this way: the pilots are appointed and get their certificate from the Hull Trinity Board in Hull; that will remain the same, but I understand that it will do away with a portion of the management.

12145. I do not think you will find that in the Bill?—I think it does so from what I understand.

12146. Mr. *Gourley.*] Are all the vessels which enter Grimsby, whether coasting or foreign, subject to compulsory pilotage?—Not the coasters.

12147. Are the coasters free?—Yes, coasting to England. All vessels going to foreign ports and coming from foreign ports are liable to compulsory pilotage.

12148. Are the vessels in the coasting trade as large as the vessels in the foreign trade?—No, they are not so large.

12149. Are they so numerous?—No, certainly not.

12150. Are they as well navigated without a pilot as those which carry pilots?—Just as well. A small vessel will go two or three coasting voyages to London and Gravesend at one time, and at another time it will go to Dieppe, Havre, or Dunkirk.

12151. Where do the pilots meet the vessels bound inwards to Grimsby and Hull; outside or within the Grimsby harbour?—They meet them outside the harbour, in what they call the Roads.

12152. Is it necessary to have large pilot cutters to go out to meet them, or could they go out with small boats?—They could work with small boats; they could work with the tugs; there is always a tug about there, and the pilots could use the tugs as well as the cutters.

12153. I believe Grimsby is used very much as a harbour of refuge for vessels trading along the coast in that neighbourhood?—Yes, it is.

12154. *Chairman.*] Grimsby itself is not used in that way, but the Roads, inside the Spurn Point, are so used?—Yes; those vessels seeking refuge never come into the port; they only come for shelter in the Spurn Roads.

12155. Mr. *Gourley.*] Do they carry pilots?—No; a vessel coming into the harbour for refuge is exempt by the Act from pilotage.

12156. That proves that there is no danger in taking the entrance of the harbour without a pilot, does it not?—Certainly.

12157. *Chairman.*] Do many take pilots when they come in for refuge?—No, never.

12158. Mr. *Gourley.*] Do they take pilots outwards?

Mr. *H. Josse.*

15 June 1870.

wards?—In bad weather many vessels will come round the Spurn, and stop at anchor there till the weather moderates, and then they will go away; they come in without a pilot, and they go away without a pilot.

12159. When once the vessel is inside the harbour in the Grimsby Roads, is there any difficulty in navigating her into your docks?—No.

12160. I suppose a steam tug could do all the work?—Yes.

12161. If this Bill becomes law, do you think that there would still be a large amount of employment for pilots on the part of foreign vessels?—I think some masters will take pilots, but they will strike a bargain, and they will be certain to have the services well rendered.

12162. You would not consider it to be a good regulation, would you, that masters should make bargains with a pilot, and you would consider that the price should be regulated by some board?—Yes, by the local board.

12163. By what regulation is it that the merchants of Grimsby are now liable to pay the pilotage on foreign cargoes?—It is in the Humber Pilotage Act that the party who clears the vessel is liable to the pilotage.

12164. Is that in the Act of the Hull Trinity Pilotage?—Yes.

12165. Where do the Grimsby pilots locate themselves at Grimsby? — Twelve live in Grimsby.

12166. Do they go out in the large cutter-boats?—They go out in the cutters in turn one after the other.

12167. What size are the cutters?—I believe those cutters are about 100 tons.

12168. Are they always out at sea?—Yes, I suppose they are; there is always a boat at sea; there is one in the dock and one at sea.

12169. You say it is not necessary to have as many boats as they have now?—No.

12170. And that they can dispense with half of them?—Yes, they can dispense with half of them.

12171. I suppose the pilot is really of no use till the ship reaches round the Spurn and enters smooth water?—Yes; and then it is not required to come into Grimsby.

12172. *Chairman.*] Did I understand you to say that there is an agitation now in France for the abolition of compulsory pilotage?—I think it is mooted; I do not think there is any public measure as yet taken, but I know from the pilots that there is a great talk of it. The movers in France, strange to say, are the underwriters. The underwriters prefer to have the ships managed by the captains and not by the pilots.

12173. I believe there is no system in France by which a master of a steamer can get a certificate of pilotage?—No, it is a Government affair altogether. It is not a local Act, the same as you have in this country; there is a general Government Act.

12174. As I understand you, the underwriters think it of such importance that the steamers should remain under the charge of the masters that they wish for the abolition of compulsory pilotage?—The underwriters are the first movers in the matter in France.

12175. Sir *C. Wingfield.*] Then they have more confidence in the masters than they have in the body of pilots?—Yes.

12176. Mr. *Graves.*] Does not their desire arise from the wish to do away with that exemption from liability which a pilot on board brings with him?—It is the same for the owner as it is for the underwriter.

12177. Do you state that in France the underwriters are advocating a principle which allows a captain to take a pilot or not, just as he pleases?—No; I understand that the underwriters in France want to do away with the French pilotage, and not to make it compulsory.

12178. Is the reason of that wish that they think the vessel is safer without a pilot than with one?—I suppose so.

12179. *Chairman.*] That is where the master knows something of navigation? — Exactly. Because the French underwriters are very particular, and we have been able ourselves every year to reduce our premium of insurance from our vessels, doing no damage whatever.

12180. Mr. *Graves.*] If an underwriter put into his policy that a ship should not carry a pilot, would not that have the same effect?—No, the underwriter cannot interfere with the present law.

Mr. Thomas Oates, called in; and Examined.

Mr. *T. Oates.*

12181. *Chairman.*] I believe you are a shipbroker residing at Grimsby? — Yes; I am an agent for Lloyd's at Grimsby, and a shipowner, too.

12182. Are you well acquainted with the system of compulsory pilotage, as now carried on in the Humber?—Yes.

12183. Have you heard the evidence given by Mr. Josse on the subject?—Yes.

12184. Do you generally agree with him?—I do agree with him.

12185. Do you consider that the compulsory pilotage in the Humber entails a considerable burden upon the owners of small vessels?—It does. It entails burdens upon the owners of the small class of vessels, and prevents them getting to Continental ports, such as Havre, Dieppe, and Dutch ports. The freights are so low, and they cannot pay the heavy pilotage entailed in and out. Many little vessels drawing twelve feet of water, and only carrying 150 tons of cargo pay as much pilotage as another vessel carrying 400 tons of cargo, because the pilotage is levied by the foot, and not upon the tonnage of the vessel. Therefore the smaller vessels are taxed to a much greater extent, in proportion, than the larger ones.

12186. Therefore it falls very heavily upon these smaller class of vessels?—Yes.

12187. There is a great trade in small vessels from the Humber to the North of Europe and the French coast, is there not?—Yes, and now there is a large trade to Norway carrying lobsters and mackerel.

12188. And many of them are engaged in the coasting trade at other parts of the year, are they not?—Yes, they are generally employed in fishing the other part of the year. If they go across to bring fish, then that brings them under the Pilotage Act.

12189. Then they find themselves compelled to take a pilot?—Yes, either to take a pilot or pay for him.

12190. I believe there is a considerable trade

Mr. *T. Oates.*

15 June 1870.

of the same class at Goole and other ports higher up the Humber?—Yes.

12191. In small vessels?—Yes. Small vessels trade from Goole to different French and Dutch ports as well.

12192. Is what you represent generally the feeling of the shipping interest at Grimsby?—Yes. The pilotage is felt to be a great burden upon the smaller class of vessels, and there is frequent complaint about the larger vessels not being able to find pilots when they require them, particularly in the winter months; that is in consequence of the system under which the pilotage is worked.

12193. Has any evil resulted, in your experience, from the fact that owners are exempt from damage done by a vessel when under the charge of a compulsory pilot?—Yes; we have had two or three cases of the kind, in which people have had to suffer in consequence of having had a compulsory pilot on board their vessels. They have received damage, and they are unable to recover.

12194. When the small class of vessel has received damage from a larger vessel, the larger vessel being under the charge of a compulsory pilot, no damages can be recovered?—The smaller vessel has been unable to recover anything, because, as a rule, the pilots are unable to meet any charges of the kind; and if they did attempt to recover, under the present state of the law, it would be difficult to do so.

12195. It has been suggested that that evil might be met by making the owner responsible for the act of the pilot, though he is bound to take him?—It would be unjust to compel a man to take a person on board a vessel, and then to make that man responsible for any damage done by that person, because he cannot be held to be the owner's servant if the owner is compelled to take him. If the owner voluntarily takes a man on board his vessel, and gives him the command of that vessel, if that man causes damage, the owner should be held responsible, inasmuch as he has the choice of the man to whom he gives the charge of his ship.

12196. If the owner is compelled to employ him, you think he ought not to be responsible?—I think it would be unreasonable and unjust to make him so.

12197. Have you any opinion to give with regard to the management of the pilotage system on the Humber now?—The system is a very bad one. It is a monopoly. The men know that the ships are compelled to take them, and, consequently, they are very careless about rendering their services. As a rule, they render their services when it suits them. Practically, we have no control over the pilots at Grimsby. The pilots are under the board at Hull, and there is nobody at Grimsby that has any control over them.

12198. What, in your opinion, will be the effect of the abolition of compulsory pilotage, as far as the pilotage service is concerned?—As far as the pilotage service is concerned I believe that the efficient men will get more money than they do now. Their services will be frequently in demand; and, I believe they will make more money than they make now; nine-tenths of the vessels that come into Grimsby are foreign vessels, they come to Grimsby one year and go to some other port the next year.

12199. In your opinion, would those vessels continue to take pilots?—Very often they would.

12200. Would the relation of the pilot to the captain be more satisfactory then?—Certainly.

12201. And there will be a greater inducement to a pilot to look for his vessels, and to be active in the service?—Pilots will look then for the ships, instead of the ships having to look for the pilots, which they very frequently have to do now.

12202. It has been suggested that it is very doubtful whether the pilots will go out in bad weather to look for vessels; will that, in your opinion, be the case?—There is no doubt, if the pilotage was not compulsory, they would be always out at sea. There are a set of pilots at Grimsby at present who work upon the voluntary system.

12203. What pilots are those?—The pilots are licensed by the Trinity House of Hull for the purpose of piloting vessels from the sea to Lynn, Boston and Wisbeach. These ships are not obliged to take a man as pilot, but if they take anybody they must take a man licensed for the purpose. These men are constantly at sea, always looking out for vessels, and I should think it is a rare occasion that any vessel bound to those ports has not a pilot offered.

12204. Are they out in all weather?—Yes.

12205. Do they find more vessels in bad weather, than in fine weather?—Yes, they find a great many vessels. Many vessels take the man offered to them; it is the same in those places as at Grimsby. Most of the vessels frequenting these ports are either foreigners or vessels belonging to other English ports.

12206. Do you find those men very diligent in their service?—Yes.

12207. Therefore you have had experience of the two systems, both the voluntary and the compulsory system?—Yes. Many of these men fall in with vessels at sea. When they cannot get a Humber pilot they bring them to a place where they can get a Humber pilot, and when they get into Humber waters they are superseded.

12208. These men are obliged to look for their bread?—Yes.

12209. And that acts as a great inducement to them?—Yes.

12210. Do you think that the same motive will be brought to bear upon the present compulsory pilots in the Humber, if the Bill before the Committee passes into law?—Yes, these men will be at sea, and I believe the efficient men would earn more money than they do at present; at least they would get more, because they do not get what they earn now.

12211. Mr. *Gourley.*] Is the Pilotage Board at Hull a paid board, or is it a board which gives its services voluntarily?—I believe it is voluntary; I believe it is not a paid board; it is a board constituted by a private Act of Parliament.

12212. What is the cause of all the heavy expenses of management; there is a large sum deducted every year for management, is there not?—Yes, they have a large office in Hull, a collector, a commodore of pilots, and two officers who have to be paid. They have seven pilot boats, four of the boats are always in dock, and three of them only are at sea, consequently there is the cost of keeping up these seven boats, which makes

Mr. *T. Oates.*

15 June 1870.

makes the expenses large in proportion to their earnings.

12213. Is it necessary to have such an expensive control?—No.

12214. In what kind of boats do the voluntary pilots go to sea?—In little vessels of from 30 to 40 tons register.

12215. Do they buy the boats themselves?—Yes, they are their own boats.

12216. The Trinity Board has nothing to do with the boats at all?—No; the Trinity House licenses the men, and the boat has a license from the Trinity House too.

12217. What is the value of the boats?—I should think they would cost about 700 *l.* each.

12218. Are they sufficient for all their pilotage services?—Yes, and they go further out to sea than the Humber pilots. They cruise between the Humber and Flamborough Head on the north side of the Humber, to the Deeps on the south side.

12219. Where do the Humber pilots meet the ships?—Outside the Spurn; Dimlington Highland is the point to the north, and Donna Nook Beacon to the south.

12220. Where do they meet them?—They meet them there in fine weather, but when a breeze springs up, they often come into the roads before meeting a pilot.

12221. A ship can come into the Grimsby Roads as well without a pilot as with one?—A stranger cannot, but a man used to the place can; ships of 250 or 300 tons register do.

12222. Who do you think should be responsible for accident caused by negligence when in the charge of a pilot, the owner of the vessel, or the master, or the pilot?—The shipowner should certainly be responsible if the negligence is caused by his servant; but if he is to employ a compulsory servant, I do not see that he should be liable, because he has no choice.

12223. Are his own officers not compulsory, inasmuch as they have to pass an examination?—Yes; and it is his lookout to see that he gets competent men into his vessel.

12224. You think the shipowner should be responsible for acts over which he has no control?—You must put the responsibility somewhere: the man has no control, in one sense, because he is not there himself, but he has control in this manner, that he should know something about the qualification of the man to whom he commits the charge of his ship.

12225. Is he not very often deceived?—Yes.

12226. But you would not make the owner responsible for the negligence when he is deceived in the man he has employed, would you?—I cannot see how you could avoid it.

12227. *Chairman.*] You speak mainly of the pilotage into Grimsby; does the opinion you have given, hold good with regard to Hull?—They are under the same control.

12228. Do you yourself know anything of the navigation of the Humber up to Hull?—Yes.

12229. Are there any reasons for making an exception in the case of Hull?—None whatever.

12230. Is the navigation really easy up to Hull?—Yes; it is very easy navigation.

12231. And up to Goole?—No, not above Hull. The navigation from Hull to Goole and Gainsboro' is not easy, because the sands frequently shift.

12232. But there is a strong feeling in those places against compulsory pilotage, is there not?—Yes; inasmuch as only small vessels can reach those ports. There is not depth of water for the larger vessels to get there, and the expense of pilotage for small vessels is prohibitory in many places.

12233. And that in fact deters trade?—Yes it does deter trade.

12234. Mr. *C. Turner.*] I believe only small vessels go from Hull to Gainsboro'?—Yes.

12235. And I believe it requires more than one tide?—They get up sometimes with a steam tug in one tide.

12236. *Chairman.*] There has been a considerable trade in small vessels from those ports to the Continent, has there not?—Yes, there used to be.

12237. Now they feel the competition by steamers?—Yes, and the railways have something to do with it is as well.

12238. Mr. *C. Turner.*] Is there a Custom House at Gainsboro' and Goole?—Yes.

12239. The principal trade of Gainsboro' is grain, is it not?—Yes, inwards, and coal and stone outwards.

Captain JAMES JOHNSON, called in; and Examined.

Captain *J. Johnson.*

12240. *Chairman.*] You are a retired commander of a coast-guard cruiser?—Yes.

12241. And you have resided for many years past at Milford?—Yes.

12242. During a greater portion of the time you were commander of the coast guard cruiser, did you cruise in all parts of the coasts of England, Ireland, and Scotland?—Yes.

12243. And more generally on the Welsh coast and in the Bristol Channel?—Yes.

12244. Have you considered the Bill before the Committee?—Yes.

12245. Will you state to the Committee your opinion on the advisability of abolishing compulsory pilotage?—I think that compulsory pilotage ought to be a thing of the past. From the beautiful manner in which the charts are got up and the coasts buoyed and lighted there really is no such great necessity now as there was years ago for pilots.

12246. Taking those ports that you are familiar with in the Bristol Channel, is there any reason for maintaining compulsory pilotage at those places where it is maintained?—At Milford, for instance, the dangers are so very few that it can be entered at any time, night or day, with or without a pilot.

12247. Pilotage is still compulsory at Milford, I believe?—Yes.

12248. Are there any exemptions from pilotage there?—Yes, vessels putting in from stress of weather do not pay pilotage.

12249. Supposing compulsory pilotage is abolished, what is your opinion as to the extent to which pilots will be employed at the minor ports?—I think you would have a better class of men, and they would keep to sea more.

12250. There would be a greater inducement for them to go and seek their vessels, would there not?—Yes; and the good men will always be employed, particularly by foreign vessels.

12251. Therefore, in your opinion, there would

Captain *J. Johnson.*

15 June 1870.

would be a considerable employment of pilots after the Bill is passed?—Yes; I believe the same number of pilots will be employed in Milford as now.

12252. Only you think they will be a better class of men?—Yes; it would soon be seen that the good men would get employment, and the bad kind of men would have nothing to do.

12253. As it is now, feeling themselves certain of employment, there is a dead level kept up among them?—I know that shipmasters come to them; they do not go to look for the ships.

12254. What is the rule of the Admiralty as regards having a pilot?—You are allowed a pilot in and out three times going to a strange port.

12255. And after that what is the rule?—Then you are supposed to make yourself so well acquainted with the place that you are not allowed to take a pilot after the third time.

12256. Is it left to their discretion whether they will take a pilot or not?—They are not bound to take a pilot the first two or three times, but they are allowed a pilot three times if they are not acquainted with the port.

12257. Is that in the case of the Admiralty cruisers?—It is the case generally.

12258. Therefore it would follow from the same rule that masters of merchant vessels after they have been two or three times to a port should be competent to enter that port?—The charts are so plain and beautifully got up that you can scarcely make a mistake.

12259. If vessels now put into Milford or other ports from stress of weather they are not bound to take pilots?—No.

12260. Taking the case of Milford Haven, is there any reason why any system of compulsory pilotage should be maintained there?—No, I do not think so.

12261. The approaches are very easy, are they not?—The shallowest part has 18 feet of water at low water spring tides, and there is a rise of 23 feet of water there.

12262. Do you know anything of the other ports of the British Channel, particularly Swansea?—I know Swansea very well.

12263. Is there any reason why they should be exempt there from the operation of this Bill?—I do not think so.

12264. Is the port easy of access?—It is a pier harbour; at tide time you run to the pier.

12265. Comparing Swansea with Cardiff and Gloucester, is there any reason why there should be a compulsory system at Swansea and a voluntary system at Cardiff and Bristol?—No; I think the ports up above are more difficult.

12266. Therefore there is less reason for retaining the compulsory system at Swansea than there is at the other ports?—Yes.

12267. Do you know anything of the entrance to the Mersey?—Yes.

12268. Have you often been in?—Frequently.

12269. Without a pilot?—After the first time I had no pilot.

12270. You took a pilot the first time?—Yes.

12271. What sized cruiser was it?—139 tons, drawing 12 feet of water.

12272. You took a pilot the first time, and after that you frequently went in without a pilot?—The place is more plain to me than the streets of London, it is so beautifully buoyed.

12273. You have been in there very often?—Yes.

12274. And you have found no difficulty?—I have beaten in and out with a vessel.

12275. Is there any reason arising out of the difficulty of the navigation for maintaining the compulsory system of pilotage in Liverpool, supposing that it is done away with in other ports of the country?—It is not any more difficult from Point Linas than from the Tuskar up to the Skerries. If the pilots were there in thick weather, they would get employment down there more than up above; there are steam tugs all over the Channel.

12276. Mr. *Graves.*] Have you read this Bill?—I have.

12277. Are you aware that there is nothing whatever in that Bill to alter the present system of pilotage as regards the control of the local authorities?—Yes, I have read the Bill, and I understood that.

12278. The only alteration it proposes to make is that it should be optional for the shipowner to take a pilot or not?—Yes.

12279. Taking Milford Haven, where the navigation is very simple and easy, is it likely that a man would take a pilot in and out there?—Foreigners would.

12280. But only foreigners?—There are some vessels with which the masters would not run the slightest risk.

12281. But you would consider a ship as safe going into Milford Haven without a pilot as with one?—If the man has a good chart, I do not see the slightest difficulty.

12282. Then, in all such ports pilots are of no use?—No.

12283. Do you consider that a pilot at all tends to give greater security to life in such a harbour as Milford?—Certainly, for strangers it does.

12284. But only for strangers?—Yes.

12285. Supposing that the income of the pilots of Milford Haven is entirely confined to the foreigners coming in there, would not that very materially limit the income of the pilots of Milford?—It certainly would.

12286. Would you consider that a Bill which would have such an effect could be for the interests of the pilots of Milford generally?—I think that the pilots would keep to sea then, and they would get more employment than they do now.

12287. They would get more employment though only foreign vessels took them?—If they fell in with the vessels outside, they would be induced to take them.

12288. What is the proportion of foreign tonnage to the English tonnage in Milford Haven?—I do not know.

12289. Would it be half?—I dare say it would.

12290. You stated that Cardiff is more difficult of access than Swansea, do you mean from the Penarth Roads to Cardiff?—Yes.

12291. Is it not the fact that it is a mere canal cut through the mud for about two miles in length, perfectly straight?—That is the entrance to the dock.

12292. I say, from Penarth to Cardiff docks?—Penarth road is a long way from the entrance of the cut.

12293. But there is no bank of any kind intervening between the roads and the entrance to the cut?—There are shoals on the east side.

12294. I speak of between the usual anchorage and the entrance to the cut?—The anchorage is

is so limited, and the channel is so small, that there is a difficulty there.

12295. Are you aware there is a rule of the dock authorities of Cardiff that no vessel can enter the docks without a written order of the dockmaster?—No, I am not aware of that.

12296. Are you aware that no such regulation exists at Swansea, and that vessels run right in from the sea to the docks?—Yes.

12297. Are you aware of that distinction between the two ports?—Yes.

12298. Would not a pilot be more necessary in a port where there is no power of communicating as to the inability of taking him into a dock than in a port where he was only allowed to enter by a written order of the dockmaster?—At Swansea you can get into it at all times; you need not wait at all. You have a signal up to show that you are coming into one of the docks.

12299. Is not a pilot more necessary as a harbour regulation in a port where the dockmaster has no power to communicate with the vessel until she enters the river and the docks?—It is so different to Swansea, because Cardiff roadstead is a good roadstead.

12300. Mr. *Cave.*] I believe you have no port at all at Cardiff; there is nothing but a road?—There is the town of Cardiff, and the docks.

12301. But you have no port outside; there is no harbour?—No; it is an open roadstead.

12302. And except the open roadstead, there is nothing but the docks?—No.

12303. There is no harbour that you can get into except by going through the dock gate?—No.

12304. Therefore it is a totally different port to Swansea?—Yes.

12305. You can run into the Cardiff port from the open sea without going through lock gates?—The gates are open at a certain time of the tide.

12306. And only one vessel can go in at a time, I believe?—I think so; it is very narrow, I know.

12307. I think there are two or three sets of gates before you get into the port, are there not?—Yes.

12308. And there are locks?—Yes; I have not been there lately.

12309. So that you cannot say that a vessel can run from the sea into the port of Cardiff at all?—No, not from the roadstead.

12310. Therefore in arguing about pilotage, there is not the slightest resemblance between Swansea and Cardiff?—Swansea has a much easier approach than Cardiff.

12311. What do you mean by easier approach?—The Channel is so narrow to go into the docks at Cardiff.

12312. No one ever runs in from the sea into the docks at Cardiff, do they?—I do not think they are allowed; they must bring up in Penarth-roads till they have permission.

12313. To go into the docks at Cardiff, they must warp, they do not sail in, ropes are used, and they are dragged in by both sides, must they not?—Tugs take them in.

12314. But the tugs do not take them into the lock?—No; they are not allowed to tow them into the locks.

12315. Therefore a vessel cannot be said to sail into the port of Cardiff, although she does into Swansea?—Yes.

12316. Therefore, in arguing about pilotage, there is no relation at all between the two ports?—I do not think there is.

12317. Mr. *Gourley.*] Vessels cannot go into Swansea Docks any more than into the Cardiff Docks without having, in the first instance, the assistance of a tug?—You can sail right into Swansea; you are not allowed to carry sail into the dock, but you are to the entrance of the dock.

12318. Can you sail right up to the cut which leads into Cardiff?—Yes, you can if you like.

12319. Mr. *Cave.*] There is a harbour in one case, and no harbour in the other; there is a roadstead at Cardiff, and a harbour at Swansea?—Yes, a tidal harbour.

Mr. George Henry Evans, called in; and Examined.

12320. *Chairman.*] You are the Agent for the Liverpool and Bristol Channel Steam Navigation Company at Bristol?—Yes.

12321. And you have resided at Bristol for some years past, have you not?—About 24 years.

12322. Are you acquainted with the navigation of the Bristol Channel?—To a certain extent.

12323. And are you acquainted with the general shipping interest at Bristol?—As far as the coasting steamers are concerned.

12324. Previous to 1861, the ports of Gloucester and Newport were subject to the Bristol pilotage, were they not?—Yes.

12325. And Cardiff also?—Yes.

12326. And in 1861, the voluntary system of pilotage was established, as far as Gloucester, Newport and Cardiff were concerned?—Yes.

12327. Leaving Bristol with the compulsory system?—Yes.

12328. Will you state to the Committee what effect that has had upon the Bristol pilots and upon the Gloucester and Cardiff pilots?—Previously to the passing of the Act, there were 78 pilots in Bristol, and about 44 boats, and sometime after the passing of the Act, the number of pilots was, I think 60, with 40 boats.

12329. On the other hand, at Gloucester, Newport and Cardiff, a complete system of pilotage has grown up?—We had no returns before 1861 for Cardiff; but now I think there are 60 pilots at Cardiff; I am not sure of the number at Newport. In Bristol, in 1860, there were 78 pilots and 19 apprentices, and in 1869, 60 pilots and no apprentices; no return was made for Gloucester for 1860.

12330. There was no system of pilotage in Gloucester previous to 1860, and in 1869 there were 19 pilots?—Yes.

12331. And in Newport what was the number?—In Newport in 1860 we had 21 pilots, and in 1869, 28 pilots from Cardiff, we had no return in 1860, but in 1869 they had 67 pilots with 13 Bristol pilots having supplementary licenses.

12332. Then since 1860, the Bristol pilots have been gradually diminished in number, in consequence of their losing the pilotage to Gloucester and Cardiff?—Yes, to a certain extent.

12333. Have you compared the rates at present charged by the Cardiff, Newport, and Gloucester pilots, with those charged by the

Mr. *G. H. Evans.* 15 June 1870.

Bristol pilots?—Yes, I have to a certain extent. This is a comparative view of some of the rates charged by Cardiff, Newport, and Gloucester pilots, and those of Bristol: From Lundy Island to Cardiff, on 200 and under 300 tons burthen, the pilotage is 3 *l.* 15 *s.* From Lundy Island to Newport, on the same tonnage, it is 4 *l.* 6 *s.* Gloucester pilotage from Lundy Island to King's Road, is 3 *l.* From Lundy Island to Bristol, it is 7 *l.* 2 *s.* 3 *d.*, and from Ilfracombe to Bristol, 5 *l.* 7 *s.* 3 *d.*

12334. What is the general result which you draw from the change which has taken place as far as Gloucester and Cardiff is concerned, compared with that of Bristol?—On inquiry at the ports of Cardiff, Newport, and Gloucester, I learnt from the replies to the inquiries of the commissioners there, that they are perfectly satisfied with the non-compulsory system, and that the character of the pilots has been well maintained, and that there has been no lack of pilots for the vessels. The same remark applies to all three ports.

12335. In your opinion, would it be an advantage to Bristol if the same measure was applied to it as to the other ports, if compulsory pilotage was abolished, and the voluntary system established it its place? — I think it would.

12336. Will you state to the Committee, shortly, your reasons for coming to that opinion? —Comparing the results of the pilotage as applied to the non-compulsory ports, I think if the same were applied to Bristol, the result would be to the advantage of Bristol; it would free the shipping in many instances from heavy charges of pilotage. For instance, a vessel of from 200 to 300 tons, coming and taking a pilot from Lundy Roads up to Bristol, has to pay pilotage inwards, which is 7 *l.*, and that vessel going outwards to Swansea would have to pay pilotage, although in ballast, of about 5 *l.*, making altogether a pilotage charge upon that vessel of about 12 *l.*, whereas if that vessel had gone into Cardiff she might have taken a pilot or not, according to the option of the master, but she would have been free outwards in ballast.

12337. Your opinion is, that in many cases, vessels are compelled to take pilots where there is really no necessity for it?—In many cases.

12338. On the other hand, the experience of Gloucester and Cardiff shows that a considerable number of vessels would continue to take pilots as now?—I was speaking the other day to a large shipowner in Bristol, who has frequently had vessels into Cardiff, and he has never known a single instance where he had taken a vessel into Cardiff without being in charge of a pilot.

12339. Have you considered at all the effect of the clause in the Merchant Shipping Act, which relieves the owner of responsibility for the acts of the pilot when the pilotage is compulsory? —No, excepting that it acts unjustly towards the non-compulsory vessel.

12340. It has been represented to the Committee that the navigation of the Avon from the mouth of the Avon up to Bristol is peculiarly difficult; and as regards that portion of the approaches to Bristol, the compulsory pilotage should be maintained; is that your opinion?—I think that is the feeling generally in Bristol; some would have the pilotage abolished entirely; but I think there is a feeling in the majority of cases to maintain compulsory pilotage, as far as the river is concerned.

12341. Is that your opinion or not?—I should decline to give an opinion upon that point, not being engaged in the foreign trade. As far as the coasting steamers are concerned there is no difficulty in the river navigation. With the class of steamers which we have into Bristol coming up the river, there would be no difficulty.

12342. Are you now bound to take pilots?—Yes; that is, if the master or mate has not a certificate.

12343. Do the masters of most of your vessels have certificates or not?—At present we have a Bristol pilot, the master has not a certificate; we have employed the Bristol pilots for some time; the master has not a certificate for the port of Bristol, but only for the ports of Swansea and Milford.

12344. Should you continue to employ the Bristol pilots if the Bill were passed?—If the pilotage of the river was maintained, we should be obliged to employ a pilot for the river, but not for the Channel.

12345. I presume that other masters of other vessels would do the same; if the navigation of the river is difficult, they would employ a pilot specially for it?—Yes.

12346. Therefore it may be left to the owners of the vessels to exercise their discretion in the matter?—I do not think any foreign vessel coming into the Port of Bristol would come up the river without taking a pilot; I think they would all take pilots, as a rule.

12347. In the same way as they now almost always take a pilot going up to Gloucester?—Yes.

12348. Is there any reason for compelling them to do that when they would voluntarily employ a pilot without compulsion?—No.

12349. Mr. *Graves.*] What reason is there for your not taking out a license for your masters, in the Bristol river?—Some time ago the pilotage of the Bristol Channel was divided into north and south; that is, a master trading on the south side of the channel had a certificate for south side alone, and a master trading on the north side had a certificate for the north side alone, but now they are both combined; and a master taking out a certificate for the pilotage in the Bristol Channel has to take it out for both the north and the south sides.

12350. Will a pilot holding one of these licenses be entitled to pilot a vessel up and down the Bristol river?—Certainly; it extends to the Bristol river.

12351. Have your masters licenses for either the north or south side?—No, not at present.

12352. Would you continue to employ a pilot in the Bristol river, if it was in your option to take a pilot, or not, with your steamers? — No.

12353. Do you find much difficulty in your steamers navigating the river now?—No.

12354. Does that arise from the fact of the ships having pilots on board?—Not at all, I should say.

12355. Do you apprehend that there would be any more difficulty in the navigation if many of the vessels that went up and down had no pilots on board?—I do not think there would be.

12356. Your principal objection to the present system is that you have now to pay pilot dues up and down the Avon?—We have to pay, or otherwise

wise employ, pilots for four compulsory ports, Bristol, Swansea, Milford, and Liverpool.

12357. I speak now of Bristol alone; I understand that one of your principal objections to the present system is, that you are now compelled to take a pilot up and down the River Avon?—Yes.

12358. In your opinion, is that an obligation which is not necessary for the navigation of your vessels?—Yes.

12359. And you desire to be free from the charge of pilotage up and down?—Yes.

12360. I suppose you would look upon the matter just as you would look upon light dues, as a tax upon the shipping?—Yes.

12361. And you have the same wish to get freed from light dues that you now have to be free from pilotage dues; you look upon both very much in the same light as a tax upon shipping?—Yes.

12362. Mr. *Malcolm.*] I think you said that you do not consider that there is any advantage in being certain that there is a pilot who understands the river on board every vessel that comes up and down a narrow river like the Avon?—If a vessel has been in the habit of navigating that river for many years, with a crew which is very seldom changed, I do not think there is any danger whatever in her coming in without a pilot.

12363. You mean danger to your own vessel?—Yes.

12364. But does not it make it much easier for the master of your vessel to navigate her, if he is perfectly certain that the vessel he meets coming down has a competent person on board?—I do not think that it makes the least difference to him.

12365. Do you mean that, in a narrow river, it makes no difference to be certain that there is a man who can go to an inch, and run as close as possible, in order to give you as much room as possible?—If I take the general run of the navigation from year's end to year's end, I do not know of a single accident where vessels have come into collision where there has been a fair-way for the two vessels; there have been accidents when the river is crowded with shipping, but allowing two vessels a fair course, I do not think it can make any difference to the captain whether the vessel he meets has a qualified pilot on board or not.

12366. Do you think that that is the general opinion of the people of Bristol?—I do.

12367. Mr. *Cave.*] Why does not your captain take out a certificate for the port of Bristol?—That has been rather a difficulty to him; some time ago, it was a very simple matter to get a pilotage certificate; but now, through combining both sides of the Bristol Channel in one certificate, it has made it a much more complicated system, and he has rather shrank from applying for a pilotage certificate, and we have met that reluctance to a certain extent by employing a permanent Bristol pilot.

12368. I suppose the reluctance to take out a certificate may be a fear of not passing his examination?—I should think so.

12369. Then you would not have a certificate given without an examination being passed?—Certainly not.

12370. Your answer amounts to this, that your master does not take out a certificate because he has not sufficient knowledge to enable him to get into Bristol by himself?—No; because the master is perfectly competent to take his vessel in and out of the port of Bristol, but he feels a difficulty in answering many technical questions which the Board put, and he seeks to avoid that.

Mr. *G. H. Evans.*

15 June 1870.

12371. He has not found a difficulty as regards the port on the north side, where he has taken out a certificate?—No, not in Swansea or Milford.

12372. Does it not come to this, that he does know his way into one port and not into the other?—No; you may deduce that from it, but I do not think that it amounts to that; he is perfectly conversant with the navigation of the port of Bristol.

12373. Then why, if he can pass an examination for other ports, cannot he pass an examination for Bristol?—We have never pressed him on the point. There has been a reluctance on his part to encounter the difficulty of it, and we have met that reluctance on his part by putting a permanent Bristol pilot on board.

12374. We know that there are cases of good practical men who cannot pass examinations at all; but it is unusual to hear of a practical man who can pass an examination for one port which he knows, and not for another port which he knows?—I do not know as to the ports of Swansea and Milford; but I should apprehend that the examination for the ports of Swansea and Milford is not so difficult as that for the port of Bristol.

12375. I suppose it is more difficult to get into Bristol than it is to get into those ports?—Yes.

12376. Therefore it rather comes to the same thing?—Yes; as the master of a vessel, I should think that he is practically and thoroughly acquainted with the navigation of the port of Bristol.

12377. You said, I think, that you objected to the charges in and out of Bristol, as compared with Cardiff; I suppose the difference is caused by the greater length of the river navigation, is it not?—Yes, to a certain extent, it is; that is to the river navigation on the tonnage, which I gave just now; on 200 and under 300 tons, it amounts to 1 *l.* 17 *s.* 5 *d.*, and the pilotage to Kingroad amounts to five guineas; so that a vessel bound to Cardiff would have to pay much less pilotage than a vessel bound to Kingroad.

12378. But the five guineas is to Bristol, and not to Kingroad?—No, to Kingroad alone; the 1 *l.* 17 *s.* is for the river navigation beyond.

12379. In the event of the voluntary system being entirely established in the River Avon, would not there be a risk of vessels getting across occasionally, and stopping the whole trade?—In each case of the kind that I know of, there has been a pilot on board.

12380. But if accidents happen on account of the difficulty of navigation, or perhaps I ought rather to say on account of the extreme rapidity of the tide, and if the accidents take place when skilled persons are on board, would not you infer that more accidents would take place if there were not such skilled persons on board?—It is open to that inference.

12381. In a narrow channel like that, such an accident would, of course, endanger other vessels besides the one to which it happened?—It might do so; we have had very large vessels ashore in the River Avon, but I have never known of any accident to the shipping through that.

Mr. *G. H. Evans.*

15 June 1870.

12382. But have you known of instances in which the whole traffic has been stopped for several days; for instance, when the "Demerara" was across the river?—No; it was not stopped three days.

12383. How long was it stopped?—Perhaps 24 hours; I speak at random, but I am not sure of it.

12384. When you mention the change which occurred to the pilotage of the Channel in those ports which were formerly compulsory, and are now voluntary, do you know how much the general traffic has increased in those ports?—I do not; I cannot say what the increase is.

12385. If you heard that the traffic generally had increased 50 per cent., and that the earnings of the pilots had only increased 16 per cent., would not that rather change your opinion as to the evidence which you gave to the Chairman in the first instance?—The inquiries which I have made with regard to the trade of the port of Cardiff, rather go the other way, that the pilots there have been in receipt of full returns from the pilotage, and are perfectly satisfied with the result of it themselves.

12386. That is not quite the question which I put to you. Since 1861, we learn that the trade of Cardiff has increased 50 per cent. at least?—I should think that it had.

12387. But that the increase of the business of the pilots has only been 16 per cent.?—Yes.

12388. Therefore, under the voluntary system, the pilots have had less occupation than they probably would have had under the compulsory system, because, supposing the system to be the same, they ought to have increased 50 per cent.?—But, under the compulsory system in Bristol, they have fallen away in numbers.

12389. Is not that because, formerly, you included in the Bristol pilotage other parts of the Channel?—It might be so, but we have no return as to the extent to which the Bristol pilots are engaged in Cardiff.

12390. We know that almost all the pilotage of the Channel was put down under the head of Bristol?—Yes.

12391. And now that is taken off, and Bristol pilotage means Bristol proper?—Yes.

12392. And that we understand has not diminished, but has rather increased?—Yes; to a certain extent it has.

12393. Witnesses have told us that it has really increased under the compulsory system?—That is so.

12394. So that it is not the fact that the argument of the increase of Cardiff and the decrease of Bristol has anything to do with the question, that under the compulsory system, Bristol has not diminished, but that under the voluntary system Cardiff has not increased so much as you might expect it to do; is not that the result you come to from the figures?—I would rather not answer that question.

12395. *Chairman.*] I think you lost a steamer yourself sometime ago in a fog?—Yes.

12396. And you were compelled in consequence to charter another steamer to run between Bristol and Liverpool, calling at Milford and Swansea?—Yes.

12397. Then the certificate of the master of the lost vessel would not apply to the chartered vessel, would it, although you put that master in command of her?—No, he was not in command of that vessel.

12398. The chartered vessel became liable to compulsory pilotage at Liverpool, Milford, Swansea, and Bristol?—Yes.

12399. What steps did you take in consequence of that?—We had to employ a Bristol pilot, and a pilot at Milford, and we had to pay the pilotage at Swansea and Liverpool.

12400. What altogether was the charge that you had to bear?—We had to pay 2 *l.* 5 *s.* per week for the Bristol pilot, and 1 *l.* 15 *s.* for the Milford pilot, that is about 4 *l.*; and we had to pay the pilotage at Swansea and Liverpool in addition.

12401. And if the pilotage had been voluntary at all these ports you would have been free of that charge?—Yes.

12402. So that you had the four charges suddenly thrown upon you in consequence of your having to charter this vessel?—Yes.

12403. You have been asked by the right honourable Member for Shoreham as to the relative increase of the pilotage at Cardiff as compared with Bristol; have you had any complaints of the loss of vessels due to the non-employment of pilots by the trade in Cardiff?—No, I have not.

12404. Have you any reason to believe that property or life has been in danger by the pilotage being voluntary there?—No, I have heard of nothing of the kind.

12405. No such suggestion has been made?—Not that I have heard of.

12406. Or in the case of Gloucester either?—No.

12407. Generally the change from the compulsory to the voluntary system has not been brought to those ports by any evils which have been suggested as likely to arise in the event of compulsory pilotage being abolished?—No, I have heard of nothing. I had a letter from a commissioner at Gloucester some time ago expressing his satisfaction with the working of the non-compulsory system that had been established.

12408. It has not been suggested that vessels enter those ports in charge of masters who are not acquainted with the navigation where they ought to take pilots?—No, I have not heard any such suggestion.

12409. It has not been suggested that they come to the port without pilots where, in consequence of the ignorance of their masters, they ought to take pilots, or that vessels have been lost in consequence?—No.

12410. And you think that the same measure may be dealt out to Bristol without any danger?—I should think so.

12411. Then, as regards the River Avon, should you consider that that comes within the general term of a sea pilotage authority?—That would be a river pilotage.

12412. Being the river itself, it is subject to harbour regulations?—I should say that it would come, properly speaking, under the regulation of the havenmaster of the port.

12413. And therefore it ought to be under a different system altogether, and not under a system of pilotage?—No.

12114. But, rather under the direction of a havenmaster, so as to prevent vessels from blocking up the river?—Yes.

12415. Can that, in your opinion, be carried out without a compulsory system of pilotage at all?—I should think so, because the havenmaster

master would have perfect authority over that distance of the navigation, and he could enforce it.

12416. He might have agents at different places, in order to compel pilots to take up their proper positions?—Yes, very simple regulations could enforce that.

12417. Then it is not a matter for compulsory pilotage at all?—No, not at all as regards the river; the whole distance of the river would not be more than about 12 or 14 miles, I think.

12418. As regards the navigation from Lundy Island up to the entrance to the river, what is the general opinion of Bristol, is it in favour of abolishing compulsory pilotage, or not?—I think they would be, as far as I have heard, willing to allow that to go, so long as the pilotage of the river was maintained.

Mr. *G. H. Evans.*

15 June 1870.

12419. But you are of opinion that the river pilotage is a matter of harbour regulation, rather than pilotage?—Yes.

12420. Mr. *Cave.*] Does a vessel take more than one tide to get from Kingroad to Bristol?—No.

12421. Never?—No.

12422. Do you know the port of Gloucester?—No, I do not.

12423. You do not know whether vessels go straight up to the town of Gloucester without pilots?—I should think it would be a very little vessel indeed that would venture up to Gloucester without a pilot; they go up to Sharpness, and are then towed up the canal.

Mr. William Wood, called in; and Examined.

12424. Sir *Charles Wingfield.*] You are a free waterman, or unlicensed pilot?—Yes.

12425. You served seven years' apprenticeship in navigating vessels in the Thames?—Yes.

12426. And you obtained your freedom of the Waterman's Company in 1841?—Yes.

12427. And you have been since engaged in the pilotage of vessels above Gravesend?—Yes, of vessels exempt from compulsory pilotage.

12428. In the same way that Hinton has?—Yes.

12429. You have testimonials as to your character and skill as a pilot, have you not?—Yes.

12430. You do not consider yourself incapacitated by age, do you?—No.

12431. But, according to the Trinity House regulations, you are not eligible for a license because you are over 35 years of age, and have not served at sea?—That is so.

12432. Do you agree with Hinton, that there are some 300 or 400 men in a similar position to yourself?—Yes.

12433. You have your regular ships which you are engaged to pilot?—Yes.

12434. What are your average earnings?—I do not earn so much now as I did in former years; the ships have gone away out of the coal trade into the Baltic trade, and we do not get so much work.

12435. What were your earnings last year?—Not over 150 *l.*

12436. If a Trinity House pilot offers himself on board a vessel in your charge, does the master keep you as well as him?—I have not been superseded on a coaster; vessels from Lisbon employ me as well as the Trinity House pilot.

12437. When a vessel liable to compulsory pilotage is boarded by a Trinity House pilot, the master must employ the Trinity House pilot, but if you were on board would he keep you as well?—Yes, the vessels I work for.

12438. *Chairman.*] And would they pay you as well as the other man?—Yes.

12439. And if you refused to make the ship over to the Trinity House pilot, the master would have to pay, on a complaint, double pilotage; but by retaining you, and taking the Trinity House pilot, he pays simply the Trinity House pilot's fee, and your fee?—Yes.

12440. But usually you pilot without a Trinity House pilot, and have the charge of the ship?—Yes.

12441. But the Trinity House pilot has power to supersede you in every vessel?—Yes.

12442. The Merchant Shipping Act of 1854, expressly authorises an unqualified pilot to take charge of a ship when no qualified pilot has offered himself?—Yes.

Mr. *W. Wood.*

12443. And also for the purpose of changing moorings?—Yes.

12444. So that the effect of that Act of Parliament, coupled with the increase of trade, and the effect of the restriction by the Trinity House, of the number of licensed pilots, has been to make your class the only pilots who pilot the coasters, and the other kind of vessels to which you devote yourself?—Yes.

12445. The Trinity House pilots being engaged on other ships, what proportion of the vessels are piloted by the free watermen pilots, as compared with the Trinity House pilots between London and Gravesend?—More than three times the number.

12446. More than three times the number are piloted by the free watermen?—Yes.

12447. The reason of that is that the licensed pilots confine themselves to the best class of ships, and the best paying class of ships, which are steamers?—Yes.

12448. Which have the most accidents, the Trinity House pilots or the free watermen pilots?—I can scarcely say; there is much about a muchness there.

12449. Is it the case that the Trinity House pilots will go in with ships after dark?—There is a certain class of Trinity House pilots protected by the Trinity House now, who, directly they come to Gravesend, can put the anchors down if they please; but there is a certain class of pilots who pilot the home-trade passenger ships up after dark.

12450. And you go after dark?—Yes.

12451. Is there any river or harbour regulation preventing vessels going after dark?—No.

12452. But on a dark night, a ship does not go, does she?—Yes, if it is possible at all to go up she does.

12453. Patterson, the Trinity House pilot, who was examined before this Committee, said, that he could not give a single instance of a collision in the river, where each ship had a Trinity House pilot on board?—It is a very bad job that Mr. Patterson had a shallow memory.

12454. Can you give an instance?—Yes, several, but I cannot recall the dates.

12455. Was Mr. Norwood's ship, the "Volga," run into by the "Mary," when off Erith?—Yes, and

Mr. *W. Wood.*

15 June 1870.

and there was one Trinity House pilot on board each ship.

12456. And the ship "Cusack," ran into the "Dreadnought" Hospital Ship, off Gravesend?—I cannot speak as to that.

12457. *Chairman.*] You have no legal position at present, and the licensed pilots have a full right to supersede you; is not that so?—Yes.

12458. But by custom they have left to you a certain number of vessels?—Yes; I am the fourth generation of my parents who have been in the same occupation as myself, and not one had a Trinity House license.

12459. And you have always had considerable employment?—Yes; I have had five apprentices during my time, and my son took his freedom up a month ago, and paid 3 *l.* 12*s.* 6 *d.* I have still another apprentice in my son, who has served over five years of his time; he is constantly in the boat.

12460. What is the class of vessels that you are mostly employed upon?—Coasters and colliers.

12461. Coasting steamers?—Yes; and ships from the Baltic, occasionally.

12462. Those that are free from compulsory pilotage?—Yes; but we are superseded by licensed pilots. If we are on board a ship from the Baltic, they come and take the ship from us.

12463. The Baltic ships are subject to compulsory pilotage?—No, they are not.

12464. But if they are passenger vessels they are?—Yes.

12465. Sir *C. Wingfield.*] Those are the men who were licensed by the Order in Council of 1864 for the home-trade passenger ships?—Yes; but it does not touch them in the Baltic.

12466. *Chairman.*] What is your idea of the Bill before the Committee?—We want to be allowed to have what our forefathers had before us, the coasters, colliers, and ships from the Baltic; that is all we pray for. We do not wish to be superseded by the Trinity House pilots.

12467. But you have not that privilege by law now?—No.

12468. How will you be worse off after the Bill passes than you are now; I want to understand your case; you have no legal position?—No.

12469. The licensed pilots are entitled to supersede you at any moment, if they think fit, are they not?—Yes; but when they are slack of work, if one of our vessels comes up, they supersede us, and turn us out of the ship when it suits them.

12470. They prey upon you when they have nobody else to prey upon?—Yes.

12471. And you think they will prey upon you rather oftener if the Bill is passed than they do now?—Yes.

12472. Mr. *Cave.*] You are not a certificated waterman, are you?—No, not by the Trinity House

12473. They are the persons who take the home-trade passenger ships?—Yes.

12474. When you were asked about the accidents of the "Cusack" and the "Volga," I suppose from those being put down as accidents, they are the only ones that have taken place?—There are several others.

12475. You do not remember any instance yourself?—We never keep any record of these things.

12476. Having no legal position now, and being looked upon as piratical craft, you want to be changed into pilots?—We should like some protection aboard the ships.

12477. I do not see why the Trinity House pilots should interfere with you more when the Bill is passed than they do now?—But we are only afraid of that when they are slack of work.

12478. They can do that now just as well, cannot they?—Yes.

12479. Therefore it practically makes no difference in your position?—No.

12480. Sir *C. Wingfield.*] Are you not afraid that you and Hinton, and others who have taken an active part in urging your claims before the Committee, will be subject to persecution?—Yes.

12481. They cannot deprive you of work, but they will make a dead set at you and some of the leaders, and hunt you out of the vessels?—Yes.

12482. *Chairman.*] Do you find, as a rule now, when the licensed pilots are slack of work, that they they come down upon your vessels and take the work from you?—There has never been an instance where I have been superseded out of a coasting vessel.

12483. But there have been cases in the Baltic trade?—Yes.

12484. When they find that you are employed in piloting these vessels, they come down and supersede you?—Yes; if a captain writes to me to look out for his ship at Gravesend, and I take the trouble to go on board, if a licensed pilot comes on board, the captain has to employ both of us, or I must leave.

12485. If the licensed pilot does not supersede you at Gravesend, the master of the vessel would have to pay double pilotage?—Yes.

12486. Your trade is mainly from Gravesend up to the docks, is it not?—Yes.

12487. If the employment of licensed pilots does not fall off, there will be no greater inducement for them to supersede you after this Bill is passed than there is now?—I do not know that they will do so.

12488. Supposing their trade does not fall off, and they are employed as much after this Bill is passed, as they are now, then there will be no greater inducement to those men to supersede you after this Bill is passed than there is now?—No.

12489. Is it not the case that every vessel coming up from the docks to Gravesend must take a pilot of some kind?—There are very few instances in which they do not.

12490. They all do?—They all do take assistance, either the one or the other.

12491. So that there will be always the same opportunity for a licensed pilot getting employment as now?—I think plenty.

12492. And unless their numbers are increased there will be no more reason for you to expect that a licensed pilot will take the trade away from you than there is now?—No; it is only at a time when they are slack of work, and it suits them to supersede us, that they do so.

12493. Supposing their employment falls off, and they have to fall back upon your vessels and supersede you, would not a small reduction of the numbers of the licensed men meet the case?—Yes.

12494. Until the Bill has been in operation some little time, you can hardly tell what ought to be done?—No.

12495. After the Bill has been in operation some

some little time, if it turns out that these men are forced to get employment by superseding you, then it will be necessary, somewhat, to to reduce their numbers, will not it ?—Yes.

12496. And you think that that will meet all you want ?—Yes.

12497. Sir *C. Wingfield.*] But still you are afraid of being persecuted?—Yes; it may be just as it suits them.

12498. Mr. *Graves.*] What is your qualification for piloting a vessel up and down?—I act as a free waterman of the River Thames.

12499. Do you consider that any one is entitled to come and ask a captain to take him as a pilot up and down the Thames?—We offer our services aboard a coasting ship, which is the trade which forms our principal employment, and the captain can refuse or employ us.

12500. Is there any class but the free watermen whoever attempt to pilot vessels up and down?—No.

12501. Can any man ply on the Thames for hire unless he is a free waterman?—No.

12502. Would you propose that this power to pilot a vessel should be extended to any man, wherever he comes from, if the captain wished to take him?—If he is competent to take charge of the ship.

12503. Whether he is a free waterman or not? —Yes.

12504. You do not think that it ought to be confined to men who are free watermen, do you? —I do not say exactly free watermen; if a man is qualified to take charge of a ship he would get employment.

12505. Do you consider that the power to pilot a vessel up and down the Thames should be confined to men who are free watermen?---Do not confine it entirely to them; if you can get a man competent to take charge of a ship, let him have the privilege.

12506. Whether he is a free waterman or not? —Yes.

12507. Do you pass any examination?—No.

12508. How many free watermen are there altogether?—I cannot say exactly; perhaps there are over 9,000.

12509. Can any one of those men pilot a vessel? —No.

12510. How is it that the men are selected for the piloting?—By serving their time under men in practical navigation.

12511. What do you call practical navigation? —With his master, the same as my son served with me, a contract of seven years.

12512. Do you mean seven years in the work of ferrying about the Thames, or taking vessels up and down?—Not ferrying, but being employed in ships night and day.

12513. Do you mean going up and down the Thames, or merely in the docks?—Up and down the Thames, in and out of the docks, and all parts of the river.

12514. Would there be any objection to an examination of some kind being passed by every one of your class?—I should think not; I should have no objection myself.

12515. Would not you recommend that there should be some examination, so that a man should show that he is qualified ?—Yes.

12516. *Chairman.*] As I understand, any one of these 9,000 watermen in the Thames has as much right as you have to navigate a vessel if they can get people to employ them?—Yes, we all work under one license.

12517. But the shipowners do not employ any except those of whom they have some knowledge? —Yes.

12518. Therefore it is practically free trade between the 9,000 men?—Yes.

12519. Has not a Bill been passed by another Committee which has thrown open the navigation of the Thames?—I do not know how far it goes.

12520. Is it not the fact that the navigation of the Thames is thrown open to everybody who can pass a very easy examination?—I have heard of that.

12521. The system of apprenticeship will no longer be the sole mode of men obtaining their freedom of the river, so that after the Bill has become law, anybody who passes a certain examination will be competent to exercise whatever right you have?—Yes.

12522. Mr. *Graves.*] What regulates the number of free watermen that are admitted to pilot vessels?—There is no particular number.

12523. Are you confined as to the number of apprentices that you can take?—We were. In former years we could only take two apprentices in the seven years. After the first apprentice had served four years of his time, we could take another. Now, of late years we can take as many apprentices as we think proper, on account of most lightermen having men to work their craft.

12524. A large portion of this experience which fits you to pilot vessels is obtained on board the lighters, is it not?—The greater portion of the Thames watermen work on the lighterage of the river.

12525. You say that a large proportion of the time is spent in lightering; do you consider that that is an experience of a sufficiently satisfactory character to warrant a man taking the charge of a square rigged vessel in the Thames?—Certainly not. A man who has navigated a lighter would not have had sufficient practice for him to manœuvre a ship.

12526. Have any of your craft applied to the Trinity House for a license?—It would be useless unless we had gone 12 months to sea, to be a candidate for the Trinity House license.

12527. None of your men have been to sea for 12 months, and applied for a license?—None. Some of them have been over age, over 35, and they have been rejected on that account.

12528. Your charges are much less than the regular pilotage, are they not?—Yes.

12529. How much less?—More than half.

12530. I suppose that is one reason why you are such great favourites with the captains?—I do not know that.

12531. Supposing that the whole of the Thames is thrown open, and you have power to go up and down as well, what is to become of the licensed men charging double what you do?—They would have the same pilotage as they have got now, for the ships that now employ them will still employ them. There is not a foreigner who comes into the river from the North Sea who is exempt from compulsory pilotage but that takes a licensed pilot.

12532. Supposing you offered a foreigner to take him down for half what the licensed pilots do, which would he employ?—I cannot answer that.

Mr. *W. Wood.*

15 June 1870.

12533. *Chairman.*] How do you maintain your charge, with regard to yourself and other unlicensed men?—The owners and the captains of the ships regulate our charges.

12534. Sir *C. Wingfield.*] But, practically, your charges do not vary. You never take more than 2 *l.* for the biggest ship, do you?—No.

12535. *Chairman.*] How many men are there who, like you, make an employment out of this?—In the navigation of steamers about 25.

12536. And how many in navigating coasters?—Over 300; the men have to go a long way down after coasters.

12537. How much, on the average, do they make a year?—I cannot form an idea, sometimes it is better than others; it depends upon the influx of the shipping.

12538. And at other times of the year they are employed in other things, I suppose?—Yes.

12539. And it is a very changeable kind of occupation?—Yes.

12540. Sir *C. Wingfield.*] A great majority do not make more than 50 *l.* a year, do they?—No.

12541. *Chairman.*] The number of men who make over 100 *l.* a year, is small, is not it?—Yes.

12542. What number should you say?—I should say there are about 50 altogether, making over 100 *l.* a year.

12543. And do they really employ themselves in nothing else?—Yes.

12544. The others I suppose are ready to take a job of any kind?—Yes.

Mr. Charles Joseph Luton, called in; and Examined.

Mr. *C. T. Luton.*

12545. *Chairman.*] You are a waterman pilot for the home-trade passenger vessels?—Yes.

12546. That calling was practcally created by an Order in Council of the 1st of May 1855?—Yes.

12547. That was in consequence of the home-trade passenger vessels being compelled by the Merchant Shipping Act of 1854, to take pilots?—Yes; it was on account of several accidents that occurred, that Sir Robert Peel brought it forward.

12548. Those vessels had been previously in the habit of taking you and other men as pilots, had they not?—Our ancestors.

12549. In consequence of that, you, and a certain number of others, were licensed as pilots, specially for the home passenger vessels?—Yes.

12550. I believe you are paid a pilotage rate fixed by the Trinity House?—Yes.

12551. And you are not entitled to pilot any other vessels?—No.

12552. But you have the exclusive right of piloting those vessels?—Yes; we have the exclusive right to pilot the home trade passenger steamships.

12553. Are your numbers kept up?—Yes.

12554. Then your work is in respect of vessels that are compelled to carry pilots?—Yes.

12555. But you have no right at present to pilot any other vessels?—Not according to the Act.

12556. What is your complaint of the Bill now before the Committee?—According to the present formation of the Merchant Shipping Code, you find in clause 468, that it sweeps us away entirely, if the home trade is done away with, therefore we are no more pilots.

12557. You refer to the Merchant Shipping Code, and not to the Bill before the Committee?—Not exactly the Bill itself, it is the two together; because we are under the jurisdiction of the Trinity House and also the Board of Trade.

12558. I do not know that we can go now into the question of the Merchant Shipping Code; therefore you will please confine yourself to the operation of the Bill now before the Committee, which relieves vessels from the necessity of taking pilots; what would be the operation of that upon you?—The operation of the Bill at present, excludes us, because this is compulsory pilotage, and the home trade is entirely done away with in the Merchant Shipping Code, which followed this Bill, we are left outside.

12559. You are referring to the Merchant Shipping Code?—Yes.

12560. In what respect does that hurt you?—There would be two classes of traders, the coasters and foreign.

12561. At present, the home passenger vessels include a number of vessels that go to the continent?—Yes.

12562. Under the new Bill it is proposed to have two distinctions only, namely, coasters and foreign trade, and, therefore, you think that the Bill will exclude you from the pilotage of a certain number of vessels that go to the continent?—It will take our continental trade away altogether.

12563. How much of your employment comes from vessels of that kind?—The greatest part of it.

12564. You would wish, as far as those vessels are concerned, still to retain the exclusive right of pilotage you now have?—Yes.

12565. Have the ordinary licensed pilots the right to supersede you?—They can supersede us on board any other vessel except the home-trade passenger steamships.

12566. They cannot supersede you on board the home-trade passenger steamships?—No; on any other vessel they can.

12567. You wish that that exclusive right, which you now have in respect of these vessels, should be maintained?—Yes.

12568. Then, in fact, it is the indirect effect of the operation of the clause in the Merchant Shipping Code, which abolishes the distinction between the home trade vessels and foreign vessels, and makes the distinction for the future coasters and foreign, which you object to?—Yes, that is all.

12569. It is the indirect effect of that that you complain of?—Yes, it is apparently very direct, because it says the home trade is done away with entirely.

12570. The home trade is not done away with, but instead of the home trade, including a certain number of vessels that go to the continent, for the future it is only to include coasters?—It includes the Isles of Jersey, Guernsey, Alderney, and Sark.

12571. Now will you confine your attention to the object of the Bill before the Committee, which abolishes compulsory pilotage, and state how it will affect you?—As far as the Bill stands in its present form, it does not affect us if you give us our

our own rights and let us remain as we are now.

12572. I believe you were all employed by these steamers, before the Act of 1855?—Yes, we were all employed.

12573. The only effect of the Act of 1855 was to compel these vessels to employ men they had been in the habit of employing before?—Yes; but there is another privilege now given to the Trinity House to pass masters, so that every year as younger men go up it takes our trade away though our staff is supposed to be kept up.

12574. In consequence of the examination of the masters of these vessels, and giving them pilotage certificates, there is a gradual falling off of your employment?—Yes, and there is no doubt that if the Bill passes in its present form, the owners will take advantage in small coasting vessels, both continental and coasters, of passing their masters, and piloting the ships themselves, and that will take a great deal of our work away.

12575. As I understand, your position was this: you were all of you practically employed before 1855 by these steamers?—Yes.

12576. And when that Act was passed compelling them to employ pilots, you came before the House of Commons or the Government and asked them to reserve your rights, as it were, and compel these vessels to employ you as they had been in the habit of doing?—Yes.

12577. And now when the compulsion is going to be taken off, you say that your rights ought to be reserved again?—Yes; the Order in Council was made in 1854 to compel all those vessels to take pilots, and the 22 or 24 men that were then living, of course some of them are since dead, made an application to be passed, and they passed an examination under the Trinity Board. As one has died off an apprentice has come to fill his place; he pays three guineas a year, and accounts for all his earnings before the Trinity Board, and pays income tax accordingly.

12578. I do not at present see why your employment is likely to fall off, because, before 1854, you were employed by these vessels, and the effect of the Act of 1854 was to compel them to employ you, and you got that clause inserted upon your behalf, on the ground that those vessels were in the habit of employing you; what reason is there to believe that if this Bill now before the Committee is passed, those vessels will cease to employ you?—If the Bill and the Merchant Shipping Code passes, we are no longer pilots.

12579. I do not talk of the Merchant Shipping Code, I talk of the Bill for the abolition of compulsory pilotage?—That in itself does not affect us at present.

12580. What do you mean by saying that it does not affect you at present?—It does not affect us till the Merchant Shipping Code follows.

12581. I want you now to confine your attention to the Bill for the abolition of compulsory pilotage, and get rid of any ideas you have of the Merchant Shipping Code; supposing the Merchant Shipping Code is altered, as you wish, what will be the effect of the Bill for the abolition of compulsory pilotage upon you?—I think that no man should be allowed to take charge of a vessel without having undergone a thorough examination.

12582. Mr. *Stevenson.*] Is it the case that the Trinity House pilots sometimes take free watermen on board in order to assist them in taking vessels up and down the river?—Yes; to steer the ship.

12583. And to help them in the pilotage work?—Yes.

12584. And they pay them out of the pilotage earnings, do they not?—I do not know that; I never did it myself; I am satisfied that none of our body ever did.

12585. Mr. *Gourley.*] Who pays the watermen when they are on board a ship with licensed pilots; are they paid by the captains or the owner?—The owner.

12586. Why do these ship captains take them?—Simply because it is necessary, sometimes, to have a waterman assisting vessels coming from long voyages, for the sailors are knocking about the decks, and they do not care whether they steer into anything or not.

12587. Are not watermen taken for navigating the ships from London to Gravesend, and Gravesend to London?—Not to my knowledge.

12588. Do you know Mr. Hinton?—Yes.

12589. Is he not employed for the purpose of navigating vessels when pilots are on board, from London to Gravesend, and Gravesend to London?—He is engaged in navigating vessels, and he is a free waterman.

12590. He is employed to do something more than steer?—He is employed to do something more than steer; there are a certain class of men that are passed throughout, and they get the preference of taking the ships down, and the captain allows Hinton to take the ship from London to Gravesend, and he gets his money, and then they take a pilot from Gravesend.

12591. Are many of the other free watermen employed who are in a like capacity as that of Mr. Hinton?—A few, not many.

12592. If the present Bill should become law, how would it affect those men; would it not have a tendency to prevent them navigating as they now do?—I think so.

12593. You think that the licensed pilots will supersede them?—They will take advantage of them.

12594. You consider that to be wrong towards those men, do you not?—I do not know that it is wrong towards them; I think if a man goes to sea, and goes through the examination, and gets himself prepared for this sort of thing, he ought to enjoy it.

12595. Are you a sailor?—I have been from call-boy upwards in steamers.

12596. Then you are something more than a waterman?—Only in the coasting trade.

12597. Is that the reason why you consider that sailors should have the preference over men who are merely watermen?—I think that a man ought to be properly trained for it.

12598. Do not you think there ought to be a clause in the Bill to meet the case of the watermen who are properly qualified to navigate ships between London and Gravesend?—No, I do not see it myself.

12599. Mr. *Cave.*] I believe that at present the home-trade passenger steamers, unless they carry a master or mate with a certificate, are obliged to take a pilot, are they not?—Yes.

12600. When this Bill passes they will no longer be obliged to take pilots?—No.

12601. Will many of them take pilots?—I think very few of them will take pilots.

12602. In that respect you think that, if this

Mr. *C. T. Luton.*

15 June 1870.

Bill passes, your position will be made worse?—Yes.

12603. In case a regular Trinity pilot is taken on a home-trade passenger steamer can you supersede him?—No, in no case.

12604. If you are first in the field, and get on board one of the home-trade passenger ships, they cannot supersede you?—No.

12605. But with regard to other vessels they can supersede you?—With regard to anything else they can.

12606. As a matter of fact, do you often take your chance of being superseded on board other vessels?—I have been superseded on board Baltic steamers.

12607. Is it the custom of the certificated watermen pilots to offer their services to vessels in which they can be superseded by the Trinity pilots?—We often do.

12608. Then it is a matter of accident whether you are superseded by them or not?—If there is plenty of work they will not come near us.

12609. It is a matter of accident?—Yes.

12610. Then you do interfere with them on board these other vessels supposing the work becomes more slack?—I should only interfere in those ships that I was engaged by.

12611. You have told us already that they can supersede you on board all vessels except home-trade passenger ships?—Sometimes.

12612. And the only reason why they do not supersede you is that they have enough to do elsewhere?—Yes.

12613. Supposing their employment was curtailed by the provisions of this Bill, they would be more likely to supersede you than now?—Yes; they would then claim our continental trade that went foreign; that would go from us entirely.

12614. If you are on board a home-trade passenger ship, and an accident happens, you are liable for damages, are you not?—Yes.

12615. Supposing you are on board one of these other vessels on which you could be superseded, would you be liable for the damage?—No; any vessels that are exempt from taking pilots are not liable.

12616. I am speaking of a vessel on which you can be superseded by a Trinity House pilot?—We can be superseded on board any vessel except the home-trade passenger ships.

12617. But supposing you are on board one of the vessels which are not exempt from compulsory pilotage?—I never go on board any except of our own vessels.

12618. You do not interfere with those under the compulsory system?—No.

12619. Then those vessels in which you are liable to be superseded are those that are exempt from pilotage altogether, if they choose?—Yes.

12620. And on board those vessels you are not liable for any damage?—No.

12621. The owner is liable, is he not?—Yes.

12622. Whether a certificated waterman or a Trinity pilot is on board, it makes no difference, the owner is liable?—Yes.

12623. Have you had many accidents in the case of the home-trade passenger steamers?—No.

12624. Have there been any accidents?—There have been a few in my time.

12625. Who has practically paid the damage in those cases?—Sometimes the owner, and sometimes, perhaps, it might not have been paid at all, or the underwriter paid it.

12626. Whether the owners or the underwriters pay it is the same thing?—Yes, generally speaking they are insured.

12627. What is the reason that, in some cases, the owners pay, and in other cases it is left to the pilots to pay if they can?—That is where the owners try to get out of paying the damage by putting it upon the pilot's shoulders.

12628. If the damage is very heavy they say that the pilot must pay?—Yes, they put it upon his shoulders because they know that he is liable for 100*l.*

12629. Supposing the damage is very heavy, it is put upon the pilot's shoulders; but if the damage is very light, the owners pay?—Yes, sooner than have any litigation over the matter, they pay.

12630. You said that your men return their earnings to the Trinity House, and pay the income tax?—Yes.

12631. To whom do they make the return?—To the Trinity House.

12632. Is it deducted from your earnings?—No, I take my own money, I send in a return of my earnings every month, and they tax me upon it.

12633. Then they deduct it?—No; I have to pay it to the Trinity House as a tax.

12634. And it is paid to the Government through the Trinity House?—Yes; I pay that independently of my three guineas.

12635. The three guineas is simply for your license?—Yes.

12636. Besides that you pay your income tax to the Trinity House, which they afterwards pay to the Government?—Yes.

12637. Sir *C. Wingfield.*] You were a free waterman before you got your certificate, were you not?—Yes.

12638. A freeman of the Waterman's Company?—Yes.

12639. When you were a free waterman, were you employed by Mr. Cooper?—I was not employed by him; I have been with him.

12640. The owners of the vessels employed you as a free waterman, along with Mr. Cooper the Trinity House pilot?—I was employed as a waterman in the same vessel as Mr. Cooper, when I was doing Messrs. Pearsons' work, of Hull.

12641. You were employed to pilot their vessels?—I used to pilot all their non-compulsory ships.

12642. Along with Mr. Cooper?—No, I used to take them alone, without him.

12643. And sometimes with him?—Yes.

12644. Are there not one or two of your class who hold certificates from the Board of Trade to pilot steam passenger vessels, and who do not use their certificates, but work on the non-compulsory vessels, like Mr. Hinton does?—Not to my knowledge.

12645. He does not go on board the home passenger ships, which his certificate entitles him to do, but he goes up as Mr. Hinton does, with the Baltic vessels, the non-compulsory and others?—Only the collier screws.

12646. Mr. Raine is one of that sort?—But he goes with passenger ships sometimes.

12647. He sometimes uses his certificate, and sometimes he does not use it?—Yes.

12648. *Chairman.*] What proportion of your employment comes from vessels other than the home

home passenger steamers?—Not above one-fifth of it.

12649. Mr. *Graves.*] Does your license confine you altogether to home-trade passenger vessels?—Yes.

12650. *Chairman.*] Can you supersede a licensed pilot on one of those steamers?—No.

12651. And a licensed pilot cannot supersede you?—No.

12652. When you say that one-fifth of your employment is in respect of home vessels, do you mean generally?—Vessels that have not passengers on board.

12653. Do you speak generally of these 22 pilots, or only of yourself?—I speak of myself; some do not get any money from non-compulsory ships.

12654. Some get a great deal more?—None get more than one-fifth.

12655. Mr. *Graves.*] Can a licensed pilot take one of the home-trade passenger ships down the Thames?—Yes, if he is employed by the owner.

12656. But you are not free to take any other vessel, except a home-trade passenger ship down the river?—No.

12657. Then you form another group of pilots on the Thames?—Yes, we are 22 in number.

12658. What examination did you pass when you got this license?—The same as the other pilots before the Trinity Board.

12659. Do you consider that the examination you pass before the Trinity Board would enable you to take out a license for the entire navigation of the Thames?—Yes.

12660. What is to prevent you applying at any time, if this privilege is done away with, for a license to take vessels down to Dungeness?—They will not grant it us, because we have not been masters of vessels for 12 months.

12661. Sir *C. Wingfield.*] And because most of you would be over age?—Yes.

12662. Mr. *Graves.*] Have you a system of apprenticeship amongst your pilots?—Yes; I have an apprentice now myself; nearly all of us have our apprentices.

12663. They have joined under the belief that it would remain obligatory upon the home-trade passenger ships to take pilots?—Yes.

12664. Mr. *Gourley.*] Whom do you consider the best pilots on the Thames; the regular pilots, or men like yourself, or the free watermen?—That is hard to say; I think I know as well as anybody; I know that all our body have the worst work to do; we sail day or night, summer and winter.

12665. The watermen have all the navigation to do in the Thames, have they not?—No.

12666. But a great part of it?—They do a portion of it.

12667. Sir *C. Wingfield.*] I believe you said that you have night work?—Yes.

12668. Do not the Trinity House pilots do night work as well?—Yes; but they are not bound to go as we are.

12669. Why are you bound to go more them them?—We are bound to one class of vessels, and if we do not go, many more people will go. They bind us with the word "No," in the license, "Home-trade passengers ships, and no others."

12670. Mr. *Graves.*] Is your tariff the same as the watermen generally?—It varies from 1 *l.* to 3 *l.*

12671. *Chairman.*] That is much less than a licensed pilot charges?—Yes; because our vessels do not draw as much water. Most of our work is contract work.

12672. Mr. *Graves.*] I suppose, as a rule, your charges are lower than the other pilots?—Yes.

12673. Sir *C. Wingfield.*] But they are not so low as the free watermen; they never charge more than 2 *l.* for the biggest ships; your charge is 2 *l.* for a big ship, is it not?—Sometimes a little ship will pay that.

12674. *Chairman.*] As I understand, the licensed pilots, as a rule, do offer their services to these vessels and compel these vessels to employ them?—They never trouble the home-trade passenger vessels.

12675. But they have the right to do so?—If we were not there they could do it.

12676. They have no right to supersede you, have they?—No; they never trouble their heads about it.

12677. Mr. *Gourley.*] You think that your licenses should be extended to all trades?—Yes.

12678. You think it ought in fairness to be conceded?—Yes.

12679. Why should not it be conceded to men like Hinton?—I should have no objection.

12680. Mr. *Graves.*] Is there any limit to your liability as a pilot through gross neglect in the case of an accident?—We are liable to pay damage in case of accidents.

12681. The same as the licensed pilots?—Yes.

12682. Sir *C. Wingfield.*] Up to 100 *l.*?—Yes.

12683. Mr. *Graves.*] Do many vessels go up and down the Thames without any pilot on board?—Yes, a few in the Continental trade, where the masters have passed the examination; we have no power of going there; the owners have forced their masters to pass the examination to pilot them, because they are small vessels.

12684. Do you find any practical difficulty in the navigation by these vessels coming in your way without a pilot on board?—Sometimes.

12685. They make the navigation more difficult?—Yes.

12686. And if the number of vessels that went up and down without a pilot was increased, so the difficulty of the navigation would be increased?—Yes.

12687. Would you apprehend, if it became an entirely optional system on the part of all shipowners to take a pilot or not, that more captains would refuse pilots than now?—Yes, I have every reason to believe that more captains would refuse pilots.

12688. And, in your opinion, many vessels would go up and down without a pilot that now take them?—Yes.

12689. And thus will not the difficulty of the navigation of the Thames be increased, in your opinion?—Yes.

12690. *Chairman.*] Did not the men who are in the same position as yourself obtain a clause in the Act of 1854 upon the very ground that they should be always employed by these steamers under the voluntary system?—I believe that was the case.

12691. Men of your class had always been employed by those very home-trade passenger vessels before the Act of 1854, which, for the first time, compelled them to carry pilots; was not that the case?—Yes.

12692. What

Mr. *C. T. Luton.*

15 June 1870.

12692. What ground is there for believing that these same vessels will not continue to take pilots?—Because the privilege is given now for masters and mates to pass an examination, and they embrace the opportunity of passing their masters and mates, and taking the ships up themselves.

12693. Before 1854 these vessels were not bound to take pilots at all, therefore, the masters had not to pass any examination?—It was so.

12694. But, notwithstanding that, they employed a class of men like yourself to pilot them from Gravesend up to the docks?—Yes.

12695. And on that occasion, when the Act of 1854 was passed, which compelled the vessels to carry pilots, you obtained a clause reserving your rights?—Yes.

12696. In the event of the Bill passing, relieving these vessels from the obligation to carry pilots, what ground is there for believing that they will not continue to carry pilots in the same way that they did before the Act of 1854?—There are so many in the market now; the labour is so cheap and masters are ready to take the ships themselves simply to get a situation.

12697. There were many masters wanting occupation before 1854, were there not?—Not so many as now, I believe.

12698. You think that a great change has taken place since 1854?—Yes.

12699. You think that many masters of vessels would be willing to take the work now?—Yes.

12700. Mr. *W. Martin.*] You have been a long while on the Thames, have you not?—Yes.

12701. And you know the different vessels that go up and down the river?—Yes.

12702. Do you know the barges that trade in cement and lime from the Medway up to London?—Yes.

12703. They are sea-going vessels, good vessels, are they not?—Yes, some of them.

12704. Are not most of them?—I cannot say that.

12705. They are vessels with masts and sails, are they not?—Yes.

12706. They do not keep drifting about without masts and sails, do they?—There are sailing barges and dumb barges.

12707. No dumb barges come up from the Medway, do they?—No.

12708. Those that come with masts and sails are no obstacle to you in piloting, are they; they do not get in your way, do they?—Very frequently, I think; one of the greatest difficulties we have to encounter is sailing barges till you come up into the upper Pool.

12709. Why are they worse than other sailing ships?—Simply because they are so obstinate. Supposing you come up with a heavy vessel, and a barge is standing across, if you ask him to put his helm down he will not do it; he will let you touch the ground and run against our own helm very often.

12710. Are you aware that they are generally manned by yachtsmen, when the yachts are laid up?—Some of them are very clumsy ones then.

12711. Mr. *Gourley.*] I suppose barges are the cause of more collisions in the Thames than any other craft?—Yes.

12712. Mr. *Stevenson.*] Some of those home-trade passenger ships come from the Continent, I believe?—Yes.

12713. They are obliged to take a pilot with passengers on board, are they not?—Yes; then they take a pilot.

12714. Are they compelled to do so?—Yes.

12715. Equally with coasting steamers?—Coasting steamers with passengers are compelled to take a pilot; all coasting steamers and other vessels carrying passengers are liable to compulsory pilotage.

12716. Mr. *J. S. Hardy.*] Why was the Act of 1854 passed if these ships were exempt from carrying pilots before?—I do not know why it was, but I believe that several accidents occurred, and Sir Robert Peel was on board one of the ships, so I am told.

12717. It was found necessary to make them carry pilots when they have passengers on board?—Yes.

12718. *Chairman.*] But you told us that they always did carry pilots?—Yes.

12719. And they took the class of men that are now masters?—Yes.

12720. So that the only effect of the Act was to compel them to carry the men they had been in the habit of carrying?—It was offered to the regular body first, and they refused it.

12721. The result of the Act was to compel them to carry the men they were in the habit of taking?—These men held no licenses but watermen's licenses in 1854.

12722. The men who obtained the licenses for piloting the vessels were the very men who had been in the habit of piloting the vessels?—Yes.

12723. Therefore, the effect of the Act was to compel them to take the men they had been in the habit of taking under the voluntary system?—It was to compel them to pass the examination and to compel the owners to have men who had passed the examination, because the Act specified that they should have the assistance of a properly qualified man.

12724. The result was, that the men who had been in the habit of piloting the vessels obtained licenses, and obtained the right to force their services upon the very vessels who had been in the habit of voluntarily employing them?—Yes.

12725. Mr. *J. S. Hardy.*] I suppose the competent men were able to obtain licenses and to obtain employment, and the incompetent men were unable to obtain licenses?—All the men who were working passed.

12726. Did the accidents happen whether from having no pilots on board, or from their having incompetent men?—From having no pilots on board.

12727. Sir *J. Hay.*] I think you stated that there were more masters qualified to act as pilots now than there were before 1854; do you mean masters who were qualified by taking a license, or do you mean masters qualified by reason of experience?—I mean thereby that they call themselves qualified, because they have passed an examination.

12728. You speak of men who have passed an examination, and who are qualified by holding a license?—Yes, much against their own will; the owners force them to do it.

12729. Would they pay the same pilotage?—Yes.

12730. Mr. *Graves.*] I see on the back of your license there is "annual renewal;" what is the meaning of that?—Every year it has to be renewed, and three guineas paid.

12731. It is renewed by the Trinity House?—It is renewed by the Trinity House.

12732. Do

12732. Do you pass any examination each year?—Not each year; we pass an examination before we obtain a license.

12733. What do you pay the three guineas for?—The renewal of the license for working; that goes to the Trinity House.

12734. There is a tax levied upon you of three guineas a-year?—Yes.

12735. And the only return for that is the entries upon the back of your license?—Yes.

12736. Do the licensed pilots undergo the same form?—Yes; they have to renew their licenses the same.

Mr. *C. T. Lulon.*

15 June 1870.

12737. *Chairman.*] That goes to the pilotage fund?—Yes.

12738. It goes to the pension fund?—We have nothing to do with the pension fund, we are only outsiders; we have no claim upon the superannuation fund.

12739. Mr. *Stevenson.*] But your money helps other people's claims?—Yes.

Mr. ANTHONY GEORGE ROBINSON, called in; and Examined.

12740. *Chairman.*] You are a Shipowner in London?—Yes.

12741. And Deputy Chairman of the General Shipowners' Society?—Yes.

12742. You have had a large number of ships under your management?—Yes.

12743. Has the Bill before the Committee been considered by the Shipowners' Society?—Yes.

12744. And we have been told already that they approve generally of its principles; is that so?—Yes; the only objection was to paragraph 6 in clause 2, which gives the authorities power not to license any more pilots for two years; we consider it injurious to stop the licensing of pilots.

12745. You observe that the intention of that is only with the view of ascertaining what number of men should be drawn off the list in the event of their employment falling off?—Yes.

12746. After the two years have expired that restriction will no longer hold?—No; we consider that it puts the pilotage authority in a position that obliges them, for their own sakes, to wait a considerable time to ascertain whether there would be a falling off or not, and during that time the shipowners may suffer from the want of pilots.

12747. Supposing that the interval was reduced to one year, would you still object to it?—Yes, but not so much; the shorter the time the better.

12748. You understand that it would be necessary to make some restriction in the number, or otherwise the pilotage authorities might take the opportunity of licensing a considerable number, and, under the provisions of the Bill, the Board of Trade would be compelled to withdraw a greater number than is necessary?—Yes, we saw that objection as well; but we considered that the chance of not having sufficient pilots was more serious than that.

12749. You look with great dislike at any clause which has the effect of tending to perpetuate the principle of restriction?—Yes.

12750. At present it rests entirely with the local authorities whether to license an additional number of pilots or not?—Yes.

12751. And if they think fit, they may throw the pilotage entirely open?—Yes.

12752. A clause like that might have the effect of inducing the pilotage authorities to continue the restriction of numbers?—Yes.

12753. Apart from that, which is a minor detail, the members of the society generally approve of the Bill now before the Committee?—Yes.

12754. Will you state to the Committee generally your own opinion with regard to compulsory pilotage?—I think it very objectionable; I think by doing away with compulsory pilotage we should have better pilots; they would be more efficient. Our society is a great shipowners' society, and there are repeated complaints from time to time from the owners of ships trading to London in dark winter weather, of having to run into the Downs without pilots; the pilots having the monopoly, anchor under Dungeness in bad weather, and the ships coming up of a dark night cannot get a pilot, and they think that if the restriction was removed, and if there was free trade, these men would go further down channel, as the Dutch and the Belgian pilots do, and that valuable ships would not run into danger.

Mr. *Robinson.*

12755. I believe that your society have frequent complaints from vessels who want pilots, and do not get them so early as they would wish?—Yes.

12756. And you are of opinion that under the voluntary system there would be a greater inducement for the pilots to seek the vessels, whereas now the vessel has to seek the pilot?—Yes.

12757. Have you any further objections to make with regard to the compulsory system, arising from the present exemption from liability of the owner who is compelled to employ a pilot?—Yes, we are compelled now to employ pilots at a very serious and heavy expense on small ships.

12758. What are your steamers; are they engaged in the general steam navigation?—They are general traders from the Baltic, and from the Continent, and from the Mediterranean, and America.

12759. I suppose some of them are not compelled to carry pilots, and some of them are?—Yes.

12760. Therefore you have experience of both the voluntary and compulsory systems?—Yes; in the river between Gravesend and London it is voluntary with a great number of steamers, but they invariably take a waterman or pilot, though they are not compelled.

12761. And you select the waterman you wish to employ?—Yes.

12762. And you get a man specially qualified for the purpose?—Yes; I have complained more than once to the Trinity House authorities that they have not licensed enough of them; we are short of pilots now; at the present time there are not enough licensed pilots between Gravesend and London.

12763. Are you obliged to supplement them by the free watermen?—Yes.

12764. Do you find any difficulty in getting thoroughly competent watermen to pilot your vessels?—No; we have experienced difficulty in this way, that these watermen have been over and over again superseded by Trinity pilots. They wait until the ship in the river is unmoored and

Mr. *Robinson.*

15 June 1870.

taken out of the tier, and all the trouble has been gone to, and they then step on board the vessel and say, "I am a licensed pilot," and they supersede the other man.

12765. You think that a hardship from which the watermen suffer?—Yes.

12766. You think it ought to be met by adding to the number of licensed pilots?—Yes.

12767. You were just now going to state some of the objections you had to compulsory pilotage?—I had an instance here of one of our steamers trading sometimes coastwise and sometimes to Holland, and therefore she is sometimes free of pilotage. In this case we sent her to Bordeaux. Our captains are not always licensed pilots, because we have to change them sometimes, and we cannot license a man unless he is in command of one ship. In this case we were unfortunate in not having a licensed captain; the consequence was we had to pay an outward pilotage irrespective of the Gravesend pilotage, 5*l.* 1*s.* 3*d.*, earning a freight of 70*l.* 10*s.* 3*d.*, and an inward pilotage of 7*l.* 11*s.* 5*d.*, earning a freight of 192*l.* On a freight inwards and outwards of 262*l.*, the vessel had to pay 12*l.* 12*s.* 8*d.* pilotage. On another occasion, a vessel earning a freight of 270*l.* had to pay 15*l.* 10*s.*

12768. Was that for pilotage from Gravesend to the Downs?—Yes.

12769. And that is irrespective of that other pilotage which you speak of between Gravesend and the docks?—Yes.

12770. I think for that portion of the Thames you always do take a pilot?—Between Gravesend and London.

12771. Between Gravesend and London you always take a licensed pilot, or a waterman?—Yes.

12772. Is that on account of the peculiar state of the navigation of the Thames?—Yes. We had a case before the present law was altered where we were compelled to carry a Trinity House pilot. A ship arrived at Gravesend from Oporto, with passengers and live stock on board; the captain went ashore, and asked two or three Trinity pilots to take him up, and not one would go with him; they said they were not compelled to go at night, and they would not go; they said that he would have to wait till he could get a waterman to bring the ship up.

12773. Your instruction to your captains always is to take a pilot at Gravesend?—Yes.

12774. And from London to Gravesend?—Yes.

12775. But from Gravesend to the sea, or inwards from the Downs to Gravesend, your instructions are that your captains are not to take pilots?—Yes.

12776. You think that they are thoroughly competent?—Yes.

12777. You would not appoint a man to the command of one of your vessels who is really not competent to navigate it from the Downs inwards?—No. What we find fault with in the present law is, that a ship trading one week to one port is not compelled to take a pilot, whereas if she goes to another port, going down the same channel, she is compelled to do so.

12778. That arises from the very complicated state of the exemptions?—Yes.

12779. It would be quite impossible to go backwards and get rid of the exemptions, and the only way is to go onwards and extend exemptions to every vessel; is that your opinion?—Yes. Another great objection to compulsory pilotage is the law as to collisions.

12780. What is your opinion upon that point?—I can give one instance which occurred in our own case, where we had a ship moored in the river, in charge of a Trinity pilot; a vessel ran foul of her, and we have never recovered any damages; our ships have sunk two or three ships in the river from time to time, and we have not paid anything, because our ships were under the charge of a compulsory pilot.

12781. Then it acts with great uncertainty as to whether you are going to get damages out of the vessel you are in collision with or not?—Yes; this man had his vessel moored in Deptford, head and stern; and our ship ran him down and sunk him; the man was ruined; he brought an action against us, and we defended it; pleaded compulsory pilotage, and it was decided that we were not liable; then he had to go against the pilot, and the pilot had no means.

12782. It has been suggested to this Committee that it might be possible to meet that difficulty by throwing upon the owner the responsibility, though at the same time compulsory pilotage is retained?—The owner would never submit to be compelled to take a man and then be liable for his acts; it is contrary to all principle of reason to compel a man to be liable for another man's acts, over whom he has no control.

12783. Are you aware that that is the law in some parts of the Continent?—Yes.

12784. Have you heard complaints of it in foreign ports or not?—Yes.

12785. Are you aware that that is the law in Holland now?—Yes; we have suffered from it ourselves.

12786. From being made liable for the actions of a man that you were bound to employ?—Yes; it works very badly.

12787. You do not think that that would be a proper remedy to meet the evil?—No.

12788. You think also that compulsory pilotage operates very offensively upon small vessels?—Yes.

12789. A large number of vessels, whose masters are quite competent as pilots, are bound, under the present law, to take pilots when they do not want them?—Yes.

12790. And it forms a considerable per-centage in their earnings?—Yes.

12791. Particularly upon vessels from the Thames and the east of England, and the Continent?—Yes.

12792. Is it your opinion that the licensing system should be maintained, and that the pilotage authorities should continue to license men and regulate the charges of the pilots?—Decidedly.

12793. You are not in favour of a completely free system, of throwing the whole thing open?—No.

12794. Then you approve of the general principle of leaving the pilotage authorities with the power to license pilots, and, in fact, to put the compulsory districts in exactly the same position as the non-compulsory are now, where there is an established pilotage authority?—Yes.

12795. Do you at all know the navigation of the Mersey?—Yes.

12796. Do any of your vessels trade there?—Yes; some of them, coasting vessels.

12797. Is there, in your opinion, any reason for specially exempting Liverpool from the operation of this Bill?—No, I do not see any.

12798. You

12798. You do not see that the navigation of the Mersey is so much more difficult than the Thames?—It is not nearly so difficult.

12799. If this Bill is passed, what is your opinion as to the amount of employment that will remain for the pilots?—I think there will be quite as many employed, and in some cases more; but in all cases, I think, there will not be a reduced number employed, particularly as the trade of the country is steadily increasing year by year; the effect of the Bill may be to get rid of bad ones, and the good ones will earn more money that they do now; the active ones will take the place of the sluggards.

12800. With regard to the aggregate number of pilots that will be required if the Bill is passed, do you think that there will be, on the whole, a falling-off in their number?—No; in the case of the port of Cork there is no compulsory pilotage, and I believe there are more pilots there now than there were before.

12801. You think that the effect of the Bill will be to stimulate the exertions of the pilots, and that it will be so beneficial as to produce more employment than now exists; that the men would go out to sea and charge more, and that that will make up for the falling-off in the number of vessels that want pilots, which would go to counteract what you stated, namely, that the small class of vessels that are now bound to take pilots will not want them?—Yes.

12802. In your opinion, it is not necessary to go into any such system of compensation under the Bill?—I should think you would have nothing to pay under the Bill; it was our opinion, and not only my opinion, but the opinion of many of the shipowners, that there would be nothing to pay, and that was the reason why we thought that Clause No. 6 was so objectionable.

12803. The opinion of the Shipowners' Society is, that there will really be no call for compensation at all?—Yes.

12804. And that there will be, on the whole, as much employment of pilots, looking at the increase of the trade, as there is now?—Yes.

12805. Mr. *Graves.*] You say you think there will be no falling off in the number of pilots; what is the hardship under the present system?—The hardship of the present system is making me pay for you, for example. I have to pay with my small ship, when my captain is well acquainted with the navigation; to pay for a man that has a large ship, where the amount of his pilotage is a mere fraction as compared to the freight he earns, whereas the amount of pilotage for a small ship is a very large per-centage.

12806. I understood you to say that you thought that the number of pilots employed would be the same as ever?—I think so, and they would go further afield.

12807. It is only to the incidence of the tax that you object principally?—I object on principle to compulsory pilotage altogether, because it carries with it freedom from liability in the case of collisions.

12808. You regard it as a tax upon shipping?—I do.

12809. Do you regard the light dues as a tax upon shipping?—Yes.

12810. And you put the two in the same category very much, in your desire to get quit of them?—Yes.

12811. *Chairman.*] There is no exemption from liability arising from the payment of light dues?—No.

12812. Mr. *Graves.*] You referred to the Mersey; how much do your vessels pay towards the pilot service of the Mersey?—None at present, unless we send a strange ship in there.

12813. Then you do not suffer from any hardship in the Mersey?—Personally not; but there is some hardship to the small shipowner; I am not speaking now personally of A. G. Robinson, but as deputy chairman of the General Shipowners' Society, and there is the same hardship arising in the Mersey as in the Thames or any other port.

12814. But personally you have no hardship to complain of with reference to the Mersey?—No.

12815. Your vessels trade with nearly all the continental countries?—Yes.

12816. Are there not any ports to which your vessels ply in which compulsory pilotage does not exist?—I am not thoroughly up in the pilotage law in all the places we trade to. In Russia I do not think we are compelled to take a pilot. In France, Holland, and Portugal, we are; we are not compelled in Turkey. In America, to a certain extent, we are bound to take a pilot when he offers; but there is a certain amount of freedom there, and we sometimes take a pilot 100 miles off the port.

12817. In France the system is compulsory?—Yes.

12818. In Holland it is compulsory?—Yes.

12819. In Belgium it is compulsory?—Yes.

12820. In Spain it is compulsory?—I think so.

12821. And Portugal?—Yes, and Portugal.

12822. And North Germany and Austria?—Yes, and the Elbe.

12823. How far do you carry your views with reference to a perfectly free system; do you mean that any number of pilots should be licensed who can prove themselves qualified?—I would go so far as that, because I think it would regulate itself; men would cease to ask to be licensed.

12824. Would you give the option to the pilot as well as to the shipowner whether he would, when called upon, pilot a vessel out or not?—Yes; practically he has now that option.

12825. You would give perfect freedom?—He now has the option; I cannot compel him to go; the law compels him to go; but I should be very sorry to enforce the law; practically, at the present moment, the pilot need not go, but the shipowner must take him.

12826. Practically, in a regulated system where each man takes his turn, he has no power then to say that he will not accept it?—No, he has no power to say that he will not accept it, but he has the power to say whether he will go or not.

12827. Would you leave it free to a pilot to make his own arrangement as to the price of the pilot for his services?—I would not object. At the same time if he is to come under the pilotage authority, I think that is one of the points I would leave with the pilotage authority to regulate.

12828. The chairman of your society, at Question 9623, was asked this: "If there were two vessels running up the north channel, one of 1,500 tons and the other of 300 tons, you would leave it free to the pilot to go to the one of 1,500 tons?"

Mr. *Robinson.*

15 June 1870.

tons?" and his answer was "Yes;" do you agree with that?—I do.

12829. Do you think that that would be just to the small class of vessels?—I think it would; I think a pilot is like every other man, and he ought to be allowed to get the most he can for his services.

12830. Under what provision of this Bill would you hope to carry out that perfect freedom which you aim at?—I do not exactly understand the provisions of the Bill; I am quite satisfied of this, that if you do away with compulsory pilotage we shall always be able to get a pilot when we want him. Take the coast of Norway, or go into any part of Norway, and you will get, not a regular licensed pilot, but a man that is well acquainted with the navigation; go into any port there, and you will find some one who knows the navigation.

12831. Would you leave it to the pilots to go wherever their interests led them to look for vessels, or would you confine them to certain stations?—I would have certain stations; but I would leave them free to go beyond the line of station if they chose, and that would be the practical effect of the non-compulsory system. With reference to the Thames they would go down the channel, and your ship would get a pilot off the Wight; whereas now she cannot meet with any pilot till she comes up to Dungeness, and then, in bad weather she is in danger.

12832. You said that you complained to the Trinity House of the want of pilots; was the complaint made formally on behalf of the society, or individually?—Individually.

12833. Has the society ever made that representation to the Trinity House?—I think not.

12834. Is it not the interest of the Trinity House to regulate the number of pilots in accordance with the requirements of the port?—I do not know what their interest is; but I think they do not regulate them to the interest of the shipowners.

12835. Have the shipowners the right of election of the Trinity House?—No, it is a self-elected body.

12836. And that is objected to by the shipowners of London?—Yes, almost unanimously.

12837. Has it it been at all considered by the society whether any improvement could be made with reference to the control of the pilots of London, in providing a local authority of a representative character?—The General Shipowners' Society have written to the Board of Trade, calling their attention to the members of the Trinity House, being self-elected, and expressing a strong opinion for a general election by the general body of the shipowners. Beyond that I do not think they have expressed an opinion that there should be a special pilot authority, constituted by the shipowners, or the parties who pay the pilots.

12838. Is it your own opinion that it would be a very great improvement if a local authority were established, representing purely the commerce and trade of the port for the control of the whole of the pilots of the Thames?—No doubt it would be; it has answered admirably in Dublin, and I think in Liverpool too, and other ports.

12839. Mr. *W. Martin.*] Do you know of the case of the "Leda" and the "Christiana"?—Yes.

12840. That was a case where the "Christiana" was moored by order of the harbourmaster of Blackwall; she was at her proper moorings; the "Leda" in broad daylight, having a Trinity House pilot on board, ran into her and sank her, and the crew were very nearly drowned; they had a difficulty in saving their lives, and the vessel has been disabled ever since?—I know there was a collision.

12841. A verdict of 267 *l.* was found against the pilot on the trial before Mr. Justice Keating?—There was a verdict, but I do not recollect the figure.

12842. And the pilot at once became a bankrupt?—Yes.

12843. And the consequence was that the owner of the "Christiana" never recovered one farthing?—I heard of it; we have had two or three similar cases.

12844. And you are of opinion that that law of exemption, when a compulsory pilot is on board, is very unjust?—I do not consider it unjust, when you are compelled to take a pilot under compulsory pilotage, but if a man is free to take a pilot or not, I think it would be unjust.

12845. Sir *J. Hay.*] In reply to the honourable Member for Liverpool, when describing the objection which you principally held against compulsory pilotage, you said in a very clear manner, "I pay for you"?—Yes.

12846. May not it also be said that it is not that you are paying for another person, but that you are paying in fine weather for a pilot whom you would be glad to meet in foul weather?—No, not so; I do not know of any case where we personally refuse to take a pilot in fine weather where we would take him in foul weather.

12847. I do not want to press the question; I rather want to get your opinion with regard to the ordinary maintenance of a good service of pilots at all the ports where pilots are required in this country; do not you think there is a great deal of encouragement to pilots to be on the spot where they are wanted, if they are certain of employment, in all kinds of weather?—To a certain extent it holds good; on the other hand, the pilots have the monopoly of your being compelled to take them, whether you like it or not, they get supine and do not attend; and it has repeatedly occurred with us in bad weather that we cannot get them, they never make their appearance. A ship hoists a signal for a pilot and no pilot will show himself; but in fine weather, whether there is a pilot signal or not, they come after you. I speak now of the navigation of the Thames; with reference to our steamboats it constantly occurs in bad weather that the captain is doubtful and wishes to have a pilot and signals for one, and he cannot get him; but in fine weather the pilots invariably try to cut him off, and if they do not actually get on board they declare that they were within sight, and claim pilotage from him.

12848. May not that depend upon the haziness of the weather?—No.

12849. I think you stated that the only country in Europe which managed to do without compulsory pilotage was Turkey?—Yes, as well as my recollection serves me, and I fancy it is so in Russia. I feel satisfied that we do not pay for pilots in Russia; we get them, and can take them.

12850. You would hardly think that the Turkish mercantile marine was the best example for us to follow?—I fancy you can get a pilot in Turkey

Turkey if you want him, just as well as in the Thames.

12851. I suppose that the absence of pilots in Turkey is rather due to the religious objection to insurance which prevails there?—No; because there are plenty of Greeks and Ionians there. Turkey itself has no sailors, but there are plenty of Christian subjects there.

12852. Mr. *J. S. Hardy.*] Do not you sail your ships at all hours of the night in the Thames?—Yes, night and day.

12853. Has not damage occasionally resulted from sailing them at night?—I think there is less damage done at night than in the day time.

12854. With regard to the question of compensation, we heard a great deal of it at first, but I should like to ask you, as a shipowner, upon the question of compensation when carrying a compulsory pilot, is not a ship coming in rough weather, even where a pilot is not compulsory, practically compelled in bad weather to take the first pilot that offers?—Not where she is not compelled to take a pilot.

12855. It is not legally compulsory, but in bad weather, with a ship that does not know the port, it is practically compulsory, is it not?—That would be the practical result.

12856. And yet, in that case, there is no injustice in making the owner responsible for the acts of the pilot?—No, because he has not the option of taking him or not.

12857. He has the option; but the option is no greater than the option he has at present, by which he can take a pilot on board, paying him for his services, although he may not allow him to direct the vessel; therefore, you are in as good a position as the person who comes in in rough weather and is obliged to take the first pilot who offers?—He takes his chance of a collision then.

12858. You are now in a position, if you think proper, to pay pilotage, and not to let the pilot manage the ship?—Yes, that is what we often do, and that is what we complain of; that we have to pay a man who does nothing. We sometimes take the charge of the ship from him.

12859. There is another question as to compensation which we have not entered into at all; I want to know why the Consolidated Fund and the public are to be expected to pay compensation for this change which is entirely to benefit the shipowners. Should not the compensation to be paid to the pilots, if there is any to be paid, be a charge upon the shipping generally, and not upon the public at large?—I do not see why the shipowner should pay; he has been paying for a thing he does not want, and you are going to ask him to pay further.

12860. It would not be paying further; in order to be exempt from a certain charge which is now put upon you, it would be necessary that some small compensation should be provided for a few years; is there any reason whatever why I am to be taxed to exempt you from this charge for the future?—Why should I, who have been suffering from this so long, be compelled to pay?

12861. In order to get rid of the grievance you have been suffering from?—The Government of the country have put me under this grievance for such a length of time, and why should I pay to get rid of it? In other cases where Parliament takes off taxation, it does not compel the parties who were taxed to pay for it.

12862. This is not a taxation; it has been a payment for compulsory services rendered, and you are going to be allowed in future not to pay the charge unless you think proper; do you see any reason why the charges which are thrown upon the country by this should not be borne by the people who reap the benefit?—No; I say we have been taxed unjustly for a number of years.

12863. In your view the country ought to pay you what you have been overtaxed for some years past?—Yes, if you could get it.

12864. Mr. *Gourley.*] You look upon the present system of pilotage as a monopoly?—To a certain extent.

12865. And, inasmuch as all monopolies have been nearly abolished in this country, you think there can be no hardship whatever upon those who have been enjoying the monopoly bearing the loss resulting from the abolition of that monopoly?—No.

12866. The same as all other monopolies which have been repealed in this country; when shipowners held the East India monopoly of 60 *l.* a ton, and it was taken from them, it was taken from them for the benefit of the country?—Yes.

12867. Therefore, if the pilot should in the abolition of monopoly suffer a loss, they should bear it themselves; that is your view?—Yes.

12868. And neither the country nor the shipowners should bear it?—Yes; if any loss occurs the country should bear it itself; I think the amount of compensation would be very small, if any.

12869. What is your opinion of the present rates of pilotage, from London to the Downs; is it too much or too little?—I think they are too heavy in certain cases; I do not think they are too heavy in large ships going long voyages earning large freights; but they are very oppressive in light draft of water vessels, which go principally short voyages, and earn very little money.

12870. Under the voluntary system, if the prices were reduced, I apprehend that all shipowners, more or less, would always carry pilots, and would never think of going down to the Downs without a pilot?—All large ships would.

12871. Have you had more accidents with vessels navigated without pilots than with pilots?—We have had more accidents with ships in charge of the Trinity House pilots, than with ships with river pilots, or with ships without pilots at all. We have fewer accidents with ships with no pilots. The Trinity House themselves feel themselves too incompetent to navigate in the river any of the large New York ships; a Trinity House pilot takes on a waterman to help him in many cases.

12872. You would recommend the granting of licenses to watermen who are in the habit of navigating ships on the Thames?—It is granted to them, but not enough.

12873. It is granted for ships carrying passengers; but take other men navigating ships not carrying passengers, would not you recommend that they should also have business from the Trinity Board?—Yes.

12874. Sir *C. Wingfield.*] In fact, you have more confidence in free watermen than a licensed pilot?—Yes; above Gravesend.

12875. And they also do the work very much cheaper?—

Mr. *Robinson.*
15 June 1870.

Mr. *Robinson.* 15 June 1870.

cheaper?—They do it a little cheaper, but not much.

12876. I think their maximum charge is 2 *l.* for the biggest vessel?—Yes; in large ships they would do it cheaper, but in ordinary size vessels it does not come much cheaper; it does come a little cheaper.

12877. Does not the practice of giving separate licenses to the pilots for the river above Gravesend and below Gravesend, lead to a greatly increased cost of pilotage?—It is a bad system.

12878. Does not it make the pilotage much more expensive in having separate licenses for the pilots for the river above Gravesend and below Gravesend?—It does to a certain extent, but the man that pilots below Gravesend could not pilot the ship above safely.

12879. But there are some pilots licensed from London to the Downs, are there not?—I do not know of any, there may be a few.

12880. I believe there are over 50, but they are an expiring class?—Yes.

12881. Mr. *J. S. Hardy.*] But the two are quite a different class of pilots; one is the river pilots, and the other is the sea pilots?—Yes; if you would ascertain the practice of those men, you would find that they take the watermen to help them.

12882. Sir *C. Wingfield.*] You know from your own experience that whether they are obliged to take a licensed pilot or not, they still take watermen, in addition, above Gravesend, because a licensed waterman has a better knowledge of the river?—We do not take him, the pilot takes him and pays him.

12883. Some shipowners do so, I believe?—I do not know that.

12884. Mr. *Gourley.*] That is a rule of your own?—Yes.

12885. Sir *C. Wingfield.*] You require him to do it, do you not?—No; we could not compel him to do it.

12886. Then, in fact, you find it very inconvenient, having employed these free watermen, that a licensed pilot should come on board your ship and supersede him?—Yes; we have found it very inconvenient, because we could not depend upon one or the other. A man says, "I have all this trouble for nothing; there is no use my taking charge of your ship; I may be superseded any moment." That was previous to the licensing of them under the late Act of Parliament for passenger ships. Since then they have interfered very little.

12887. Do you find the free watermen more zealous than the licensed pilots; more eager to get work?—Yes; we have a greater control over them, because we need not employ them if they do wrong.

12888. Whereas a licensed pilot, being secured of work, gets indifferent?—Yes.

12889. And he does not care to go at night?—No, not when the river is crowded.

12890. And his rates being very much higher than the free watermen's rates, he need not do nearly so much work as the free watermen do, although he earns just as much?—No, he need not.

12891. *Chairman.*] The case of the Thames between London and Gravesend is quite optional, is it not?—Yes, it is optional.

12892. We have been already informed that there are a very large number of men who act as pilots who are not licensed; is that the case?—A good number of watermen who are not licensed do pilot home-trade passenger ships.

12893. A large number of whom are quite competent to pilot vessels, I believe?—Yes.

12894. There is an alternative before us, either increasing the number of licensed pilots, or throwing the whole thing open, and allowing anybody to pilot between London and Gravesend; does not the existence of this large body of men rather point to the advisability of throwing the whole thing open?—I would have no objection to see it thrown open.

12895. You think it might be done with safety?—Yes.

12896. It being quite exceptional, there being a large number of men from whom you could make your choice?—Yes.

12897. In your opinion, it is doubtful whether it is necessary to keep up the licensing system of pilotage as far as Gravesend?—I think so; the navigation between London and Gravesend does not depend so much upon a man knowing the particular depth of the water, as it is upon knowing how to handle the vessels; and men being employed in barges and steam-tugs, and tug-boats, learn how to manage vessels much better than any pilot can do.

12898. There is such an abundant class of men who are really competent, and out of whom shipowners can choose which man they think fit, that really there seems hardly any necessity for having a licensed corps at all there?—No; previous to the watermen being licensed to pilot ships after the Passenger Act was passed, we found no difficulty in getting competent men that were not authorised to pilot at all; in fact, I think the men of that day did less mischief than they do at present.

12899. In fact, the very men whom you used to employ were afterwards licensed under the Act of 1854?—Yes.

12900. And on the whole that protection which is obtained from their license has hardly been a benefit because it has given them a kind of monopoly?—Yes.

12901. And it has tended rather to damage property?—It has tended to make them careless. We are placed in the difficulty now that if we get rid of one, we cannot get another very well; they are not in existence.

12902. I think you stated that your experience was, that the number of accidents arising to vessels when in charge of pilots, was rather more numerous than when they were not under the charge of pilots?—Yes.

12903. The effect of the passing of this Bill, you think, would be to diminish the security to life and property?—Yes.

12904. Is that the general opinion of the Shipowners' Society?—Yes.

12905. What is the amount of tonnage that you manage yourself?—About 30 steamboats.

12906. Are they of a considerable size?—Yes, from 2,000 tons down to 300 tons.

12907. Are most of those vessels fully insured?—None are fully insured.

12908. Speaking as an owner of ships to that extent, do you think that the effect of the Bill would be in any way detrimental to property or life?—No, nor as an underwriter either.

12909. Are you largely engaged in underwriting?—Yes.

12910. As an underwriter you are of that opinion?—Yes.

12911. Mr. *Graves.*] Would you extend the free system below Gravesend?—I would leave it optional.

12912. *Chairman.*] You think below Gravesend there should be a licensed system?—I think you must have them under control, otherwise you would have fishermen presenting themselves to foreigners and strangers as pilots, that have no right to do so.

12913. When those foreign vessels come up to Gravesend they would be in the hands of brokers who could supply them with competent watermen?—Yes.

12914. Whereas, if they were out at sea entering the Thames, they might fall into the hands of incompetent men?—Yes.

12915. That would be a reason for keeping up a license system from the Thames to the Downs, which there is from the Thames to London?—Yes, to a certain extent,

12916. Mr. *Graves.*] Would you give the licensed pilots the power of superseding unlicensed men when they are once in charge of a ship?—No, I would leave it optional with the captain to change him or not as he pleased.

12917. Sir *C. Wingfield.*] Does that answer apply to pilots above Gravesend?—Yes, anywhere and everywhere; a man joins a ship off Beachy Head, and if he comes up it is not fair that he should be superseded at Dungeness by a licensed man who has been lying snug under Dungeness.

12918. *Chairman.*] Then what is the value of his license?—To a certain extent it gives the captain of the ship the option of taking a licensed man; the license is, to a certain extent, a certificate that the man is competent.

12919. Do you think that the license should be no more than that; that it should give no legal power of superseding?—No.

12920. Sir *C. Wingfield.*] It would be a sufficient advantage for the man to possess the license?—Yes.

12921. Mr. *J. S. Hardy.*] What guarantee would that be to a foreigner to prevent him being preyed upon by watermen?—He will take care of himself. When he finds that he has got an unlicensed man on board he would make his bargain with the man before he took him.

12922. The result of that would be not to have licenses at all, but to throw the whole trade open?—The effect would be that nearly every competent man would take a license.

12923. In fact, it would create free trade?—It would be a certain free trade. I presume the pilotage authority would not grant a license without examining the man. I do not think there would be more competent men who would present themselves for it. We have not got such a superabundance on shore or land of competent people in the present day. We are rather short than otherwise of good men. Both masters and mates, and pilots, we are short of.

Mr. *Robinson.* 15 June 1870

12924. *Chairman.*] Your last proposition goes much beyond the Bill before the Committee?—Yes.

12925. You would hardly think it desirable to adopt such a course at once?—No.

12926. It would raise much more difficult questions of compensation than are raised now; you are giving your theory of what we might ultimately come to?—Yes.

12927. But it would be necessary to proceed to it by steps?—Yes; you could not come to it all at once.

12928. Mr. *Gourley.*] But you would not leave the pilotage system, even though that system should be ultimately free, without responsibility to some authority?—No; if I licensed a man I would put him under the control of somebody for damage sustained.

12929. You would recommend that the pilotage system between London and Gravesend should have some representative to which the pilot should be accountable?—Yes, just the same as you license a cabman.

12930 Sir *C. Wingfield.*] It might be under the Board of Trade?—The Board of Trade have too much power already.

12931. Mr. *J. S. Hardy.*] With this system the men would take care not to take a license because there would be a licensed man superseding him, and by taking out no license he would be a perfectly independent man?—It would cure itself. A captain of a ship is anxious to get a pilot; of course he knows that men are licensed, and he also knows that some men are real pilots and others are only supernumeraries, therefore he would take a licensed man as a rule; a man who did not know the port would take a licensed man at once when he presented himself.

12932. Mr. *Gourley.*] Do you think that all vessels should be piloted by men licensed by some board?—I do not say that; at present it would be better perhaps until we get a little more experience.

12933. *Chairman.*] Do cases ever occur in which vessels which pilot themselves employ a waterman to assist them?—Yes.

12934. Thus showing their own incompetency?—Yes.

12935. They pay them out of their own earnings?—Yes.

Mr. Thomas Davies, called in; and Examined.

12936. Mr. *Graves.*] You are a Master Pilot of Liverpool?—Yes.

12937. How many years have you been in the pilot service?—Thirty-seven years.

12938. It has been stated by one of the pilots here, Henry Jones, who was engaged in Mr. Inman's service, that he only received 170 *l.* a year; is that correct?—No; I have a statement copied from the returns made by Mr. Leece, the collector of pilotage, which I can vouch for as being correct; in 1867 he received 334 *l.* 9 *s.* as pilotage, and that went to the general fund.

12939. From whom was it received?—From Mr. Inman, and he received himself for his own earnings, 220 *l.* 9 *s.* 10 *d.* In 1868 he received 327 *l.* 2 *s.* as pilotage, and he received himself 212 *l.* 17 *s.* 3 *d.*; in 1869 he received 346 *l.* 14 *s.* 6 *d.* as pilotage, and he received himself 216 *l.* 18 *s.* 7 *d.*; that includes alien pilotage.

Mr *T. Davies.*

12940. Showing that the 170 *l.* which he stated that he had received is not correct?—He received 180 *l.* from pilotage, but including the alien pilotage it makes the sum of 216 *l.* for that year.

12941. I believe you were the chairman of a

Mr. *T. Davies.*

15 June 1870.

meeting of pilots held at the George's Dock, on the 8th of March last?—Yes.

12942. Was that meeting called by advertisement?—Yes, it was by advertisement.

12943. What number of pilots were at that meeting?—It was a very full room; I should think there were 150, or more.

12944. Was Jones present at that meeting?—He was there.

12945. Was Beckett present?—He was there.

12946. Did either of the pilots disagree with the resolutions that were put that day?—No; Jones did not say anything, but he heard all which passed, and he was satisfied with what was done; but Beckett took a very active part in bringing certain things forward before the meeting.

12947. In opposition to the Bill?—Yes.

12948. What was the resolution agreed to at that meeting?—To oppose the Bill, and, failing that, to seek for compensation without making any concession at all.

12949. To oppose the Bill in its principle?—Yes.

12950. Was there a dissentient voice in the meeting?—Not one.

12951. Whom did the pilots assembled at that meeting select to come to London to state their views?—They had other meetings afterwards, and they selected Mr. Beckett and Mr. Richard Williams to represent them.

12952. Did these two representatives take any active steps?—They were attending the Committee, coming up and down, prepared to give evidence if it was required, for about two months.

12953. Did they get up petitions?—They got up petitions and went to the newsroom and got them signed by all the masters of vessels.

12954. Were they all in favour of retaining the present compulsory system at Liverpool?—Yes.

12955. Was not Beckett in attendance during all the early sittings of this Committee in order to give evidence against this Bill?—Yes.

12956. Why did he not give evidence?—The reason that there was no evidence given on the first part was that Williams and Beckett considered that all their views had been placed before the Committee, and there was not much for them to say with reference to it; but before this transpired there was a complaint against him before the pilotage committee, which he had to attend to, and then, I think, he altered his views and declined to come and give evidence.

12957. Did you hear Beckett's evidence yesterday?—Yes.

12958. Did he state the views of the pilots of Liverpool?—Not at all.

12959. Was he authorised to come here to state their views yesterday?—I am not aware that he was authorised by any person; so far from his stating the views of the pilots, I am not aware that there are any men, except the two who came before the House in the pilot service, at Liverpool, who object to our opposing the Bill. I have had many opportunities to test it by different meetings, and talking to the body, and from the feelings expressed to me, the whole of the pilots are in favour of compulsory pilotage for Liverpool.

12960. Did the pilots afterwards nominate another of the journeymen pilots to represent their views here in place of Beckett?—Beckett was away on an excursion for several days, and during that time they appointed another in his place, but when he came back he resumed his post.

12961. Mr. *Gourley.*] His absence was the cause of their appointing another?—Yes.

12962. Mr. *Graves.*] Were you present yesterday when it was stated by Beckett that the pilot boats avoid supplying the small vessels if they see a larger one; is that correct?—It is not correct, and it is a very false statement; and in my position, if I was to attempt to do anything of the kind, I would lose my 37 years' servitude in the service with reference to my superannuation. I should be dismissed the service as a master pilot if I attempted to pass a small vessel, or any vessel, and gave the preference to another one; it is a point that the committee is most particular upon.

12963. And if done, would the boat they are in be liable to punishment?—The master of the boat is responsible to the committee for carrying out the laws.

12964. Is it not also the fact, that the second boat on the station considers it part of its duty to watch the first one?—It is a duty laid down by the committee to see that no vessel escapes, or that no vessel wanting a pilot shall be avoided in any way; if the first boat shirks them at all, the second boat puts a pilot on board directly.

12965. You do not know of any instance when a small vessel has come up with her flag flying for a pilot, that a large vessel has received the preference from the pilot?—It never occurred to my knowledge.

12966. It has been stated by Beckett, that he has done 20 turns against another man's four; can you give any explanation of that?—I do not understand that at all, because the system in the service is for the men to take regular turns; when the boat goes out they take their turns to pilot each vessel in succession, whether it is a small or a large one, and whether the time is a dirty time or a pleasant time, each goes in rotation, so that he could not possibly pilot 20 ships to another man's four; I think, if I remember right, he did say something about three masters, that was what he was alluding to at the time. There are three masters employed to each boat; I am the first master of No. 10; the third master in No. 10 is doing my duty in Liverpool, and is appointed by the committee for the purpose; if he is doing my duty in Liverpool, he could not take the vessels in and out, and the whole of the 16 journeymen divide his work amongst them, so that Beckett might perhaps, in comparison with that one individual, do a little more work, but he would not do more than the other 16 journeymen.

12967. He has also stated that he worked only 40 days out of the 365; can you offer any explanation of that?—I suppose he merely meant the time he was actually employed in piloting vessels, but he has to be at sea six months in the year, and I thought, from his evidence, that the gentlemen of the Committee would think we had a very pleasant time in Liverpool in piloting; he said that he was doing nothing but eating and drinking, and walking on shore.

12968. *Chairman.*] We understood that he was a certain time at sea, but that the actual time he was engaged in piloting vessels was only 40 days in the year?—As regards that, it would be 50 or 55; I would not contradict his statement,

ment, but, being employed as a pilot, he must be at least six months of his time afloat in the Bay of Liverpool, under all circumstances, and under all weathers; and in the winter time it is a very irksome and disagreeable situation to be in. During the time he is on shore he has to attend at the committee office, sometimes two tides in a day, particularly in the summer time, when there are long days. A portion of the pilots are sent home, and they have to attend every night at five o'clock; then they have to go in the river with vessels; sometimes they are lying on vessels outward bound eight or ten days, and sometimes three or four days; but many of the large ships, particularly passenger ships, have pilots on board in the river some two or three days before they sail.

12969. Mr. *Graves.*] Are there not also a certain number obliged to be on the pier head?—Yes; we meet twice a day when the days are long, but always one tide every day; we meet two and a-half hours before high water, and remain there till after high water.

12970. And each man's work is allotted out to him, whether moving vessels from dock to dock, or anything else?—We have a book, and if anybody makes an application for a pilot the master sees that the pilot is ready. If a master neglected to attend to it he would be severely fined by the committee, and if a pilot neglected to come they could take his license from him.

12971. While a man is supposed to be on shore, and not in the bay, he has a large amount of important duty to attend to?—Yes.

12972. And you consider that that is one of the necessities of the port, in order to keep up an efficient service?—Yes.

12973. *Chairman.*] Are you a boatowner yourself?—Yes.

12974. You stated just now that when Beckett was unable to be here the pilots chose somebody else to represent them?—Yes.

12975. Did the other man come up here?—The other man came up here, and he was here the whole of one or two days.

12976. Was he here while the Liverpool witnesses were being examined?—Yes.

12977. And he was not called?—No.

12978. Were you here in the room yesterday when Mr. Beckett gave his evidence?—I was.

12979. What induced you to come up here?—I have been attending continually backwards and forwards, to give evidence, if necessary.

12980. You attended on your own behalf?—In my own behalf.

12981. And not as representing the pilots?—Representing pilot boatowners.

12982. You were not chosen to represent the pilots, were you?—Some portion of the pilots, and the pilot boatowners.

12983. But not the other pilots?—All the pilot boatowners that are pilots.

12984. But not the other pilots?—There are a great many of them.

12985. How many of the pilots of Liverpool are boatowners?—I suppose something like 70.

12986. And how many are not boatowners?—I suppose rather more than that; I do not know the number.

12987. Are there not 120 who are not boatowners?—I do not think so many as that.

12988. We have it in evidence what the number is, but you were selected by the boatowners to represent them?—The pilots who are boatowners.

12989. And this other man was chosen by the pilots who were not boatowners?—Yes.

12990. This man came up to attend the Committee, but was not called when the Liverpool witnesses were called?—No.

12991. Was Mr. Beckett in attendance at the time when the Liverpool witnesses were called?—Yes.

12992. He was not called then?—No.

12993. Mr. *Gourley.*] How did the pilots make the appointment of Mr. Beckett and yourself; by a general meeting or a meeting of the committee?—By a general meeting of the pilots.

12994. How many pilots were present?—I do not know; but all that were on shore that could vote in that way.

12995. How many are on shore generally?—About half the number; about 120.

12996. *Chairman.*] Do I understand that the other man was chosen on the part of the pilots who are not boatowners?—Yes.

12997. Instead of Mr. Beckett?—It was during the time Mr. Beckett was away.

12998. And on that account?—Yes.

12999. Although Mr. Beckett had been here attending the Committee at the time the Liverpool witnesses were called?—He had been here, and he also came up while the other pilot was here; there were three here to represent the pilots.

13000. And none of them were called?—No.

13001. Is there not a considerable difference between the pilots who are boatowners and the pilots who are not boatowners?—I do not know that there is any material difference; but from my own experience, on the whole, I think the boatowners are the better class.

13002. But they were called together separately, and they chose separate persons to represent them?—No; at the general meeting I was selected by the whole of the pilots to preside at that meeting.

13003. But when was it determined to come up to give evidence upon the two classes of pilots separately?—We had our meetings separately; we had a master pilots meeting, and we had a journeymen pilots meeting.

13004. One class of the pilots chose Mr. Beckett to come here, and the others chose you?—One class chose Mr. Beckett and Mr. Richard Williams.

13005. And the other class chose you?—Yes.

13006. I suppose there was some reason for choosing different men to represent them?—The only reason was because one was to represent the pilots that were not boatowners, and the other was to represent the pilots that were boatowners.

13007. There was some difference of opinion between the two classes?—I am not aware of any difference at the general meeting; we were then unanimous as to compulsory pilotage.

13008. Are you aware that the pilots who are not boatowners complain very much of the system of boatowning?—I have not heard anything particularly about that; but there is no doubt that where capital and labour is divided, there is generally an outcry.

13009. As a general rule you admit that?—Yes.

13010. Would you apply that general rule to the

Mr. *T. Davies.*

15 June 1870.

the particular case before us, namely, the separation of interest between pilots who are boatowners and pilots who are not?—It may be so, but we have a fair arbitrator between us; that is the pilotage committee; the pilotage committee are a disinterested body, and they arbitrate between us.

13011. You have not told us the reason of the pilots not being called at the period of the Liverpool evidence being given; do you think that it was very possibly from the difference of opinion between you as to the Liverpool system of pilotage?—I can state positively that we had a meeting, and that the pilots were asked by our solicitor and myself if they would give evidence in this case, and the answer was, that they had a number of questions written down, and they had been striking them off one by one, and everything they thought of putting forward had been done by others, and they did not see that there was anything to give evidence about; they being satisfied, I was satisfied, and there was an end of it.

13012. Did you come up again when you heard that Mr. Beckett was coming?—I have been coming up continually ever since the Committee began to take evidence.

13013. Have you been attending the Committee every day?—Nearly so; I have had a cruise at sea since; I have been here when most of the Liverpool evidence was given.

13014. Mr. *Graves.*] Was not it the fact that you did not give your evidence in consequence of being advised by myself and others that it was not worth while taking up the time of the Committee, as other impartial witnesses had given all the information you could give?—Yes, that occurred at the meeting I spoke of.

13015. In London were not you advised that it was not desirable to take up the time of the Committee by calling any evidence on the part of the boatowners?—Yes.

13016. *Chairman.*] Then we have been fortunate enough to pick out the only two men who differ from you and the other pilots?—That is my opinion.

13017. Has there been any meeting of pilots since, the Bill has been discussed in Committee?—After Mr. Henry Jones, the pilot, gave evidence, I went down to Liverpool, as I was surprised to hear that there was one pilot in favour of non-compulsory pilotage, and I called a meeting of all the pilots on shore, and I got Mr. Bremner, our solicitor, to meet them and read Jones' evidence over to them; there were 84 pilots there; and at that time when we were all met together, and after Mr. Bremner, our solicitor, had read the evidence over to them, I put the question to them that if there were any there that had the same opinion as Mr. Henry Jones they were to signify the same by putting the right hand up, and there was not a right hand put up; but there were a great many dissentients from what was read who expressed their feelings.

13018. There was no resolution passed at that meeting, was there?—No, that was all that took place at that meeting.

13019. There was no discussion at the meeting as to the general effect of the Bill or what had taken place before the Committee?—No, the probable effect of the Bill had been discussed before, and we were decidedly against it.

13020. You simply called them together and read the evidence out, and asked them to hold up their hands, and nobody did hold up their hands?—That was only as to the evidence of Mr. Jones.

13021 You recollect that Mr. Beckett stated that a considerable change of opinion had taken place amongst the pilots, in consequence of evidence given before this Committee generally; has there been any meeting of pilots to ascertain whether their opinions remain the same or whether they are altered?—I think the pilots generally are of opinion that the evidence which has been given is rather favourable to us than against us.

13022. Mr. Beckett was giving a contrary version as to what the opinion of the pilots was?—There has been no meeting, with the exception of the one I spoke of.

13023. All that took place was, that Mr. Henry Jones' evidence was read over, and you then asked the men to hold up their hands, and they did not do it?—They expressed very strong terms against him for doing what he had done; some of them said that if he had been in Sheffield they would not have been answerable for his life if he had done such a trick.

13024. That may have deterred many of the men from holding up their hands at the meeting?—No, that was after the meeting.

Mr. Richard Williams, called in; and Examined.

Mr. *Williams.*

13025. Mr. *Graves.*] You are a first-class pilot of Liverpool?—Yes.

13026. Were you present at a meeting which was held on the 8th of March, and which was called by public advertisement?—I was not present at that meeting.

13027. Were you appointed by that meeting, in conjunction with Mr. Beckett, to come here to represent the views of the pilots of Liverpool?—I was appointed to assist Mr. Beckett to come up here, and advise with him as to the best to be done under the circumstances.

13028. In opposing the Bill?—Yes.

13029. For the whole of the pilots?—Yes.

13030. That was by a resolution passed at that meeting?—Yes, it was.

13031. Have you attended the various meetings of this Committee as representing the pilots of Liverpool?—I have attended this Committee at every meeting with reference to Liverpool, with the exception of the meeting when Henry Jones was examined.

13032. It was intended that you should give evidence before the Committee as to the views of the pilots in their determination to oppose the Bill; why did not you give that evidence?—Because I imagined that the subject was exhausted, and so did Mr. Beckett. In the first place, evidence as to the necessity of pilots, and the efficiency of the service in the second.

13033. Were not you advised by myself and others that it was not desirable to take up the time of the Committee, as your case was fully proved by others?—We were.

13034. But your wish was to give evidence, and you attended here day after day to give evidence

dence before the Committee?—I should have preferred giving evidence.

13035. Mr. Beckett yesterday in his evidence said that a good many pilots that he had spoken to shared in his altered views; are you aware from your position, representing the pilots of Liverpool, that that is so?—I have never heard anything of the sort.

13036. Are you aware of any one, besides those two men, who agrees in the principle of this Bill?—I have never heard another pilot, with the exception of those two men, say that he agreed with the present Bill, or with a non-compulsory system.

13037. Then he did not represent the views of the pilots of Liverpool in speaking here yesterday?—Not as they spoke to me with reference to the subject.

13038. Or according to the authority you have got?—No.

13039. Were you at the meeting called on the 30th of May last, at the Pier Head?—Yes.

13040. What took place at that meeting?—Mr. Jones' evidence rather took a great number by surprise, and we thought it better to call a meeting to see if there had been a material alteration in the views of the pilots generally. It happened to be tide time, and we mustered 84. The evidence of Mr. Jones was read over by Mr. Bremner, and he asked the meeting particularly had they come to any other conclusion than they had originally come to in the months of February, March, and April, and if so, to hold up their right hands, and there was not a hand held up.

13041. There was no dissent in that meeting?—The question was particularly put whether any alterations had taken place in their views.

13042. When did it come to the knowledge of the pilots that Mr. Beckett had changed his views?—I heard something of it about last Friday or Saturday.

13043. Did it excite much surprise amongst those pilots whom you mix with?—It did among some, but with others it did not.

13044. May the Committee now fairly assume that you are the only person now authorised by the pilots of Liverpool to state that they entirely disapprove of the principle of the Bill?—Mr. Beckett would have been if he had maintained his original views, but not having done so, and I never having had any orders to the contrary, I maintain that I represent them. The pilots of Liverpool from the first had made up their minds to sink all differences and oppose the Bill *in toto*.

13045. No pilot in Liverpool has ever intimated to you that he ceases to regard you as his representative before this Committee?—He has never done so.

13046. *Chairman.*] Mr. Beckett stated that he was still rather opposed to the Bill, and that if any change was made at all in the pilotage of Liverpool, or if any payment now made to the pilotage fund by vessels not bound to carry pilots was discontinued, he thought it would be better to adopt the voluntary system. Has that question been discussed by the pilots of whom you have spoken?—It has been discussed as a voluntary principle on both sides; that has been distinctly understood; meaning that I explained to the several meetings that it was never intended by the Bill that it should be voluntary on the part of the pilot.

13047. Has there been any discussion by the pilots of Liverpool as to the effect upon them and their system of any alteration of the law, not involving the absolute doing away with compulsion?—At several meetings we have had the question of clipping discussed. Our system of pilotage for a number of years has been a system of clipping, taking a little money off this and a little money off that; they have been reducing the pilotage instead of increasing it.

13048. Has there been any meeting of the pilots of Liverpool since this Bill has been discussed in Committee to ascertain their opinions of what would be the effect of still further clipping the pilotage of Liverpool?—Yes, there was a meeting in Clayton-square, at the Bee Hotel; there were 50 pilots present, as near as I can recollect, and that was after several meetings of the Committee here. I explained to them what had been said and done upon the occasion, and what steps had been taken, and they unanimously agreed that the only thing to do in the future was to remain stedfast upon the present compulsory system, and that no other one would suit their views.

13049. Did they take into their consideration the possibility of changes being made in the receipts which they now have from vessels which are bound to take pilots; for instance, the coasting passenger steamers?—The coasting passenger steamers do not take pilots at present.

13050. But they have to pay, have they not?—They pay a nominal sum of 1*s.* a foot.

13051. That forms a considerable sum altogether towards the pilotage?—£. 1,700 *l.* a year.

13052. Mr. Beckett said, that if the Bill did take away those sums, he thought, on the whole, that it would be better to adopt the voluntary system?—The Bill, as I read it, never contemplated the taking away of the 1 *s.* a foot on the coasting trade from us.

13053. Do not you think it possible that the other pilots, when they began to know the nature of the Bill, may have changed their opinions?—I confine myself particularly to the Bill and nothing else.

13054. From what you just stated, it does not appear that the pilots quite know what the Bill means to do?—I read it to them.

13055. With your explanation, they understood it, but before, they did not understand what it meant?—I read its meaning from the first, just the same as I read its meaning to-day, that it means a voluntary system on the part of an owner of a ship to take a pilot or not, but the compulsion, as far as the pilot is concerned, to remain on duty, will remain the same, whether employed or not.

13056. Can you tell the Committee what the reason is for the two classes of pilots wishing to be separately represented?—It never was intended at the commencement for Mr. Jones to come up here; Mr. Jones several times offered his services, but they were always declined.

13057. I am speaking of Mr. Davies and yourself; it seems the two classes of pilots met, and chose different pilots to represent them before this Committee; I ask why these different classes of pilots met separately, and wished to be separately represented?—In case the Bill should pass, and the question of compensation was brought on, that Mr. Davies should represent the owners for their part of the compensation, and Mr. Beckett should represent the journeymen for their portion of the compensation.

Mr. *Williams.* 15 June 1870.

13058. Will you undertake to say that there was no other reason for their meeting separately, and wishing to be separately represented?—Nothing but that suggests itself to me.

13059. Is there not a considerable difference between the two bodies of pilots with reference particularly to the ownership of the boats?—There always has been.

13060. And the pilots whom you represent, who are not owners of boats, look upon the ownership of boats with great dissatisfaction, do they not?—It is the same dissatisfaction as always exists, where it is capital *versus* labour.

13061. I only want facts; it is the fact, is it not, that there has been considerable dissatisfaction?—Among a few I have heard it mentioned, that they might receive a little more from the owners.

13062. Is it your opinion that if this Bill passes, it will inevitably lead to the breaking up the system of the ownership of the boats in Liverpool?—It will not only lead to that, but it will lead to the breaking up of the best pilots in Liverpool.

13063. I talk of the ownership of the boats; is it your opinion that it will necessarily lead to the breaking up of the system in Liverpool, under which the boats are now owned, if the Bill passes?—Decidedly, I think it will break them up, and break us up as well.

13064. Would it inevitably lead to the breaking up of the system of boatowning in Liverpool; is that your opinion?—I should have to consider it in two or three various ways.

13065. You have not considered it yet?—No.

13066. Supposing that it had that effect, should you look upon it with satisfaction?—No, I should not look upon the fall of anybody else with satisfaction.

13067. But you do not agree with the system of boatowning in Liverpool, do you?—I never embarked in it.

13068. And you join with the other pilots of the same class in their feeling of dissatisfaction with the system?—I never entered into conversation with them with reference to any question of that kind before coming up here.

13069. Do not you agree with the other pilots of your class, in looking with dissatisfaction upon the system under which the boats are owned in Liverpool?—If any man thought proper to purchase a share he could do so.

13070. But you have not thought it worth while to do so, and all the other 130 pilots have not thought it worth while to do so?—No.

31071. They look with dissatisfaction at the existence of a system under which a considerable portion of their earnings goes to the owners of the boats?—I will not pledge myself that the 130 men do that.

13072. But you look with dissatisfaction, do not you, upon the system by which a large portion of your earnings goes to the boatowners?—There is not so much goes to the boatowners, but it is an expensive establishment in other ways.

13073. A good deal goes for good-will, does not it?—No, in expenses that you cannot avoid in working the business, boat hire, and steamboat hire, and the necessary machinery for keeping the boats supplied with pilots.

13074. But a large portion goes to the owners of the boats in respect of the good-will which they have given for the boats, and that amount is deducted from the earnings of the pilots?—If I said that, I should say contrary to the evidence already given.

13075. I think you would be only giving evidence in accordance with that which has been already given?—If I had prepared figures as to that, I could answer you.

13076. Then you cannot answer the question?—No.

13077. You do not know whether the portion of your earnings which goes to the owners of the boats, is for the good-will?—It must be so.

13078. Do you look upon that with dissatisfaction or not; do you approve of the system under which a considerable portion of your earnings goes to the owners of the boats?—I am at a loss to know the per-centage of it; they say 9 or 10 per cent.; that is little enough.

13079. You know what it is?—I presume that is not much, if they only get 9 or 10 per cent.

13080. That is a wrong calculation; are you not aware that a very much larger portion of your earnings than 9 per cent. goes to the owners of the boats?—I think it is 25 per cent. It has been said in evidence that the gross is 25 per cent., but that the nett proceeds amount only to 9 or 10 per cent.

13081. Had not that been a ground of dissatisfaction among the pilots of your class?—Yes; that is when they have not looked into it properly; they show that the greater amount of the 25 per cent. goes for the working expenses, and the wear and tear.

13082. A great portion of it goes for the ownership of the boats, which is, in fact, the good-will given for the boats?—The good-will is the price of the shares.

13083. But for which there is no property representing it?—But there are a great number who still purchase shares in the boats, and they must do that with their eyes open.

13084. And that has been the ground of the dissatisfaction between the non-boatowners and the boatowners, has it not?—Yes.

13085. Is it your opinion that this Bill will have the inevitable result of breaking up the system of boatowning?—It is sure to do so.

13086. Is it not possible that many of the pilots, when they found that the Bill would have that result, may have looked with a somewhat different view upon the operation of the Bill, to what they held when they first entered into the question?—Up to Monday morning they had not.

13087. Mr. Beckett has stated otherwise; there has been no meeting of pilots on the subject, has there?—There has been no meeting.

13088. Since the first general meeting at which speeches were made, and resolutions come to, you do not know of any meeting except the one you told us of, at which Mr. Jones's evidence was read out?—That was the last public meeting.

13089. Have you had any special delegation from the pilots since Mr. Jones gave his evidence or since Mr. Beckett gave his evidence?—No different instructions have come to me from them.

13090. Sir *John Hay.*] I gather from what you have stated that you, representing the journeymen, would prefer to continue the present system, even though that present system causes you to pay a greater per-centage from your income to the boatowning pilots; you would continue

tinue to prefer the present system rather than throw it open altogether and do away with compulsory pilotage?—Yes.

13091. You have a little grievance against the boatowners; a sort of jealousy which frequently exists between labour and capital; if it is merely a trifling feeling of jealousy of that character you would rather preserve the present system than make the change which the Bill contemplates?—Yes; it is curious that they should make a concession to the boatowners on the 1st of January this year, and then so soon as May they should say they are dissatisfied with the amount they have received.

13092. You have heard of no change in the opinion of those you represent?—None.

13093. Mr. *Brassey.*] Is the ownership of the pilot-boats in the port of Liverpool confined to pilots?—It is confined to pilots and superannuated pilots.

13094. And in any case the class of boats necessary for the pilot service of the port of Liverpool would be of an expensive and costly character?—They would have to be a similar class of vessel to those now in use.

13095. And, as the boats would be costly, the pilots must submit to have deductions from their fees to preserve the class of boats?—Yes, unless they thought proper to invest in them themselves.

13096. In that case they would invest a large amount of capital?—Yes.

13097. You say that you have not invested in shares in these boats?—No.

13098. Were you deterred from doing so from the fear of legislation, or the excessive price of the shares?—There is a great risk attached to owning shares in a pilot-boat, and the prices are high, and the fact is that there has been so much legislation with respect to pilotage lately, and so many Acts of Parliament and bye-laws have been passed, that I was quite under the impression that we were perfect by this time; it is not safe to go very far in buying shares in boats.

PAPERS handed in by Mr. *T. H. Farrer.*

(No. 1.)

Appendix (A).

MEMORIAL of Owners of Barges and other Craft navigating the Rivers Thames and Medway.

To the Right Honourable the Lords of the Committee of Privy Council appointed for the Consideration of Matters relating to Trade and Foreign Plantations.

The humble Memorial of the undersigned, being Owners of Barges and other Craft navigating the Rivers Thames and Medway,

Sheweth,

THAT your memorialists are owners of barges and other craft navigating the Rivers Thames and Medway, amounting in the aggregate to 135,000 tons and upwards.

That your memorialists beg respectfully to direct your Lordships' attention to the existing laws relating to pilotage as affecting your memorialists, the losses to which they and others are liable by the neglect or unskilfulness of pilots, and (in the present state of the law) the inability of those sustaining damage by reason thereof, to obtain compensation or redress.

That many of your memorialists being engaged in trade with works or manufactories on the Medway and wharves or places of business in London, have barges constantly running between their said manufactories and wharves, and others of your memorialists let out their barges for hire, and all which barges are in constant danger of and are frequently damaged or sunk by ships in the charge of pilots navigating the Thames.

That by the Merchant Shipping Act, 1854, sect. 379, certain ships when not carrying passengers are exempted from compulsory pilotage; but a large number of the ships navigating the Thames, and particularly steam ships, are not so exempt, inasmuch as they carry passengers.

That by the 354th section of the same Act, every home-trade passenger ship, unless the master or mate of such ship has a pilotage certificate, is bound compulsorily to take a pilot.

That by the 388th section of the same Act, no owner of any ship shall be answerable for any damage occasioned by the fault or incapacity of any pilot acting in charge of such ship, where the employment of such pilot is compulsory by law.

That by the 373rd section of the same Act, no Trinity House pilot (who by the 372nd section is required to execute a bond to the Trinity House for 100 *l.*) shall be liable for neglect or want of skill beyond the penalty of such bond, and the pilotage in respect of the voyage in which he is engaged.

That it follows from the sections of the Act referred to, that the owners of ships when compulsorily bound by law to take a pilot are not liable for any damage occasioned by the neglect or want of skill of the pilot when in charge, and that the liability of the pilot himself for any such neglect or want of skill is limited to 100 *l.*

That although the liability of the pilot is so limited, they are in fact men of small means, and when sued for the damage sustained frequently become bankrupt, and the unfortunate barge or ship owner is left to bear his loss, as the bond to the Trinity House mentioned in the 372nd section of the Act referred to is not taken for the purpose of securing the 100 *l.* the limit of the pilot's liability to any person suffering damage, but for the due observance by the pilot of certain bye-laws and regulations of the Trinity House.

That if the damage caused to a ship or barge amounts to a small sum and within the pilot's limit of liability, the owners of the ship doing damage, though denying their liability, sometimes adjust the claim and offer a sum (probably on account of the pilot) frequently not more than half the amount of the real damage sustained, and which sum it is considered expedient to accept rather than attempt to recover the full damages against the pilot, who as before stated is not worth suing.

That when the damages amount to a considerable sum neither the shipowner nor the pilot pay the same; the shipowner refusing on the ground of non-liability, and the pilot pleading his poverty and want of means.

As illustrating and supporting the foregoing statements and the course taken by the pilots on such occasions, your memorialists beg to state out of many, the facts of a single case.

In

Appendix (A).

In September 1864, a barge named the "Snodland," belonging to one of your memorialists (Messrs. Lee, Son, & Smith) laden with lime, in broad daylight, was run into and sunk in the Thames by the screw steamer "Sentinel," a passenger vessel plying between London and Newcastle, and then in charge of a Trinity House pilot named Benjamin Allen. The barge was much damaged and the cargo destroyed; the total loss sustained by the collision exceeded 250 *l.* The owners of the steamer denied their liability. The pilot admitted that the collision happened from the steamer having touched or "smelt" the ground, and cast no blame on the crew of the barge. He was sued for the amount of the damage. He did not plead to the action; but threatened through his solicitor that when the damages were ascertained by a jury he would become bankrupt. The damages were assessed by a jury at 252 *l.* 3 *s.* 3 *d.*, and with the costs of the action amounted to 291 *l.* 1 *s.* 7 *d.* Execution was issued against his goods, but on the day following the levy (as he had threatened) he became bankrupt, and there being no assets of any value, Messrs. Lee, Son, & Smith, will lose the entire amount of their damages and costs.

From the circumstances of this case it will be seen that Messrs. Lee, Son, & Smith have exhausted their remedies against the pilot, and have not succeeded in recovering from him even the sum of 100 *l.*, limited by the Section of the Act before referred to.

That on the same day and shortly after the collision with the barge "Snodland" above mentioned, the same steamer whilst in charge of the same pilot, on the same voyage, sunk the barge "Thomas and Sarah" belonging to your memorialist Henry Hughes, laden with bricks, but for the reasons before suggested he did not see the pilot, his damages amount to 240 *l.* and upwards, and are wholly unpaid.

That a loss of this nature to many persons being owners or part owners of a single ship or barge has been the cause of their utter ruin and bankruptcy.

That steam passenger vessels are frequently navigated recklessly with a view to accomplishing the voyage in the shortest possible time. That the Tyne Steam Shipping Company (the owners of the "Sentinel," the steamer before referred to) advertise that their "vessels are well known for their great speed, making the voyage in several hours less time than any other vessel on the station." That it is the practice for this and other companies owning several vessels, to contract with particular pilots for the pilotage of all their vessels. That the same pilot being constantly employed by the same Company, becomes, as it were, a servant of that Company, is imbued with the same desire to accomplish a rapid voyage; and is therefore less careful than he would be if he were casually employed. And it is believed that with the view of retaining the benefit of such an engagement he prefers to risk any amount of damage to any other vessel or craft (knowing the limit of his liability to be 100 *l.*), so that he save the vessel he is piloting from calamity and loss.

That your memorialists, therefore, venture respectfully to submit that the present law as to pilotage inflicts great hardship and loss upon your memorialists and others in their position, who are daily liable to frequent and repeated losses from collisions under circumstances such as those referred to.

That as by law the masters and mates of home trade passenger-ships must now be possessed of certificates of competency, your memorialists respectfully submit that compulsory pilotage may now reasonably be abolished; if so abolished the pilot, if employed, would then be the servant of the owner of the ship, and in cases of collision, your memorialists and others would then have their remedy against the owners of the ships with which the collisions happened.

Your memorialists therefore humbly request your Lordships' attention to the present inefficiency of the law for securing to owners of craft suffering damage from collision with a ship in charge of a pilot, the amount of such damage.

And that your Lordships will be pleased to recommend such alterations as to your Lordships shall seem meet, either by the abolition of compulsory pilotage, or by regulations by means of which the amount of damage sustained may be secured to those suffering such damage.

And your memorialists will ever pray, &c.

			Tonnage of Barges.
(signed)	*Lee, Son, & Smith*	London and Rochester	1,800
	William Vokins	London	2,700
	J. S. Jarvis	London	800
	Jno. & Wm. Eastwood	London	500

(And 128 other Owners, representing a Total of 135,795 tons.)

Appendix (A).

(No. 2.)

MEMORIAL of Owners of Sailing Barges and other Craft navigating the Rivers Thames and Medway.

To the Right Honourable the Lords of the Committee of Privy Council appointed for the Consideration of Matters relating to Trade and Foreign Plantations.

The humble Memorial of the undersigned, being Owners of Sailing Barges and other Craft navigating the Rivers Thames and Medway,

Sheweth,

THAT your memorialists are owners of sailing barges and other craft navigating the Rivers Thames and Medway, amounting in the aggregate to 407,000 tons and upwards.

That your memorialists beg respectfully to direct your Lordships' attention to the existing laws relating to pilotage as affecting your memorialists, the losses to which they and others are liable by the neglect and unskilfulness of pilots, and, by reason of the present state of the law, the inability of those sustaining damage to obtain compensation or redress.

That many of your memorialists being engaged in trade, with works or manufactories on the Medway, and wharves or places of business in London, have barges constantly running between their said manufactories and wharves, and others of your memorialists letting their barges for hire, all which barges are in constant danger of and are frequently damaged or sunk by ships in the charge of pilots navigating the Thames.

That by the Merchant Shipping Act, 1854, sect. 379, certain ships, when not carrying passengers, are exempted from compulsory pilotage, but a large number of ships navigating the Thames, and particularly steam ships, are not so exempt, inasmuch as they carry passengers.

That by the 354th section of the same Act, every home trade passenger ship, unless the master or mate of such ship has a pilotage certificate, is bound compulsorily to take a pilot.

That by the 388th section of the same Act, no owner of any ship shall be answerable for any damage occasioned by the fault or incapacity of any pilot acting in charge of any such ship, where the employment of such pilot is compulsory by law.

That by the 373rd section of the same Act, no Trinity House pilot (who by the 372nd section is required to execute a bond to the Trinity House for 100 *l.*) shall be liable for neglect or want of skill beyond the penalty of such bond, and the pilotage in respect of the voyage in which he is engaged.

That it follows from the sections of the Act referred to, that the owners of ships when compulsorily bound by law to take a pilot, are not liable for any damage done by their ship when occasioned by the neglect or want of skill of the pilot in charge, and that the liability of the pilot himself for any such neglect or want of skill is limited to 100 *l.*

That on the occasion of damage, therefore, under the circumstances stated, the shipowner refuses to pay, on the ground of non-liability, and the pilot pleads his poverty and want of means.

That although the liability of the pilots is so limited, they are in fact men of small means, and when sued for the damage sustained frequently become bankrupt, and the unfortunate barge or ship owner is left to bear his loss, as the bond to the Trinity House mentioned in the 372nd section of the Act referred to is not taken for the purpose of securing the 100 *l.*, the limit of the pilot's liability, to any person suffering damage, but for the due observance by the pilot of certain bye-laws and regulations of the Trinity House.

As illustrating and supporting the foregoing statements, your memorialists beg respectfully to state the facts of four recent cases, out of very many, within their own experience and knowledge.

In September 1864, the barge "Snodland," belonging to one of your memorialists, laden with lime, was in broad daylight run into and sunk in the Thames by the screw steamer "Sentinel," then in charge of a Trinity House pilot named Benjamin Allen. The barge was much damaged, and the cargo destroyed. The loss sustained exceeded 250 *l.* The owners of the steamer denied their liability. The pilot was sued, admitted his liability, and did not plead to the action; but threatened that when the damages were ascertained, he would become bankrupt, and thus avoid the payment. The damages were assessed by a jury at 252 *l.*, and with the costs of the action amounted to 291 *l.* Execution was issued against the pilot's goods; but on the day following the levy (as he had threatened) he became bankrupt, and there being no assets, your memorialist lost the entire amount of his damages and costs.

That on the same day, and shortly after the collision with the barge "Snodland," the same steamer "Sentinel," whilst in charge of the same pilot, on the same voyage, sank a barge belonging to another of your memorialists, laden with bricks; but, from the result of the last case, he did not sue the pilot. His damages amount to 240 *l.* and upwards, and are wholly unpaid.

In April 1865, another barge, laden with lime, belonging to the same memorialist as the "Snodland," was, in broad daylight, in the Thames, at Limehouse Reach, run into and sunk by the screw steamer "Hibernia," then in charge of a pilot named Edward John Allen. The damage amounted to 301 *l.*, and the owners denied their liability. The pilot is not worth suing.

In

In August 1865, the barge "Belvedere," laden with cement, belonging to another of your memorialists, was, in the Thames, near Woolwich, run into and sunk by the screw steamer "Ibis," in charge of a pilot. The loss of the cement and damage to the barge amounted to 500 *l.* The owners denied their liability. The pilot admitted that he had miscalculated the quantity of water; that he foresaw that he must either run the "Ibis," which he was navigating, ashore, or run down a billy-boy at that time sailing near, or the barge "Belvedere," if he changed his course. He made his election, and determined to run into the barge, which he did. When applied to for the damage, he stated he possessed no effects, and with some difficulty 30 *l.* was obtained from him.

In all the cases before mentioned the ships carried passengers, and were therefore by law compulsorily bound to carry a pilot, and, according to the present state of the law, the owners were not liable.

From the circumstances of these cases it will be seen that in the first case your memorialist, although he exhausted his remedies against the pilot, did not succeed in recovering from him a single shilling, much less the sum of 100 *l.*, mentioned in the Act as the limit of the pilot's liability. And in the other cases the memorialists were deterred from proceedings which were costly and ineffectual, and bore their own losses.

That a loss of the nature referred to, to persons being owners or part-owners of a single ship or barge, has been the cause of their utter ruin.

That screw steam passenger vessels are frequently navigated recklessly, with a view to accomplish the voyage in the shortest possible time. That owners of the steamer "Sentinel," before referred to, advertised that their "vessels are well known for their great speed, making the voyage in several hours less time than any other vessel on the station." That it is the practice for this and other companies, owning several vessels, to contract with particular pilots for the pilotage of all their vessels, and their vessels only, and this at a reduced rate of pilotage. That the pilot being thus constantly employed by the same Company becomes, as it were, a servant of that Company, is imbued with the same desire as his employers to accomplish a rapid voyage, and is therefore less careful than if he were casually employed. It is believed that, with the view of retaining the benefit of such an engagement, he prefers to risk any amount of damage to any other vessel or craft (knowing his own inability to pay, and the non-liability of his employers for such damage), so that he save the vessel he is piloting from casualty and loss.

That your memorialists therefore venture most respectfully to submit that the present law as to pilotage inflicts great hardships and loss upon your memorialists and others in their position, who are liable daily to frequent and repeated losses from collisions with ships under circumstances such as those referred to.

That your memorialists respectfully submit that compulsory pilotage may now reasonably be abolished. That, as shown by your memorialists, its operation is unfair and unequal. If abolished, the pilot, if employed, would then be the servant of the owner of the ship, and, in cases of collision, your memorialists and others would then have the same remedy against the owners of the ships with which the collisions happened as the owners of those ships now have against your memorialists in the event of damage by reason of any unskilfulness on the part of those navigating the barges belonging to your memorialists.

Your memorialists therefore humbly request your Lordships' attention to the present inefficient state of the law for securing to owners of craft, suffering damage from a collision with a ship in charge of a pilot, the amount of the damage inflicted on them.

And that your Lordships will be pleased to recommend such amendments in the law as to your Lordships shall seem meet, by the abolition of compulsory pilotage, or by regulations with regard to pilots, by means of which damages sustained by reason of their unskilfulness or negligence may be secured to those suffering such damage.

And your memorialists will ever pray, &c.

(No. 3.)

LETTER from Mr. *W. Lee* to the Vice President of the Board of Trade.

Sir, Holborough, near Rochester, 4 April 1868.

ADOPTING the suggestion which fell from you on the recent presentation of a memorial by a deputation of barge owners on the Thames and Medway as to the present state of the law of pilotage, I have endeavoured to obtain a statement of the losses sustained by the memorialists within the last three years. I have had some difficulty in obtaining the information by reason of the occupations of the memorialists, many being absent; but

Appendix (A).

I send you a list of such of the losses as have to this time been supplied me, and I have reason to believe that there are numerous others. In many cases the loss happens under circumstances of peculiar hardship. You will see that the list now sent shows a loss of upwards of 6,000 *l.*, with only 660 *l.* actually recovered, and therefore showing, as I submit, a case of substantial grievance.

I have, &c.
(signed) *William Lee.*

The Right Hon. Stephen Cave, M. P.,
Vice President,
Board of Trade, &c. &c. &c., Whitehall.

(No. 4.)

LETTER from Mr. *W. Lee* to the Vice President of the Board of Trade.

Sir, Holborough, near Rochester, Kent, 10 September 1868.

REFERRING to the Memorial of the "Owners of Sailing Barges and other Craft navigating the Rivers Thames and Medway," on the present unsatisfactory state of the law of pilotage, presented to the Board of Trade on the 5th February last by a deputation which I, with other Members of Parliament, had the honour to introduce to you, I think it right to convey to you the results of two actions brought by me since the presentation of that memorial, for damages sustained by me by collisions with ships in the charge of pilots, as further illustrating the hardships complained of in the memorial, and the inability of persons suffering such damage to obtain any redress, or recover the amount of their losses either from the owners of the ships or the pilots themselves. The cases were as follows:

In April 1867, my barge the "Urgent," in broad daylight, brought up in the River Thames to receive orders near the Commercial Docks, when she was run into by the screw steam passenger ship the "Hibernia," plying between London and Dundee, of 180 horse-power, and carrying passengers, and therefore compulsorily bound by law to carry a pilot; the crew saved their lives with difficulty; the barge was nearly cut in two; was very seriously damaged, and sunk, and the cargo of lime on board completely destroyed.

It will readily occur to you that, although in the case of such a collision as that referred to, the persons on board the barge might have a strong belief that the collision occurred by reason of the wilfulness or unskilfulness of the pilot, yet the state of the law is such, that even though a ship compulsorily bound by law to take a pilot may do damage, yet if it appear that the collision occurs by reason of a want of a good look out, or some other dereliction of duty on the part of the master or crew of that ship, then the pilot is not liable, although he may have the care, and be directing the navigation of the ship. The question of negligence by the crew or pilot is therefore a point very difficult for persons not on board the ship with the pilot to ascertain.

Although pretty well sure that in this case the pilot was to blame, I thought it right to sue the owners of the "Hibernia" for the damage sustained, which would give the pilot an opportunity of giving his evidence as to the cause of the collision, before the tribunal best fitted for the adjudication of such cases, namely, the Admiralty Court, a Court as you are aware having peculiar cognizance of such matters, the judge being assisted on the trial by two of the Trinity Masters, and infinitely more fitted for the trial of such questions than a judge and jury.

The cause was heard on the 28th and 29th days of January last; the pilot, Edward John Allen attended as a witness, and gave his evidence on behalf of the owner of the "Hibernia," and the judgment of the Court was "that the collision was occasioned by the fault or incapacity of Edward John Allen, a duly licensed Trinity House pilot, who was at the time acting in charge of the steam vessel "Hibernia," and that the "employment of the said pilot was compulsory by law," and the defendants, the owners of the "Hibernia," were accordingly dismissed from the cause, but the Court made no order as to costs.

The result of this suit therefore was (as I had anticipated), that the owners and crew of the "Hibernia" were absolved from blame; the pilot was found to be the only person in fault, and I had to pay my own costs of the suit in the Admiralty Court, which will probably amount to 150 *l.*

I determined to exhaust my remedies for the damage I had sustained, and I therefore wrote to the pilot for payment of the damages which the Court of Admiralty had determined had occurred by reason of his carelessness or want of skill. No expression of regret was ever made by the pilot, nor any offer of terms, either for payment of the whole, or any part of the damages; not even to the limit of his bond, as provided by the 373rd section of the Merchant Shipping Act, 1854; and I therefore brought an action at law against him in the Court of Common Pleas to recover the amount of such damages.

I did expect, after the decision of the Court of Admiralty, that at least the pilot would not have disputed his liability to pay the amount of the damages, but in this I was disappointed, for he appeared in person to the action, and pleaded that he was "not guilty." The consequence of that plea being, that I was compelled for a second time to carry the cause down to trial, with my crew, my bargebuilder, and other witnesses to prove my case; when, after several days attendance at Westminster, the pilot not then appearing to defend the action, a verdict was found in my favour for 196 *l.* 10 *s.* damages, and the costs of the action were afterwards taxed at 46 *l.* 13 *s.* 8 *d.*, making my damages and costs, as allowed by the jury and master, 243 *l.* 3 *s.* 8 *d.*, and this in excess of my own costs which I have to pay of my suit in the Admiralty Court.

I now think it right to show you fully the tactics adopted by the pilot to evade the payment of the damages and costs recovered against him. The date of the verdict was the 2nd May 1868; three days afterwards, the pilot, for the express purpose of evading payment, became bankrupt on his own petition, and notice of that bankruptcy appeared in the London Gazette of the 8th May; the pilot had, however, been a little too precipitate in his proceedings, and as the costs in the action were not taxed and ascertained until the 1st June following, by taking advantage of a pure technicality (which I felt justified in doing), I was, notwithstanding the bankruptcy, entitled to, and did arrest the defendant for the 243 *l.* 3 *s.* 8 *d.* I had so recovered against him, and he was at my suit sent to Maidstone Gaol. He applied to a Judge at Chambers for his release from custody, but the

Appendix (A).

Judge was of opinion that the arrest was regular, and dismissed the application with costs, which costs were afterwards taxed by the Master, and allowed to me at 4 *l.* 8 *s.* 6 *d.*

The pilot then applied to the county court judge at Maidstone to be again adjudicated bankrupt, and to be released from custody at my suit, on the 13th July 1868, but the judge of that court decided that under the circumtances he had no jurisdiction, and the pilot was again sent back to prison.

The pilot then presented in the London Bankruptcy Court another petition for adjudication, and on the 24th July applied under that petition for his discharge, when the Commissioner, upon my opposition, refused to entertain that application until his first bankruptcy was disposed of, and the pilot was again sent back to prison.

I then had an appeal from the wife of the pilot, and feeling that I had at least shown him that the law was at least strong enough to put him to inconvenience, if not to compel him to pay the amount of the damage, and having been assured that he was without the means of payment, and from feelings of compassion for his wife and family, I consented to his release from custody, and he was accordingly discharged from prison by my consent. What has been the result of his several subsequent applications to the Court of Bankruptcy under his proceedings therein, I know not, except that the proceedings disclosed that there was no chance of a dividend.

You will see that though the pilot made me no offer of any sum whatever in part satisfaction or payment of my damages, yet that he found means to pay for professional assistance to defend the action, to pay the expences of two adjudications against himself, an abortive application to the county court judge to be declared bankrupt, and of an application to a Judge at Chambers to set aside the execution I had issued against him.

The facts of the other collision are, perhaps, more flagrant than in the case last-mentioned; the result very similar, but more simple in detail.

On Sunday the 15th December 1867, at one o'clock, in broad daylight, two of my barges, called the "Christiana," and the "Samuel," were with others moored in Limehouse Reach, attached to moorings laid down by the Conservators of the River Thames, and to which my barges were especially directed by Captain James, the harbour master, to attach when lying to. Whilst so moored, they were run into by the screw steam Passenger Ship "Leda," plying between London and St. Petersburgh, compulsorily bound by law to carry a pilot, and then in charge of a Trinity House pilot, named Richard West. The screw struck the "Christiana," forced her from the moorings some distance, and sunk her; also damaged the rigging of the other barge, the "Samuel." The crew of the "Chistiana" saved their lives with some difficulty, and the master has ever since the collision been unable to follow his occupation. The "Christiana" was laden with lime, and the amount of my loss was, in the whole, 284 *l.* 11 *s.*

It will be seen that in this case there could be no question as to whether there was any fault on the part of my crew in navigating the barges, as they were, as before stated, moored at buoys laid down by the proper authorities, and a collision must have happened from sheer recklessness on the part of those navigating the "Leda."

I applied to the owners of the "Leda" for payment of the damages sustained; they repudiated their liability, and referred me to the pilot. I then applied to the pilot West; he replied that in his opinion the owners of the "Leda" ought to pay, as he was not paid the full pilotage money for piloting the ship, but made no offer or attempt at settlement. I therefore brought an action against the pilot: he appeared by a solicitor, and pleaded to the action that he was "not guilty," with an intimation that he would defend in person, as he denied his liability, but should I recover judgment, it would not avail me, as he was utterly destitute of means. I was not deterred by this communication, and at some expense carried the cause to trial, and after several days attendance at Westminster, with my crew, barge builder, and the harbour master of the Port of London, and others, as witnesses, I obtained a verdict for 267 *l.* 9 *s.*, the pilot appearing in person at the trial, not denying the facts, but stating it was a hard case upon himself, and that the shipowner ought to be liable. The jury appeared to be of that impression, and hesitated before giving me a verdict, and did not do so, until they had appealed to the judge (The Hon. Mr. Justice Keating) presiding at the trial, for a direct intimation from him, that under the circumstances the owners of the "Leda" were, at law, not liable for the damage, and the jury remarked that it was a hard case upon the pilot. The costs of the action when taxed amounted to 54 *l.* 10 *s.*, and my total damages therefore, in this case, amounted to 321 *l.* 19 *s.*

The cause was tried on the 28th May 1868, and the pilot became bankrupt, and was gazetted on the 12th June 1868.

The pilot instructed the same solicitor in his bankruptcy, as Edward John Allen, the pilot referred to in the other collision, and he having learnt experience from the course of my proceedings with his other client, discovered the technicality under which I was enabled to arrest the pilot Allen, notwithstanding his bankruptcy, and finding that the pilot West was liable to the same risk, he made him a second time bankrupt, and he accordingly was again adjudicated bankrupt on his own petition, on the 27th June, and having obtained on this second bankruptcy protection from the Court of Bankruptcy, I was unable, as I should have done, to arrest him for the damages I had sustained.

There are no assets in either of the bankruptcies referred to, and the damages and costs in both actions, amount, as will be seen, to over 570 *l.*, of which I have not received one shilling. The damages referred to do not nearly cover the whole of the damages accrued in either of the collisions; as there are many items, such as loss of the use of barge for

for the time it is disabled, and other matters, which the law considers too remote to be recovered against a defendant in such a case. My whole damages and costs, and expenses I have been put to in the matter detailed in this letter, cannot fall far short of 800*l.* or 900*l.*

I have thought it right to detail thus fully my own experience in the matters, the subject of the memorial referred to at the commencement of this letter; and as they are matters which have occurred, or at any rate been completed, since the presentation of that memorial, I venture respectfully to bring them to your notice and attention, as they corroborate the statements of the memorialists, and forcibly show the very unsatisfactory state of, and the necessity for some alteration in, the law, as to compulsory pilotage, by which a better remedy may be secured to those on whom damages are inflicted, than at present exists.

I cannot but feel forcibly that in the two cases of collision I have mentioned, the owners of the two screw steamers, who in other respects had the advantage of the services of the pilot in the care and navigation of their vessels, ought to have borne the damages incurred by such collisions, rather than myself, who derived no benefit or advantage whatever from the fact of such pilot being employed, and that my remedy should not be affected by the circumstance that the ship running down my property is, or is not, bound to take a pilot, a question determined by accident, and frequently a subject of nice questions of law.

I cannot conclude this letter without directing your attention to the mode in which these claims are met by the pilots themselves. It will be seen that when a claim is made upon them, they immediately threaten bankruptcy; when it is prosecuted they vexatiously defend the action to the last, necessitate the calling of witnesses at great expense to prove the circumstances of the collision, which they know was caused by their own negligence, and which they do not attempt to justify at the trial; and when judgment is obtained against them, they, by every trick and device, manage to evade payment. And although they describe themselves as being utterly without means, and make no offer of compromise, or attempt at a settlement, yet are enabled to provide the necessary funds to defend the actions, and to pay the costs of two, and even three bankruptcies, if necessary, to enable them to evade the payment of a sixpence to the person whose property is damaged by their recklessness.

Apologising for the length of this letter, and trusting the importance of the subject on which I write will be my justification,

I have, &c.
(signed) *William Lee.*

(No. 5.)

List of Legal Decisions as regards the Liability of certain Vessels when in charge of a Compulsory Pilot. Furnished by Mr. *Vernon Lushington.*

"Borussia," Swabey, 94.

Ship in charge of a compulsory pilot.

Held, that it was imprudent to move her from dock to dock by a steam tug at night; and that for this the owners were liable.

"Carrier Dove," Browning.—Lushington, p. 113 (1863.)

The improper navigation of the defendant's vessel consisted in getting under way for the purpose of docking, under circumstances which rendered that proceeding dangerous to other vessels, and the defendant only proved that the pilot as well as the captain, was on deck giving general orders, but did not prove the particular order, nor produce the pilot as a witness. Held defendant remained liable.

"Christiana," 7 Moore, P. C., 160. 1850.

Ship held liable for not striking top gallant yards and masts, while at anchor in the Downs.

"Mobile," 10 Moore, P. C., 467. 1856.

Pilot left dock, while he was below the difficulty occurred, and the mistake was made. Ship held liable.

"Argo," Swabey, 462. 1859.

Ship would be liable if collision caused by ship not being in ordinary safe trim, and so not answering her helm duly.

"Batavia," 1 Spinks, 378. 1854.

Pilots sole duty to regulate speed and course.

"Julia," Lushington, 224. 1861.

Pilot on deck; master permitted a tug to make fast without informing the pilot. Defendants held liable.

Appendix (A).

"Lizzie Aisbitt." 1867.

Ship in tow of a tug coming up the Thames in daylight. Pilot on forecastle. The tug, (which usually takes her own course, but is bound to obey pilot if he does give orders) without orders ported by a mistake in judgment. Defendants held liable.

"Iona," 4, Moore Rep., N. S., Privy Council, 336.

Collision in daylight in Thames; pilot on bridge. Ship held liable for deficient look-out.

"Gipsy King," 2 W. Rob. 537. 1847.

Pilot's province to see to proper calling of anchor.

"Lochlibo," 3 W. Rob. 310. 1850. Affirmed 7 Moore, P. C., 430.

Pilot's province to determine whether safe to proceed.

"General de Caen," Swabey, 9. 1855.

Foreign ship. Pilot induced master to employ waterman who undestood English to take wheel. Ship held liable for waterman's fault.

"Velasquez," 4 Moore, P. C., New Series, 426. 1867.

By pilot's own evidence and the crew of the ship, the strange vessel was reported to him, and he saw it in time to take all proper measures to avoid collision. Evidence disbelieved, and ship held liable.

"Schwalbe;" Lushington's Rep. 239. 1861.

Defendant's vessel charged with improperly starting, defendants denied starting, and gave evidence that the helm was ported only, and by the pilot's order. The Court found that the helm was improperly starboarded. Defendants held liable.

(No. 6.)

LETTER from Mr. *W. H. Seward* to Mr. *F. Clare Ford.*

Department of State, Washington,
27 January 1865.

My dear Sir,

I HAVE given careful consideration to the note which you addressed to me on the 4th instant, and by which, under Lord Stanley's instruction, you expressed a desire to learn from this department how the law stands in the United States upon the question therein stated, namely, whether in cases where the owner of a ship is compelled by law to employ a pilot, that ship or her owner, is or is not, according to the law of the United States, liable to pay for damage occasioned by her when she is in charge of, or managed by such pilot.

You will please inform Lord Stanley that the United States have no Statute upon the subject of your inquiry; nor have we any express decision upon that subject by our Court of last resort.

In regard to municipal law, no department of this Government has authority to declare what is the existing law in the absence of a Statue, or judicial decision by the Court of *dernier resort.*

Under these circumstances, all that I can do is to refer you to the opinion of test writers of repute, and their comments on the decisions in our State Courts and the subordinate Courts of the United States.

Professor Parsons, in his Treatise on Maritime Law, vol. i., pages 484 to 489, and Mr. Curtis, in his treatise on the Rights and Duties of Merchant Seamen, page 196, have collected cases, English and American, as well on the general question which you propound, as also on the subordinate one, what constitutes the compulsory employment of a pilot. The latter question seems to be involved in more doubt in this country than in Great Britain, and it might well happen that our Courts would not hold the employment compulsory, so as to exempt the owners upon the general principles of equity, while, at the same time, precisely similar employment would be deemed to work exemption under the terms of the British Statute.

The uncertainty of the law and the possibility of conflict in regard to the rights and liabilities of merchant seamen to which my attention has thus been directed, are so grave that occasion will be taken to call the attention of Congress to the matter.

Regretting my inability to give a more conclusive answer to your inquiry,

I am, &c.
(signed) *Will. H. Seward.*

Francis Clare Ford, Esq.,
&c. &c. &c.

LETTER from Mr. *T. Mandeville Carlisle*, Legal Adviser to the British Minister at Washington, to Mr. *F. Clare Ford*.

My dear Sir, Washington, 2 February 1868.

I RETURN herewith the papers received in your note of yesterday.

Nothing occurs to me as useful to be added to Mr. Seward's observations, except to refer to the case of Smith *v.* Condry, 1 Howard's Supreme Chancery Reports, p. 28, the only case upon the subject which I remember to have come before the Supreme Court.

It was the case of a collision between two American ships, one of them coming out of the Port of Liverpool, and the other lying in the Mersey.

The offending ship was in charge of a pilot, in obedience to the Act of Parliament specially regulating the Port of Liverpool in that particular, 37 Geo. 3. This Statute held by the British Courts not to have been repealed by the subsequent general Acts, contained no provision exempting the owners from liability occasioned by the unskilfulness of such pilot. The precise question was whether, without such express exemption by Statute, it followed from the requirement to take a pilot on board. The Supreme Court, following the case of Carruthers *v.* Sydebotham, 1 M. & S. 77, and other cases cited by Taney, C. J., in the opinion, held the owners exempt from liability.

It is true that the case goes upon the authority of the British cases upon the British Statutes; but I think it may, perhaps, be inferred that the reasoning of those cases was entirely satisfactory to the Court, and would be adopted in cases coming under the Pilot Acts of the several States requiring the employment of pilots.

These State Statutes are held constitutional in the absence of any general Act of Congress covering the subject under the power to regulate commerce, which is exclusive from the moment of its exercise by Congress.

Undoubtedly Mr. Seward's views are very just, in looking to the passage of an Act of Congress to remove all doubts.

G. T.

I am, &c.
(signed) *T. Mandeville Carlisle.*

Francis Clare Ford, Esq.,

(No. 7.)

CASE OF THE SHIP "CHINA."

SUPREME COURT OF THE UNITED STATES.

No. 21.—DECEMBER TERM, 1868.

The Steamship "China," her tackle, etc., the British and North American Royal Mail Steam Packet Company, Claimants, Appellants, *v.* Louis Walsh and Benjamin Carver.	Appeal from Circuit Court of the United States for the Southern District of New York.

Mr. Justice SWAYNE delivered the opinion of the Court.

THIS is a case arising out of a collision between the steamship "China," a British vessel then leaving the port of New York for Liverpool, and the brig "Kentucky," then on a voyage from Cardenas to New York. The facts are few and undisputed. The collision occurred on the 15th of July 1863, a short distance outside of Sandy Hook. The brig was sunk. The steamship was wholly in fault. It was not alleged, in the argument here for the appellants, that there was either fault or error on the part of the brig.

The case turns upon the effect to be given to the Statute of New York, of the 3d of April 1857.

At the time of the collision the steamship was within the pilot waters of the port of New York; and was in charge of a pilot, licensed under this Act, and taken by the master pursuant to its provisions.

The pilot's orders were obeyed, and the catastrophe was entirely the result of his gross and culpable mismanagement.

No question was made in the argument, upon the subject; the evidence is too clear to admit of any.

There are all the facts material to be considered.

The questions with which we have to deal are questions of law. No others arise in the case.

It is insisted by the appellants that the Statute referred to compelled the master of the steamship to take the pilot, and that they are therefore not liable for the results of his misconduct.

British adjudications are relied upon in support of both these propositions.

In order to appreciate these authorities, the British Pilot Acts must be understood.

They are the 52 Geo. 3, c. 30; the 6 Geo. 4, c. 125; the Shipping Act of the 17 & 18 Vict. c. 104; the Liverpool Pilot Act of 37 Geo. 3, c. 789, and the Newcastle Pilot Act of the 41 Geo. 3, c. 86. The three first mentioned contain equivalent provisions. The same remark applies to the two latter. The former all contain a clause to the effect that "the owner or master of any ship shall not be answerable for any loss or damage occasioned

Appendix (A).

by the neglect, default, incompetency, or incapacity of any licensed pilot." The latter contain a system of local pilot regulations, but have no such provision. They require that a pilot shall be taken, and if not taken, that pilotage shall, nevertheless, be paid. In these respects, and in most others, they are substantially the same with the Statute of New York.

I. Was the steamship compelled to take the pilot ?

In the case of the "Maria," in which the Liverpool Pilot Act was was largely considered, Dr. Lushington said :

"It never was decided that a clause requiring a pilot to be taken on board, or if not taken, the pilotage to be paid, was not compulsory. * * * Now the Liverpool Pilot Act provides for three cases : 1st. The case of vessels homeward bound ; 2nd. of vessels outward bound ; and lastly, of vessels lying at an anchorage ; and with reference to homeward bound vessels, it is provided in the 24th section of the Act, that if the master refuses to take a pilot on board, he is liable to the payment of pilotage. There is, therefore, this distinction in the two cases : that in the case of a vessel at anchor, the taking of the pilot on board is perfectly optional with the master, but in the case of a homeward bound vessel, it is enjoined upon him by the provisions of the Act, and if he refuses so to do, he is rendered liable to the payment of the pilotage dues. This, in my opinion, amounts to compulsion to take such pilot on board, and it was so held by the learned judges by whom the case of Sidebotham *v.* Caruthers was decided. What says Mr. Justice Le Blanc ? 'It appears that the master was compellable to take the pilot on board, and it was in consequence of his misconduct that the vessel was placed in such a situation, that when the water left her, she fell upon her side and thus the damage happened.' Without going further into the case, it is sufficient to observe, that Lord Ellenborough and Mr. Justice Bailey were of the same opinion, that the master was compellable to take the pilot on board."—(1 Wm. Rob. 95).

Other authorities to the same effect might be referred to, but it is deemed unnecessary, The one we have cited is sufficient.

Suppose the New York Statute, in the event of a refusal to take a pilot on board, instead of full pilotage had given the vessel or cargo to the pilot.

Whether the amount to be paid were large or small, it would operate in the same way, and involve the same principle. The difference would be not in the fact but in the degree of compulsion. If it be said the master had the option to pay the pilotage and proceed without the pilot, the answer is, that he would have had the same option if the consequence had been fine and imprisonment, or the visiting upon him of any other penal sanction.

In each case there would be compulsion, measured in its force by the means prescribed to make it effectual. A duty is enjoined and an obligation is imposed. The alternatives presented are to receive the pilot; or to refuse and take the consequences.

In this connection it is proper to consider the particular provisions of the New York Statute. It enacts that the master "shall take a liscensed pilot ;" that in case of refusal, pilotage shall be paid, and that it shall be paid to the first pilot offering his services. Any person not holding a license under this Act, or the law of New Jersey, who shall pilot or offer to pilot any vessel to or from the port of New York, by way of Sandy Hook, except such as are exempt by virtue of this Act ; or any master on board a steam-tug who shall tow such vessel without a licensed pilot on board, shall be punished by a fine not exceeding one hundred dollars, or imprisonment not exceeding sixty days ; and all persons employing a person not licensed under this act, or the law of New Jersey, are subjected to a penalty of one hundred dollars.

It was contended by the counsel for the appellee, that if the master had chosen to proceed without a pilot, he would have been liable only to the payment of pilotage ; and that none of the other penal provisions of the Statute, according to its true meaning, apply in such a case. We have not found it necessary to examine this subject. Giving to the Statute either construction, it seems to us clear, in the light of both reason and authority, that the pilot was taken by the steamship upon compulsion.

II. This brings us to the examination of the second proposition :—

Does the fact that the law compelled the master to take the pilot, exonerate the vessel from liability.

The immunity of the wrong-doing vessel when the pilot is in charge, and alone in fault, is now well settled in English jurisprudence, both in the Admiralty Court and in the courts of common law.

The rule must necessarily be the same in both. In such cases the liability of the ship and of the owner are convertible terms. The ship is not liable if the owners are not; and no responsibility can attach to the owners, if the ship is not liable to be proceeded against.

The "Druid," 1 Wm. Rob. 399.

Some of the leading English cases will be adverted to according to the order of time in which they were determined.

The case of "The Neptune the 2nd" was decided two years after the passage of the Statute of 52 Geo. 3.

In that case Sir William Scott said : "If the mere fact of having a pilot on board and acting in obedience to his directions, would discharge the owner from responsibility, I am of opinion that they would stand excused in the present case. I think it is sufficiently established in proof, that the master acted throughout in conformity to the directions of the pilot.

pilot. But this I conceive is not the true rule of law. The parties who suffer are entitled to have their remedy against the vessel that occasioned the damage, and are not under the necessity of looking to the pilot, from whom redress is not always to be had, for compensation. The owners are responsible to the injured party for the acts of the pilot, and they must be left to recover the amount as well as they can, against him. It cannot be maintained that the circumstances of having a pilot on board, and acting in conformity to his directions, can operate as a discharge of the responsibility of the owners."

The Statute is not adverted to in the case.

In The Attorney General *v.* Case, 3 Price, 303, it was held by the Court of Exchequer, that the case was to be determined under the Liverpool Pilot Act, and that the Statute containing the clause of exemption did not apply; that the vessel being at anchor, it was optional with the master to take a pilot or not, and that the vessel was therefore liable. It was strongly intimated that if she had been under way, and the pilot had been taken under the Liverpool Act, there would have been no such compulsion as, upon general principles, would have exonerated the vessel from the responsibility.

In Caruthers *v.* Sidebotham, 4 M. & S., 88 the Court of King's Bench held that the pilot was compulsorily taken, and that independently of the Statute giving the exemption, the vessel, upon general principles of municipal law, was not liable. The Attorney General *v.* Case, was refered to in the argument. The ruling of the Court was in direct antagonism to the intimations in that case.

The "Girolamo," 3 Hagg. 169, was decided by Sir John Nichol. He held, among other things, that the provision in the 6 George 4, that "the Act should not affect or impair the jurisdiction of the High Court of Admiralty," limited the operation of the clause of exemption to proceedings *in personam* in the common law courts, and left the Admiralty jurisdiction to be exercised in all respects as if the exemption in the Statute had not been enacted. The judgment is a very elaborate one. The vessel was held liable, although in charge of a licensed pilot at the time of the collision.

This case was followed by the "Baron Holby," 3 Hagg. 244; the "Gladiator," 3 Hagg. 340; and the "Eolidas," 3 Hagg. 367—decided by the same judge in the same way.

So the English law stood until the decision by Dr. Lushington in the case of the "Protector," 1 Wm. Rob. 45.

In that case the subject was examined with great care and fullness of research. The learned judge expressed the opinion that Sir Wm. Scott had decided the case of the "Neptune," the second, in entire ignorance of the statute of 52 Geo. 3, c. 39, and that the case, therefore, was not authority.

He overruled the judgment of Sir John Nichol as to the effect of the jurisdiction clause of the Statute, and held the true rule to be, that the Statute took away the responsibility of the vessel whenever the accident was imputable to the fault of the pilot alone. The court found the fact so to be, and upon that ground dismissed the owner of the "Protector" from the suit.

In the "Maria," 1 Wm. Rob. 95, the subject was again ably examined by the same Admiralty judge. It was held that under the Newcastle Pilot Act the taking of a pilot by a foreign ship was compulsory, and that if damage occurred to another vessel by his default, the vessel which had taken him was not liable, both upon general principles and by virtue of the Act of 5 Geo. 4, c. 55.

The rule laid down by the Court of King's Bench in Sidebotham *v.* Caruthers, 4 M. & S. 78, was recognised and affirmed. These judgments have stood unquestioned down to the present time.

There have been numerous adjudications settling the construction of the statutory provision, that the vessel shall be exonerated where the pilot is in fault.

The following propositions may be deduced from them:

The Statute giving the immunity where a licensed pilot is employed abridges the natural right of the injured party to compensation, and is, therefore, to be construed strictly.

The exemption applies only where the pilot is actually in charge of the vessel, and solely in fault.

If there be anything which concurred with the fault of the pilot in producing the accident the exemption does not apply, and the vessel, master, and owners are liable.

The colliding vessel is in all cases *primâ facie* responsible.

The burden of proof rests upon the party claiming the benefit of the exemption. He must show affirmatively that the pilot was in fault, and that there was no fault on the part of the officers or crew "which might have been in any degree conducive to the damages."

(The "Gen. De Caen," 1 Swabey, 10; the "Diana," 1 Wm. Rob. 135; the "Protector," *ibid* 60; the "Christiana," 7 Moore, P. C., 171; the "Minna," Law Rep. Ad. & Ecc., pt. 2, Nov. 1868, p. 97; the "Iona," Law Rep., 1 P. C. 432.)

The last in the series of these authorities to be considered is the "Haley," Law Rep., 1868, pt. 2, Ad. & Ecc., p. 3.

The owners of a foreign ship sued the owners of an English ship in the British Court of Admiralty, claiming damages for a collision in Belgian waters. The defendants pleaded that by the Belgian law pilotage was compulsory. The plaintiffs replied, that by the same law the wrong-doing vessel was liable for the damages. The case turned upon the sufficiency of the latter proposition as an answer to the former.

Sir Robert Phillimore, following the case of Smith *v.* Condry, decided by this court, (1 How. 28,) and other authorities to which he referred, held that the rights of the parties were governed by the law of the place of the tort.

Appendix (A).

In the course of his learned and elaborate opinion he said:

"The English legislature has thought it expedient that only certain persons under certain restrictions shall be allowed to act as pilots in British waters; and that it shall be compulsory upon all masters of ships to place the navigation of their vessels under the control of one of these licensed pilots. And the common law of England has ruled, that in such cases the natural responsibility of the owner of the vessel for injuries done to the property or persons of others by the unskilful navigation of that vessel shall cease, and be transferred to the pilot. This law holds that the responsibility of the owner for the acts of his servant is founded upon the presumption that the owner chooses his servant, and gives him orders which he is bound to obey; and that the acts of the servant, so far as the interests of third parties are concerned, must always be considered the acts of the owner. But no such presumptions, it is said, can exist in the case of compulsory pilotage, in which the state forces its own servant upon the owner, and, indeed, in some respects reverses the usual order of things on board ship by rendering it incumbent on the master to obey the orders of the pilot. But the considerations of domestic policy which have created this peculiar law are not founded on principles of universal law or natural justice. They are considerations of British policy which apply to British waters and territory; but not Flushing waters, in which this collision took place. * * * "Lord Stowell's mind, furnished as it was with the principles of jurisprudence, rejected the argument for the immunity of the wrong-doing vessel." * * * "I will frankly say, that it appears to me difficult to reconcile the claims of natural justice to the law which exempts the owner who has a licensed pilot on board, from all liabilities for the injuries done by the bad navigation of the ship to the property of an innocent owner." * * * "No one acquainted with the working of this law, which exempts the wrong-doing vessel from liability in this court, can be ignorant that it is fruitful of injustice."

This survey of the English adjudications warrants several observations.

Lord Stowell, overlooking the Statute, refused to recognise the principle of exemption. He held the "true rule of law" to be that fault created liability, notwithstanding that the pilot was taken upon compulsion.

Sir John Nichol made a persistent effort to get rid of the Statute by giving the jurisdiction clause a construction which annulled the operation of the exemption in the Admiralty court.

Dr. Lushington and the Privy Council have held that the exemption clause is to be strictly construed, and have given it a construction so narrow as greatly to limit its operation and impair its efficacy; while Sir Robert Phillimore pronounced its working in the Admiralty court "fruitful of injustice" and more than intimates that it is contrary to the fundamental principles of natural right.

These results furnish little inducement to us to establish the principle in our jurisprudence.

The question is not a new one in this country. It arose as early as the year 1800, in Bussey *v.* Donaldson, 4 Dallas, 206. In that case the court said: "The legislative regulations were not intended to alter or obliterate the principles of law by which the owner of a vessel was previously responsible for the conduct of the pilot, but to secure in favour every person, strangers as well as residents, trading to our port, a class of experienced, skilful, and honest mariners to navigate their vessels safely up the bay and the river Delaware. The mere right of choice is, indeed, one, but not the only reason why the law in general makes the master responsible for the acts of his servant, and in many cases where the responsibility is allowed to exist, the servant may not in fact be the choice of the master."

Williamson *v.* Pierce, 4 Mart., N. S., 399; Yates *v.* Brown, 8 Pick. 23, and Dennison *v.* Seymour, 9 Wend. 1, involved the same principle, and were decided in the same way.

In the case of the "Creole," decided by Mr. Justice Grier, on the circuit, in the year 1853, 2 Wall. jun. 485, the subject underwent a learned and thorough examination, both by counsel and the court. The result was the same as in Bussey *v.* Donaldson. It appears by that case, that Mr. Justice Wayne had ruled the point in the same way in his circuit. No American adjudication to the contrary has been brought to our attention.

The question is now, for the first time, presented in this court.

The New York Statute creates a system of pilotage regulations. It does not attempt, in terms, to give immunity to a wrong-doing vessel. Such a provision in a State law would present an important question, which, in this case, it is not necessary to consider.

The argument for the appellants proceeds upon the general legal principle that one shall not be liable for the tort of another imposed upon him by the law, and who is, therefore, not his servant or agent.—(15 East, 189; 4 M. & S. 77; 6 B. & C. 657; 12 Ad. & E. 737; 4 Exch. 244.)

The reasoning by which the application of this principle to the case before us is attempted to be maintained, is specious rather than solid.

It is necessary that both outward and inward bound vessels, of the classes designated in the Statute, should have pilots possessing full knowledge of the pilot grounds over which they are to be conducted. The Statute seeks to supply this want, and to prevent, as far as possible, the evils likely to follow from ignorance or mistake as to the qualifications of those to be employed, by providing a body of trained and skilful seamen, at all times ready for the service, holding out to them sufficient inducements to prepare themselves for the discharge of their duties, and to pursue a business attended with so much of peril and hardship. The services of the pilot are as much for the benefit of the vessel and cargo as those of the captain and crew. His compensation comes from the same source as theirs. Like them

them he serves the owner and is paid by the owner. If there be any default on his part, the owner has the same remedies against him as against other delinquents on board. The difference between his relations and those of the master is one rather of form than substance.

It is the duty of the master to interfere in cases of the pilot's intoxication or manifest incapacity, in cases of danger which he does not foresee, and in all cases of great necessity.

The "Argo," 1 Swabey, 464.
The "Christiana," 7 Moore, P. C., 192.

The master has the same power to displace the pilot that he has to remove any subordinate officer of the vessel. He may exercise it or not, according to his discretion.

The maritime law as to the position and powers of the master, and the responsibility of the vessel, is not derived from the civil law of master and servant, nor from the common law.

It had its source in the commercial usages and jurisprudence of the middle ages. Originally, the primary liability was upon the vessel, and that of the owner was not personal, but merely incidental to his ownership, from which he was discharged, either by the loss of the vessel or by abandoning it to the creditors. But while the law limited the creditor to this part of the owner's property, it gave him a lien or privilege against it in preference to other creditors.

The "Phœbe," Ware, 273.
The "Creole," 2 Wall. jun., 519.

The maxim of the civil law, *sic utere tuo ut non lædas alienum*, may, however, be fitly applied in such cases as the one before us.

The remedy of the damaged vessel, if confined to the culpable pilot, would frequently be a mere delusion. He would often be unable to respond by payment, especially if the amount recovered were large.

Thus, where the injury was the greatest, there would be the greatest danger of a failure of justice.

According to the admiralty law, the collision impresses upon the wrong-doing vessel a maritime lien. This, the vessel carries with it into whosesoever hands it may come. It is inchoate at the moment of the wrong, and must be perfected by subsequent proceedings. Unlike a common law lien, possession is not necessary to its validity. It is rather in the nature of the hypothecation of the civil law. It is not indellible, but may be lost by laches or other circumstances.

The "Bold Buccleeigh," 7 Moore, P.C., 284; Edwards *v.* the Steamer "R.F. Stockton," Crabbe, 580; the "America, 16 Law Reports, 264; the "Lion," Law Rep., November 1868; Ad. & Ecc., 107.

The proposition of the appellants would blot out this important feature of the maritime code, and greatly impair the efficacy of the system. The appellees are seeking the fruit of their lien.

All port regulations are compulsory. The provisions of the Statute of New York are a part of the series within that category. A damaging vessel is no more excused because she was compelled to obey one than another. The only question in all such cases is, was she in fault?

The appellants were bound to know the law. They cannot plead ignorance. The law of the place makes them liable. This ship was brought voluntarily within the sphere of its operation, and they cannot complain because it throws the loss upon them rather than upon the owners of the innocent vessel. We think the rule which works this result is a wise and salutory one, and we feel no disposition to disturb it.

The steamship is a foreign vessel. We have, therefore, considered the learned and able argument of the counsel for the appellants with more care than we should otherwise have deemed necessary.

Maritime jurisprudence is a part of the law of nations. We have been impressed with he importance of its right administration in this case.

The decree of the circuit court is affirmed.

D. W. Middleton,
Clerk Superintendent, U. S.

THE "CHINA."

Mr. Justice *Clifford* (with whom concurred Mr. Justice *Field*).

I CONCUR in the proposition that the pilot laws of New York afford no defence to the appellants in this case, and that the decree of the circuit court, determining that the colliding steamship was liable, notwithstanding she had a licensed pilot on board, ought to be affirmed. Many English cases decide otherwise, but I am not satisfied with the reasons given in their support, and have no hesitation in concurring in the conclusion to which the majority of the court has come; but I do not concur in the proposition that the State laws which require inward or outward bound vessels to pay pilot fees or half pilot fees, whether they employ a pilot or not, would afford any such defence in case of a collision, even if it be admitted that a law imposing penalties in case of a refusal to employ a licensed pilot would have that effect. Whether the party charged is liable or not, aside from the merits,

Appendix (A).

depends in all cases upon his relation to the wrong-doer. If the wrongful act was done by himself or was occasioned by his negligence, of course he is liable, and he is equally so if the act constituting the fault was done by one towards whom he bore the relation of principal, but the liability ceases where the relation of principal entirely ceases to exist as in the case of inevitable accident. Unless the relation of principal entirely ceases to exist the party owning the vessel remains liable in a suit in *personam*.

When a vessel is chartered the liability of the owner in respect to a collision happening in consequence of the faulty navigation of the ship depends upon the inquiry whether or not the master and crew can be considered to be his servants. Settled rule is, that where the shipowner provides the vessel only and the master and crew are selected by the charterer, the latter, and not the shipowner is responsible for their acts; but if the shipowner propides not merely the vessel, but also selects the master and crew, he is still liable in case of collision to the owners of the injured vessel, because the vessel in the sense of the maritime law is under his control, though the wages of the master and crew may be paid by the charterer. Such liability in the former case is shifted from the real owner to the owner for the voyage, but the ship is as much liable in the one case as in the other to a suit in *rem* for the injury committed, because she sailed on the voyage as the property of the real owner and by his consent.

Port regulations are supposed to be known to the shipowner before he sends his vessel on the voyage, and the rule of the maritime law is that in sending her to any particular port he elects to submit to the lawful regulations established at that port, and that his vessel shall be responsible in case she unlawfully collides with another vessel engaged in lawful navigation. Contrary to the rule adopted in the English Admiralty the American Courts have so held without an exception which has fallen under my observation.

The " Carolus," 2 Curtis, 2, 269.
The " Hallock," 1 Sprague, 539.
Bussy *v.* Donaldson, 4 Dallas, 206.
Yates *v.* Brown, 8 Pickering, 23.
Williamson *v.* Price, 4 Martin, N. S., 399.
Dennison *v.* Seymour, 9 Windel, 1.
Smith *v.* Condrey, 1 Howard, 28.
The " Lotty," Olcott, 329.
The " Creole," 2 Wallace, junior, 511.
The " Rescue," 2 Sprague, 16.

All of these cases decide that the State Statutes requiring the master to take a licensed pilot and making provision for the payment of pilot fees do not amount to a compulsion to take a pilot, and I am satisfied they are correct, and that such a Statute cannot be set up as exempting a ship from responsibility while navigated by a licensed pilot.

Believing these descriptions to be correct, I cannot consent to pronounce them incorrect, especially as no such conclusion is necessary to the right disposition of the present case. Neither the common law courts nor the courts of Admiralty in this country have adopted the rule established by Dr. Lushington; on the contrary, they all have held that the Statute Laws requiring the master to pay pilot fees whether he employed a pilot or not, did not compel him to surrender the navigation of his ship to the licensed pilot, or prevent him from continuing in the command of his ship. Dissenting as I do from the rule laid down in the English courts, I concur with the majority of the court in over-ruling those decisions as applied to our jurisprudence, but I cannot concur in over-ruling the American decisions which assert the opposite doctrine, because I believe they are correct.

Judgment affirmed.

Reported in 7 Wallace, p. 61.

(No. 8.)

The " Halley."

(Law Report, p. 68—Ad. & Ec., p. 3.)

Judgment delivered in the Admiralty Court on Tuesday, November 26th, 1867.

In this case the owner of a Norwegian vessel has brought an action against the owner of an English vessel for damage done to the Norwegian ship in the territory of Belgium.

One of the functions, and not the least important, of the High Court of Admiralty is to administer international justice in maritime suits between foreigners who resort to its jurisdiction, or, as in the present instance, between the foreigner and the British subject. The Prize Jurisdiction of this Court administers the *jus inter gentes*, or public international law, and what is called the Instance Jurisdiction administers the *jus gentium*, or private international law. In order to attain this end the rules of pleading, and the general mode of investigating and trying the merits of such cases when they come before it, are simple, free from technicality, and calculated to do substantial justice. In this Court, as Sir J. Nichol observes in the " Girolamo " (3 Hagg. Rep. 177), " the law maritime according to the law of nations is to be administered;" and again he says (p. 189) it " is governed by the rules " (he

(he is not speaking of the Prize Court) "of international law." To the same effect in the "Zollverein" (1 Swabey, p. 99), Dr. Lushington, in the case of a collision between a British and foreign vessel, says, "The case must be decided by the law maritime, by those rules of "navigation which usually prevail among nations navigating the seas where the collision "takes place." And in the "Golubchick" (1 W. Rob., p. 147), he says, "Upon general "principle I apprehend that this Court, administering, as it does, a part of the maritime "law of the world, would have a right to interpose in cases of the present description." If, therefore, this collision had taken place upon the high seas, it must, upon general principles, have been adjudicated according to the "*lex maris*."

The petition of the plaintiff in this cause sets forth that the Norwegian barque "Napoleon," of the burthen of 740 tons, while riding at anchor in Flushing Roads, in the month of January of this year, was run into by the British steam ship "Halley," and thereby suffered considerable damage. In their answer to this charge contained in the petition, the defendants, the owners of the "Halley," state that by "the Belgian or Dutch "laws, which prevail in and over the River Scheldt, and to which the said river is subject, "from the place where the said river pilot came on board the 'Halley,' and thence up to "and beyond the place of the aforesaid collision, it was compulsory on the said steamer to "take on board and to be navigated under the directions and in charge of a pilot, duly "appointed or licensed according to the said laws, and *it was by virtue of such laws* (the "words are not unimportant) that the 'Halley' was compelled to take on board and to be "given in charge, and until the time of the said collision as aforesaid to remain in charge "of, and did take on board, and was given in charge, and up to the time of the said "collision remained in charge of the said river pilot, who was duly appointed or licensed "according to the said laws, and whom the defendants or their agents did not select, and "had no power of selecting."

To this defence the owners of the "Napoleon" reply as follows:—"That by the Belgian "or Dutch laws in force at the time and place of the said collision, the owners of a ship "which has done damage to another ship by collision are liable to pay and make good to "the owners of such lastly-mentioned ship all losses occasioned to them by reason of such "collision, notwithstanding that the ship which has done such damage was, at the time of "the doing thereof, being navigated under the direction and in charge of a pilot duly "appointed or licensed according to the said laws, and notwithstanding that such damage "was solely occasioned by the negligence, default, or want of skill of such pilot, without "any contributory negligence on the part of the master or crew of such lastly-mentioned "ship, and notwithstanding that it was, at the time and place of the collision, by the said "laws compulsory on such lastly-mentioned ship to be navigated under the direction and "in charge of such pilot; and the defendants, the owners of the 'Halley,' are *by virtue of* "*the said laws* liable to pay and make good to the plaintiffs all losses occasioned to them "by the said collision, even if the statements contained in the 11th Article of the said "answer be true."

The admission of this plea is objected to by the owners of the "Halley," on the ground that the law of England alone governs this case. On this subject elaborate arguments have been addressed to the Court by the counsel for both parties. The point, it is said, has never before been raised, and I have now to give judgment upon it.

I will frankly say, that it appears to me difficult to reconcile the claims of natural justice with the law which exempts the owner, who has a licensed pilot on board, from all liability for the injuries done, by the bad navigation of his ship, to the property of an innocent owner. *Obligatio* is (according to the admirable definition in the Institutes) "vinculum juris quo necessitate astringimur alicujus rei solvendæ;" it is "lien de droit," as the French say. No one acquainted with the working of this law, which exempts the wrong-doing vessel from liability in this court, can be ignorant that it is fruitful in injustice. On the one hand, the master is tempted to abstain from all control over his vessel, lest he should afford grounds for the argument that by interference with the pilot, he has deprived himself of the legal immunity which he would otherwise enjoy. On the other hand, it is obvious that great inducements may be offered to the pilot to shield the incapacity or mismanagement of the master and his officers by taking all the blame upon himself. It is true that by so doing, he may subject himself to censures and punishment from the Trinity House. Certainly, in cases where the evidence clearly established very gross negligence or want of skill on his part, such would be the result; but the greater number of cases are not of this extreme description. It is impossible to doubt that an owner, who, as in a recent case before me, would, but for the fact of having a licensed pilot on board, have been compelled to pay perhaps 25,000 *l.* to the ship which he had sunk, lies under a very strong temptation to take whatever measures may be necessary for obtaining the two necessary statements of the pilot; namely,—

First, that he alone had the management of the vessel;

And secondly, that the orders were obeyed; the two stereotyped questions necessarily and invariably put to the pilot by those who conduct the defence of the wrong-doing vessel.

Again, I cannot help thinking, that the doctrine so clearly explained by Lord Cranworth in "Reedie *v.* London and North Western Railway," (4 Exch. 255), of the owner being responsible only for the acts of his own servant, has been somewhat strained in its application to the case of the licensed pilot. I do not quite understand why, because the State insists on the one hand, upon all persons who exercise the office of pilot within certain districts being duly educated for the purpose, and having a certificate of their fitness, and

Appendix (A).

insists on the other hand, that the master shall, within these districts, take one of these persons on board to superintend the steering of his vessel, the usual relation of owner and servant is to be entirely at an end; and still less do I see why the sufferer is to be deprived of all practical redress for injuries inflicted upon him by the ship which such a pilot navigates. If compulsory pilotage be at all expedient, a question open to very considerable doubt, it seems to me more just that the master of the wrong-doing ship should be left to his action against the pilot who has badly navigated her, than that the owner of the injured ship should be placed in that predicament. I incline to the opinion, that the Belgian law, as it appears in these pleadings, is more consonant with natural justice than our own on this subject. Be this, however, as it may, it has not, I repeat, been argued that the Belgian law is inadmissible here, because it is at variance with natural justice, and if such an argument had been advanced, I should have expressed my dissent from it.

Having regard then to the fact that the *lex fori* is founded upon special considerations of public policy applicable only to British territory, and that the admission of the foreign law, the *lex loci delicti commissi*, to govern this case is not prevented by reason of its repugnance to natural justice or to public policy,—if the question before me were as to the law which ought to govern the fulfilment of the obligation arising out of an ordinary contract made in Belgian territories, it could not, I think, be successfully contended that I ought to apply the English law to such case.

Now, let me mention a judgment delivered in the Supreme Court of the United States of North America, and certainly entitled to the highest respect in this Court. In the case of "Smith and others *v.* Condry" (1 Howard, U. S. Rep. 28, and 14 Curtis, 48), to which I was referred by Mr. Clarkson, two ships belonging to subjects of the United States of North America came into collision in the port of Liverpool. The action was brought in the Circuit Court for the district of Columbia, and came up by writ of error to the Supreme Court. Mr. Chief Justice Taney, in delivering the opinion of the Court, observed (p. 32) as follows:—"Upon the evidence above stated the defendant asked the Court to instruct "the jury that under the statutes of Great Britain of the 37 Geo. 3, c. 78; 52 Geo. 3, c. 39, "and 6 Geo. 4, c. 125, the defendant was not responsible for any damage occasioned by "the default, negligence, or unskilfulness of the pilot. The Court gave this instruction, "and that is the subject of the first exception. The collision having taken place in the "port of Liverpool, the rights of the parties depend upon the provisions of the British "statutes then in force, and if doubts exist as to their true construction we must, of course, "adopt that which is sanctioned by their own Courts." This decision of the Supreme Court of the United States of North America seems to go the whole length of the way which the Norwegian plaintiff desires me to travel, for it is, in fact, a decision that the court before which a plaintiff sues for the enforcement of the damages growing out of an *obligatio ex delicto* ought to measure those damages by the law which bound the obligor and the obligee at the time when the *factum obligans* (as civilians speak) took place, or, in other words, when the *delictum* was committed.

Lastly, I must observe upon not the least remarkable feature in the present proceeding, namely, that the defendant is the first to invoke in his own favour the law of Belgium. He pleads that by that law, applicable to this case, the taking of a pilot on board was compulsory, and there his citation from the Belgian law ceases. The plaintiff, not unnaturally, pleads in his turn the other part of the Belgian law, which is to the effect that the compulsory taking on board of a pilot does not release the master from his liability under the general law for all damages occasioned by the unskilful navigation of his vessel. The defendant contends that the plaintiff has no right to finish the citation, so to speak, which he, the defendant, has begun, from the Belgian law; that I must only look at that portion of it which he has selected as being in his favour, and which, as such, he is pleased to lay before me; that it is my duty not to apply either the general *lex maris*, mentioned at the beginning of this judgment, or the whole Belgian law, which combines the obligation to take a pilot with the continuing responsibility of the owner; but to take the former part of that law, which relates to the obligation to take a pilot, and add to it the English law, which exempts the owner from responsibility. This is the tesselated piece of jurisprudence which I am told the law requires to be applied to the case before me. I hope there is no law or legal rule in this country which would compel me to do an act of, what seems to me, such manifest injustice; as at present advised, I know of none.

Upon the whole, after an anxious and, I trust, careful consideration of the principles of law applicable to this case, and of the authorities and arguments which have been laid before me, I am of opinion that the plaintiff is entitled to plead that the law of Belgium, within whose territorial waters his vessel received damage from the vessel of the defendant, renders the owner of the latter vessel, although compelled to take a pilot on board, liable to make reparation for the wrong which she has done. The question is one of grave importance, and submitted in this country for the first time unhappily to my decision. I am glad to remember that, if I have erred, my error will be corrected by the Court of Appeal, and I will readily accord to the defendant, if he desire it, the permission to appeal, which the statute requires, from this decision upon the admissibility of the plaintiff's plea.

(No. 9.)

LETTER from Lord *Lyons* to Lord *Stanley*.

My Lord, Paris, 2 January 1868.

IN pursuance of the instructions contained in your Lordship's Despatch, No. 11, Commercial, of the the 21st ultimo, directing me to ascertain and report upon the state of the French law, in regard to the liability of shipowners to pay for damage caused by their vessels when under the guidance of pilots, whose employment is rendered compulsory by the laws of France, I requested Mons. Treite, legal adviser of this embassy, to draw up a report on this subject, and I have now the honour to enclose copy of the Report which I have received from him.

I have, &c.
(signed) *Lyons*

The Lord Stanley.

(Enclosure.)

Milord, Paris, le 29 Decembre 1867.

V. E. a bien voulu me poser la question suivante :

Dans les cas où la loi de France *oblige* le propriétaire d'un navire à employer un pilote, ce navire ou son propriétaire est-il, ou bien n'est il pas tenu selon la loi Française de payer les domages occasionnés par ce navire alorsque celui-ci est sous la direction du pilote?

Je n'hésite pas à repondre à V. E. que le navire ou son propriétaire est tenu tout d'abord à payer les domages que ce navire a causés sauf son recours contre l'auteur manifeste de ces domages autrement dit, la présence *obligée* d'un pilote à bord ne rend pas ce pilote responsable des domages occasionnés par le navire.

Voici à l'appui de cette opinion ce qu'ont dit les auteurs et la jurisprudence.

Les questions de responsabilité sont communément des questions de *fait* et d'*appréciation* réservées à la décision des tribunaux.

La responsabilité spéciale pour domages causés par un navire pourvu d'un pilote, n'en est pas moins réglé par les principes généraux en cette matière ; ces principes sont écrits dans le code Napoléon, en disent, Article 1382. Tout fait quelconque de l'homme qui cause à autrui un domage oblige celui, par la faute duquel il est arrivé, à la réparer, Article 1383, chacun est responsable du domage qu'il a causé non seulement par son fait, mais encore, par sa négligence ou son imprudence.

Article 1384. On est responsable non seulement du domage, que l'on cause par son fait mais encore, de celui qui est causé par le fait des personnes dont on doit répondre. Les maîtres et les *commettants* sont *responsables* du domage causé par leurs domestiques ou préposés dans les fonctions auxquelles ils les ont employés. Les propriétaires de navires sont des commettants, les capitaines des navires sont les préposés des armateurs ou des propriétaires de navires.

Il resulte de ces articles que la responsabilité d'un domage doit retomber sur l'auteur de ce domage ou sur celui, pour le compte auquel l'auteur a agi, et qui s'appelle *la personne civilement responsable* c'est à dire qu'elle n'est tenue qu'aux réparations ou aux indemnités à payer sans encourir les peines que la loi pénale prononce contre les délites commis par imprudence ou négligence ou inobservation des réglements. L'auteur de l'accident est seul responsable criminellement mais le civilement responsable, tel que le commettant, est condamné, solidairement aux domages intérêts avec l'autéur du domage, et le civilement responsable conserve son recours contre l' auteur du mal.

En cas de contestation sur les causes et les auteurs d'un domage, les tribunaux statuent et décident sur qui doit retomber la responsabilité du domage. Si c'est le pilote, il est condammé à payer les indemnités, comme toute autre personne, mais sa présence obligeé à bord n'implique pas sa responsabilité d'une manière absolue.

En effet l'obligation de prendre un pilote imposée à certains navires par l'article 34 du Décret Imperial du 12 Decembre 1806, tient non pas seulement aux intérêts privés des navigateurs, mais surtout à la police général de la vie maritime. Cette police doit veiller au salut des équipages et à l'observation des lois et réglements sur cette matière, aussi lorsque les capitaines refusent de prendre un pilote il n'en sont pas moins obligés de le payer, et en pareil cas, les capitaines encourent la responsabilité de tous les évenements qui surviennent et risquent même des penalitès sévères si le bâtiment se perd (Article 40—Loi du 22 Août 1790). La presence à bord d'un pilote décharge le capitaine d'une partie de sa responsabilité, mais elle ne l'en affranchit pas entièrement. Le capitaine doit surveiller le pilote ; si celui-ci commande des manœuvres dangereuses, le capitaine doit consulter l'équipage et reprendre le commandement même par la force, s'il le faut ; car le capitaine est responsable de la faute grave et evidente qu'il aurait laissé commettre au pilote, et ne peut s'abriter derrière l'autorité du pilote ; il serait coupable de n'avoir pas employé tel moyen de salut qu'un homme d'intelligence et d' honneur devait employer ; il serait responsable de sa négligence.

Telle est l'opinion des auteurs qui ont écrit sur cette matière.*

Quant

---

* *Voir* M. Beaussant—Code Maritime, troisiéme volume, page 383.

Appendix (A).

Quant aux décisions des tribunaux elles sont diverses sur ce sujet comme presque sur tous les autres sujets. Ainsi il a été jugé que lorsqu'un pilote est à bord d'un navire pour y exercer ses fonctions du pilotage, l'administration du pilotage est, à l'exclusion du capitaine, responsable des fautes qui peuvent être commises par le pilote dans l'exercice de ses fonctions, que, s'il est survenu un abordage, il y a lieu de mettre le capitaine hors de cause en réservant à la partie lesée ses droits contre l'administration du pilotage (Tribunal de Marseilles, 11 Mai 1827) et qu'une fois qu'un navire est entré en rivière, le capitaine n'a pas le droit de s'opposer à une mésure que le pilote, sous sa responsabilité, juge propre au salut du navire et du chargement (Tribunal de Bordeaux, 23 Février 1829). A ces décisions on peut opposer des décisions contraires.

Ainsi le tribunal de Marseilles a, le 21 Avril 1830, jugé que de ce qu'un navire se trouve sous le commandement d'un pilote chargé de la conduire, il ne s'ensuit pas que le capitaine soit absolument dégagé de toute responsabilité à raison d'un abordage de son navire contre un autre.

Le même tribunal de Marseilles a, le 5 Mai 1831, décidé que le capitaine était responsable des domages provenant du choc du navire sur des filets signalés par des bouées quoiqu'il y eût un pilote à bord lors de l'accident.

En fin la Cour Impériale de Rennes, le 3 Août 1832, a jugé que l'armateur d'un navire sur lequel se trouve un pilote, chargé de la direction du navire ne laisse pas d'être responsable des faits de ce pilote et spécialement des domages causés par un abordage. Les recueils de Jurisprudence mentionnent fort peu de procès sur cette matière.

Les divergences de ces décisions sont peut être plus apparentes que réelles; elles peuvent s'expliquer par la diversité des circonstances du fait. La présence d'un pilote diminue, je le répète, la responsabilité du capitaine, mais elle ne la fait pas totalement disparaître; elle ne fait pas non plus cesser celle de l'armateur. C'est aux tribunaux à apprécier d'après les circonstances si le capitaine a dû s'en rapporter au pilote, ou bien si les manœuvres ordonnées par celui-ci avaient un tel caractère de témérité ou de mal adresse qu'il était de son devoir de s'y opposer, ou bien encore si le navire était dans des conditions convenables de construction et d'armement ce qui engagerait la responsabilité du propriétaire.

En résumé, les observations ci-dessus se permettent de confirmer l'opinion précédemment émise, qu'en matière de navigation du pilotage, il n'y a pas de responsabilité absolue. Ce sont toujours des questions de fait et d'appréciation. Les juges en décident et condamment les auteurs des domages chacun suivant la part que les circonstances lui ont faite dans le sinistre.

Sa partie lesée exerce tout d'abord son action en indemnité contre le navire ou son propriétaire ou armateur, celui-ci a son recours contre les auteurs du domage et les appelle en garantie, soit pilotes ou capitaines.

Agréez, &c.

(No. 10.)

LETTER from Mr. *Speeding*, North Channel Pilot, to the Secretary, Board of Trade.

Sir, Garford-street, Poplar, 28 February 1870.

I, WILLIAM SPEEDING, Master Mariner, and Trinity Pilot, of 69 (late 34), Garford-street, in the parish of Poplar, county of Middlesex, beg leave to ask your kind permission to allow me to lay before the honourable Select Committee, now sitting on the Abolition of the Compulsory Pilotage Bill, a few particulars for the benefit of shipmasters and shipowners trading to the Port of London.

I beg leave to state that I hold a license (upwards of 20 years), under the honourable Corporation of Trinity House, to pilot ships for the North Channel from London to Orfordness, in and out of Harwich Harbour, and from London Bridge to the Downs and Dungeness.

I have to request that your honourable Committee will be pleased to recommend that the Orders in Council, dated 18th February 1854, relating to pilotage inwards, Downs to London, shall, for the benefit of shipowners, be extended to the North Channel upwards, Orfordness to London.

In consequence of many ships coming up the said North Channel with flags flying for a pilot, the London pilots are not allowed to go on board and take charge. With your kind permission the pilots are willing to do this duty and thus put aside all further cause of complaint.

Shipowners request pilots to continue in charge only as far as they require them. The present regulations will not permit London pilots to leave ships short of the Downs.

I beg leave to call your honourable Committee's attention to the very small amount of pension the London pilots receive. May we be allowed to hope that we may be dealt with in the same way as Custom House officers are, there being means to meet this matter already in the pilots' fund.

Might I suggest that all complaints against pilots be disposed of at a police court.

I have, &c.
(signed) *William Speeding.*

To George John Shaw Lefevre, Esq., M.P

LETTER from the Secretary to the Trinity House, to the Secretary, Harbour Department, Board of Trade.

Sir, Trinity House, London, 11 March 1870.

I AM directed to acknowledge receipt of your letter, dated 3rd inst. (H. 1116), transmitting one from Mr. William Speeding, a pilot, licensed by this Corporation, relative to the Bill for Abolishing Compulsory Pilotage, for the observations of the Elder Brethren, and, in reply, I have to acquaint you with reference to Mr. Speeding's suggestion that the regulations for pilotage inwards from the Downs to London shall, for the benefit of shipowners, be extended to the North Channel upwards, Orfordness to London; that the authority to London pilots to pilot vessels upwards from the Downs was granted by Act of Parliament (16 & 17 Vict. c. 129, s. 5), and not by Order in Council, as Mr. Speeding states, and that it is not necessary that this plan should be adopted in the North Channel, as the circumstances are not similar.

The South Channel service is subject at times, when, after long easterly winds, a westerly wind brings in a large influx of vessels, to a greater demand for pilotage inwards than the Cinque Ports pilots can meet, and the London pilots are therefore allowed to go to their assistance; but no such requirement exists in the North Channel where British vessels rarely take pilots, and those appointed are quite sufficient for the general service.

The Elder Brethren do not propose to make any further remarks on Mr. Speeding's letter, which, as requested by you, is herewith returned.

I am, &c.
(signed) *Robin Allen*, Secretary

The Assistant Secretary, Harbour Department,
Board of Trade.

(No. 11.)

LETTER from Mr. *Sharland* to the Secretary, Board of Trade.

Case of the Gravesend Licensed River Pilots.

Dear Sir, Town Hall, Gravesend, 14 March 1870.

As requested by you, I enclose points submitted by the deputation to Mr. Lefevre on Friday last; also a printed statement in which these points are amplified.

I also transmit draft clauses for your consideration.

I am desired to rectify an error in the statement made by the deputation to Mr. Lefevre in reply to his inquiry what proportion of the present employment of the river pilots depended upon compulsory pilotage. The answer given was about one-third, but a careful investigation has since been made, and it is ascertained that the proportion is about *one-half*.

You desired me to inform you what rates of pilotage were paid to the home trade passenger ships' pilots, and what sums to watermen.

I regret that I can give you no reliable information on either point. The rates receivable by the home trade passenger ships' pilots are, as you know, the same as those payable to the licensed pilots, but what sums are *in fact paid* we cannot ascertain.

The watermen make their own bargains with the masters of ships in each case.

I am, &c.
(signed) *Geo. Edw. Sharland.*

T. H. Farrer, Esq.,
Board of Trade, Whitehall Gardens, S.W.

(Enclosures.)

MERCHANT SHIPPING CODE (PILOTAGE ACT).

PROPOSED CLAUSES.

Section 451, in lieu of present Section.

WHENEVER a licensed pilot who has executed such deed of covenant becomes liable to pay damages for neglect or want of skill, the Trinity House, or some person appointed by them, shall as soon as may be assess the damages to be paid by such pilot, so however, that the amount to be paid by him shall in no case exceed the amount covenanted by the deed to

Appendix (A).

be paid, and the amount of pilotage dues payable to him in respect of the voyage in which he was engaged when he became so liable; but save as aforesaid, no such pilot shall be liable in any proceeding for the recovery of damages for neglect or want of skill.

Section 438.—To be added at the end of paragraph 1, after the words "and Dungeness to the South."

So nevertheless that no pilot shall be licensed to conduct ships both above and below Gravesend.

To be added to Section 3.

A licensed pilot may lawfully go and remain for a reasonable time on board any ship for the purpose of tendering his services as pilot, or for the purpose of searching for and ascertaining whether or not an unlicensed pilot is on board, and the master of any ship who refuses to permit a licensed pilot to go and remain on board his ship for either of the purposes aforesaid, shall for each offence incur a penalty not exceeding 20 *l.*

The fact of an unlicensed pilot, or person accustomed to act as such, being or remaining on board any ship, or landing from any ship, shall be *prima facie* evidence that the master of the said ship had given his ship into the charge of, or had continued to employ, such unlicensed pilot, and that such unlicensed pilot had assumed or continued in charge of such ship.

In lieu of Section 2.

And whereas the pilotage emoluments of licensed pilots may be seriously diminished by the operation and effect of this Act, and it is just and reasonable that full compensation for any such loss should be made in respect thereof to such licensed pilots as were licensed before the passing of this Act; be it therefore enacted, that immediately after the passing of this Act, the Commissioners of Her Majesty's Treasury shall, upon the application of any such licensed pilot, by such means and in such manner as they may think proper, inquire into and ascertain the annual amount, to be computed upon an average of five years immediately preceding the passing of this Act, or of such shorter period as such licensed pilot shall have been licensed, of the pilotage emoluments received by such licensed pilots; and the said Commissioners shall, upon the like application, also ascertain, in such manner as they may think proper, the total amount of pilotage emoluments received by such licensed pilot during any year after the passing of this Act; and the said Commissioners are hereby authorised and empowered by warrant under their hands to award to such licensed pilot the deficiency when and so often as the same shall occur between the last-mentioned amount and the annual average amount so ascertained as aforesaid, and the sum so awarded shall be paid out of the moneys to be provided by Parliament for that purpose.

(No. 12.)

Points submitted by Deputation of Gravesend River Pilots to Mr. *Shaw Lefevre*, on 11th March 1870.

The deputation submitted to the decision of the Government to abolish compulsory pilotage, but urged the insertion of clauses for the following purposes:—

1. For the retention of Gravesend as a pilot station, and the reinsertion of the words, "So nevertheless that no pilot shall be hereafter licensed to conduct ships both above and below Gravesend," inserted by Mr. Cardwell in Section 370 of "The Merchant Shipping Act" 1854, but omitted from Section 438 of the present Bill.

2. For facilitating evidence against unlicensed pilots by inserting clauses making presence of unlicensed pilot on board *primâ facie* evidence that he is in charge, and authorising licensed pilots to go on board to offer services, &c.

3. Limiting pilots' liability, and revising section 451 of Merchant Shipping Code with this view.

4. For compensation, as distinguished from superannuation, in case of loss of employment.

The above points are amplified in the printed Statement herewith.
Suggested Clauses are also herewith for Mr. Farrer's consideration.

Appendix (A).

Statement of the Claims of the Gravesend River Pilots.

1. The Licensed Trinity River Pilots residing at Gravesend, pending the decision of the Select Committee on the question of maintaining the principle of compulsory pilotage, respectfully submit to the favourable consideration of Parliament their claims to protection in the following particulars:—

1. Compensation for loss of employment.
2. Protection against Unlicensed Pilots.
3. Limit to personal liability.
4. Retention of Gravesend as a pilotage station.

With respect to the first of these, "Compensation for loss of employment," they ask to be treated, in the event of compulsory pilotage being abolished, in precisely the same way as successive Governments and Parliaments have dealt with the interests of Clerks of the Peace on the passing of the "Criminal Justice Act," and with Proctors when Doctors' Commons was opened to the legal profession in general. Let an average of the earnings of licensed pilots be taken and verified for the five years preceding the passing of the Act; let each year's subsequent earnings be similarly ascertained, and the deficiency (if any) awarded by the Commissioners of the Treasury. If the views of the promoters of the Bill prove correct, the amount required for compensation will be inconsiderable; if, on the other hand, the fear of the pilots be well founded, that many of them will, after years of exertion, be left in the decline of life, and without any fault of their own, destitute of means of subsistence, it is but just and reasonable that they should be treated in like manner as other classes of the community whose business and employment have been similarly affected by legislative interference.

2. With reference to the second point to be provided for, "Protection against Unlicensed Pilots," it is contended that if pilotage is to be no longer compulsory, yet in case the master of a ship resolves to take a pilot, it is a duty to his owners and the public that such pilot should be duly qualified and licensed, like a surgeon or a lawyer.

If licensed pilots *are* to exist, and to be subjected, as now by law, to an infinity of regulations, restrictions, and contributions, and to a variety of conditions and penalties, they must be protected against unlicensed persons who, not being so subject, are enabled to compete in the performance of certain pilotage duties in fine weather on conditions most unfavourable to licensed pilots, and who, as well as the masters of ships employing them, resort to the most ingenious schemes to evade detection. Clauses are, therefore, necessary, making the presence of an unlicensed pilot on board a vessel (after a licensed pilot has tendered his services) *primâ facie* evidence that he is in charge, and giving a licensed pilot the right of going on board a ship to tender his services, and ascertain whether an unlicensed pilot is concealed therein.

3. In regard to the third point, the liability of pilots for damages accruing in the exercise of their calling has always hitherto been limited by the Legislature. The peculiarly responsible nature of their occupation, the extreme difficulties of distinguishing in critical positions between carelessness and prudence, unskilfulness and mere error of judgment, gross negligence and inevitable accident, renders the legal liability of pilots an exceptional case. They ask in this respect that their responsibility be limited as hereinbefore.

To leave them liable in case of accident or error in judgment, or what a jury in its proverbial ignorance of nautical matters might consider carelessness or want of skill, to the full damages which might follow, would be not only cruelly unjust, but would inevitably tend to defeat its own object. The knowledge of the fearful extent of the risk would, in emergencies, paralyse and unnerve the strongest and coolest mind, until at length no sane men would venture to take charge of a ship without first divesting himself of all his property.

The pilot is also by the form of the Bill to provide two sureties in 100*l.*

If it is intended that the sureties are to be liable only in case of breach by the pilot of the regulations and bye-laws of the Trinity Board, the provision is not very objectionable; but if it be intended (and the Bill is not clear on this point) that the sureties should be liable to damages for neglect or want of skill of the pilot, the clause is most objectionable, as it would be practically impossible for pilots to obtain sureties to incur gratuitously a risk and responsibility which insurance offices and underwriters will not undertake on any terms.

4. The pilots further respectfully urge that the words "So nevertheless that no pilot shall be hereafter licensed to conduct ships both above and below Gravesend," omitted from the present Bill, be restored therein.

These words were inserted by Mr. Cardwell in 1854, after much discussion and consideration, in compliance with a memorial very numerously and influentially signed by underwriters, merchants, and shipowners of the Port of London, representing that the proposal at that time made (as in the present Bill) to permit sea pilots to navigate ships to London was calculated to be injurious to their property; that it would entirely deprive of their occupation a large body of deserving men who had entered the river pilot service with a belief that it would be permanent; and who, having been brought up to that particular branch of pilotage, were best skilled in the management of a crowded river; that no practical benefit would be conferred upon the public by the change; and that a previous attempt to extend this branch of pilotage to sea pilots had been found impracticable, and

Appendix (A).

accompanied with danger and damage to property, and had, after two years' trial, been condemned and repealed.

The same reasons exist now as in 1854, but in a stronger degree, and the pilots represent the proposed change to be unnecessary and injurious.

(No. 13.)

STATEMENT of the TRINITY SEA PILOTS against the proposed "Bill to abolish Compulsory Pilotage."

THE Trinity Sea Pilots are divided into two bodies; 49 reside in London, and the remaining 50 are stationed at Gravesend. There are likewise 75 Trinity river pilots stationed at Gravesend.

The sea pilots respectfully urge upon the House of Commons that, should the Bill pass into law, their claim to compensation for loss of employment (which in all probability will happen to them) should be considered, and some method be adopted by Parliament for fixing and determining the same. Should the pilotage business decrease, and the sea pilots fear it will, it would be exceedingly hard upon a body of men who have left the command of sea-going ships for so many years, several of whom are getting old, and have been replaced by younger men, to be virtually thrown out of employ and left to begin life again, and, though no act of their own, to become almost destitute. It is submitted that the above statement will entitle them to the favourable consideration of Parliament on this head.

They desire to draw the attention of the Select Committee to paragraph 6, in section 2, of the proposed Bill, and to state that if it should transpire that the Trinity House have inadvertently made a pilot since the 15th February 1870, the right to claim the compensation, as proposed by the Bill, will be lost, they would urge the Select Committee to alter this paragraph, and further beg to state that, if the Bill is to be for two years before compensation can be claimed, it would ruin half the Gravesend branch of sea pilots, whose means of gaining a livelihood are now so much plundered by regular unlicensed men concealed in ships going away in ballast, under the provisions of the Order in Council of 1861.

They likewise beg to rivet the attention of the Select Committee to the constant fraud practised on them by the unlicensed men who are in the regular habit of piloting ships in ballast to sea, to the great loss of employment of the Gravesend branch, and thereby rendering that station almost useless. This has been brought about:—

1st. By the Order in Council of the 21st November 1855, authorising ships *in ballast*, on producing a certificate from Trinity House of their being so, for the master to navigate the ship himself.

2nd. By an Order in Council, 16th July 1857, affecting the 397th section, Merchant Shipping Act, 1854, extending the exemption to all ships mentioned in such section, whether carrying passengers or *not*.

3rd. By the Order in Council of the 25th July 1861, extending the exemption from compulsory pilotage to *all* ships in ballast when piloted by the master.

The sea pilots at Gravesend kept a book for a short time, from 3rd July 1861 till 30th May 1862, which shows a total of 95 ships in ballast that passed down the river through Gravesend in charge of regular unlicensed men actually logged; but this is not half of the real number.

They respectfully submit that the penalty imposed by the 3rd section of the Bill should be a minimum of 10 *l.*, and that a clause be inserted making the presence of an unlicensed man on board, *primâ facie* evidence of his being in charge, and that, in the case of an English ship, the penalty for taking such unlicensed man should be levied on any one or more of the owners, and in the case of a foreign ship, on the captain.

That the liability of the pilot should be limited to 100 *l.*

A great hardship is inflicted on the Gravesend branch of the sea pilots by keeping the sea pilot station up, and compelling them to reside there and so lose employment; this might be remedied by extending their license to London, which is the seat of employment, and so enable them to seek for work. There are not any ships in Gravesend, and it costs the owner, according to draught of water, from 7 *s.* to 6 *l.* 7 *s.*, if he first engages a river pilot to take him down the river, and a sea pilot thence to the Downs. If the station were abolished this would be a great saving of expense to shipowners.

RATES of PILOTAGE in the London District, from London to Sea.

SCALE showing the Amount a Shipowner has to Pay for One Pilot from London to Sea, and the greater Amount he has to Pay for Two Pilots; viz., a River Pilot from London toGravesend, and a Sea Pilot from thence to Sea; also, showing the difference of Pilotage saved by employing One Pilot only throughout.

Draught of Water.	Pilotage Rate for One Pilot, from London to the Downs.	Two Pilotage Rates for River and Sea Pilots, from London to the Downs.	Difference between One and Two Pilots.
	£. s. d.	£. s. d.	£. s. d.
7 feet - - -	5 – –	5 7 –	– 7 –

22 „ - - -	25 14 –	31 6 –	5 12 –
23 „ - - -	28 14 –	35 1 –	6 7 –

The above scale shows the disadvantage it is to the sea pilots stationed at Gravesend, also to the shipowner having to pay that amount when compelled to employ two pilots.

(No. 14.)

ORDER in COUNCIL relating to the Pilotage of the London and English Channel Districts.

At the Court at Osborne House, Isle of Wight, the 1st day of November 1862;

Present—The Queen's Most Excellent Majesty in Council.

WHEREAS by the 333rd section of "The Merchant Shipping Act, 1854," it is enacted that, subject to the provisions contained in the fifth part of that Act, it shall be lawful for every pilotage authority, by bye-law made with the consent of Her Majesty in Council from time to time, to do within its districts all or any of the things specified in that behalf in the said section.

And whereas the Trinity House Corporation being the pilotage authority under the said Act for the London and English Channel districts, the limits whereof now are "the waters of the Thames and Medway as high as London Bridge and Rochester Bridge respectively, and also the seas and channels leading thereto or therefrom, as far as Orfordness to the north and Dungeness to the south, and the seas between Dungeness and the Isle of Wight," has submitted for the consent of Her Majesty in Council the bye-law, a copy whereof is set forth in the schedule hereunto annexed, with respect to the pilotage of the said London and English Channel districts.

And whereas it has been made to appear to Her Majesty that the said bye-law is proper and reasonable;

Now, therefore, Her Majesty, by virtue of the power vested in Her by the said recited Act, and by and with the advice of Her Privy Council, is pleased to approve, and doth hereby approve of and signify her consent to the said bye-law as a bye-law of the said Trinity House with respect to the pilotage of the London and English Channel districts.

(signed) *Arthur Helps.*

SCHEDULE to which the foregoing Order refers.

FROM and after the first publication in the London Gazette of the Order signifying the consent of Her Majesty in Council to this bye-law, there shall be paid to all Trinity House pilots, for all ships piloted within the limits of the London and English Channel districts, such dues in respect of their pilotage services as are specified in the Table following:—

TABLE of the RATES of PILOTAGE to be Demanded and Received by Pilots Licensed by the Corporation of Trinity House of Deptford Strond, or acting as such under the Authority of the Acts of Parliament, 6 Geo. 4, c. 125, 16 & 17 Vict. c. 129, and 17 & 18 Vict., c. 104, for Piloting Ships and Vessels within the Limits, in the said Table mentioned.

„ Gravesend to London, or *vice versâ* - - - -	1 5 –

Vessels exceeding 70 tons and not exceeding 100 tons, chiefly laden inwards with fish, corn, or other provisions, are to pay during the summer months, viz.: from Lady-day to Michaelmas-day inclusive, the following rates for the outward voyage, viz.:—

	£. s. d.
From London to Gravesend - - - - - - -	1 5 –
„ Ditto to the Nore - - - - - - - -	2 18 –
„ Ditto to the Sea - - - - - - - -	5 5 –

A pilot taking charge of a foreign vessel, on board of which there may not be any individual qualified to interpret his orders, shall be authorised to employ a person to assist him as leadsman or interpreter; provided it be distinctly understood that the necessity for the employment of such person shall be proved to the satisfaction of the Corporation of Trinity House, in which case only the following rates shall be chargeable in addition to the regular pilotage, viz.:—

	£. s. d.
For the whole run from Sea to Gravesend - - - -	2 10 –
„ do from Gravesend to Sea - - - -	1 – –

The additional rate, for intermediate portions of a foot in the draught, to be regulated as follows, viz.:—

For three inches and under - - - - -	No addition.
For more than three inches and under nine inches -	The medium between the two rates.
For nine inches and upwards - - -	The rate for the next foot.

For removing a ship or vessel from moorings into a dry or wet dock, or from one part of the river situated above Blackwall to another part of the river so situated:—

	£. s. d.
For a ship under 300 tons - - - - - - -	– 15 –
Ditto of 300 to 600 tons - - - - - - -	1 1 –
Ditto of 600 to 1,000 tons - - - - - -	1 11 6
Ditto *above* 1,000 tons - - - - - - -	2 2 –

In the Thames above Gravesend,

For a boat of a class carrying an anchor above 4 cwt. with a corresponding tow line - - - - - - -	2 2 –
For a boat of a class carrying an anchor of above 2 cwt. -	1 1 –
Ditto ditto under 2 cwt. -	– 15 –

Per trip for the whole distance from Gravesend to London, and in proportion for any part of that distance,

And for each man's service in those boats 8 *s.* per tide.

(No. 15.)

ORDER in COUNCIL confirming Pilotage Bye-laws of the Mersey Docks and Harbour Board.

At the Court at Buckingham Palace, the 26th day of June 1861,

Present:—The Queen's most Excellent Majesty in Council.

WHEREAS by the 332nd section of "The Merchant Shipping Act, 1854," it is enacted that every pilotage authority shall have power by bye-law made with the consent of Her Majesty in Council, to exempt the masters of any ships or of any class of ships from being compelled to employ qualified pilots, and to annex any terms or conditions to such exemptions, and to revise and extend any exemptions now existing by virtue of that Act or any other Act of Parliament, law or charter, or by usage, upon such terms and conditions, and in such manner as may appear desirable to such authority. And whereas by 333rd section of the same Act it is enacted that subject to the provisions contained in the fifth part of the said Act, it shall be lawful for every pilotage authority by bye-law made with the consent of Her Majesty in Council from time to time to do within its district all or any of the things specified in that behalf in the said section. And whereas the Mersey Docks and Harbour Board being the pilotage authority for the Port of Liverpool, and in the seas and channels leading into and adjacent thereto, according to the meaning of the said recited Act, have submitted for the consent of Her Majesty in Council the several bye-laws relating to the pilotage of the said district, of which a copy is contained in the first and second Schedules hereunto annexed. And whereas it has been made to appear to Her Majesty that all the said bye-laws are proper and reasonable. Now, therefore, Her Majesty by virtue of the power vested in Her by the said recited Act, and by and with the advice of Her Privy Council, is pleased to approve, and doth hereby approve and signify, Her consent to the said bye-laws, as bye-laws of the said Mersey Docks and Harbour Board with respect to the pilotage of the said district.

Arthur Helps.

SCHEDULES ABOVE REFERRED TO.

SCHEDULE I.

BYE-LAWS made by the Mersey Docks and Harbour Board with respect to Pilots, Pilot Boats, and Pilotage.

123. The office of the Pilotage Committee shall be open during the office hours of the Mersey Docks and Harbour Board, and the secretary shall constantly attend for the purpose of receiving reports and transacting such other business as may be required of him; he shall also summon all meetings of the committee, as well as all persons whose attendance may be required by the Committee.

124. The duties of the superintendent shall be as follows:—To exercise a supervision and control, under the Board, over all the master pilots, pilots, and apprentices, so as to see that the Act and these bye-laws are duly observed by all in their respective departments; to exact from the master pilots and pilots a report of all occurrences affecting the service, on which the Pilotage Committee or himself may require information; and it shall be his especial duty to see that the stations are effectively occupied day by day, and he shall have posted in the office, every day, the numbers of the boats on the several stations, and shall report to the committee every case of misconduct, or breach of the bye-laws that may occur. The time of the superintendent shall be wholly devoted to the service of the Board, and his office hours shall be those of the Board.

125. Every pilot boat shall have three masters, to be called the first, second, and third masters, and the masters or owners of each boat shall be jointly entitled to take 10 apprentices, but they are not to have a greater number than 10 in respect of one boat at any time. The pilots shall be appointed to their respective boats by the Board, so, and in such manner, that each boat may carry an equal number, or as nearly so as is practicable; and no pilot shall be removed from a boat to which he shall have been appointed by the Board, without three months' notice in writing on the part of the masters or the pilot, and a copy of such notice shall be left with the clerk of the committee, who shall record the date when it is received.

126. The first and second masters of each pilot boat (and the third master also in case of necessity), are to take command and proceed to sea in her by turns, and the master remaining on shore shall appoint pilots to outward bound vessels, and transact the other necessary business of the boat. Every master shall maintain due subordination, sobriety,

Appendix (A).

and good order, amongst the crew of his boat, both at sea and in port, and shall, whilst in turn for boarding vessels, always use his utmost exertions to approach and board vessels requiring pilots; and every pilot, or other person, serving on board, or belonging to the boats, shall at all times cheerfully submit to and execute all the lawful commands of the master. The masters shall on no occasion leave the boats when at sea, except in cases of emergency. They shall keep exact journals of the proceedings of every cruise, which shall contain, in particular, accounts of all vessels boarded or piloted inwards, and the time and place of boarding them; and shall enter in their journals, every two hours, the position of their boats. Whenever the committee may require it, a copy of the journal of any cruise signed by the master in command for that cruise, shall be sent into the office in time to be submitted to the committee at their next following meeting. The masters shall instruct their apprentices in the use af charts, and in all other matters, a knowledge of which is by the bye-law numbered 129, required of apprentices on their applying to be licensed.

127. All pilots shall repair to their respective boats, and proceed in them to their stations, whenever and as often as they are required by the masters, and no pilot, while on service, shall under any pretence whatever, leave his boat save on duty. Every pilot when not actually employed, shall attend daily, at such time and place as may be fixed upon and appointed for that purpose by the master of the boat to which he belongs, to receive such orders and directions as may then and there be given by the said master; and in case the owners, masters, and crew of any boat shall suffer any loss by reason of the non-attendance or neglect of any pilot, such loss shall be borne by the pilot so neglecting or refusing to attend. Every pilot shall, whenever he is required, assist, as far as he is able, in performing all necessary repairs to the boat, her rigging, sails, and materials; and in case of refusal or neglect, the master may employ another person in his stead, the expense whereof shall be deducted from his share of the earnings of the said boat. He shall use his utmost care and diligence to conduct the ships and vessels under his charge without damage or doing injury to others; and shall behave himself with strict sobriety, and due respect towards the owners, masters, and officers thereof. He shall order the ensign to be hoisted on entering the port; and on his arrival from sea, either in charge of a vessel or otherwise, he shall as soon as possible give notice thereof to the master of the boat to which he belongs; and shall not leave his vessel until she is safely anchored in the river; nor then leave her without a written permission from the commander, or on being relieved by a pilot of equal class by order of one of the masters of the boat. He shall duly keep the lead going when in charge of any ship or vessel while under weigh; and shall report to the committee all accidents which may have happened to such vessel while under his direction, within 24 hours after his discharge; and no pilot shall lay any vessel aground without a written order from the owner or master. He shall always have with him, when on duty, a good watch, a tide table, a copy of Part 6 of "The Mersey Dock Acts Consolidation Act, 1858," and of so many of these bye-laws as relate to pilots, pilot boats, and pilotage, his license, and a pilot flag, as described in the bye-law numbered 145. On taking charge of a vessel, he shall exhibit his licence to the officer in command. In the case of outward bound vessels, he shall repair on board in sufficient time before leaving the dock or basin to ascertain if the vessel he is about to take charge of is ready for sea, or to anchor in the river. When received on board a pilot boat from an outward bound ship or otherwise, he shall submit to the authority and direction of the master while he remains on board such boat, in all respects as if he were one of her own crew. He shall obey and execute all orders received from the Board or the committee, their secretary, or the superintendent.

128. Candidates for apprenticeship will be required to prove, to the satisfaction of the Board, that they are able to read and write correctly, and that they have a competent knowledge of arithmetic, before they can be considered eligible for the pilot service. They may then be admitted into one of the following classes:—

1. Candidates of not less than 16 years of age, having served three years at sea, partly in square rigged vessels, shall (if approved by the Board) after one month's probation, be apprenticed for seven years, and be eligible for examination for a third class license, at the expiration of three years' apprenticeship.

2. Candidates of not less than 15 years of age, having served 18 months at sea, partly in square rigged vessels, shall (if approved by the Board) after 12 months' probation, be apprenticed for seven years, and be eligible for examination for a third-class license, at the expiration of three years' apprenticeship.

3. All other candidates, not less than 15 years of age, shall, after 12 months' probation (if approved by the Board), be apprenticed for seven years, and be eligible for examination, for a third-class license, at the expiration of four years' apprenticeship.

The proposed indentures and satisfactory testimonials, including a surgeon's certificate that the candidate is of sound health, shall in every case be submitted to the Board; and after the indentures have been approved by the Board and signed by the masters and apprentice, they shall not be cancelled by any private agreement, without the permission of the Board; but the Board shall have the power of cancelling any such indenture, either at the request of the parties, or upon any misconduct on the part of the apprentice deserving in the judgment of the Board of such punishment, and all indentures shall, by express stipulation therein contained, be made subject to the exercise of this power by the Board. The name of every candidate to be entered in the Pilot's Character Book on his first entering the service.

129. No.

129. No person, having served in a Liverpool pilot boat, according to the provisions of the preceding bye-law, shall be licensed to act as a pilot, until he shall also have passed a creditable examination on the following subjects :—

He must be able to give a correct and seamanlike description of the harbours, docks and piers of Liverpool, Birkenhead, Garston, Chester, Beaumaris, Holyhead, Isle of Man, Pile of Foudre, and Fleetwood; he must know the course and distance between any two places within the limits prescribed by the Board; the rise and set of the tides; the depth and character of the soundings; the best anchorages and where to stop a tide; the sandbanks, rocks, shoals, and other dangers; the landmarks, buoys, perches, and lights; the variation and deviation of the compass, and the application thereof; he must be able to set off a ship's position on the chart; he must understand the complete management of a vessel; to bring her to anchor, and to keep her clear of her anchor in a tide way; to moor, unmoor, and get under weigh; and how to handle a vessel under any circumstances.

He must further produce certificates of service as assistant pilot and leadsman in vessels under the charge of a first-class pilot, inward and outward, for every cruise of his boat for 12 months; such certificates to be obtained after the second year of apprenticeship. He must also produce a certificate from his masters as to his conduct and sobriety; and no pilot shall receive a full license without the production of a satisfactory certificate from his masters, unless there shall appear to the Board good reason for deviating from this regulation.

Second and third-class licenses will not be granted between the 25th of September and 25th of March.

130. Second and third-class pilots are limited (except in cases of necessity) to conduct vessels of, but not exceeding, the undermentioned registered tonnage and draught of water, viz. :—

Pilots, 2nd class	-	-	500 tons	-	- 16 feet.
Pilots, 3rd class	-	-	250 tons	-	- 12 feet.

Any vessel exceeding the given tonnage and draught which may from necessity take on board a pilot of a class not authorised to conduct her, shall, if possible, exchange him for a duly-authorised pilot, out of any boat she may meet, and such boat shall make the exchange, in order that he may be forwarded to the boat on the first western station, to be put on board the first vessel requiring a pilot of the class to which he belongs, and every pilot shall inform the master of any vessel he may be put in charge of, of his true position in the service.

131. Every pilot-boat must be of the burthen of 40 tons or upwards, and must be painted in uniform colours, viz., black bulwarks; yellow sheer streak and gunwale; paint streak, green; black bends; white to copper or water line. She must be kept in good repair, and well found with masts, rigging, sails, anchors, cables, and every other necessary material, and shall always have on board an approved chart of the Bay of Liverpool, on which the boundary lines of the several stations hereafter mentioned shall be distinctly marked by the superintendent; also charts of the latest survey of the River Dee, Beaumaris, Holyhead, Isle of Man, Pile of Foudre, and Fleetwood, for the use of the pilots and apprentices; a good telescope, two lanterns, and a swivel, or other small gun, for the purpose of making and answering signals. She must have her number painted on each bow, in white, in figures as large as the depth of the black paint will admit of; and the same number must be painted upon her main and foresails in black figures four feet long. The number on the sails must be painted on the third and fourth cloths from the after leech, and on the mainsail at an equal distance between the upper reef and the gaff. Her name and number, together with the name of the first master, and the port to which she belongs, shall also be painted in large letters and figures upon her stern, one inch broad, and three inches long; and good and sufficient accommodations must be provided for the master and crew, at the expense of the owners.

132. The boats shall be stationed as follows, viz. :—The first and second boats shall cruise off Point Lynas, or to the northward and eastward of it, as wind and weather may permit, or circumstances may require; but not further to the westward than the Middle Mouse, or eastward than Priestholm Island, bearing S.S.W. by compass.

The duty of the first boat shall be to offer the services of, and to furnish, pilots to all vessels inward-bound, and for that purpose the master shall use his best endeavours to speak all such inward-bound vessels as may come within the limits of his station, without respect to their being from a foreign voyage, or otherwise. And if it become necessary for this boat to chase any vessel to the northward, or out of the fair-way track, the second boat shall remain on such station, and board all vessels wanting pilots, which vessels shall be exchanged at the end of the cruise.

The duty of the second boat shall be to be near the first, and to see that the master of the first boat does his duty; and also to board and give pilots to any vessels homeward-bound, that may not have been boarded by the first boat; and, in case the master of the first boat shall refuse, neglect, or omit to put a pilot on board any such vessel requiring one, the master of the second boat shall furnish such vessel with a pilot, and shall note the circumstance, with all the particulars of time, place, and weather, in his journal; and, im-

Appendix (A).

mediately on his return to Liverpool, shall report the same to the committee. And as soon as the first boat has left her station, the second boat shall succeed to it.

The third boat shall cruise to the eastward of Point Lynas, but not further eastward than the west end of the Great Ormshead, bearing S.S.W. by compass, and board any vessels that may pass the first and second boats, and when the second boat has left her station, this boat shall succeed her.

The fourth boat shall cruise as far west as the eastern limit of the third boat, and eastward until Barland bears S.S.W. by compass. The duty of this boat shall be to board and furnish pilots to all vessels requiring them within the limits of her station, whenever the second and third boats may be out of sight, or refuse or neglect to board, or whenever such vessels shall have passed the limit of the third boat's station; and to see that the second and third boats perform their duty, in like manner as the second boat is to look after the first. And when the third boat has left her station, this boat shall succeed her.

The station of the fifth boat shall be to the westward of the N.W. Light-ship, so far as to keep sight of it from the deck, and shall come to the light-ship for the purpose of being relieved, when the boat which is to relieve her arrives at the Bell Buoy, or N.W. Light-ship, and when relieved she shall take the station of the fourth boat.

The duty of the sixth boat shall be to board all vessels that are to the eastward of a line drawn from the Point of Ayr and the N.W. Light-ship, and all vessels to the northward, when the first boat is not within a reasonable distance, and she shall, every day after high water, stretch over towards the Bell Buoy, for the purpose of taking pilots out of vessels going to sea.

The seventh boat shall follow and take the pilots out of vessels outward-bound, for which purpose one of the masters, all the apprentices, and as many pilots belonging to the said boat as shall be required by the master, shall be on board; and as soon as all the pilots are taken on board from vessels outward-bound, she is to return with them to Liverpool. This duty shall be performed by the next boat that has the turn for the second Hoylake Station.

133. The other boats shall be kept in constant readiness to perform any extra service that may occur, the last boat upon turn for regular service to have the preference; but none of them shall, without the order of the superintendent, leave the port, under any pretence whatever, save to assist vessels in distress, or other pressing emergency, or for the purpose of surveying the banks for the instruction of the crews and apprentices; and in case any boat shall be absent, save as aforesaid, when required to go upon the regular service of the port she shall forfeit her turn.

134. All boats are to take their turn or rotation for service in the same order as they arrive from sea, and in case of more boats than one leaving Liverpool, by order of the superintendent, to proceed to the stations at the same time, it shall be lawful for the first boat upon turn to commence boarding vessels, and furnishing them with pilots, as soon as she has got to the westward of the Hoylake Boat; but it is to be clearly understood, that this privilege extends only to boats actually on their passage to the westward stations, and not after they have arrived there, and that, in boarding vessels, when more than one boat is in sight, the first boat upon turn is, on all occasions, to take precedence.

135. The masters and crew of any boat convicted of boarding and piloting any ship or vessel out of her regular turn, shall forfeit every advantage gained thereby, in respect of pilotage inwards and outwards, to the masters and crew of the boat which may be declared by the committee to be entitled thereto.

136. All pilot boats, whilst upon their stations, and in turn for boarding vessels, shall, during daylight, and as the signal offering the services of a pilot, keep constantly flying at the mast-head a red and white flag of large dimensions, the upper horizontal half of which shall be white, and the lower half red; such flag to be carefully kept clean. During the night, the boat on turn for boarding shall exhibit lights, in accordance with the Admiralty regulations for the pilot service.

137. Every pilot-boat in the service shall, once in each year, commencing on the first day of April, in such rotations and at such times as may be fixed by the committee, having due regard to the interest and convenience of the service, sail to and make an accurate examination and survey of the following ports and places, namely: Lancaster, Pile of Foudre, River Wyre, and all ports in the Isle of Man, Holyhead Harbour, Beaumaris, and Chester. The secretary of the committee, or the superintendent, shall give notice, in writing, to the master of every boat ordered on this survey at least 24 hours before the time appointed for sailing, and shall go on board when the boat is ready for sea and muster the crew, when one of the masters, half of the pilots, and all the apprentices, are hereby directed and required to be present, and to proceed upon and remain on board during the survey, unless reasonable cause of absence can be shown to the satisfaction of the committee; and the masters and pilots shall go upon the survey by turns, so that each individual shall go once in two years. The master shall keep an exact and accurate journal of their proceedings, which shall contain all such remarks and information as he shall make or obtain relative to the lighthouses, landmarks, buoys, perches, and other sea-marks, as well as all rocks, sand-banks, and other dangers, and the depth of water within the limits of the survey. He shall obtain a certificate from some principal officer of the revenue at each of the ports above-mentioned that he has visited the port. The journal and certificates shall be delivered to the

secretary

secretary of the committee, or the superintendent, within 24 hours after his return to Liverpool. No more time shall be spent on the survey than is necessary for the purposes above-mentioned, nor must any ship or vessel be boarded by, or furnished with, a pilot from any boat whilst on the survey, except such ship or vessel shall be in distress, in which case the particulars of her situation shall be accurately noted in the journal.

138. Each master is required, after each arrival of his boat from sea, to enter in the Inward-bound Book, in the office, within one hour after such arrival, if in the day time, or if in the night, by nine o'clock in the morning following the arrival of his boat, from what station, the time, and where lying, and shall sign his name to such entry. And the master on shore shall enter in the Outward-bound Book the sailing of his boat, the number of the boat and men, the time when, and the place from which she has sailed, and to what station she is bound.

139. In the event of the first boat on turn not proceeding to its destination at the proper time, the master in charge shall thereupon become liable to the penalty hereinafter mentioned, and the second boat shall proceed to the station; and in case the master of the second boat shall neglect to do so, he shall thereupon become liable to the like penalty.

140. The boat following boat, or the boat sailing for the second Hoylake Station, shall (when required so to do by a written order from the superintendent) take any hands belonging to the boat next on turn for the Fourth Western or First Hoylake Station, and also to any other of the western boats; and the First Hoylake Boat, or Fourth Western Boat, shall receive any pilots so sent, and pass them on to the next western boat, and so on, until they have joined their own boat; but if she has boarded all her hands and left the station, then the boat bringing them down shall board them on the first vessels wanting pilots.

141. After boarding all hands at the western station, the boat to be relieved shall hoist a ball at her masthead, and keep it there until answered by telegraph, and the same signal is to be made when abreast of the N.W. Light-ship, until answered by a ball at Bidstone, as a signal for the next boat on turn to proceed.

142. The boat on the First Western Station, when she shall have boarded all her pilots except two first class, or four of the second and third class, shall (in order that she may return to Liverpool) transfer them to the second boat, which boat shall receive and board them on the first vessels requiring pilots of their class.

143. No master of a pilot-boat shall, without the sanction of the Board, carry to sea, or receive on board the boat, or in any other way assist in putting on board any ship or vessel, for the purpose of piloting or conducting her, any person either not duly licensed, or whose license shall have been suspended or withdrawn by an order of the Board, or which shall not have been renewed.

144. The earnings of each pilot-boat, including all compensations and rewards for assisting vessels in distress, shall be divided amongst the owners and crew in the following proportions, viz.:—

		Shares.
Owners	For the boat	$2\frac{1}{2}$
	For each licensed apprentice	$\frac{1}{32}$
	For all unlicensed apprentices	$1\frac{1}{2}$
Masters		1
Pilots—1st class		1
,, 2nd class		$\frac{3}{32}$
,, 3rd class		$\frac{3}{32}$

But the Board have power to alter such apportionments from time to time, in such manner as they shall judge most conducive to the interests of the service; and if any pilot shall be disabled from doing his duty by sickness or bodily hurt, he shall be entitled to two-thirds of a share of the said earnings for the space of three months, provided such sickness or hurt has not been occasioned by drunkenness, gaming, or other vice, the fact to be determined by the Board, upon such evidence as may be brought before them; and provided also that due notice be given to the superintendent and masters of the boat at the commencement of his sickness, accompanied by a medical certificate, if required by the Board.

Each pilot shall deliver all money received by him for pilotage, with an account and vouchers, to the master of the boat to which he belongs, on the day following that on which they are received; or, in case of such vouchers and money being received at sea, then they shall be delivered to the said master as soon as he, the said pilot, returns to port, or joins his boat at sea; and all claims for extra days shall be inserted in the certificate for pilotage, and signed for by the master of the vessel.

145. Every pilot shall provide himself with a flag three feet long by two feet broad, corresponding in colour and pattern with the distinguishing number of the boat to which he belongs. On taking charge as pilot of any vessel, he shall cause his flag to be hoisted on board such vessel, at the gaff-end, under the ensign, or wherever it may be most conspicuously

Appendix (A).

spicuously seen (except on the foremast), particularly by a pilot-boat in chase; and he shall keep his flag continually flying until he is discharged or relieved by another pilot. This bye-law shall apply to all vessels, outward or inward-bound, at sea or in port, under weigh or at anchor, and under all circumstances, so long as she is in charge of a pilot.

On perceiving a pilot-boat in chase by night, the pilot in charge of the vessel so chased shall cause a light to be hoisted where it may be best seen by the pilot-boat; and he shall direct that this light be lowered and re-hoisted every five minutes, as a signal that the vessel is provided with a pilot.

146. Pilots in charge of vessels at anchor in the river or channel, shall cause white lights to be constantly exhibited at night, one on the forestay, and the other at the gaff-end, to be not less than eight feet above the upper top-rail of the bulwarks, so long as at anchor in pilot water.

147. All pilots shall obey the bye-laws of the Board; and also all orders and directions that may be given to them by the water bailiff, harbour, dock, and pierhead masters, relative to the docking, towing, transporting, or removing vessels under their charge.

148. The following rates of pilotage shall be chargeable in respect of the neighbouring ports hereinafter mentioned, namely:—

Port of Chester, any part north of Hilbre Island—Liverpool rates.

Port of Chester, any part south of Hilbre Island—Liverpool rates and half as much more.

Lancaster, Fleetwood, or Pile of Foudre—Liverpool rates and travelling expenses.

Beaumaris.

Inward-bound: Liverpool rates and travelling expenses.

Outward-bound foreign putting into: Liverpool outward rates, half as much more, and travelling expenses.

Outward-bound coasting putting into: Liverpool outward coasting rates, half as much more, and travelling expenses.

All pilotage rates are to be charged for every foot of water a vessel may draw, and so in proportion for every half-foot, but no allowance to be made for any draught of water above or under half-a-foot, and no vessel, whatever may be her draught of water, to pay for less than eight feet. No vessel to be deemed a coasting vessel so as to be liable to a reduced rate for pilotage, unless she shall *bonâ fide* have been employed in the coasting-trade for six months; and, if trading outwards, shall sail from the port of Liverpool on a coasting voyage.

If the pilot be not discharged and the pilotage paid within two hours after the vessel is brought to anchor, or given into the charge of the pilots of the place she is bound to, he shall be paid 10 *s.* 6 *d.* a day for every day or part of a day he may be detained afterwards. Having conducted a vessel into any of the above ports, a pilot shall not join his boat again for the purpose of piloting any other vessel during the cruise on which the boat was engaged at the time he left her. No pilot shall make any agreement for, or receive any greater sum of money for pilotage, than is allowed by the Act of Parliament and these bye-laws.

Steamers or other vessels proceeding on an experimental trip not farther than the Bell Beacon or North West Light-ship, shall be charged full outward and half inward pilotage.

The rates for docking and transporting shall be as follows, viz.:—

From one dock to another - - - -	£. 1 - -
To or from Garston - - - - -	- 2 - -

The amount of compensation and travelling expenses to be allowed to pilots carried beyond limits (which are not provided for in this bye-law), or for extraordinary services shall, in every case, be decided by the Board.

149. Any pilot may, upon receiving written authority from the superintendent, proceed to any port or place in the United Kingdom, for the purpose of taking charge of and conducting any ship or vessel to the port of Liverpool. And no vessel having a pilot on board, under this regulation, shall be obliged to take another pilot, or shall be subject to any higher or other rate of pilotage than is established by these bye-laws or Act of Parliament.

150. The masters of steam vessels, trading from this port to Ireland or Scotland, requiring pilots, must apply to the superintendent, who shall thereupon cause to be appointed pilots to such vessels out of the crew of the pilot-boat having the steam turn (namely, the last but one upon turn for service), which pilots so appointed shall be at liberty, if required, to proceed and remain in such vessels during the whole of the voyage upon which they shall then respectively sail, and shall pilot them outward and inwards for which the usual and regular rates shall be paid, together with 10 *s.* 6 *d.* per day for every day of the pilot's absence from Liverpool, including the day of sailing from, and the day of ariving in, Liverpool. Every pilot, on his return from such voyage, not finding his own boat in port, shall be carried out in the next boat sailing for the station, and put on board his said boat. But in case she shall have returned to Liverpool before he arrives on the station, he shall then be boarded on the first vessel requiring a pilot.

151. Any

151. Any master of a pilot-boat sending a pilot to take charge of vessels beyond his license limit, except in cases of necessity, shall be fined in the sum of 5 *l.*, subject to be reduced by the Board if they should think fit.

152. For every extension of license the sum of one guinea shall be paid; and on the renewal of any license in place of one lost, the fine of three guineas shall be levied, subject to be reduced by the Board if they think fit.

153. Pilots in charge of ships or vessels, on being hailed by any pilot-boat, shall, on all occasions, give a true account of the time when they were boarded, and the number of pilots left on board the boat to which they belong. And all master of pilot-boats, when on any of the westward stations, are also to give a true account of the number of pilots they have on board, whenever they are required so to do by the master of any other pilot-boat.

154. No owner, part owner, or master of any pilot-boat, nor any pilot, or licensed apprentice, shall, at any time while acting as such, have or hold any share or interest in any steam tug company, or in any steam tug or any steamboat occasionally used for the purpose of towing vessels.

155. All instances of neglect of duty shall be brought before the Board, and no master pilot shall compromise any offence of a pilot.

156. All complaints of offences against the Act of Parliament, or the foregoing bye-laws, or any of them, with respect to pilots, pilot-boats, and pilotage, shall be made in writing, signed by the party aggrieved, and delivered to the secretary of the Pilotage Committee, or left at the office, as soon as practicable; and such secretary shall summon the party complained of, the party aggrieved, and all such persons as the committee may desire to examine to attend the meeting of the committee, which shall be first held next after the expiration of 48 hours from the time of the receipt by him of such complaint.

157. Every owner, part owner, master, pilot, or licensed apprentice, offending against or contravening any of the preceding bye-laws with respect to pilots, pilot-boats, and pilotage, shall for every such offence forfeit and pay the sum of 5 *l.*, which fine, by "The Mersey Docks Ferry Accommodation Act, 1860," the Board are empowered to inflict, provided that the Board shall be at liberty to reduce such fine in any case if they may think fit.

Note.—In addition to this penalty any pilot acting contrary to the provisions of any of these bye-laws, is liable under the Act of Parliament to have his license recalled or suspended by the Board; and any owner, or part owner, offending against any of these bye-laws, applicable to pilot-boats, is liable to have the license of his boat recalled.

158. These bye-laws shall commence and take effect on the 1st day of June 1861.

Note.—By "The Mersey Dock Acts Consolidation Act, 1858," sect. 387, any justice before whom any person shall be convicted of any offence against these bye-laws, may mitigate the amount of penalty imposed.

SCHEDULE II.

BYE-LAWS made by the Mersey Docks and Harbour Board, for the Regulation of Masters and Mates of Ships who have received Pilotage Certificates under the 340th Section of "The Merchant Shipping Act, 1854."

1. No person, to whom such a certificate shall be granted, shall add to or in any way alter such certificate, or make or alter any endorsement thereon, nor shall at any time lend such certificate.

2. Every person to whom such a certificate shall be granted, who shall observe any alteration in any of the sands or channels, or that any buoys or beacons of the Board have been driven away, broken down, damaged, or out of place, shall forthwith deliver or send a correct statement thereof in writing to the secretary of the Board.

3. Every person to whom such a certificate shall be granted, shall from time to time conform himself strictly to all directions which shall be given to him by any of the harbour masters or by the water bailiffs, touching the mooring, unmooring, placing, or removing, of any ship or vessel under his charge, so long as such ship or vessel shall be lying and situate within the limits of the authority of such harbour masters or water bailiff.

4. Every person to whom such a certificate shall be granted, shall, when in charge of any ship or vessel for which such certificate may have been granted, exhibit from the mast head of such ship or vessel, a distinguishing flag of the usual dimensions, and of two colours, the upper horizontal half red, and the lower horizontal half white, in order to show that such ship or vessel has on board a master or mate qualified to act as pilot thereof.

5. Every person to whom such a certificate shall be granted shall attend the meetings of the Board, or of their Pilotage Committee, upon being required to do so by a notice in

Appendix (A).

writing under the hand of the secretary of such committee, to answer any complaint or charge which may be made against him.

Any person holding such a certificate, who shall offend against, or contravene any of the last five preceding bye-laws, shall, for the first offence, forfeit and pay the sum of 20 *l.*, subject to reduction by the justices by whom the penalty is inflicted; and for any subsequent offence his certificate shall be annulled or suspended at the discretion of the Board.

6. The last five preceding bye-laws shall commence and take effect on the 1st day of June 1861.

(No. 16.)

ORDER in COUNCIL as to Reduction of PILOTAGE of COASTING STEAMERS at Liverpool.

At the Court at Buckingham Palace, the 30th day of January 1854.

Present—The Queen's Most Excellent Majesty in Council.

WHEREAS by "The Pilotage Law Amendment Act, 1853," it was enacted, "That it should be lawful for every pilotage authority, by regulation or bye-law, made with the consent of Her Majesty in Council, to fix, and from time to time to alter, the rate and prices or other remuneration to be demanded and received by pilots, licensed by such authority, or to substitute other rates and prices in lieu of those for the time being demanded or received, or to alter the mode of remunerating pilots in such manner as such authority might, with such consent as aforesaid, think fit; so that no higher rates or prices should be demanded or received from the masters or owners of ships than the rates and prices which might, if the said Act had not passed, have been demanded or received:" and likewise "To exempt the masters of any ships or vessels, or of any classes of ships or vessels, from being compelled to employ pilots, and to annex any terms or conditions to such exemptions, and from time to time to revoke and alter any exemptions so made, and to revise and extend any exemptions now existing by virtue of any Act of Parliament or charter, upon such terms and conditions, and in such manner, as such authority, with such consent as aforesaid, might think fit."

And whereas at a meeting of the Commissioners of Pilots of the Port of Liverpool, being the pilotage authorities of the said port, according to the meaning of the said recited Act, it was resolved that, with the consent of Her Majesty in Council, the following regulations should be made with respect to coasting steamers plying from and to the port of Liverpool; that is to say, "The coasting steamers outward bound, proceeding to sea without a pilot, be altogether exempted from the payment of pilotage; and that the rates of pilotage for coasting steamers inward-bound be reduced from 4*s.* to 1*s.* per foot when the services of a branch pilot are not required on board the steamer; and that the said regulations shall take effect at the expiration of one calendar month from the consent of Her Majesty in Council being obtained thereto."

And whereas the said regulations appear to be proper and reasonable:

Now, therefore, Her Majesty, by virtue of the power vested in Her by the said recited Act, and by and with the advice of Her Privy Council, is pleased to approve, and doth hereby approve, of the said regulations so submitted as aforesaid.

(signed) *Wm. L. Bathurst.*

(No. 17.)

CORRESPONDENCE in 1868, 1869, respecting Examination of MASTERS and MATES at Liverpool.

LETTER from Captain *Simpson* to the Assistant Secretary, Harbour Department, Board of Trade.

Pilotage Department, South end of Prince's Dock,
Liverpool, 9 June 1868.

Sir,

I AM directed by the Mersey Docks and Harbour Board to reply to your letter [H. 2012] of the 4th instant, and I beg leave to inform you that the statement of Mr. Hogan applies to the "Order in Council as to Reduction of Pilotage of Coasting Steamers," dated 30th day of January 1854 (a copy of which is enclosed), which appears to have been the result of a voluntary arrangement or compromise between the coasting steam trade and the pilots, with

with the object of avoiding local examination when the Merchant Shipping Act of 1854 came into operation.

The Order in Council still continues in force, but does not apply to vessels whose masters or mates may be holding pilotage certificates granted by this Board, all such vessels being entirely exempted from pilotage charges. Every other coasting steamer not in ballast, whether having a master or mate holding a pilotage certificate under sections 354 and 355 of the Merchant Shipping Act, 1854, or not, pays to pilots the charge of 1*s.* per foot per voyage, according to the terms and by virtue of this compromise, and it does not appear that the charge has ever been disputed.

The compromise was affected about five years before this Board became the pilotage authority of Liverpool.

The advantage which is the object of Mr. Hogan's application is not so apparent; unless it be to avoid the examination which, under the 340th section of the Merchant Shipping Act, 1854, he must undergo before he can receive a pilotage certificate from this Board, and on the other hand, to avoid the penalty to which he is liable for piloting a home trade passenger ship without a certificate. In other words he asks that section 354 may in his case be suspended, and that section 355 (which was only intended to apply to masters or mates who had been continuously piloting home trade pasesnger ships for two years prior to the commencement of the Merchant Shipping Act of 1854) may be strained so as to apply to him, because he has been acting for the last two years in contravention of the 354th section of the Act.

I have, &c.
(signed) *Robert W. J. Simpson,*
Superintendent of Pilotage.

The Assistant Secretary, Harbour Department,
Board of Trade.

LETTER from Captain *Simpson* to Captain *Bedford,* R.N.

(Private.)

Pilotage Office, Prince's Pier, Liverpool,
24 June 1868.

Dear Sir,

HAVING returned to Liverpool, and being once more in harness, I hasten to reply to your private note of the 16th instant, which arrived here while I was having my holidays.

I thank you very much for giving me this opportunity of stating the simple facts with reference to the examinations of masters and mates for pilotage certificates at this port, as I have been long aware that erroneous reports on this subject have been made to the Board of Trade.

The Dock Board undertook these examinations in 1859. Having no suitable examiners at that time, and being desirous of improving the system of examinations of pilots, it was determined to take the Trinity House as our model, and to gather information on the subject from various sources. Being at that time just appointed to this office, I was sent to make these inquiries, and received many valuable hints not only from the Trinity House, but also from your colleague, Captain Walker (in the absence of Captain Sullivan), to whom I am very much indebted. The result of this mission was the adoption of a system and the appointment of a committee, as closely approximate to those at the Trinity House as it was possible to make them. Since then, slight modifications have been made in the committee, which is now comprised of five members, viz., three members of the pilotage committee (who are shipowners as well as captains), the marine surveyor, and the superintendent of pilotage. All applications for examination are immediately referred to the examiners, and upon their report, pilotage certificates and pilot licenses are granted. Having twice passed an examination before the Elder Brethren, I am in a position to state that our examinations are in every way conducted the same as at the Trinity House, and with the utmost consideration for the candidates that is consistent with duty. Every application so far has been successful so far as I am aware. That is to say, every candidate has ultimately got a certificate, though in some cases not till after a second appearance, in consequence of being unable to pass the first time. The Dock Board have never received applications from any of the Dublin and Liverpool steamers' captains, or from any masters or mates in the trade between England and Ireland. If any such applications had been made, they would of course receive the same consideration as others.

The pilotage charge of one shilling per foot per voyage, alluded to by Mr. Hogan, is an unholy contract between pilots and the coasting trade, to avoid examination, and to reserve the privilege of employing pilots in dirty weather. The certificate of the Dock Board, (given after examination) as the Merchant Shipping Act, 1854, provides, frees the holder from all pilotage charges of every kind.

I regret having to close in haste, and remain,

Yours, faithfully,
(signed) *Robert P. J. Simpson.*

Captain Bedford, R.N., Board of Trade.

Appendix (A.)

LETTER from Mr. *Watson* to Mr. *T. H. Farrer.*

City of Dublin Steam Packet Company, Office, 15, Eden Quay,
Sir, Dublin, 10 July 1868.

YOUR letter of the 3rd instant has been forwarded to me from Liverpool. I beg respectfully to protest against any change being made as to the granting certificates, authorising the commanders to take steam vessels with passengers in and out of Liverpool, such a change as you refer to would be quite opposed to the compact entered into by the Board of Trade with the coasting steam trade.

When the Merchant Shipping Bill was under consideration in 1854, the steam interest withdrew all objection to the insertion of the 354th section (which, for the first time, rendered it obligatory on vessels with passengers to have a pilot on board), on the provision being made by the next section, authorising the masters or mates to apply to the Board of Trade for a pilotage certificate. This provision was urged, as you may recollect, mainly with the object of guarding against the difficulties which were anticipated would arise in Liverpool to the granting pilotage licenses to such applicants by the local authority.

After the passing of the Act, attempts were made without success, to obtain licenses from the Mersey Docks Board, and after a prolonged correspondence with the Board of Trade on the subject, the President acceded to our application early in 1860, to carry into operation the 355th section of the Act. Since that time no further difficulty has been experienced; the officers, on giving satisfactory proof of their fitness, have been authorised to pilot, without increasing the penalty prescribed by the 354th section.

I am not aware of any instance of accident arising to ships thus piloted, certainly none has taken place with any vessel belonging to this company.

At the close of 1865, you honoured me with a communication expressing the desire of the Board of Trade to discontinue the arrangement, and to leave the question of issuing licenses with the Mersey Board, but I was obliged to decline acceding to the desire, which was not further pressed.

Your present communication to announce that the Board of Trade, as at present advised, propose no longer to issue pilotage certificates under the 355th section of the Act, for the port of Liverpool, causes the utmost surprise, and on the part of the Irish steam interest, I have to convey their strongest objection to the adoption of such a course.

The letter of 24th June, received from the superintendent of pilots at that port, does not indicate such a friendly feeling to the steam interest, as to encourage a hope that the matter would be dealt with in a different spirit from that which we so long experienced. I may remark that Captain Simpson, when speaking of the payment of one shilling per foot to the pilotage establishment (no service being rendered for such payment), designates it as "an unholy contract between the pilots and coasting trade to avoid examination, reserving the privilege of employing pilots in dirty weather;" appears to be ignorant that the compromise was voluntered by the Dock Board, long prior to the passing of the Merchant Shipping Act, at the time when neither examinations nor certificates were needed. His assertion of employing pilots in dirty weather, has been reported over and over again.

I would venture to suggest that a return should be called for to show the cases where such services have bean called for by officers holding the certificates of the Board of Trade; and also, a return of the successful cases of applicants to the Docks Board for licenses.

Trusting that the consideration of the foregoing statement may be sufficient to establish the just claim of the steam coasting trade to the continued exercise by the Board of Trade of the provisions and duties assigned by the 355th section of the Act, so long as the 354th section remains in force.

I have, &c.
T. H. Farrer, Esq., Board of Trade. (signed) *Wm. Watson.*

LETTER from Captain *Simpson* to the Assistant Secretary, Harbour Department, Board of Trade.

Pilotage Department, South end of Prince's Dock,
Sir, Liverpool, 30 July 1868.

I AM directed to reply to your letter of the 25th instant (H. 2655) with reference to the correspondence arising out of Mr. Hogan's application to the Board of Trade for a Liverpool pilotage certificate, and to acknowledge the receipt of a copy of a letter from Mr. Watson, of the City of Dublin Steam Packet Company, which you have transmitted to the Mersey Docks and Harbour Board, with an invitation to make such observations thereon as they may have to offer.

The information with reference to the examinations of masters and mates for pilotage certificates at this port, which at the request of the Board of Trade from time to time has been forwarded, is of so full and unreserved a character that it is scarcely possible to throw much more light on the subject, but I am to say that the Dock Board will be happy to answer any questions which the Board of Trade may feel disposed to put to them, and to afford Mr. Watson every opportunity of satisfying himself as to the correctness of the statements which have emanated from this office.

The

Appendix (A).

The following brief observations, arranged chronologically, are submitted in reply to your invitation.

1st January 1859.—The Mersey Docks and Harbour Board entered on its duties as the Liverpool Pilotage Authority.

7th March 1859.—Applications received from Messrs. Hughes and John, mates in the service of the City of Dublin Company, asking to be examined for pilotage certificates. The Board at that time had not considered the question of examining masters and mates, and had no examiners.

6th June 1859.—The above named gentlemen were informed that the Dock Board declined to undertake the examinations of masters and mates for pilotage certificates.

6th October 1859.—The Dock Board having resolved to undertake these examinations, intimated the same to the Board of Trade, and appointed examiners. This resolution was prominently advertised in all the local daily and weekly journals.

I have only further to observe, that since the date last mentioned, every applicant for a pilotage certificate has been examined; only one has failed to finally pass his examination; and neither Mr. Hogan nor any other officer in the employ of the City of Dublin Steam Packet Company has ever applied to be examined by the Mersey Docks and Harbour Board.

I have, &c.
(signed) *Robert P. J. Simpson.*

The Assistant Secretary,
Harbour Department, Board of Trade, London.

Letter from Captain *Simpson* to the Assistant Secretary, Harbour Department, Board of Trade.

Pilotage Department, South end of Prince's Dock, Liverpool,
10 August 1868.

Sir,

I have to acknowledge your letter of the 5th instant (H. 2895), and in compliance with the request therein contained, I am directed by the Mersey Docks and Harbour Board to furnish you with the accompanying Return of all applications for pilotage certificates received (from masters and mates) by the Docks and Harbour Board since 6th October 1859, giving the names of the applicants, and the result of the examination in each instance.

I am, &c.
(signed) *Robert P. J. Simpson.*

The Assistant Secretary,
Harbour Department, Board of Trade,
Whitehall, S.W.

RETURN of all APPLICATIONS to the MERSEY DOCKS and HARBOUR BOARD from MASTERS and MATES for PILOTAGE CERTIFICATES between the 6th of October 1859 and the Date hereof, showing the Result in each instance.

Note.—The ticks (√) in "Remarks" column show the pilotage certificates which remain in force.

10 August 1868.

Robert P. J. Simpson,
Superintendent of Pilotage.

Sir, 13, Eden Quay, Dublin, 2 October 1868.

I BEG to acknowledge receipt of your letter of 7th September covering copy of a letter which was addressed to Mr. Watson, of the City of Dublin Steam Packet Company, on 4th July last.

You will please to observe that my employers are not the City of Dublin Steam Packet Company, but the Dublin and Liverpool Screw Steam Packet Company, of which Mr. Stirling is the managing director; and I most respectfully ask the Board of Trade to reconsider the matter, and, in compliance with the 355th section of "The Merchant Shipping Act, 1854," to grant me a certificate to enable me to pilot the steamers which I command, in and out of the port of Liverpool, without incurring a penalty for so doing; but I do not wish to interfere with the existing rule of paying to the pilots 1*s.* per foot on my vessel.

I have full confidence in being able to pass any examination equal to any pilot in the establishment, as I have been now more than two years continuously piloting and assisting to pilot my ship into Liverpool (my mate having a pilotage certificate), and no one pilot of the establishment could in five years have the same amount of practical knowledge; and I believe that it is quite possible to put such questions to any applicant for a pilotage certificate as would puzzle the best pilot in Liverpool. And I therefore object to present myself to the Mersey Board for examination, feeling certain that I would not get such an examination as would allow me to pass; for that body seem to have an inclination to offer every impediment to passing men who do not belong to the pilotage establishment. This is shown by the small number who have got certificates since the passing of the Act, though no one can deny the competency of masters of steam vessels to pilot their vessels into and out of Liverpool with their daily practice.

I therefore most respectfully trust that you will kindly comply with my request, and place me in a position to discharge a duty to my employers which I feel quite competent to perform.

I have, &c.

The Assistant Secretary, (signed) *M. Hogan.*
Harbour Department, Board of Trade.

LETTER from Captain *Simpson* to the Assistant Secretary, Harbour Department, Board of Trade.

Pilotage Department, South-end of Princes Dock, Liverpool,

Sir, 19 October 1868.

WITH reference to your letter of the 13th instant (H. 3587), I am directed by the Pilotage Committee of the Mersey Docks and Harbour Board to thank you for sending them a copy of Mr. Hogan's renewed application for a pilotage certificate, and for drawing their attention to certain observations which appear in his letter.

I am further directed to say that there is such manifest inconsistency in Mr. Hogan's remarks, that this Board cannot see any necessity to reply to them beyond the declaration that he is altogether in error so far as his remarks apply to this Board; and I am to repeat (and to request that you will kindly intimate the same to Mr. Hogan) that this Board is quite ready to grant a pilotage certificate to him, or to any other master or mate, after passing a fair and reasonable examination.

I am, &c.

The Assistant Secretary, (signed) *Robert P. J. Simpson.*
Harbour Department, Board of Tard of Trade, London.

LETTER from Mr. *Stirling* to the Assistant Secretary, Harbour Department, Board of Trade.

Dublin and Liverpool Screw Steam Packet Company,

Sir, 13, Eden Quay, Dublin, 20 October 1868.

CAPTAIN HOGAN has handed me your letter of 13th instant, H. 3587, in which you inform him that the Board of Trade cannot depart from the decision communicated to him and to the Mersey Docks and Harbour Board relative to the granting of pilotage certificates for the Port of Liverpool, under the 355th section of "The Merchant Shipping Act, 1854."

I deferred writing to you till I had before me the whole correspondence which had taken place between Captain Hogan and the Board of Trade on the subject, from 20th March last, when he made the first application.

I beg most respectfully to express to you my great surprise that the Board of Trade should depart from the principle on which they acted after the passing of the Merchant Shipping Act, 1854, as the 355th clause was enacted to give them the power of granting certificates to masters and mates who were qualified by constant practice to pilot their ships;

Appendix (A).

as it was quite certain that the pilot authorities would throw every impediment in the way of granting certificates to any persons not connected with their own establishment.

That this has been the course in Liverpool is evidenced by the small number of persons to whom the Mersey Docks Board have granted certificates, as no masters or mates (no matter how well qualified) are disposed to submit themselves to an examination, when they feel confident they will not be allowed to pass, and nothing can possibly be easier than to puzzle even the best informed men, by putting questions about cross-bearings, from a chart.

None of the pilots of Liverpool establishment could acquire in five (I might say 10) years the practical knowledge of the navigation which the commanders of steam vessels sailing into and out of Liverpool two or three times weekly acquire in two years' service, and it is a great hardship to refuse to such men the certificates which the Legislature in 1854, fearing and foreseeing the difficulty which would be thrown in the way of their passing an examination, put into the power of the Board of Trade to issue.

If the Mersey Docks Board were disposed to publish a series of questions, on the perfect knowledge of which they would grant the certificate, no exception could be taken to such an examination, and masters and mates going up would know what they were about; but till such time as they do so, I, in common with all steam-ship owners trading to Liverpool, must protest, respectfully but strongly, against the Board of Trade giving up the custom of granting certificates to men who by their daily practice prove themselves competent to perform the service.

In conclusion, I most respectfully ask the Board of Trade to reconsider the matter, and continue to issue certificates to such captains and mates as are entitled under the 355th section of the Merchant Shipping Act to receive the same, till such time as the Mersey Docks Board indicate by a printed rule what information masters and mates are required to have to entitle them to a certificate enabling them to pilot their ships into and out of the port of Liverpool.

I am, &c.
(signed) *Jas. Stirling*,
Managing Director.

The Assistant Secretary,
Harbour Department, Board of Trade,
Whitehall, S. W.

LETTER from Mr. *Watson* to the Secretary, Board of Trade.

City of Dublin Steam Company,
20, Water-street, Liverpool, 24 October 1868.

Sir,

I HAVE the honour to state, in reply to your letter of 15th August, transmitting a copy of letter from the Mersey Docks Board, in reference to applications for pilot certificates, that the return enclosed in that letter containing the names of but 26 applicants in the space of nine years, appears strongly to confirm the apprehensions of masters of vessels and of their employers, that there was but little chance of such applications meeting with success.

In that period, only 15 masters of sailing vessels and three of steam vessels obtained certificates.

Being very desirous, however, of acceding to the wishes of the Board of Trade, to leave the matter in the hands of the local pilotage authority, if an arrangement could be devised which would ensure the carrying into effect the original intentions of the Board of Trade and of the Legislature, on the subject of freedom from compulsory pilotage, I have had several interviews with Captain Simpson, the last of which took place this day, when I finally submitted for consideration suggestions with reference to the mode in which the examination of masters of coasting steamers might be conducted, which, if adopted, would induce greater confidence in a fair result; and accompanied with further suggestions, as to the permanent employment of competent men belonging to the pilotage establishment in our vessels, at such rate of payment as would secure them about the same amount of income as they derive on the average of their casual earnings in the present way.

In the hope that some arrangement may be arrived at, satisfactory to the Board of Trade, to the Pilotage Establishment of Liverpool, and to the Company, I would now respectfully suggest that the subject may be allowed to lie over for the present.

I have, &c.
(signed) *Wm. Watson.*

of the Board of Trade.

(Enclosure.)

City of Dublin Steam Packet Company,
Office, 15, Eden Quay, Dublin, 22 December 1868.

Sir,

THE Board of Directors have had under consideration the correspondence which has taken place with the Board of Trade, in reference to the subject of issuing certificates to the masters or officers of the Company's vessels, authorising them to pilot in and out of Liverpool,

Liverpool, in accordance with the 355th section of "The Merchant Shipping Act, 1854;" and Mr. Watson having also stated the purport of the communication which he has had with you on the subject, I am now authorised to propose on the part of the Company, that instead of applying in future to the Board of Trade for certificates to be granted to other officers than those who now hold them, the directors will be prepared to appoint in the place of the second officer of each vessel, a properly qualified pilot, belonging to the pilotage establishment, to attend in such ships as may not have a master or officer with a Board of Trade pilotage certificate, at the weekly pay of 40*s.*, whose sole duty should be to pilot the vessel in and out of Liverpool as far as the Skerries, but to be under the control of the master as to proceeding to sea by night as well as by day.

The existing arrangement for the payment of 1*s.* per foot on the inward voyages to be continued as a contribution to the pilotage establishment. I may add, that in the event of the present proposal being adopted, appointments would be very gradual, as there is a sufficient number of officers in the service for the vessels at present owned by the Company.

I remain, &c.
(signed) *P. Howell,* Secretary.

Captain Simpson,
Superintendent of Liverpool Pilots.

Pilotage Department, South-end of Prince's Dock,
Liverpool, 30 December 1868.

Sir,

I AM directed by the Pilotage Committee to acknowledge the receipt of your letter of the 24th instant, offering terms upon which the Board of Directors of the City of Dublin Steam Packet Company will be prepared to employ permanent pilots in their steamers, and I am to inform you that your letter has been brought under the consideration of the Pilot Service, and that the result shall be communicated to you.

I am, &c.
(signed) *Robert P. J. Simpson,*
Superintendent of Pilotage.

P. Howell, Esq., Secretary,
City of London Steam Packet Company,
15, Eden Quay, Dublin.

Pilotage Collector's Office, Liverpool,
2 January 1869.

Gentlemen,

AT a meeting of master pilots held here to day, the proposal of the City of Dublin Company was discussed, when it was unanimously resolved,—

"That the offer of this Company be respectfully declined, and the master pilots beg to refer the Pilotage Committee to the 151st bye-law."

I remain, &c.
(signed) *Thomas Parry,* President.

To the Chairman and Gentlemen
of the Pilotage Committee.

AT a Public Meeting of the Pilots of Liverpool, held in the Clarendon Rooms on the 15th January 1869:

Present:—Mr. Thomas Frith in the Chair, &c. &c. &c.

Read—Letter from R. P. J. Simpson, Esq., enclosing copy of a letter received by him from the City of Dublin Steam Packet Company, with reference to the permanent employment of pilots in their steamers.

The subject having been considered, it was unanimously resolved,—

"That the pilots of Liverpool decidedly object to the permanent appointment of pilots, as proposed by the City of Dublin Steam Packet Company, at the weekly pay of 40*s.* being of opinion that, for the credit of the service, none but first-class pilots should be appointed to pilot such steamers, and that the Company should be charged the full pilotage rates allowed by Act of Parliament, and that no concessions be made detrimental to the interests of the service, seeing that by Act of Parliament full scope is given to masters and mates to obtain pilotage certificates."

(signed) *Thomas Frith,* Chairman.

Appendix (A).

City of Dublin Steam Packet Company,
Sir, 15, Eden Quay, Dublin, 23 April 1869.

The directors have been in expectation of having the decision of the Pilotage Committee in reference to the proposal contained in my letter to you of 22nd December last, as to the employment of pilots in the vessels of the Company; your letter of the 13th of that month stated that the subject was then under consideration, and that the result should be communicated.

I am, &c.
Captain Simpson, &c. &c. (signed) *P. Howell*, Secretary.
Liverpool.

Pilotage Office, Prince's Pier, Liverpool,
Sir, 29 April 1869.

I am directed by the Mersey Docks and Harbour Board to forward to you the enclosed copies of the resolutions of master pilots and pilots with refererence to the proposal of the City of Dublin Company for pilots to be appointed to their steamers, at a salary of 40 *s.* per week; and I am to inform you that the reason why these resolutions were not forwarded before was to afford time to the pilots to make such arrangements with the City of Dublin Company for piloting their ships as would be mutually agreeable, subject to approval in the proper quarters.

I am, &c.
P. Howell, Esq., Secretary, (signed) *Robert P. J. Simpson.*
City of Dublin Steam Packet Company, Dublin.

Letter from Mr. *Howell* to the Secretary, Board of Trade.

City of Dublin Steam Packet Company,
Sir, Office, 15, Eden Quay, Dublin, 30 April 1869.

I am desired to transmit, for the information of the Board of Trade, the enclosed copy of correspondence which has taken place with the Liverpool Pilotage Establishment, in reference to the attempt to arrive at an arrangement for the permanent employment of pilots in the vessels referred to in the letter addressed to you by Mr. Watson on the 24th October last, but which attempt has not been attended with success.

I am, &c.
The Secretary, (signed) *P. Howell*, Secretary.
Board of Trade.

(No. 18.)

Letter from the Secretary to the Dublin and Kingstown Steam Packet Company to the Secretary, Board of Trade.

Dublin and Kingstown Steam Packet Company (Limited),
Sir, 29, Eden Quay, Dublin, 17 July 1866.

Our company has been running hourly for some years between Dublin and Kingstown without paying pilotage, with passengers only, the vessel drawing 4½ to 5 feet water. Tugs and other steamers have also carried passengers between these places without pilotage having been asked.

Last month the Ballast Board or Corporation for improving the port of Dublin have noticed us to take pilots, or have masters or mates with pilots' certificates.

As similar steamers in the Belfast and Bangor line, Cork and Queenstown, Glasgow and Greenock, Limerick and Foynes, Darry and Lough Foyle, Liverpool and ports on Mersey, are not subject to compulsory pilotage, we are under the impression that it was never intended that pilotage should be charged on such passenger boats running hourly from 9 a.m. till 8 p.m., and sometimes making a short excursion of 20 to 30 miles along the coast.

The distance from Dublin to Kingstown is about seven miles, with 10 feet at low water to 24 feet at high water, where shallowest.

As compulsory pilotage would render our line profitless, our Directors trust that the Board of Trade will intimate to the Commissioners for Improving the Port of Dublin that such is exempt from pilotage as in other ports.

I am, &c.
Secretary, Board of Trade, (signed) *Wm. Kenaghan*, Secretary.
London.

LETTER from the Secretary to the Ballast Office, Dublin, to the Secretary, Marine Department, Board of Trade.

Sir, Ballast Office, Dublin, 7 August 1866.

HAVING submitted to the Board your letter of the 20th ultimo, forwarding copy of a letter addressed to their Lordships from the Dublin and Kingstown Steam Packet Company complaining that this corporation have recently required the Company's steamers plying between Dublin and Kingstown with passengers, to carry pilots, unless the masters or mates of the vessels hold pilotage certificates,

I am in reply directed to state that the Board were actuated in this case solely by a sense of what is due to passenger safety, having regard to the great responsibility which rests with them, being the pilotage authorities of the port of Dublin, should any accident to life occur; and that they did not adopt this course without obtaining legal advice, which has been communicated in the following words.

"In the case of steamers carrying passengers, whether with or without goods, the master not having a pilotage certificate, or a mate with such certificate from the local authority, or a certificate to either master or mate from the Board of Trade under sec. 355, is liable for each such offence to a penalty not exceeding 100 *l.* under sec. 354.

"(signed) *E. C. Chatterton.*"

The Secretary,
Marine Department, Board of Trade.

I am, &c.
(signed) *Walls*, Secretary.

LETTER from the Secretary, Marine Department, Board of Trade, to the Secretary to the Ballast Office, Dublin.

Board of Trade, Whitehall, S.W.,
Sir, 14 August 1866.

I AM directed by the Board of Trade to acknowledge your letter of the 7th instant, stating the reasons which actuated the Ballast Board in requiring the Dublin and Kingstown Steam Packet Company's steamers plying between Dublin and Kingstown with passengers, to carry pilots, unless the masters or mates of the vessels had pilotage certificates.

In reply the Board of Trade desire me to express their opinion that the corporation are in error in supposing that the corporation are responsible for the safety of the passengers. They are responsible for selecting proper pilots, but it is the owners and masters of the vessels who are responsible for the safety of the passengers.

To take this responsibility from those upon whom it naturally rests, and to transfer it to the Port of Dublin Corporation, could not fail to have bad effects.

I am, &c.
The Secretary to the Ballast Office, Dublin. (signed) *T. H. Farrer.*

LETTER from the Secretary to the Ballast Board, Dublin, to the Secretary, Marine Department, Board of Trade.

Sir, Ballast Office, Dublin, 21 August 1866.

HAVING submitted to the Board your letter of the 14th instant, on subject of their requiring the Dublin and Kingstown Steam Packet Company's Steamer to carry pilots, their Lordship's observing that this Corporation are in error in supposing that they, the Corporation, are responsible for the safety of the passengers.

I am in reply directed to acquaint you, for the information of the Board of Trade, that this Board had not the remotest intention of incurring any legal responsibility of the nature to which their Lordships allude; the responsibility the Corporation referred to, was that of which every Body, exercising authority, owe to public opinion.

They consider that under the Act they are bound to see that competent pilots are taken by all passenger vessels within their port, or that the master or mate should qualify as such.

I am, &c.
The Secretary, &c. &c. (signed) *W. Ives*, Secretary.
Marine Department, Board of Trade.

Appendix (A).

(No. 19.)

PETITION of Ship Owners and Master Mariners of the Township of *Knottingley*, in the Port of *Goole*.

The humble Petition of the undersigned Ship Owners and Master Mariners in the Township of Knottingley, in the Port of Goole,

Sheweth,

THAT your petitioners have long regarded the law of compulsory pilotage a most grievous and obnoxious tax, quite contrary to the principles of free trade, inasmuch as the shipmaster if compelled to give up charge to the pilot forced on board by law, although it remains an unsettled point as to whether or not, under some circumstances, the master should remove the pilot from charge, thus placing the shipmaster in a very unenviable position, for to remove the pilot from charge he must be supposed to know better what to do, under the circumstances, than the pilot he removes, and admitting that how anomalous the law to force a pilot on board a ship if that law supposes the shipmaster to know better how to navigate that ship than the pilot himself does.

Your petitioners beg to remind your Honourable Board of what took place with respect to the loss of the "Spindrift," wrecked near Dungeness; how the Court at Greenwich acquitted the master from any blame, owing to a compulsory pilot being in charge of the ship, and how your Honourable Board, together with the Elder Brethren of the Trinity House, dissented from that Court's decision; thus showing how difficult for a shipmaster to determine when the time arrives for him to supersede the pilot in charge. Your petitioners are confident that the most just and effectual way to remedy that evil would be to establish a voluntary system of pilotage, and beg your Honourable Board to insert a clause in your proposed Merchant Shipping Amendment Bill, to abolish unconditionally the law of compulsory pilotage throughout the United Kingdom, and let there be free trade in pilots, the same as in shipmasters. Your petitioners cannot see any reason why one class should be protected at the expense of another class. Any person qualifying himself for a shipmaster can be one, without any regard as to number, and your petitioners recommend the same law towards pilots.

Your petitioners look upon the present mode of levying the rates for pilots' fees on the draft of water very unjust in principle, inasmuch as a ship of 2,000 tons would carry nearly 10 times the number of tons per foot draft of water as another ship of 100 tons; thus showing that levying the rates on the draft of water, falls very unequally on different sized ships.

Your petitioners beg to recommend as a remedy for that evil, that all pilotage fees be levied on the gross tonnage of the ship, precisely similar to light dues, dock dues, &c.

Your humble petitioners look forward to your Honourable Board to deal with these questions in a just and comprehensive spirit.

And your Petitioners will ever pray.

(No. 22.)

MEMORIAL of Leith Chamber in favour of Abolition of Compulsory Pilotage.

Sir, Leith, 5 March 1870.

I HAVE the honour to transmit a Memorial from the Leith Chamber of Commerce to the Honourable the Board of Council for Trade, with reference to the Bill for the Abolition of Compulsory Pilotage, which I have to request you will have the goodness to submit to the Board.

I have, &c.

G. J. S. Lefevre, Esq., M.P., Secretary to the Board of Trade, London.

(signed) *Pillans Scarth*, Secretary.

To the Honourable the Board of Council for Trade.

The humble Memorial of the Leith Chamber of Commerce, incorporated by Royal Charter,

Sheweth,

THAT this Chamber cordially approve of the principle of the Bill introduced into Parliament to abolish Compulsory Pilotage, and the more so as they consider that shipowners ought to be responsible for the acts of a pilot when he is put in charge of a ship by themselves voluntarily.

That while thus approving of the main provisions of the Bill, this Chamber consider it to be quite unjust that when responsibility is imposed on shipowners they should not be allowed to employ the pilot, if they desire to employ one, who they may deem best qualified for the safe and efficient conducting of their ship; and are of opinion that a pilot, when so appointed, ought not to be displaced by any other party whatever.

That an obvious anomaly in the position and responsibility of shipowners will exist if Section 3, which confers on licensed pilots power to supersede men who may not be licensed, though perfectly qualified, and chosen by the owners, on whom the responsibility lies, remain in the Bill; and this Chamber, therefore, respectfully submit that said Clause do not stand part of it.

Signed at Leith, in name and by authority of the Chamber, this 4th day of March 1870.

John F. Cathcart, Chairman.

(No. 23.)

LETTER from Mr. *R. Johns* to Board of Trade.

Sir, Western Point, 29 March 1870.

I PRAY you will pardon me for intruding on your time on this occasion. I see by the papers a Select Committee is appointed to inquire into the system of Compulsory Pilotage. I am highly gratified to hear such, especially with regard to the pilotage system of Liverpool. I am one of the many coasting masters who may hope to have our wrongs redressed. The wrong I now complain of is as follows: I came from London to this port with a cargo of cement; I arrived on the 15th instant, freight at the rate of 7 *s.* per ton; when off point Synas, I was hailed by the pilots on that station, "Where are you from?" I said "London;" the pilots sailed away from me, not asking any more questions. The pilot's boat next on turn hailed us; I told him I was from London; the captain of pilot boat asked me, "Where did you come from; when to London?" I told him "Tarragona, Spain." The captain then said, "Back your yard, and hoist a jack for a pilot from the boat who spoke you first." I did not do so for some time. I told him I did not want a pilot till I got to the north-west light ship; he told me if I did not take one he would make me pay double pilotage. I said I was not aware of being compelled to take a pilot off Point Synas; he said I was. I then took the pilot, who charged me 9 *s.* per foot, 11½ feet, for which I paid 5 *l.* 3 *s.* 7 *d.*; so what with dock dues and pilotage, &c., I have not 1 *s.* to send my owner. Myself and many masters think it a great injustice. I have not only now to complain of it; I have been to Runcorn at different times with flints; from Rye, also from Dieppe, France; of flints we have to carry twenty-two hundred and a-half to the ton, freight 7 *s.* per ton; sometimes 6 *s.*, at other times 5 *s.* 3 *d.* My vessel carries 220 tons; the long tonnage of flints 190 tons; we make 66 *l.* freight at times; 55 *l.* to 50 *l.* according as the freights are. When I get to the pilot water of Liverpool I have a pilot forced on me, when I am coasting, at the enormous rate of 9 *s.* per foot foreign pilotage; if caught in and out with pilot, my pilotage is 7 *l.* to 8 *l.*; we would only be too pleased to send the amount to our owners instead of sending nothing. What with steam by land and

Appendix (A).

water, also the pilotage, us coasters have a difficulty to meet our expenses; it appears to me, we battle with the elements, and others reap the benefit. A ship of a thousand tons only pays a few more shillings than I do; at the same time her cargo worth thousands of pounds, her freight several hundred pounds, and yet pay but a trifle more than us; of course large shipowners look to their own interest, and do not care who sink so long as they swim. Another wrong is done us from the river Elb to Brest is termed coasting by the Board of Trade, and yet we are subject to foreign pilotage and dues, which come heavy upon us, especially at this port, as we are subject to foreign pilotage for six months after coming from one of the continental ports; the freight from such to United Kingdom merely saves us ballast, and yet we have to pay foreign pilotage and dues; it is a great burden to all masters who frequent such ports. I know many would rejoice to have an opportunity to sign against it, but the difficulty is we are so often going from port to port, that we have no time to appear to protest against if required. If a petition were got up, I feel confident every master who comes to Runcorn and Western Point would sign it. Be it far from me to do any hurt to the pilots, but if we are to have compulsory pilotage, let it be equalised, and vessels pay according to register tonnage, and coasters be exempt at this port as well as other ports in the Kingdom, which would seem more just. I do not see why Liverpool should be permitted to have compulsory pilotage more than any other port in the Kingdom; if the pilotage was more reasonable at this port, I feel certain many who now try to escape them, would encourage them; I would for one.

I am, &c.

Schooner Forester, of Rye, Sussex.
Residence, St. Saviour's Terrace, Pobman, near Fowey, Cornwall.

T. H. Farrer, Esq.,
Secretary, Board of Trade.

(No. 24.)

LETTER from Mr. *Thomas Part* to Board of Trade.

Sir, Wigan, 31 March 1870.

THE parties interested in the trade and docks of the Upper Mersey, are anxious to aid, so far as they can, in securing the passing of the pending Pilotage Bill, and I am instructed to ask you, if before the Select Committee close their labour they will be allowed to tender evidence in support of the Government measure.

If you can do so without inconvenience, I should be much obliged by your telling me for the information of the parties I have referred to, whether the evidence will be allowed, and when it will be most convenient to the Committee to receive it.

I have, &c.
(signed) *Thomas Part.*

T. H. Farrer, Esq.,
Board of Trade.

Appendix (B).

PAPER delivered in by the Chairman.

PORT OF LIVERPOOL.

TOTAL TONNAGE of SAILING and STEAM VESSELS Entered and Cleared with Cargoes, and in Ballast, at the Port of *Liverpool*, in each of the Years 1850, 1855, 1860, 1865, and 1868.

	Sailing Vessels.			Steam Vessels.

Appendix (C).

PAPERS handed in by Captain Sir *F. Arrow*, 8 April 1870.

Appendix (C).

RETURN of the Number of PILOTS, Average Earnings, &c., Licensed for the LONDON DISTRICT, as defined by the Merchant Shipping Act, 1854.

Number of Pilots.	Average Earnings.		Mileage.
	£.		
50	445	From London to Sea, North and South Channels -	About 120 miles.
50	310	From Gravesend to Sea, North and South Channels	„ 95 „
70	320	Between London and Gravesend (River) up and down.	„ 26 „
22	242	Between London and Gravesend (River) up and down; Home trade, Steam Passenger ships only.	„ 26 „
128	310	South Channel; from Dungeness to Gravesend -	„ 93 „
60	274	North Channel; from Orfordness to Gravesend -	„ 76 „

Note.—The pilots licensed for the South Channels have the option of bringing vessels *up* and *down*, but seldom avail themselves of the privilege of piloting both ways.

In computing the above earnings for income tax assessment, allowances for travelling charges, &c. are made as follows:—London Channel, 20%; River pilots, 12½; Cinque Ports, Old, 15%; New, 20%; Thanet, 30%; East Coast, 50%; Watermen, 10%. These may, therefore, be regarded as "trade expenses."

RETURN of Pilotage Districts (Trinity House); Number of Pilots, Average Earnings, and Extent.

Districts.	Number of Pilots.	Average Earnings.	Limits of District.	Mileage.

Yarmouth	24	27	From sea, through Gatways, to harbour	17

General deduction for income tax at the above ports, 50 per cent.

Appendix (D).

PAPER handed in by Mr. *R. P. J. Simpson*, R.N., 6 May 1870.

RETURN of all COMPLAINTS against PILOTS by the OWNERS of STEAM and SAILING VESSELS for NEGLIGENCE, &c. during the Years 1868 and 1869.

Date of Minute.	Complainant.	No. of Boat.	Name of Vessel.		Nature of Complaint.	Result to Pilot.
			Steam.	Sailing.		
3 Feb. - 1868	W. and J. Tyrer - - -	6	- - -	"Mersey" - - -	The loss of that vessel on the West Hoyle Bank.	Suspended. On the 10th February the Pilot was superannuated.
9 Mar. „	John Barbour & Co. - -	6	- - -	"R. Wark" - -	Leaving the vessel at anchor in the river, and returning next day in a state of intoxication.	Charge withdrawn, but Pilot fined 1*l.* 1*s.* for leaving the vessel without the written permission of the captain.
6 April „	Captain McPhail - - -	2	- - -	"Thistle" - - -	Going on board in a state of drunkenness, and neglecting duty while vessel proceeding to sea.	Suspended; and on the 27th of April license restored, the charge not being proved.
27 July - „	Captain Rosenan - - -	1	- - -	"Antoinettee" - -	Taking the vessel into King's Basin without instructions, the vessel having to proceed to Garston.	Committee satisfied with the Pilot's statement, and that he was free from all blame.
24 Aug - „	James Baines & Co. - -	10	- - -	"Castlemaine" - -	Grounding of the ship in the river -	Reduced to 500 tons' license.
14 Sept. - „	Bibby, Sons, & Co. - -	12	"Albanian" -	- - - -	Neglecting to attend to take vessel to sea.	Fined 5*l.*, and reprimanded; and ordered to make good the loss to the boat, No. 12.
Oct. - „	Guion & Co. - - -	5	"Manhattan" -	- - - -	Stranding of the vessel near "Crosby" Light Vessel.	No longer permitted to act as permanent Pilot of Messrs. Guion & Co.'s steamers.
9 Nov. - „	Underwriters' Association -	2	- - -	"Grand Bonny" - -	Stranding of vessel on Waterloo Beach -	Suspended; and on the 18th November dismissed the service.
30 „ - „	Williamson, Milligan, & Co. -	4	- - -	"Knight of Snowdon"	Refusing to take the vessel into Queen's Dock through the Coburg Entrance.	Reprimanded for want of energy on this occasion, and for neglecting the opportunity for surveying the state of Plockington Bank at low water.
14 Dec. - „	Bibby, Sons, & Co. - -	9	- - -	- - - -	Neglecting to account for 21 dollars received from their agents at Gibraltar for expenses, after having been carried away.	Ordered to return to Messrs. Bibby & Co. 15 dollars (that being the difference between the money received and his actual expenses at Gibraltar), and fined 1*l.* 1*s.* for neglecting to account.

3 May - 1869	Miners & Co. - - -	12	- - -	"Queen of the South" -	Grounding of the vessel on Queen's Channel Bar.	Severely reprimanded for want of caution.
31 „ - „	Captain Hill - - - -	10	- - -	"Ossena" - - -	Negligently bringing the vessel into collision with another vessel at anchor.	Reprimanded, and cautioned to be more careful in future.
5 July - „	John Bibby, Sons, & Co. -	8	"Illyrian" - -	- - -	Causing damage to the vessel's propeller by moving the engines at an improper time, whereby the propeller fouled a buoy and chain off the Canada Dock entrance.	Complaint dismissed, it being admitted that the Pilot had acted under Dock Master's orders.
5 „ - „	John Bibby, Sons, & Co. -	2	"Persian" - -	- - -	Neglecting to attend and take the vessel out of dock.	Fined 2*l.* 2*s.*
5 „ - „	James Moss & Co. - -	2	"Isis" - -	- - -	Intoxicated while on board, and incapable of taking charge; another Pilot employed to take the vessel into the river.	Suspended; and on the 16th August reduced to a 500 tons' license, and further cautioned as to the consequence of a repetition of such conduct, as it was only at the urgent request of the owner that he was not dismissed the service.
26 „ - „	Lamport and Holt - - -	3	"Flamsteed" -	- - -	Allowing the vessel to run against the pier head at Huskisson Dock.	Cautioned to be more careful in future.
6 Sept. - „	W. J. Myers, Sons, & Co. -	6	"Ambrose" - -	- - -	Running foul of the barque "Globe" -	Reprimanded.
18 Oct. - „	Board of Trade - - -	8	- - -	"Empress" - -	Loss of the vessel on Taylor's Bank -	Reduced to 1,000 tons' license for six months.
15 Nov. - „	Owners of ship "City of Lahore."	10	- - -	"City of Lahore" -	Stranding of vessel on Crosby Beach -	Reduced to 500 tons' license.
22 „ - „	John Collar, on behalf of Owners and others.	1	- - -	"Ganymede" - -	Loss of the vessel on Crosby Beach -	Suspended; and on the 29th November superannuated.
29 „ - „	Captain Barnaby - -	12	- - -	"Ada Florence" - -	Grounding of the vessel on Askew's Spit.	Fined 5*l.*, and severely reprimanded for neglecting to use the lead.
1 Dec. - „	G. J. Cornish & Co. - -	4	- - -	"Talba" - - -	For being in a state of intoxication, and leaving the ship.	Suspended for one month; and on the 28th December license directed to be handed to him on the 1st January 1870.

The particulars on this and the preceding sheet, No. 1, have been extracted from the Pilotage Committee Book by me,

E. J. Hale.

Pilots' Widows 47 „	750
Pilots' Orphans 46 „	259
TOTAL £.	2,074

THE Average Pensions are as follows (1 January 1870), viz.:—

	£.	s	d.
Pilots Superannuated	27	6	–
Widows	15	19	–
Orphans	5	12	–

The highest pension paid to a superannuated pilot is 48 *l.*, but it might be more, the rule being to allow 1 *l.* of annuity for every full year of active service with a first-class license.

Highest pension paid to a widow, 26 *l.*, but might be more.

The average of all pensions gives 15 *l.* 14 *s.* 3 *d.* for each individual on the fund.

„ 850 „ 900 - - -	5 5 –	3 7 –	8 12 –
„ 900 „ 950 - - -	5 10 –	3 12 –	9 2 –
„ 950 „ 1,000 - - -	5 15 –	3 17 –	9 12 –

Together with an additional sum of 5*s.* in respect of every 50 tons above 950 tons on the inward pilotage; and an additional sum of 5*s.* in respect of every 50 tons above 950 tons on the outward pilotage.

Pilots will take vessels over 500 tons register, outward bound, clear of the Green Grounds, or to the Mumbles Roads, and the above charge includes landing the pilot in all cases.

Vessels of 200 tons and upwards, if boarded beyond the following bearings, shall pay additional pilotage as under:—

	West of Pwlldy Point, bearing N.N.E.	West of Oxwich Point, bearing N.N.E., South of Sker Buoy, bearing E.N.E. or W.S.W.	West of Worm's Head, bearing N.N.E.
	s. *d.*	*s.* *d.*	£. *s.* *d.*
200 tons and under 300 tons -	4 –	5 –	– 6 –
300 „ 400 „ -	5 6	7 6	– 10 –
400 „ 500 „ -	7 6	10 –	– 15 –
500 „ 600 „ -	10 –	12 6	1 – –
600 „ 700 „ -	12 6	15 –	1 5 –
700 tons and upwards - -	15 –	18 6	1 10 –

One-half of the above rates only to be paid and payable to every pilot navigating or assisting any

any vessel (not entering Swansea Harbour) within any part of Swansea Bay, or within the limits of the pilotage ground hereinafter mentioned.

N.B.—Pilotage not compulsory upon vessels under 100 tons register, when entering or leaving Swansea Harbour in ballast; but if any pilotage be required, only a licensed pilot to be employed, and the above rates to be paid.

2.—Optional Pilotage.—Masters of vessels, under 500 tons register, requiring pilots to take their vessels to the Mumbles Roads, or clear of the Green Grounds, to pay, in addition to the outward pilotage rates, the following additional rates, including landing :—

	s.	*d.*		*s.*	*d*
Vessels under 100 tons - -	4	–	Vessels 300 tons and under 400 -	9	6
„ 100 tons and under 200 -	5	6	„ 400 „ 500 -	11	–
„ 200 „ 300 -	7	6			

Masters of vessels requiring pilots to take their vessels to the eastern or western limits, to pay, in addition to the outward rates, the following additional rates, including landing :—

	£.	*s.*	*d.*		£.	*s.*	*d.*
Vessels 300 tons and under 500 -	3	–	–	Vessels 700 tons and under 900	5	–	–
„ 500 „ 700 -	4	–	–	„ 900 tons and upwards -	6	–	–

The following shall be deemed to be the limits of the pilotage ground of pilots appointed and licensed by the Swansea Harbour Trustees, viz. :—" North of the line of the Nash Lights in one,"—and " east of an imaginary line running north and south of a point, four miles westward of the Helwick Light Vessel, placed off the Helwick Shoal, near the Worm's Head, in the county of Glamorgan."

3.—Every pilot required to remain on board a vessel at anchor, whether inward or outward bound, to be paid by the master of such vessel, at the rate of 4*s.* for every 12 hours, or broken portion of 12 hours, that he so remains on board.

4.—The harbour master may nominate such superannuated pilots as he shall think proper to be harbour pilots, who shall only act as pilots in transporting or removing vessels within the harbour.

5.—Masters of vessels requiring to move vessels within the harbour, shall employ a pilot for that purpose, and shall pay such pilot at the following rate :—

	s.	*d.*		*s.*	*d.*
Vessels under 100 tons - -	2	6	Vessels 400 tons and under 500 -	7	6
„ 100 tons and under 200 -	3	6	„ 500 „ 600 -	10	–
„ 200 „ 400 -	5	–	„ 600 tons and upwards -	12	–

N.B.—This rule not to apply to vessels moving within either dock.

6.—If the master of any vessel shall require any pilot to go on board and take his vessel out of the harbour, transport or remove her, and such vessel be not ready to be taken out or moved, half the rates last mentioned shall be paid to the pilot.

7.—Masters of vessels requiring hobblers or boats to assist in removing vessels within the harbour, shall pay each hobbler employed 2*s.*, and for each boat 2*s.*

N.B.—Pilots boarding vessels of heavy draught of water, *are required to communicate with the Harbour Master* on the height of the tides, and receive his directions *previous to bringing the vessels into port.*

No pilot to board vessels from any other vessel or boat than a licensed pilot boat.

Appendix (I).

Appendix (I).

Mr. Hardy's Statement.

(Copied from Mr. Hardy's Letter to the Trinity House, 7th March 1854.)

	£. s. d.
The property of the Cinque Ports Pilots' Fund at the time of valuation by Mr. Peter Hardy, Actuary in 1853, was understood to consist of—	
Several sums of stock, being the accumulation of the surplus monies from foreign pilotage, amounting to - - - - - - - - - -	10,345 – –
Another sum of stock, being the accumulation of certain contributions from the pilots' known Trinity money, amounting to - - - -	6,260 – –
Of a freehold property described in the 10th Clause of the Act, and valued at - - - - - - - - - - - - - - -	780 – –
Amounting together to about - - - £.	17,385 – –
The liabilities under the Pilot Fund were ascertained, by careful valuation of each individual case, to be, present value in money of present pensions to 13 superannuated pilots actually on the funds - - - - - - - - -	4,878 – –
Present value in money of pensions of 50 *l.* per annum each, to 13 pilots now in active service, but who are above the age of 65 - - - - - - - -	5,047 – –
Present value in money of pensions of 12 *l.* 12 *s.* each, to 63 widows now on the fund - - - - - - - - - - - - - - - -	8,041 – –
Present value in money of pensions of 12 *l.* 12 *s.* each, to all the wives of all the existing pilots, active and superannuated, at the decease of their husbands	6,928 – –
Present value in money of pensions of 50 *l.* per annum each, to 117 pilots now in active service, after they shall have attained the age of 65, or previously, at the option of the Trinity House, should they be incapable of performing their duties - - - - - - - - - - - - - - - -	18,958 – –
Present value in money of 143 *l.*, to be paid on the death of each pilot, active and superannuated, to his widow, children, or nominee - - - - - -	11,217 – –
Making a total liability, amounting to - - - £.	55,069 – –
Against which is to be estimated—	
The present value in money of 6 *l.* per annum, a contribution from each pilot, active and superannuated, throughout life - - - - - -	12,532 – –
The present value in money of contribution of 13 *l.* 4 *s.* per annum from each of the 117 pilots remaining in active service, until they shall attain the age of 65, or until superannuated, being at the rate of 11 *s.* per turn per man during service, or in other words, 24 turns per annum - - - -	21,182 – –
Making the value of the future contributions to amount to - - -	33,714 – –
To which must be added the amount of property as previously ascertained -	17,385 – –
£.	51,099 – –
You will observe that the total liability as above - - - - - - -	55,069 – –
And the money value of the property and future contributions being only -	51,099 – –
There is a deficiency of - - - - - - - -	3,970 – –
To which deficiency must be added:	
1st. The present money value of the allowance of 1 *l.* per man per annum during the whole continuance of life, as a compensation to the Trinity House for the expense of conducting the business of the benevolent fund - - - - - - - - - - - - - - -	2,089 – –
Sundry compensation for loss of office, valued, according to the period of service, at about 1,500 *l.*; expenses incurred in effecting the transfer of the Pilots' Fund to the Trinity House, 500 *l.* - - - - - -	2,000 – –
Leaving a total deficiency to be made good to the Trinity House out of the Mercantile Marine Fund, amounting to - - - - - - £.	8,059 – –

It

Appendix (I).

It will be, Sir, in your recollection that the present President of the Board of Trade intimated his willingness to make good the foregoing deficiency out of the funds set apart for that purpose belonging to the mercantile marine, provided that, as a justification for this act of liberality to the Cinque Ports pilots, the pilots themselves would make a sacrifice on their part by the surrender to the Trinity House of the cutters and pilot boats at present their private proverty, which cutters were valued at about 3,000 *l.* Having received your instructions to proceed to Dover to meet a deputation of the pilots, and to acquaint them with the decision at which the President of the Board of Trade had arrived, and the conditions on which he would consent to make good the deficiencies which the valuation of the liabilities had exhibited in their funds, I visited Dover on Saturday, the 11th of February last, and had a conference with the two clerks, Messrs. Thornton and Wood, and with some other members of the late fellowship, in the presence of Captain Noble. The men expressed themselves perfectly satisfied with the arrangement which you authorised me to propose, a copy of which I had the honour to previously transmit to you; they also expressed themselves willing to surrender the cutters, provided the Trinity House would sanction, in lieu thereof, the half-cutters' money, as in case of the Trinity House pilots.

This concession I learn, by a letter from Mr. Herbert, of the 27th ult., has been granted by the Honourable Court of the Elder Brethren, and that there remains nothing further in this matter for me to do.

I am, &c.
(signed) *Peter Hardy.*

	£.	s.	d.
Total liabilities of the Cinque Port Pilots, as stated by Mr. Peter Hardy, actuary, in March 1854, to the Trinity House	55,069	–	–
Assets.—The present value in money of 6 *l.* per annum, a contribution from each pilot, active and superannuated, throughout life	12,532	–	–
The present value in money of a contribution of 13 *l.* 4 *s.* per annum, from each of the 117 pilots remaining in active service until they shall attain the age of 65, or until superannuated, being at the rate of 11 *s.* per turn per man during service, or, in other words, 24 turns per annum	21,182	–	–
Making the value of the future contributions to amount to	33,714	–	–
To which must be added the amount of property as previously ascertained, to	17,385	–	–
£.	51,099	–	–
Dues paid since January 1854 to 31st December 1868, at 11 *s.* per turn, amount to	21,481	7	–
Ditto for the year ending 31st December 1869			
By contributions of 6 *l.* per annum per man, from 1 January 1854 to 31 December 1868, for 143 *l.* to be paid to his relatives at death	10,235	10	–
Ditto for the year ending 31 December 1869

PORT OF LIVERPOOL.

RETURNS FOR 1865 AND 1869.

	1865.	1869.
1. Gross earnings of pilots	£. 63,413 3 6	£. 67,550 16 1
2. Amount paid to pilots	45,534 – –	48,238 – –
Ditto - to apprentices	1,824 15 10	1,643 4 1
3. Number of each class amongst whom distributed:		
Pilots - 1st class (full license)	210	210
2nd class (1,000 tons, full license)	– – –	12
3rd class (500 tons „)	13	16
4th class (250 tons „)	4	3
Apprentices—3rd class (500 tons „)	21	25
4th class (250 tons „)	27	18
Unlicensed	44	34
4. Highest sum, lowest sum, and average paid to—		
1st class Pilots—Highest	£. 229 19 6	£. 230 11 8
Lowest	193 10 6	206 2 –
Average	210 13 6	218 7 6
Apprentices - Highest	12 *s.* per week	10 *s.* per week.
Lowest	6 *s.* „	6 *s.* „
Average	8 *s.* 2 *d.* „	7 *s.* 9 *d.* „
5. Sums paid by way of pensions or other charities, giving the number and amount of pensions, and stating whether the pensions are paid to any and which of the owners of shares in boats	For answer, *see* the accompanying Lists of Annuitants.	

6. Sums applied in maintaining boats, distinguishing between building, repairing, and other expenses of maintenance.

Answer.—No boats have been built in this period. The working expenses, *i. e.*, repairs and maintenance, were:

In 1865 - £. 2,081
In 1869 - £. 1,855

7. Sums paid to owners of boats in each year.

Answer.—1865 - £. 16,465, less working expenses, £. 5,431
= £. 11,034 net amount.

1869 - £. 16,424, less working expenses, £. 4,977
= £. 11,447 net amount.

8. Prices of shares in boats for last five years.

Answer.—Average price, £. 118. 2 *s.* 2 *d.* per share.

9. Present value of shares.

Answer.—No demand during the present inquiry.

10. Sums actually paid by present holders of shares for their shares.

The reply to this question involves personal application to every boat owner, as they own shares in different boats, bought at different periods, and at various prices. The average given above (£. 118) will, however, probably be under rather than over the price paid per share by present owners.

11. List of persons by whom shares are held, distinguishing between acting pilots, superannuated pilots, and other persons.

Answer.—The shares are held by acting and superannuated pilots only, in the following proportions, viz., 74 acting pilots hold 530 shares; 20 superannuated pilots hold 238 shares. (For "List," *see* accompanying Returns.)

12. List of boats, with their sizes, ages, and present actual value.

Answer.—*See* accompanying "Return of Number, &c. of Liverpool Pilot Boats."

Robert P. J. Simpson,
Superintendent of Pilotage.

2 May 1870.

1868	262	9,289	2,208	1,288,545	64	1,890	350	205,171
1869	248	8,828	2,114	1,238,245	62	1,752	357	236,148

During the last few years the registers have been cleared of a number of vessels which had been lost or broken up in previous years. Most of these were sailing vessels. This will account for the apparent decrease in the number of sailing vessels during the last few years.

Appendix (K).

PAPERS handed in by Mr. *Graves*, M.P.

Letter from Mr. *MacIver* to Mr. *Graves*, M.P.

My dear Sir, Liverpool, 13 June, 1870.

I have to own receipt of your letter of the 10th instant, saying, "that but for my absence abroad, I would have been asked to give evidence before the Select Committee now sitting on the Bill for the Abolition of Compulsory Pilotage at Liverpool, but that you are still anxious of ascertaining my views on the change proposed by the Bill." I never saw the Bill until within the last three days, nor did I know what its provisions were.

I see it proposes to leave the entire control of the pilots in the hands of the local authorities, as at present, and leaving it optional with the shipowners to take a pilot or not. My own opinion is, that the local authorities—meaning chiefly the Mersey Docks and Harbour Board—ought to have the entire control of the pilots; and so long as that Board continues to represent and control the River Mersey, and all its approaches, I think its control ought not to end where it is, but ought to extend to the Liverpool steam-tug system also. The very worst I could say of the Liverpool pilot system would redound to its credit; but what the proposed voluntary system might prove, I could not take upon myself to say exactly. Having experience of the one, I can speak positively in favour of its having tended to the security of life and property, and its suitability to such a port as the Mersey; but I would not favour the other clause of making it optional with the shipowner to take a pilot or not, because I believe it would have just the contrary effect, and tend to the insecurity of life and property. No doubt about it at all in my mind.

As for the pilotage authority, as at present constituted, I do not know any other form of authority likely to ensure a more impartial tribunal in the interests of the shipowners, the pilot, and the port.

I did not arrive from abroad until after the evidence of Captain Judkins had been given. I mean, that he could not by possibility know my opinions as to the points on which he has given evidence, but, having read his evidence, must say it is singularly expressive of what I would have said myself on most points, so that you might almost take his evidence as my own. He does not overrate the difficulties of the approaches to the River Mersey, as applicable to the "Scotia" class, nor the River Mersey itself, but, singularly enough, some witnesses lay so much stress upon inward-bound vessels, as leads me to believe that their practical experience of Liverpool Mersey risks cannot be great. I know too much of Liverpool winter weather, and what it is off the Liverpool Banks, to underrate the risks and dangers there; but the part that has concerned me personally has been the outward-bound vessels, and there is no individual in Liverpool, unless an actual pilot, can have had longer experience in regulating the sailing of outward-bound vessels than I have had myself, and if I were to say one word depreciatory of the pilots as a whole, the present pilotage system, or the suitability of the present boats for the service, I think it would be unjust and untruthful, and I have never in my life, up to the present hour, expressed other opinions. True I have said, and do so now, some of the individual pilots have been very stupid, and done some stupid things; but I have never considered them infallible, or that the same accidents or incidents that have happened to our ships in their hands would not have happened if they had not been there, or our captains solely in charge. The foregoing will show you I cannot in any sense of fairness or justness indorse the support of the proposed Bill by the Association of Steamship Owners of Liverpool as represented by individuals; neither would I like to be considered as assenting to the opinions expressed in evidence by Members on behalf of the Liverpool Steamship Owners Association. I have never managed my own business on principles such as have been enunciated as governing them in the conduct of their steam vessels, nor would I at all consider it as contributing to the proper conduct of the Cunard Company to lead anyone to suppose these were the principles that did govern me, or would govern me, in the management of the steamships entrusted to my charge. The right of choice of particular pilots, on which so much stress has been laid by some witnesses is, to my mind, "a delusion and a snare." At all events, all parties may understand the choice of a particular man, as a pilot, forms no part of the ground or reason for the Cunard Mail Steamers taking licensed pilots from Liverpool or Cork off their licensed ground. The true reason for employment of special pilots in this way on board the Cunard Mail Packets was given to you by Captain Judkins, and there really never was any other reason. As for exercising

exercising the right of individual choice or preference for any one man, it was just the reverse with me; for if I had detected influence of any kind exercised by the captains in favour of any particular pilot, I should certainly have passed it by, fearful that I was contributing to an exercise of favouritism rather than acquiring ability and character, and would have fallen back on the pilotage authorities to furnish a licensed pilot, in their estimation the right and fit man for putting in charge of such ships as the Cunard Company's Mail Steamers are.

All the conditions that I had in view, viz., safety to life and property, and saving of time in taking a pilot on board at Queenstown, in place of having to look for one about Point Lynas, were all fulfilled, not by having the man of our own choice, but having a properly qualified licensed pilot on board in whom the pilotage authorities had confidence for the conduct of that special class of ships.

Something is attempted to be made in evidence of a Cunard Steamer at some time or other having been ashore on the Liverpool Banks. Now, that steamer, I take leave to say was one of our Mediterranean steamers, not coming inwards, but outward bound, or it may have been another of our vessels going to Havre; but in neither of the cases was blame attachable to the pilot, nor have I any reason to believe these accidents would not have happened if a pilot had not been on board. I believe just the reverse of that; for whatever the accidents may have been with us with pilots on board, my conviction is that accidents would have been much more serious and much more frequent if we had been sailing without pilots or with pilots on the voluntary system. The first of these cases of our ships being ashore, happening when I was at home, I went down to the Banks myself and individually had a hand in helping her off; and it was on the spot that I inquired into all the circumstances of her getting on, and acquitted the pilot then, and it would be most unjust to say anything different now. The ship in question had one of our most experienced captains on board, accustomed to the River Mersey and its approaches, as far as anyone making foreign voyages of two months' duration can be expected; and before communicating with the pilot at all, I ascertained that he himself had mistaken the light, owing to the fog or particular condition of the atmosphere so frequently occurring in the neighbourhood of Liverpool; for most of our serious accidents have happened very close to the Rock Lighthouse, at the very entrance to the Mersey, and it was my own practical experience of this very thing that enabled me to appreciate what no theoretical knowledge could overtake.

The captains of the Cunard vessels generally are not second to any other captains sailing out of the port of Liverpool. I am entitled to say that much for them, as it will be news to me to hear of other captains who have done their work better, whilst I know so many have not done their work quite so well. Yet in saying this I must not be understood as leading you to believe that I am one of those who, after so very long practical experience would willingly ask these captains, in the weather that so often prevails in Liverpool, to take a large vessel and necessarily heavily draughted vessel—and frequently just as the evening is setting in and bad weather too—to sea without a pilot. It would be a much graver responsibility than I would feel justified in assuming; I mean being accessory to sending a ship to sea without a properly licensed pilot. I would never dream of doing such a thing; and whether the future system were compulsory or voluntary, my practice would be the same, considering that I never was free from responsibility in such a matter, unless I could show that all reasonable means had been taken to contribute to safety. Hence, you understand, it would be a licensed pilot of Liverpool, and not a man of my own choice, that I should look to have, leaving the responsibility of finding such a pilot, as it is now, on the pilotage authorities, and suppose there would be some such board, even if the present compulsory system were altered to a voluntary one.

You see I can speak with great freedom to you, although I do not know that you quite understand what the Cunard Company really means, and it would be very odd if you did, for I do not know it exactly myself. But, so far as I am concerned, it is only a popular name given to, at least some of the ships which are under the direction of the MacIvers at Liverpool; but our Liverpool and Glasgow steam coasting trade existed long before the present partners in these steamers had the pleasure of knowing the late Sir Samuel Cunard. About 40 years ago the Clarence Dock was opened, our Glasgow steamers occupied the south side of it, then the most efficient class of steamers known at the time, and so are they now, and occupying precisely the same berths in that dock. These vessels for 40 years, and before that, have been all advertised in the public prints as sailing from Liverpool, with or without pilots. It might be a long story to go into all the outs and ins of this, but you will see at a glance, when I point out that these Glasgow steamers' hours of sailing from Liverpool, then as now, were fixed on with reference to arriving at Greenock at a particular time of tide, enabling them to run up direct to Glasgow, and for some other reasons not necessary to mention here. And as these sailing hours varied, running frequently in the night, however willing we might be to take the licensed pilots of Liverpool, the sailings being so frequently in the evening, and the traffic so small through the particular channel these vessels went, there was no inducement for a pilot boat to be in the way to take off the pilots, even if it had been convenient and safe to do so, and the same applying to the inward passages led to the absolute necessity of qualifying pilots for ourselves for these particular steamers; and with steamers like these going and coming two or three times in the week, this is not only practicable, but on the whole, more advantageous and equally protective to life and property, as any other course could be, as, under Providence, these ships hitherto have gone and come from the Mersey with comparative freedom from accidents; but when I am asked to apply the same

Appendix (K).

principle to our deep-sea foreign-going steamers, I am not willing to do so, because the essential condition for a favourable result is wanting, viz., practice obtained by leaving and entering the port of Liverpool two or three times a week.

I am not one of those who believe that a theoretical examination on the Mersey and its approaches is sufficient to qualify for the safe conduct of large vessels making for Liverpool, or going out of Liverpool, nor would I, looking to the security of life and property, be content with any such qualification, so that unless I had reason to know that the individual was a real seaman, and had had a continuous service of going into and out of the port of Liverpool, at least once a week, and had done so for years previously, I would not consider him a qualified pilot to guide a captain of ours in the conduct of a large ship; whether it be sailing or steam, it would make no difference. But in a steam vessel there is a difference, and how a pilot could properly navigate a steamer without knowing the effect of the propelling power, under given circumstances, is quite beyond my comprehension, practically speaking, and I would not exercise the choice in favour of individual pilots, even if put in my power to-morrow, neither would I advise anyone else to do it, on the score of ordinary prudence alone.

I enclose you a circular issued to our captains against trusting their ships to pilots when off the ground for which they hold special license, and you will see I express no opinion upon the responsibilities of a captain whilst on pilot ground with the pilot on board. This circular is nothing new, but has been re-issued lately since I came home, owing to the evidence that I have seen given by other parties than Captain Judkins on the proposed new Pilotage Bill.

There is just one other thing that I, perhaps, ought to mention to you; that without going so far as to say that I may possibly be as largely interested in steam navigation as any other individual in the United Kingdom, still, I neither own, nor am interested, as owner, or manager, in any steam vessel belonging to a joint stock company, all the steamers that I have to do with from Liverpool being property of private co-partnery. But that you may have some idea of the work done by the familiarly-called "Cunard Company," and its relative extent as compared with the whole tonnage arriving and sailing from the port of Liverpool, taking the combined tonnage of sailing and steam, I enclose you a list, giving the number of actual sailings and arrivals last year, the men discharged and engaged, the tonnage and dock dues, and also pilotage paid; and if there be any other information or point on which you would like information, you have just to ask for it.

I would rather not go to London, because, as you may imagine, my hands are pretty full at present with my own work, and I never pretended at any time to neglect that for public business; but, at the same time, if it be thought as a matter of justice that I ought to appear, I can be summoned, and I will go irrespective of personal inconvenience. Only do without me if possible.

The present pilotage system has not cost the Cunard Company much trouble, when I tell you that I do not even know where the present pilot committee sit; in other words, I have not been before them for 25 years, and you know enough of me to guess if there had been a serious case affecting me I would not have been absent. The only suggestion I would make might be, that any pilot proved a second time drunk should have his license taken from him, and be discharged without recourse; and that the meetings of the pilotage committee might be open to the public in all cases of serious inquiry, as secrecy or supposed secrecy gives cause for imaginary grievance. Thus, you see, it would be nonsense to say that nothing about the present system could be improved, although I think it would be the greatest mistake possible to depart from the principle of recognised stations, and adopt the perambulatory principle of pilots going in search of vessels. That is not applicable to this channel, and never would work in practice as satisfactorily as the present system has done, and I should doubt the practical judgment of anyone, be he pilot or captain, who, with sufficient experience of this channel and approaches to Liverpool, would recommend such change. If I were asked whether the present pilot boats could be greatly improved, either in safety or adaptability for such services as they have to render off the Liverpool Banks, in all weathers, I would say, No.

Steam pilot boats is not a new but a very old idea. I have discussed it often and over again with the late superintendent of pilots, but I could never disguise from myself that the steam pilot boat would not only be very expensive, but of questionable advantage, and that it would not answer the purpose better, nor be a safer boat for services on the Liverpool Banks than the present pilot boats, and whoever says the contrary, let him render a reason intelligible and satisfactory to those who have to risk their lives in such a service.

With the aid of the many now existing tug-boats, pilots might be put on board, and taken from the pilot boats when on station; that, I think, would be a desirable thing. It would be a saving of time, and save taking boats off the station, but when once on board their own pilot boats, I would consider them more safe than in a small steamer of any kind. I give this opinion without ever having spoken to a pilot about it. I would not like to give an opinion about a horse, but I am not afraid to give an opinion about a Liverpool pilot boat for the particular service, the weather they are exposed to off the Liverpool Banks, or its relative safety as compared with other class of vessels that come under my observation, and I have been a great deal about the world, in vessels of all kinds, excepting vessels of war.

Now, one thing more, and I have done. Perhaps you may not be aware we have never used English coal for our foreign-going vessels, and, until lately, that a portion of it has been

been brought to Birkenhead by rail from South Wales; all our coal was brought at that time, chiefly by sailing vessels, from Newport and Cardiff. These sailing vessels carried from 80 tons up to 350, and averaged, perhaps, a ship for every day in the year. Now, keeping in mind that we were ourselves insurers of the cargo, and that during a series of years we have never paid 100 *l.* in losses altogether, I cannot, with such a fact before me, say that the compulsory system of pilotage has not contributed to the safety of those vessels, and even the small loss of a hundred pounds or two over so many years, and with so many vessels each year, the loss in question did not happen at all on the Liverpool coast. What our losses might be with voluntary pilotage we have yet to find out. I give your our experience of the compulsory, and we have no wish to try the other, and still remain insurers on the cargo. I consider the increased risk to property would be very great, and, as a matter of course, if to property also to life.

Yours, &c.

S. R. Graves, Esq., M.P. for Liverpool. (signed) *Chas. MacIver.*

LETTER from Mr. *John Wallace* to Mr. *Graves*, M.P.

British and North American Royal Mail Steam Packet Company,
Sir, Office, 8, Water-street, Liverpool, 14 June 1870.

MR. MACIVER has requested me, with reference to your note about the Pilotage Bill, &c., to forward the accompanying Returns, which he thinks will give you the information desired. From these it appears that the Company pay *here* for pilotage over 3,200 *l.* per annum; that they contribute to the Dock Estate a twelfth of its entire revenue from tonnage dues; enter under one-fourteenth of the total tonnage reported; have a seventh of the steam tonnage, and pay a sixth of the tonnage dues levied thereon.

This was for the financial year ending 24th June 1869, and there is no doubt that when this year's accounts are compiled, our position will be found to be more satisfactory, as the sailings of the Company's steamers have been much more numerous.

I am, &c.

S. R. Graves, Esq., M.P., (signed) *John Wallace.*
5, Cleveland-row, St. James's, S.W.

Appendix (L).

Appendix (L).

STATEMENT of VESSELS entering the Port of *London* which Employed PILOTS from SEA in the Year 1869.

In the North Channel - - - - - - - - - -	1,292
In the South Channel - - - - - - - - - -	3,774

Trinity House, London, 2 May 1870.

Robin Allen, Secretary.

STATEMENT showing the Number of VESSELS that entered the Port of *London*, and Paid LIGHT, &c. DUTIES, during the Year 1869.

	British Vessels.	Foreign Vessels.	TOTAL.
From Ports North of Norden (*i. e.*, by North Channel).	1,469	2,026	3,495
*From Norden and Ports South to Rotterdam	203	298	501
From Rotterdam and Ports Southward (*i. e.*, by South Channel).	5,535	1,301	6,836
	7,207	3,625	10,832

	From the North of the Thames.	From the South of the Thames.	TOTAL.
Coasting Vessels - - - - - - -	14,123	4,636	18,759

*Vessels from these Ports use the North or South Channel according to the state of wind and weather.

Trinity House, London, 29 April 1870.

Robin Allen, Secretary.

INDEX

TO THE

REPORTS

FROM THE

SELECT COMMITTEE

ON THE

PILOTAGE BILL.

Ordered, by The House of Commons, *to be Printed,*
8 *and* 12 *July* 1870.

INDEX.

ANALYSIS OF INDEX.

ALPHABETICAL and CLASSIFIED LIST of the PRINCIPAL HEADINGS in the following INDEX, with the Pages at which they will be found.

PAGE

ACCIDENTS - - - - - - - - 585
Compulsory Pilotage - - - - - - 605
Liability - - - - - - - - 632
Loss of Life - - - - - - - 651
Safety of Life - - - - - - - 660
Voluntary Pilotage - - - - - - 680

Belfast - - - - - - - - - 593
Board of Trade - - - - - - - 593
Boats - - - - - - - - - 594
Liverpool, I. 12 - - - - - - 641

BRISTOL AND BRISTOL CHANNEL:
I. *Bristol:*
1. As to the present Pilotage Arrangements and their Operation - - - - 595
2. Question of Voluntary Pilotage in the Avon - - - - - - 596
3. Question of Voluntary Pilotage from Lundy to Kingroad - - - - 596
II. *Cardiff, Newport, and Gloucester:*
1. As to the Establishment of Voluntary Pilotage and its Effect - - - 597
2. Evidence relative especially to the Case of Gloucester - - - - - 597
3. Supply and Earnings of Pilots with reference to the Increase of Trade - - 598
III. *Suggested Establishment of Compulsory Pilotage throughout the Bristol Channel* - - - - 598
IV. *Conclusions and Recommendations of the Committee* - - - - - - - 598
Boats - - - - - - - - - 594
Swansea - - - - - - - - - 666

Cinque Ports Pilots - - - - - - - 600
Thames, The - - - - - - - - 668

City of Dublin Steam Packet Company - - - 600

CLYDE, THE:
I. *From Glasgow to Greenock:*
1. Extent of Compulsory Pilotage District - 601
2. Constitution of the Pilotage Board, and Regulations adopted as to Licenses, Rates, &c. - - - - - - 602
3. Evidence as to the Difficulties and Dangers of the Navigation, and as to the great importance of Compulsory Pilotage on this and other Grounds - - - 602
4. Licensed Masters and Mates - - - 603
5. Exemptions - - - - - - - 603
6. Liability of Pilots - - - - - 603
7. Feeling in Glasgow adverse to Voluntary Pilotage - - - - - - 603
8. Evidence favourable to Voluntary Pilotage, subject to Harbour Master's Regulations - - - - - - - 603
9. Conclusions and Recommendations of the Committee - - - - - 603
II. *From Greenock Seawards* - - - - 604

Compensation - - - - - - - - 604
Belfast - - - - - - - - - 593
Dublin, 4 - - - - - - - - 610
Hull, II. 4 - - - - - - - - 626
Liverpool, IX., X. - - - - - - - 649
Thames, The, IX., X. - - - - - - 675

COMPULSORY PILOTAGE: PAGE
1. *Report by Mr. Lindsay's Committee in Favour of partial Abolition* - - 605
2. *Evidence in Favour of Abolition generally* 605
3. *Evidence in Defence of the Compulsory Principle* - - - - - - - 605
4. *Conclusions of the Committee favourable to Abolition* - - - - - - 606
Accidents - - - - - - - - 585
Anomalies of System - - - - - - 587
Belfast - - - - - - - - - 593
Belgium - - - - - - - - - 593
Boats - - - - - - - - - 594
Bristol and Bristol Channel - - - - 595
Chambers of Commerce - - - - - - 599
Clyde, The - - - - - - - - 601
Dublin - - - - - - - - - 609
Exemptions - - - - - - - - 612
Falmouth - - - - - - - - 612
Foreign Countries - - - - - - 619
France - - - - - - - - - 619
Galway - - - - - - - - - 620
Hull - - - - - - - - - 624
Insurance - - - - - - - - 627
Liability - - - - - - - - 632
Light Dues - - - - - - - - 637
Liverpool - - - - - - - - 637
Lloyd's - - - - - - - - - 650
Local Authorities - - - - - - 651
Passenger Ships - - - - - - - 656
Penalties - - - - - - - - 657
Safety of Life - - - - - - - 660
Shipowners - - - - - - - - 662
Swansea - - - - - - - - - 666
Thames, The - - - - - - - - 668
Trinity House - - - - - - - 677
Tugs - - - - - - - - - 678
Underwriters - - - - - - - 679
Voluntary Pilotage - - - - - - 680
Waterford - - - - - - - - 682

DUBLIN:
1. *As to the present Pilotage Service and its Administration* - - - - - 609
2. *Question of Compulsory or Voluntary Pilotage* - - - - - - - 609
3. *Character of the Navigation* - - - 610
4. *Question of Compensation under a Voluntary System* - - - - - 610
5. *Dublin and Kingstown Steam Packet Company* - - - - - - - 610
City of Dublin Steam Packet Company - - 600
Exemptions (Compulsory Pilotage) - - - - 612
Anomalies of System - - - - - - 587
Channel Islands - - - - - - - 599
Clyde, The, I. 5 - - - - - - - 603
Foreign Vessels - - - - - - - 619
Havre - - - - - - - - - 621
Hull, I. 3 - - - - - - - - 625
Liverpool, II. - - - - - - - - 642
Thames, The, V. - - - - - - - 672
Trinity House - - - - - - - - 677
Falmouth - - - - - - - - - 613

Free Trade - - - - - - - - - 619
Licensed Pilots - - - - - - - 636
Rates - - - - - - - - - 658
Voluntary Pilotage - - - - - - 680
Grimsby - - - - - - - - - 620
Hull - - - - - - - - - 624

Hull (Humber Pilotage District): PAGE

1. *As to the present Pilotage System:*
   1. Constitution of the Pilotage Authority, and satisfactory Character of its Administration - - - - - - - 624
   2. Liberal Course pursued as regards Pilotage Certificates - - - - - - 624
   3. Exemptions from Compulsory Pilotage - 625
   4. Staff of Pilots, and Amount of Earnings - 625

II. *As to the Question of Voluntary Pilotage:*
   1. Local Feeling in disapproval generally of the Bill - - - - - - - - 625
   2. Character of the Navigation as affecting the Question at issue - - - - - 625
   3. Views of the Pilots in regard to the Application of the Bill - - - - - 626
   4. Claim to Compensation - - - - - 626
   5. Conclusions of the Committee adverse to the Retention of Compulsory Pilotage - 626

Goole - - - - - - - - - - 620
Grimsby - - - - - - - - - - 620
Tugs - - - - - - - - - - 678

Insurance - - - - - - - - - 627
Underwriters - - - - - - - - 679

Liability:
1. *State of the Law as to the Exemption of Owners from Liability when a Compulsory Pilot is employed* - - - 632
2. *Mischievous Effect of the present Law* - 633
3. *State of the Law in Foreign Countries* - 633
4. *Suggestions for the Liability of the Owner, concurrently with Compulsory Pilotage* - 633
5. *Objections to the foregoing Proposition* - 634
6. *Suggested Liability concurrently with Compulsory Payment* - - - - - - 634
7. *Suggestions for enlarged Liability, as by the Adoption of Voluntary Pilotage* - - 634
8. *Considerations as to the relative Position and Functions of the Master and Pilot, with reference to the Question of Liability of the Owner* - - - - - 634
9. *Question of Remedy against the Pilot* - 635
10. *Extent of Liability of the Underwriter* - 635
11. *Liability in respect of Loss of Life* - - 635
12. *Suggestions for an increased Immunity of Owners* - - - - - - - 636
13. *Conclusions of the Committee* - - - 636

Admiralty Vessels - - - - - - - 586
Barges - - - - - - - - - 592
Belgium - - - - - - - - - 593
Canada - - - - - - - - - 599
France - - - - - - - - - 619
Holland - - - - - - - - 623
Litigation - - - - - - - - 637
North German Confederation - - - - 655
Pilots' Indemnity Fund - - - - - 657
Safety of Life - - - - - - - 660
Shipowners - - - - - - - - 662
"Spindrift," The - - - - - - 664
United States - - - - - - - 679
Voluntary Pilotage - - - - - - 680

Licensed Pilots - - - - - - - 636
Local Authorities - - - - - - 651
Masters and Mates - - - - - - 653
Number of Pilots - - - - - - 655

Liverpool (Mersey Pilotage District):
I. *As to the present Pilotage Service and its Administration:*
   1. Establishment of Compulsory Pilotage under different Acts - - - 637
   2. Argument that Compulsion applies only to Payment of Rates - - - 638
   3. Constitution and Action of the Mersey Docks and Harbour Board, as the Pilotage Authority - - - 638

Liverpool (Mersey Pilotage District)—cont^d. PAGE
I. *As to the present Pilotage Service, &c.*—continued.
   4. Number of Pilots and Apprentices, and Amount of Work performed - - 638
   5. Evidence as to the Efficiency of the Service - - - - - - - 639
   6. Evidence as to Inefficiency - - - 639
   7. Pilot Stations - - - - - 639
   8. Selection of Pilots - - - - 640
   9. Complaints, and their Investigation - 640
   10. Pilotage Rates, and Earnings of Pilots 640
   11. Annuity Fund and Pensions - - 641
   12. Pilot Boats, and Boat Ownership - 641
   13. Other Details generally - - - 642

II. *Exemptions from Compulsory Pilotage* - - 642

III. *Examination of Masters and Mates for Pilotage Certificates* - - - - - - - - 643

IV. *As to the Navigation of the Mersey:*
   1. Concurrence of Testimony as to the exceptional Difficulties and Dangers of the Navigation - - - - - - 643
   2. Evidence to the effect that the Navigation is not exceptionally hazardous - - 644
   3. Efficiency in the matter of Buoys, Lights, &c. - - - - - - - - 645

V. *Accidents to Piloted and Unpiloted Ships respectively* - - - - - - - - 645

VI. *Relative Tonnage of Sailing Ships and Steam Ships* - - - - - - - 645

VII. *Enormous Trade of the Port* - - - - 645

VIII. *As to the Question of Compulsory or Voluntary Pilotage:*
   1. Concurrence of Evidence in strong Opposition to the application of the Bill to Liverpool - - - - - 646
   2. Local Feeling upon the Question at issue - - - - - - 647
   3. Views of the Liverpool Pilots - - 647
   4. Efficiency respectively of Compulsory Pilots, and of Licensed Masters and Mates - - - - - - - 648
   5. Proposed Extension of the Compulsory Principle - - - - - 648
   6. Effect of Voluntary Pilotage as regards the Rates - - - - - 648
   7. Evidence in approval generally of the proposed adoption of Voluntary Pilotage - - - - - - - 648

IX. *Question of Compensation* - - - - 649

X. *Summary by the Committee, and Conclusion arrived at in favour of the Application of the Bill* - - - - - - - - - 650

Boats - - - - - - - - - 594

[*N.B* —In this Index the *Figures* following the Names of the Witnesses refer to the Questions in the Evidence; those following *App.*, to the Pages in the Appendix; and the *Numerals* following *Rep.*, to the Pages in the Report.]

A.

Abolition of Compulsory Pilotage. See *Compulsory Pilotage. Voluntary Pilotage.*

Accidents:

Obstacles to any satisfactory return of the comparative losses in compulsory and in non-compulsory pilotage districts, respectively, *Farrer* 609-611——Very limited degree in which the non-compulsion to take a pilot tends to increase the liability to accident, *Sir F. Arrow* 1840–1842.

Large number of small vessels without pilots lost last year in going to Liverpool, whereas there was only one large ship lost with a pilot, *Judkins* 2049. 2110-2116. 2170. 2196, 2197. 2214-2216——Exceedingly small proportion of accidents in the case of piloted ships in the Mersey, *Danson* 3273–3277; *Simpson* 4543–4545——Of sixty-eight casualties in the Mersey district in 1869, only one occurred to a vessel with a pilot on board, *Galloway* 4066.

Increased liability to accident in the case of coasters not taking pilots, *Simpson* 4324–4327——Numerous accidents in the Clyde before 1825, when there was no pilotage in the river; necessity then shown for the introduction of compulsory pilotage, *Turner* 4782. 4802, 4803. 4840——The record of wrecks shows that casualties occur almost entirely in the case of ships without pilots, *Mallett* 7516.

Belief as to vessels for London being more frequently lost when without than when with pilots, *Tozer* 8182——Much more frequent accidents in the Thames when unlicensed than when licensed pilots are employed, *Speeding* 9152-9158. 9205——Circumstance of the Trinity pilots acting only in the day time, so that they run less risk of accident than the waterman pilots, *Hinton* 9499, 9500——Instances of vessels getting on shore in the river at Belfast, when not in charge of pilots, *Benson* 9899-9901. 9919–9922.

Numerous and heavy losses of witness's firm, owing to the negligence of the licensed pilots of Liverpool, *Leyland* 10039–10041. 10125, 10126. 10140–10143——Consideration of certain evidence as to the numerous accidents to vessels in the Mersey without pilots, as compared with the few accidents when compulsory pilots are employed; grounds for dissenting from the inferences drawn therefrom in favour of the compulsory system, *ib.* 10057–10064. 10076–10079. 10146–10150. 10199–10208——Explanation as to the apparently greater danger of vessels in the Mersey when not under charge of pilots; several instances, on the other hand, of piloted vessels going on shore, *Inman* 10367–10373. 10388–10397.

Impression that a certain return of casualties to vessels without pilots in the Thames, refers mainly to vessels of an inferior class not subject to compulsory pilotage, *Sir F. Arrow* 11904–11910——Instances of accident to vessels in the Clyde in charge of river pilots, *Lee* 11937. 11944, 11945——Fewer accidents to witness's ships in the Thames, when not in charge of licensed pilots, *Robinson* 12371.

Peculiar freedom from accidents in the case of coasting passenger steamers not subject to compulsory pilotage, *Rep.* xxviii.

See also *Compulsory Pilotage. Liability. Loss of Life. Safety of Life. Voluntary Pilotage.*

Report, 1870—*continued*.

Adams, William. (Analysis of his Evidence.)—Concurrence in the complaint of Mr. Robert Lee as to the grievance suffered by the Greenock deep-sea pilots through the encroachments of the river pilots, 11959–12010——Small earnings now made by witness and the majority of the deep-sea pilots, 12002–12009.

Admiralty Vessels. Statement showing that the captains and masters in the navy are held responsible by the Admiralty, notwithstanding that a pilot may be in charge, *Farrer* 89-91——Distinction between Admiralty vessels and private vessels, in the former not being obliged to take pilots, *ib.* 544–547——Statement as to Admiralty vessels being allowed a pilot only three times in and out when going to a strange port, *Johnson* 12254–12257.

Alexander, Alexander. (Analysis of his Evidence.)—Long experience of witness as a Clyde pilot, 5436–5438——Excessive size of some of the ships now built on the Clyde, the greatest care being required in order to take them safely down the river, 5439–5448. 5452–5456——Necessity of a pilot with local knowledge of all details of the navigation, in order to take vessels up and down the river; great danger by the captain acting as pilot, 5448–5456. 5479–5484——Probability of many vessels not employing pilots in the Clyde under an optional system, 5457. 5461–5466.

Expectation that efficient pilots would not be forthcoming if their employment were optional and their remuneration uncertain, 5458–5469. 5486–5489——Reasons why an ample supply of pilots may exist on the Tyne and Wear, under non-compulsory pilotage, though they would not be found in the Clyde, 5471–5478.

Large number of masters licensed as pilots for river steamers on the Clyde; unfitness of these to pilot large vessels, 5490–5502——Obligation upon ships when launched to take a pilot down the river, 5503–5505——Necessity of pilots, irrespectively of steam tugs, 5505–5507——Very easy pilotage below Greenock, 5508–5510——Extent of employment of pilots by vessels to and from Greenock: doubt as to this being any proof that pilots would be taken between Greenock and Glasgow, 5511–5536.

Allan, James. (Analysis of his Evidence.)—Represents the firm of Allan & Co., of the Allan line of steamers from Glasgow; has been for many years chairman of the Glasgow Pilot Board, 5209–5218 ——Great importance of the detailed regulations laid down by the Clyde trustees and by the Pilot Board, it being essential to have local pilots thoroughly acquainted with the details, 5219–5233——Danger in connection with the dredging and other works going on in the river, 5223–5233——Enormous traffic on the river, there being great danger from the numerous river steamers as well as from the large ships, 5234–5244. 5270–5272.

Statement as to the number of masters and mates licensed as pilots for river steamers, &c., and as to the license fee in each case being fixed at 20*s.* a year, 5245–5249. 5261–5265. 5379 5388——Grounds for the conclusion that but for the compulsion to take a pilot many vessels not knowing the port might try to save pilotage rates, to the great jeopardy of the navigation, 5250–5258. 5307–5335——General feeling of shipowners in Glasgow in favour of compulsion; exceptional instances to the contrary, 5259, 5260. 5374–5378.

Obstacle to widening the navigable channel of the Clyde, where it is most narrow, 5266–5269——Impracticability of navigating the Clyde merely by chart, 5272——Approval of non-compulsory pilotage generally, the Clyde being altogether an exceptional case, 5273–5278——Inferiority of the Greenock deep-sea pilots as compared with the Glasgow pilots, 5279–5285——Expediency of the Clyde compulsory pilotage district being somewhat extended, by making the tail of the bank instead of Newark Castle the legal boundary; practically, this is the boundary at present, 5289–5291. 5354–5367.

Inadequacy of harbour masters' regulations for meeting the difficulties of the navigation, 5292–5295——Defence of the immunity of the owner concurrently with compulsory pilotage; with or without the former the latter is imperative, 5296–5306——Relative functions of the captain and pilot adverted to; approval of the complete charge vested in the latter, 5299–5301——Charge of the pilotage both by the foot and by tonnage, 5337–5340——Approval of extending the liability of the pilot from 20*l.* to 100*l.*, 5341–5346.

Concurrence in the view that non-compulsory pilotage should not be forced upon Liverpool, 5368–5371. 5389–5391——Opinion that local authorities should have discretion as to the system most suitable for their wants, 5389–5391.

Anderson, Arthur (The late). View of the late Mr. Anderson of the Peninsular and Oriental Company, on the question of compulsory pilotage, *Farrer* 81. 209.

Annuities to Pilots. See *Compensation.*

Report, 1870—*continued.*

Anomalies of System. Doubt as to its being practicable to abolish existing anomalies, short of an abolition of compulsion, *Farrer* 492-494——Admission as to there being anomalies, or different regulations for different ports not removed or dealt with by the Bill, *ib.* 689-693——Material object of the Bill to get rid of existing anomalies, *ib.* 830-833.

Anomalies by reason of exemptions, which should as far as possible be abolished, *Danson* 3139. 3232.

Conclusion of the Committee that the present system is anomalous to the last degree, both in the extent to which compulsory pilotage is carried and in its exemptions, *Rep.* xxvii——Grounds for the conclusion that the only way to get rid of existing anomalies is by the general abolition of compulsion, *ib.* xxvii-xxx.

See also *Board of Trade. Exemptions.*

Apprentices. Approval of entrusting the pilotage authorities with the regulation of the number of apprentices, *Farrer* 465-468——Number and qualifications of pilot apprentices under the Trinity House; how far these have any claim to compensation under the Bill, *Sir F. Arrow* 1607-1613.

Arrow, Sir Frederick, Knight. (Analysis of his Evidence.)—Has been in the Trinity House since 1859, and has been Deputy Master for nearly five years, 1368-1370——Great extent of the pilotage district of the Trinity House, it being the largest district in the kingdom, 1370. 1376, 1377——Explanation that on the question of compulsory pilotage witness speaks only for himself, having no authority to submit the views of the Elder Brethren, 1372-1375. 1389——Readiness evinced by the Trinity House in granting exemptions, although some years since they were opposed, as a body, to the abolition of compulsion; the subject has not been discussed since 1862, nor has the present Bill been considered, 1372, 1373.

Several classes of pilots in the Thames district, and number of each class, 1378, 1379——Numerous exemptions in the district from compulsory pilotage, the exemptions being considered fully equivalent to the compulsory cases, 1380-1388. 1406-1408——Opinion that pilotage should either be entirely voluntary or entirely compulsory; grounds for concluding that the voluntary system should be adopted generally, 1389-1408——Belief that on the whole pilots will be as much employed under a voluntary system, and that safety of life and property will not be jeopardised, 1389. 1391, 1392.

Peculiarly difficult character of the navigation of the Thames district, 1393-1395——Effect of the relief of the owner from liability in placing the captain and pilot of a ship in a wrong position, and as having an evil tendency in other respects, 1396-1402——Illustration in the case of the "Spindrift" of the mischievous effect of the responsibility vested in the pilot under the compulsory system, 1398, 1399——Expediency in any case of the liability clause of the Merchant Shipping Act being repealed; belief that with such repeal the opposition to the abolition of compulsory pilotage would soon disappear, 1402-1408.

[Second Examination.]—Very large examination of masters and mates by the Trinity House for pilotage certificates, the certificates being confined to the ships of the same owner, 1409-1412——Steps taken by the Trinity House on several occasions for an extension of exemptions, 1413, 1414——Important effect of the increased use of steam in diminishing any arguments that existed for compulsory pilotage, 1415-1417.

Jurisdiction exercised by the Trinity House, not only as to the limits of the different pilotage districts, but as to the number of licensed pilots for each district, 1418-1424——System of superintendence and control to which the pilots are subject, 1425, 1426——Employment of four pilot cutters at Dungeness; maintenance of these by the Trinity House out of the "boarding money" paid to the pilots in addition to the pilotage rate, 1427-1434. 1629-1633. 1854, 1855——Particulars relative to the composition and administration of the superannuation fund, the amount of which is now 88,000 *l.*, 1435-1442. 1724-1728.

Belief that in the Trinity House district the abolition of compulsion would have no material effect upon the employment or earnings of the pilots, 1443-1445. 1481. 1767. 1783-1791——Expediency of the local authorities having power to limit the number of licensed pilots, and to protect them against unlicensed pilots, 1446-1448. 1453-1458. 1866——Expediency also of a regulated price, 1449-1452——Probable necessity of a higher rate in winter than in summer, 1450. 1464-1466. 1651——Tendency of the voluntary system to render the pilots more vigilant and zealous, 1457, 1458. 1665-1667.

Doubt whether there can be any improvement upon the present cruising ground at Dungeness, as by stationing the cutters further to the west, 1459. 1668, 1669——Facility of re-arranging the pilotage districts, should it be found necessary as a consequence of the Bill, 1460-1463——Expectation that under voluntary pilotage there will be equally good attendance at sea in bad weather, 1464-1466. 1665-1667. 1758-1761——Very satisfactory working of the voluntary system in the North Channel of the Thames, 1467-1471.

Report, 1870—*continued.*

Arrow, Sir Frederick, Knight. (Analysis of his Evidence)—*continued.*

Improbability of its being necessary to make much use of the compensation clauses of the Bill; suggestions hereon on the subject of superannuation under different circumstances, 1472–1481. 1600–1606. 1670–1673. 1813–1815. 1876—— Evidence to the effect that the navigation of the Thames (where the voluntary system answers) is more difficult than that of any other pilotage district, not excepting Liverpool; detailed examination hereon, with reference more especially to the navigation of the Mersey, 1482–1493. 1584–1594. 1781. 1843–1848. 1858. 1935–1940——Further statement as to compulsory pilotage not being necessary or defensible with reference to safety of life; exemption of coasters adverted to hereon, 1494, 1495. 1502–1516. 1762–1764. 1800–1804. 1840–1842.

Effect of an abolition of exemptions in compelling many more vessels to take pilots, thus imposing a heavier liability upon shipping, 1496–1501——Admission as to the advantage of a licensed pilot as a safeguard against danger; doubt whether much risk would be incurred by owners in order to save this expense, 1502–1516——Circumstance of unlicensed pilots being frequently employed in the Thames, on account of the reduced charge, 1517–1520. 1897——Absence of change in the number of pilots in the Thames during the last ten years, though the number has been decreasing round the coast; belief as to the sufficiency of licensed pilots, 1521–1527. 1768–1770. 1863. 1918–1920.

Satisfaction given generally by the pilotage service in the Thames, though there is some room for improvement, 1528. 1597–1599——Opinion favourable to the abolition of compulsion, even though the anomalies in respect of liability might be otherwise removed, 1529, 1530. 1542–1547. 1792–1799——Belief as to the continued responsibility of the captain of a ship after he has taken a licensed pilot on board, 1531–1535. 1690–1697 ——Termination of the compulsory waters of the Thames at Dungeness, outwards as well as inwards; question hereon, whether they might not as well terminate in the Downs, 1536–1541.

Exception taken to the shipping interest being compelled to pay pilotage rates, though not compelled to employ pilots; practice as to payment for lights adverted to hereon, 1553–1568——Statement as to the Pilotage Committee of the Trinity House not having been consulted with reference to the Bill, 1569–1574——Further explanation in regard to the Trinity Board not having discussed the question, nor recorded their opinion since 1862; 1575–1580.

Objection to its being left to each pilotage authority to adopt voluntary or compulsory pilotage, 1581. 1595, 1596——Approval of the examination and licensing of pilots being entrusted to the local authorities. 1582, 1583——Less necessity for compulsory pilotage since the great improvements effected in buoyage and lighting, 1601. 1848.

Number and qualifications of pilot apprentices under the Trinity House; how far these have any claim to compensation under the Bill, 1607–1613——Custom of owners in the Thames to take pilots as a protection against liability in the event of collision, 1614, 1615 —— Consideration of the case of the owners of sailing barges plying from the Medway into the Thames, these barges being often run down by steamers with pilots on board, and having no adequate redress, 1616–1628—— Proposal in the Merchant Shipping Bill that the pilots shall have two sureties to the bond of 100 *l.* given by them, 1625, 1626. 1874, 1875.

Efficiency of the pilot service of the Tyne under the voluntary system, 1634–1638—— Explanation of the arrangements in force at Southampton as to the selection of pilots by the large steamships; payment of one-third of the earnings of these men to a common fund, 1639–1650——Statement as to the reluctance shown by the Falmouth pilots to keep out at sea, and as to the steps taken by the Trinity House to correct the evil, 1652—— Advantage if the pilotage at Falmouth were entirely voluntary, 1652, 1653——Explanation as to the much smaller number of vessels piloted outwards than inwards at Falmouth, 1654–1656.

Doubt as to the pilot boats under a voluntary system being inefficient, 1657–1659. 1816–1822—— Obstacle to steam pilot boats on account of the expense, 1660—— Occasional demand in the Thames for more pilots than are comprised in the licensed staff at Dungeness, &c.; use made of the services of Deal boatmen and of watermen on these occasions, 1662–1664—— Absence of collusion between the licensed pilots and the watermen as to the latter piloting small ships, 1664. 1917.

Dissent from the view that the master of a passenger ship should be required to possess a pilotage certificate before being allowed to navigate without a pilot, 1674–1681—— Circumstance of the common law carrying immunity of the owner from liability when there is a compulsory pilot on board; conclusion that exemption under such condition is not unreasonable, 1682–1689—— Duty of the master of a ship to act irrespectively of a compulsory pilot on board if he sees that the latter is evidently in the wrong, 1690–1697.

System of supervision by the Elder Brethren of the Trinity House and by sub-commissioners over the out-port districts, 1698–1702——Consideration of the constitution of the Trinity

Report, 1870—*continued.*

Arrow, Sir Frederick, Knight. (Analysis of his Evidence)—*continued.*

Trinity House with reference more especially to the question of representation of the mercantile and shipping interest at the Board, 1703–1718. 1837–1839——Qualifications of the Thames watermen as regards navigation between Gravesend and London, adverted to; doubt as to shipowners taking a waterman on board, as well as a pilot, in order to assist in the pilotage, 1719–1723. 1892–1894.

Witness repeats that he sees no necessity for exemptions from a non-compulsory system, 1728–1732. 1759——Very few complaints against the Trinity House pilots, 1733——Practice as to the investigation of complaints, as in the case of the "Spindrift," 1733–1736——Further statement as to the Trinity House having for some years past acted in the direction of increased exemptions from compulsory pilotage, 1737–1740. 1742–1745.

Large and increasing trade of the Bristol Channel adverted to in connection with the pilots' earnings under the voluntary system, 1740, 1741——Concurrence in the view that the obligation to take a licensed pilot, if any at all be taken, is very desirable, 1746, 1747. 1785–1788——Improved lighting of the Bristol Channel cited as facilitating the adoption of voluntary pilotage, 1748–1752——Probability of the navigation of the Mersey being more difficult than that of the Bristol Channel, 1753–1758——Further statement that under a voluntary system in the Mersey pilots would be found sufficiently far out, and in bad weather, if their services were required, 1758–1761.

Belief that under voluntary pilotage there would be no difficulty in keeping up the supply of pilots at Dungeness, 1765–1767——Decrease since 1862 in the number of ships in the Thames, although the tonnage had largely increased; this partly accounts for the non-increase in the number of pilots, 1768–1770——Suggestion in regard to the navigation of the Clyde near Glasgow being under the jurisdiction of the harbour master, it not being necessary to maintain compulsory pilotage, 1771–1775. 1823–1830.

Efficiency of the Cinque Port pilots, there being very few complaints against them, 1776–1780——Objection to the principle of compulsion, even though under the voluntary system ships may equally employ pilots from the same class as at present, 1782–1791——Contemplated right in a licensed pilot to supersede an unlicensed pilot, 1805, 1806——Difficulty of the question of the captain of a steam-tug being regarded as a licensed pilot, 1807–1812. 1849, 1850.

Expectation that under voluntary pilotage in the Mersey perfectly efficient pilot boats will be found, 1816–1822——Information relative to the examinations of the Trinity House for pilotage certificates; qualifications required, 1831–1834——Competency of certificated masters to navigate in pilotage waters without risk to life or property, 1835, 1836. 1840–1842——Very limited degree in which the non-compulsion to take a pilot tends to increase the liability to accident, 1840–1842——Opinion as to the present pilotage rates in the Thames not being excessive, 1851–1857——Checks upon vessels being sent to sea badly found, 1859–1861.

Large number of free watermen or unlicensed pilots in the Thames above Gravesend, and large amount of pilotage work done by them; denial that this proves any insufficiency of licensed pilots, 1862–1864. 1885–1900. 1907. 1918–1920——Doubt as to the expediency of licensing the free watermen; approval rather of the licensed men being protected against their encroachments, 1862. 1865–1868. 1885–1924——Instances of licensed pilots perfectly unable to meet their liabilities for accidents, 1869, 1870——Opinion favourable to pilots being licensed for the whole distance from London to the sea, instead of there being a break at Gravesend, 1872.

Objection to unlimited liability of pilots under a voluntary system, 1873——Control to be exercised in such a harbour as that of Swansea by the harbour master, when ships come in with or without pilots, 1877–1879——Objection to the plan of having the tug alongside in towing, 1881–1884——Exception taken, on the score of qualification, to the licensing of the free watermen, 1901–1914——Character of the vessels of the pilots who cruise in the North Channel; earnings of those pilots as compared with those of the South Channel, 1925–1934.

Power of the London pilots to make claims for salvage without the consent of the Trinity House, whilst the Dungeness and North Channel pilots cannot do so, 1941–1945——Expediency of legislation to the effect that no pilot be enabled to claim salvage without the previous consent of the pilotage authority, 1941. 1945–1948——Circumstance of the Board of Trade having refused power to the Trinity House to prevent their pilots holding shares in steamers, 1949.

[Third Examination.]—Detailed information relative to the navigation of the Mersey, witness contending that the difficulties have been much exaggerated before the Committee, and that no exceptional case exists calling for compulsory pilotage, 11837–11855. 11859. 11862. 11878——Greater difficulty of the navigation of the mouth of the Thames than of the Mersey, 11840. 11846——Careful watching of the sands and shoals in the estuary of the Thames and on the east coast, the changes being great and frequent, 11850–11855.

Report, 1870—*continued.*

Arrow, Sir Frederick, Knight. (Analysis of his Evidence)—*continued.*

With regard to the navigation of the Clyde near Glasgow, witness repeats that this is more a harbour master's question than a pilot's question, 11856-11858. 11862. 11889, 11890——Dissent from certain evidence as to the navigation of the Humber being difficult and exceptional, 11860-11862——Apparently excessive and extravagant scale upon which the Liverpool pilotage service is conducted, 11863. 11874-11877. 11894-11897——Very few complaints as to the supply of pilots in the North Channel of the Thames, where the pilotage is voluntary, 11864-11867.

Facilities under the Bill for regulating the number of pilots, and for securing their attendance at their stations, 11868-11872——Absence of hardship in compelling the men to keep to their stations so long as they are protected by being licensed, 11868-11874——Means of protection open to the licensed men in the North Channel against unlicensed men, 11879-11884——Steps contemplated by the Trinity House for largely extending the exemptions on the Thames, irrespectively of the Bill, 11885-11887——Logical conclusion that exemptions having once been made more must follow, 11886-11888.

Distinction between artificial river pilotage and sea pilotage, the former being a harbour master's question, 11889-11893——Opinion as to the Avon presenting a stronger case for pilotage than the Clyde, 11898-11901——Probable difficulty in respect of entrance to the harbour at Swansea, 11902, 11903——Impression that a certain return of casualties to vessels without pilots on the Thames refers mainly to vessels of an inferior class, not subject to compulsory pilotage, 11904-11910.

Avon, The. Explanation by the Committee as to their insertion of a clause in the Bill empowering bye-laws to be made for the regulation of the Avon, as far as Kingroad, *Rep.* xxvi——*See* also *Bristol and Bristol Channel.*

B.

Ballantine, Captain William. (Analysis of his Evidence.)—Is in command of the "Scandinavian," of the Montreal line; has had more than twenty years' experience of the Mersey, 2959-2963——Great efficiency of the Liverpool pilotage service, 2964-2972. 3109, 3110——Excellent working of the system of stations for the pilots, 2966-2970——Great imprudence in going in or out of the port without a pilot; details hereon as to the exceptionally difficult and hazardous character of the navigation, 2973 *et seq.*

Opinion that it should be compulsory upon every vessel in the Mersey to take a pilot, the smaller ships paying a reduced rate, 2980. 3069-3076. 3088-3096. 3113——Expectation that if the pilotage were not compulsory many vessels would run risks in order to save the charge, 2984, 2985. 3088. 3113——Probability that on a certain occasion witness's ship would have run upon a sunken rock had he not had a pilot on board, 2991-2994.

Conclusion that under a voluntary system there would not be an available supply of pilots in bad weather, whereas the present organization ensures a supply, 2995-3011——Illustration in the case of the "St. Lawrence" of the advantages consequent upon the adoption of pilot stations, 3001-3006——Explanation as to the relative position and responsibilities of witness and of the pilot on board; objection to any increase of the responsibility of the captain, who has quite enough already, 3012-3018. 3032-3034. 3111, 3112. 3116-3120.

Opinion as to the earnings of the Liverpool pilots being none too much, 3021, 3022——Very general feeling among captains in Liverpool in favour of the present pilotage system, 3023, 3024——Explanation on the subject of the employment of two selected pilots by witness's company, these being taken on to Londonderry, and picked up there on the return voyages, 3035-3053. 3077-3085. 3104-3108. 3121——Doubt as to vessels for Liverpool finding it advantageous to stop at Queenstown for pilots, 3054-3058. 3086, 3087. 3107.

Objection to any interference with compulsory pilotage at Liverpool, chiefly on the ground of danger to life, 3088-3090. 3113——Very low rates at Liverpool, 3092——Inadequacy of charts for the navigation of the Mersey, without a pilot, 3097-3106——Probability of compulsory pilotage not being necessary in many ports, such as the Clyde, 3113-3115.

Bannister, Anthony. (Analysis of his Evidence.)—Is a merchant and shipowner of Hull, and has been chairman of the Humber Pilotage Commissioners for about twenty years, 5537-5540——Regulation of the pilotage system of Hull by an Act passed in 1832; 5541——Examination and licensing of pilots by the Hull Trinity House, whilst the administration of the pilotage rests with the Pilotage Commissioners, 5541-5543. 5747-5749. 5773-5775——Large representation of merchants and shipowners on the commission, the Trinity House and the corporation being also represented, and there being seventy-two commissioners altogether, 5543-5545. 5763-5766.

Total

Report, 1870—*continued.*

Bannister, Anthony. (Analysis of his Evidence)—*continued.*

Total of sixty-eight pilots and seven pilot boats, 5546, 5547. 5563——Extent of the pilotage district, and system of cruising by which the supply of pilots is regulated, 5548, 5549. 5560–5565——Careful investigation of complaints by the commissioners, these, however, being very rare, and the system giving universal satisfaction, 5550–5559. 5622. 5746. 5750, 5751. 5767——Information relative to the supply and training of apprentices, of whom there are twenty-one: important advantage on this score of the school possessed by the Trinity House, 5566–5573. 5663. 5757, 5758.

Particulars relative to the navigation of the Humber as being exceedingly intricate and dangerous, so that it is most essential to secure an efficient supply of pilots, 5574–5586. 5626. 5631–5633. 5637–5641. 5673–5678—— Belief that the Bill would ruin the present efficient service, and that if the pilotage were not compulsory pilots would not be found when wanted in bad weather, on account of the uncertainty of employment, 5587. 5598–5607. 5619–5622. 5701–5708. 5759–5762——Very liberal licensing of masters and mates at Hull, 5588–5592. 5747. 5752–5754. 5782, 5783—— Exemption of coasters and of foreign vessels of light draught, 5593–5595.

Moderate earnings of the pilots under the present compulsory system, 5596, 5597—— Unanimous feeling of the Pilotage Commissioners against the Bill, there being in fact no local feeling in its favour, 5605–5607. 5622. 5763–5772—— Exception taken to the clauses as to compensation, this being a matter which should rest with the local authority rather than the Board of Trade, 5608–5612. 5695–5700. 5755, 5756——Gratuitous services rendered by the Hull commissioners: small expenses of the commission for salaries, &c. 5613–5615.

Very moderate pilotage rates, there being different scales according to distance, 5623–5625. 5709–5713. 5776–5779——Grounds for concluding that under a voluntary system many vessels would incur risk by not taking a pilot, 5626–5636. 5679–5689. 5721–5727 ——Practice as to pilotage between Hull and Goole, there being branch pilots for the service, and the rates not causing complaint, 5642–5652——Belief as to Grimsby being opposed to interference with the present system, 5653–5656 ——Question as to a reduction of the number of pilots and apprentices under a voluntary system; danger of any reduction, 5657–5672. 5755, 5756——Evidence relative to the question of liability of owners, to the effect that even with a compulsory pilot on board the captain should continue in charge of the ship, and the owner should be responsible for accidents, 5690–5694. 5728–5745. 5784–5793——Fair claim of the pilot to charge his own rates if he risks his life under a voluntary system, 5714–5717——Further reference to the numerous exemptions from compulsory pilotage at Hull, though foreign vessels are not included in the category, 5752–5754. 5780–5783.

[Second Examination.]—Production of, and explanation upon, a certain document signed by fifty-six out of sixty-eight pilots in the Humber, praying to be exempted from the operation of the Bill, 6337 *et seq.*——Statement to the effect that a previous document, signed by forty pilots, in disapproval of the present system and in favour of the Bill, was signed under a misconception, and in the belief that they would receive compensation and be free to demand their own rates, 6343 *et seq.*

Barfield, William. (Analysis of his Evidence.)—Is a licensed pilot from Gravesend to Dungeness and Orfordness, 8270–8272——Great reduction in the employment and income of pilots in the Thames if compulsory pilotage be abolished: reference hereon to the large reduction consequent upon the exemptions from time to time, 8273–8279. 8320–8365. 8437–8454——Objection to the permissive character of the compensation clauses of the Bill, and to the interval of two years, witness submitting that the present income of the pilots should be guaranteed to them for life, 8282–8290. 8300–8319.

Complaint as to the action of unlicensed men in piloting vessels in the Thames, this evil being likely to increase under a non-compulsory system, 8291–8294. 8407–8419—— Recent law in Norway requiring vessels above twenty tons to take pilots, 8295–8297—— Opinion that the pilot should be no more liable for damage than the shipmaster, 8298 ——Prejudicial effect upon the safety of life if the Bill be passed, 8299.

Evidence favourable to the pilots below Gravesend being licensed to pilot also between London and Gravesend, 8366–8406. 8455–8458. 8477–8483. 8495, 8496——Objection to the pilots being compulsorily stationed at Gravesend; statement hereon as to a large number coming to London in order to be selected for employment at Gravesend, 8394–8405. 8420–8436. 8462–8465—— Voluntary employment of pilots by some large vessels from Dungeness to the Isle of Wight: probable reduction of such employment under the Bill, 8437–8454.

Approval of a separate class of pilots inwards and outwards, 8466–8476——Frequent employment of tugs from beyond Dungeness up to London, 8484–8486——Limited employment of tugs in the North Channel, 8487——Constant employment of tugs between London and Gravesend, 8488——Somewhat similar class of pilots in the North Channel and the South Channel, the earnings being much the same, 8489–8494.

Report, 1870—*continued.*

Barges (Thames and Medway). Statement showing the grievances complained of by the owners of barges and small craft in the Thames, when injury is done by large vessels and steamers under compulsory charge of a pilot; great difficulty of recovery from the pilot, *Farrer* 59–65——Obstruction caused to the navigation by barges, *ib.* 63.

Further statement as to the sinking of barges in the Thames by ships in charge of pilots, and as to the grievance through the latter not being able to pay the damages, *Farrer* 439–448. 650–654——Question of liability further considered with reference to the risk of collision with barges in the Thames, *ib.* 809. 849–856——With regard to a certain deputation of barge owners to the Board of Trade, sailing barges, and not mere lighters, were represented on this occasion, *ib.* 1016–1019.

Consideration of the case of the owners of sailing barges plying from the Medway into the Thames, these barges being often run down by steamers with pilots on board, and having no adequate redress, *Sir F. Arrow* 1616–1628.

Objection to the owner rather than the pilot being responsible for damages done to barges in the Thames, *Taylor* 8059–8077. 8151–8156 ——The barges are frequently in fault, *ib.* 8151–8156——Considerable obstruction cruised by the sailing barges which come from the Medway into the Thames, *Luton* 12700–12711.

Memorial of owners of barges and other craft navigating the Thames and Medway, setting forth the grievances experienced under the system of immunity of shipowners from liability where pilots are compulsorily employed, *App.* 508, 509——Memorial to a similar effect from the owners of sailing barges in the Thames and Medway, *ib.* 510, 511.

Return of casualties suffered by owners of sailing barges, showing total damages to the extent of 6,004 *l.*, of which only 660 *l.* was recovered from the pilots, *App.* 512.

Letter from Mr. William Lee, dated 10th September 1868, with further reference to the grievances under which the owners of sailing barges labour, *App.* 513–515.

Beasley, Mr. Views of Mr. Beasley, of Liverpool, in 1860, in favour of compulsory pilotage, *Farrer* 81.

Beckett, Francis Charles. (Analysis of his Evidence.)—Is a first-class licensed pilot of Liverpool, 11564–11566——Was appointed at a public meeting of the pilots, held some weeks since, to attend the Committee in opposition to the Bill; was not, however, called upon at the time to give evidence, 11567–11576——Feeling of the pilots in favour of the pilotage being thrown entirely open, it being understood that they should be compensated, 11571, 11572. 11648——Concurrence of the pilots in the evidence given by Mr. Jones, 11577–11581.

Strong objection on the part of 164 pilots who are not boat-owners, to the system of boat-owning; evidence in support of such objection, 11582–11585. 11617–11621. 11638–11641. 11833–11836——Amendments contemplated in the system of stations, witness proposing amongst other alterations, that there be a station at Tuskar or some other point in the Channel, if the pilots wish to go there, 11586, 11587. 11606–11610. 11631–11637. 11672–11697. 11703. 11715–11718. 11762–11773. 11799–11826——Advantage to the better and more industrious class of pilots if pilotage were voluntary, 11588–11590. 11611, 11612. 11617–11621. 11746–11751. 11827–11836.

Evidence as to the unduly large number of pilots, witness, for instance, not being actually engaged in piloting more than forty days in the year; particulars hereon as to the time wasted on shore and in the boats, 11588. 11598–11605. 11737–11744. 11751–11761. 11774–11788——Partiality and favouritism in the employment of the pilots, some doing much more work than others, though the earnings of each boat are equally divided, 11591–11597. 11789–11798.

Change of opinion among the pilots since the Bill has been discussed, many of them now approving of voluntary pilotage, 11613–11616——Expediency of emulation amongst the pilots, and of more freedom in the way of extension of the stations, witness contending that under a voluntary system there would be ample employment if the number of pilots were properly limited, 11616–11637. 11660 *et seq.*——Conclusion that with voluntary pilotage there would be ample inducement to pilots to be sufficiently far out in bad weather, 11625, 11626. 11819–11826.

Circumstance of witness having, some two months since, expressed himself strongly in opposition to the Bill, 11642–11648——Difficulty recently between witness and the pilotage board about his not handing over some pilotage money; this had nothing to do with his change of opinion, 11649–11659.

Statement as to the pilot boats giving a preference to large vessels; similar tendency under an optional system, 11671–11694——Unduly large number of apprentices hitherto, 11704–11714——Contemplated continuance of the licensing of pilots, 11719, 11720——Approval of the Bill, more especially as forcing upon the authorities the charges advocated by witness as regards stations, &c., 11827–11836.

Report, 1870—*continued.*

Belfast:

Several objections to the abolition of compulsory pilotage at Belfast; probability of many vessels not taking pilots under an optional system, and of frequent disaster arising on account of the difficulties of the navigation of the river, *Macfaran* 9748-9784—— Belief that the Belfast Harbour Commissioners are in favour of compulsory pilotage, *ib.* 9785-9789.

Sundry grounds upon which witness as a shipowner of Belfast objects to voluntary pilotage in the river; reference more especially to the difficulties of the navigation, and to the efficiency of the present system, *Cochrane* 9790-9817. 9829-9834.

Petition of the Belfast pilots against the Bill, which they believe would reduce their income one-half, *Benson* 9837-9840——Trial of optional pilotage in 1855, the result being that the pilots greatly suffered in income, that the shipowners had great grounds of complaint, and that at the end of a year the compulsory system was re-established, *ib.* 9839. 9854-9868. 9902-9911. 9944-9950.

Intricate and difficult character of the navigation, the channel being very narrow and winding, and a block of the river being likely to cause much disaster, *Benson* 9848-9853. 9877-9884. 9893. 9925-9931——Satisfaction of the shipowners with the present service, *ib.* 9869, 9870——Decided inadequacy of the compensation clauses of the Bill as regards the Belfast pilots, *ib.* 9872-9876. 9923, 9924.

Particulars as to the services of the pilots, twenty-three in number, when large fleets are in want of pilots; doubt as to the number being insufficient, *Benson* 9885-9898—— Instances of vessels getting on shore in the river when not in charge of pilots, *ib.* 9899-9901. 9919-9922——Statement of the pilotage rates; claim of each pilot to his own earnings, *ib.* 9912-9918——Probability of a falling off in the employment of pilots by inward-bound vessels, *ib.* 9932-9952——Average of about 100 *l.* a year as the earnings of each pilot, *ib.* 9953.

Evidence as to the safety of the approach to Belfast, so that pilotage should be optional there, *Reynolds* 11042-11052. 11054-11056.

Conflicting evidence as to the character of the pilotage of the loug hand river at Belfast, and as to the expediency of the compulsory system, *Rep.* xxvi.

Belgium. Provision in the Belgium law that the owner is not protected from liability by having a pilot on board, *Squarey* 2391——Compulsory payment of pilotage in Belgium, the owner being at the same time not free from liability, *Lamport* 3667.

Benson, Patrick. (Analysis of his Evidence.)—Is a pilot of Belfast, 9835, 9836——Petition of the Belfast pilots against the Bill, 9837-9840——Trial of optional pilotage in 1855, the result being that it completely failed, and that at the end of a year the compulsory system was re-established, 9839. 9854-9868. 9902-9911. 9944-9950.

Expected extension of employment of hobblers as pilots if the pilotage be optional, 9841-9847—— Intricate and difficult character of the navigation, a block of the river being likely to cause much disaster, 9848-9853. 9877-9884. 9893. 9925-9931——Satisfaction of the shipowners with the present service, 9869, 9870——Decided inadequacy of the compensation clauses of the Bill, 9872-9876. 9923, 9924.

Particulars as to the services of the pilots when large fleets are in want of pilots; doubt as to the number being insufficient, 9885-9898——Instances of vessels getting on shore when not in charge of pilots, 9899-9901. 9919-9922——Statement of the pilotage rates; claim of each pilot to his own earnings, 9912-9918——Probability of a falling off in the employment of pilots by inward-bound vessels, 9932-9935——Moderate earnings of each pilot, 9953.

"*Billow.*" *The.* Particulars relative to the hardship in the enforcement of compulsory pilotage in the case of this vessel, *Farrer* 34-38.

Bills of Lading. Statement as to owners protecting themselves against liability by a clause in the bill of lading where pilotage is voluntary, *Moss* 4038-4050.

Board of Trade. Absence of interference on the part of the Board of Trade, in order to enforce the obligation to take a pilot, *Farrer* 256——Statement as to complaints not coming before the Board of Trade relative to the incapacity or misconduct of pilots, *ib.* 769-771——Question as to the views of the present nautical adviser of the Board with reference to the principle of the Bill, *ib.* 964-970.

Circumstance of the Board of Trade having refused power to the Trinity House to prevent their pilots holding shares in steamers, *Sir F. Arrow* 1949.

Large powers of the Board of Trade for the removal of anomalies in the pilotage systems of the different ports, *Lamport* 3612-3618——Comment upon the action of the Board in heaping obligations upon shipowners, the removal of the obligation to take pilots being comparatively a small matter, *ib.* 3628-3634. 3675.

Report, 1870—*continued.*

Boats. Statement as to the Bristol pilots having larger boats than the Gloucester pilots, and cruising much farther out; question hereon as to their being stimulated by competition as a result of non-compulsion, *Clegram* 1080–1082. 1135–1139. 1199–1202. 1211–1214. 1256–1260. 1271–1276. 1314–1319——Character of the Gloucester pilot boats further adverted to, with reference to the distance to which they cruise to the west, *ib.* 1199–1202. 1215–1220. 1235–1237. 1261–1264——Efficiency of the Bristol pilots' boats, forty-four in number; long distance to which they sometimes go, *Drew* 6440–6452. 6668, 6669.

Doubt as to the pilot boats under a voluntary system being inefficient, *Sir F. Arrow* 1657–1659. 1816–1822——Obstacle to steam pilot boats on account of the expense, *ib.* 1660——Expectation that under voluntary pilotage in the Mersey perfectly efficient pilot boats will be found, *ib.* 1816–1822.

Belief that a voluntary system at Liverpool would not secure the same efficient boats as the compulsory system, *Hills* 2769–2776. 2785, 2786——Less probability of steam pilot boats being introduced under voluntary pilotage, *ib.* 2774–2776.

Suggestion that steam pilot boats might be used at Liverpool; probability of these, or of boats otherwise efficient, being provided if pilotage were voluntary, *Inman* 10292. 10314–10319. 10336–10342. 10398——Inferior pilot boats at Cork as compared with the Liverpool boats, *ib.* 10398–10400.

See also *Liverpool*, I. 12.

Boilers, Inspection of. Exception taken to the Government inspection of boilers, with reference to the questions of liability and of safety, *Farrer* 873–875.

Bouch, John Thomas. (Analysis of his Evidence.)—Is partner in the firm of H. Marshall & Co., of Liverpool, managing owners of the Old Black Ball line of packets to New York, 10877–10880——Grievance under compulsory pilotage, on account of the necessity of taking the first pilot that offers, whether he is a capable man or not, 10881–10885. 10992–10996——Belief that with voluntary pilotage a better class of men would be available, and would go further down the Channel, where the chief danger arises, and where they would be frequently employed, 10884–10892. 10903. 10947–10952. 10976–10981.

Conclusion that on the whole there would be as much or more employment of pilots under a voluntary system, 10890–10893. 10899–10902. 10921, 10922. 10974, 10975——Inducement to pilots to be out in bad weather if all their earnings went to themselves, instead of a portion going to the boat-owners as at present, 10893–10895. 10904, 10905. 10937–10941. 10962, 10963——Non-complaint as to the amount of the pilotage rates, 10896, 10897. 10958–10962.

Tendency of compulsory pilotage and the immunity of the owner to make the captain careless, 10906–10909——Approval of the owner being liable if he may select his pilot, but not otherwise, 10910–10913——Opinion that the Mersey up to Liverpool is not at all a difficult navigation, the difficulty being in the channel up to the Mersey, 10914–10918. 10949–10957——Conclusion that Liverpool should not be excepted from the Bill, 10918–10920.

Similarity between the New York system of pilotage and that of Liverpool, 10923–10928——Circumstance of the Bill not proposing to interfere with the power of the Mersey Board, or to provide cruising stations; duty of the pilot to be at his station, though it should be optional in the shipowner as to employing him, 10929–10936. 10973–10975.

Frequent complaints made by witness as to the pilots, some of whom are very inefficient; explanation as to his having postponed formal complaint in a recent case of collision, 10964–10972. 10992–11005——Inadequate redress received when complaints have been made, 10967–10970. 10992–10998——Necessity of a pilot when a steam tug is used, 10982–10991.

Boulogne. Exemption from compulsory pilotage in the Thames in the case of ships trading to Boulogne, or to any port in Europe north of Boulogne, *Rep.* viii, ix.

Bremner, Henry. (Analysis of his Evidence.)—Is solicitor to the pilots of Liverpool, 4620, 4621——Statement as regards the several Bills or Acts respecting pilotage in Liverpool, that the present Bill is the first which has ever been introduced for the purpose of abolishing compulsory pilotage, 4622–4630——Confirmation of the principle of compulsory pilotage by "The Merchant Shipping Act" of 1854; 4628. 4632——Increased facilities for exemption given under "The Amendment Act" of 1862, though such facilities have not been put in operation, 4628–4630. 4632.

Decided dissent from the view of Mr. Farrer, that it is no part of the business of the Government to take a ship out of the hands of those most interested in her safety, 4631——Opinion that the Mersey Docks and Harbour Board are the proper authority to deal with the pilotage of the port, 4632, 4633.

Objection

Report, 1870—*continued.*

Bremner, Henry. (Analysis of his Evidence)—*continued.*

Objection of the pilots to the Bill as not containing any provision for the compensation of the owners of the boats, 4634——Objection also to the proposed compensation of the pilots, as being utterly inadequate, 4634, 4635——Evidence in support of the conclusion as to the inadequacy of the compensation or superannuation clause, and in explanation of the claims of the pilots to an improved and more liberal scheme of compensation, 4635-4645. 4690-4711——Suggestion that the pilotage authority might be empowered to charge different rates in summer and winter, 4646-4648.

Particulars relative to the amount paid by the pilots for their boats, and the enhanced value now represented by the shares; 4649-4659——Total of 55,960 *l.* paid for boats at different times since 1824, the twelve boats now in use having cost 28,960 *l.*; 4652, 4653——Cause of the competition for boat shares; great incentive of the system to industry and frugality, 4660, 4661. 4664-4666——Error of Mr. Farrer in stating that some of the boat-owners were not pilots, 4661-4663——Explanation of the arrangements proposed for the compensation of the boat-owners; alternative plans suggested, 4667-4674. 4712-4753.

Evidence in support of the claims of the apprentices to compensation; prejudicial effect hereon of a certain provision in the second clause of the Bill, 4675-4683——Circumstance of the Liverpool pilots being liable to the full extent of their means, many of them being possessed of property, 4684-4686——Frequent actions against the pilots, the justices having summary jurisdiction up to 50 *l.*; 4687-4689.

Dissent from the view that the difference between the cost of the boats and the present value of the shares is a fictitious value, witness contending that the compensation should in justice be based upon the full share value, 4719-4753. 4774——Statement as to the obligation to carry pilots having never been forced upon coasting passenger steamers, witness disapproving of this exemption, though there are but few accidents to these vessels, 4754-4773.

Brewis, William Henry. (Analysis of his Evidence.)—Long experience of witness as a pilot of Hull, 5883-5885——Concurrence in the evidence of Mr. Bannister and Mr. Dale Brown, 5886, 5887——Very great danger in entering the Humber in certain winds, whilst the numerous and shifting sand banks render the navigation very difficult, 5888-5908. 6006-6008. 6019, 6020.

Evidence to the effect that a certain letter to the Board of Trade, signed by forty of the Hull pilots, in favour of the Bill, and of free pilotage, was so signed under misapprehension, and that nearly all these pilots have since recorded their objection to the alterations proposed by the Bill, 5909-5916. 5941-5981. 6009-6018. 6053-6066. 6080-6083.

Belief that under voluntary pilotage many vessels would try to do without pilots, and that on account of the uncertainty of remuneration the supply of efficient pilots would greatly fall off, 5917-5926. 5989-6005. 6022-6052. 6067-6077——Very moderate earnings of the pilots and master pilots, 5927-5932. 6021——Very satisfactory and economical working of the present system and regulations, 5933-5940. 5947-5956——Ample supply of steam-tugs in the Humber; doubt whether there would be an equally ample supply of pilots under an equally voluntary system, 5984-6005.

BRISTOL AND BRISTOL CHANNEL:

I. *Bristol:*
1. As to the present Pilotage Arrangements and their Operation.
2. Question of Voluntary Pilotage in the Avon.
3. Question of Voluntary Pilotage from Lundy to Kingroad.

II. *Cardiff, Newport, and Gloucester:*
1. As to the Establishment of Voluntary Pilotage and its Effect.
2. Evidence relative especially to the case of Gloucester.
3. Supply and Earnings of Pilots with reference to the Increase of Trade.

III. *Suggested Establishment of Compulsory Pilotage throughout the Bristol Channel.*

IV. *Conclusions and Recommendations of the Committee.*

I. *Bristol:*

1. As to the present Pilotage Arrangements and their Operation:

Statement as to the Bristol pilots having no claim in respect of pilotage west of Lundy Island, *Clegram* 1136-1139. 1309, 1310——Doubt as to there being any distinction as to liability in the case of vessels in the Bristol Channel under compulsory pilots and non-compulsory pilots respectively, *ib.* 1295-1298——Penalty upon unlicensed pilots in the Bristol Channel, *ib.* 1332.

Report, 1870—*continued.*

Bristol and Bristol Channel—continued.

I. *Bristol*—1. As to the present Pilotage Arrangements and their Operation—*continued.*

Constitution of the pilotage authority of Bristol under an Act of 47 Geo. 3, and under the Bristol Dock Act of 1848, the jurisdiction extending from Bristol to Lundy, *Drew* 6403–6411——Exemption of vessels under eighty tons from compulsory pilotage, unless a pilot tenders his services, when half rates are paid, *ib.* 6412–6416. 6676–6690. 6838–6840——Practice of coasting steamers to have certificated masters in lieu of pilots, certificates being given without limit, *ib.* 6417–6422. 6804–6809. 6837–6840.

Reduction in the number of Bristol pilots, there being now only sixty, owing to there being separate pilots for Cardiff, Newport, and Gloucester; further diminution intended on account of the falling off in the earnings, *Drew* 6423–6426. 6599–6610——Practice as to the pilotage of vessels from Bristol to Newport, Cardiff, and Gloucester, and as to the liability of pilots to be superseded; tendency of the system to confine the licensing of pilots to one port only, *ib.* 6454–6468. 6736–6745——Increased earnings of the Bristol pilots in 1869 owing to the increased trade, *ib.* 6519–6522.

Satisfaction given in Bristol by the present system, *Drew* 6526, 6527——Power of the pilotage authority to stop the licensing of apprentices if not required for the service, *ib.* 6660–6665——Very moderate earnings of the Bristol pilots, *ib.* 6666, 6667——Doubt as to the pilotage rates between Kingroad and Bristol being excessive, *ib.* 6760–6768——Undue value placed upon their boats by the pilots, *ib.* 6835, 6836.

Comparative rates charged by the Bristol pilots and by the pilots of Cardiff, &c.; much higher rates in the former case, *H. E. Evans* 12334. 12337 12378——Statement as to the captain of one of the steamers of witness's company not having taken out a pilotage certificate for Bristol, but only for Swansea and Milford, *ib.* 12343. 12349–12351. 12367–12376.

2. Question of Voluntary Pilotage in the Avon:

Exceedingly intricate and difficult navigation of the Avon from Kingroad to Bristol, very strict supervision and discipline being essential in order to prevent obstruction, and voluntary pilotage being most objectionable, *Drew* 6427–6439. 6470–6482. 6492–6500. 6631–6659. 6751–6759. 6791–6803. 6850–6867——Views of the corporation of Bristol in favour of a compulsory system, and of entire control as regards the river itself, *ib.* 6501–6507. 6584, 6585——Sufficiency of about 120 pilots for the river, *ib.* 6514–6518.

More exceptional character of the Avon than of the Severn above Chepstow, *Drew* 6653-6659. 6843-6849——Unanimity at Bristol as regards the importance of compulsory regulations in the river, *ib.* 6791–6793. 6854, 6855——Less safety of vessels in the Avon if navigated by their captains instead of by pilots, *ib.* 6822-6824, 6864-6867——Further objection to voluntary pilotage in the Avon, though the great majority of vessels might continue to take pilots between Kingroad and Bristol, *ib.* 6850–6881.

Approval of non-compulsory system at Bristol; undue pressure of rates under the compulsory system, *H. E. Evans* 12335–12337——Necessity of foreign vessels taking pilots from the mouth of the Avon up to Bristol, this however being a proper matter to be dealt with by harbour regulations, and witness strongly objecting to the steamers of his company being compelled to take a pilot, *ib.* 12340–12348. 12352–12366. 12379–12383. 12411–12419——Belief that optional pilotage in the Avon would not lead to any increase of accidents likely to obstruct the navigation, *ib.* 12362–12366. 12379–12383.

3. Question of Voluntary Pilotage from Lundy to Kingroad:

Conclusion as to voluntary pilotage being equally effectual for Bristol as for Gloucester or Cardiff, *Farrer* 187——Inexpediency of vessels bound to Bristol being compelled any more than Gloucester vessels to take pilots so far west as Lundy Island, if they do not require them, *Clegram* 1337–1343. 1359–1361——Improved lighting of the Bristol Channel cited as facilitating the adoption of voluntary pilotage, *Sir F. Arrow* 1748–1752.

Improbability of the pilots going westward of Lundy under an optional system, *Drew* 6453. 6589–6598——Objection to the compulsory system being abolished from Lundy inwards; improbability in such case of an efficient supply of pilots being kept up for the lower part of the Channel, *ib.* 6469. 6508–6513. 6589–6598. 6611–6630. 6783–6786——Respects in which danger is likely to arise between Lundy and Kingroad if the pilotage were voluntary, *ib.* 6483–6491. 6812–6821——Circumstance of the Corporation being favourable to voluntary pilotage between Lundy and the Holmes; witness does not concur in this view, *ib.* 6532–6536. 6580–6588. 6691–6717. 6748–6750. 6772–6786.

Examination as to witness having been opposed to voluntary pilotage in the case of Gloucester, Cardiff, and Newport, and as to pilots being largely employed voluntarily; doubt, however, whether the same results would follow as regards vessels for Bristol, *Drew* 6535–6579. 6611 *et seq.*

Exemption

Report, 1870—*continued.*

Bristol and Bristol Channel—continued.

II. *Cardiff, Newport, and Gloucester:*

1. As to the Establishment of Voluntary Pilotage and its Effect:

Exemption of Gloucester, Newport, and Cardiff from compulsory regulations by Act in 1861, *Farrer* 11. 98——Great difficulty as to pilotage in the Bristol Channel, which was ended by Newport, Cardiff, and Gloucester obtaining a Bill doing away with compulsory pilotage, *ib.* 108——Further statement relative to the abolition of compulsory pilotage, as regards Gloucester, Cardiff, and Newport, whilst it continues in force as regards Bristol; satisfaction of shipowners and pilots of the former places under the voluntary system, *ib.* 175-186——Careful inquiry by a Committee of the House of Commons, before Gloucester, Cardiff, and Newport were freed from the compulsory system, *ib.* 176-212.

Efficiency of voluntary pilotage in the Severn further adverted to; increased earnings of the Cardiff, Newport, and Gloucester pilots, whilst the Bristol pilots heve suffered, *Farrer* 326. 332-334. 336-338. 486-488. 567-576. 662-666——Less satisfactory state of things in the Severn if the increased employment of pilots had taken place under a compulsory system, *ib.* 662-666——Effect of the voluntary system, as regards the employment of pilots in the Bristol Channel, further adverted to; satisfactory working of the system, *ib.* 865-872.

Summary of the former regulations as to the pilotage, and of the evils complained of by Newport, Cardiff, and Gloucester, through being subject to the jurisdiction of the Bristol authorities, *Clegram* 1033-1044——Inquiry on the part of the Board of Trade, followed up by a Bill introduced by Cardiff, Newport, and Gloucester, in 1861, which became law, and exempted those places from the jurisdiction of Bristol, and from compulsory pilotage, *ib.* 1045-1052.

Belief that there is the same satisfaction at Cardiff and Newport, as at Gloucester, *Clegram* 1079——Statement as to the pilotage authorities of Gloucester, Cardiff, and Newport not being responsible for the buoyage, *ib.* 1223-1228——Object of the Bill of 1861 not only to get rid of the monoply, but to establish the non-compulsory principle, *ib.* 1320-1323.

Absence of analogy between the circumstances of the Bristol Channel and of the Mersey, *Hills* 2691-2705——Respects in which a voluntary system may be more suited to the Bristol Channel and to Gloucester than to the Clyde, *Henderson* 5008-5022. 5152-5160. 5197-5206.

Statement as to compulsory pilotage having been applied for by the Bill of 1861 relative to Cardiff, &c., and as to the Bill having been altered by the Committee of the House, *Drew* 6695-6701. 6787-6790——Objection formerly by Cardiff, Swansea, and other ports to their vessels being liable to be boarded by the Pill or Bristol pilots, *Ford* 7250-7252.

Very satisfactory working of free pilotage at Cardiff, &c., there being no lack of pilots, who get good employment, *H. E. Evans* 12334. 12403-12409——Practice of Cardiff vessels to employ pilots whenever there is any occasion, the voluntary system not having led to risk or accidents, *ib.* 12338. 12403-12410.

2. Evidence relative especially to the case of Gloucester:

Particulars relative to the navigation up to Gloucester from Lundy Island, there being four pilotage stages and rates; very difficult character of the navigation between Kingroad and the entrance to the canal, *Clegram* 1053-1057. 1122-1129. 1159-1164. 1203-1205. 1215-1217. 1261. 1268-1270. 1333-1338. 1363-1365——Separate pilotage authority for Gloucester; how constituted, *ib.* 1058. 1096-1105. 1351. 1354-1358——Authority of the Gloucester pilots to pilot to the limit of the Bristol Channel, that is, Lundy Island, *ib.* 1059——Large reduction in the rates after the passing of the Act of 1861, *ib.* 1060, 1061. 1083, 1084——Difficulty of the navigation in the upper part of the Channel, *ib.* 1062, 1063.

Statement that there are now twenty-one licensed pilots of Gloucester, and eight apprentices, there being eighteen pilot boats; conclusion as to the sufficiency of this staff, which is regulated by the pilotage board, *Clegram* 1064-1078. 1106-1111. 1115-1119. 1130-1132. 1167-1170. 1249-1253. 1253-1285. 1290, 1291. 1352, 1353. 1366——Decided opinion that the introduction of voluntary pilotage at Gloucester has been most successful; grounds for this conclusion, *ib.* 1068 *et seq.*——Information as to the average earnings of the Gloucester pilots; probable inaccuracy of a certain return on this subject, 1069-1071. 1112-1115. 1171-1195. 1254, 1255.

Necessity of pilotage berween Kingroad and the entrance to the canal, even though it is not legally compulsory, *Clegram* 1085-1087. 1122-1129. 1333-1336——Large increase of the trade of Gloucester and of the Bristol Channel generally, *ib.* 1108-1111. 1233, 1234. 1245-1248——Regulations of the Gloucester Pilotage Board for securing the attendance of pilots in the different parts of the district; belief as to the accuracy of the

Report, 1870—*continued.*

Bristol and Bristol Channel—continued.

II. *Cardiff, Newport, and Gloucester*—2. Evidence relative especially, &c.—*continued.*

return required to be furnished by the pilots on this point, *Clegram* 1133–1135. 1165, 1166. 1199–1202. 1229–1232. 1238–1244. 1265–1267. 1344–1346——Particulars as to the option in the master of a Gloucester vessel to change a Bristol pilot for a Gloucester pilot after the vessel has come east of Lundy Island; absence of abuse or hardship on this score, *ib.* 1140–1158. 1302–1313——Circumstance of there being no masters or mates licensed at Gloucester, *ib.* 1196–1198.

Instance of a vessel of witness having had to wait for a pilot at Kingroad when going to Gloucester, *Ford* 7233–7239.

3. Supply and Earnings of Pilots with reference to the Increase of Trade:

Decrease in the trade of Bristol and increase in the trade of Cardiff adverted to as sufficient to account for the decrease of pilots in the former case and the increase in the latter, *Farrer* 725–729——Large and increasing trade of the Bristol Channel adverted to in connection with the pilots' earnings under the voluntary system, *Sir F. Arrow* 1740, 1741.

Small increase in the pilotage earnings of Cardiff and Newport as compared with the great increase of trade, *Drew* 6523–6525——More numerous supply of pilots in the Bristol Channel since the pilotage of certain ports has been voluntary; increased supply owing probably to the increase of trade, *Chaddock* 11432–11436. 11521–11531. 11538–11541——Large increase of pilots at Cardiff, Gloucester, and Newport since the pilotage has been optional, whilst the pilots at Bristol under the compulsory system have decreased, *G. H. Evans* 12324–12332. 12384–12394.

Aggregate return of the tonnage of sailing and steam vessels that entered and cleared at each port during the year 1860 and 1868; great increase, especially at Cardiff, *App.* 565.

III. *Suggested Establishment of Compulsory Pilotage throughout the Bristol Channel:*

Opinion in favour of compulsory pilotage throughout the whole of the Bristol Channel, all the different jurisdictions being combined; facility in such case of maintaining a station at Lundy, and of reducing the rates, *Rosser* 7034–7037. 7063–7087. 7153, 7154.

IV. *Conclusions and Recommendations of the Committee:*

Summary of the former regulations as to the pilotage of the Bristol Channel, and of the local ports respectively, *Rep.* xxiii——Re-arrangement under the Bristol Channel Pilotage Act of 1861, Gloucester, Newport, and Cardiff having since been exempt from the compulsory regulations previously in force, *ib.* xxiii, xxiv.

Sums paid to the pilots of Bristol and other ports respectively, in 1860 and in 1868; important diminution in the case of Bristol, whilst the number and earnings of pilots of Cardiff, Gloucester, Newport, &c., have largely increased, *Rep.* xxiv, xxv.

Very satisfactory working of the system introduced in 1861 as regards Cardiff, Newport, and Gloucester, *Rep.* xxv——Feeling at Bristol and at Swansea in favour of an extension of the voluntary system, *ib.* xxv, xxvi——Conclusion that all masters who do not know the river, will of their own accord always take pilots, *ib.* xxvi.

Insertion by the Committee of a clause in the Bill empowering the harbour authorities of Bristol to make bye-laws for the regulation of the Avon as far as Kingroad, *Rep.* xxvi.

See also *Boats. Swansea.*

Brown, Dale. (Analysis of his Evidence.)—Was commodore of pilots at Hull from 1844 to 1861; is now superintendent of the Dock Company, 5794–5797——Concurs generally in the evidence of Mr. Bannister, 5798–5800——Statement as to the exceedingly dangerous character of the navigation of the Humber, on account of the shifting sand-banks and other causes, 5801–5812. 5842–5848. 5864–5867. 5878–5882——Great facility in the granting of pilotage certificates to masters and mates of local vessels, 5813–5816——Careful check upon the cruising of the pilots, 5817, 5818——Severe punishment of pilots when complaints are established, 5817–5822.

Very moderate earnings of the pilot boats and pilots, 5823–5829——Belief that under the Bill there would be no longer the same inducement to efficient men to remain in the service, as there would not be the same regular employment, whilst a reduction of numbers would be prejudicial, 5830–5841. 5849 *et seq.*——Expectation that in dangerous weather pilots would not be found when most wanted, if the pilotage were voluntary, 5863–5867. 5876–5882.

Report, 1870—*continued.*

Buoyage and Lighting. Less danger in pilotage waters through the improved buoyage, &c., *Farrer* 820, 821——Less necessity for compulsory pilotage since the great improvements effected in buoyage and lighting, *Sir F. Arrow* 1601. 1848.

Burns, Messrs. Circumstance of Messrs. Burns of Glasgow being now opposed to compulsory pilotage, *Farrer* 210.

C.

Calcutta. Objectionable practices formerly of the pilots at Calcutta, *Judkins* 2209–2213——Difficulty of the navigation of the Hooghly adverted to; importance of the employment of experienced pilots, *Castle* 7735. 7737–7740——Unrestricted number of pilots at Calcutta, an examination being required, *Duncan* 9715–9717.

Canada. Decision in Canada that the shipowner is not free from liability, though his ship is in charge of a pilot, *Farrer* 84.

Cardiff. See *Bristol and Bristol Channel,* II.

Castle, Frederick Augustus. (Analysis of his Evidence).—Has had considerable experience in the command of large ships out of London, 7696, 7697——Great confidence placed by witness in the Trinity House pilots; especial value of their previous nautical experience as masters or mates, 7698–7706——Good prospects given up in order to become pilots, 7707, 7708——Great danger of increased loss of life and property between Dungenness and London if compulsory pilotage were abolished, 7709–7714——Increased necessity for a pilot when a tug is used; illustration of this, 7712–7714——Reference to the liability respectively of the pilot and of the underwriters in cases of collision or loss, 7715–7718.

Obstacle to a selection of pilots by foreign ships inwards, the system of examination and license being most useful in such cases, 7719–7722——Degree of control and command exercised by the pilot, though he does not supersede the captain, 7723–7730——Unwillingness and unfitness of witness to navigate his ship through the Thames, without an efficient pilot on board, 7731–7736——Difficulty of the navigation of the Hooghly adverted to; importance of the employment of experienced pilots, 7735. 7737–7740.

Chaddock, Robert. (Analysis of his Evidence.)—Is a master mariner, and is well conversant with the navigation of the ports of Liverpool, London, Bristol, &c., 11400–11407.——11499–11506——Complaint as to the compulsion to take a pilot outwards from Liverpool, it being desirable to have the option of taking a pilot inwards, 11408, 11409. 11466–11471——Grievance in witness being required, on account of the tonnage of his vessel, to take an apprentice pilot at Liverpool instead of a thoroughly competent pilot, 11410–11417. 11480–11492. 11546, 11547.

Opinion that compulsory pilotage should be abolished at Liverpool, and that this change would produce a more efficient class of pilots, who would go further to sea, 11418–11425. 11430, 11431. 11449. 11532–11537——Feeling among the Liverpool pilots in favour of voluntary pilotage, 11426, 11427——Discontent of some pilots as to the boat-owning system, 11428, 11429.

More numerous supply of pilots in the Bristol Channel since the pilotage of certain ports has been voluntary; increased supply owing probably to the increase of trade, 11432–11436. 11521–11531. 11538–11541——Facility in obtaining pilots off Queenstown under the voluntary system, 11437–11447——Frequent want of pilots outside Waterford in bad weather, though the pilotage is compulsory, 11442–11444.

More dangerous navigation of the Mersey than of the Thames, on account of the prevailing winds being from the westward, 11445–11447——Inconvenience of the pilot stations at Liverpool for sailing ships, 11448——Statement in support of the conclusion that it should be optional in witness to take a pilot in the Thames, 11450–11465——Unsatisfactory working of the non-liability of the owner when there is a pilot on board, 11473–11479.

Degree of difficulty in getting into Swansea, witness, however, seeing no necessity for compulsory pilotage, 11507–11520——Suggestion that in levying the pilotage charge at Liverpool, tonnage as well as draught might be the basis of the charge 11544–11546. 11557–11563——Absence of necessity for a pilot when a vessel is being towed out of Liverpool, most vessels using a tug both in and out of the Mersey, 11548–11553.

Chambers of Commerce. Petition received from the United Associated Chambers of Commerce in favour of abolition of compulsion, *Farrer* 225–227.

Channel Islands. Exemption from compulsory pilotage in the case of ships of Guernsey, Jersey, &c., which are wholly laden with stone, the produce of those islands, *Rep.* viii.

Charleston. Illustration at Charleston of the improvement consequent upon the adoption of voluntary pilotage, *Duncan* 9573–9575. 9746.

Report, 1870—*continued.*

"*Chase*," *The.* Particulars relative to the hardship in the enforcement of compulsory pilotage in the case of this vessel, *Farrer* 30-32.

Cinque Ports Pilots. Efficiency of the Cinque Ports pilots, there being very few complaints against them, *Sir F. Arrow* 1776-1780——Evidence in support of the conclusion that the compensation clauses of the Bill are altogether inadequate; contributions and earnings of the Cinque Ports pilots adverted to hereon, *Millen* 7307-7310. 7345-7357. 7416-7451. 7492-7498; *Mallett* 7544-7570——The gross pension of Cinque Ports pilots is 50*l.* a year, out of which there is a deduction of 6*l.* a year for a widows' fund, *Millen* 7416-7427. 7492-7494——Larger pension of the Cinque Ports pilots than the Trinity pilots, *ib.* 7448-7451.

Qualifications and nautical practice required in Cinque Ports pilots; prospect given up in order to enter the service, *Mallett* 7508-7511. 7520, 7521. 7692-7695——Calculation that the Cinque Ports pilots would lose one-third of their income if their compulsory employment were abolished, *ib.* 7529-7531. 7603-7638.

Regular apprenticeship served by witness as a Cinque Ports pilot, *Ralph* 7841-7844——Several alterations for the worse effected in the position of the Cinque Ports pilots on their coming under the Trinity House, *ib.* 7845-7855——Large contributions made by witness to the Trinity Superannuation Fund, as compared with his claims upon the fund, *ib.* 7855-7879——There are altogether seventy of the old class of Cinque Ports pilots at Deal and Dover, *ib.* 7870-7872——Varying age at which the Cinque Port pilots are superannuated, there being some on duty over seventy years of age, *ib.* 7880-7883. 7902-7909.

Paper prepared by Mr. Hardy, in March 1854, together with calculations relative to the Cinque Ports Pilots' Fund, and explanations on the subject of the surrender of the cutters and pilot boats, *App.* 568, 569——Return of the sums received and paid by the Trinity House on account of the Pilots' Fund, *ib.* 570, 571.

Total of fifty-nine old Cinque Port pilots now remaining, whose employment is practically confined to the inward pilotage, *Rep.* ix.——*See* also *Thames, The.*

City of Dublin Steam Packet Company. Dissatisfaction on the part of the City of Dublin Steam Packet Company in regard to pilotage certificates not being granted by the Liverpool authorities, *Farrer* 148-150.

Establishment of the company in 1823, it now having twenty steamers running from Dublin to Liverpool, Holyhead, &c., *Watson* 10680-10683——Grievance felt by the company for some years after its formation in having to pay compulsory pilotage rates at Dublin and Liverpool, *ib.* 10684-10687——Arrangement made with the Dublin Ballast Board, by which, on paying 150*l.* a year for ten years towards a superannuation fund, the company was relieved from pilotage charges in the port, *ib.* 10688-10964.

Very great difficulty experienced by the company in getting its captains examined for pilotage certificates by the Liverpool authorities; details as to the grounds for this complaint, *Watson* 10695. 10752-10765——Arrangement by which the company has paid a reduced rate at Liverpool in consideration of their never employing the pilots of their port, their own captains acting as pilots; complaint as to this payment, which amounts to 400*l.* a year, no services being rendered in return, *ib.* 10696-10711. 10766-10772. 10828-10831——Perfect immunity of the company's vessels from accident in the Mersey, though not taking licensed pilots, *ib.* 10709, 10710. 10746. 10839.

Invariable employment of certificated captains on the vessels of witness's company going with passengers into Liverpool, *Watson* 10770-10772——Statement as to the captains receiving certificates from the Board of Trade on certain conditions without examination, *ib.* 10773-10781. 10840-10845.

Clegram, William Brown. (Analysis of his Evidence.)—Is superintendent and engineer of the Gloucester and Berkeley Canal; has for many years taken an interest in the question of the pilotage of the Bristol Channel, 1031, 1032——Summary of the former regulations as to the pilotage, and of the evils complained of by Newport, Cardiff, and Gloucester, through being subject to the jurisdiction of the Bristol authorities, 1033-1044——Inquiry on the part of the Board of Trade, followed up by a Bill introduced by Cardiff, Newport, and Gloucester, in 1861, which became law, and exempted those places from the jurisdiction of Bristol, and from compulsory pilotage, 1045-1052.

Particulars relative to the navigation up to Gloucester from Lundy Island, there being four pilotage stages and rates; very difficult character of the navigation between King Road and the entrance to the canal, 1053-1057. 1122-1129. 1159-1164. 1203-1205. 1215-1217. 1261. 1268-1270. 1333-1338. 1363-1365——Separate pilotage authority for Gloucester; how constituted, 1058. 1096-1105. 1351. 1354-1358——Authority of the Gloucester pilots to pilot to the limit of the Bristol Channel; that is, Lundy Island, 1059——Large reduction in the rates after the passing of the Act of 1861; 1060, 1061. 1083, 1084——Difficulty of the navigation in the upper part of the Channel, 1062, 1063.

Statement

Report, 1870—*continued.*

Clegram, William Brown. (Analysis of his Evidence)—*continued.*

Statement that there are now twenty-one licensed pilots at Gloucester, and eight apprentices, there being eighteen pilot boats; conclusion as to the sufficiency of this number, which is regulated by the Pilotage Board, 1064–1078. 1106–1111. 1115–119. 1130–1132. 1167–1170. 1249–1253. 1278–1285. 1290, 1291. 1352, 1353. 1366 —— Decided opinion that the introduction of voluntary pilotage at Gloucester has been most successful; grounds for this conclusion, 1086 *et seq.*

Information as to the average earnings of the Gloucester pilots; probable inaccuracy of a certain Return on this subject, 1069–1071. 1112–1115. 1171–1195. 1254, 1255 —— Belief that there is the same satisfaction at Cardiff and Newport as at Gloucester, 1079 —— Statement as to the Bristol pilots having larger boats than the Gloucester pilots, and cruising much farther out; question hereon as to their being stimulated by competition as a result of non-compulsion, 1080–1082. 1135–1139. 1199–1202. 1211–1214. 1256–1260. 1271–1276. 1314–1319.

Necessity of pilotage between King Road and the entrance to the canal, even though it is not legally compulsory, 1085–1087. 1122–1129. 1333–1336 —— Opinion, based upon witness's experience of the Bristol Channel, that it would be a great advantage if compulsory pilotage were abolished generally, 1088–1095. 1206–1210. 1299–1301 —— Regulations of the Gloucester Pilotage Board for securing the attendance of pilots in the different parts of the district; belief as to the accuracy of the Return required to be furnished by the pilots on this point, 1133–1135. 1165, 1166. 1199–1202. 1229–1232. 1238–1244. 1265–1267. 1344–1346.

Statement as to the Bristol pilots having no claim in respect of pilotage west of Lundy Island, 1136–1139. 1309, 1310 —— Particulars relative to the option in the master of a Gloucester vessel to change a Bristol pilot for a Gloucester pilot after the vessel has come east of Lundy Island; absence of abuse or hardship on this score, 1140–1158. 1302–1313 —— Circumstance of there being no masters or mates licensed at Gloucester, 1196–1198.

Character of the Gloucester pilot boats further adverted to with reference to the distance to which they cruise to the west, 1199–1202. 1215–1220. 1235–1237. 1261–1264 —— Statement as to the pilotage authorities of Gloucester, Cardiff, and Newport not being responsible for the buoyage, 1223–1228 —— Approval of restriction by the local pilotage authorities upon the number of pilots, 1292–1294. 1324–1331.

Doubt as to there being any distinction as to liability in the case of vessels in the Bristol Channel under compulsory pilots and non-compulsory pilots respectively, 1295–1298 —— Object of the Bill of 1861, not only to get of the Bristol monopoly but to establish the non-compulsory principle, 1320–1323 —— Penalty upon unlicensed pilots in the Bristol Channel, 1332.

Inexpediency of vessels bound to Bristol being compelled any more than Gloucester vessels to take pilots so far west as Lundy Island if they do not require them, 1337–1343. 1359–1361 —— Invariable practice of the vessels which employ steam tugs up to Gloucester to take pilots also; deduction from the pilotage rate in such a case, 1347–1350.

CLYDE, THE:

I. *From Glasgow to Greenock:*

1. Extent of Compulsory Pilotage District.
2. Constitution of the Pilotage Board, and Regulations adopted as to Licenses, Rates, &c.
3. Evidence as to the Difficulties and Dangers of the Navigation, and as to the great Importance of Compulsory Pilotage on this and other Grounds.
4. Licensed Masters and Mates.
5. Exemptions.
6. Liability of Pilots.
7. Feeling in Glasgow adverse to Voluntary Pilotage.
8. Evidence favourable to Voluntary Pilotage, subject to Harbour Master's Regulations.
9. Conclusions and Recommendations of the Committee.

II. *From Greenock Seawards.*

I. *From Glasgow to Greenock:*

1. Extent of Compulsory Pilotage District:

Statement that the pilotage of the Clyde is only compulsory above Newark Castle, though the practice is to take pilots between the tail of the bank and Glasgow, *Henderson* 4896–4898 —— Expediency of the Clyde compulsory pilotage district being somewhat extended, by making the tail of the bank, instead of Newark Castle, the legal boundary; practically this is the boundary at present, *Allan* 5289–5291. 5354–5367.

Report, 1870—*continued.*

Clyde, The—continued.

1. *From Glasgow to Greenock*—continued.

2. Constitution of the Pilotage Board, and Regulations adopted as to Licenses, Rates, &c.

Clause in the Act obtained by the Clyde Trustees in 1825, showing the local powers under which pilotage was established, *Turner* 4782——Regulations adopted by the Pilotage Board in 1826, in order to enforce compulsory pilotage at fixed rates, *ib.* 4783, 4784.

Explanation relative to the Act obtained in 1858, and the provisions therein, combining the pilot boards of Glasgow and Greenock into one pilotage authority for the river and Firth of Clyde; powers given to the pilot board thus constituted, *Turner* 4786-4788——Bye-laws passed by the board on the subject of licenses: practice of the Glasgow committee to license compulsory pilots, and of the Greenock committee to license non-compulsory or deep-sea pilots, *ib.* 4789-4793.

Practical experience and intimate knowledge of the river required in the pilots before they are licensed, *Henderson* 4900-4903——Mode of election to the pilotage board, commerce and shipping being duly represented, *ib.* 5137-5141.

Great importance of the detailed regulations laid down by the Clyde Trustees and by the Pilot Board, it being essential to have the local pilots thoroughly acquainted with the details, *Allan* 5219-5233——Charge of the pilotage both by the foot and by tonnage, *ib.* 5337-5340——Explanation as to shipowners being allowed to select their pilot outwards, *ib.* 5347-5353——Obligation upon ships when launched to take a pilot down the river, *Alexander* 5503-5505.

3. Evidence as to the Difficulties and Dangers of the Navigation, and as to the great Importance of Compulsory Pilotage on this and other Grounds.

Particulars relative to the enormous increase of traffic on the Clyde, and the exceedingly difficult character of the navigation above Greenock, so that witness advocates an extension rather than a diminution of compulsory pilotage on this part of the river, *Turner* 4782. 4785. 4794. 4804-4843. 4858, 4859. 4878-4887——Numerous accidents in the Clyde before 1825, when there was no pilotage in the river; necessity then shown for the introduction of compulsory pilotage, *ib.* 4782. 4802, 4803. 4840——Great improvement consequent upon the introduction of the compulsory system, *ib.* 4785——Very tortuous character of the river, the channel being very narrow in some places, *ib.* 4815. 4820-4823. 4885, 4886; *Henderson* 4944-4946——More rapid increase in the traffic and in the size of the ships than in the improvement of the navigation, though the latter has been very great, *Turner* 4842. 4881-4887; *McKelvie* 5397, 5398; *Alexander* 5439, 5440.

Belief that the abolition of compulsory pilotage would make the Clyde an impracticable navigation, *Henderson* 4899——Details relative to the tortuous, narrow, and dangerous character of the navigation, whilst the traffic on the river is enormous, so that the use of pilots is an absolute necessity, *ib.* 4904 *et seq.*——Great length and tonnage of some vessels now built on the Clyde, *ib.* 4908-4910.

Belief that the abolition of compulsory pilotage would greatly increase the risk, would deter many owners from sending their ships up to Glasgow, and would destroy the efficiency of the pilot service, *Henderson* 4930-4938. 5023-5025. 5050-5062. 5148-5151. 5161-5177. 5183-5187——Very exceptional character of the river above Greenock, so that exceptional arrangements are necessary, *ib.* 4944-4962. 4990-5007——Great care required in the navigation of steamers, *ib.* 5092, 5093——Probability of many vessels not taking pilots unless compelled to do so, *ib.* 5101-5109. 5184-5187——Great liability to the navigation being stopped through vessels grounding, the exemptions from pilotage increasing this danger, *ib.* 5161-5177.

Danger in connection with the dredging and other works going on in the river, *Allan* 5223-5233——Enormous traffic on the river, there being great danger from the numerous river steamers as well as from the large ships, *ib.* 5234-5244. 5270-5272——Grounds for the conclusion that but for the compulsion to take a pilot many vessels, not knowing the port, might try to save pilotage rates, to the great jeopardy of the navigation, *ib.* 5250-5258. 5307-5335.

Obstacle to widening the navigable channel where it is most narrow, *Allan* 5266-5269——Impracticability of navigating the Clyde merely by chart, *ib.* 5272——Inadequacy of harbour master's regulations for meeting the difficulties of the navigation, *ib.* 5292-5295.

Great increase in the size and draught of vessels in the Clyde, there being much danger of their grounding on account of the navigable channel being so narrow and winding, *McKelvie* 5397-5413——Necessity of pilots with ample local knowledge, captains not being competent to take large vessels up or down the river; illustration to this effect, *ib.* 5406-5412. 5421-5426; *Alexander* 5448-5456. 5479-5484——Inadequacy of a chart without a pilot, *McKelvie* 5415.

Probability

Report, 1870—*continued.*

Clyde, The—continued.

1. *From Glasgow to Greenock*—continued.

3. Evidence as to the Difficulties and Dangers of the Navigation, &c.—*cont^d.*

Probability of many vessels not employing pilots in the Clyde under an optional system, *McKelvie* 5427–5435; *Alexander* 5457. 5461–5466—— Excessive size of some of the ships now built on the Clyde, the greatest care being required in order to take them safely down the river, *ib.* 5439–5448. 5452–5456 —— Extent of employment of pilots by vessels to and from Greenock; doubt as to this being any proof that a pilot would be taken between Greenock and Glasgow, *ib.* 5511–5536.

4. Licensed Masters and Mates:

Total of 133 masters and mates licensed for pilotage in the Clyde, *Farrer* 160—— Large number of pilotage certificates granted to masters in the Clyde; qualifications required, *Henderson* 4940–4943. 5142–5147——Inefficiency of masters as pilots unless they know the river thoroughly, *ib.* 5071–5085——Statement as to the number of masters and mates licensed as pilots for river steamers, &c., and as to the license fee in each case being fixed at 26*s.* a year, *Allan* 5245–5249. 5261–5265. 5379–5388——Large number of masters licensed as pilots for river steamers; unfitness of these to pilot large vessels, *Alexander* 5490–5492.

5. Exemptions;

Provisions for the exemption in the Clyde of all vessels under 100 tons, *Farrer* 158, 159 ——Exemption of vessels above sixty tons, and also of vessels up to 100 tons, under certain conditions which have not been fulfilled, *Turner*, 4789. 4795–4798. 4861, 4862 ——Probability of the Pilot Board of Glasgow making improved regulations if left to themselves; opinion that one great improvement would be to remove the exemption of any vessel over thirty tons above Greenock, *ib.* 4794. 4804, 4805.

6. Liability of Pilots:

Approval of extending the liability of the pilot from 20 *l.* to 100 *l.*, *Allan* 5341–5346.

7. Feeling in Glasgow adverse to Voluntary Pilotage:

Very strong feeling in Glasgow against the present Bill, *Turner* 4801, 4802. 4814. ——Absence of complaint against the compulsory pilotage rates or against the pilots, *ib.* 4808, 4809——Statement of the circumstances under which the Pilot Board met at Glasgow instead of at Greenock, upon the occasion of the preparation of a petition against the Bill; there was nothing irregular in this proceeding, *ib.* 4844–4847.

Feeling of the large shipowners in Glasgow in favour of compulsion, *Henderson* 4939. 5188–5191——Reason for the coasting shipowners not objecting to the Bill, *ib.* 5196 ——General feeling of shipowners in Glasgow in favour of compulsion; exceptional instances to the contrary, *Allan* 5259, 5260. 5374–5378.

8. Evidence favourable to Voluntary Pilotage, subject to Harbour Master's Regulations:

With regard to the operation of compulsory pilotage in the narrow part of the Clyde between Greenock and Glasgow, witness believes it probable that efficient pilots would be equally employed, and that the damage done would be equally limited, under a voluntary system, *Farrer* 157. 161. 577–590——Conclusion that a voluntary system may be adopted between Glasgow and Greenock as well as below Greenock, *ib.* 772–781 —— Question whether the same exceptional circumstances are not involved in the case of the Upper Clyde as of the Upper Thames, *ib.* 1027.

Suggestion in regard to the navigation of the Clyde near Glasgow being under the jurisdiction of the harbour master, it not being necessary to maintain compulsory pilotage *Sir F. Arrow* 1771–1775. 1823–1830—— Further conclusion with regard to the navigation of the Clyde near Glasgow, that this is more a harbour-master's question than a pilot's question, *ib.* 11856–11858. 11882. 11889, 11890——Opinion as to the Avon presenting a stronger case for pilotage than the Clyde, *ib.* 11898–11901.

Instances of accident to vessels in the Clyde in charge of river pilots, *Lee* 11937. 11944, 11945——Hardship in compelling coasters and small vessels to take pilots in the Upper Clyde, *ib.* 11985–11989.

9. Conclusions and Recommendations of the Committee:

Reference to the evidence from Glasgow as being strong and unanimous in favour of the present compulsory system between Glasgow and Newark Castle, whilst it is equally unanimous in favour of compulsory pilotage below Greenock, *Rep.* xxii, xxiii——The case of the Clyde between Glasgow and Newark Castle is very peculiar, and is more in the nature of harbour police and regulations than of pilotage, *ib.* xxiii——Conclusion that without compulsion vessels requiring a pilot would take one, and that there is no good reason for retaining the compulsory system above Greenock, *ib.*

Clause inserted by the Committee of the Bill empowering the local authorities to make bye-laws for the proper regulation and police of this portion of the river, *Rep.* xxvi.

CLYDE, THE—continued.

II. *From Greenock Seawards:*

Approval of non-compulsory pilotage below Greenock, *Turner* 4806. 4807. 4838. 4871–4877——Statement as to the very inefficient character of the non-compulsory pilots below Greenock as compared with the efficiency of the compulsory pilots above Greenock; strong objection on this ground to the voluntary system, *Henderson* 5023–5027. 5047–5070. 5110–5114. 5130–5135. 5178–5187——Inferiority of the Greenock deep-sea pilots as compared with the Glasgow pilots, *Allan* 5279–5285——Very easy pilotage below Greenock, *Alexander* 5508–5510.

Complaint as to the river pilots frequently infringing upon the ground of the deep-sea pilots, by taking vessels to Garelock as well as out to sea and round the coast, whereas the deep-sea pilots cannot go above Newark Castle, *Lee* 11914 *et seq.*——Compulsory pilotage on the river whilst from Newark Castle out it is optional, *ib.* 11915.

Witness submits that the deep-sea pilots should be protected within their own limits, or should be allowed to pilot up to Glasgow, *Lee* 11924–11931. 11952–11957. 11982–11984——Qualifications of witness as pilot adverted to; he has hardly ever had an accident to a ship, *ib.* 11931–11936——Information as the employment and average earnings of the eighteen deep-sea pilots of Greenock; witness makes about 200 *l.* a year, *ib.* 11938–11952. 11966–11981.

Concurrence in the complaint of Mr. Robert Lee as to the grievance suffered by the Greenock deep-sea pilots through the encroachments of the river pilots, *Adams* 11999–12010——Small earnings now made by witness and the majority of the deep-sea pilots, *ib.* 12002–12009.

Concurrence in the complaint as to the river pilots of Glasgow infringing on the pilotage grounds of the Greenock deep-sea pilots, whereas the latter are not allowed to go up to Glasgow, *Irvin* 12011–12020.

Coasters. See *Bristol and Bristol Channel. Clyde, The. Dublin. Exemptions. Hull. Liverpool. Runcorn. Swansea. Thames, The.*

Cochrane, James. (Analysis of his Evidence.)—Sundry grounds upon which witness, as a shipowner in Belfast, objects to voluntary pilotage in the river; reference more especially to the difficulties of the navigation and to the efficiency of the present system 9790–9817. 9829–9834——Willingness of witness to be held liable for accidents when a compulsory pilot is employed, 9818–9828.

Collisions. See *Accidents. Liability.*

Compass, Deviation of. Importance of the knowledge of the captain, when a pilot is on board, in regard to a deviation of the compass, *Judkins* 2333–2335——Illustration, in the matter of adjusting the compass, of the importance of the pilot not superseding the captain, *Danson* 3188–3190.

COMPENSATION:

Explanation relative to the effect of clause 2 of the Bill in regard to compensation, if within a given period it can be shown that the demand for pilots has fallen off, and that it is necessary to reduce the number, *Farrer* 239–242——Possibility of hardship under the clause requiring a lapse of two years before any compensation is given, *ib.* 482, 483——Willingness of Government to reconsider the question of not granting compensation until after two years' operation of the proposed Act, *ib.* 526, 527. 679, 680.

Expediency of a check in the Treasury and the Board of Trade as to the number of pilots to be superannuated by the pilotage authority of Liverpool, if the Bill be passed, *Farrer* 712. 719–723. 765–768. 829.

Improbability of its being necessary to make much use of the compensation clauses of the Bill; suggestions hereon on the subject of superannuation under different circumstances, *Sir F. Arrow* 1472–1481. 1600–1606. 1670–1673. 1813–1815. 1876.

Exception taken to the proposal in the Bill for an interval of two years before claims for compensation can arise, *Squarey* 2562, 2563; *Millen* 7276–7278——Probable dissatisfaction to be caused by leaving the amount of compensation in the discretion of the Board of Trade, *Squarey* 2564, 2565——Exception taken to the clauses as to compensation, this being a matter which should rest with the local authority rather than the Board of Trade, *Bannister* 5608–5612. 5695–5700. 5755, 5756.

Evidence in disapproval of the scheme of compensation; particulars hereon as to the present superannuation arrangements in the case of the Trinity pilots and the Cinque Ports pilots, *Millen* 7276–7278. 7307–7310. 7345–7357. 7416–7451. 7492–7498; *Mallett* 7544–7570——Suggestion that the present income of the pilots be guaranteed to them, *Millen* 7308, 7309. 7345–7347.

Several grounds upon which witness objects to the compensation clauses of the Bill, *Ralph* 7869 *et seq.*——Disapproval of the permissive character of the compensation clauses,

Report, 1870—*continued.*

COMPENSATION—continued.

clauses, *Ralph* 7885–7888. 7898, 7899——Improvement if the interval before compensation were only one year instead of two, *ib.* 7889–7897——Satisfaction of witness if he were now superannuated at half his earnings, *ib.* 7910–7921.

Objection to the permissive character of the compensation clauses of the Bill, and to the interval of two years; witness submitting that the present income of the pilots should be guaranteed to them for life, *Barfield* 8282–8290. 8300–8319——Entire inadequacy of the compensation clauses of the Bill, *Pattison* 8774. 8778, 8779.

Views of the Shipowners' Society of London as to the expediency of compensation; disapproval however of the limitation of the number of pilots for two years with reference to compensation, *Duncan* 9730–9744——The period should be six months instead of two years, *Benson* 9874. 9876——Exceptions taken to some of the conditions proposed in regard to the compensation of the pilots, *Holt* 11227–11236.

Belief that no compensation will be necessary, as the employment is not likely to fall off, *Robinson* 12799–12806. 12868. 12870——Grounds for the opinion that compensation should not be borne by the Consolidated Fund, *ib.* 12859–12868.

See also *Belfast.* *Dublin*, 4. *Hull*, 11, 4. *Liverpool*, IX, X. *Thames, The*, IX, X.

Competition. Conclusion as to self-interest and competition being more efficient stimulants than rules and discipline, *Rep.* xxviii.

See also *Free Trade.* *Voluntary Pilotage.*

COMPULSORY PILOTAGE:

1. *Report by Mr. Lindsay's Committee in favour of partial Abolition.*
2. *Evidence in favour of Abolition generally.*
3. *Evidence in Defence of the Compulsory Principle.*
4. *Conclusions of the Committee favourable to Abolition.*

1. *Report by Mr. Lindsay's Committee in favour of partial Abolition:*

Quotation from report of Mr. Lindsay's Committee of 1860, as showing the conclusions then arrived at adverse to compulsory pilotage, *Farrer* 92–95——Explanation as to Mr. Lindsay's Committee having reported that compulsory pilotage may be abolished "in most parts" of the country, instead of "in every part," *ib.* 94–97.

2. *Evidence in favour of Abolition generally:*

Summary of reasons for the abolition of compulsory pilotage throughout the country, *Farrer* 203——Conclusion that the pilots do not show as much care and anxiety as if employed only when wanted, *ib.*——Probability of compulsory pilotage having been originated in the days of guilds, *ib.* 246. 659–661——Reasons for the abandonment by the Board of Trade of the principle that pilotage, being for the benefit of all, should be contributed to by all; it is now proposed that only those who use pilots shall pay, *ib.* 272–279——Primary object of the present Bill to remove the obligation upon the ship to employ a pilot, without interfering with local regulations, *ib.* 229. 354–363.

Absence of hardship in compelling an owner to employ a licensed master or mate, whereas it is a hardship to compel him to employ a pilot, *Farrer* 700–704——Important distinction in principle between the obligation to take a pilot in any case, and the obligation to take one of a particular class, if one be taken at all, *ib.* 840–847.

Opinion based upon witness's experience of the Bristol Channel, that it would be a great advantage if compulsory pilotage were abolished generally, *Clegram* 1088–1095. 1206–1210. 1299–1301.

Conclusion favourable to the abolition of compulsion, even though the anomalies in respect of liability might be otherwise removed, *Sir F. Arrow* 1529, 1530. 1542–1547. 1792–1799——Exception taken to the shipping interest being compelled to pay pilotage rates, though not compelled to employ pilots; practices as to payment for lights adverted to hereon, *ib.* 1553–1568——Objection to the principle of compulsion even though, under the voluntary system, ships may equally employ pilots from the same class as at present, *ib.* 1782–1791.

Injustice in forcing shipowners to pay pilotage, though not employing pilots, *Duncan* 9662–9664—— Opinion that compulsory pilotage is no longer necessary, the coasts being so well buoyed and lighted, and the charts so well got up, *Johnson* 12244, 12245. 12258.

3. *Evidence in Defence of the Compulsory Principle.*

Explanation that in contending for the continuance of the compulsory system, witness speaks only for Liverpool, where it has answered so well; he has no experience as to the working of the voluntary system in other ports, *Judkins* 2050–2059. 2070–2093. 2127.

Compulsory Pilotage—continued.

3. *Evidence in Defence of the Compulsory Principle*—continued.

2144. 2176, 2177——Opinion that in any port where the navigation is difficult, or where there is a bar harbour, compulsion is desirable, in order to secure a proper supply of efficient pilots, *Judkins* 2077–2082. 2278–2282.

Argument that the compulsion is to pay pilotage rates, and not to take a pilot on board; extent to which the penalties may involve compulsion, *Squarey* 2398–2435. 2444–2451. 2472–2476. 2496–2512——Statement as to the witness's views, involving the abolition of exemptions; the degree of contribution might be varied infinitely, *ib.* 2456–2466. 2483–2487——Opinion that, unless where the navigation is specially dangerous, there should not be obligation to take a pilot, *ib.* 2480. 2513–2517.

Argument in support of compulsory payment, even though a pilot may not be taken; analogous principle involved in the payment for police, lighthouses, &c., *Lamport* 3607, 3608. 3632–3634. 3694. 3726–3733——Opinion in favour not only of compulsory payment by all vessels for pilotage, but of compulsory employment of pilots when there is not a licensed master in charge, *Galloway* 4079–4081. 4094–4099. 4107, 4108——Salutary effect of the moral obligation upon pilots to be at their stations under the compulsory system, *Bannister* 5759–5762.

Opinion in favour of compulsory pilotage generally, accompanied with facilities for the licensing of masters and mates, *Lumsden* 6113–6118. 6127–6135——Argument that there is not really any compulsory pilotage at all, *Mallett* 7571——Witness has not read the Bill, and is merely prepared to give his opinion in favour of compulsory-pilotage, *Tozer* 8198–8206.

4. *Conclusions of the Committee favourable to Abolition.*

Consideration of the past and present state of the law on the subject of compulsory pilotage; great anomaly and inconsistency by reason of the varied exemptions which have been introduced, *Rep.* iii *et seq.*——Frequent complaints formerly on the part of coasting steamers against compulsory pilotage, *ib.* iii, iv——Numerous complaints and varied character of the grounds of complaints urged by shipowners, and by the different classes of pilots in the Trinity House District, *ib.* xi, xii.

Argument opposed to the conclusion that the compulsory system is necessary in order to maintain a competent supply of pilots, *Rep.* xxviii——Further expression of the opinion that the first essential step is the abolition of the obligation to employ a pilot, *ib.* xxix——Probability of the services of pilots not being so readily or effectively given under the compulsory system as if their employment depended on their efficiency, *ib.*

Injustice of the compulsory system as obliging many ships that do not require pilots to pay for keeping up a staff for those that do, *Rep.* xxix——Impracticability of curing the evils caused by the present system, save by abolishing compulsory pilotage altogether, *ib.* xxx.

See also *Accidents. Anomalies of System. Belfast. Belgium. Boats. Bristol and Bristol Channel. Chambers of Commerce. Clyde, The. Dublin. Exemptions. Falmouth. Foreign Countries. France. Galway. Hull. Insurance. Liability. Light Dues. Liverpool. Lloyd's. Local Authorities. Passenger Ships. Penalties. Safety of Life. Shipowners. Swansea. Thames, The. Trinity House. Tugs. Underwriters. Voluntary Pilotage. Waterford.*

Cork. See *Queenstown and Cork.*

Cruising of Pilots. Feeling of many shipowners in favour of pilots being allowed to cruise at a long distance from the ports, *Farrer* 596, 597.

Cunard Service. General opinion of the commanders in the Cunard service that the compulsory system is essential in the Mersey, *Judkins* 2038.

Letter from Mr. McIver, dated 13th June 1870, strongly objecting, on the part of the Cunard Company, to the abolition of compulsory pilotage, *App.* 576–579.

Statement by Mr. Wallace as to the very large amount of pilotage rates paid at Liverpool by the Cunard Company, and as to the large tonnage dues contributed to the dock estate, *App.* 579.

D.

Daines, William. (Analysis of his Evidence.)—Is a licensed pilot from London to the Isle of Wight, 8497–8501. 8521——Belief that if the Bill became law there will be a great many wrecks in the winter time, and that the pilotage service will no longer be efficient, 8502–8506——Large reduction expected in the employment and earnings of the pilots, 8503–8508. 8536–8550——Suggestions as to the compensation to be given to the London pilots,

Report, 1870—*continued.*

Daines, William. (Analysis of his Evidence)—*continued.*

pilots, 8509–8512——Grievance to the licensed pilots on account of the evasion practised by unlicensed men, 8513–8515.

Opinion that a ship run down should be able to recover from the owner of the other ship, the pilot being liable to the latter for 100 *l.*; 8516–8519——Non-objection to the Gravesend pilots outwards being licensed to pilot all the way from London, 8522–8529——Different class of unlicensed men above and below Gravesend, 8530–8535——Expected use of tugs by vessels inwards for taking them past the pilotage ground, 8536–8538.

Danson, John Towne. (Analysis of his Evidence.)—Is chairman of the Underwriters' Association of Liverpool, 3122, 3123——Satisfaction of the underwriters with the present pilotage system of the port, 3124–3126. 3148——Respects in which a vessel is likely to be more safe in charge of a trained pilot than of a captain who has passed the examination for a pilotage certificate; amendment suggested on the latter score, 3127–3129. 3140–3144. 3290–3294—— Estimate of 400,000,000 *l.* as the annual value of property inwards and outwards in the Mersey, 3130, 3131——Large extent of the channels of the Mersey, 3132, 3133——Estimate of 400,000 as the number of lives that pass in and out of the port yearly, 3134.

Belief that there is no other port in the world involving so dangerous a navigation as Liverpool; limited knowledge of witness as to the navigation of the Thames adverted to hereon, 3135. 3252. 3277–3279. 3327–3332. 3345. 3422—— Very decided opinion in favour of retaining compulsory pilotage in the Mersey; examination in support of this conclusion, 3136 *et seq.*——Statement in favour of every vessel in the Mersey being bound not only to pay for a pilot but to take one; that is, as a matter of police for the safety of all, 3138. 3213, 3214. 3249–3251. 3288, 3289.

Suggested extension of the principle of compulsion in the direction of the abolition of exemptions, 3139. 3232. 3318–3320. 3411, 3412——Excellent manner in which the port is buoyed and lighted, 3144–3147——Probability of about one-fourth or one-fifth of the owners not taking pilots when they consider the weather favourable, under an optional system; danger thus imparted to the navigation, which should be guarded against, 3149–3152. 3215–3218. 3333–3344.

Consideration of the law and the practice as to policies of insurance involving the employment of pilots; conclusion that under an optional system underwriters would not stipulate for the services of pilots, but would rather increase the premium on account of the increased risk, 3153–3160. 3207–3211. 3233–3242. 3273, 3274. 3295–3313. 3357–3364——Belief that there would be an increased loss of life and property under an optional system in the Mersey, 3159. 3176–3178.

Very general feeling among underwriters and shipowners at Liverpool in favour of retaining compulsory pilotage, 3161–3163. 3229, 3230. 3245——Expediency of the imprudent as well as the prudent shipowner being required to contribute to the cost of the pilotage establishment, 3164–3167. 3216, 3217——Conclusion that under an optional system pilots would be less regularly employed, and would not always be found when most wanted, 3168–3170. 3217–3226——Opinion that compulsory pilotage or absolute freedom as to rates are the only alternatives, 3171–3173.

Necessity of regulations for the maintenance at all times of a large and efficient staff, 3174–3179——Very small cost of the staff with reference to the enormous value at risk, 3175, 3176. 3409, 3410——Importance of all steamers having pilots, though in tow of steam tugs, 3180. 3284–3287.

Evidence in support of the view that concurrently with compulsory pilotage the owner should be liable for accidents; approval so far of the principle of the present Bill, 3182–3195. 3227–3229. 3263–3272. 3314–3322. 3365–3393——Contemplated liability of the pilot to the local authority, 3186, 3187. 3264——Relative functions of the captain and pilot adverted to; inexpediency of the latter being supposed to supersede the former in the command, 3188–3191. 3314–3317.

Doubt as to the expediency of any general or uniform principle being laid down by law on the subject of pilotage, 3196–3203——Argument that Liverpool should in any case be allowed to maintain a system proved to be so efficient, 3196–3202——Serious liability doubtless incurred by owners in not taking pilots, 3204–3206——Further statement that witness looks upon compulsory pilotage in the Mersey as a matter of needful police, 3213. 3231. 3246. 3249–3251. 3260–3262. 3288, 3289.

Statement as regards insurance rates being higher on vessels from Bombay to the Clyde than to Liverpool; this is not a pilotage question, 3253–3259——Conclusion as to there being a larger proportion of collisions in the Mersey in the case of unpiloted than of piloted ships, 3273, 3277——Preventive action of pilots in the matter of loss of life, it being impossible to estimate the loss of life prevented, 3280–3283.

Experience of the Thames adverted to with reference to witness's view, that under an optional system in the Mersey an efficient staff would not be available, 3325–3332——

Report, 1870—*continued.*

Danson, John Towne. (Analysis of his Evidence)—*continued.*

Statement to the effect that though four-fifths of the ships insured would in any case take pilots there would still be increased loss and an increase of insurance rates, 3333–3356——Power of the underwriters to protect themselves by an increased premium, so that they would not suffer by the Bill, 3394–3401.

Adequacy of the earnings of pilots in the Mersey to induce zeal and efficiency 3402–3408——Approval of the non-exemption from compulsory pilotage in the Thames of vessels carrying passengers though only one or two in number, 3413-3419——Doubt as to the underwriters in London being as a body opposed to compulsory pilotage; absence of analogy, however, between the Thames and Mersey, 3420–3422.

Davies, Thomas. (Analysis of his Evidence.)—Is a master pilot of Liverpool; has been thirty-seven years in the service, 12936, 12937——Inaccuracy of the statement by the pilot, Henry Jones, as to the amount of his annual receipts for pilotage, 12938–12940——Explanation of the circumstances under which the witness Beckett was deputed by the Liverpool pilots to give evidence against the Bill, 12941–12961—— Statement that the evidence of Jones and Beckett by no means represents the views of the pilots, who are as a body opposed to the abolition of the compulsory system; particulars hereon as to certain meetings of pilots on the question, 12941–12959. 13011–13024.

Inaccuracy of Beckett's statement that the pilot boats avoid the small vessels in order to supply large ones, 12962–12965——Explanation of Beckett's statement as to the pilots not taking regular turns, 12966——Denial also that the pilots have not full occupation for their time both at sea and on shore, 12967–12972——Particulars as to witness having been chosen to represent the boat-owning pilots whilst Beckett was one of two chosen for those who are not boatowners, 12973–13007——Question whether there is not much difference of opinion between the pilots who are boatowners and those who are not boat-owners, 13001–13010.

Deal Boatmen. Zeal shown by the Deal boatmen in bad weather, under the voluntary system, *Sir F. Arrow* 1665–1667—— Great danger by employing boatmen instead of pilots in the Thames district, *Castle* 7710, 7711; *Tillman* 7751——Exception taken to the employment of Deal boatmen instead of licensed pilots; statement hereon as to witness not having been aware that this is provided against under the Bill, *Tozer* 8191–8197. 8220, 8221——Practice of the Deal boatmen to pilot up to Gravesend but not down again, *Pattison* 8931–8941. 8951——Efficient services often rendered by Deal boatmen, *Duncan* 9570.

Capacity and character of the Deal boatmen as pilots; valuable services often rendered by them, *Rep.* x——Instances of misconduct in the matter of wrecked property and salvage, *ib.*——Suggestion in regard to the licensing of all such Deal boatmen as may prove themselves to be competent and of good character, *ib.* xiii.

Discipline. Facility of carrying out discipline in any port concurrently with voluntary pilotage, *Holt* 11184–11187.

Doyle, James. (Analysis of his Evidence.)—Is master of a Dublin pilot cutter; has been thirty-five years in the service, 8585–8587——Total of forty pilots, five masters, and five cutters in the service, 8589. 8629. 8678——Provision and maintenance of the cutters out of the pilots earnings, 8591-8601——Several difficulties of the navigation, so that experienced pilots are very essential, 8602–8615. 8675-8677——Gratuitous assistance rendered by the pilots to vessels passing up and down the channel, 8616–8628——Statement as to the claims of the pilots in regard to compensation; belief that under the Bill there would be hardly any employment for them, 8629–8683.

Drew, Captain John. (Analysis of his Evidence.)—Has been harbourmaster of the port of Bristol since 1841, and has had nearly sixty years' experience of the navigation of the Bristol Channel; is also a Younger Brother of the Trinity House, 6396–6402——Constitution of the pilotage authority of Bristol under an Act of 47 Geo. 3, and under the Bristol Dock Act of 1848, the jurisdiction extending from Bristol to Lundy, 6403–6411——Exception of vessels under eighty tons from compulsory pilotage, unless a pilot tenders his services when half rates are paid, 6412–6416. 6676–6690. 6838–6840.

Practice of coasting steamers to have certificated masters in lieu of pilots, certificates being given without limit, 6417–6422. 6804–6809. 6837–6840——Reduction in the number of Bristol pilots, there being now only sixty, owing to there being separate pilots for Cardiff, Newport, and Gloucester; further diminution intended on account of the falling off in the earnings, 6423-6426. 6599–6610——Exceedingly intricate and difficult navigation of the Avon from Kingroad to Bristol, very strict supervision and discipline being essential in order to prevent obstruction, and voluntary pilotage being most objectionable, 6427–6439. 6470–6482. 6492–6500. 6631–6659. 6751–6759. 6791–6803. 6850-6867.

Efficiency of the pilots' boats, forty-four in number; long distance to which they sometimes go, 6440–6452. 6668, 6669——Improbability of the pilots going westward of Lundy under an optional system, 6453. 6589–6598——Practice as to the pilotage of vessels from Bristol to Newport, Cardiff and Gloucester, and as to the liability of pilots

Report, 1870—*continued.*

Drew, Captain John. (Analysis of his Evidence)—continued.

to be superseded; tendency of the system to confine the licensing of pilots to one port only, 6454–6468. 6736 6745——Objection to the compulsory system being abolished from Lundy inwards; improbability in such case of an efficient supply of pilots being kept up for the lower part of the channel, 6469. 6508–6513. 6589–6598. 6611–6630. 6783–6786.

Respects in which danger is likely to arise between Lundy and Kingroad, if the pilotage were voluntary, 6483–6491. 6812–6821——Views of the Corporation of Bristol in favour of a compulsory system and of entire control, as regards the river itself, 6501–6507. 6584, 6585——Sufficiency of about twenty pilots for the river, 6514–6518——Increased earnings of the Bristol pilots in 1869, owing to the increased trade, 6519–6522——Small increase in the pilotage earnings of Cardiff and Newport as compared with the great increase of trade, 6523–6525——Satisfaction given in Bristol by the present system, 6526, 6527.

Circumstance of the Corporation being favourable to voluntary pilotage between Lundy and the Holmes; witness does not concur in this view, 6532–6536. 6580–6588. 6691–6717. 6748–6750. 6772–6786——Examination as to witness having been opposed to voluntary pilotage in the case of Gloucester, Cardiff, and Newport, and as to pilots being largely employed voluntarily; doubt, however, whether the same results would follow as regards vessels for Bristol, 6535–6579. 6611 *et seq.*——More exceptional character of the Avon than of the Severn above Chepstow, 6653–6659. 6843–6849——Power of the pilotage authority to stop the licensing of apprentices, if not required for the service, 6660–6665.

Very moderate earnings of the Bristol pilots, 6666, 6667——Feeling of owners of large vessels in favour of retaining immunity from liability in conjunction with compulsory pilotage, 6671–6674——Statement as to compulsory pilotage having been applied for by the Bill of 1861, relative to Cardiff, &c., and as to the Bill having been altered by the Committee of the House, 6695–6701. 6787–6790——Doubt as to the pilotage rates between Kingroad and Bristol being excessive, 6760–6768.

Unanimity at Bristol as regards the importance of compulsory regulations in the river, 6791–6793. 6854——Less safety of vessels in the Avon if navigated by their captains instead of by pilots, 6822–6824. 6864–6867——Responsibility resting with the captain even where there is a pilot on board, 6825–6832——Objection to the owners being responsible for negligence in the pilot, 6833, 6834——Undue value placed upon their boats by the pilots, 6835, 6836——Further objection to voluntary pilotage in the Avon, though the great majority of vessels might continue to take pilots between Kingroad and Bristol, 6850–6881.

DUBLIN:

1. *As to the present Pilotage Service, and its Administration.*
2. *Question of Compulsory or Voluntary Pilotage.*
3. *Character of the Navigation.*
4. *Question of Compensation under a Voluntary System.*
5. *Dublin and Kingstown Steam Packet Company.*

1. *As to the present Pilotage Service, and its Administration:*

Total of forty pilots, five masters, and five cutters in the service, *Doyle* 8589. 8629. 8678——Provision and maintenance of the cutters out of the pilots' earnings, *ib.* 8591–8601——Gratuitous assistance rendered by the pilots to vessels passing up and down the Channel, *ib.* 8616–8628.

Much more extensive exemptions in Liverpool than in Dublin, *Watson* 10747–10750——Great improvement by transferring the pilotage of Dublin from the Ballast Board to the Port Board; constitution of the latter, *ib.* 10805–10816.

Return from the pilot authorities containing details relative to the number of pilots and apprentices, the pilots' fund, pilotage rates, pilots' earnings, &c., *App.* 554.

Summary by the Committee of the regulations as to pilotage at Dublin; free examination of masters and mates for licenses, *Rep.* xxvi.

2. *Question of Compulsory or Voluntary Pilotage:*

System of compulsory pilotage at Dublin; objection made by the Board of Trade to a Bill in 1869 for extending the limits of the compulsory district, *Farrer* 162–164——Objection raised by the shipowners of Maryport and Workington to compulsory pilotage in the Dublin district, *ib.* 165.

Witness testifies to the efficiency of the Dublin pilot service under the compulsory system, but is not prepared to say the service would be less efficient under an optional system, *Triphook* 8553–8569. 8572, 8573——Coasters would dispense with pilots under an optional system, it being a hardship to force pilots upon them, *ib.* 8574–8581——Foreign ships would equally employ pilots under a non-compulsory system, *ib.* 8577–8580.

Report, 1870—*continued.*

DUBLIN—continued.

2. *Question of Compulsory or Voluntary Pilotage*—continued.

Approval of the Bill by the Dublin Docks and Harbour Board, save as regards the compensation clauses, *Watson* 10720-10722. 10734-10742——The over-sea trade is small, and the colliers and other coasters will mostly dispense with pilots if the Bill be passed, *ib.* 10722, 10723——Probable advantage if every vesel into Dublin had a licensed pilot, though coasters should not be compelled to take one, *ib.* 10801-10804.

3. *Character of the Navigation:*

Difficult entrance to the port, *Triphook* 8568——The captains of the Holyhead packets are all certificated pilots, and have no difficulty in entering the port, *ib.* 8570, 8571 —— Several difficulties of the navigation, so that experienced pilots are very essential, *Doyle* 8602-8615. 8675-8677.

The navigation is very easy, *Watson* 10728——Inaccuracy of certain evidence as to the difficulties of the navigation into Dublin, there being no good reason for compulsory navigation, *Reynolds* 11033-11041. 11049, 11050. 11073-11077.

4. *Question of Compensation under a Voluntary System:*

Witness considers that the pilots should be well compensated under the Bill, *Triphook* 8569. 8580-8584——Statement as to the claims of the pilots in regard to compensation; belief that under the Bill there would be hardly any employment for them, *Doyle* 8629-8683—— Evidence showing that the Bill will have a very marked effect in decreasing the use of pilots at Dublin, and that speedy compensation is essential; suggestion hereon that the interval be reduced from two years to six months, *Watson* 10720-10733. 10786-10798. 10851-10867——Suggestion that the compensation should be so arranged that the pilot's position should not be worse under the Bill, *ib.* 10791-10793. 10868-10875 ——Approval of the superintendent of the pilots in Dublin being maintained out of the pilotage fund, *ib.* 10799, 10800. 10832-10836.

Conclusion of the Committee that the only question at Dublin is that of compensation for the pilots, if compulsion be abolished, *Rep.* xxvi.

5. *Dublin and Kingstown Steam Packet Company:*

Inaccuracy of certain conclusions of the Dublin Ballast Board as to the responsibility in the case of passenger steamers between Kingstown and Dublin, to which compulsory pilotage was applied, *Farrer* 166.

Correspondence in July and August 1866 upon the question of the vessels of the Dublin and Kingstown Steam Packet Company being required to have pilots, or masters, or mates with pilots' certificates, when running between Dublin and Kingstown, *App.* 550, 551.

See also *City of Dublin Steam Packet Company.*

Dunbar, Mr. (the late). Views of Mr. Dunbar, in 1860, in favour of compulsory pilotage, *Farrer* 80——Evidence of Mr. Dunbar before the Committee of 1860 further adverted to, *ib.* 753-755——The reason of Mr. Dunbar for approving of compulsory pilotage was that it exempted from liability, *ib.* 805.

Duncan, George. (Analysis of his Evidence.)—Is largely interested as a shipowner and underwriter in London; is chairman of the London General Shipowners' Society, 9539-9544——Considers that the society fairly represents the shipowners of London, and that Mr. Taylor is in error on this point, 9545, 9546. 9704-9710——Full discussion of the present Bill by the society through its committee, the result being that they approve of the abolition of compulsory pilotage; constitution of the committee adverted to hereon, 9547-9549. 9626-9634. 9665-9670. 9704-9710. 9730——Preference of the society for an entirely free system of pilotage, 9549. 9626-9632.

Grounds for the conclusion that the competition under free pilotage would secure greater efficiency than now results from compulsory pilotage, 9550. 9570-9575. 9621-9625. 9638-9648. 9729. 9743——Grievance in being compelled to take pilots at Dungeness, and in there being no power of selection in the case of ships inwards to London, as there is in the case of ships outwards, 9550. 9562-9572. 9649-9662——Probability of the great majority of vessels continuing to take pilots under a voluntary system, 9551-9561.

Mischievous effect of the law as to the immunity of the owner when there is a compulsory pilot on board; great injustice, however, in removing such immunity unless pilotage be voluntary, 9563-9567. 9576-9582. 9637——Belief as to the large employment of pilots, and the large earnings, under an optional system, 9583-9602——Satisfactory working of voluntary pilotage in the north channel of the Thames, 9592-9599. 9686-9694.

Efficiency and low charges of many of the Thames watermen as pilots, 9603-9607 —— Facilities desirable as regards the examination of watermen, in order to become licensed pilots, 9608-9619——Approval of perfect freedom in the matter of pilotage, the Bill,

Report, 1870—*continued.*

Duncan, George. (Analysis of his Evidence)—continued.

Bill, however, not going to this length, 9620-9648——Expediency of the shipowners of London being properly represented in the pilotage authority, 9633. 9671-9678. 9698-9700-9724——Injustice in forcing shipowners to pay pilotage, though not employing pilots, 9662-9664.

Very bad working of the present pilotage system of the Thames, 9671, 9672——Importance of abolishing compulsory pilotage, as well as of amending the pilotage authority, 9678-9680——Doubt as to a ship being rendered unseaworthy in the eyes of the law when a pilot is not employed in pilotage waters, 9681-9685——Different rates paid by steamers and by sailing ships, 9695-9697.

Occasional employment by witness of a waterman as well as a pilot, the latter having charge of the ship, 9701-9703——Advantage in the captain not giving up sole charge to the pilot, 9711-9714——Unrestricted number of pilots at Calcutta, an examination being required, 9715-9717——Probability of the licensed pilots superseding Mr. Hinton and other watermen if the Bill be passed; great abuse at one time in this respect, 9718-9720.

Disapproval of the attempted regulation of the number of pilots in the Thames, 9721-9725——Opinion that there is no reason for exempting Liverpool from the operation of the Bill, 9727-9729——More efficient pilotage service in the Mersey than in the Thames, 9728——Views of the Shipowners' Society as to the expediency of compensation; disapproval however of the limitation of the number of pilots for two years with reference to compensation, 9730-9744.

Dundee. Great satisfaction given by the voluntary system at Dundee; very complete regulations in force there, *Farrer* 225. 238——Practice at Dundee as to the supply of pilot-cutters at sea, the pilotage being voluntary, *ib.* 462-464.

Dungeness. See *Thames, The*, iii, 7.

"*Earl of Auckland,*" *The.* Case of the "Earl of Auckland" cited, as showing the litigation arising upon the question of vessels being compelled to carry a pilot, *Farrer* 77. 112.

E.

Earnings of Pilots. Approval of local regulations as to the distribution of earnings, as at Dundee, *Farrer* 472-476——Less efficiency if the present income were not maintained, *Tillman* 7763, 7764.

Return of the numbers and earnings, &c., of pilots at compulsory and non-compulsory ports, *App.* 553.

Conclusion that the abolition of compulsion will in the end render the service more remunerative to efficient pilots, *Rep.* xxx.

See also *Bristol and Bristol Channel. Clyde, The. Compensation. Hull*, i. 4. *Licensed Pilots. Liverpool*, i, 10, 12. *Thames, The*, iii, 4, iv, 2. *Voluntary Pilotage.*

Employment of Pilots. See *Bristol, and Bristol Channel. Clyde, The. Compensation. Grimsby. Hull*, i, 4, ii, 1. *Licensed Pilots. Liverpool*, i, 4, viii. *Thames, The*, iii, iv, viii. *Tugs. Voluntary Pilotage.*

Evans, Admiral George. (Analysis of his Evidence.)—Since 1843 has been acting conservator of the Mersey; has also had much experience in the navy, and knows something of nearly every port in the kingdom, 4570-4576——Constant attendance and vigilance required in order to detect the frequent and minute changes that take place in the channel of the Mersey, 4575-4581——Result of witness's experience nearly all over the world that the navigation to Liverpool is of a peculiarly dangerous and exceptional character; it is out of all question more dangerous than that of the Thames or Bristol Channel, 4579-4583. 4596-4617.

Decided opinion as to the efficiency of the Liverpool pilotage service, and as to the necessity of continuing the present system, 4584-4591——Strong objections to an application of voluntary pilotage to Liverpool, though it may answer in many other ports, 4590-4619——Circumstance of Liverpool harbour being already excepted from the control of the Board of Trade on account of its very exceptional character, 4596——The present system works admirably, and witness would advise the Committee to let well alone, 4618.

Evans, George Henry. (Analysis of his Evidence.)—Is agent at Bristol for the Liverpool and Bristol Channel Steam Navigation Company; has resided at Bristol for twenty-four years, 12320-12323——Large increase of pilots at Cardiff, Gloucester, and Newport since the pilotage has been optional, whilst the pilots at Bristol under the compulsory

Report, 1870—*continued.*

Evans, George Henry. (Analysis of his Evidence)—*continued.*

system have decreased, 12324-12332. 12384-12394——Comparative rates charged by the Bristol pilots, and by the pilots of Cardiff, &c.; much higher rates in the former case, 12334. 12377. 12388——Very satisfactory working of free pilotage at Cardiff, &c., there being no lack of pilots, who get good employment, 12334. 12403-12409.

Approval of a non-compulsory system at Bristol; undue pressure of rates under the compulsory system, 12335-12337——Practice of Cardiff vessels to employ pilots whenever there is any occasion, the voluntary system not having led to risk or accidents, 12338. 12403-12410——Necessity of foreign vessels taking pilots from the mouth of the Avon up to Bristol, this, however, being a proper matter to be dealt with by harbour regulations, and witness strongly objecting to the steamers of his company being compelled to take a pilot, 12340-12348. 12352-12366. 12379-12383. 12411-12419.

Statement as to the captain of one of the steamers of witness's company not having taken out a pilotage certificate for Bristol, but only for Swansea and Milford, 12343. 12349-12351. 12367-12376——Belief that optional pilotage in the Avon would not lead to any increase of accidents likely to obstruct the navigation, 12362-12366. 12379-12383——Heavy pressure of compulsory rates at Bristol, Swansea, Milford, and Liverpool, 12395-12402.

Examination of Masters and Mates. See *Masters and Mates.*

Examination of Pilots. Expediency in any case of pilots being examined and licensed, *Squarey* 2469-2471——Opinion that a thorough examination of every pilot should be essential, *Luton* 12581——*See* also *Licensed Pilots.*

Exemptions (Compulsory Pilotage):

Proviso in the Act 12 & 13 Vict. c. 88, exempting from compulsory pilotage under certain conditions; this was not generally acted upon, *Farrer* 16, 17——Explanations in reference to sundry clauses of the Merchant Shipping Act of 1854, upon the question of exemption as regards more especially the case of passenger ships, *ib.* 19-23——Very capricious character of the exemptions from compulsory pilotage, *ib.* 66. 73——Great variety of regulations and of exemptions in the different pilotage districts, *ib.* 104——Anomaly involved in the system of exemptions, *ib.* 203.

Effect of an abolition of exemptions in compelling many more vessels to take pilots, thus imposing a heavier liability upon shipping, *Sir F. Arrow* 1496-1501——The first exemption made was a direct blow at compulsion, *ib.* 1389——It is neither practicable nor advisable to go back in the direction of removing exemptions, *ib.* 1389, 1390——Logical conclusion that exemptions having once been made, more must follow, *ib.* 11886-11888.

Opinion adverse to exemptions, it not being unreasonable to make every vessel contribute to a service maintained for the benefit of all, *Squarey* 2456-2466. 2483-2487——Suggested extension of the principle of compulsion in the direction of the abolition of exemptions, *Danson* 3139. 3318-3320. 3411, 3412——Witness would have no exemptions except where the master or mate was duly licensed, *Galloway* 4081. 4107, 4108.

Arbitrary and capricious character of the exemptions from compulsory pilotage, *Rep.* iii, v——Considerable doubt and litigation owing to the inconsistent and contradictory character of the various clauses upon the question of exemptions, *ib.* v——The tendency of the courts has been, on the whole, to favour the exemptions, *ib.*——Removal of some of the inconsistencies by means of bye-laws extending the exemptions, *ib.*——Six heads of statutory exemption, as determined by the Merchant Shipping Act of 1854, *ib.* viii.

Complete satisfaction given where exemptions have been extended, *Rep.* xxvii——Great opposition and dissatisfaction if any attempt were made to diminish the exemptions, *ib.*

See also *Anomalies of System. Channel Islands. Clyde The*, I. 5. *Foreign Vessels. Havre. Hull*, I. 3. *Liverpool* II. *Thames The*, V. *Trinity House.*

F.

Falmouth. Small increase in the number of pilots at Falmouth, which is a great port of call, *Sir F. Arrow* 1423——Statement as to the reluctance shown by the Falmouth pilots to keep out at sea, and as to the steps taken by the Trinity House to correct the evil, *ib.* 1652——Advantage if the pilotage were entirely voluntary, *ib.* 1652, 1653——Explanation as to the much smaller number of vessels piloted outwards than inwards, *ib.* 1654-1656.

Unanimous

Report, 1870—*continued.*

Falmouth—continued.

Unanimous decision of the Falmouth Chamber of Commerce in favour of the present Bill, *Fox* 12021–12024. 12048——Safety of the approach and entrance to the harbour, there being no difficulties requiring pilots constantly, *ib.* 12025–12031. 12061–12071——Complaint that under the compulsory system at Falmouth, pilots do not go out of port in bad weather; conclusion that if the pilotage were optional this abuse would not occur, *ib.* 12025. 12032–12039. 12057–12060. 12071–12081.

Large number of vessels which call at Falmouth; expectation that the number will greatly increase, and that there will be increased demand for pilots under a non-compulsory system, *Fox* 12026–12056——Refusal of many captains to take pilots on board, though obliged to pay the charge, *ib.* 12043–12045——Frequent collisions from the mismanagement of the pilots, *ib.* 12046, 12047——Supervision of the pilots adverted to; improvement about being adopted, *ib.* 12071–12075.

Reference by the Committee to the arguments adduced in favour of the abolition of compulsory pilotage at Falmouth, *Rep.* xv.

Farrer, Thomas Henry. (Analysis of his Evidence.)—Is Permanent Secretary of the Board of Trade; had charge for many years of the Marine Department, 1–3——Reference to a certain map as showing, subject to some qualification, the districts where pilotage is compulsory, and where it is non-compulsory, 4, 5——Distinction of the jurisdiction, where the pilotage is compulsory, by means of colours, these colours being red, ochre, brown, and green, 6——Total of 1828 pilots in ports where pilotage is more or less compulsory, and of 1066 in ports where it is entirely free, 7–9.

General tendency of legislation in recent years towards the abolition or modification of the compulsory system; instances of this at Bristol and Newcastle, 11–20. 98–103——Proviso in the Act 12 & 13 Vict. c. 88, exempting from compulsory pilotage under certain conditions; this was not generally acted upon, 16, 17——Provision in the Act 16 & 17 Vict. c. 129, for facilitating the examination of masters of vessels, with a view to their piloting their own vessels within certain limits, 18.

Powers given under Section 332 of the Merchant Shipping Act of 1854, for exempting masters of ships from the compulsory employment of pilots, 19——Explanations in reference to sundry other clauses of the Act of 1854, upon the question of exemption from compulsory pilotage, as regards more especially the case of passenger ships, 20–23——Provision in the Act of 1854 as to the infliction of penalties in the event of failure to employ a qualified pilot under certain circumstances, 20, 21.

Regulations under sections 360 and 361 of the Merchant Shipping Act in regard to unqualified pilots being superseded by qualified pilots, 24, 25——Nature of the facilities under the Act of 1854 for the recovery of pilotage rates when earned, 26——Section 388 of the Act of 1854 adverted to, as exempting the owner from liability where loss or damage arises when pilots are carried under compulsion, 27, 28.

Several instances which have come before the Board of Trade of great hardship upon masters or owners through the method of enforcing compulsory pilotage and payment of the rates, 29–38——Inability of witness to trace before 1812 the exemption of liability of owners where pilotage is compulsory, 39, 40——Existence of compulsory pilotage in the Thames as early as 1716, if not before, 39——Tendency of the courts to establish the non-liability of owners, where pilotage is compulsory, irrespectively of express enactments on the subject, 41–45.

Doctrine laid down by the courts as to the necessity of masters or captains obeying the orders of the pilots, 45, 46——Limitation by the courts of exemption from liability to those cases in which it is clearly proved by the owner that the injury arises through fault of the pilot, 47–49——Effect of the present law, and of recent decisions upon the question of liability, in making it to the interest of the captain not to interfere with the pilot, even though he (the captain) may see that the vessel is going into danger, 50–58.

Case of the "Spindrift" adverted to as illustrating the mischievous operation of the present system of non-liability when a pilot is in charge in a compulsory district, 51. 58——Views of the Elder Brethren of the Trinity House as to the expediency of interference by the master under certain circumstances, 55——Statement showing the grievances complained of by the owners of barges and small craft in the Thames when injury is done by large vessels and steamers under compulsory charge of a pilot; great difficulty of recovery from the pilot, 59–65——Obstruction caused by barges to the navigation, 63.

Very capricious character of the exemptions from compulsory pilotage, 66. 73——Information as to the exemptions in the Thames, 67–73——Unsatisfactory state of the law, as leading to endless litigation, upon the question whether either of two vessels in collision is bound to carry a pilot, and whether the damage is caused by the act of the pilot alone, 73–79——Views of Mr. Dunbar, Mr. Green, and other large sailing-ship owners, in 1860, in favour of compulsory pilotage, 80, 81. 205–210——Further reference to the system of certificates to masters and mates as tending to limit the operation of compulsory pilotage, 81–83.

Report, 1870—*continued.*

Farrer, Thomas Henry. (Analysis of his Evidence)—*continued.*

Decision in Canada that the shipowner is not free from liability though his ship is in charge of a pilot, 84——Explanation relative to the law of the United States upon the question of liability as affected by compulsory pilotage, 84–86——Similar law in Belgium and France as in the United States, 87, 88——Similarity of the North German law to the English law, 89.

Statement showing that the captains and masters in the Navy are held responsible by the Admiralty, notwithstanding that a pilot may be in charge, 89–91——Report of Mr. Lindsay's Committee of 1860 cited as showing the conclusions then arrived at, favourable to a system of voluntary pilotage, 92–95——Explanation as to Mr. Lindsay's Committee having reported that compulsory pilotage may be abolished "in most parts" of the country, instead of "in every part," 94–97.

Great variety of regulations and of exemptions in the different pilotage districts, 104——Great extent of coast comprised in the Trinity House district, the exemptions from compulsory pilotage being exceedingly numerous, 106. 109–113——Distinction between the London district and the out-port district of the Trinity House, as regards the appointment and examination of pilots, 106, 107——Great difficulty as to pilotage in the Bristol Channel, which was ended by Newport, Cardiff, and Gloucester obtaining a Bill doing away with compulsory pilotage, 108.

Details relative to the several classes of pilots working in and out of London, there being seven or eight different classes, licensed or unlicensed; great inconvenience and collision by reason of so many conflicting interests, 114–135——Employment of by far the greater number of pilots in the Thames on work which is not compulsory, 116–128 Large number of watermen who act as unlicensed pilots, 116. 123, 124. 128–130. 133–135——Conflicting applications made to the Board of Trade for the protection of the several classes of Thames pilots, 130–133.

Exemption of coasters under 100 tons from compulsory pilotage, under the Liverpool Pilotage Act, provided they have been in the coasting trade for six months, 136, 137 Letter from Mr. Steele, of Liverpool, to the Board of Trade, complaining in strong terms of the compulsory pilotage regulations in the case of coasters which within six months have been a foreign voyage, 137, 138——Satisfaction of the Liverpool shipowners generally with their pilotage system; great dissatisfaction, on the other hand, of the steamship owners, 138, 139. 141–143.

Discussion at the Mersey Docks and Harbour Board in June 1868, upon the subject of the negligence of pilots, and their liability, 139, 140——Conclusions of the Liverpool steamship owners in favour of the abolition of compulsory pilotage, 142. 156——Arrangement in 1856 between steamship owners at Liverpool and the Pilotage Commissioners, whereby the former agreed to pay reduced pilotage rates on being relieved from the obligation to take a pilot, the owners being liable in case of damage, 143–146.

Information in detail upon the subject of the grant of certificates to the masters and mates of steamships or passenger ships at Liverpool; correspondence on this matter between the Mersey Docks and Harbour Board and the Board of Trade, 146–155——Very restricted action of the Liverpool pilotage authorities in granting or renewing certificates; contrast as compared with London, Hull, and Glasgow, 151, 152. 154, 155.

Limitation of compulsory pilotage in the Clyde to that part of the river between Greenock and Glasgow, 157. 161——Exemption in the Clyde of all vessels under 100 tons, 158, 159——Total of 133 masters and mates licensed for pilotage in the Clyde, 160.

System of compulsory pilotage at Dublin; objection made by the Board to a Bill in 1869, for extending the limits of the compulsory district, 162–164——Objection raised by the shipowners of Maryport and Workington to compulsory pilotage in the Dublin district, 165——Inaccuracy of certain conclusions of the Dublin Ballast Board as to the responsibility in the case of passenger steamers between Kingstown and Dublin, to which compulsory pilotage was applied, 166.

Very liberal action of the pilotage authorities in the Humber, in the matter of certificates, 167–169——Petition received at the Board of Trade from Goole, complaining of compulsory pilotage in the Humber, and suggesting sundry amendments, 170–172——Views of the majority of the Hull pilots as to the objections to which the present system is open, 173——Total of sixty-eight or sixty-nine pilots at Hull, 174.

Further statement relative to the abolition of compulsory pilotage as regards Gloucester, Cardiff, and Newport, whilst it continues in force as regards Bristol; satisfaction of shipowners and pilots of the former places under the voluntary system, 175–186——Careful inquiry by a Committee of the House of Commons before Gloucester, Cardiff, and Newport were freed from the compulsory system, 176. 212——Conclusion as to voluntary pilotage being equally effectual for Bristol as for Gloucester or Cardiff, 187.

Discontinuance of the examination of masters and mates by the Board of Trade, 188——Letter from Galway complaining of compulsory pilotage, 188. 194——Illustration at

Report, 1870—*continued.*

Farrer, Thomas Henry. (Analysis of his Evidence)—*continued.*

at Cork of the satisfactory operation of the voluntary system, 189–192——Practice of the pilotage authorities in voluntary districts, as well as in compulsory districts, to limit the number of pilots, 194–202.

Summary of reasons for the abolition of compulsory pilotage, 203——Important considerations which weaken the argument arising from the fact that a large number of shipowners are in favour of the compulsory system, 203. 211——Great change since 1860 in the views of the shipowners, some of the largest shipowners in London approving of the present Bill, 204–211.

Several instances of voluntary ports where the staff of pilots is as ample and efficient as in compulsory ports, 211——Absence of any desire for change, or of any complaint of want of pilots where voluntary pilotage is in force, 213–215——Equal security of life and property in voluntary ports as in compulsory ports, 216.

Conclusion arrived at by the underwriters of Lloyds in favour of the abolition of the compulsory system, 217, 218——Reference to a letter from the Secretary of Lloyd's, to the effect that premiums would not be increased by the abolition of compulsion, 219.

[Second Examination.] Important change of opinion on the part of the Trinity House relative to the question of exemption from compulsory pilotage; feeling now in favour of an extension of the exemptions, 221, 222. 461——Letter recently received at the Board of Trade from the General Shipowners' Society of London, showing that the large sailing-ship owners of London are now favourable to the principle of abolition of compulsion, 223. 407–409——Letter from the Secretary of Lloyd's quoted as showing the opinion of the Committee of Lloyd's that the time had arrived for abolishing compulsory pilotage, 224.

Memorial from the Leith Chamber of Commerce adverted to as being entirely in favour of free trade in pilotage, 225——Great satisfaction given by the voluntary system at Dundee; very complete regulations in force there, 225. 238——Petition received from the United Associated Chambers of Commerce in favour of abolition of compulsion, 225–227.

Primary object of the present Bill to remove the obligation upon the ship to employ a pilot, 229——Effect of the Bill that the compulsory districts will be placed in the same position as the non-compulsory districts in regard to the licensing and control of the pilots by the local pilotage authorities, 229–238——Explanation relative to the effect of Clause 2 of the Bill in regard to compensation, if within a given period it can be shown that the demand for pilots has fallen off, and that it is necessary to reduce the number, 239–242.

Belief that safety of life, as involved in the safety of the ship, will be better protected under a voluntary than a compulsory system, 243–245——Probability of compulsory pilotage having been originated in the days of guilds, 246. 659–661——Origin of the system in Liverpool adverted to, 247–249——Expediency of the responsibility for the protection of life resting with the shipowners, who are better judges than Government of what is required, 250, 251.

Further reference to a certain clause of the Act of 1854 as having been intended chiefly to encourage the examination of masters and mates as pilots, 252–255——Absence of interference on the part of the Board of Trade, in order to enforce the obligation to take a pilot, 256——Inconsistency of modern legislation on the question of compulsory provisions generally for the protection of life, 257, 258——Explanation as to the omission from the Merchant Shipping Bill now before the House, of the provision in the Merchant Shipping Act requiring home-trade passenger ships to take pilots, 259–263.

Evidence of Mr. Thomas Eustace Smith before the Committee of 1860 adverted to as showing his views in favour of compulsory pilotage, 264–269——Approval of a voluntary system, irrespectively of the question of liability, 270, 271——Reasons for the abandonment by the Board of Trade of the principle that pilotage, being for the benefit of all, should be contributed to by all; it is now proposed that only those who use pilots shall pay, 272–279——Denial that, as regards light dues, a different principle is laid down as compared with the course proposed respecting payment for pilotage, 280–291.

Compulsory operation of the present law, even though, under the Merchant Shipping Act, masters and mates have been largely licensed in some ports, 292–299——Circumstance of there being only ten masters and mates licensed at Liverpool; reference hereon to the great reluctance of the owners of steamships in the Mersey to have their masters and mates examined, 297. 300–306. 317. 670——Date of creation and mode of constitution of the Mersey Docks and Harbour Board adverted to with reference to the part taken by the Board as the local pilotage authority, 307–317.

Opinion that the voluntary system will prove just as efficient at one port as another, as the supply will be in proportion to the demand, 318. 324–338——Contemplated regulation by the local authority, as at present, of the supply of licensed pilots in reference to

Report, 1870—*continued.*

Farrer, Thomas Henry. (Analysis of his Evidence)—*continued.*

the demand, 319-323——Efficiency of voluntary pilotage in the Severn further adverted to; increased earnings of the Cardiff, Newport, and Gloucester pilots, whilst the Bristol pilots have suffered, 326. 332-334. 336-338. 486-488. 567-576——Considerable difficulty of a portion of the Tyne pilotage, 335——Control of the Board of Trade in voluntary districts adverted to with reference to the inaccurate returns received, as from Sunderland, 339-342,

Small number of vessels going to Runcorn which are, apparently, subject to compulsory pilotage, 343-346——Conclusion that the pilotage of the Thames is fully as difficult as that of the Mersey, 347, 348——Testimony borne by Admiral Evans to the efficiency of the pilotage service of the Mersey, 349-352——Letter from Mr. Forwood, containing sundry objections to the operations of the compulsory system in the Mersey, and advocating a system of freedom and competition, 352, 353.

Further explanation that the present Bill is intended mainly to remove the obligation to take a pilot, and does not necessarily establish absolute free trade, as regulations and restrictions may still be imposed by the local pilotage authorities, 354-363——Practice of some of the large steamers out of Liverpool in regard to holding the master responsible as well as the pilot, 364, 365——Entirely public character of the Mersey Board, whereas it is opposed to voluntary pilotage, 366-368——Inexpediency of any exceptional legislation for Liverpool, notwithstanding the satisfaction given generally by the compulsory system, 369-373.

Circumstance of the Bill contemplating a possible decrease in the number of pilots, 374-376——Examination as to the probable effect of the Bill in regard to the earnings of the Liverpool pilots, and as to the claim of these to compensation; way in which it is proposed to compensate them, should the necessity arise, 377-422. 479-485——Question considered whether, under the Bill, there would be any increased power of selection of pilots by the ships, 424-438.

Further statement as to the sinking of barges in the Thames by ships in charge of pilots, and as to the grievance through the latter not being able to pay the damages, 439-448——Opinion that uniformity of the law of liability cannot be secured short of the abolition of compulsory pilotage, 449-452——Representative character generally of the pilotage boards in districts where the pilotage is free; instances also of representative boards in compulsory districts, 453-461.

Practice at Dundee as to the supply of pilot cutters at sea, the pilotage being voluntary, 462-464——Approval of entrusting the pilotage authorities with the regulation of the number of apprentices, 465-468——Power of the pilotage authorities to require employment of pilots in turn, 469-471——Approval of regulations as to the distribution of earnings, as at Dundee, 472-476.

Further evidence as to the advantage of enlarged liability in the shipowner, without undue supervision or control by Government; liability of railway companies adverted to hereon, 489-493. 551-558. 601-608——Doubt as to its being practicable to abolish existing anomalies, short of an abolition of compulsion, 492-494——Improvement if the master of the ship were required by law to interfere if he saw that danger was being incurred by the pilot, 495. 615, 616——Varying rules at different ports as to the selection of licensed pilots, 496.

Satisfactory administration by the Pilotage Commissioners of Hull, 500-505. 514-519——Further reference to the very liberal action of the Hull Trinity House in the granting of certificates to masters and mates after examination, 506-513——Admission as to the claim of the Hull pilots to compensation, if their case is similar to that of the Liverpool pilots, 520-525——Willingness of Government to reconsider the question of not granting compensation until after two years' operation of the proposed Act, 526, 527. 679, 680.

Explanation of the provision in the Bill as to unlicensed pilots being subject to penalties under certain circumstances, 528-530——Absence of communication from Hull to the Board of Trade, either in approval or disapproval of the Bill, 531-533——Power of local pilotage authorities to increase the rates in winter, provided they do not exceed the maximum rates under their separate Acts, 534, 535.

Concurrence in the view that uniformity throughout the kingdom should as far as possible be adopted, the present Bill being a substantial instalment of what is required, 536-543——Distinction between Admiralty vessels and private vessels, the former not being obliged to take pilots, 544-547——Exemption of the owner from liability adverted to as a logical consequence of the compulsory employment of a pilot, 548-550.

Important distinction between the question of compulsory payment for lights and for pilots, 559-566——Operation of compulsory pilotage in the narrow part of the Clyde adverted to; probability that efficient pilots would be equally employed, and that the damage done would be equally limited under a voluntary system, 577-590——Exception taken to a pilot's idemnity fund as a means of compensation for injuries or losses, 591, 592. 655-658.

Report, 1870—*continued.*

Farrer, Thomas Henry. (Analysis of his Evidence)—*continued.*

Improbability of any large increase in the number of pilots in the first two years after the passing of the Bill, 594, 595——Feeling of many shipowners in favour of pilots being allowed to cruise at a long distance from the ports, 596-597——Very harsh mode of enforcement of penalties against owners further adverted to; this, however, is not a necessary consequence of a compulsory system, 598–600. 632-640——Conclusion that under the voluntary system ships are very unlikely to be over-insured, and to be intentionally lost, there being no pilot on board, 601, 602. 617, 618——Frequent instances of claims against owners for compensation in respect of loss of life, 603, 604.

Obstacles to any satisfactory return of the comparative losses in compulsory and in non-compulsory districts, 609–611——Doubt as to the voluntary system in the Tyne having been the cause of a large excess of pilots, 612, 613——Belief that pilots will be just as much employed if compulsion be abolished, and that the relation between employer and employed will be much more healthy, 614.

Witness further contends that safety of life will be equally secured under a voluntary system, 619–622——Further statement as to the obstacle to securing liability in the owner concurrently with the obligation to take a pilot; removal of some ground of objection if this could be done, 623–631. 654——Case of the "Spindrift" further adverted to; suspension of the pilot by the Trinity House, 641–648——Further reference to the amount of losses incurred by barge-owners on the Thames through inability of pilots to pay the damages, 650–654.

Less satisfactory state of things in the Severn if the increased employment of pilots had taken place under a compulsory system, 662-666——Obligation upon the masters of home-trade passenger ships to undergo an examination; difficulty, however, in the case of a pilotage examination, 667-670——Expectation that there will be no difficulty through pilots not being in attendance when wanted, 671-675——Probability of the same pilots being still employed, the chief or only difference being that the employment would be voluntary, 676-678. 681-683.

[Third examination.] Statement in further support of the conclusion that safety of life may best be provided for by not interposing compulsory regulations interfering with the responsibility of owners, 684–686——Absence of analogy between the compulsory examination of masters and mates and compulsory pilotage, 686–688——Admission as to there being anomalies or different regulations for different ports, not removed or dealt with by the Bill, 689–693.

Expediency of applying generally by legislation the principle of liability of shipowners, instead of leaving it to the several local authorities to act as they please in the matter, 694-699. 852——Absence of hardship in compelling an owner to employ a licensed master or mate, whereas it is a hardship to compel him to employ a pilot, 700–704——Further evidence as to the peculiar hardship of the mode of enforcement of penalties for non-employment of pilots; amendment desirable, 705–709. 812, 813. 937–940.

Special consideration necessary to be given to the case of the Liverpool pilot-boats, and the compensation or superannuation of the owners, 710–713. 829. 991–997——Expediency of a check in the Treasury and the Board of Trade as to the number of pilots to be superannuated by the pilotage authority of Liverpool, if the Bill be passed, 712. 719–723. 765–768. 829——Views of Mr. Forwood and of Captain Graham Hills; also report of the Pilotage Commission of 1836, cited as showing the mischievous operation of the Liverpool pilot-boat system; conclusion as to the importance in any case of abolishing the system, 713–718. 998–1000.

Abundance of pilots expected to be found wherever there is a demand for them, under a voluntary system, 724. 729——Decrease in the trade of Bristol, and increase in the trade of Cardiff adverted to as sufficient to account for the decrease of pilots in the former case and the increase in the latter, 725–729——Circumstances under which the Board of Trade formerly granted some pilotage licenses at Liverpool without an examination; advantage of practical proof of efficiency as compared with a theoretical examination, 730–737.

Grounds for the conclusion that though the pilotage service of Liverpool may be very dangerous, an ample supply of pilots will be in attendance when required, and if properly paid, 738–743. 756–759——Further statement as to the difficulty experienced relative to the examination of masters and mates by the Mersey Board, 744–747——Action expected to be taken by local authorities on the question of licensing a greater or less number of pilots, when compulsion has been abolished, 748. 972–981——Opinion as to the necessity of fixing the rates at each port, 749, 750. 936. 980, 981.

Uselessness of attempting to retain compulsory pilotage concurrently with an abolition of the immunity of the ship, 751, 752. 852——Evidence of Mr. Dunbar before the Committee of 1860, further adverted to, 753–755——Expectation that pilots will show greater zeal under the voluntary system, 756, 757. 769. 782–788. 887——Further reference to the change of opinion on the part of the Trinity House in the direction of increased exemptions, 760–764.

Report, 1870—*continued*.

Farrer, Thomas Henry. (Analysis of his Evidence)—*continued.*

Statement as to complaints not coming before the Board of Trade relative to the incapacity or misconduct of pilots, 769–771——Opinion that a voluntary system may be adopted between Glasgow and Greenock as well as below Greenock, 772–781——Advantage of captains not having the inducement which they now have to neglect the navigation of their ships, 782 ——Inadequate supply of licensed pilots for all the vessels which want pilots in the Thames; facility with which any deficiency may be supplied by the Trinity House, 789–795. 818.

General practice of vessels in the upper waters of the Thames to take pilots, 796–798 ——Belief as to the greater difficulty of the pilotage into London than into Liverpool, 799, 800——Conclusion further expressed that the safety of ships will not be prejudiced by the abolition of compulsory pilotage, 802–804——Anxiety of owners to retain compulsory pilotage as exempting them from liability, 805——Change of opinion on the part of Mr. Eustace Smith on the question of compulsion, 806–808——Question of liability further considered with reference to the risk of collision with barges in the Thames, 809. 849–856.

Remedy of the shipowner against the pilot under the proposed abolition of compulsion, 810, 811——Non-interferenceof the Bill with the watermen of the Thames; question of their being superseded by the licensed pilots adverted to, 814–819——Less danger in pilotage waters through the improved buoyage, &c., 820, 821——Reasons for steamship owners preferring that their vessels should be in charge of their own masters, 823, 824 ——Ample power of insurers to protect themselves on the score of pilotage; practice in some cases for the underwriters to require a clause in the policy of insurance to the effect that a pilot must be employed, 825, 826. 877. 948–963. 1024.

Material object of the Bill to get rid of existing anomalies, 830–833——Circumstance of the ship being liable in the United States although there is compulsory pilotage, 834–839 ——Important distinction in principle between the obligation to take a pilot in any case and the obligation to take one of a particular class, if one be taken at all, 840–847—— Facility with which the Board of Trade might require some local knowledge in masters and mates in granting them certificates, 857–860.

Probability of pilots being as much employed voluntarily as compulsorily, 861–864—— Effect of the voluntary system as regards the employment of pilots in the Bristol Channel, further adverted to; satisfactory working of the system, 865–872——Exception taken to the Government inspection of boilers, with reference to the questions of liability and of safety, 873–875——Doubt as to the safety of ships being jeopardised in order to save the pilotage rates, the small owners complain much of the burden of the rates, 876–880.

Complaints from Runcorn and the Upper Mersey districts as to the obligation to pay pilotage rates on entering the port of Liverpool, 878–882. 1020–1022——Limitation of the amount of insurance in some foreign countries, in order to prevent risk being run, 883. 1025, 1026——Objection to any local exceptions from the Bill, 884–886—— Doubtful effect of the clause in the Merchant Shipping Bill as to the limit of the liability of pilots, 888.

Further consideration of the position and claims of the free watermen of the Thames with reference to pilotage between London and Gravesend; extent to which they may have a claim to be licensed so as not to be superseded by the licensed pilots, 890. 946 *et seq.*——Insufficiency of the licensed pilots above Gravesend; special and exceptional circumstances of this part of the pilotage, 890 *et seq.* 1023——Probable advantage if the rates of the watermen between London and Gravesend were fixed, 936.

Entire inaccuracy of a report that the present Bill originated in the case of the "Spindrift," 941–945——Question as to the views of the present nautical adviser of the Board of Trade with reference to the principle of the Bill, 964–970.

Statement as to the law implying in some cases that there is a condition in the policy of insurance as to employment of a pilot, 982–984——Increased facility of fixing the rates under a voluntary system, 985, 986——Facility also as to restricting the number of licensed pilots with reference to the demand, 987–990——Objection of steam-tug owners to undertake the responsibility of piloting ships; question hereon as to the licensing of tug owners as pilots, 1001–1014.

With regard to a certain deputation of barge-owners to the Board of Trade, sailing barges, and not mere lighters, were represented on this occasion, 1016–1019——Question whether the same exceptional circumstances are not involved in the case of the upper Clyde as of the upper Thames, 1027——Interest of money of the licensed pilots of the Thames in steam-tugs; proposal at one period by the Trinity House for prohibiting the pilots from owning tugs, 1028, 1029.

Ford, Thomas. (Analysis of his Evidence).—Is a shipowner and merchant of Swansea, and is one of the harbour trustees, 7155–7159——Complaint sometimes made at Swansea as to the pilotage district not going as far as Lundy, 7160–7162——Similar charge from Lundy as from Helwick, the limit of the district, 7162, 7163——Satisfaction felt at Swansea with the working of the present pilotage system of the port, 7164. 7177—— Very difficult and exceptional character of the entrance to Swansea harbour and docks,

Report, 1870—*continued.*

Ford, Thomas (Analysis of his Evidence)—*continued.*

so that the obligation to take a pilot is essential to prevent disaster, 7165–7177. 7201 *et seq.*

Opinion that compulsory pilotage is not necessary from Helwick, but only from the Mumbles, 7175. 7196–7206 ——Grounds for condemning the law of immunity of the owner when there is a compulsory pilot on board, witness contending that the pilot should never supersede the captain, 7178–7195. 7241–7245——Adequacy of voluntary pilots for some ports, each port being the best judge of its own requirements, 7196, 7197. 7246. 7249.

Probability of many vessels for Swansea not taking pilots in fine weather, under a voluntary system, and of their not being able to obtain them in bad weather, 7210–7240. 7246–7248——Objection formerly by Cardiff, Swansea, and other ports to their vessels being liable to be boarded by the Pill or Bristol pilots, 7250–7252.

Foreign Countries. Circumstance of there being compulsory pilotage in nearly all foreign countries, Turkey and Russia being exceptions, *Robinson,* 12815–12822. 12849–12851.

See also *Liability,* 3.

Foreign Vessels. Most foreign vessels have, practically, been exempt from compulsory pilotage since the Reciprocity Treaty Act, *Farrer* 102 —— Obstacle to a selection of pilots by foreign ships inwards, the system of examination and license being most useful in such cases, *Castle* 7719–7722——Importance of compulsory pilotage in the case especially of large and foreign-going ships *Tillman* 7754–7756. 7798; *Taylor* 7946. 7992. 8058. 8150. 8162, 8163——Probability of most foreign vessels taking pilots in the Thames under any system, *Tillman* 7834–7838.

Circumstance of foreign vessels in non-compulsory waters generally taking a pilot as a matter of course, *Rep.* xxiii.

See also *Bristol and Bristol Channel. Clyde, The. Compulsory Pilotage. Dublin. Hull. Liverpool. Thames, The. Voluntary Pilotage.*

Forwood, Mr. Letter from Mr. Forwood containing sundry objections to the operation of the compulsory system in the Mersey, and advocating a system of freedom and competition, *Farrer* 352, 353.

Fox, Howard. (Analysis of his Evidence.)—Unanimous decision of the Falmouth Chamber of Commerce in favour of the present Bill, 12021–12024. 12048——Safety of the approach and entrance to Falmouth Harbour, there being no difficulties requiring pilots constantly, 12025–12031. 12061–12071 —— Complaint that under the compulsory system at Falmouth, pilots do not go out of port in bad weather; conclusion that if the pilotage were optional this abuse would not occur, 12025. 12032–12039. 12057–12060. 12071–12081——Large number of vessels which call at Falmouth; expectation that the number will greatly increase, and that there will be increased demand for pilots under a non-compulsory system, 12026–12056——Supervision of the pilots adverted to; improvement about being adopted, 12071–12075.

France. Views of the Commission appointed in France in 1866 upon the question of compulsion and of owners' liability; conclusion as to the owner deriving no protection under the French law through there being a pilot on board, *Squarey* 2430–2435—— Compulsory system in operation in France; belief that the underwriters there are moving for a non-compulsory system, *Josse* 12117–12122. 12172–12180.

Report by M. Treite explanatory of the state of the law in France in regard to the liability of shipowners for damage caused by their vessels when in charge of pilots whose employment is compulsory, *App.* 525, 526.

Free Trade. Explanation that the present Bill is intended mainly to remove the obligation to take a pilot, and does not necessarily establish absolute free trade, as regulations and restrictions may still be imposed by the local pilotage authorities, *Farrer* 229. 319–323. 354–363.

Opinion that compulsory pilotage or absolute freedom as to rates are the only alternatives, *Danson* 3171–3173——Grounds for the conclusion that the promoters of the Bill are false to the principles of free trade; that is, as regards the proposed restriction upon the number and pay of the pilots, *Lamport* 3622–3625. 3637–3640. 3702–3707——Witness would prefer free trade with all its disadvantages to the system proposed by the Bill, *ib.* 3637–3640.

Objection to a perfectly free system; unfairness, however, of compulsory regulations unless the pilots have freedom as to rates, *Galloway* 4087–4089. 4105——Approval of perfect freedom in the matter of pilotage, the Bill, however, not going to this length, *Duncan* 9620–9640.

Evidence opposed to the view that the licensing of pilots, concurrently with a restriction upon the rates, is a departure from the principles of free trade, *Leyland* 9999–10005.

Report, 1870—*continued.*

Free Trade—continued.

10024–10030. 10044–10047. 10219–10226—— Opinion that pilotage should be free not only at Liverpool but generally round the coast, *Johnson* 11312–11314——Larger extent of freedom contemplated by witness than is proposed by the bill, *Robinson* 12828–12831. 12911–12932.

See also *Licensed Pilots.* *Rates.* *Voluntary Pilotage.*

G.

Galloway, Robert. (Analysis of his Evidence.)—Is one of the four nominee members of the Mersey Docks and Harbour Board, being nominated by the Conservancy Commissioners, 4051–4056——Very complete superintendence exercised by Admiral Evans, as the Acting Conservator of the Mersey, 4057–4063——Opinions recorded by Admiral Evans as to the great importance of compulsory pilotage in the Mersey, and as to the efficiency of the service, 4064–4066.

Circumstance of eleven out of twelve members of the Pilotage Committee being strongly in favour of retaining the present system, 4067, 4068——Almost universal satisfaction given by the system, 4069, 4070——Careful investigation of complaints against individual pilots, offenders being duly punished, 4071–4073 — Opinion that voluntary pilotage may be preferable to compulsory pilotage for some ports, but would be altogether inadequate in the case of Liverpool, and would not secure a proper supply of pilots for inward bound vessels in bad weather, 4074–4078. 4082–4088. 4100 *et seq.*

Admirable working of the system of pilot stations, 4078——Opinion in favour not only of compulsory payment by all vessels for pilotage, but of compulsory employment of pilots, when there is not a licensed master in charge, 4079–4081. 4094–4099. 4107, 4108 — Objection also to a perfectly free system; unfairness however of compulsory regulations unless the pilots have freedom as to rates, 4087–4089. 4105.

Grounds for the conclusion that there should not be immunity of the owner by reason of compulsion to take a pilot; opinion that the latter should act only as an adviser and should not supersede the captain in his command, 4090–4093. 4109–4111. 4116–4120 ——Tendency to a diminution of collisions if the immunity of the owner from liability were abolished, 4092. 4141–4161.

Peculiar danger of the access to Liverpool, so that a voluntary system would not answer there as in other ports, 4106. 4125–4129——Very moderate pilotage rates at Liverpool; necessary increase of these under a voluntary system, 4112–4115——Expectation that the employment of pilots would fall off chiefly in fine weather, if pilotage were optional, 4129–4140.

Galway. Letter from Galway complaining of compulsory pilotage, *Farrer* 188. 194.

Glasgow. See *Clyde, The.*

Gloucester. See *Bristol and Bristol Channel,* II.

Goole. Petition received at the Board of Trade from Goole, complaining of compulsory pilotage in the Humber, and suggesting sundry amendments, *Farrer* 170–172.

Practice as to pilotage between Hull and Goole, there being branch pilots for the service, and the rates not causing complaint, *Bannister* 5642–5652——Very heavy pressure of the pilotage rates upon small vessels trading to Goole, *Josse* 12109–12111 —— Difficulty of the navigation up to Goole and Gainsboro', the compulsory pilotage, however, being a great tax upon trade, *Oates* 12231–12239.

See also *Hull.* *Knottingley.*

Graves, Mr. (*Member of Committee.*) Special Report proposed by Mr. Graves; conclusions therein adverse to the proposed abolition of compulsory pilotage, *Rep.* lxvii–lxx —— Adoption, in lieu of the foregoing, of the Special Report proposed by the Chairman of the Committee, *ib.* lxx, lxxi.

Gravesend Pilots and Pilot Station. See *Thames, The.*

Greenock. See *Clyde, The,* II.

Grimsby. Belief as to Grimsby being opposed to interference with the present compulsory system, *Bannister* 5653–5656.

The pilotage of Grimsby is under the Hull district, *Josse* 12082–12084——Compulsory pilotage at Grimsby on all foreign-going vessels, coasters to English ports being alone exempt, *ib.* 12085–12090. 12107, 12108. 12146, 12147——Liability of the merchant who clears the ship for the pilotage, *ib.* 12085. 12163, 12164.

Very easy access to Grimsby, there being no necessity for imposing pilotage compulsorily,

Report, 1870—*continued.*

Grimsby—continued.

sorily, especially in the case of small vessels, upon which the charge presses very heavily, *Josse* 12087 *et seq.*——Employment of twelve pilots, the charge coming to between 4,000 *l.* and 5,000 *l.* a year, *ib.* 12091, 12092——Complaint as to half the pilots' earnings being disposed of by the Hull Commissioners; particulars hereon as to the expenses defrayed by the latter, *ib.* 12092. 12101. 12112, 12113. 12124–12145.

Expectation that under optional pilotage there would still be considerable employment for pilots at Grimsby, and that those who are efficient and zealous would make a good living, *Josse* 12099–12103. 12115, 12116. 12123–12131. 12161, 12162——Belief that, instead of seven pilot cutters at Grimsby, three would suffice, *ib.* 12138, 12139. 12165–12171.

Witness, who is agent for Lloyd's at Grimsby, and is a shipowner there, concurs in the evidence of Mr. Josse, *Oates* 12181–12184——Want of local control over the pilots at Grimsby, *ib.* 12197——Very efficient services of some pilots on the voluntary system, *ib.* 12202–12209. 12214–12218——Unduly expensive management expenses at Hull in connection with the Grimsby pilots, *ib.* 12211–12213.

See also *Hull.*

H.

"*Halley*" *The.* Judgment of the Admiralty Court in November 1867 upon the question of the liability of the owner of the "Halley" for damage done to a Norwegian brig in Flushing Roads, *App.* 522–524.

Harvey, John. (Analysis of his Evidence.)—Has had twenty-four years' experience as a Humber pilot, 6287, 6288——Concurs in the evidence of Mr. Brewis, 6289–6293. 6299, 6300——Regret expressed by some of the Humber pilots in regard to their having signed a certain letter in favour of the Bill, 6294 6298——Very satisfactory working of the pilotage service, 6301, 6302.

Probability of witness's employment by foreign vessels falling off very much if they were not subject to compulsory pilotage, 6303–6323——Dissent from the conclusion that the expense of the service could be curtailed, 6326–6328——Practice as to division of the pilots' earnings, this being the cause probably of the discontent expressed by the younger men, 6329–6336.

Havre. Exemption of coasters and small vessels from compulsory pilotage at Havre, *Squarey* 2458, 2459.

Henderson, Thomas. (Analysis of his Evidence.)—Is partner in the firm of Handiside and Henderson, and is a member of the Glasgow Pilot Board, 4890–4895——Statement that the pilotage of the Clyde is only compulsory above Newark Castle, though the practice is to take pilots between the tail of the bank and Glasgow, 4896–4898——Belief that the abolition of compulsory pilotage would make the Clyde an impracticable navigation, 4899——Practical experience and intimate knowledge of the river required in the pilots, before they are licensed, 4900–4903.

Details relative to the tortuous, narrow, and dangerous character of the navigation, whilst the traffic on the river is enormous, so that the use of pilots is an absolute necessity, 4904 *et seq.*——Belief that the abolition of compulsory pilotage would greatly increase the risk, and would deter many owners from sending their ships up to Glasgow, 4930–4938. 5148–5151. 5161–5177——Conclusion, that under a voluntary system there would not be the same certainty of employment or remuneration, and that the pilots would no longer be of the same efficient class, 4935. 5023–5025. 5050–5062. 5097–5109. 5183–5187.

Feeling of the larger shipowners of Glesgow in favour of compulsion, 4939. 5188–5191——Large number of pilotage certificates granted to masters in the Clyde; qualifications required, 4940–4943. 5142–5147——Very exceptional character of the river above Greenock, so that exceptional arrangements are necessary, 4944–4962. 4990–5007——Approval of non-compulsory pilotage round the coast generally, with the exception of Glasgow, Liverpool, Bristol, and Hull, 4958–4962. 5028, 5029. 5136——Objection to masters as pilots for large ships in the Clyde or Mersey, 4963–4966.

Hardship in making owners responsible when there is a compulsory pilot on board, 4967–4971——Expediency of as much uniformity as possible in the pilotage system round the coast, 4972–4979——Improvement if there were a licensing pilotage authority for the Trinity House district, distinct from the administrative authority, 4980–4989——Respects in which a voluntary system may be more suited to the Bristol Channel and to Gloucester than to the Clyde, 5008–5022. 5152–5160. 5197–5206.

Statement as to the very inefficient character of the non-compulsory pilots below Greenock as compared with the efficiency of the compulsory pilots above Greenock; strong

Report, 1870—*continued.*

Henderson, Thomas. (Analysis of his Evidence)—*continued.*

strong objection on this ground to the voluntary system, 5023–5027. 5047–5070. 5110–5114. 5130–5135. 5178–5187——Varying practice in the Clyde as to the degree of control exercised by the pilot; impression that the latter, rather than the master, should be the one to act in case of emergency, 5031–5043.

Belief as to the more careful navigation of large ships than of small ones, 5044–5046——Inefficiency of masters as pilots in the Clyde, unless they know the river thoroughly, 5071–5085——Inadequate supply of pilots for the Tyne and Wear during the winter months, 5086–5091——Great care required in the navigation of steamers in the Clyde, 5092, 5093——Necessity of a pilot when a steam tug is employed, 5094–5096. 5116–5122——Need for a system of police or compulsory pilotage in the Thames, 5097–5100. 5123–5129.

Probability of many vessels not taking pilots in the Clyde, unless compelled to do so, 5101–5109. 5184–5187——Mode of election to the Pilotage Board, commerce and shipping being duly represented, 5137–5141——Great liability to the navigation being stopped through vessels grounding, the exemptions from pilotage increasing this danger, 5161–5177——Reason for the coasting-ship owners not objecting to the Bill, 5196——Large experience of witness, without having found the voluntary system really efficient in any place, 5201–5204.

Hills, Captain Graham Hewitt, R.N. (Analysis of his Evidence.)—Is Marine Surveyor to the Mersey Docks and Harbour Board, and is one of the examiners of pilots, 2649–2654——Information in detail relative to the shifting character of the channels of the Mersey, and the dangers generally of the navigation; conclusion that the navigation is more difficult and dangerous than that of the Thames, Bristol Channel, or any other place in the kingdom, 2655–2671. 2676. 2691–2721. 2743–2762. 2778. 2797–2805. 2891–2901. 2908–2914——Particulars as to the frequent surveys of the Mersey by witness, and as to the steps taken to utilise the knowledge acquired; practice as to surveys in the Thames adverted to hereon, 2658, 2659. 2668. 2672. 2885–2890. 2915–2923.

Excellence of the system of pilot stations in the Mersey; belief that without them there would be nothing like the same efficiency or security, 2673–2676——Opinion that under voluntary pilotage or under a free system, it would be impossible to maintain and carry out the excellent regulations now so efficiently enforced, and that pilots would often not be found when most wanted, 2677–2685. 2722. 2806. 2855–2863——Absence of analogy between Queenstown and Liverpool as regards the question of a voluntary system, and of an adequate supply of pilots, 2686–2690. 2813–2825. 2833——Absence of analogy also between the circumstances of the Bristol Channel and of the Mersey, 2691–2705.

Reference to the Tyne ports and certain other ports as comparatively free from difficulty, so that voluntary pilotage may well answer in them, 2706–2716——Inadequacy of harbour regulations and instructions as a means of obviating the employment of pilots at any time before getting into dock at Liverpool, 2717–2722——Result of witness's experience that he knows no port where the pilotage system has so effectually met the necessities of shipping as at Liverpool, 2723.

Great misgiving with which witness views the attempt to apply voluntary pilotage in the Mersey; belief that such system would render life and property more insecure, 2724, 2725. 2741, 2742. 2779——Belief as to the unwillingness of owners at Liverpool to send up masters and mates for pilotage examination, as tending to interfere with the immunity from liability now enjoyed, 2726–2737——Very different examination at Liverpool of the pilots and of masters for pilotage certificates, 2732, 2733. 2739, 2740——Ready facilities given for the examination of masters, 2738.

Necessary increase of pilotage fees in the Mersey if the boats only went out in bad weather, 2763, 2764——Obstacle to the proper training of apprentices, unless the boats went out in fine weather, 2765–2768——Belief that a voluntary system would not secure the same efficient boats as the compulsory system, 2769–2776. 2785, 2786——Statement as to the Mersey Board and the Pilotage Committee having no interest whatever in the pilotage, 2780–2784.

Expediency of the master having full control or command when a pilot is on board, though he cannot be expected to know all the dangers of the navigation, 2787–2789——Large number of vessels in the Mersey which do not take pilots, and do not require them, 2790, 2791——Difficulties in the way of accepting tug boats as pilots, 2792–2796——Grounds for concluding that the employment of pilots would greatly fall off under the Bill, and that many masters and owners would run risks for the sake of saving the pilotage charge, 2806–2834. 2902.

Exceptions taken to the view that the experience of pilotage in the North Channel of the Thames is an argument in favour of voluntary pilotage in the Mersey, 2835–2863——Statement as to the compulsory pilots generally leaving outward-bound vessels at the bell buoy, and as to there being two boats with voluntary pilots available beyond that

Report, 1870—*continued.*

Hills, Captain Graham Hewitt, R.N. (Analysis of his Evidence)—*continued.*

that point, 2864–2884——Probability of the foreign-going vessels from Liverpool being usually insured, and of their taking pilots in any case on account of the conditions of insurance, 2902–2907——Limited qualifications required in piloting between Gravesend and London, 2924–2928.

Absence of any supply of unlicensed pilots at Liverpool, or along the coast to Port Linas, 2929–2938——Practice of some inward-bound ships to take voluntary pilots in the Irish Channel, and to bring them on to Liverpool in addition to the compulsory pilots taken at the Bell Buoy, 2939–2950——Explanation in regard to the Cunard and other large steamers taking pilots on to Queenstown and taking up pilots at Queenstown for Liverpool, 2951–2958.

Hinton, George Thomas. (Analysis of his Evidence.)—Is a free waterman of the Thames, practising between London and Gravesend, 9219–9223——Served an apprenticeship of seven years before being licensed by the Watermen's Company, 9224–9230——Previously to 1862 piloted sailing vessels and steamers, and has since piloted steamers only, 9231–9233.

Statement as to witness and other watermen pilots being frequently employed to navigate ships when there is also a Trinity pilot compulsorily taken; conclusion that this is done on account of the superior skill of the watermen, 9234–9243. 9363–9373. 9418–9432. 9444–9449. 9472–9478. 9487–9491. 9521–9525. 9532–9537—— Much lower charges of the watermen pilots than of the Trinity pilots; opinion that this is not the reason of the employment of the former in preference to the latter, 9244–9249. 9370–9372. 9402–9417.

Large earnings of witness and some other watermen pilots, one making 900 *l.* a year; small earnings, however, of the great majority, 9250–9252. 9265–9274. 9464–9469. 9483–9486. 9497, 9498——Employment of from twenty to twenty-five free watermen in piloting steamships between London and Gravesend, there being from 400 to 500 employed on sailing ships, and the total earnings being calculated at 26,400 *l.*, 9253–9275. 9320–9331—— Complaint as to the power of the Trinity pilots to supersede the watermen; grounds for apprehending that this power will be largely exercised if the Bill be passed, unless some protective clauses be inserted, 9276–9296. 9316 *et seq.*

Obstacle to the great majority of the free watermen undergoing examination for Trinity pilotships, 9297–9301——Statement as to two free watermen having been appointed to pilot Government ships between London and Gravesend, having first passed an examination at the Trinity House, 9302–9315. 9390–9396—— Information as to the training which qualifies watermen as pilots; circumstance of no examination being passed, 9373–9385. 9433–9443.

Decided inadequacy of the present staff of licensed pilots for the work in the Thames, so that there is ample room for the watermen pilots, 9455–9458. 9492–9496. 9527–9531——Important distinction between free pilotage in a river and in the open sea, 9479–9482——Circumstance of the Trinity pilots acting only in the day time, so that they run less risk of accident than the watermen pilots, 9499, 9500.

Hobblers. Probable employment of "hobblers" in the Thames instead of licensed pilots, if there were no restriction, *Tillman* 7770, 7771. 7781–7785——Expected extension of employment of hobblers as pilots at Belfast if the pilotage be optional, *Benson* 9841–9847.

Holland. Compulsory payment of pilotage in Holland, the owner being at the same time not free from liability, *Lamport* 3667.

Holt, Alfred. (Analysis of his Evidence.)—Is a shipowner at Liverpool, and is manager of the Ocean Steamship Company; is also a member of the Mersey Docks and Harbour Board, and of the Pilotage and Marine Committees, 11083–11086——Approval of the application of the Bill to Liverpool, 11087, 11088—— Expectation that voluntary pilotage would probably lead to a reduction in the number of pilots, who would be of a better class and better paid, 11089–11094. 11108–11112——Expediency of the master having full control over his vessel in pilotage waters, 11089. 11095–11098.

Increased emulation under a voluntary system; degree of emulation at present, 11093, 11094. 11121. 11131–11145. 11223–11226—— Conclusion that there would be a large employment of pilots under a voluntary system, and that pilots would be taken further down channel, though on the whole the employment would probably be less than at present, 11099–11102. 11113–11120——Opinion that the present rate of charge is high, considering the service rendered, 11103–11105. 11159–11164. 11290——Danger in the navigation to Liverpool, though not of a character to call for exceptional legislation, 11106–11108.

Effect of the Bill to leave all the present regulations undisturbed, and merely to render it optional in the shipowner to employ a pilot, 11122–11130——Way in which there would be facilities to ships generally for carrying out a selection of pilots under a voluntary

Report, 1870—*continued.*

Holt, Afred. (Analysis of his Evidence)—*continued.*

voluntary system, 11136–11141. 11188–11191——Grounds for the conclusion that there are more pilots than are required for the service of the port; power of the pilotage committee to prevent abuse on this score, 11146–11154. 11218–11222——Power also of the local authority to regulate the division of the pilots' earnings, 11155–11158.

Expediency of its being optional in every owner to secure the services of a pilot, whilst the latter should not have the right of refusal, 11165–11173——Conscientious action of the pilotage committee in following up complaints against pilots, though severer measures might sometimes be adopted; modes of punishment adverted to, 11174–11183. 11192, 11193. 12259–12264——Facility of carrying out discipline in any port concurrently with voluntary pilotage, 11184–11187.

Limited extent to which there is any selection of pilots at Liverpool, 11194–11200——Contemplated licensing of pilots under a voluntary system, it being at the same time important to take great care in changing from one system to another, 11201–11217——Doubt as to the expediency of fixing the rates by statute, 11203. 11289——Exceptions taken to some of the conditions proposed in regard to the compensation of the pilots, 11227–11236.

Opinion that the system of boat owning is very unsound, though if it be abolished compensation should be provided, 11237–11240. 11249–11253. 11276–11281——Difficulty as to the fund or source whence the boat owners should be compensated; degree of claim upon the consolidated fund, 11241–11249. 11255–11258. 11265–11288——Question as to its being any hardship to the shipowners to enforce a new system upon them contrary to the views of the great majority, 11292–11300.

Hull (Humber Pilotage District):

I. *As to the Present Pilotage System:*

1. Constitution of the Pilotage Authority, and satisfactory Character of its Administration.
2. Liberal Course pursued as regards Pilotage Certificates.
3. Exemptions from Compulsory Pilotage.
4. Staff of Pilots, and Amount of Earnings.

II. *As to the Question of Voluntary Pilotage:*

1. Local Feeling in Disapproval generally of the Bill.
2. Character of the Navigation as affecting the Question at Issue.
3. Views of the Pilots in regard to the Application of the Bill.
4. Claim to Compensation.
5. Conclusions of the Committee adverse to the Retention of Compulsory Pilotage.

I. *As to the present Pilotage System:*

1. Constitution of the Pilotage Authority, and satisfactory Character of its Administration:

Satisfactory administration by the Pilotage Commissioners of Hull; absence of complaints to the Board of Trade, *Farrer* 500–505. 514–519.

Regulation of the pilotage system of Hull by an Act passed in 1832, *Bannister* 5541——Examination and licensing of pilots by the Hull Trinity House, whilst the administration of the pilotage rests with the Pilotage Commissioners, *ib.* 5541–5543. 5747–5749. 5773–5775—— Large representation of merchants and shipowners on the Commission, the Trinity House, and the Corporation being also represented, and there being seventy-two commissioners altogether, *ib.* 5543–5545. 5763–5766.

Careful investigation of complaints by the Commissioners, these however being very rare, and the system giving universal satisfaction, *Bannister* 5550–5559. 5622. 5746. 5750, 5751. 5767——Gratuitous services rendered by the Hull Commissioners; small expenses of the Commission for salaries, &c., *ib.* 5613–5615.

Severe punishment of pilots when complaints are established, *Brown* 5817–5822——Careful check upon the cruising of the pilots, *ib.* 5817, 5818——Very satisfactory and economical working of the present system and regulations, *Brewis* 5933–5940. 5947–5956.

Satisfaction given generally by the pilotage service, *Lumsden* 6092. 6105–6109; *Harvey* 6301, 6302——Careful investigation of complaints by the Pilotage Commissioners, *Lumsden* 6107–6109 —— Representation of all interests upon the Commission, *ib.* 6110, 6111.

2. Liberal Course pursued as regards Pilotage Certificates:

Very liberal action of the Hull Trinity House in the granting of certificates to masters and mates after examination, *Farrer* 167–169. 506–513——Very liberal licensing of masters

Report, 1870—*continued.*

HULL (HUMBER PILOTAGE DISTRICT)—continued.

I. *As to the present Pilotage System*—continued.

2. Liberal Course pursued as regards Pilotage Certificates—*continued.*

masters and mates, *Bannister* 5588–5592. 5747. 5752–5754. 5782, 5783——Great facility in the granting of pilotage certificates to masters and mates of local vessels, *Brown* 5813–5819——Possession of pilotage certificates by witness's captains and mates, this being the case as regards the local owners generally, so that pilotage is compulsory only as regards foreign vessels, *Lumsden* 6093–6097. 6183–6195. 6215–6223. 6279–6286.

Free examination of masters and mates by the Trinity House of Hull, the result being that almost all the vessels belonging to Hull shipowners are thus exempt from compulsory pilotage, *Rep.* xxi, xxii.

3. Exemptions from Compulsory Pilotage:

Reference to the numerous exemptions from compulsory pilotage at Hull, though foreign vessels are not included in the category, *Bannister* 5593–5595. 5752–5754. 5780–5783——Exemption of coasters and of foreign vessels of light draught, *ib.* 5593–5595.

Exemption of all coasters and all foreign-going vessels drawing less than six feet of water, *Rep.* xxi, xxii——Compulsion is confined practically to foreign vessels, and British vessels belonging to other ports, *ib.* xxii.

4. Staff of Pilots, and Amount of Earnings:

Total of sixty-eight pilots and seven pilot boats, *Bannister* 5546, 5547. 5563——Extent of the pilotage district and system of cruising, by which the supply of pilots is regulated, *ib.* 5548, 5549. 5560–5565. 5701——Information relative to the supply and training of apprentices, of whom there are twenty-one; important advantage on the score of the school possessed by the Trinity House, *ib.* 5566–5573. 5663. 5757, 5758.

Moderate earnings of the pilots under the present compulsory system, *Bannister* 5596, 5597; *Brown* 5823–5829; *Brewis* 5927–5932. 6021——Very moderate pilotage rates, there being different scales according to distance, *Bannister* 5623–5625. 5709–5713. 5776–5779——Dangers encountered by the Hull pilots in bad weather, their remuneration not being extravagant, *Lumsden* 6137–6142——Dissent from the conclusion that the expense of the service could be curtailed, *Harvey* 6326–6328——Practice as to division of the pilots' earnings, this being the cause probably of the discontent expressed by the younger men, *ib.* 6329–6336.

Total of sixty-eight pilots between the sea and Hull, there being twenty-one apprentices, *Rep.* xxi.

II. *As to the Question of Voluntary Pilotage:*

1. Local Feeling in Disapproval generally of the Bill:

Absence of communication from Hull to the Board of Trade either in approval or disapproval of the Bill, *Farrer* 531–533.

Belief that the Bill would ruin the present efficient service, and that if the pilotage were not compulsory, pilots would not be found when wanted in bad weather, on account of the uncertainty of employment, *Bannister* 5587. 5598–5607. 5619–5622. 5701–5708. 5759–5762; *Brown* 5830–5841. 5849 *et seq.*; *Brewis* 5917–5926. 5989–6005. 6022–6052. 6067–6077.

Unanimous feeling of the Pilotage Commissioners against the Bill, there being in fact no local feeling in its favour, *Bannister* 5605–5607. 5622. 5763–5772——Question as to a reduction of the number of pilots and apprentices under a voluntary system; danger of any reduction, *ib.* 5657–5672. 5755, 5756——Concurrence in the evidence in disapproval of the Bill, *Brown* 5798–5800; *Brewis* 5886, 5887.

Objection to the application of the Bill to Hull, the present system being efficient, *Lumsden* 6105, 6106. 6136–6138. 6150–6153——Disapproval of the Bill both by the shipping and commercial interests, *ib.* 6112——Grounds for the conclusion that the employment of pilots in the Humber would greatly fall off under a voluntary system, *ib.* 6234–6249.

Very large trade in small vessels from the Humber to the North of Europe and the French coast, compulsory pilotage entailing an excessive burden upon the owners of these vessels, *Oates* 12185–12192——Conclusion as to there being no good reason for maintaining compulsory pilotage at Hull, *ib.* 12227–12230.

2. Character of the Navigation as affecting the Question at Issue:

There are many sand banks, but the river is well buoyed and lighted, *Farrer* 516–518——Safety of the pilotage the moment a vessel is inside the Humber, *Sir F. Arrow* 1487.

Particulars relative to the navigation of the Humber as being exceedingly intricate and dangerous, so that it is most essential to secure an efficient supply of pilots, *Bannister* 5574–5586. 5626. 5631–5633. 5637–5641. 5673–5678——Statement as to the exceedingly

Report, 1870—*continued.*

HULL (*HUMBER PILOTAGE DISTRICT*)—continued.

II. *As to the Question of Voluntary Pilotage*—continued.

2. Character of the Navigation as affecting the Question at Issue—*continued.*

ingly dangerous character of the navigation of the Humber, on account of the shifting sand banks, and other causes, *Brown* 5801–5812. 5842–5848. 5864–5867. 5878–5882 ——Very great danger in entering the Humber in certain winds, whilst the numerous and shifting sand banks render the navigation very difficult, *Brewis* 5888–5908. 6006–6008. 6019, 6020——Concurrence in the evidence of other witnesses as to the dangers of the navigation, *Lumsden* 6101–6104.

Dissent from certain evidence as to the navigation of the Humber being difficult and exceptional, *Sir F. Arrow* 11860–11862.

3. Views of the Pilots in regard to the Application of the Bill:

Statement by a majority of the Hull pilots as to the objections to which the present system is open; memorial on the subject signed by forty pilots out of sixty-eight, *Farrer* 173. 504.

Evidence to the effect that a certain letter to the Board of Trade, signed by forty of the Hull pilots, in favour of the Bill and of free pilotage, was so signed under misapprehension, and that nearly all these pilots have since recorded their objection to the alterations proposed by the Bill, *Brewis* 5909–5916. 5941–5981. 6009–6018. 6053–6066. 6080–6083.

Explanation that a certain letter signed by about forty of the Hull pilots does not represent their real views as regards the Bill, the purport of which they did not understand at the time, *Lumsden* 6170–6182.

Regret expressed by some of the Humber pilots in regard to their having signed a certain letter in favour of the Bill, *Harvey* 6294–6298——Probability of witness's employment by foreign vessels falling off very much if they were not subject to compulsory pilotage, *ib.* 6303–6323.

Production of, and explanation upon, a certain document, signed by fifty-six out of sixty-eight pilot boats in the Humber, praying to be exempted from the Bill, *Bannister* 6337 *et seq.*——Statement to the effect that a previous document, signed by forty pilots, in disapproval of the present system, and in favour of the Bill, was signed under a misconception, and in the belief that they would receive compensation, and be free to demand their own rates, *ib.* 6343 *et seq.*

Requisition, dated 14th March 1870, of fifty-six pilots of the Humber for the preparation of a petition praying that the pilotage of the Humber may be exempted from the operation of the Compulsory Pilotage Act, *App.* 562.

4. Claim to Compensation:

Admission as to the claim of the Hull pilots to compensation, if their case is similar to that of the Liverpool pilots, *Farrer* 520–525.

5. Conclusions of the Committee adverse to the Retention of Compulsory Pilotage:

Exception taken by the Committee to the evidence received from the Pilotage Commissioners, the shipowners, and pilots of Hull, in favour of retaining compulsory pilotage, *Rep.* xxii.——Complaints as to the incidence of pilotage rates, and dissatisfaction amongst the pilots, under the present system, *ib.*

Conclusion of the Committee that there is no substantial difference between the case of Hull and that of the North Channel of the Thames, *Rep.* xxii——There is, therefore, no good reason for retaining compulsion in the Humber, *ib.*

Humber Pilotage District. See *Goole. Grimsby. Hull. Tugs.*

I.

Immunity of Owners. See *Liability.*

Inman, William. (Analysis of his Evidence.)—Is managing owner of the Liverpool, New York, and Philadelphia Steam Ship Company, the vessels plying from Liverpool, and representing a very large tonnage, 10227–10231——Was for some years on the pilotage committee of the Mersey Board, 10232——Has twice been chairman of the Liverpool Steamship Owners' Association, which approves of the Bill, except the third clause, 10233–10237. 10285.

Opinion favourable to voluntary pilotage generally, witness attaching great importance to the right of selection of pilots, 10238–10245. 10286–10297——Explanation as to witness now having a choice of pilots; difficulty experienced before this permission was granted

Report, 1870—*continued.*

Inman William. (Analysis of his Evidence)—*continued.*

granted by the pilotage committee, 10239–10245. 10286–10289. 10298–10300——Comment upon the mode of inquiry by the pilotage committee into complaints, 10246. 10299–10308——Instances of incompetency on the part of compulsory pilots on board witness's ships, 10246, 10247——Mischievous effect of giving sole charge to the pilot, and of exempting the owner from liability; under the compulsory system, however, such exemption is only just, 10248–10255. 10380–10382.

Belief that if pilotage at Liverpool were voluntary, the men would be better paid, and the services rendered more efficient, 10256. 10273–10278. 10329–10342. 10352——Exception taken to the practice whereby large deductions are made from the pilots' earnings towards the boatowners, 10256–10258. 10319. 10338. 10343, 10344. 10347. 10433, 10434——Evidence in support of the conclusion that vessels would continue to employ pilots under a voluntary system; practice of witness in non-compulsory ports adverted to hereon, 10259–10270. 10423–10432. 10441–10444——Very similar rates at Cork and Liverpool, 10271, 10272. 10374. 10384–10387. 10423–10430.

Evidence of Mr. Leyland adverted to as representing the general views of the steam shipowners of Liverpool, 10279–10281——Very large steam tonnage of the port of Liverpool, the amount daily increasing, 10282–10284——Objection by the Steamship Owners' Association to a right in licensed pilots to supersede unlicensed pilots, 10285. 10324——Difficulty in providing that sailing ships coming to Liverpool should have a chance of pilots, 10290–10295.

Suggestion that steam pilot boats might be used at Liverpool; probability of these, or of boats otherwise efficient, being provided if pilotage were voluntary, 10292. 10314–10319. 10336–10342. 10398——Exception taken to the views of the underwriters of Liverpool on the present question, 10309–10311——Statement as to the unduly enhanced value of the boat shares on account of the large dividends paid, and as to the boats not being properly efficient, 10319–10323. 10401–10422. 10445–10451——Preference of witness for licensed pilots; at the same time it should not be compulsory upon owners to employ them, 10324–10335.

Expediency of applying voluntary pilotage at Liverpool, and generally, by means of the Bill, rather than of merely amending the Mersey Docks Act, and correcting the boat-owning system, 10343–10352. 10383——Contemplated adoption of a regulated price concurrently with optional employment and a system of licensing, 10353–10358——Doubt as to ships inwards being any worse off in bad weather under a voluntary system, 10359–10361——Discretion allowed by witness to his captains as to their availing themselves of the local knowledge of the pilots, 10362–10366.

Explanation as to the apparently greater danger of vessels in the Mersey when not in charge of pilots; several instances of piloted vessels going on shore, 10367–10373. 10388–10397——Objection to an unlicensed man taking charge of a vessel in port, but not in the open sea, 10378, 10379——Inferior pilot boats at Cork as compared with the Liverpool boats, 10398–10400——Doubt whether compensation for the Liverpool boat-owners should be provided from Imperial sources, 10409. 10435–10440. 10445–10451.

Insurance:

Reference to a letter from the secretary of Lloyds to the effect that premiums would not be increased by the abolition of compulsory pilotage, *Farrer* 219——Conclusion that under the voluntary system ships are very unlikely to be over-insured, and to be intentionally lost, there being no pilot on board, *ib.* 601, 602. 617, 618——Great difficulty involved in the question of insurance, *ib.* 601.

Ample power of insurers to protect themselves on the score of pilotage; practice in some cases for the underwriters to require a clause in the policy of insurance to the effect that a pilot must be employed, *Farrer* 825, 826. 877. 948–963. 1024——Limitation of the amount of insurance in some foreign countries, in order to prevent risk being run, *ib.* 883. 1025, 1026——Statement as to the law implying in some cases that there is a condition in the policy of insurance as to employment of a pilot, *ib.* 982–984.

Information in detail on the subject of the law of insurance as affected by pilotage; conclusion that pilots would, under a voluntary system, be still largely employed on account of the obligation under the insurance laws, *Squarey* 2579–2600. 2609–2648——Probability of the foreign-going vessels from Liverpool being usually insured, and of their taking pilots in any case on account of the conditions of insurance, *Hills* 2902–2907.

Consideration of the law and the practice as to policies of insurance involving the employment of pilots; conclusion that, under an optional system, underwriters would not not stipulate for the services of pilots, but would rather increase the premium on account of the increased risk, *Danson* 3153–3160. 3207–3211. 3233–3240. 3273, 3274. 3295–3313. 3357–3364——Statement to the effect that though four-fifths of the ships insured would in any case take pilots, there would be increased loss and an increase of insurance rates, *ib.* 3333–3356.

INSURANCE—continued.

Doubt as to the law of insurance having the effect of inducing pilots to be taken under a voluntary system in any port, *Lamport* 3608–3611 —— Statement as to foreign insurance policies requiring pilots to be taken, *Millen* 7313–7316, 7317; *Mallet* 7588–7591. 7597–7600.

Tendency of optional pilotage to enhance the insurance rates upon those ships which do not employ pilots, *Tozer* 8242–8253. 8265–8267——Tendency also of the probable action of the underwriters to lead indirectly to a sort of compulsory pilotage, *ib.* 8253–8262.

See also *Underwriters.*

Irvin, Matthew Lamont. (Analysis of his Evidence.)—Complaint as to the river pilots of Glasgow infringing on the pilotage grounds of the Greenock deep-sea pilots, whereas the latter are not allowed to go up to Glasgow, 12011–12020.

J.

Johns, Richard. Letter from Mr. R. Johns to the Board of Trade, dated 29th March 1870, complaining of the heavy burden of the compulsory pilotage rates of Liverpool in the case of coasting vessels, *App.* 555, 556.

Johnson, Henry Owens. (Analysis of his Evidence.)—Represents the firm of John Granger & Company, of Liverpool, owning a line of steamers running to Belfast, Londonderry, and Silloth, 11301–11304—— Non-employment of any pilots by the firm in the Mersey, the captains of the steamers being considered more competent to manage the vessels, 11305–11310. 11359——Complaint as to the vessels being subject to a charge for pilotage though never employing a pilot, 11306. 11311. 11316, 11317. 11380–11386 ——Opinion that pilotage should be free not only at Liverpool, but generally round the coast, 11312–11314——Belief that there would be sufficient pilots to meet the demand under a voluntary system, 11315. 11318–11321.

Examination relative to the agreement with the Liverpool pilotage committee, by which witness's vessels pay a reduced pilotage rate of one shilling per foot, though not using nor required to use a pilot; witness was not aware that there was any sanction of the Board of Trade for this charge, 11322 *et seq.* 11396, 11397——Explanation in regard to witness's captains not having been examined for pilotage certificates, in order to save the sum (from 350 *l.* to 400 *l.* a year) paid for pilotage rates; witness was not aware that the payment might thus be saved, 11322–11337. 11371–11379. 11387–11395. 11398.

Johnson, Capt. James. (Analysis of his Evidence.)—Was formerly in command of a coast-guard cruiser; has had experience more especially in the Bristol Channel, 12240–12243 ——Opinion that compulsory pilotage is no longer necessary, the coasts being so well buoyed and lighted, and the charts so well got up, 12244, 12245, 12258——Entire absence of necessity for a retention of compulsory pilotage at Milford, 12246–12253. 12259–12261. 12279–12289——Expectation that under an optional system there would be a better class of men who would keep the sea more, 12249–12253. 12286, 12287.

Statement as to Admiralty vessels being allowed a pilot only three times in and out when going to a strange port, 12254–12257——Conclusion as to a compulsory system being less required at Swansea than at Cardiff; relative facilities of access to each port, 12262–12266. 12290–12319——Circumstance of witness having been frequently into the port of Liverpool, whilst he had a pilot only once; he considers that compulsory pilotage is not necessary there, 12267–12275.

Jones, Henry. (Analysis of his Evidence.)—Is a licensed pilot of Liverpool; is one of the selected pilots of the Inman Company, to and from Queenstown, 10517–10522——Payment of 340 *l.* a year for witness's services, whereas he receives only about half; complaint hereon, 10523–10526. 10533, 10534. 10573–10581. 10588–10590. 10645–10658—— Evidence favourable to the Bill as compelling the break-up of the boat-owning system in the Mersey; details hereon as to the very objectionable and unjust working of the system in diverting a large portion of the pilot's earnings, 10527 *et seq.*——Expectation that there would be no material falling off of employment under an optional system, 10540–10543.

Dissatisfaction of half, or more than half, of the pilots with the present system at Liverpool, more especially as regards the boat ownership; examination hereon upon the question whether meetings of the pilots have not recorded their disapproval of the Bill, 10544 10553. 10634–10644. 10661–10670——Worse position of the pilots in 1872, when the compensation for differential dues ceases, 10548–10550. 10566.

Suggestions as to the amendments desirable in the system of boats and stations under a non-compulsory system; advantage of a boat going down the Channel as far as Tuskar, 10544–10563. 10591–10599, 10659, 10660. 10671–10678——Explanation that witness does not object to the earnings of the same boat being equally divided, and merely objects to the deduction for the boat owners. 10582–10587. 10622–10624. 10628–10633 ——Better

Report, 1870—*continued.*

Jones, Henry. (Analysis of his Evidence)—*continued.*

——Better payment of the Queenstown than Liverpool pilots, 10600–10604——Difficulties of the navigation of the Mersey, more especially to strangers, 10605–10612——Contemplated licensing of pilots under a voluntary system, 10618–10621.

Josse, Henri. (Analysis of his Evidence.)—Is a merchant at Grimsby, the pilotage of which is under the Hull district, 12082–12084——Compulsory pilotage at Grimsby on all foreign-going vessels, coasters to English ports being alone exempt, 12085–12090 12107, 12108. 12146, 12147——Liability of the merchant who clears the ship for the pilotage, 12085. 12163, 12164——Very easy access to Grimsby, there being no necessity for imposing pilotage compulsorily, especially in the case of small vessels, upon which the charge presses very heavily, 12087 *et seq.*

Employment of twelve pilots, the charge coming to between 4,000 *l.* and 5,000 *l.* a year, 12091, 12092——Complaint as to half the pilots' earnings being disposed of by the Hull Commissioners; particulars hereon as to the expenses defrayed by the latter, 12092. 12101. 12112, 12113. 12124–12145——Expectation that under optional pilotage there would still be considerable employment for pilots at Grimsby, and those who are efficient and zealous would make a good living, 12099–12103. 12115, 12116. 12123–12131. 12161, 12162.

Grievance in there being no redress at Grimsby against owners for damages under compulsory pilotage, 12104——Very heavy pressure of the pilotage rates upon small vessels trading to Goole, 12109–12111——Compulsory system in operation in France; belief that the underwriters there are moving for a non-compulsory system, 12117–12122. 12172–12180——Belief that instead of seven pilot-cutters at Grimsby, three would suffice, 12138, 12139. 12165–12171.

Judkins, Captain Charles Henry Evans. (Analysis of his Evidence.)—Has had immense experience of the navigation and pilotage of the Mersey; is now commander of the "Scotia," 1950–1954. 1958. 2156–2158——Very excellent manner in which the Mersey is lighted and buoyed, 1955. 1956——Exceedingly efficient operation of the Liverpool system of pilot stations, pilots being invariably found when wanted, 1956–1962. 1970, 1971. 2138——Exceptions taken to the New York system of pilotage as not being stationary, 1963–1969.

Thorough efficiency of the Liverpool pilots; absence of complaints against them, 1972–1975——Much lower pilotage rates in Liverpool than in New York, 1976–1979——Great importance of pilots on board of all vessels going into Liverpool; illustrations of this, 1980 *et seq.*——Evidence as to the peculiar dangers of the navigation of the Mersey, on account of the suddenness with which gales come on, of the fogs, and of the shifting character of the channels; conclusion that the difficulties are greater than in the case of the Bristol Channel or the Thames, 1983–1987. 1991. 1995. 2003–2010. 2077–2081. 2094–2096. 2151–2155. 2171–2178. 2185, 2186. 2244–2257.

Examination in detail in support of the conclusion that it would not be safe to abolish compulsory pilotage in the Mersey, witness contending that under the voluntary system there would not be the same efficiency of pilots, and that they would not always be found where and when wanted, 1988 *et seq.*

Respects in which compulsory pilotage in the Mersey adds to security of life; increased risks likely to run, if the pilotage rates could be avoided, 1992–1994. 2011, 2012. 2014. 2036. 2048–2052. 2103–2106. 2110–2123. 2201–2207——Value of the apprenticeship served by Liverpool pilots, 1998–2004. 2045–2047. 2124, 2125. 2208——Belief that under the optional system many masters would not take pilots, and that the efficient and numerous staff necessary for the Mersey could not be maintained, 2013–2020. 2187–2192——Explanation as to the supervision and control still exercised by witness after taking a pilot on board; relative responsibility of the captain and pilot adverted to hereon, 2021, 2022. 2107–2109. 2131–2137. 2145–2150. 2179–2182. 2258–2277. 2328–2346.

Consideration of the voluntary system of pilotage in operation at Queenstown; its entire unsuitableness for Liverpool, 2023–2036. 2089, 2090. 2217–2243. 2283–2286——Numerous collisions in the Mersy, if pilotage were not compulsory, 2036. 2165–2170——General opinion of the commanders in the Cunard service that the compulsory system is essential in the Mersey, 2038——Belief as to the impracticability of securing by means of regulations the same unfailing supply of efficient pilots as under the compulsory system, 2039–2047. 2054–2066. 2082 *et seq.*

Large number of small vessels without pilots lost last year in going to Liverpool, whereas there was only one large ship lost with a pilot, 2049. 2110–2116. 2170. 2196, 2197. 2214–2216——Explanation that in contending for the continuance of the compulsory system, witness speaks only for Liverpool, where it has answered so well; he has no experience as to the working of the voluntary system in other ports, 2050–2059. 2070–2093. 2127. 2144. 2176, 2177——Much larger amount of tonnage which can be piloted by the same staff at Liverpool since the introduction of steamships 2060–2067.

Judkins, Captain Charles Henry Evans. (Analysis of his Evidence)—*continued.*

Compulsion to take a pilot in going into the port of New York, 2067–2069——Opinion that in any port where the navigation is difficult, or where there is a bar harbour, compulsion is desirable in order to secure a proper supply of efficient pilots, 2077–2082. 2278–2282——Conclusion that there would be no certainty of employment under a non-compulsory system, and that therefore pilots would not incur risk and would not be always found in bad weather, 2082–2093. 2097–2102. 2126–2129. 2137, 2138. 2194, 2195.

Importance not only of an ample supply of pilots in the Mersey, but of their all being trained men and of assured efficiency; great risk in taking on board men of whose efficiency nothing is known, 2102, 2103. 2159–2164. 2199. 2200. 2208. 2287–2296——Excessive rates likely to be demanded by pilots in bad weather if pilotage be free, 2129, 2130——Loss of the "Royal Charter" adverted to as a consequence of not having a pilot on board, 2137——Unfairness in prescribing the rates under an optional system, 2142, 2143——Opinion as to the injustice of fixing liability on the owner, when there is a compulsory pilot on board, 2145–2150. 2263–2267. 2345, 2346.

Objectionable practices formerly of the pilots at Calcutta, 2209–2213——Explanation in regard to the Cunard vessels taking pilots before going into Queenstown; question hereon whether a voluntary pilotage is not adequate for this port, 2217–2243. 2283–2286.

Statement as to the Cunard vessels for Liverpool taking their pilots at Queenstown, in order to avoid stopping off Port Linas, 2297–2303. 2327——Belief that under a non-compulsory system witness's company would equally employ pilots; question whether the other steamship companies of Liverpool would not also do so, 2304–2327.

K.

Knottingley. Petition of shipowners and master-mariners of Knottingley (port of Goole) praying for an unconditional abolition of the law of compulsory pilotage throughout the United Kingdom, *App.* 552.

L.

Lamport, William James. (Analysis of his Evidence.)—Represents about 30,000 tons of steam shipping at Liverpool, 3559, 3560——Great satisfaction given by the present pilot service of the port, though it is capable of some amendment, 3561–3564. 3594——Objection to the proposal for the abolition of compulsory pilotage, witness advocating compulsory payment, even though a pilot may not be taken, 3565–3593. 3597–3608. 3720–3733——Opinion as to the maintenance of pilot stations being essential, 3568.

Evidence in support of the conclusion that under optional pilotage pilots would no longer feel under any moral obligation to be out in bad weather, and that they would not be always found, as they now are, when most wanted, 3569–3581. 3646–3662. 3676–3678. 3736–3773.

Statement in favour of the provision in the merchant shipping code abolishing the immunity of the owner for the fault of the pilot; argument in support of the liability of the owner concurrently with compulsory payment for pilotage, as distinct from compulsory employment, 3581–3583. 3597–3608. 3665–3667. 3682–3684. 3720–3727. 3791–3793.

Probability of many vessels in the Mersey trusting to steam-tugs without a pilot, if there were no compulsion; danger thus incurred, 3584–3589. 3679–3681——Approval of masters being still allowed to qualify for pilotage certificates, 3590——Belief that a perfectly free system in lieu of that proposed by the Bill would never answer in Liverpool; nor has witness any confidence in the permanence of the regulations to be established by the Bill, 3591–3593. 3622–3643. 3702–3707.

Improvement if some of the Liverpool pilots were stationed in the Channel as far down as Tuskar, 3594–3596. 3656–3662. 3685, 3686——Statement opposed to the theory that the pilot should supersede the captain in the management of the ship; suggestion that the proper function of the former should be to advise, 3598–3606. 3667, 3668. 3682–3684. 3687–3693——Argument in support of compulsory payment, even though a pilot may not be taken; analogous principle involved in the payment for police, lighthouses, &c, 3607, 3608. 3632–3634. 3694. 3726. 3733.

Doubt as to the law of insurance having the effect of inducing pilots to be taken under a voluntary system in any port, 3608–3611——Large powers of the Board of Trade for the removal of anomalies in the pilotage system of the different ports, 3612–3618——Disapproval of uniformity of system being laid down by the Legislature, witness preferring that each port should be allowed to manage its own affairs, without too much interference by the Board of Trade, 3691–3621. 3673–3675——Grounds for the conclusion that the promoters of the Bill are false to the principles of free trade; that is as regards the

Report, 1870—*continued.*

Lamport, William James. (Analysis of his Evidence)—*continued.*

the proposed restriction upon the number and pay of the pilots, 3622–3625. 3637–3640. 3702–3707.

Probability of the pilots making charges amounting to salvage under a system of free trade, 3625–3627. 3699–3702——Comment upon the action of the Board of Trade in heaping obligations upon shipowners, the removal of the obligation to take pilots being comparatively a very small matter, 3628–3634. 3675——Inconsistency of the exemptions at Liverpool from compulsory pilotage; witness, however, would not now abolish all exemptions, 3635. 3636. 3655. 3734, 3735.

Peculiar danger in entering the port of Liverpool, so that there is good reason for an exceptional pilotage service, 3641–3645. 3695–3698. 3737–3747 —— Very moderate earnings of the Liverpool pilots, the average being under 200 *l.* a year, 3663, 3664 —— Intention of witness in any case to employ pilots; imprudence of those owners who propose to escape the charge, 3668–3672.

Evidence to the effect that a majority of the steamship owners of Liverpool are in favour of the Bill; views of witness's partner on the subject, 3708–3711. 3774–3780——Vast increase going on in the steam shipping trade of the port, 3712–3715——Statement as to there being every facility given to steamship owners to become members of the Mersey Docks and Harbour Board, though there may be but few owners on the Board, 3716–3719.

Objection of most of the steamship owners in the Mersey to their being liable for accidents, if there be compulsory payment of pilotage, 3780–3786——Improbability of much agitation at Liverpool against a pilotage tax to be imposed irrespectively of the employment of pilots, 3787–3790.

Large Ships. Belief as to the more careful navigation of large ships than of small ones, *Henderson* 5044–5046.

Lee, Robert. (Analysis of his Evidence.)—Is a deep-sea pilot of the port of Greenock, his license extending from Newark Castle to Cambrae Heads, 11911–11913. 11915—— Complaint as to the river pilots frequently infringing upon the ground of the deep-sea pilots, by taking vessels to Gareloch as well as out to sea and round the coast, whereas the deep-sea pilots cannot go above Newark Castle, 11914 *et seq.*——Witness submits that the deep-sea pilots should be protected within their own limits, or should be allowed to pilot up to Glasgow, 11924–11931. 11952–11957. 11982–11984.

Qualifications of witness adverted to; he has hardly ever had an accident to a ship, 11931–11936——Instances of accident to vessels in charge of river pilots, 11937. 11994, 11995——Information as to the employment and average earnings of the eighteen deep-sea pilots of Greenock; witness makes about 200 *l.* a year, 11938–11953. 11966–11981 ——Opinion that if any ships be compelled to take pilots, it should be those with passengers and valuable cargoes; but witness does not recommend compulsion at all, 11958–11965. 11985–11989. 11996–11998.

Lee, William. Memorial from Mr. Lee and other owners of sailing barges in the Thames and Medway, *App.* 510, 511——Letter from Mr. Lee, dated 4th April 1868, together with return of casualties; very small proportion recovered out of the total amount of the damage, *ib.* 511, 512——Letter from Mr. Lee, dated 10th September 1868, in further support of the claim of the sailing-barge owners to a remedy of the grievances experienced under the present system of non-liability of shipowners in cases of collision, *ib.* 513–515.

Legislation. Objections to the question of the adoption of voluntary pilotage being left to the caprices of local legislation, *Rep.* xxix.——Opinion that no case has been made out for special and exceptional legislation, *ib.*——Conclusion that the principle upon which the Bill is founded is a right one, and that the Bill should, with the amendments made in it, be passed into a law at as early a date as possible, *ib.* xxx.

See also *Compulsory Pilotage.* *Local Authorities.* *Voluntary Pilotage.*

Leith Chamber of Commerce. Reference to memorial from the Leith Chamber of Commerce as being entirely in favour of free trade in pilotage, *Farrer* 225.

Memorial of the Leith Chamber of Commerce, dated 4th March 1870, in favour of abolition of compulsory pilotage, *App.* 555.

Leyland, Frederick. (Analysis of his Evidence.)—Is managing partner of the firm of John Bibby & Co. of Liverpool, large owners of steamships; is also chairman of the Liverpool Steamship Association, 9954–9959——Unanimous opinion of a committee of the association in favour of the Bill, upon several grounds, 9960–9968. 10031–10035. 10080–10089 ——Evidence in support of the conclusion that under a voluntary system the pilots would be more efficient, and that inferior men would gradually be weeded out of the service, 9963. 9975–9984. 10014–10016. 10040–10043. 10166–10171. 10180–10182. 10210–10212.

Report, 1870—*continued.*

Leyland, Frederick. (Analysis of his Evidence)—*continued.*

Statement in favour of the owner being liable in the event of his not being compelled to employ a pilot, whilst it would be unjust to make him liable if the pilot were a compulsory one; conclusion also as to the expediency of control of the pilot by the captain, 9964–9972. 10056. 10065–10074. 10138, 10139. 10184–10193. 10213–10218—— Perfect competency of the captains in command of witness's steamers to navigate them in the Mersey without a pilot; explanation as to one only having a pilotage certificate, 9969–9974. 9986, 9987. 10036. 10052–10056. 10075. 10117, 10118. 10144, 10145.

Effect of a voluntary system that the pilots would get better pay, and that the excessive and unfair payments to the boat-owners would be put a stop to, 9975. 10160–10162—— Continued employment of pilots by witness's firm under an optional system, the difference being that they would have the advantage of choosing their own pilots; way in which the power of selection would be exercised, 9976–9984. 9992, 9993. 10008–10016. 10048–10052. 10119–10124. 10136–10139. 10153–10159. 10172–10179. 10210–10212.

Denial that the navigation of the Mersey is exceedingly dangerous, 9985–9987. 10036–10038——Instances of the pilots not being at their stations when wanted, 9986, 9987. 10018. 10163–10165——Easier navigation of steamships than of sailing ships in the Mersey, the former being greatly on the increase, 9988–9991——Great benefit anticipated from the Bill as regards Liverpool, though it does not control the Mersey Board in the matter of licenses, stations, &c., 9994–10007. 10020–10023. 10210–10212——Opinion of the Shipowners' Society that the Bill does not go far enough, 9997.

Tendency of the competition under a voluntary system, to cause the pilots to be more energetic and to go farther to sea, 9998–10000. 10017–10019. 10029, 10030. 10043. 10166–10171——Approval of the pilots being restricted in number by license, and being bound by a regulated price, whilst it should be optional in the shipowners not to employ them; denial that such system would be at variance with the principles of free trade, 9999–10005. 10024–10030. 10044–10047. 10219–10226——Numerous and heavy losses of witness's firm owing to the negligence of licensed pilots, 10039–10041. 10125, 10126. 10140–10143.

Very improper manner in which complaints against pilots are dealt with by the Mersey board or the pilotage committee; suggestions hereon for an improved constitution of the pilotage tribunal with reference to the investigation of accidents and complaints, 10041. 10089–10116. 10127–10133. 10194–10198.

Consideration of certain evidence as to the numerous accidents to vessels in the Mersey without pilots, as compared with the few accidents when compulsory pilots are employed; grounds for dissenting from the inferences drawn therefrom in favour of the compulsory system, 10057–10064. 10076–10079. 10146–10150. 10199–10208——Inefficiency of many of the Liverpool pilots, 10132–10135——Contemplated limitation of the number of licensed men, 10151, 10152——Payment of about 1,800 *l.* or 2,000 *l.* a year by witness's firm for pilotage, 10219.

LIABILITY:

1. *State of the Law as to the Exemption of Owners from Liability when a Compulsory Pilot is employed.*
2. *Mischievous Effect of the Present Law.*
3. *State of the Law in Foreign Countries.*
4. *Suggestions for the Liability of the Owner, concurrently with Compulsory Pilotage.*
5. *Objections to the foregoing Proposition.*
6. *Suggested Liability concurrently with Compulsory Payment.*
7. *Suggestions for enlarged Liability, as by the Adoption of Voluntary Pilotage.*
8. *Considerations as to the Relative Position and Functions of the Master and Pilot, with reference to the Question of Liability of the Owner.*
9. *Question of Remedy against the Pilot.*
10. *Extent of Liability of the Underwriter.*
11. *Liability in respect of Loss of Life.*
12. *Suggestions for an increased Immunity of Owners.*
13. *Conclusions of the Committee.*

1. *State of the Law as to the Exemption of Owners from Liability when a Compulsory Pilot is employed:*

Section 388 of the Merchant Shipping Act of 1854 adverted to as exempting the owner from liability where loss or damage arises, when pilots are carried under compulsion, *Farrer* 27, 28——Inability of witness to trace before 1812 the exemption of liability of owners where pilotage is compulsory, *ib.* 39, 40——Tendency of the courts to establish the non-liability of owners where pilotage is compulsory, irrespectively of express

LIABILITY—continued.

1. *State of the Law as to the Exemption of Owners, &c.*—continued.

express enactments on the subject, *Farrer* 41–45 —— Limitation by the courts of exemption from liability to those cases in which it is clearly proved by the owner that the injury arises through the fault of the pilot, *ib.* 47–49.

Belief as to the continued responsibility of the captain of a ship after he has taken a licensed pilot on board, *Sir F. Arrow* 1531–1535. 1690–1697——If the pilot were placed on the ship's articles for the time being, the owner would still be liable, *ib.* 1544 —— Circumstance of the common law carrying immunity of the owner from liability when there is a compulsory pilot on board; conclusion that exemption under such condition is not unreasonable, *ib.* 1682–1689.

List of legal decisions as regards the liability of certain vessels when in charge of a compulsory pilot, *App.* 515, 516.

2. *Mischievous Effect of the present Law:*

Effect of the present law, and of recent decisions upon the question of liability, in making it to the interest of the captain not to interfere with the pilot, even though he (the captain) may see that the vessel is going into danger, *Farrer* 50–58——Ill effect of taking the responsibility from the master and owner of the ship, *ib.* 203——Advantage of captains not having the inducement which they now have to neglect the navigation of their ships, *ib.* 782.

Effect of the relief of the owner from liability in placing the captain and pilot of a ship in a wrong position, and as having an evil tendency in other respects, *Sir Frederick Arrow* 1396–1402——Tendency to a diminution of collisions if the immunity of the owner from liability were abolished, *Galloway* 4092. 4141–4161——Mischievous effect of the law as to the immunity of the owner when there is a compulsory pilot on board; great injustice, however, in removing such immunity unless pilotage be voluntary, *Duncan* 9563–9567. 9576–9582. 9637; *Inman* 10248–10255. 10380–10382.

Tendency of compulsory pilotage and the immunity of the owner to make the captain careless, *Bouch* 10906–10909——Unsatisfactory working of the non-liability of the owner when there is a pilot on board, *Chaddock* 11473–11479——Grievance in there being no redress at Grimsby against owners for damages under compulsory pilotage, *Josse* 12104——Hardship in the liability for damage resting with the pilot, who is generally unable to pay; objection at the same time to the owner being responsible under compulsory pilotage, *Oates* 12191–12196. 12222–12226.

3. *State of the Law in Foreign Countries.*

Similar law in the United States, in Belgium and France, upon the question of liability as affected by compulsory pilotage, *Farrer* 84–88——Information relative to the law in Belgium, New York, France, and other foreign countries, as not protecting the owner where there is compulsory pilotage, *Squarey* 2384–2394. 2430–2437——Impression that England stands alone among maritime nations in the protection of owners from liability, *ib.* 2384, 2385. 2436, 2437.

4. *Suggestions for the Liability of the Owner, concurrently with Compulsory Pilotage:*

Evidence in support of the conclusion that concurrently with compulsory pilotage rates the immunity of the owner from liability should be by law abolished, *Squarey* 2374. *et seq.*——Feeling among the legal profession employed in shipping cases at Liverpool that it would be well to abolish the immunity of the owners, *ib.* 2441–2443——Evidence in further support of the view that the pilot should not obviate the action of the captain, and should not absolve the owner from liability, *ib.* 2488–2495. 2518–2522.

Advocacy of the view that concurrently with compulsory pilotage the owner should be liable for accidents; approval so far of the principle of the present Bill, *Danson* 3182–3195. 3227–3229. 3263–3273. 3314–3322. 3365–3393——Evidence in favour of owners being liable when there is a pilot on board, it being desirable that the latter should in no way interfere with the command, *Moss* 3867–3873. 3878, 3879. 3925. 3972–4012.

Grounds for the conclusion that there should not be immunity of the owner by reason of compulsion to take a pilot; opinion that the latter should act only as an adviser and should not supersede the captain in his command, *Galloway* 4090–4093. 4109–4111. 4116–4120——Defence of the immunity of the owner concurrently with compulsory pilotage; with or without the former, the latter is imperative, *Allan* 5296–5306——Evidence relative to the question of liability of owners, to the effect that even with a compulsory pilot on board the captain should continue in charge of the ship, and the owner should be responsible for accidents, *Bannister* 5690–5694. 5728–5745. 5784–5793.

Report, 1870—*continued.*

LIABILITY—continued.

4. *Suggestions for the Liability of the Owner, &c.*—continued.

Grounds for condemning the law of immunity of the owner when there is a compulsory pilot on board, witness contending that the pilot should never supersede the captain, *Ford* 7178–7195. 7241–7245——With or without compulsory pilotage the immunity should cease, *ib.* 7241–7246——Opinion that the shipowner should be liable in cases of accidents, with or without a pilot, *Mallett* 7572–7580——Willingness of witness to be held liable for accidents when a compulsory pilot is employed, *Cochrane* 9818–9828.

5. *Objections to the foregoing Proposition:*

Opinion that uniformity of the law of liability cannot be secured short of the abolition of compulsory pilotage, *Farrer* 449–452——Exemption of the owner from liability adverted to as a logical consequence of the compulsory employment of a pilot, *ib.* 548–550——Further statement as to the obstacle to securing liability in the owner concurrently with the obligation to take a pilot; removal of some ground of objection if this could be done, *ib.* 623–631. 654.

Opinion as to the injustice of fixing liability on the owner when there is a compulsory pilot on board, *Judkins* 2145–2150. 2263–2267. 2345, 2346——Question whether immunity from liability concurrently with compulsory pilotage would be approved by owners in Liverpool; diversity of opinion on this subject on the part both of sailing shipowners and steam shipowners, *Squarey* 2523–2541. 2571–2579. 2601, 2602——Objection of most of the steam shipowners in the Mersey to their being liable to accidents if there be compulsory payment of pilotage, *Lamport* 3780–3786——Hardship in making owners responsible when there is a compulsory pilot on board, *Henderson* 4967–4971.

Grounds for dissenting from the view that the owner should be liable when there is a compulsory pilot on board; relative functions of the pilot and captain adverted to hereon, *Lumsden* 6119–6126. 6196–6204. 6211–6214. 6224–6233. 6529–6268——Objection to the owners being responsible for negligence in the pilot, *Drew* 6833, 6834——Decided objection to the shipowner being responsible when there is a compulsory pilot on board, *Taylor* 8007–8012.

Conclusion that notwithstanding the mischievous effect of giving sole charge to the pilot, and of exempting the owner from liability, under the compulsory system, such exemption is only just, *Duncan* 9563–9567. 9576–9582; *Leyland* 9964–9972. 10065–10074. 10184–10193; *Inman* 10248–10255. 10380–10382——Approval of the owner being liable if he may select his pilot, but not otherwise, *Beach* 10910–10913.

6. *Suggested Liability concurrently with Compulsory Payment:*

Statement in favour of the provision in the Merchant Shipping Code abolishing the immunity of the owner for the fault of the pilot; argument in support of the liability of the owner concurrently with compulsory payment for pilotage, as distinct from compulsory employment of a pilot, *Lamport* 3581–3583. 3597–3608. 3665–3667. 3682–3684. 3720–3727. 3791–3793.

7. *Suggestions for enlarged Liability, as by the Adoption of voluntary Pilotage:*

Evidence as to the advantage of enlarged liability in the shipowner, without undue supervision or control by Government; liability of railway companies adverted to hereon, *Farrer* 250, 251. 449–452. 489–493. 551–558. 601–608. 684–686——Expediency of applying generally by legislation the principle of liability of shipowners, instead of leaving it to the several local authorities to act as they please in the matter, *ib.* 694–699. 852——Uselessness of attempting to retain compulsory pilotage concurrently with an abolition of the immunity of the ship, *ib.* 751, 752. 852.

Expediency in any case of the liability clause of the Merchant Shipping Act being repealed; belief that with such repeal the opposition to the abolition of compulsory pilotage would soon disappear, *Sir F. Arrow* 1402–1408——Statement in favour of the owner being liable in the event of his being compelled to employ a pilot, whilst it would be unjust to make him liable if the pilot were a compulsory one; conclusion also as to the expediency of control of the pilot by the captain, *Leyland* 9964–9972. 10056. 10065–10074. 10138, 10139. 10184–10193. 10213–10218——Objection to compulsory pilotage as involving immunity of the owner in case of collision; expediency of the owner being liable, as one of the advantages of optional pilotage, *Robinson* 12779–12788. 12807. 12839–12844. 12854–12858.

8. *Considerations as to the relative Position and Functions of the Master and Pilot, with reference to the Question of Liability of the Owner:*

Doctrine laid down by the courts as to the necessity of masters or captains obeying the orders of the pilots, *Farrer* 45, 46——Views of the Elder Brethren of the Trinity House as to the expediency of interference by the master under certain circumstances, *ib.* 55——Practice of some of the large steamers out of Liverpool in regard to holding the

Report, 1870—*continued.*

LIABILITY—continued.

8. *Considerations, &c. with reference to the Question of Liability, &c.*—continued.

the master responsible, as well as the pilot, *Farrer* 364, 365——Improvement if the master of the ship were required by law to interfere if he saw that danger was being incurred by the pilot, *ib.* 495. 615, 616——Duty of the master of a ship to act irrespectively of a compulsory pilot on board if he sees that the latter is evidently in the wrong, *Sir F. Arrow* 1690–1697.

Explanation as to the supervision and control still exercised by witness after taking a pilot on board; relative responsibility of the captain and pilot adverted to hereon, *Judkins* 2021, 2022. 2107–2109. 2131–2137. 2145–2150. 2179–2182. 2258–2277. 2328–2346——Opinion that the proper functions of the pilot is to advise the captain, and not to undertake the entire navigation of the ship, *Squarey* 2380–2383——Expediency of the master having full control or command when a pilot is on board, though he cannot be expected to know all dangers of the navigation, *Hills* 2787–2789.

Explanation as to the relative position and responsibilities of witness and of the pilot on board; objection to any increase of the responsibility of the captain, who has quite enough already, *Ballantine* 3012–3018. 3032–3034. 3111, 3112. 3116–3120——Relative functions of the captain and pilot adverted to; inexpediency of the latter being supposed to supersede the former in the command, *Danson* 3188–3191. 3314–3317——Statement opposed to the theory that the pilot should supersede the captain in the management of the ship; suggestion that the proper function of the former should be to advise, *Lamport* 3667, 3668. 3682–3684. 3687–3693.

Varying practice in the Clyde as to the degree of control exercised by the pilot; impression that the latter rather than the master should be the one to act in case of emergency, *Henderson* 5031–5043——Approval of the complete charge vested in the pilot, *Allan* 5299–5301——Practice of witness (as pilot) to give orders, the captain supplying the required information and assistance, *McKelvie* 5416–5420——Responsibility still resting with the captain when there is a pilot on board, *Drew* 6825–6832.

Opinion that the management of the vessel should rest with the pilot rather than the captain, *Millen* 7299–7306——Statement to the effect that witness does not consider the pilot should supersede the captain in the command, *Mullett* 7670–7686——Degree of control and command exercised by the pilot, though he does not supersede the captain, *Castle* 7723–7730——Opinion that when a pilot is on board a ship he should be entrusted with the entire control and responsibility, *Taylor* 7938, 7939.

Opinion that the pilot should have the sole charge of the ship in crowded waters, *Pattison* 9000——Advantage in the captain not giving up sole charge to the pilot, *Duncan* 9711–9714——Witness would never allow a pilot to interfere with his command of his own ship, *Reynolds* 11021——Expediency of the master having full control over his vessel in pilotage waters, *Holt* 11089. 11095–11098.

9. *Question of Remedy against the Pilot:*

Remedy of the shipowner against the pilot under the proposed abolition of compulsion, *Farrer* 810, 811——Doubtful effect of the clause in the Merchant Shipping Bill as to the limit of the liability of pilots, *ib.* 888——Proposal in the Merchant Shipping Bill that the pilots shall have two sureties to the bond of 100 *l.* given by them, *Sir F. Arrow* 1625, 1626. 1874, 1875——Instances of licensed pilots perfectly unable to meet their liabilities for accidents, *ib.* 1869, 1870——Objection to unlimited liability of pilots under a voluntary system, *ib.* 1873.

Contemplated liability of the pilot to the local authority, *Danson* 3186, 3187. 3264——Circumstance of the Liverpool pilots being liable to the full extent of their means, many of them being possessed of property, *Bremner* 4684–4686——Reference to the liability respectively of the pilot and of the underwriters, in case of collision or loss, *Castle* 7715–7718.

Opinion that the pilot should be no more liable for damage than the shipmaster, *Barfield* 8298——Conclusion that a ship run down should be able to recover from the owner of the other ship, the pilot being liable to the latter for 100 *l.*, *Daines* 8516–8519——Practical character of witness's liability up to 100 *l.* (as pilot in the Thames); objection to unlimited liability, *Pattison* 8866–8873. 8988–8995.

10. *Extent of Liability of the Underwriter:*

Liability of the underwriter of a ship, which runs down another ship, for three-fourths of the claim, one-fourth falling upon the owner, *Tozer* 8268, 8269.

11. *Liability in respect of Loss of Life:*

Frequent instances of claims against owners for compensation in respect of loss of life, *Farrer* 603, 604.

Report, 1870—*continued.*

LIABILITY—continued.

12. *Suggestions for an increased Immunity of Owners:*

Opinion that a shipowner having taken all precautions against accident should not be liable, irrespectively of compulsory pilotage, *Shallcross* 3545-3554——Suggestions for amending the present system as to liability for accident when there is a pilot in charge; opinion favourable to an increase of the immunity of the owner, *Tozer* 8183–8189. 8228–8231. 8235-8241.

13. *Conclusions of the Committee:*

Consideration of the law as to the exemption of the shipowner from liability for damage done by his ship when placed by compulsion in charge of a pilot, *Rep.* v–vii——Conclusions as to the very mischievous operation of this state of the law; sundry illustrations in support of the strong condemnation expressed by the Committee, *ib.* vi–viii——Several foreign countries in which compulsory pilotage does not carry with it exemption from liability, *ib.* viii——Circumstance of some of the strongest supporters of compulsory pilotage being decidedly of opinion that the present exemption from responsibility should be done away with, *ib.*

Very general concurrence of opinion on the part of the witnesses from Liverpool as to the great evil of the immunity of the owner from liability for damage when the ship is in charge of a compulsory pilot, *Rep.* xix, xx——Preponderance of evidence from Liverpool to the effect that under a compulsory system the owner cannot justly be made liable for the acts of the pilot, *ib.* xx——Changed views of the shipowners on the subject of immunity from liability, *ib.* xxvii.

Evil of the present legal relation between a captain and a compulsory pilot, *Rep.* xxvii——Expediency of the responsibity resting with the employer or owner instead of with the Government or pilotage authority, *ib.* xxviii——Great evil of the present pilotage system on the score of liability, *ib.*——Tendency to disaster through the captain being compelled to give up charge of his ship to a pilot, *ib.* xxix.

Impracticability of dealing with the law of liability save by Imperial legislation, *Rep.* xxix——Great opposition expected from shipowners if it were sought to make them liable for the acts of pilots compulsorily employed, *ib.* xxix, xxx.

Conclusion that the immunity from liability must stand or fall with the legal obligation to employ a pilot, *Rep.* xxx.

Licensed Pilots. Action expected to be taken by local authorities on the question of licensing a greater or less number of pilots, *Farrer* 229–238. 748. 972–981. 987–990——Expediency of the local authorities having power to limit the number of licensed pilots, and to protect them against unlicensed pilots, *Sir F. Arrow,* 1446–1448. 1453–1458. 1866——Approval of the examination and licensing of pilots being entrusted to the local authorities, *ib.* 1582, 1583——Concurrence in the view that the obligation to take a licensed pilot, if any at all be taken, is very desirable, *ib.* 1746, 1747. 1785-1788——Contemplated right in a licensed pilot to supersede an unlicensed pilot, *ib.* 1805, 1806.

Approval of the pilots being restricted in number by license, and being bound by a regulated price, whilst it should be optional in the shipowners not to employ them; denial that such system would be at variance with the principles of free trade, *Leyland* 9999–10005. 10024–10030. 10044–10047. 10219–10226——Contemplated limitation of the number of licensed men, *ib.* 10151, 10152——Preference of witness for licensed pilots; at the same time it should not be compulsory upon owners to employ them, *Inman* 10324–10335.

Approval of the licensing of pilots under a voluntary system, *Jones* 10618-10621; *Beckett* 11719, 11720——Contemplated licensing of pilots under a voluntary system, it being at the same time important to take great care in changing from one system to another, *Holt* 11201–11217.

Facilities under the Bill for regulating the number of pilots and for securing their attendance at their stations, *Sir F. Arrow* 11868–11872——Absence of hardship in compelling the men to keep to their stations, as they are protected by being licensed, *ib.* 11868–11874.

Evidence favourable to the licensing of pilots in the Thames, and to the charges being regulated by the local authorities in the event of the abolition of compulsory pilotage, *Robinson* 12792–12794. 12823–12827. 12911–12932.

Employment of 1,828 licensed pilots in districts where there is some kind of compulsion, whilst in those where there is no compulsion whatever the number is 1,066, *Rep.* iii.

See also *Local Authorities. Masters and Mates. Number of Pilots.*

Light

Report, 1870—*continued.*

Light Dues. Denial that as regards light dues dues a different principle is laid down as compared with the proposed option respecting payment for pilotage, *Farrer* 280–291 ——Important distinction between the question of compulsory payment for lights and for pilots, *ib.* 559–566.

Approval of compulsory payment for pilotage, on the same principle as compulsory payment for lights, *Ballantine* 3090——Similar principle involved in compulsory payment for lighthouses and for pilotage, *Lamport* 3607. 3694 ——Objection not only to the pilotage tax, but to the light dues, *Robinson* 12808–12811.

"*Lion,*" *The.* Case of the "Lion" adverted to, as involving the question whether she was exempt from liability for damages as being a passenger vessel, the passengers being the father-in-law and wife of the master, *Farrer* 78, 79.

Litigation. Unsatisfactory state of the law, as leading to endless litigation, upon the question whether either of two vessels in collision is bound to carry a pilot, and whether the damage is caused by the act of the pilot alone, *Farrer* 73–79——Absurd and oppressive litigation under the compulsory system, further adverted to, *ib.* 203.

Liverpool (Mersey Pilotage District):

I. *As to the present Pilotage Service, and its Administration:*

1. Establishment of Compulsory Pilotage under different Acts.
2. Argument that Compulsion applies only to Payment of Rates.
3. Constitution and Action of the Mersey Docks and Harbour Board as the Pilotage Authority.
4. Number of Pilots and Apprentices, and Amount of Work performed.
5. Evidence as to the Efficiency of the Service.
6. Evidence as to Inefficiency.
7. Pilot Stations.
8. Selection of Pilots.
9. Complaints, and their Investigation.
10. Pilotage Rates and Earnings of Pilots.
11. Annuity Fund, and Pensions.
12. Pilot Boats, and Boat Ownership.
13. Other Details generally.

II. *Exemptions from Compulsory Pilotage.*

III. *Examination of Masters and Mates for Pilotage Certificates.*

IV. *As to the Navigation of the Mersey:*

1. Concurrence of Testimony as to the exceptional Difficulties and Dangers of the Navigation.
2. Evidence to the effect that the Navigation is not exceptionally hazardous.
3. Efficiency in the matter of Buoys, Lights, &c.

V. *Accidents to Piloted and Unpiloted Ships respectively.*

VI. *Relative Tonnage of Sailing Ships and Steam Ships.*

VII. *Enormous Trade of the Port.*

VIII. *As to the Question of Compulsory or Voluntary Pilotage:*

1. Concurrence of Evidence in strong Opposition to the Application of the Bill to Liverpool.
2. Local Feeling upon the Question at Issue.
3. Views of the Liverpool Pilots.
4. Efficiency respectively of Compulsory Pilots and of Licensed Masters and Mates.
5. Proposed Extension of the Compulsory Principle.
6. Effect of Voluntary Pilotage as regards the Rates.
7. Evidence in Approval generally of the proposed Adoption of Voluntary Pilotage.

IX. *Question of Compensation.*

X. *Summary by the Committee, and Conclusion arrived at in favour of the Application of the Bill.*

I. *As to the present Pilotage Service, and its Administration:*

1. Establishment of Compulsory Pilotage under different Acts:

Origination of the pilotage system of Liverpool by Act of Parliament in 1765 on all outward-bound vessels, *Squarey* 2349. 2361 ——Further Act in 1796, extending compulsion to inward-bound vessels, *ib.*——Summary of the chief provisions of the several

Report, 1870—*continued.*

LIVERPOOL (*MERSEY PILOTAGE DISTRICT*)—continued.

I. *As to the present Pilotage Service, and its Administration*—continued.

1. Establishment of Compulsory Pilotage under different Acts—*continued.*

Acts since 1796, there having been a Consolidation Act in 1858 by which the present pilotage system is worked, *Squarey* 2349–2352. 2361.

Failure of the voluntary system in the first instance, previously to the Act of 1765, *Danson* 3137. 3212–3214——Statement as regards the several Bills or Acts respecting pilotage in Liverpool, that the present Bill is the first which has ever been introduced for the purpose of abolishing compulsory pilotage, *Bremner* 4622–4630——Confirmation of the principle of compulsory pilotage by the Merchant Shipping Act of 1854, *ib.* 4628. 4632.

2. Argument that Compulsion applies only to Payment of Rates:

Examination with reference to the opinion that pilotage is not compulsory at Liverpool, but only the payment of rates, *Squarey* 2398–2435. 2444–2451. 2472–2476. 2496–2512——Penalty of double pilotage for refusal to take a pilot, *ib.* 2414–2417. 2427.

3. Constitution and Action of the Mersey Docks and Harbour Board as the Pilotage Authority:

Date of creation and mode of constitution of the Mersey Docks and Harbour Board adverted to, with reference to the part taken by the Board as the local pilotage authority, *Farrer* 307–317——Entirely public character of the Mersey Board, whereas it is opposed to voluntary pilotage, *ib.* 366–368——Belief that the system of pilotage government is extremely good, *ib.* 722.

Constitution of the Mersey Docks and Harbour Board as the pilotage authority by the Act of 1858, *Squarey* 2352, 2353. 2356——Working of the pilotage system by a committee of twelve members, eight of whom are taken from the Mersey Board, and four are persons specially conversant with pilotage and shipping matters, *ib.* 2350–2356. 2359, 2360——The proceedings of the committee are brought up weekly for confirmation at the meetings of the Board, *ib.* 2356.

Power of the Dock Board to make bye-laws, subject to the sanction of the Board of Trade, *Squarey* 2357, 2358—— Examination of the pilots by a sub-committee of the Pilotage Committee, *ib.* 2359——Absence of pecuniary interest in the Mersey Board in maintaining compulsory pilotage, *ib.* 2481, 2482——Power of the Mersey Board, with the approval of the Board of Trade, to amend details in the present pilotage system, *ib.* 2542–2546. 2603–2605.

Statement as to the Mersey Board and the Pilotage Committee having no interest whatever in the pilotage, *Hills* 2780–2784——Impression that there are more sailing shipowners than steam shipowners on the Mersey Board, *Lamport*, 3718, 3719——Statement as to there being every facility given to steam shipowners to become members of the Mersey Board, though there may be but few owners on the board, *ib.* 3716–3719——Explanation that there are more steam shipowners than sailing shipowners on the board, *Moss* 3805–3807.

4. Number of Pilots and Apprentices, and Amount of Work performed:

Total of 284 pilots, including licensed apprentices, there being also thirty-four unlicensed apprentices, *Moss* 3825–3830——Reduction being effected in the number of apprentices and of pilots on account of the earnings falling off from several causes; adequate supply maintained for the necessities of shipping, *ib.* 3832–3842. 4013–4035——Explanation as to there being different classes of pilots for vessels of different sizes, *ib.* 3897–3906.

Average of forty-eight or fifty vessels piloted yearly at Liverpool by each pilot, there being also other work to do, *Simpson* 4265–4269. 4501–4507. 4546–4548. 4566–4568——Increase in the number of pilots within the last ten years, steps being now taken to reduce the numbers; question hereon as to there being sufficient work for the staff, *ib.* 4493–4513. 4546–4548. 4566–4568.

Grounds for the conclusion that there are more pilots than are required for the service of the port; power of the pilotage committee to prevent abuse on this score, *Holt* 11146–11154. 11218–11222——Evidence as to the unduly large number of pilots, witness for instance, not being actually engaged in piloting for more than forty days in the year; particulars hereon as to the time wasted on shore and in the boats, *Beckett* 11588. 11598–11605. 11737–11744. 11751–11761. 11774–11778——Unduly large number of apprentices hitherto, *ib.* 11704–11714——The service might be conducted with from eighty to 100 less pilots, *ib.* 11753, 11754.

Apparently excessive and extravagant scale upon which the Liverpool pilotage service is conducted, *Sir F. Arrow* 11863. 11874–11877. 11894–11897.

Denial that the pilots have not full occupation for their time both at sea and on shore, *Davies* 12967–12972.

Testimony

Report, 1870—*continued.*

LIVERPOOL (*MERSEY PILOTAGE SERVICE*)—continued.

I. *As to present Pilotage Service, and its Administration*—continued.

5. Evidence as to the Efficiency of the Service:

Testimony borne by Admiral Evans to the efficiency of the pilotage service of the Mersey, *Farrer* 349–352——Thorough efficiency of the Liverpool pilots; absence of complaints against them, *Judkins* 1972–1975——Value of the apprenticeship served by the pilots, *ib.* 1998–2004. 2045–2047. 2124, 2125. 2208.

Result of witness's experience that he knows no port where the pilotage system has so effectually met the necessities of shipping as at Liverpool, *Hills* 2723——Obstacle to the proper training of apprentices unless the boats went out in fine weather, *ib.* 2765–2768——Great efficiency of the pilotage service, *Ballantine* 2964–2972. 3109, 3110——Probability that on a certain occasion witness's ship would have run upon a sunken wreck had he not had a pilot on board, *ib.* 2991–2994.

Satisfaction of the underwriters with the present pilotage system of the port, *Danson* 3124–3126. 3148——There might be some changes for the better, but on the whole the system is a very good one, and is very well administered, *ib.* 3148——Necessity of regulations for the maintenance at all times of a large and efficient staff, *ib.* 3174–3179——Adequacy of the earnings of pilots to induce zeal and efficiency, *ib.* 3402–3408.

Decided efficiency of the present service, *Shallcross* 3430, 3431. 3438, 3439. 3486, 3487——Great value of the training and practical knowledge of the Liverpool pilots; advantage as compared with the knowledge of masters or captains who are only in the port occasionally, *ib.* 3438. 3455, 3456. 3502–3505. 3512. 3516. 3540–3542——Great satisfaction given by the present pilot service of the port, though it is capable of some amendment, *Lamport* 3561–3564. 3594.

Constant service at sea of nearly half the staff at a time, *Moss* 3831. 3907——Very few complaints either against the pilotage rates or the service, *ib.* 3849–3851. 3866——Dissent from a statement that in managing the outward pilotage, there is much waste of the pilot's time on shore, *ib.* 3938–3944——Almost universal satisfaction given by the system, *Galloway* 4069, 4070.

Statement of the training and qualifications of the pilots, *Simpson* 4167–4171——Decided opinion as to the efficiency of the Liverpool pilotage service, and as to the necessity of continuing the present system, *Admiral Evans* 4584–4591——Intimate knowledge of witness as to the pilotage service in the Mersey; its efficiency, *Taylor* 7945, 7946. 8157–8161——More efficient pilotage service in the Mersey than in the Thames, *Duncan* 9728——Great efficiency of the pilots, *Marwood* 10478.*10485.

Inaccuracy of the statement by the witness Beckett, that the pilot boats avoid the small vessels in order to supply large ones, *Davies* 12962–12965——Explanation of Beckett's statement as to the pilots not taking regular turns, *ib.* 12966.

6. Evidence as to Inefficiency:

Inefficiency of many of the Liverpool pilots; heavy losses of witness through their negligence, *Leyland* 10039–10041. 10132–10135. 10140–10143——Instances of incompetency on the part of compulsory pilots on board witness's ships, *Inman* 10246, 10247——Frequent complaints made by witness as to the pilots, some of whom are very inefficient; explanation as to his having postponed formal complaint in a recent case of collision, *Bouch* 10964–10972. 10992–11005——Waste of the pilot's time under the present regulations, *Holt* 11147. 11150——Grievance in witness being required, on account of the tonnage of his vessel, to take an apprentice pilot at Liverpool, instead of a thoroughly competent pilot, *Chaddock* 11410–11417. 11480–11492. 11546, 11547.

Partiality and favouritism in the employment of the pilots, some doing much more work than others, though the earnings of each boat are equally divided, *Beckett*, 11591–11597. 11789–11798——Statement as to the pilot boats giving a preference to large vessels; similar tendency under an optional system, *ib.* 11671–11694.

7. Pilot Stations:

Exceedingly efficient operation of the Liverpool system of pilot stations, pilots being invariably found when wanted, *Judkins* 1956–1962. 1970, 1971. 2138——Excellence of the system of pilot stations; belief that without them there would be nothing like the same efficiency or security, *Hills* 2673–2676——Admirable working of the system of pilot stations, *Ballantine* 2966–2970; *Shallcross* 3439; *Galloway* 4078.

Opinion as to the maintenance of pilot stations being essential, *Lamport* 3568——Improvement if some of the Liverpool pilots were stationed in the Channel, as far down as Tuskar, *ib.* 3594–3596. 3656–3662. 3685, 3686——Value of the boat stations, which are all to be retained, *Moss* 4031–4033.

Way in which the system of boat stations is worked, *Simpson* 4202–4205. 4395. 4508–4513——Check applied, in order to see that the boats keep their stations; very few complaints on this point, *ib.* 4206–4213——Forcible illustration, during a gale in 1866, of the excellent operature of the system of stations as a means of preventing casualties; small pilotage charges involved on this occasion, *ib.* 4222–4237.

LIVERPOOL (MERSEY PILOTAGE DISTRICT)—continued.

I. *As to the present Pilotage Service, and its Administration*—continued.

7. Pilot Stations—*continued.*

Instances of the pilots not being at their stations when wanted, *Leyland* 9986, 9987. 10018. 10163–10165——Suggestions as to the amendments desirable in the system of boats and stations under a non-compulsory system; advantage of a boat going down the Channel as far as Tuskar, *Jones* 10554–10563. 10591–10599. 10659, 10660. 10671–10678——Circumstance of the Bill not proposing to interfere with the power of the Mersey Board, or to provide cruising stations; duty of the pilot to be at his station, though it should be optional in the shipowner as to employing him, *Bouch* 10929–10936. 10973–10975.

Inconvenience of the pilot stations, as regards sailing ships, *Chaddock* 11448——Amendments contemplated in the system of stations, witness proposing, amongst other alterations, that there be a station at Tuskar, or some other point in the Channel, if the pilots wish to go there, *Beckett* 11586, 11587. 11606–11610. 11631–11637. 11672–11697. 11703. 11715–11718. 11762–11773. 11799–11826.

8. Selection of Pilots:

Explanation on the subject of the employment of two selected pilots by witness's company, these being taken on to Londonderry, and picked up there on the return voyage, *Ballantine* 3035–3053. 3077–3085. 3104–3108. 3121——Special arrangements by which some of the large steam-ship companies are allowed to have selected pilots; check upon the average earnings of these, *Simpson* 4247–4253. 4301–4323. 4374–4379——Explanation as to special pilots not being attached to witness's ships at Liverpool, *Taylor* 7966, 7967.

Explanation as to witness now having a choice of pilots; difficulty experienced before this permission was granted by the pilotage committee, *Inman* 10239–10245. 10286–10289. 10298–10300——Difficulty in providing that sailing ships coming to Liverpool should have a choice of pilots, *ib.* 10290–10295——Statement as to the pilots coming a distance of 240 miles to meet the ships, without making any extra charge, *ib.* 10263–10267. 10294–10297. 10375–10377.

Grievance under compulsory pilotage on account of the necessity of taking the first pilot that offers, whether he is a capable man or not, *Bouch* 10881–10885. 10992–10996——Way in which there would be facilities to ships generally for carrying out a selection of pilots under a voluntary system, *Holt* 11136–11141. 11188–11197——Limited extent to which there is any selection of pilots at Liverpool, *ib.* 11194–11200.

List of Liverpool pilots appointed for special and permanent service in steamers, *App.* 563.

9. Complaints, and their Investigation:

Careful investigation of complaints against individual pilots, offenders being duly punished, *Galloway* 4071–4073—— Several complaints made against individual pilots; excellent effect of the punishment and publicity in these cases, *Simpson* 4214–4221. 4330–4333. 4397–4405——Total of forty-six complaints in 1869, *ib.* 4215, 4216——In 1869 six pilots were suspended, one reduced, and one dismissed, *ib.* 4333.

Inadequate redress received when complaints have been made, *Bouch* 10967–10970. 10992–10998——Conscientious action of the pilotage committee in following up complaints against pilots, though severer measurers might sometimes be adopted; modes of punishment adverted to, *Holt* 11174–11183. 11192, 11193. 12259–12264——Very improper manner in which complaints against pilots are dealt with by the Mersey Board or the pilotage committee; suggestions hereon for an improved constitution of the pilotage tribunal with reference to the investigation of accidents and complaints, *Leyland* 10041. 10089–10116. 10127–10133. 10194–10198——Comment upon the mode of inquiry by the pilotage committee into complaints, *Inman* 10246. 10299–10308.

Return of all complaints against pilots by the owners of steam and sailing vessels for negligence, &c. during the years 1868 and 1869, *App.* 560, 561.

10. Pilotage Rates and Earnings of Pilots:

Opinion as to the earnings of the Liverpool pilots being none too much, *Ballantine* 3021, 3022——Very moderate rates, *ib.* 3092; *Watson* 10876——Very small cost of the staff with reference to the enormous value at risk, *Danson* 3175, 3176. 3409, 3410——Very moderate earnings of the Liverpool pilots, the average being under 200 *l.* a year, *Lamport* 3663, 3664.

Annual earnings of the different classes of pilots; serious reduction through the abolition of differential rates, *Moss* 3821–3823. 4036, 4037——Total of about 53,000 *l.* as the pilots earnings in 1869, *ib.* 3824 —— Very moderate pilotage rates at Liverpool; necessary increase of these under a voluntary system, *Galloway* 4112–4125——Economy of the service, *Simpson* 4239. 4254–4264—— Lower pilotage rates at Liverpool than at London, Cardiff, or New York, *ib.* 2594–4263.

Payment

Report, 1870—*continued.*

LIVERPOOL (MERSEY PILOTAGE DISTRICT)—continued.

I. *As to the present Pilotage Service, and its Administration*— continued.

10. Pilotage Rates and Earnings of Pilots—*continued.*

Payment of about 1,800 *l.* or 2,000 *l.* a year by witness's firm for pilotage, *Leyland* 10219——Witness's company pay 370 *l.* a year for each pilot, whereas the latter only receives about 180 *l.*, *Inman* 10256, 10257——Grievance in the Liverpool pilots not having all their earnings, *Marwood* 10478–10480.

Payment of 340 *l.* a year for witness's services as a selected pilot of the Inman Company, whereas he receives only about half; complaint hereon, *Jones* 10523–10526. 10533, 10534. 10573–10581. 10588–10590. 10645–10658——Worse position of the pilots in 1872, when the compensation for differential dues ceases, *ib.* 10548–10550. 10566——Non-complaints as to the amount of the pilotage rates, *Bouch* 10896, 10897. 10958–10962.

Opinion that the present rate of charge is high, considering the service rendered, *Holt* 11103–11105. 11159–11164. 11290——Suggestion that in levying the pilotage charge tonnage as well as draught might be the basis of the charge, *Chaddock* 11544–11546. 11557–11563——Witness does not say the rates are excessive, *Sir F. Arrow* 11896——Inaccuracy of the statement by the pilot Henry Jones, as to the amount of his net annual receipts for pilotage, *Davies* 12938–12940.

Returns for 1865 and 1869, relative to the earnings of the pilots, &c., *App.* 572.

11. Annuity Fund, and Pensions:

Payments whence the pilotage annuity fund is created, and way in which administered by the Board, *Squarey* 2362–2366——Particulars relative to the pilots' annuity fund, its amount, and how constituted and administered, *Simpson* 4270–4280——Grant of pensions to pilots when infirm from other causes as well as age; very small proportion superannuated, *ib.* 4534–4537——Calculation of the pensions at the rate of 1 *l.* for each year of service, *ib.* 4538–4541——Compulsion upon the Mersey Board to grant a pension upon the scale laid down by bye-law, *Bremner* 4637–4644.

Statement of the current expenses of the annuity fund, and number of annuitants on 1st January 1870, *App.* 564——Average pensions of pilots, and of widows and orphans, on 1st January 1870, *ib.*

12. Pilot Boats, and Boat Ownership:

Views of Mr. Forwood and of Captain Graham Hills, also of the Pilotage Commission of 1836, cited as showing the mischievous operation of the Liverpool pilot-boat system; conclusion as to the importance in any case of abolishing the system, *Farrer* 713–718. 998–1000——Ownership of about one-third of the shares by persons who are no longer acting pilots, *ib.* 714——There are now twelve boats, their value being about 30,000 *l.*, *ib.*——The sum actually invested in the boats is about 90,000 *l.*, *ib.*

Explanation of the provisions relative to the ownership of the pilot boats, and the regulations as to the sale of shares, *Squarey* 2367–2373——Expensive and efficient character of the pilot boats, twelve in number, *Moss* 3843–3846. 3907–3910——Practice as to the division of the earnings of each boat among the men, *ib.* 3847. 3911. 3926–3937.

Information relative to the shares in which the twelve pilot boats are owned, and the system of division of the earnings of each pilot, *Simpson* 4172–4178. 4316–4323——Ownership of the boat shares by retired pilots and by acting pilots, *ib.* 4178. 4380, 4381——Total of 768 shares representing a value of 90,700 *l.*, *ib.* 4178–4182——Average earnings at the rate of 12½ per cent. upon the market value of the shares, subject to deduction for depreciation and insurance, *ib.* 4183–4196. 4447–4464.

Nature of the security for the maintenance of efficient boats and for the prompt replacing of worn-out boats; great efficiency obtained under the system, *Simpson* 4198–4201. 4336–4339. 4382–4394. 4406–4411——Examination relative to the enhanced value of the boat shares as compared with the cost of the boats; admission that the system of ownership requires correction, *ib.* 4340–4354. 4412–4414. 4428–4438. 4447–4461.

Particulars relative to the amount paid by the pilots for their boats, and the enhanced value now represented by the shares, *Bremner* 4649–4659——Total of 55,960 *l.* paid for boats at different times since 1824, the twelve boats now in use having cost 28,960 *l.*, *ib.* 4652, 4653——Cause of the competition for boat shares; great incentive of the system to industry and frugality, *ib.* 4660, 4661, 4664–4666——The shares have been as high as 145 *l.*, the present value being 118 *l.*, *ib.* 4654–4658. 4734–4736——Error of Mr. Farrer in stating that some of the boat owners were not pilots, *ib.* 4661–4663.

Exception taken to the practice whereby large deductions are made from the pilots' earnings towards the boat owners, *Inman* 10256–10258. 10319. 10338. 10343, 10344. 10347. 10433–10436——Statement as to the unduly enhanced value of the boat shares, on account of the large dividends paid, and as to the boats not being properly efficient, *ib.* 10319–10323. 10401–10422. 10445–10451.

Report, 1870—*continued.*

Liverpool (Mersey Pilotage District)—continued.

I. *As to the present Pilotage Service, and its Administration*—continued.

12. Pilot Boats, and Boat Ownership—*continued.*

Evidence favourable to the Bill as compelling the break up of the boat owning system in the Mersey; details hereon as to the very objectionable and unjust working of the system in diverting a large portion of the pilots' earnings, *Jones* 10527 *et seq.*——Explanation that witness does not object to the earnings of the same boat being equally divided, and merely objects to the deduction for the boat owners, *ib.* 10582–10587. 10622–10624. 10628–10633.

Dissatisfaction of some of the Liverpool pilots in regard to the deduction from their earnings for the owners of the boats, *Reynolds* 11078–11081; *Chaddock* 11428, 11429——Opinion that the system of boat-owning is very unsound, though if it be abolished compensation should be provided, *Holt* 11237–11240. 11249–11253. 11276–11281.

Strong objection on the part of 164 pilots who are not boat owners to the system of boat-owning; evidence in support of such objection, *Beckett* 11582–11585. 11617–11621. 11638–11641. 11833–11836.

Paper containing particulars relative to the pilots' ownership of pilot boats, and the mode of division of the earnings, *App.* 563——List of pilot boat owners in February 1870, showing the number of sixty-fourth shares held by each, *ib.* 573, 574——Return of the number, tonnage, price, &c. of the pilot boats, *ib.* 575.

13. Other Details generally:

Discussion at the Mersey Docks and Harbour Board in June 1868 upon the subject of the negligence of pilots, and their liability, *Farrer* 139, 140——Origin of the pilotage system adverted to, *ib.* 247–249.

Statement as to the modes of distribution by the Mersey Board of the sums derived from pilots' licenses, and from fines and penalties, *Squarey* 2362–2364——The receipts from the licenses, &c. are all disbursed again in the pilotage system, *ib.* 2364.

Statement as to the compulsory pilots generally leaving outward-bound vessels at the Bell Buoy, and as to their being two boats with voluntary pilots available beyond that point, *Hills* 2864–2884——Absence of any supply of unlicensed pilots at Liverpool, or along the coast to Port Linas, *ib.* 2929–2938——Practice of some inward-bound ships to take voluntary pilots in the Irish Channel, and to bring them on to Liverpool, in addition to the compulsory pilots taken at the Bell Buoy, *ib.* 2939–2950.

Arrangement as to the same pilot being taken by a ship outward bound who has already piloted her into port, *Simpson* 4246. 4514, 4515——Necessity for pilotage beyond the Bell Buoy; facility recently given in this respect, *ib.* 4441–4444——Frequent actions against the pilots, the justices having summary jurisdiction up to 50*l.*, *Bremner* 4687–4689.

Order in Council, dated 26th June 1861, confirming pilotage bye-laws of the Mersey Docks and Harbour Board, *App.* 535——Schedule of bye-laws with respect to pilots, pilot boats, and pilotage, *ib.* 535–541.

II. *Exemptions from Compulsory Pilotage:*

Exemption of coasters under 100 tons from the compulsory pilotage, under the Liverpool Pilotage Act, provided they have been in the coasting trade for six months, *Farrer* 136, 137——Arrangement in 1854 between steamship owners at Liverpool and the pilotage commissioners whereby the former agreed to pay reduced pilotage rates on being relieved from the obligation to take a pilot, the owners being liable in case of damage, *ib.* 143–146.

Large number of vessels in the Mersey which do not take pilots, and do not require them, *Hills* 2790, 2791——Inconsistency of the exemptions from compulsory pilotage; witness however would not now abolish all exemptions, *Lamport* 3635, 3636. 3655. 3734, 3735——Saving of rates by coasting steamers under optional pilotage; risk incurred thereby, *Moss* 3950–3971.

Steps taken by the Mersey Board in order to meet the complaint that coasters should be six weeks in the trade in order to constitute them as coasters, *Simpson* 4282, 4283——Exemption of certain steamers from obligation to take pilots if in the coasting trade, *ib.* 4415——Exemption not only of coasters under 100 tons, but of all coasters in ballast, *ib.* 4466.

Statement as to coasting steamers paying only half rates when they take pilots; this is an old regulation, and the payment has not been complained of, *Simpson* 4467–4469. 4486–4491——Explanation that the Mersey Board is not responsible for not compelling the home trade passenger ships to take pilots, these vessels paying a rate of only 1*s.* a foot; anomaly in the matter of this payment, *ib.* 4470–4483,

Increased

LIVERPOOL (*MERSEY PILOTAGE DISTRICT*)—continued.

II. *Exemptions from Compulsory Pilotage*—continued.

Increased facilities for exemption given under the Amendment Act of 1862, though such facilities have not been put in operation, *Bremner* 4628–4630. 4632——Statement as to the obligation to carry pilots having never been forced upon coasting passenger steamers, witness disapproving of this exemption, though there are but few accidents to these vessels, *ib.* 4754–4773——Exemption of vessels under 100 tons from compulsory pilotage, whilst those above 100 tons are obliged to take pilots, *Marwood* 10458–10461.

Complaint as to the coasting steamships of witness's company being subject to a charge for pilotage though never employing a pilot, *Johnson* 11306. 11311. 11316, 11317. 11380–11384——Examination relative to the agreement with the Liverpool pilotage committee by which witness's vessels pay a reduced pilotage rate of one shilling, though not using nor required to use a pilot; witness was not aware that there was any sanction of the Board of Trade for this charge, *ib.* 11322 *et seq.*; 11396, 11397.

Order in Council as to reduction of pilotage of coasting steamers, *App.* 542.

III. *Examination of Masters and Mates for Pilotage Certificates:*

Information in detail upon the subject of the grant of certificates to the masters and mates of steamships or passenger ships at Liverpool; correspondence on this matter between the Mersey Docks and Harbour Board and the Board of Trade, *Farrer* 146–165 —— Circumstances under which the Board of Trade formerly granted certificates freely, without examination, *ib.* 146–148. 730–737——Very restricted action of the Liverpool pilotage authorities in granting or renewing certificates; contrast as compared with London, Hull, and Glasgow, *ib.* 148–152. 154, 155.

Statement as to there being only ten masters and mates licensed; reference hereon to the great reluctance of the owners of steamships in the Mersey to have their masters and mates examined, *ib.* 297. 300–306. 317. 670. 744–747.

Belief that but for the immunity of owners many more masters and mates would apply to be examined for pilotage certificates, *Squarey* 2397; *Hills* 2726–2737——Very different examination at Liverpool of the pilots and of masters for pilotage certificates, *Hills* 2732, 2733. 2739, 2740——Ready facilities given for the examination of masters, *ib.* 2738——Exception taken to the system of examination for masters' certificates, *Danson* 3141–3143. 3293, 3294.

Full facilities given by the Mersey Board for the examination of masters and mates, *Simpson* 4254–4258. 4355–4359. 4368——Probability of the question of liability being the cause why so few masters apply to be examined, *ib.* 4355–4359.

Statement as to captains being deterred from applying to the pilotage committee for pilotage certificates, *Reynolds* 11029–11032——Explanation in regard to witness's captains not having been examined for pilotage certificates, in order to save the sum (from 350*l.* to 400*l.* a year) paid for pilotage rates; witness was not aware that the payment might thus be saved, *Johnson* 11322–11337. 11371–11379. 11387–11395. 11398—— Objection by captains to be examined, difficulties having been thrown in their way by the examining authority, *ib.* 11326–11329. 11336, 11337.

Schedule of bye-laws for the regulation of masters and mates of ships who have received pilotage certificates, *App.* 541, 542.

Correspondence in 1868 and 1869 respecting the examination of masters and mates for pilotage certificates, *App.* 542–550——Return of all applications to the Mersey Docks and Harbour Board from masters and mates for pilotage certificates between the 6th October 1859 and the 10th August 1868, *ib.* 546——Number of applications from masters and mates, and number passed, transferred, &c., *ib.* 564.

IV. *As to the Navigation of the Mersey:*

1. Concurrence of Testimony as to the Exceptional Difficulties and Dangers of the Navigation:

Evidence as to the peculiar dangers of the navigation of the Mersey, on account of the suddenness with which gales come on, of the fogs, and of the shifting character of the channels; conclusion that the difficulties are greater than in the case of the Bristol Channel or the Thames, *Judkins* 1983–1987. 1991. 1995. 2003–2010. 2077–2081. 2094–2096. 2151–2155. 2171–2178. 2185, 2186. 2244–2257——Very unsafe anchorage, *ib.* 1986, 1987——Frequency of very hazy weather, *Judkins* 2003, 2004. 2217; *Ballantine* 2987. 3104.

Information in detail relative to the shifting character of the channels of the Mersey, and the dangers generally of the navigation; conclusion that the navigation is more difficult and dangerous than that of the Thames, Bristol Channel, or any place in the kingdom, *Hills* 2655–2671. 2676. 2691–2721. 2743–2762. 2778. 2797–2805. 2891–2901. 2908–2914——Particulars as to the frequent surveys of the Mersey by witness, and as to the steps taken to utilise the knowledge acquired; practice as to surveys in the Thames

Report, 1870—*continued.*

Liverpool (Mersey Pilotage District)—continued.

IV. *As to the Navigation of the Mersey*—continued.

1. Concurrence of Testimony as to Exceptional Difficulties, &c.—*continued.*

adverted to hereon, *Hills* 2658, 2659. 2668. 2672. 2885–2890. 2915–2923——Continuous change going on in the Queen's Channel, and Queen's Channel bar, *ib.* 2660–2666——Great difficulty owing to the frequent haze caused by the smoke from the town, *ib.* 2747, 2748. 2778.

Great imprudence in going in or out of the port without a pilot; details hereon as to the exceptionally difficult and hazardous character of the navigation, *Ballantine* 2973 *et seq.*——Increased risk through the increased length of the vessels now built, *ib.* 2988–2990——There is no other port with such narrow channels and strong tides combined, *ib.* 2983———Danger through the frequent change in the channels, *ib.* 3028–3031——Inadequacy of charts for the navigation of the Mersey without a pilot, *ib.* 3097–3106.

Large extent of the channels of the Mersey, *Danson* 3132, 3133 — Belief that there is no other port in the world involving so dangerous a navigation as Liverpool; limited knowledge of witness as to the navigation of the Thames adverted to hereon, *ib.* 3135. 3252. 3277–3279. 3327–3332. 3345. 3422——Statement as regards insurance rates being higher on vessels from Bombay to the Clyde than to Liverpool; this is not a pilotage question, *ib.* 3253–3259——Very dangerous character of the navigation of the Mersey, *Shallcross* 3504. 3513. 3532–3542——Peculiar danger in entering the port of Liverpool, so that there is good reason for an exceptional pilotage service, *Lamport* 3641–3645. 3695–3698. 3737–3747.

Information relative to the enormous strength of the tides in the channels of the Mersey, the navigation being for this and other reasons of an exceptionally dangerous character, *Moss* 3808–3812. 3876, 3877. 3883–3891. 3900——Great increase in the number and tonnage of vessels frequenting the port, the traffic being chiefly carried on within two or three hours of high water, *ib.* 3813–3830.

Peculiar danger of the access to Liverpool, so that a voluntary system of pilotage would not answer there as in other ports, *Galloway* 4106. 4125–4129——Opinion that the navigation of the Mersey and approaches to Liverpool are more dangerous than in the case of any port of the kingdom; respects in which more dangerous than the approach to London, *Simpson* 4166. 4366. 4416–4427——Opinion that there is more danger to outward-bound than to inward-bound ships, *ib.* 4443.

Constant attendance and vigilance required in order to detect the frequent and minute changes that take place in the channel of the Mersey, *Admiral Evans* 4575–4581——Result of witness's experience nearly all over the world that the navigation to Liverpool is of a peculiarly dangerous and exceptional character; it is out of all question more dangerous than that of the Thames or Bristol Channel, *ib.* 4579–4583. 4596–4617——Circumstance of Liverpool harbour being already excepted from the control of the Board of Trade on account of its very exceptional character, *ib.* 4596——The tides are very strong, and there is no anchorage outside the bar with a north-east wind, *ib.* 4601–4604.

Peculiarly intricate and dangerous navigation of the Thames and the Mersey, *Taylor* 7929, 7930——Difficulties of the navigation of the Mersey, more especially to strangers, *Jones* 10605–10612——More dangerous navigation of the Mersey than of the Thames on account of the prevailing winds being from the westward, *Chaddock* 11445–11447.

2. Evidence to the effect that the Navigation is not exceptionally hazardous:

Conclusion that the pilotage of the Thames is fully as difficult as that of the Mersey, if not more so, *Farrer* 347, 348. 799, 800——Evidence to the effect that the navigation of the Thames (where the voluntary system answers) is more difficult than that of any other pilotage district, not excepting Liverpool; detailed examination hereon, with reference more especially to the navigation of the Mersey *Sir F. Arrow* 1482–1493. 1584–1594. 1781, 1843. 1848. 1858. 1935–1940——Probability of the navigation of the Mersey being more difficult than that of the Bristol Channel, *ib.* 1753–1758.

Opinion that the Thames is more dangerous than the Mersey on account of the greater intricacies in the channel, *Castle* 7736; *Tillman* 7772–7776——Denial that the navigation of the Mersey is exceedingly dangerous, *Leyland* 9985–9987. 10036–10038——Opinion that the difficulties of the navigation of the Mersey have been grossly exaggerated before the Committee, and that the Thames is a far more difficult navigation, *Watson* 10743–10746. 10751. 10837–10839.

Witness considers that the Mersey up to Liverpool is not at all a difficult navigation, the difficulty being in the Channel up to the Mersey, *Bouch* 10914–10918. 10949–10957——If the present bell beacon were removed and a light-ship put there the port would be as easy of access as any other in the kingdom, *ib.* 10918——Much greater difficulty in bringing a vessel into London than into Liverpool, *Reynolds* 11016–11021——Danger in the navigation to Liverpool, though not of a character to call for exceptional legislation, *Holt* 11106–11108.

Detailed

Report, 1870—*continued.*

Liverpool (Mersey Pilotage District)—continued.

IV. *As to the Navigation of the Mersey*—continued.

2. Evidence to the effect that the Navigation, &c.—*continued.*

Detailed information relative to the navigation of the Mersey, witness contending that the difficulties have been much exaggerated before the Committee, and that no exceptional case exists calling for compulsory pilotage, *Sir F. Arrow* 11837–11855. 11859. 11862. 11878——Greater difficulty of the navigation of the mouth of the Thames than of the Mersey, *ib.* 11840. 11846——The real difficulties are before the approach to the bar, *ib.* 11841——There is no difficulty as regards steamers, *ib.* 11841, 11842——The difficulties are confined to sailing vessels, and are rendered more easy by the extended use of tugs, *ib.* 11841–11845——Excellent anchorages possessed by the port, *ib.* 11841. 11859——Much greater difficulties of the approach to Calcutta than to Liverpool, *ib.* 11849.

Circumstance of witness having been frequently into the port of Liverpool whilst he had a pilot only once; he considers that compulsory pilotage is not necessary there *Johnson* 12267–12275——Much greater difficulty of the navigation of the Thames than of the Mersey, *Robinson* 12798.

3. Efficiency in the matter of Buoys, Lights, &c. :

Very excellent manner in which the Mersey is lighted and buoyed, *Judkins* 1955, 1956; *Danson* 3144–3147——Advantage of the careful buoyage of the river, *Shallcross* 3514–3517——Large expenditure by the Mersey Board in removing wrecks from the bar, *Moss* 3864, 3865.

Very complete superintendence exercised by Admiral Evans, as the acting conservator of the Mersey, *Galloway* 4057–4063——Constant shifting of the buoys; in one year no less than ninety-nine were shifted, *ib.* 4157——Care taken as to the shifting of the buoys, *Simpson* 4439, 4440——Very large and conspicuous buoys, the channel being beautifully marked, *Sir F. Arrow* 11841.

V. *Accidents to Piloted and Unpiloted Ships respectively :*

Large number of small vessels, without pilots, lost last year in going to Liverpool, whereas there was only one large ship lost with a pilot, *Judkins* 2049. 2110–2116. 2170. 2196, 2197. 2214–2216——Very large proportion of cases before the Admiralty Board contributed by Liverpool, *Squarey* 2440——Explanation that the collision cases which came for trial from Liverpool do not all occur in Liverpool waters, *ib.* 2478, 2479.

Conclusion as to there being a larger proportion of collisions in the case of unpiloted than of piloted ships, *Danson* 3273–3277——Of sixty-eight casualties in the Mersey district in 1869 only one occurred to a vessel with a pilot on board, *Galloway* 4066——Exceedingly small number of accidents in the case of piloted ships, *Simpson* 4543–4545.

Numerous and heavy loss of witness's firm owing to the negligence of the licensed pilots, *Leyland* 10039–10041. 10125, 10126. 10140–10143——Consideration of certain evidence as to the numerous accidents to vessels without pilots, as compared with the few accidents when compulsory pilots are employed; grounds for dissenting from the inferences drawn therefrom in favour of the compulsory system, *ib.* 10057–10064. 10076–10079. 10146–10150. 10199–10208——Explanation as to the apparently danger of vessels when not under charge of pilots; several instances on the other hand of piloted vessels going on shore, *Inman* 10867–10873. 10838–10897.

VI. *Relative Tonnage of Sailing Ships and Steam Ships :*

Much larger tonnage in sailing ships than in steam-ships in the Mersey, *Shallcross* 3426——Vast increase going on in the steam-shipping trade of the port, *Lamport* 3712–3715——Easier navigation of steam-ships than of sailing ships in the Mersey, the former being greatly on the increase, *Leyland* 9988–9991——Very large steam tonnage of the port, the amount being daily increasing, *Inman* 10282–10284.

Return of the total tonnage of sailing and steam vessels entered and cleared with cargoes and in ballast, in each of the years 1850, 1855, 1860, 1865 and 1868; enormous increase in the case of steamers, *App.* 557——Number and tonnage of sailing and steam vessels which belonged to the port in each of the years 1860–69; great increase of steam tonnage, *ib.* 575.

VII. *Enormous Trade of the Port :*

Estimate of 400,000,000 *l.* as the annual value of property inwards and outwards in the Mersey, *Danson* 3130, 3131——Estimate of 400,000 as the number of lives that pass in and out of the port yearly, *ib.* 3134.

Report, 1870—*continued.*

Liverpool (Mersey Pilotage District)—continued.

VIII. *As to the Question of Compulsory or Voluntary Pilotage:*

1. Concurrence of Evidence in strong Opposition to the Application of the Bill to Liverpool:

Examination in detail in support of the conclusion that it would not be safe to abolish compulsory pilotage in the Mersey, witness contending that under the voluntary system there would not be the same efficiency of pilots, and that they would not always be found where and when wanted, *Judkins* 1980 *et seq.*——Great importance of pilots on board all vessels going into Liverpool; illustrations of this, *ib.* 1980 *et seq.*——Respects in which compulsory pilotage in the Mersey adds to security of life; increased risks likely to be run if the pilotage rates could be avoided, *ib.* 1992–1994. 2011, 2012. 2014–2036. 2048–2052. 2103–2106. 2110–2123. 2201–2207.

Belief that under the optional system many masters would not take pilots, and that the efficient and numerous staff necessary for the Mersey could not be maintained, *Judkins* 2013–2020. 2187–2192——Numerous collisions in the Mersey if pilotage were not compulsory, *ib.* 2036. 2165–2170——Belief as to the impracticability of securing by means of regulations the same unfailing supply of efficient pilots, as under the compulsory system, *ib.* 2039–2047. 2054–2066. 2082 *et seq.*——Importance not only of an ample supply of pilots in the Mersey, but of their all being traind men and of assured efficiency; great risk on taking on board men of whose efficiency nothing is known, *ib.* 2102, 2103. 2159–2164. 2199, 2200. 2208. 2287–2296——Belief that under a non-compulsory system witness's company would equally employ pilots; question whether the other steamship companies of Liverpool would not also do so, *ib.* 2304–2327.

Opinion that under voluntary pilotage or under a free system it would be impossible to maintain and carry out the excellent regulations now so efficiently enforced, and that pilots would often not be found when most wanted, *Hills* 2677–2685. 2722. 2855–2863——Inadequacy of harbour regulations and instructions as a means of obviating the employment of pilots at any time before getting into dock at Liverpool, *ib.* 2717–2722——Great misgiving with which witness views the attempt to apply voluntary pilotage in the Mersey; belief that such system would render life and property more insecure, *ib.* 2724, 2725. 2741, 2742. 2779——Grounds for concluding that the employment of pilots would greatly fall off under the Bill, and that many masters and owners would run risks for the sake of saving the pilotage charge, *ib.* 2806–2834.

Expectation that if the pilotage were not compulsory many vessels would run risks in order to save the charge, *Ballantine* 2984, 2985. 3088–3113——Conclusion that under a voluntary system there would not be an available supply of pilots in bad weather, whereas the present organisation ensures a supply, *ib.* 2995–3011——Objection to any interference with compulsory pilotage at Liverpool, chiefly on the ground of danger to life, *ib.* 3088–3090. 3113.

Very decided opinion in favour of retaining compulsory pilotage in the Mersey; examination in support of this conclusion, *Danson* 3136 *et seq.*——Probability of about one-fourth or one-fifth of the owners not taking pilots when they consider the weather favourable, under an optional system; danger thus imparted to the navigation, which should be guarded against, *ib.* 3149–3152. 3215–3218. 3333–3344——Expediency of the imprudent as well as the prudent shipowner being required to contribute to the cost of the pilotage establishment, *ib.* 3164–3167. 3216, 3217.

Conclusion that without compulsory pilotage pilots would not always be found in bad weather, when most wanted, *Danson* 3168–3170. 3217–3226; *Shallcross* 3433. 3440–3445. 3458–3464——The increased losses under an optional system would greatly exceed the cost of the pilotage, *Danson* 3176——Argument that Liverpool should in any case be allowed to maintain a system proved to be so efficient, *ib.* 3196–3202——Further statement that witness looks upon compulsory pilotage in the Mersey as a matter of needful police, *ib.* 3213. 3231. 3246. 3249–3251. 3260–3262. 3288, 3289.

Grounds for the conclusion that under an optional system the service would not be efficient, nor the supply of pilots in proportion to the demand, *Shallcross* 3440–3445. 3458–3468. 3475–3491——Objection to the proposal for the abolition of compulsory pilotage, witness advocating compulsory payment, even though a pilot may not be taken, *Lamport* 3565–3593. 3597–3608. 3720–3733——Evidence in support of the conclusion that under optional pilotage pilots would no longer feel under any moral obligation to be out in bad weather, and that they would not be always found, as they now are, when most wanted, *ib.* 3569–3581. 3646–3662. 3676–3678. 3736–3773——Belief that a perfectly free system, in lieu of that proposed by the Bill, would never answer in Liverpool; nor has witness any confidence in the permanence of the regulations to be established by the Bill, *ib.* 3591–3593. 3622–3643. 3702–3707——Intention of witness in any case to employ pilots; imprudence of those owners who propose to escape the charge, *ib.* 3668–3672.

Conclusion as to the importance of maintaining the present compulsory system, an efficient supply of pilots not being at all likely to exist under optional pilotage, *Moss* 3852–

Report, 1870—*continued.*

Liverpool (Mersey Pilotage District)—continued.

VIII. *As to the Question of Compulsory or Voluntary Pilotage*—continued.

1. Concurrence of Evidence in strong Opposition, &c.—*continued.*

3852-3860. 3912-3915——Opinions recorded by Admiral Evans as to the great importance of compulsory pilotage in the Mersey, and as to the efficiency of the service, *Galloway* 4064-4066 —— Opinion that voluntary pilotage may be preferable to compulsory pilotage for some ports, but would be altogether inadequate in the case of Liverpool, and would not secure a proper supply of pilots for inward-bound vessels in bad weather, *ib.* 4074-4078. 4082-4088. 4100 *et seq.*——Concurrence in the view that there would not be the same moral obligation upon pilots to be out in bad weather, *ib.* 4082-4086 —— Effect of the present Bill to disorganise the whole pilotage system of the port, *Simpson* 4281.

Strong objections to an application of voluntary pilotage to Liverpool, though it may answer in many other ports, *Admiral Evans* 4590-4619 ——The voluntary system would involve great danger to life, *ib.* 4594——The present system works admirably, and witness would advise the Committee to let well alone, *ib.* 4618.

Opinion that the Mersey Docks and Harbour Board are the proper authority to deal with the pilotage of the port, *Bremner* 4632, 4633——Concurrence in the view that non-compulsory pilotage should not be forced upon Liverpool, *Allan* 5368-5371. 5389-5391.

Letter from Mr. McIvor to Mr. Graves, dated 13th June 1870, approving strongly of the present pilotage service in the Mersey, and offering sundry objections to a non-compulsory system, *App.* 576-579.

2. Local Feeling upon the Question at Issue.

Satisfaction of the Liverpool shipowners generally with their pilotage system; great dissatisfaction, on the other hand, of the steam-ship owners, *Farrer* 138, 139. 141-143 —— Conclusions of the Liverpool steam-ship owners in favour of the abolition of compulsory pilotage, *ib.* 142. 156.

Very general feeling among captains in Liverpool in favour of the present pilotage system, *Ballantine* 3023, 3024 ——General feeling among underwriters and shipowners in favour of retaining compulsory pilotage, *Danson* 3161-3163. 3229, 3230. 3245.

Unanimous opinion of the Shipowners' Association that compulsory pilotage should be retained, *Shallcross* 3426-3429. 3432, 3433——Feeling of the Liverpool shipowners that they should be exempt from liability when a pilot is employed, but that with or without immunity compulsory pilotage is essential, *ib.* 3454-3457. 3520-3522. 3545-3558—— Explanation that the Shipowners' Association represents only the sailing shipowners of Liverpool, *ib.* 3495-3501.

Evidence to the effect that a majority of the steam-ship owners are in favour of the Bill; views of witness's partner on the subject, *Lamport* 3708-3711. 3774-3780—— Circumstance of eleven out of twelve members of the Pilotage Committee being strongly in favour of retaining the present system, *Galloway* 4067, 4068.

Unanimous opinion of a committee of the Steamship Association in favour of the Bill, upon several grounds, *Leyland* 9960-9968. 10031-10035. 10080-10089——Opinion of the Steam-ship Owners' Society that the Bill does not go far enough, *ib.* 9997.

The Liverpool Steam-ship Owners' Association approves of the Bill, except the third clause, *Inman* 10233-10237. 10285——Evidence of Mr. Leyland adverted to as representing the general views of the steamship owners of Liverpool, *ib.* 10279-10281—— Objection by the Steamship Owners' Association to a right in licensed pilots to supersede unlicensed pilots, *ib.* 10285. 10324.

3. Views of the Liverpool Pilots:

Dissatisfaction of half, or more than half, of the pilots with the present system at Liverpool, more especially as regards the boat ownership; examination hereon upon the question whether meetings of the pilots have not recorded their disapproval of the Bill, *Jones* 10544-10553. 10634-10644. 10661-10670——Feeling among the Liverpool pilots in favour of voluntary pilotage, *Chaddock* 11426, 11427.

Witness was appointed at a public meeting of the pilots, held some weeks since, to attend the committee in opposition to the Bill; was not however called upon at the time to give evidence, *Beckett* 11567-11576——Feeling of the pilots in favour of the pilotage being thrown entirely open, it being understood that they should be compensated, *ib.* 11571, 11572. 11648——Concurrence of the pilots in the evidence given by Mr. Jones, *ib.* 11577-11581——Change of opinion among the pilots since the Bill has been discussed, many of them now approving of voluntary pilotage, *ib.* 11613-11616.

Circumstance of witness having, some two months since, expressed himself strongly in opposition to the Bill, *Beckett* 11642-11648——Difficulty recently between witness and the Pilotage Board about his not handing over some pilotage money; this had

Report, 1870—*continued.*

LIVERPOOL (*MERSEY PILOTAGE DISTRICT*)—continued.

VIII. *As to the Question of Compulsory or Voluntary Pilotage*—continued.

3. Views of the Liverpool Pilots—*continued.*

nothing to do with his change of opinion, *Beckett* 11649-11659——Approval of the Bill, more especially as forcing upon the authorities the changes advocated by witness as regards stations, &c., *ib.* 11827-11836.

Explanation of the circumstances under which the witness Beckett was deputed by the Liverpool pilots to give evidence against the Bill, *Davies* 12941-12961——Statement that the evidence of Jones and Beckett by no means represent the views of the pilots, who are as a body opposed to the abolition of the compulsory system; particulars hereon as to certain meetings of pilots on the question, *ib.* 12941-12959. 13011-13024—— Particulars as to witness having been chosen to represent the boatowning pilots, whilst Beckett was one of two chosen for those who are not boatowners, *ib.* 12973-13007—— Question whether there is not much difference of opinion between the pilots who are boatowners and those who are not boatowners, *ib.* 13001-13010.

Explanation of the circumstances under which Mr. Beckett and witness were appointed by the Liverpool pilots to give evidence against the Bill, *Williams* 13026-13045—— Information as to the views expressed by the pilots generally in opposition to the Bill; meeting on the subject adverted to, *ib.* 13035-13055. 13086-13089—— Examination upon the question whether the pilots who are not boatowners do not feel it a grievance in having to contribute to the boats, and whether they are not therefore favourable to the Bill as tending to break up the boatowning system, *ib.* 13056-13098.

4. Efficiency respectively of Compulsory Pilots, and of Licensed Masters and Mates:

Statement as to the comparative unfitness of licensed masters and mates to take vessels in and out of Liverpool, it being very desirable to have a trained pilot on every vessel, *Moss* 3880-3886. 3916-3924——Better opportunities of the selected pilots than of the captains for becoming conversant with sudden changes in the channels, &c., *Simpson* 4307-4310——Opinion that not one master in a hundred is fit to navigate a large ship into Liverpool, *Henderson* 4966.

Perfect competency of the captains in command of witness's steamers to navigate them in the Mersey without a pilot; explanation as to one only having a pilotage certificate, *Leyland* 9969-9974. 9986, 9987. 10036. 10052-10056. 10075. 10117, 10118. 10144, 10145——Discretion allowed by witness to his captains as to their availing themselves of the local knowledge of the pilots, *Inman* 10362-10366——Complaint as to the obligation upon coasters above 100 tons to employ pilots, the captains being perfectly competent to navigate them in and out of the Mersey, *Marwood* 10462-10477. 10487-10516——Non-employment of any pilots by witness's firm in the Mersey, the captains of the steamers being considered more competent to manage the vessels, *Johnson* 11305-11309. 11359.

5. Proposed Extension of the Compulsory Principle:

Opinion that it should be compulsory upon every vessel in the Mersey to take a pilot, the smaller ships paying a reduced rate, *Ballantine* 2920. 3069-3076. 3088-3096. 3113 ——Statement in favour of every vessel in the Mersey being bound not only to pay for a pilot but to take one; that is, as a matter of police for the safety of all, *Danson* 3138. 3213, 3214. 3249-3251. 3288, 3289——Improbability of much agitation at Liverpool against a pilotage tax to be imposed irrespectively of the employment of pilots, *Lamport* 3787-3790——Opinion strongly in favour of the present compulsory regulations in the Mersey; witness would, in fact, abolish all exemptions, *Simpson* 4238-4245. 4360, 4361. 4465.

6. Effect of Voluntary Pilotage as regards the Rates:

Necessary increase of pilotage fees if the boats only went out in bad weather, *Hills* 2763, 2764——Expectation that many of the smaller vessels will cease to employ pilots if the Bill be passed, and that an increase of rates will result, *Moss* 3860-3863. 3945-3971.

7. Evidence in approval generally of the proposed adoption of Voluntary Pilotage:

Inexpediency of any exceptional legislation for Liverpool, notwithstanding the satisfaction given generally by the compulsory system, *Farrer* 369-373——Grounds for the conclusion that the pilotage service of Liverpool may be very dangerous; an ample supply of pilots will be in attendance when required, and if properly paid, *ib.* 738-743. 756-759 ——Statement that under a voluntary system in the Mersey pilots would be found sufficiently far out, and in bad weather, if their services were required, *Sir F. Arrow* 1758-1761——Opinion that there is no reason for exempting Liverpool from the operation of the Bill, *Duncan* 9727-9729.

Evidence in support of the conclusion that under a voluntary system the pilots would be more efficient, and that inferior men would gradually be weeded out of the service, *Leyland* 9963. 9975-9984. 10014-10016. 10040-10043. 10166-10171. 10180-10182. 10210-10212——Effect of a voluntary system that the pilots would get better pay, and that

Report, 1870—*continued.*

Liverpool (*Mersey Pilotage District*)—continued.

VIII. *As to the Question of Compulsory or Voluntary Pilotage*—continued.

7. Evidence in approval generally of the proposed adoption, &c.—*continued.*

that the excessive and unfair payments to the boatowners would be put a stop to, *Leyland* 9975. 10160–10162——Continued employment of pilots by witness's firm under an optional system, the difference being that they would have the advantage of choosing their own pilots; way in which the power of selection would be exercised, *ib.* 9976–9984. 9992, 9993. 10008–10016. 10048–10052. 10119–10124. 10136–10139. 10153–10159. 10172–10179. 10210–10212——Great benefit anticipated from the Bill, though it does not control the Mersey Board in the matter of licenses, stations, &c., *ib.* 9994–10007. 10020–10023. 10210–10212.

Belief that if pilotage were voluntary the men would be better paid, and the service rendered more efficient, *Inman* 10256. 10273–10278. 10329–10342. 10352——Expediency of applying voluntary pilotage at Liverpool and generally, by means of the Bill, rather than merely amending the Mersey Docks Act and correcting the boat-owning system, *ib.* 10343–10352. 10383——Doubt as to ships inwards being any worse off in bad weather under a voluntary system, *ib.* 10359–10361.

Expectation that there would be no material falling off of employment under an optional system, *Jones* 10540–10543——Belief that the over-sea ships into Liverpool will continue to take pilots, if the Bill be passed, whilst it is unjust to force pilots on coasters that do not require them, *Watson* 10712–10719. 10782–10785. 10876——Opinion that with voluntary pilotage a better class of men would be available, and would go further down the channel, where the chief danger arises, and where they would be frequently employed, *Bouch* 10884–10892. 10903. 10947–10952. 10976–10981——Conclusion that on the whole there would be as much or more employment of pilots under the voluntary system, *ib.* 10890–10893. 10899–10902. 10921, 10922. 10974, 10975——Inducement to pilots to be out in bad weather if all their earnings went to themselves, instead of a portion going to the boatowners, as at present, *ib.* 10893–10895. 10904, 10905. 10937–10941. 10962, 10963.

All foreign-going vessels would take pilots just as much as at present, *Bouch* 10901. 10921. 10975; *Reynolds* 11023. 11025. 11053; *Holt* 11102——Conclusion that Liverpool should not be exempted from the Bill, *Bouch* 10918–10920——Equal employment of pilots in the Mersey by foreign-going vessels if the pilotage were optional, whilst the hardship of compelling coasters to take pilots would be obviated, *Reynolds* 11022–11025. 11051–11053——Approval of the application of the Bill to Liverpool, *Holt* 11087, 11088.

Increased emulation under a voluntary system; degree of emulation at present, *Holt* 11093, 11094. 11121. 11131–11145. 11223–11226——Conclusion that there would be a large employment of pilots under a voluntary system, and that pilots would be taken further down the channel, though, on the whole, the employment would probably be less than at present, *ib.* 11099–11102. 11113–11120——Effect of the Bill to leave all the present regulations undisturbed, and merely to render it optional in the shipowner to employ a pilot, *ib.* 11122–11130——Power still of the local authority to regulate the division of the pilots' earnings, *ib.* 11155–11158.

Complaint as to the compulsion to take a pilot outwards from Liverpool, it being desirable to have the option of taking a pilot inwards, *Chaddock* 11408, 11409. 11466–11471——Opinion that compulsory pilotage should be abolished, and that the change would produce a more efficient class of pilots, who would go further to sea, *ib.* 11418–11425. 11430, 11431. 11449. 11532–11537——Approval in any case of the licensing system, *ib.* 11421.

Expediency of emulation amongst the pilots, and of more freedom in the way of extension of the stations, witness contending that under a voluntary system there would be ample employment if the number of pilots were properly limited, *Beckett* 11616–11637. 11660 *et seq.*——Conclusion that with voluntary pilotage there would be ample inducement to pilots to be sufficiently far out in bad weather, *ib.* 11625, 11626. 11819–11826——Opinion that there is no reason for exempting Liverpool from the operation of the Bill, *Robinson* 12795–12797. 12812–12814.

IX. *Question of Compensation:*

Examination as to the probable effect of the Bill in regard to the earnings of the Liverpool pilots, and as to the claim of these to compensation; way in which it is proposed to compensate them, should the necessity arise, *Farrer* 377–422. 479–485——Special consideration necessary to be given to the case of the pilot boats, and the compensation or superannuation of the owners, *ib.* 710–713. 829. 991–997.

Question considered as to the source whence compensation should be provided in the event of its being determined to abolish the arrangement as to a portion of the pilots' earnings going to the pilot boats; opinion that the charge should be met out of the Consolidated Fund, instead of out of the trade of the port, *Squarey* 2547–2561. 2566–2571——Prejudicial effect of the Bill upon the earnings and immunity fund, *Simpson* 4281. 4290–4292. 4334, 4335.

Report, 1870—*continued.*

Liverpool (*Mersey Pilotage District*)—continued.

IX. *Question of Compensation*—continued.

Objection of the pilots to the Bill as not containing any provision for the compensation of the owners of the boats, *Bremner* 4634——Objection also to the proposed compensation of the pilots, as being utterly inadequate, *ib.* 4634, 4635——Evidence in support of the conclusion as to the inadequacy of the compensation or superannuation clause, and in explanation of the claims of the pilots to an improved and more liberal scheme of compensation, *ib.* 4635-4645. 4690-4711——Suggestion that the present income might be guaranteed for ten years, or that the superannuation be fixed at two-thirds of the present earnings, *ib.* 4636. 4697-4702.

Evidence in support of the claims of the apprentices to compensation; prejudicial effect hereon of a certain provision in the second clause of the Bill, *Bremner* 4675–4683——Dissent from the view that the difference between the cost of the boats and the present value of the shares is a fictitious value, witness contending that the compensation should in justice be based upon the full share value, *ib.* 4719-4753. 4774——Explanation of the arrangements proposed for the compensation of the boat-owners; alternative plans suggested, *ib.* 4667–4674. 4712–4753.

Doubt whether compensation for the Liverpool boat-owners should be provided from imperial sources, *Inman* 10409. 10435–10440. 10445–10451——Difficulty as to the fund or source whence the boat-owners should be compensated; degree of claim upon the Consolidated Fund, *Holt* 11241–11249. 11255–11258. 11265–11268.

X. *Summary by the Committee, and Conclusion arrived at in favour of the Application of the Bill;*

Reference to the refusal for a long time by the pilotage authorities to examine masters and mates for certificates, *Rep.* iv——Great importance of the Liverpool or Mersey pilotage district, both in point of extent and of the valuable interests embraced, *ib.* xv ——Local Act by which the pilotage is regulated, *ib.*——Constitution of the Mersey Dock Board and of the Pilotage Committee adverted to, *ib.*

Obligations under the Liverpool Act as to the compulsory employment of pilots, both by inward-bound and outward-bound vessels, *Rep.* xv——Remarks relative to the exemptions from the compulsory system, *ib.* xvi——Very few exemptions arising from examinations and licenses of masters and mates; different reasons given for the few licenses granted, *ib.*

Summary of the course adopted in carrying out the cruising system, with reference to the pilotage of inward-bound ships, *Rep.* xvi, xvii——Consideration of the evidence on the subject of the earnings of the pilots, and of the appropriation of the earnings, *ib.* xvii, xviii——Very peculiar system upon which the pilot boats are owned; strong condemnation of the system, more especially as regards the deduction from the earnings of the working pilots in order to pay an enhanced rate of interest to those pilots who have invested in boat shares, *ib.* xviii, xix.

Conflicting character of the evidence from Liverpool as to the present pilotage system and its operation, *Rep.* xix—— Unanimous feeling of the Sailing Shipowners' Association in favour of, and of a committee of the Steam Shipowners' Association in disapproval of, compulsory pilotage, *ib.*——Immense progress made and being made by the steamship interest of the port, *ib.*——Complaints against the existing system by the owners of small coasting vessels, *ib.*——Division of opinion on the part of the pilots, *ib.*

Difference of opinion among the supporters of compulsory pilotage on several points, whereas there is no such diversity of views on the part of the advocates of the voluntary system, *Rep.* xx—— Summary of the arguments of those who support compulsory payment of pilots, and of those who advocate compulsory employment as well as compulsory payment, *ib.* xx, xxi——Circumstance of comparatively little evidence and argument having been directed to the outward pilotage, *ib.* xxi.

Conflicting evidence upon the question of the port of Liverpool being exceptionally dangerous, *Rep.* xxi——Trustworthy evidence as to the difficulties of the Thames being fully as great as, if not greater than, those of the Mersey, *ib.*

Conclusion of the Committee that even were the Mersey more dangerous than the Thames the consequence would seem to be, not that compulsion is requisite, but that pilots will, under a voluntary system, be the more needed there and the more employed, *Rep.* xxi.

See also *Boats. City of Dublin Steam Packet Company. Cunard Service. Forwood, Mr. Johns, Richard. Queenstown and Cork. "Royal Charter," The. Runcorn. Steele, Mr. Thames, The,* VIII. 3. *Tugs. Voluntary Pilotage.*

Lloyd's. Conclusion arrived at by the underwriters of Lloyd's in favour of the abolition of the compulsory system, *Farrer* 217–219——Letter from the Secretary of Lloyd's quoted as showing the opinion of the Committee of Lloyd's that the time had arrived for abolishing compulsory pilotage, *ib.* 224.——*See* also *Insurance. Underwriters.*

Report, 1870—*continued.*

Local Authorities. Effect of the Bill that the compulsory districts will be placed in the same position as the non-compulsory districts in regard to the licensing and control of the pilots by the local pilotage authorities, *Farrer* 229–238——Explanation that the Bill does not interfere with local pilotage authorities in imposing regulations and restrictions as to licensing, &c., *ib.* 319–323. 354–363——Representative character generally of the pilotage boards in districts where the pilotage is free; instances also of representative boards in compulsory districts, *ib.* 453–461——Objection to its being left to each pilotage authority to adopt voluntary or compulsory pilotage, *Sir F. Arrow* 1581. 1595, 1596.

Disapproval of uniformity of system being laid down by the Legislature, witness preferring that each port should be allowed to manage its own affairs, without too much interference by the Board of Trade, *Danson* 3196–3203; *Lamport* 3619–3621. 3673–3675——Opinion that wherever the local pilotage authorities do not want the Bill applied to them, their views should be respected, *Simpson* 4367——Expediency of its being left to the local authorities to settle their own pilotage arrangements, *Allan* 5389-5391; *Taylor* 8053–8058. 8150——Adequacy of voluntary pilots for some ports; each port being the best judge of its own requirements, *Ford* 7196, 7197. 7246. 7249.

Approval of a General Bill dealing with pilotage, rather than of its being left to local authorities to take action in the matter, *Watson* 10812–10824. 10848–10850.

Ample powers of the pilotage authorities to supplement the Bill by further steps in the direction of freedom, or to impose such restrictions and regulations as may be found necessary, *Rep.* xxix.

Grounds adduced by the Committee for dissenting from the view that if further improvements are to be left to the local authorities, the abolition or retention of compulsory pilotage may also be left to them, *Rep.* xxix——Several respects in which local authorities are unfit to deal with the general question, *ib.*

Lumsden, John. (Analysis of his Evidence.)—Is a steam shipowner and underwriter at Hull, and is one of the Pilotage Commissioners, 6085–6091——Satisfaction given by the pilotage service of this port, 6092. 6105–6109——Possession of pilotage certificates by witness's captains and mates, this being the case as regards the local owners generally, so that pilotage is compulsory only as regards foreign vessels, 6093-6097. 6183-6195. 6215–6223. 6279-6286——Concurrence in the evidence of other witnesses as to the dangers of the navigation, 6101–6104——Objection to the application of the Bill to Hull, the present system being efficient, 6105, 6106. 6136–6138. 6150–6153.

Careful investigation of complaints by the Pilotage Commissioners, 6107-6109——Representation of all interests upon the Commission, 6110, 6111——Disapproval of the Bill both by the shipping and commercial interests, 6112——Opinion in favour of compulsory pilotage generally, accompanied with facilities for the licensing of masters and mates, 6113–6118. 6127–6135——Grounds for dissenting from the view that the owner should be liable when there is a compulsory pilot on board; relative functions of the pilot and captain adverted to hereon, 6119–6126. 6196–6204. 6211-6214. 6224–6233. 6259–6268.

Dangers encountered by the Hull pilots in bad weather, their remuneration not being extravagant, 6137–6142——Statement as to its not being the practice of underwriters to make it a condition that a pilot must be employed, 6143–6149. 6205–6210. 6250–6254——Examination as to steam tugs being found in the Humber whenever they are wanted, though witness expects that pilots would not be always forthcoming under a voluntary system; respects in which the two cases are not analogous, 6154-6169. 6255–6258. 6269-6278.

Explanation that a certain letter signed by about forty of the Hull pilots does not represent their real views as regards the Bill, the purport of which they did not understand at the time, 6170-6182——Grounds for the conclusion that the employment of pilots in the Humber would greatly fall off under a voluntary system, 6234–6249.

Luton, Charles Joseph. (Analysis of his Evidence.)—Is a waterman pilot for the home-trade passenger ships, 12545——Explanation that these vessels were required by the Act of 1854 to take pilots on account of several accidents having occurred through not taking pilots, the same men having been licensed for the purpose who used to be employed voluntarily, 12546–12554. 12572, 12573. 12577. 12716–12726——Restriction of witness's

Report, 1870—*continued.*

Luton, Charles Joseph. (Analysis of his Evidence)—*continued.*

license to the piloting of home-trade passenger ships; total of twenty-two pilots thus licensed, the number being kept up by apprentices, 12551–12555. 12577. 12655–12657. 12662, 12663.

Effect of the Merchant Shipping Code and of the Pilotage Bill to deprive witness and his brother pilots of the main part of their employment, 12556–12580. 12599–12613 ——Probability under the Bill that an increased number of masters and mates of coasting vessels will take out pilotage certificates, 12573, 12574. 12692–12698. 12727–12729—— Payment of 3*l.* 3*s.* a year by witness for his license, in addition to income tax, 12577. 12630–12636. 12730–12739.

Opinion that a thorough examination should be essential in every pilot, 12581—— Occasional employment of free watermen to assist in the navigation, or to pilot between London and Gravesend; doubt as to these having any grievance under the Bill, 12582–12598——Power of a Trinity House pilot to supersede witness, save on board a home-trade passenger steamer; disadvantage on this score under the present Bill, 12599–12613. 12674–12676——Statement as to the liability of the owner and pilot respectively in case of accident caused by a home trade passenger ship, 12614–12629. 12680–12682.

Very small employment of witness's class in other than passenger vessels, 12637–12654——Obstacle to witness being licensed for the entire navigation of the Thames, 12658–12661. 12677–12679——Qualifications of witness's class adverted to, 12664–12669——Charges of witness's class as compared with the charges of the Trinity pilots and of the free watermen, 12670–12673.

Increased difficulty of the navigation by reason of numerous small vessels being in the hands of certificated masters, and not taking pilots; belief that under an entirely optional system this difficulty would be further enhanced, 12683–12699——Considerable obstruction caused by the sailing barges which come from the Medway into the Thames, 12700–12711——Liability of all coasting steamers and other vessels carrying passengers to compulsory pilotage, 12712–12715.

M.

Macfaran, Robert. (Analysis of his Evidence.)—Several objections to the abolition of compulsory pilotage at Belfast; probability of many vessels not taking pilots under an optional system, and of frequent disaster arising on account of the difficulties of the navigation of the river, 9748–9784——Belief that the Belfast Harbour Commissioners are in favour of compulsory pilotage, 9785–9789.

McIver, Charles. Letter from Mr. McIver to Mr. Graves, dated 13th June 1870, approving strongly of the present pilotage service in the Mersey, and strongly objecting to the proposal for the abolition of compulsory pilotage, *App.* 576–579.

McKelvie, John. (Analysis of his Evidence.)—Long experience of witness as a licensed pilot of Glasgow, 5392–5396——Great increase in the size and draught of vessels in the Clyde, there being much danger of their grounding, on account of the navigable channel being so narrow and winding, 5397–5413——Necessity of pilots with ample local knowledge, captains not being competent to take large vessels up or down the river; illustration to this effect, 5406–5412. 5421–5426——Inadequacy of a chart without a pilot, 5415——Practice of witness to give orders, the captain supplying the required information and assistance, 5416–5420——Grounds for concluding that many vessels would try to save the pilotage rates under an optional system, 5427–5435.

Mallett, John Capon. (Analysis of his Evidence.)—Is a Trinity Cinque Ports pilot, 7505–7507——Qualifications and nautical position required in Cinque Ports pilots; prospects given up in order to enter the service, 7508–7511. 7520, 7521. 7692–7695——Views of masters of ships as to the importance of compulsory pilotage in the south channel of the Thames; very intricate and dangerous character of the navigation adverted to hereon, 7512–7518——Contribution of 6*l.* a year by the Cinque Ports pilots towards the superannuation fund, though not certain of being eventually superannuated, 7522–7527.

Calculation that the Cinque Ports pilots would lose one-third of their income, if their compulsory employment were abolished, 7529–7531. 7603–7638——Conclusion that many vessels by the south channel would run great risk in order to save the pilotage rates, and that much loss of life and property would be the result; examination as to the grounds for this conclusion, 7532, 7533. 7585 *et seq.*——Inaccuracy of a statement as to the pilotage having been compulsory in the case of the "Spindrift," 7534–7539.

Increased responsibility of the pilot when a steam-tug is used; instances of danger through the employment of tugs, 7540–7543. 7676–7681——Evidence in support of the conclusion that the compensation clauses of the Bill are altogether inadequate; contributions and earnings of the Cinque Ports pilots adverted to hereon, 7544–7570—— Disapproval of the removal of all restrictions upon licensing and pilotage in the Thames,

7570–

Report, 1870—*continued.*

Mallett, John Capon. (Analysis of his Evidence)—*continued.*

7570. 7687–7697——Total contribution of between 16*l.* and 17*l.* a year by witness, 7556. 7562–7564.

Argument that there is not really any compulsory pilotage at all, 7511——Opinion that the shipowner should be liable in cases of accident, with or without a pilot, 7572–7580——Approval of the system of separate pilots at Gravesend, 7581, 7582——Different class of men outwards from Gravesend and inwards from Dungeness, 7583, 7584.

Much greater difficulty of the South than of the North Channel; explanation hereon as to a large proportion of vessels by the North Channel taking pilots, 7585 *et seq.*——Probability of the pilots displaying more energy if the ownership and control of the boats rested with them, 7654-7663——Disadvantage in the boats cruising further out, instead of being stationed at Dungeness, 7664-7667——Inefficient class of pilots off Scilly, 7668, 7669——Statement to the effect that witness does not consider the pilot should supersede the captain in the command, 7670–7686.

"*Martha Alida*," *The.* Particulars relative to the hardship in the enforcement of compulsory pilotage in the case of this vessel, *Farrer* 33. 113.

Marwood, John Sutton. (Analysis of his Evidence.)—Is part owner of several coasters at Liverpool, and is manager of a large number, 10452–10451——Exemption of the vessels under 100 tons from compulsory pilotage, whilst those above 100 tons are obliged to take pilots, 10458-10461——Complaint as to the obligation upon coasters above 100 tons to employ pilots, the captains being perfectly competent to navigate them in and out of the Mersey, 10462–10477. 10487–10516——Grievance in the Liverpool pilots not having all their earnings, 10478–10480——Great efficiency of the pilots, 10478. 10485——Decided approval of voluntary pilotage; belief that foreign vessels would equally continue to employ pilots, 10481–10486.

Masters and Mates:

Provision in the Act 16 & 17 Vict. c. 129, for facilitating the examination of masters of vessels, with a view to their piloting their own vessels within certain limits, *Farrer* 18——Powers given under section 332 of the Merchant Shipping Act of 1854, for exempting masters of ships from the compulsory employment of pilots, *ib.* 19——Further reference to the system of certificates to masters and mates, as tending to limit the operation of compulsory pilotage, *ib.* 81–83. 252–255.

Discontinuance of the examination of masters and mates by the Board of Trade *Farrer* 188——Compulsory operation of the present law, even though under the Merchant Shipping Act masters and mates have been largely licensed in some ports, *ib.* 292–299——Absence of analogy between the compulsory examination of masters and mates and compulsory pilotage, *ib.* 686–688——Facility with which the Board of Trade might require some local knowledge, in masters and mates, in granting them certificates, *ib.* 857–860.

Competency of certificated masters to navigate in pilotage waters without risk to life or property, *Sir F. Arrow* 1835, 1836. 1840–1842——Respects in which a vessel is likely to be more safe in charge of a trained pilot than of a captain who has passed the examination for a pilotage certificate; amendment suggested on the latter score, *Danson* 3127–3129. 3140–3144. 3290–3294——Approval of masters being allowed to qualify for pilotage certificates, *Lamport* 3590——Advantage of examination of masters in the case of steamers in the short voyage trade, *Simpson* 4328, 4329. 4369–4373.

Objection to masters as pilots for large ships in the Clyde or Mersey, *Henderson* 4963–4966——Perfect competency of masters to act as pilots, when they are frequently in and out of the Thames or Mersey, compulsory pilotage being essential mainly for large and foreign-going ships, *Taylor* 7940. 7946. 7992. 8058. 8150. 8162, 8163.

Limited use made of the power given to pilotage authorities by the Act 12 & 13 Vict. c. 88 in regard to the examination of masters and mates for pilotage certificates, *Rep.* iv.——Examination of a considerable number of masters and mates under the clauses enacted in 1853 and 1854, enabling the Board of Trade to grant certificates to masters and mates, under certain conditions, exempting from compulsory pilotage, *ib.*——Restriction of the operation of these clauses by the conditions by which accompanied, *ib.*

Merchant Shipping Act (1854). See *Liability. Masters and Mates.*

Mersey Pilotage District. See *Liverpool.*

Milford. Entire absence of necessity for a retention of compulsory pilotage at Milford, *Johnson* 12246–12253. 12259–12261. 12279–12289.

Report, 1870—*continued.*

Millen, John B. (Analysis of his Evidence.)—Has been a pilot in the Trinity service for nineteen years, 7253——Qualifications required in Trinity House pilots; necessary position as master or mate in the merchant service before they are licensed by the Trinity House, 7254–7262——Average of 340 *l.* a year as the gross earnings of sixty-four of the pilots between Dungeness and Gravesend, 7260. 7323–7325——Special care and knowledge required in piloting large ships between the Ness and Gravesend, 7263–7266——Employment of four pilot cutters at Dungeness, 7267–7269.

Evidence in support of the conclusion that if pilotage were not compulsory from Dungeness, great risk and danger would result from vessels not taking pilots, and there would not be an adequate or efficient supply of pilots in bad weather, 7270–7275. 7277–7283. 7289, 7290. 7311–7333——Grounds for objecting to the provisions of the Bill relative to compensation after an interval of two years, 7276–7288——Large number of coasters and other vessels exempt from pilotage from Dungeness; numerous accidents through pilots not being taken, 7291–7299——Opinion that the management of the vessel should rest with the pilot rather than the captain, 7299–7306.

Further evidence in disapproval of the scheme of compensation; particulars hereon as to the present superannuation arrangements in the case of the Trinity pilots and the Cinque Ports pilots, 7307–7310. 7345–7357. 7416–7451. 7492–7498——Suggestion that the present income of the pilots be guaranteed to them, 7308, 7309. 7345–7347——Practice of foreign vessels by the north channel to take pilots, 7311–7320——Doubt as to the income of the north channel pilots being nearly as much as that of the south channel pilots, 7321–7327.

Comment upon the employment of watermen and Deal boatmen in piloting large ships; their liability to be superseded by the Trinity pilots, 7333–7344. 7366–7372. 7499, 7500——Obstacles to the Trinity House licensing additional pilots, as interfering with the incomes and the efficiency of those in the service, 7350–7357. 7501–7504——Rare instances of witness piloting in the north channel though licensed for the purpose; belief that many unlicensed men are employed, 7375–7386——Control exercised by the Trinity House over the pilots at Dungeness, &c., 7391. 7452–7454.

Arrangements as to the maintenance and management of the cutters; improvement if the boats were owned by the pilots, 7392–7409. 7480–7489——Cruising of the cutters between Dungeness and the Downs; expediency if any alteration be made, of retaining compulsory pilotage from the Downs, 7410–7415——Several sources whence the superannuation fund is made up, 7440–7444——Limitation of witness's services to the district between Dungeness and Gravesend, 7455, 7456. 7490, 7491——Practice as to pilots at Dungeness being employed in turn, whilst in the case of vessels outwards, selection prevails, 7457–7469——Belief that very few vessels take pilots off Scilly, 7471–7479.

Monopoly. Tendency of the compulsory system of pilotage to create and maintain a body of protected monopolists, *Rep.* xxix.

Moss, William Miles. (Analysis of his Evidence.)—Is a member of the Mersey Docks and Harbour Board; is also chairman of the Pilot Committee, and member of the Marine Committee, 3794–3797——Is largely interested in steam, and is a member of the Steamship Owners' Association, 3798–3804——Explains that there are more steamship owners than sailing-ship owners on the Mersey Board, 3805–3807.

Information relative to the enormous strength of the tides in the channels of the Mersey, the navigation being, for this and other reasons, of an exceptionally dangerous character, 3808–3812. 3876, 3877. 3883–3891. 3900——Great increase in the number and tonnage of vessels frequenting the port of Liverpool, the traffic being chiefly carried on within two or three hours of high water, 3813–3820——Annual earnings of the different classes of pilots; serious reduction through the abolition of differential rates, 3821–3823. 4036, 4037——Total of about 53,000 *l.* as the pilots' earnings in 1869; 3824.

Total of 284 pilots, including licensed apprentices, there being also thirty-four unlicensed apprentices, 3825–3830—Constant service at sea of nearly half the staff at a time, 3831. 3907——Reduction being effected in the number of apprentices and of pilots, on account of the earnings falling off from several causes; adequate supply maintained for the necessities of shipping, 3832–3842. 4013–4035——Expensive and efficient character of the pilot boats, twelve in number, 3843–3846. 3907–3910.

Practice as to the division of the earnings of each boat among the men, 3847. 3911. 3926–3937——Very few complaints either against the pilotage rates or the service, 3849–3851. 3866——Conclusion as to the importance of maintaining the present compulsory system, an efficient supply of pilots not being at all likely to exist under optional pilotage, 3852–3860. 3912–3915——Expectation that many of the smaller vessels will cease to employ pilots if the Bill be passed, and that an increase of rates will result, 3860–3863. 3945–3971.

Large expenditure by the Mersey Board in removing wrecks from the bar, 3864, 3865——Evidence in favour of owners being liable when there is a pilot on board, it being desirable that the latter should in no way interfere with the command, 3867–3873. 3878, 3879.

Report, 1870—*continued.*

Moss, William Miles. (Analysis of his Evidence)—*continued.*

3879. 3925. 3672-4012——Statement as to the comparative unfitness of licensed masters and mates to take vessels in and out of Liverpool, it being very desirable to have a trained pilot on every vessel, 3880-3886. 3916-3924——Objection to different rates in winter and summer, 3892-3895.

Explanation as to there being different classes of pilots for vessels of different sizes, 3897-3906——Dissent from a statement that in managing the outward pilotage there is much waste of the pilots' time on shore, 3938-3944——Saving of rates by coasting steamers under optional pilotage; risk incurred thereby, 3950-3971——Value of the boat stations, which are all to be retained, 4031-4033——Statement as to owners protecting themselves against liability by a clause in the bill of lading where pilotage is voluntary, 4038-4050.

N.

Neath. Circumstance of vessels not entering Neath harbour in bad weather or in night time, *Rosser* 7124-7128.

New York. Exceptions taken to the New York system of pilotage as not being stationary, *Judkins* 1963-1969——Much lower pilotage rates in Liverpool than in New York, *ib.* 1976-1979——Compulsion to take a pilot in going into port, *ib.* 2067-2069.

Explanation that by the law of New York and other States of the Union the owner is not exempt from liability, though there be a compulsory pilot on board, *Squarey* 2386-2392.

Statement as to the New York pilots coming a distance of 240 miles to meet the ships, without making any extra charge, *Inman* 10263-10267. 10294-10297. 10375-10377——Similarity between the New York system of pilotage and that of Liverpool, *Bouch* 10923-10928——Statement as to vessels for New York not being bound to accept the first pilot that offers, *Beckett* 11670-11678. 11817, 11818.

Newport. See *Bristol,* II.

North Channel (Thames). See *Thames, The,* VIII., 3.

North-eastern Ports. Reference to the Report of the Select Committee on Merchant Shipping in 1860, as containing information on the question of pilotage in the north-eastern ports, and the local feeling on the subject, *Rep.* xxvii.——*See* also *Tyne, The.*

North-German Confederation. Similarity of the North-German law to the English law on the question of liability of the owner, *Farrer* 89——Circumstance of owners being exempt from liability under the North-German Code, when there is a pilot on board, *Squarey* 2578, 2579.

Reference to the law of the North-German Confederation whereby compulsory pilotage carries with it exemption from liability, *Rep.* viii.

Norway. Recent law in Norway requiring vessels above twenty tons to take pilots, *Barfield* 8295-8297.

Number of Pilots. Total of 1,828 pilots in ports where pilotage is more or less compulsory, and of 1,066 in ports where it is entirely free, *Farrer* 7-9——Practice of the pilotage authorities in voluntary districts as well as in compulsory districts to limit the number of pilots, *ib.* 194-202——Contemplated regulation by the local authority, as at present, of the supply of licensed pilots in reference to the demand, *ib.* 229-238. 319-323. 354-363. 748. 987-990——Circumstance of the Bill contemplating a possible decrease in the number of pilots, *ib.* 374-376——Improbability of any large increase in the number of pilots in the first two years after the passing of the Bill, *ib.* 594, 595.

Approval of restrictions by the local pilotage authorities upon the number of pilots, *Clegram* 1292-1294. 1324-1331——Contemplated limitation of the number of licensed men, *Sir F. Arrow* 1446-1448; *Leyland* 9999-10005. 10024-10030. 10151, 10152——Objection to the restriction proposed as to the licensing of any more pilots for two years, *Duncan* 9730-9744; *Robinson* 12744-12752.

Return showing the number of pilots at compulsory ports and non-compulsory ports respectively, *App.* 553.

See also *Bristol and Bristol Channel. Clyde, The. Compensation. Hull,* I., 4; II., 1. *Licensed Pilots. Liverpool,* I., 4. *Thames, The,* III., IV., VIII. *Voluntary Pilotage.*

Report, 1870—*continued.*

O.

Oates, Thomas. (Analysis of his Evidence.)—Is agent for Lloyd's at Grimsby, and is a shipowner there; concurs in the evidence of Mr. Josse, 12181–12184——Very large trade in small vessels from the Humber to the North of Europe and the French Coast, compulsory pilotage entailing an excessive burden upon the owners of these vessels, 12185–12192——Complaint as to compulsory pilots not being found in bad weather, when most wanted; grounds for concluding that under optional pilotage much greater zeal would be shown, 12192. 12197. 12201–12210. 12214–12221.

Hardship in the liability for damage resting with the pilot, who is generally unable to pay; objection at the same time to the owner being responsible under compulsory pilotage, 12193–12196. 12222–12226——Want of local control over the pilots at Grimsby, 12197——Expectation that with optional pilotage efficient men will be fully employed and will make good earnings, 12197–12210—— Very efficient services of some pilots at Grimsby on the voluntary system, 12202–12209. 12214–12218.

Unduly expensive management expenses at Hull in connection with the Grimsby pilots, 12211–12213—— Conclusion as to there being no good reason for maintaining compulsory pilotage at Hull, 12227–12230——Difficulty of the navigation up to Goole and Gainsboro', the compulsory pilotage, however, being a great tax upon trade, 12231–12239.

Optional Pilotage. See *Voluntary Pilotage.*

Out-ports (Trinity House District). Distinction between the London district and the out-port district of the Trinity House as regards the appointment and examination of pilots, *Farrer* 106, 107——Unduly large number of pilots at some of the outports, *Sir F. Arrow* 1423——System of supervision by the Elder Brethren of the Trinity House, and by sub-commissioners over the out-port districts, *ib.* 1698–1702.

Owners. See *Liability. Shipowners.*

P.

Passenger Ships. Explanation as to the omission from the Merchant Shipping Bill, now before the House, of the provision in the Merchant Shipping Act requiring home-trade passenger ships to take pilots, *Farrer* 259–263——Obligation upon the masters of home-trade passenger ships to undergo an examination; difficulty, however, in the case of a pilotage examination, *ib.* 667–670.

Similar principle involved in applying voluntary pilotage to a coaster as to a large passenger ship, with reference to the question of safety of life, *Sir F. Arrow* 1389. 1506–1509. 1762–1764. 1800–1804——Dissent from the view that the master of a passenger ship should be required to possess a pilotage certificate before being allowed to navigate without a pilot, *ib.* 1674–1681——Compulsion to take a pilot in the case of home-trade passenger ships in the Mersey, *Squarey* 2428, 2429.

Aaproval of the non-exemption from compulsory pilotage in the Thames of vessels carrying passengers, though only one or two in number, *Danson* 3313–3119——Objection to home-trade passenger ships being exempt from the obligation to carry a licensed master or pilot, *Taylor* 8024–8026——Opinion that if any ships be compelled to take pilots, it should be those with passengers and valuable cargoes; but witness does not recommend compulsion at all, *Lee* 11958–11965. 11985–11989. 11996–11998.

See also *Thames, The,* III. 2.

Pattison, Frederick. (Analysis of his Evidence.)—Is a Trinity pilot between Gravesend and London, 8733–8735——Total of seventy river pilots, there being fifty stationed at Gravesend and twenty at London, 8736–8738——Long period for which Gravesend has been a separate pilot station, though only so established by law in 1854; 8739——Complaint as to the Bill abolishing the station at Gravesend, and permitting the same pilot to take a ship right through; great importance of a separate class above and below Gravesend, 8740–8751. 8774–8777. 8785–8789. 8800–8802. 8861–8864. 8874–8878. 8890–8903. 8953, 8954.

Comment upon the pilotage service in the case of the home-trade passenger ships and steamships; refusal of the Trinity pilots to undertake this service in 1854; 8752–8761——Complaint in regard to the operation of a limited number of unlicensed pilots or free watermen between London and Gravesend; necessity of a more stringent law on this subject, 8762–8766. 8780–8784. 8791–8799. 8803–8811. 8832–8851. 8907–8917. 8921–8930.

Effect of voluntary pilotage in reducing the employment of licensed pilots; statement hereon as regards the north channel, that many foreign vessels are compelled by their insurance policies to take pilots, 8764, 8765. 8767–8774. 8812. 8830. 8918–8920.

Report, 1870—*continued.*

Pattison, Frederick. (Analysis of his Evidence)—*continued.*

8983, 8984——Entire inadequacy of the compensation clauses of the Bill, 8774. 8778, 8779——Advantage if there were no exemptions on the Thames from the compulsory employment of licensed pilots, nearly all the collisions occurring when unlicensed men are employed, 8783, 8784. 8965. 8923-8930. 8955-8961.

Doubt as to an increased licensing of men by the Trinity House doing away with the unlicensed men; lower charges of the latter adverted to hereon, 8852-8856. 8904-8910——Practice as to choice of pilots by captains and owners, as well as by brokers and others; restriction desirable in the latter case, 8857-8860. 8895-8903. 8952. 8696-8999——Practical character of witness's liability up to 100 *l.*; objection to unlimited liability, 8866-8873. 8988-8995——Requirement as to the pilots between Gravesend and London having commanded vessels, 8879-8889——Practice of the Deal boatmen to pilot up to Gravesend, but not down again, 8931-8941. 8951——Approval of pilots going both up and down within their own districts, 8942-8951.

Non-objection to the employment of watermen between London and Gravesend if there were work enough for them, and if their qualifications were proved by examination, 8962-8976——Unnecessary expense incurred by any owners who employ a waterman as well as a pilot, 8977-8982——Uniform rates charged to vessels, whether exempt or not, 8985-8987——Opinion that the pilot should have the sole charge of the ship in crowded waters, 9000.

Penalties. Provision in the Merchant Shipping Act of 1854, as to the infliction of penalties in the event of failure to employ a qualified pilot under certain circumstances, *Farrer* 20, 21——Nature of the facilities under the Act of 1854 for the recovery of pilotage rates, when earned, *ib.* 26——Several instances which have come before the Board of Trade of great hardship upon masters or owners through the method of enforcing compulsory pilotage and payment of the rates, *ib.* 29-38.

Explanation of the provision in the Bill as to unlicensed pilots being subject to penalties under certain circumstances, *Farrer* 528-530——Very harsh mode of enforcement of penalties against owners further adverted to; this, however, is not a necessary consequence of a compulsory system, *ib.* 598-600. 632-640——Further evidence as to the peculiar hardship of the mode of enforcement of penalties for non-employment of pilots, *ib.* 705-709. 812, 813. 937-940.

Liability of the master of a ship, who refuses a pilot, to a penalty of double the pilotage, *Rep.* v——Great complaints and gross hardship caused by the system of recovering penalties; that is, under the rules of law applicable to criminal proceedings, *ib.*

Pensions. Return showing the amount of pensions of pilots at compulsory ports; total of 10,495 *l.*; *App.* 553——Amount of pensions at non-compulsory ports, *ib.*

See also *Compensation.*

Phillimore, Sir Robert. Views of Sir Robert Phillimore as to the objectionable character of the law of immunity of the owner from liability, *Squarey* 2393, 2394.

Pilot Stations. Witness would have pilot stations, but would also allow the men to go beyond the line of stations, *Robinson* 12831.

See also *Liverpool*, I., 7. *Thames, The*, III., 7. *St. Lawrence River.*

Pilotage Districts. Reference to a certain map as showing, subject to some qualification, the districts where pilotage is compulsory, and where it is non-compulsory. *Farrer* 4, 5——Distinction of the jurisdiction, where the pilotage is compulsory, by means of colours, these colours being red ochre, brown, and green, *ib.* 6——Facility of re-arranging the pilotage districts, should it be found necessary as a consequence of the Bill, *Sir F. Arrow* 1460-1463.

Pilotage Rates. See *Rates.*

Pilots. *See* the Headings generally throughout the Index.

Pilots' Indemnity Fund. Exception taken to a pilots' indemnity fund as a means of compensation for injuries or losses, *Farrer* 591, 592. 655-658.

Port Regulations. Conclusion that the care of ships on entering a port is a matter not of pilotage, but of port regulation, *Rep.* xxviii.

Ports of Call. Intention of the Act 25 & 26 Vict. c. 63, s. 41, to exempt ships from compulsory pilotage when merely calling for orders, or otherwise passing through a pilotage district without loading or discharging, *Rep.* v——Circumstance of its being held that the exemption does not apply to ships calling for orders where the ultimate port of destination is not known at the time when she calls, *ib.*——*See* also *Falmouth.*

Q.

Queenstown and Cork. Illustration at Cork of the satisfactory operation of the voluntary system, *Farrer* 189. 192.

Consideration of the voluntary system of pilotage in operation at Queenstown; its entire unsuitableness for Liverpool, *Judkins* 2023–2036. 2089, 2090. 2217–2243. 2283–2286——Explanation in regard to the Cunard vessels taking pilots before going into Queenstown, in order to avoid stopping off Port Linas; question hereon whether a voluntary pilotage is not adequate for this port, *ib.* 2217–2243. 2283–2286. 2297–2303. 2327.

Absence of analogy between Queenstown and Liverpool as regards the question of a voluntary system, and of an adequate supply of pilots, *Hills* 2686–2690. 2813–2825. 2833——Explanation in regard to the Cunard and other large steamers taking pilots on to Queenstown, and taking up pilots at Queenstown for Liverpool, *ib.* 2951–2958——Doubt as to vessels for Liverpool finding it advantageous to stop at Queenstown for pilots, *Ballantine* 3054–3058. 3086, 3087. 3107——Statement as to the boats whence pilots are taken at Queenstown being used mainly for the purpose of sending merchants' orders on board the ships, *Shallcross* 3451–3453.

Very similar rates at Cork and Liverpool, *Inman* 10271, 10272. 10374. 10384–1387. 10423–10430——Large amount paid by witness for pilotage at Cork, though the employment of pilots is voluntary, *ib.* 10271, 10272. 10423–10432——Better payment of the Queenstown than the Liverpool pilots, *Jones* 10600–10604——Facility of obtaining pilots off Queenstown under the voluntary system, *Chaddock* 11437–11447.

R.

Ralph, Thomas. (Analysis of his Evidence.)—Long experience of witness as a pilot under the Cinque Ports and the Trinity House, 7840——Regular apprenticeship served by witness as pilot, 7841–7844——Several alterations for the worse effected in the position of the Cinque Ports pilots on their coming under the Trinity House, 7845–7855——Large contributions made by witness to the Trinity superannuation fund, as compared with his claims upon the fund, 7855–7879——Objection to the abolition of compulsory pilotage, 7868, 7869.

Several grounds upon which witness objects to the compensation clauses of the Bill, 7869 *et seq.*——Varying age at which the Cinque Port pilots are superannuated, there being some on duty over seventy years of age, 7880–7883. 7902–7909——Disapproval of the permissive character of the compensation clauses, 7885–7888. 7898, 7899——Improvement if the interval before compensation were only one year instead of two, 7889–7897——Satisfaction of witness if he were now superannuated at half his earnings, 7910–7921.

Rates. Power of local pilotage authorities to increase the rates in winter, provided they do not exceed the maximum rates under their separate Acts, *Farrer* 534, 535——Opinion as to the necessity of fixing the rates at each port, *ib.* 749, 750. 936. 980, 981——Increased facility of fixing the rates under a voluntary system, *ib.* 985, 986——Expediency of a regulated price, *Sir F. Arrow* 1449–1452——Probable necessity of a higher rate in winter than in summer, *ib.* 1450. 1464. 1466. 1651.

Excessive rates likely to be demanded by pilots in bad weather, if pilotage be free, *Judkins* 2129, 2130——Unfairness in prescribing the rates under an optional system of employment, *ib.* 2142, 2143——Objection to different rates in winter and summer, *Moss* 3892–3895.

Suggestion that the pilotage authority might be empowered to charge different rates in summer and winter, *Bremner* 4646–4648——Fair claim of the pilot to charge his own rates if he risks his life under a voluntary system, *Bannister* 5714–5717.

Contemplated adoption of a regulated price concurrently with optional employment and a system of licensing, *Leyland* 9999–10005. 10024–10030. 10219–10226; *Inman* 10353–10358; *Robinson* 12792–12794. 12911–12932——Doubt as to the expediency of fixing the rates by statute, *Holt* 11203. 11289——Heavy pressure of compulsory rates at Bristol, Swansea, Milford, and Liverpool, *H. E. Evans* 12395–12402.

Effect of absolute freedom in producing lower charges, more satisfactory service, and more ample remuneration to the best men, than a fixed charge, *Rep.* xii——Advantage of a low charge with constant employment, *ib.* xiii.

See also *Licensed Pilots.* *Salvage.*

Responsibility. See *Liability.*

Returns (*Board of Trade*). Control of the Board of Trade in voluntary districts adverted to with reference to the inaccurate returns received, as from Sunderland, *Farrer* 339–342.

Report, 1870—*continued.*

Reynolds, Captain Thomas. (Analysis of his Evidence.)—Considerable experience of witness in regard to the ports of Dublin, Liverpool, and London, 11006-11015. 11067-11072——Much greater difficulty in bringing a vessel into London than into Liverpool, 11016-11021——Equal employment of pilots in the Mersey by foreign-going vessels if the pilotage were optional, whilst the hardship of compelling coasters to take pilots would be obviated, 11022-11025. 11051-11053——Ample supply of pilots under a voluntary system, especially in bad weather, 11026-11028——Statement as to captains being deterred from applying to the Liverpool pilotage committee for pilotage certificates, 11029-11032.

Inaccuracy of certain evidence as to the difficulties of the navigation into Dublin, there being no good reason for compulsory pilotage there, 11033-11041. 11049, 11050. 11073-11077——Safety also of the approach to Belfast, so that pilotage should be optional there, 11042-11052. 11054-11066——Dissatisfaction of some of the Liverpool pilots in regard to the deduction from their owners for the owners of the boats, 11078-11081——Inducement under a voluntary system for a better class of men to enter the service, 11082.

River Pilotage. Important distinction between free pilotage in a river, and in the open sea, *Hinton* 9479-9482——Distinction between artificial river pilotage and sea pilotage, the former being a harbour master's question, *Sir F. Arrow* 11889-11893.

See also *Bristol, &c.*, I. *Clyde, The*, I.

Robinson, Anthony George. (Analysis of his Evidence.)—Is Deputy Chairman of the General Shipowners' Society of London, and is very largely interested in steamships, 12740-12742. 12905, 12906——Approval by the Shipowners' Society of the present Bill, except as regards some details, 12743, 12744. 12753——Objection to the restriction proposed as to the licensing of any more pilots for two years, 12744-12752——Opinion that if compulsion were abolished pilots would be more efficient, and would be found farther at sea in bad weather, 12754-12756. 12830, 12831. 12845-12847——Frequent complaint as to pilots not being found at Dungeness or as far out as is desirable, 12754, 12755. 12831. 12847, 12848.

Very onerous expense upon small ships in the Thames by reason of compulsory pilotage, 12757. 12788-12791. 12805. 12869——Valuable services rendered by the free watermen in piloting vessels between London and Gravesend, whereas they are liable to be superseded by the licensed pilots; approval of the pilotage between Gravesend and London being thrown open, 12758-12766. 12871-12901. 12933-12935——Insufficient number of licensed pilots between Gravesend and London; complaint made to the Trinity House on the subject, 12762. 12832-12834.

Instance of the heavy charges for compulsory pilotage between Gravesend and the Downs, whereas witness does not consider any pilot necessary on this part of the navigation, 12767-12769. 12775-12777——Necessity of a pilot or waterman between Gravesend and London, 12770-12774—— Complicated character of the present partial exemptions in the Thames, it being better to make exemption general, 12777-12779.

Objection to compulsory pilotage as involving immunity of the owner in case of collision; expediency of the owner being liable as one of the advantages of optional pilotage, 12779-12788. 12807. 12839-12844. 12854-12858——Evidence favourable to the licensing of pilots in the Thames, and to the charges being regulated by the local authorities in the event of the abolition of compulsory pilotage, 12792-12794. 12823-12827. 12911-12932.

Opinion that there is no reason for exempting Liverpool from the operation of the Bill, 12795-12797. 12812-12814——Much greater difficulty of the navigation of the Thames than of the Mersey, 12798——Belief that there will be as much employment of pilots after the Bill has passed, and that no compensation will be necessary, 12799-12806. 12868. 12870——Objection not only to the pilotage tax, but to the light dues, 12808-12811——Circumstance of there being compulsory pilotage in nearly all foreign countries, Turkey and Russia being exceptions, 12815-12822. 12849-12851.

Larger extent of freedom contemplated than is proposed by the Bill, 12828-12831. 12911-12932——Improvement if there were a representative pilotage authority for the Thames instead of the Trinity House, 12835-12838——Grounds for the opinion that compensation should not be borne by the Consolidated Fund, 12859-12868——Fewer accidents to witness's ships when not in charge of licensed pilots, 12871——Belief that life and property will be more secure if the Bill become law, 12902-12910.

Rosser, Captain John. (Analysis of his Evidence.)—Is harbour-master of Swansea; has the entire management of the pilotage service of the port, 6882-6884. 7112-7114——Description of the tidal harbour and two floating docks of Swansea, and of the great care necessary in bringing vessels in and out in order to prevent total obstruction of the navigation, 6885 *et seq.*; 7111-7152——Conclusion as to the necessity of compulsory pilotage for the harbour and docks; apprehension that under a voluntary system vessels would

Report, 1870—*continued.*

Rosser, Captain John. (Analysis of his Evidence)—*continued.*

would not always take pilots in fine weather, and that great risk and injury would result, 6905 *et seq.*

More unsafe character of the Mumbles Roads for vessels for Swansea than of the Penarth Roads for Cardiff vessels; great distinction also in other respects between the navigation of the two ports, 6929–6941. 6951–6954. 7109–7111. 7130–7136——General satisfaction given at Swansea by the present compulsory system, 6942, 6943. 6950——Exemption of vessels under 50 tons and of vessels under 100 tons in ballast; these vessels frequently take pilots, 6944–6950. 7001–7008.

Details relative to the number of pilots and of boats, the practice as to superannuation, the amount of earnings, &c., 6955–6973——Arrangements as to the cruising of the boats, and extent of the cruising district; circumstance of the district not extending to Lundy, 6974–6989. 7010–7014. 7113–7115. 7122, 7123——Possession of pilotage certificates by the masters of steamers in the coasting trade, 6990–6993 —— Complaint by the owners of screw colliers as to the pilotage rates inwards, 6994–7000.

Frequent complaint made as to pilots not being found at Lundy in bad weather, 7021–7033. 7047–7053——Doubt as to pilots being found at the Mumbles in bad weather under a voluntary system, it being essential to retain compulsory pilotage from the Mumbles inwards to Swansea, 7034–7062. 7137–7152——Opinion in favour of compulsory pilotage throughout the whole of the Bristol Channel, all the different jurisdictions being combined; facility in such case of maintaining a station at Lundy, and of reducing the rates, 7034–7037. 7063–7087. 7153, 7154.

Constitution of the Swansea Harbour Trustees adverted to; they are unanimous in favour of retaining compulsory pilotge, 7092–7100——Statement as to the pilots not holding shares in tug-boats, 7116–7118——Circumstance of vessels not entering Neath Harbour in bad weather or in the night time, 7124–7128——Practice generally for vessels to take pilots in bad weather, and to endeavour to do without them in fine weather, 7142–7150.

"*Royal Charter,*" *The.* Loss of the "Royal Charter" adverted to as a consequence of not having a pilot on board, *Judkins* 2137——Opinion that the absence of a pilot had nothing to do with the loss of the vessel, *Leyland* 10064.

Runcorn. Small number of vessels going to Runcorn which are, apparently, subject to compulsory pilotage in the Mersey, *Farrer* 343–346——Complaints from Runcorn and the Upper Mersey districts as to the obligation to pay pilotage rates on entering the port of Liverpool, *ib.* 878–882. 1020–1022——Exceedingly small proportion of the coasters trading to Runcorn which are subject to compulsory pilotage, *Simpson* 4284–4289. 4293–4300. 4324–4326.

Desire expressed by parties interested in the trade and docks of the Upper Mersey to be heard in support of the Bill, *App.* 556.

S.

Safety of Life:

1. *Objection to Voluntary Pilotage as prejudicial to Safety of Life.*
2. *Dissent from the foregoing Conclusion.*
3. *Question as to the expediency of Legislative interference with the responsibility of the Shipowner.*

1. *Objection to Voluntary Pilotage as prejudicial to Safety of Life:*

Belief that there would be an increased loss of life and property under an optional system, *Danson,* 3156. 3176–3178——Serious liability doubtless incurred by owners in not taking pilots, *ib.* 3204–3206——Recent instance in the Mersey of the risk avoided by the employment of a pilot, *Shallcross* 3435. 3465–3468. 3512——Expectation that some owners would decline to take pilots under an optional system, thus endangering life and property, *ib.* 3436, 3437.

Statement that there would be increased risk to life and property if foreign-going ships were not compelled to take pilots, *Taylor* 7931, 7932. 8030–8033——Prejudicial effect upon the safety of life if the Bill be passed, *Barfield* 8299.

Conclusions of Mr. M'Iver as to the increased risk to property and life by the abolition of compulsory pilotage, *App.* 576–579.

2. *Dissent from the foregoing Conclusion:*

Equal security of life and property in voluntary ports as in compulsory ports, *Farrer* 216—— Belief that saftey of life, as involved in the safety of the ship, will be better protected under a voluntary than a compulsory system, *ib.* 243–245——Witness further contends that safety of life will be equally secured under a voluntary system, *ib.* 619–622. 684–686——Conclusion further expressed that the safety of ships will not be prejudiced by

Report, 1870—*continued.*

SAFETY OF LIFE—continued.

2. *Dissent from the foregoing conclusion*—continued.

by the abolition of compulsory pilotage, *Farrer* 802–804——Doubt as to the safety of ships being jeopardised in order to save the pilotage rates, though small owners complain much of the burden of the rates, *ib.* 876–880.

Admission as to the advantage of a licensed pilot, as a safeguard against danger; doubt whether much risk would be incurred by owners in order to save this expense, *Sir F. Arrow* 1502–1516——Checks in any case upon vessels being sent to sea badly found, *ib.* 1859–1861——Belief that life and property will be more secure if the Bill become law, *Robinson* 12902–12910.

3. *Question as to the expediency of Legislative interference with the responsibility of the Shipowner:*

Expediency of the responsibility for the protection of life resting with the shipowners, who are better judges than Government of what is required, *Farrer* 250, 251——Inconsistency of modern legislation on the question of compulsory provisions generally for the protection of life, *ib.* 257, 258——Statement in further support of the conclusion that safety of life may best be provided for by not interposing compulsory regulations interfering with the responsibility of owners, *ib.* 484–493. 551–558. 601–608.

Statement as to compulsory pilotage not being necessary or defensible with reference to safety of life; exemption of coasters adverted to hereon, *Sir F. Arrow* 1389. 1494, 1495. 1502–1516. 1762–1764. 1800–1804. 1840–1842.

Decided dissent from the view of Mr. Farrer, that it is no part of the business of the Government to take a ship out of the hands of those most interested in her safety, *Bremner* 4631——Bad legislation is imperilling the safety of life and property by making pilotage non-compulsory, *Taylor* 8001. 8047–8050.

Conclusion of the Committee that it is no part of the business of Government to take a ship out of the hands of those most interested in her safety; and that merchants, shipowners, and insurers are much better judges of what they need than Government can be, *Rep.* xxviii.

St. Lawrence River. Illustration in the case of the St. Lawrence of the advantages consequent upon the adoption of pilot stations, *Ballantine* 3001–3006.

Salvage. Power of the London pilots to make claims for salvage without the consent of the Trinity House, whilst the Dungeness and North Channel pilots cannot do so, *Sir F. Arrow* 1941–1945——Expediency of legislation to the effect that no pilot be enabled to claim salvage without the previous consent of the pilotage authority, *ib.* 1941. 1945–1948.

In dangerous weather the charge demanded by pilots under a system of free-trade would almost amount to salvage, *Judkins* 2129, 2130——Probability of pilots making charges amounting to salvage under a system of free trade, *Lamport* 3625–3627. 3699–3702——Instance in the Mersey of excessive demand by a steam-tug for towing a vessel in distress, *Simpson* 4232–4237.

Scilly. Belief that very few vessels take pilots off Scilly, *Millen* 7471–7479——Inefficient class of pilots off Scilly, *Mallett,* 7668, 7669.

Select Committee of 1860. Report of Mr. Lindsay's Committee of 1860 cited as showing the conclusions then arrived at favourable to a system of voluntary pilotage; that is, in most parts of the country, *Farrer* 92–97.

Selection of Pilots. Question considered whether under the Bill there would be any increased power of selection of pilots by the ships, *Farrer* 424–438——Varying rules at different ports as to the selection of licensed pilots, *ib.* 496——Great importance attached to a right of selection, *Freeman* 10238–10245. 10286–10297.

Shallcross, Thomas Richard. (Analysis of his Evidence.)—Is chairman of the Liverpool Shipowners' Association, 3423–3425——Much larger tonnage in sailing ships than in steam ships in the Mersey, 3426——Unanimous opinion of the Shipowners' Association that compulsory pilotage should be retained, 3426–3429. 3432, 3433——Decided efficiency of the present service, 3430, 3431. 3438, 3439. 3486, 3487——Conclusion that without compulsory pilotage pilots would not always be found in bad weather when most wanted, 3433. 3440–3445. 3458–3464——Recent instance of the risk avoided by the employment of a pilot, 3435. 3465–3468. 3512.

Expectation that some owners would decline to take pilots under an optional system, thus endangering life and property, 3436, 3437——Great value of the training and practical knowledge of the Liverpool pilots; advantage as compared with the knowledge of

Report, 1870—*continued.*

Shallcross, Thomas Richard. (Analysis of his Evidence)—*continued.*

masters or captains who are only in the port occasionally, 3438. 3455, 3456. 3502–3505. 3512. 3516. 3540–3542——Excellent operation of the system of stations, 3439——Grounds for the conclusion that under an optional system the service would not be efficient, nor the supply of pilots in proportion to the demand, 3440–3445. 3458–3468. 3475–3491.

Comparatively easy pilotage of the ports in the Tyne and Wear, so that voluntary pilotage may be found efficient there, 3446–3450. 3469–3472. 3523–3531——Statement as to the boats whence pilots are taken at Queenstown being used mainly for the purpose of sending merchants' orders on board the ships, 3451–3453——Feeling of the Liverpool shipowners that they should be exempt from liability when a pilot is employed, but that with or without immunity compulsory pilotage is essential, 3454–3457. 3520–3522. 3545–3558.

Explanation that the Shipowners' Association represents only the sailing-ship owners of Liverpool, 3495–3501——Very dangerous character of the navigation of the Mersey, 3504. 3513. 3532–3542——Objection to reliance upon steam tugs for the piloting of sailing vessels in the Mersey, 3506–3511. 3518, 3519——Advantage of the careful buoyage of the river, 3514–3517——Opinion that a shipowner having taken all precaution against accident should not be liable, irrespectively of compulsory pilotage, 3545–3554.

SHIPOWNERS:

Views of Mr. Dunbar, Mr. Green, and other large sailing-shipowners in 1860, in favour of compulsory pilotage, *Farrer* 80, 81. 205–210——Important considerations which weaken the argument arising from the fact that a large number of shipowners are in favour of the compulsory system, *ib.* 203. 211——Exception taken to the approval given by shipowners to compulsory pilotage as exempting them from liability, *ib.* 203. 211. 805.

Great change since 1860 in the views of the shipowners, some of the largest shipowners in London approving of the present Bill, *Farrer* 204–211——Letter recently received at the Board of Trade from the General Shipowners' Society of London, showing that the large sailing shipowners of London are now favourable to the principle of abolition of compulsion, *ib.* 223. 407–409——Shipowners would be more than ever opposed to compulsory pilotage if the immunity of the ship were abolished, *ib.* 752.

Custom of owners in the Thames to take pilots as a protection against liability in the event of collision, *Sir F. Arrow* 1614, 1615.

Probable objection by owners to compulsory payment if they lose the benefit of immunity, *Squarey* 2452–2455. 2523–2541. 2571–2579——Feeling of owners of large vessels in favour of retaining immunity from liability in conjunction with compulsory pilotage, *Drew* 6671–6674.

Statement as to the Shipowners' Society of London not representing the shipowners of the port, *Taylor* 8051, 8052. 8101–8127. 8149.

Witness considers that the London Shipowners' Society fairly represents the shipowners of London, and that Mr. Taylor is in error, *Duncan* 9545, 9546. 9704–9710——Full discussion of the present Bill by the Society, through its committee; the result being that they approve of the abolition of compulsory pilotage; constitution of the Committee adverted to hereon, *ib.* 9547–9549. 9626–9634. 9665–9670. 9704–9710. 9730——Preference of the Society for an entirely free system of pilotage, *ib.* 9649. 9626–9632.

Question as to its being any hardship to the shipowners to enforce a new system upon them contrary to the views of the great majority, *Holt* 11292–11300——Approval by the London Shipowners' Society of the present Bill, except as regards some details, *Robinson* 12743, 12744. 12753.

Change of opinion on the part of the sailing-ship owners of London, these being now in favour of a still more free system than is proposed by the Bill, *Rep.* xiv.——Uniform objection to compulsory pilotage by the steamship owners of the Port of London, *ib.*

See also *Liability.* *Liverpool,* VIII. 2. *Steamships.*

Simpson, Robert Poulton John, R.N. (Analysis of his Evidence.)—Is Superintendent of Pilotage at Liverpool, and is an examiner of pilots and masters and mates for pilotage certificates, 4162——Has had nineteen years' experience as a master in the Navy, and holds a Trinity House pilotage certificate for the district from the Downs to the Land's End, 4163–4165.

Opinion that the navigation of the Mersey and the approaches to Liverpool are more dangerous than in the case of any port in the kingdom; respects in which more dangerous than the approach to London, 4166. 4366. 4416–4427——Statement of the training and qualifications of the Liverpool pilots, 4167–4171——Information relative to the shares in which the twelve pilot boats are owned, and the system of division of the earnings of each boat, 4172–4178. 4316–4323.

Report, 1870—*continued.*

Simpson, Robert Poulton John, R.N. (Analysis of his Evidence)—*continued.*

Ownership of the boat shares by retired pilots and by acting pilots, 4178. 4380, 4381. Total of 768 shares representing a value of 90,700 *l.*, 4178–4182——Average earnings at the rate of 12½ per cent. upon the market value of the shares, subject to deduction for depreciation and insurance, 4183–4196. 4447–4461——Nature of the security for the maintenance of efficient boats and for the prompt replacing of worn-out boats; great efficiency obtained under the system, 4198–4201. 4336–4339. 4382–4394. 4406–4411.

Way in which the system of boat stations is worked, 4202–4205. 4395. 4508–4513——Check applied in order to see that the boats keep their stations; very few complaints on this point, 4206–4213——Several complaints made against individual pilots; excellent effect of the punishment and publicity in these cases, 4214–4221. 4330–4333. 4397–4405.

Forcible illustration during a gale in 1866 of the excellent operation of the system of stations as a means of preventing casualties; small pilotage charges involved on this occasion, 4222–4237——Opinion strongly in favour of the present compulsory regulations in the Mersey; witness would in fact abolish all exemptions, 4238–4245. 4360, 4361. 4465——Economy of the service, 4239. 4259–4264.

Arrangement as to the same pilot being taken by a ship outward-bound, who has already piloted her into port, 4246. 4514, 4515——Special arrangements by which some of the large steam-ship companies are allowed to have selected pilots; check upon the average earnings of these, 4247–4253. 4301–4323. 4374–4379——Full facilities given by the Mersey Board for the examination of masters and mates, 4254–4258. 4355–4359. 4368.

Lower pilotage rates at Liverpool than at London, Cardiff, or New York, 4259–4263——Average of forty-eight or fifty vessels piloted yearly at Liverpool by each pilot, there being also other work to do, 4265–4269. 4501–4507. 4546. 4548. 4566–4568——Particulars relative to the Pilots' Annuity Fund, its amount, and how constituted and administered, 4270–4280——Effect of the present Bill to disorganise the whole pilotage system of the port, 4281——Prejudicial effect of the Bill upon the earnings and annuity fund, 4281. 4290–4292. 4334, 4335.

Steps taken by the Mersey Board in order to meet the complaint that coasters should be six weeks in the trade, in order to constitute them as coasters, 4282, 4283——Exceedingly small proportion of the coasters trading to Runcorn which are subject to compulsory pilotage, 4284–4289. 4293–4300. 4324–4326——Increased liability to accident in the case of coasters not taking pilots, 4324–4327——Advantage of examination of masters in the case of steamers in the short-voyage trade, 4328, 4329. 4369–4373——Examination relative to the enhanced value of the boat shares as compared with the cost of the boats; admission that the system of ownership requires correction, 4340–4354. 4412–4414. 4428–4438. 4447–4461.

Opinion that wherever the local pilotage authorities do not want the Bill applied to them, their views should be respected, 4367——Exemption of certain steamers from obligation to take pilots if in the coasting trade, 4415——Care taken as to the shifting of the buoys, 4439, 4440——Necessity for pilotage beyond the Bell buoy; facility recently given in this respect, 4441–4444.

Belief that under the Bill, the uncertainty of employment would affect both the number and efficiency of the pilots, 4445, 4446——Exemption not only of coasters under 100 tons, but of all coasters in ballast, 4466——Statement as to coasting steamers paying only half rates when they take pilots; this is an old regulation, and the payment has not been complained of, 4467–4469. 4486–4491——Explanation that the Mersey Board is not responsible for not compelling the home-trade passenger ships to take pilots, these vessels paying a rate of only 1 *s.* a foot; anomaly in the matter of this payment, 4470–4485.

Non-reduction of rates in the case of vessels in charge of steam-tugs, 4492——Increase in the number of pilots within the last ten years, steps being now taken to reduce the number; question hereon as to there being sufficient work for the present staff, 4493–4513. 4546–4548. 4566–4568——Grounds for the conclusion, that under an optional system many vessels would cease to employ pilots in fine weather, and that, on the whole, the employment would be much less, 4516–4533——Expectation that under voluntary pilotage pilots and tugs will gravitate towards each other, and that extortionate demands will be the result, 4525. 4549. 4564–4569——Grant of pensions to pilots when infirm from other causes as well as age; very small proportion superannuated, 4534–4537——Calculation of the pensions at the rate of 1 *l.* for each year of service, 4538–4541——Exceedingly small number of accidents in the case of piloted ships, 4543–4545.

Smith, Thomas Eustace. Evidence of Mr. T. Eustace Smith before the Committee of 1860 adverted to as showing his views in favour of compulsory pilotage, *Farrer* 264–269——Change of opinion on the part of Mr. Eustace Smith on the question of compulsion, *ib.* 806–808.

Report, 1870—*continued.*

"*Snodland*," *The.* Running down of the barge "Snodland" by the steamer "Sentinel" adverted to in memorials of owners of barges and of sailing barges; great loss incurred without power of recovery from the pilot of the "Sentinel," who became bankrupt, *App.* 509, 510.

South Channel of Thames. See *Thames, The.*

Southampton. Explanation of the arrangements in force at Southmpton as to the selection of pilots by the steamships; payment of one-third of the earnings of these men to a common fund, *Sir F. Arrow* 1639-1650——Witness, as an Isle of Wight pilot, complains that he is not allowed to take certain steamship companies' vessels for Southampton into the port, being superseded by pilots selected or privileged for the purpose, *Webb* 8684-8715. 8730-8732——Complaint also that his employment and earnings would be seriously affected by the Bill, his earnings being very small already, *ib.* 8716-8732.

Speeding, William. (Analysis of his Evidence.)—Witness submits grounds for the conclusion that he and other pilots licensed from London to the Downs should also be licensed to bring ships right through from the Downs to London; delay and extra charge now incurred through the break of pilotage at Gravesend, 9001 *et seq.*——There are fifty pilots licensed from London to the Downs, but these licenses are not renewed, and the number is gradually dying out, 9012-9014——Witness and other pilots are employed by choice, and would not suffer under the Bill, 9021-9028. 9044, 9045.

Statement as to the river pilots unduly interfering with the employment of witness and other London pilots; interest of the former in steam-tugs adverted to hereon, 9021. 9056-9094——Information relative to the class of persons who act as pilots in the north channel under the voluntary system; deficient qualifications of some of these, 9029-9049. 9053-9055——Several examinations passed by witness; previous service at sea, 9050-9052.

Objectionable practice in the employment of brokers' clerks and others for procuring ships for pilots, 9095-9109——Waste of time under the system of pilots acting outwards only, 9132-9141——Approval on the whole of optional or free pilotage in the Thames, 9145-9150——Much more frequent accidents when unlicensed than when licensed pilots are employed, 9152-9158. 9205——Doubt as to the Bill leading to much reduction in the employment of pilots either inwards or outwards, 9174-9182——Reduction in the rates when tugs are employed, 9183-9189——Improbability of the Bill causing pilots to be dispensed with when tugs are employed, save in the case of unloaded vessels, 9190-9196——Claim of the Trinity pilots to more liberal superannuation out of the pension fund, 9197-9204——Payment made to the Trinity House whenever a choice letter is granted for the employment of any pilot; return of this money unless the pilot does not go with the ship, 9206-9217.

Speeding, W. Letter from Mr. Speeding to the Secretary of the Board of Trade, suggesting certain alterations in the system of pilotage in the North Channel of the Thames, *App.* 527.

"*Spindrift*," *The.* Case of the "Spindrift" adverted to as illustrating the mischievous operation of the present system of non-liability when a pilot is in charge in a compulsory district, *Farrer* 51-58——Case of the "Spindrift" further adverted to; suspension of the pilot by the Trinity House, *ib.* 641-648——The owner seems to have done everything he could, *ib.* 854——Entire inaccuracy of a report that the present Bill originated in the case of the "Spindrift," *ib.* 941-945.

Illustration in the case of the "Spindrift" of the mischievous effect of the responsibility vested in the pilot under the compulsory system, *Sir Frederick Arrow* 1398, 1399——Practice of the Trinity House as to the investigation of complaints, as in the case of the "Spindrift," *ib.* 1733-1736.

Inaccuracy of a statement as to the pilotage having been compulsory in the case of the "Spindrift," *Mallett* 7534-7539.

Squarey, Andrew Tucker. (Analysis of his Evidence.)—Is Solicitor to the Mersey Docks and Harbour Board, 2347, 2348——Origination of the pilotage system of Liverpool by Act of Parliament in 1765, whereby pilotage was made compulsory on all outward-bound vessels, 2349. 2361——Further Act in 1796 extending compulsion to inward-bound vessels, *ib.*——Summary of the chief provisions of the several Acts since 1796, there having been a Consolidation Act in 1858 by which the present pilotage system is worked, 2349-2352. 2361.

Constitution of the Mersey Docks and Harbour Board as the pilotage authority by the Act of 1858; 2352, 2353. 2356——Working of the pilotage system by a committee of twelve members, eight of whom are taken from the Mersey Board, and four are persons specially conversant with pilotage and shipping matters, 2353-2356. 2359, 2360——Power of the Dock Board to make bye-laws, subject to the sanction of the Board of Trade

Squarey, Andrew Tucker—(Analysis of his Evidence)—*continued.*

Trade, 2357, 2358——Examination of the pilots by a sub-committee of the Pilotage Committee, 2359.

Statement as to the modes of distribution by the Mersey Board of the sums derived from pilots' licenses, and from fines and penalties, 2362–2364——Payments whence the Pilotage Annuity Fund is created, and way in which administered by the Board, 2362–2366——Explanation of the provisions relative to the ownership of the pilot boats, and the regulations as to the sale of shares, 2367–2373.

Evidence in support of the conclusion that, concurrently with compulsory pilotage rates, the immunity of the owner from liability should be by law abolished, 2374 *et seq.*——Opinion that the proper function of the pilot is to advise the captain, and not to undertake the entire navigation of the ship, 2378–2380——Tendency to collisions through the reluctance of captains to assume responsibility by interfering with the pilots, 2380–2383.

Information relative to the law in Belgium, New York, France, and other foreign countries as not protecting the owner where there is compulsory pilotage, 2384–2394. 2430–2437——Views of Sir Robert Phillimore as to the objectionable character of the law of immunity of the owner from liability, 2393, 2394——Argument that the compulsion is to pay pilotage rates and not to take a pilot on board; extent to which the penalties may involve compulsion, 2398–2435. 2444–2451. 2472–2476——Penalty of double pilotage in Liverpool for refusal to take a pilot, 2414–2417. 2427.

Views of the commission appointed in France in 1866 upon the question of compulsion and of owner's liability; conclusion as to the owner deriving no protection under the French law through there being a pilot on board, 2430–2435——Very large proportion of cases before the Admiralty Court contributed by Liverpool, 2440——Feeling among the legal profession employed in shipping cases at Liverpool that it would be well to abolish the immunity of the owner, 2441–2443.

Probable objection by owners to compulsory payment if they lose the benefit of immunity, 2452–2455——Opinion adverse to exemptions, it not being unreasonable to make every vessel contribute something to a service maintained for the benefit of all, 2456–2466——Expediency in any case of pilots being examined and licensed, 2469–2471.

[Second Examination.] Explanation that the collision cases which come for trial from Liverpool do not all occur in Liverpool waters, 2478, 2479——Opinion that, unless where the navigation is specially dangerous, there should not be obligation to take a pilot, 2480. 2513–2517——Absence of pecuniary interest in the Mersey Board in maintaining compulsory pilotage, 2481, 2482——Further statement as to witness's views involving the abolition of exemptions; the degree of contribution might be varied infinitely, 2483–2487.

Evidence in further support of the view that the pilot should not obviate the action of the captain, and should not absolve the owner from liability, 2488–2495. 2518–2522——Examination with further reference to the opinion that pilotage is not compulsory at Liverpool, but only the payment of rates, 2496–2512——Question whether immunity from liability, concurrently with compulsory pilotage, would be approved by owners in Liverpool; diversity of opinion on this subject on the part both of sailing-ship owners and steamship owners, 2523–2541. 2571–2577. 2601, 2602.

Power of the Mersey Board, with the approval of the Board of Trade, to amend details in the present pilotage system, 2542–2546. 2603–2605——Question considered as to the source whence compensation should be provided in the event of its being determined to abolish the arrangement as to a portion of the pilots' earnings going to the pilot boats; opinion that the charge should be met out of the Consolidated Fund, instead of out of the trade of the port, 2547–2561. 2566–2571.

Exception taken to the proposal in the Bill for an interval of two years before claims for compensation can arise, 2562, 2563——Probable dissatisfaction to be caused by leaving the amount of compensation in the discretion of the Board of Trade, 2564, 2565——Circumstance of owners being exempt from liability under the North German code, when there is a pilot on board, 2578, 2579.

Information in detail on the subject of the law of insurance as affected by pilotage; conclusion that pilots would, under a voluntary system, be still largely employed on account of the obligation under the insurance laws, 2579–2600. 2609–2648.

Steamships. Reasons for steamship owners preferring that their vessels should be in charge of their own masters, *Farrer* 823, 824——Important effect of the increased use of steam in diminishing any arguments that existed for compulsory pilotage, *Sir F. Arrow* 1415–1417——Much larger amount of tonnage which can be piloted by the same staff at Liverpool since the introduction of steamships, *Judkins* 2060–2067.

Circumstance of the steamship owners of the Port of London having always been against compulsory pilotage, *Rep.* xiv.——Unanimous feeling of a committee of the

Steamships—continued.

Liverpool Steamship Owners' Association in favour of abolition, *Rep.* xix——Reference to the great and growing steamship interest as being, with few exceptions, against the obligation to employ a pilot, *ib.* xxvii.

See also *Liverpool,* VI. *Shipowners.*

Steele, Mr. Letter from Mr. Steele, of Liverpool, to the Board of Trade, complaining in strong terms of the compulsory pilotage regulations in the case of coasters which, within six months, have been a foreign voyage, *Farrer* 137, 138.

Superannuation Funds. Amount of capital of superannuation fund at each compulsory port; total of 112,913*l.*, *App.* 553. *See* also *Compensation.*

Supply of Pilots. See *Compulsory Pilotage. Licensed Pilots. Number of Pilots. Voluntary Pilotage.*

SWANSEA:

1. *Generally as to the present Pilotage Arrangements.*
2. *Difficulties of the Navigation; Importance attached to Compulsory Pilotage.*
3. *Conclusions favourable to the Discontinuance of Compulsory Pilotage.*

1. *Generally as to the present Pilotage Arrangements:*

Exemption of vessels under fifty tons and of vessels under 100 tons in ballast from compulsory pilotage; these vessels frequently take pilots, *Rosser* 6944–6950. 7001–7008——Details relative to the number of pilots and of boats, the practice as to superannuation, the amount of earnings, &c., *ib.* 6955–6973——There are forty-nine sea pilots and six harbour pilots; duties of each class, *ib.* 6955–6958——There are nine boats averaging from twenty-two to thirty-five tons, *ib.* 6963, 6964.

Arrangements as to the cruising of the boats, and extent of the cruising district; circumstance of the district not extending to Lundy, *Rosser* 6974–6989. 7010–7014. 7113–7115. 9122, 9123——Possession of pilotage certificates by the masters of steamers in the coasting trade, *ib.* 6990–6993——Complaint by the owners of screw colliers as to the pilotage rates inwards, *ib.* 6994–7000——Frequent complaint made as to pilots not being found at Lundy in bad weather, *ib.* 7021–7033. 7047–7053——Statement as to the pilots not holding shares in tug-boats, *ib.* 7116–7118.

Complaint sometimes made at Swansea as to the pilotage district not going so far as Lundy, *Ford* 7160–7162——Similar charge from Lundy as from Helwick, the limit of the district, *ib.* 7162, 7163.

Regulations on the subject of compulsory pilotage and optional pilotage respectively, *App.* 566, 567.

2. *Difficulties of the Navigation; Importance attached to Compulsory Pilotage:*

Description of the tidal harbour and two floating docks of Swansea, and of the great care necessary in bringing vessels in and out, in order to prevent total obstruction of the navigation, *Rosser* 6885; *et seq.* 7111–7152——Conclusion as to the necessity of compulsory pilotage for the harbour and docks; apprehension that under a voluntary system vessels would not always take pilots in fine weather, and that great risk and injury would result, *ib.* 6905 *et seq.*

More unsafe character of the Mumbles Roads for vessels for Swansea than of the Penarth Roads for Cardiff vessels; great distinction also in other respects between the navigation of the two ports, *Rosser* 6929–6941. 6951–6954. 7109–7111. 7130–7136——General satisfaction given at Swansea by the present compulsory system, *ib.* 6942, 6943. 6950——Doubt as to pilots being found at the Mumbles in bad weather under a voluntary system, it being essential to retain compulsory pilotage from the Mumbles inwards to Swansea, *ib.* 7034–7062. 7137–7152——Constitution of the Swansea Harbour Trustees adverted to; they are unanimous in favour of retaining compulsory pilotage, *ib.* 7092–7100.

Satisfaction felt at Swansea with the working of the present pilotage system of the port, *Ford* 7164. 7177——Very difficult and exceptional character of the entrance to Swansea harbour and docks, so that the obligation to take a pilot is essential to prevent disaster, *ib.* 7165–7177. 7201 *et seq.*——Opinion that compulsory pilotage is not necessary from Helwick, but only from the Mumbles, *ib.* 7175. 7196–7206——At Cardiff there is a safe roadstead, but not at Swansea, *ib.* 7209

Probability of many vessels for Swansea not taking pilots in fine weather under the voluntary system, and of their not being able to obtain them in bad weather, *Ford* 7210–7240. 7246–7248.

SWANSEA—continued.

3. *Conclusions favourable to the Discontinuance of Compulsory Pilotage*:

Control to be exercised in such a harbour as that of Swansea by the harbour master, when ships come in with or without pilots, *Sir F. Arrow* 1877–1879——Probable difficulty in respect of entrance to the harbour at Swansea, *ib.* 11902, 11903.

Degree of difficulty in getting into Swansea; witness, however, seeing no necessity for compulsory pilotage, *Chaddock* 11507–11520——A pilot is not wanted till a ship gets to the Mumbles, *ib.* 11515–11517——Under a voluntary system a pilot would be sure to be found either at the Mumbles or at Bideford Bay, *ib.* 11518–11520.

Statement as to a compulsory system being less required at Swansea than at Cardiff; relative facilities of access to each port, *Johnson* 12262–12266. 12290–12319.

Conclusion of the Committee that in the Avon and at Swansea, masters who do not know the river will of their own accord always employ pilots, *Rep.* xxvi.

See also *Bristol and Bristol Channel.*

T.

Taylor John. (Analysis of his Evidence.)—Is one of the managing partners of the firm of T. M. Mackey, Son & Co., 7922——Very large extent to which the firm is interested in shipping in the ports of Liverpool and London, 7923–7928——Immunity of the ships of the firm from accidents to life, 7927. 7969——Peculiarly intricate and dangerous navigation of the Thames and Mersey, 7929, 7930——Importance of foreign-going ships being able to command the services of pilots who are constantly navigating the Thames, 7931, 7932——Expectation that if the pilotage were voluntary the pilots would be a less efficient class, and that increased dangers would accrue to shipping, 7933, 7934. 7940 *et seq.*

Very satisfactory working of the pilot station at Dungeness, 7935, 7936——Minimum of risk with which the pilotage service of London is now conducted, 7937——Opinion that when a pilot is on board a ship he should be entrusted with the entire control and responsibility, 7938, 7939——Probability, under a voluntary system, of many ships dispensing with pilots in fine weather, and of the uncertainty of employment and reduction of income having a very injurious effect, both as to number and efficiency, 7940 *et seq.*

Perfect competency of masters to act as pilots when they are frequently in and out of the Thames or Mersey, compulsory pilotage being essential mainly for large and foreign-going ships, 7940. 7946. 7992. 8058. 8150. 8162, 8163——Intimate knowledge of witness as to the pilotage service in the Mersey; its efficiency, 7945, 7946. 8157–8161——Grounds for the conclusion that the supply of pilots would not be always equal to the demand in bad weather under an optional system, 7947–7965. 8083–8086.

Explanation as to special pilots not being attached to witness's ships at Liverpool, 7966, 7967——Examination upon the question of the employment and supply of pilots in the north channel of the Thames under the voluntary system; reasons for concluding that the same results would not follow in the south channel, 7970–7998. 8087–8100. 8164——Effect of voluntary pilotage in inducing tugs to go further down the channel, 7994–8006. 8140, 8141.

Probability of masters taking tugs and dispensing with pilots, without the owners being able always to prevent their doing so, 8002–8006. 8013–8018. 8128–8141——Decided objection to the shipowner being responsible when there is a compulsory pilot on board, 8007–8012——Approval of the system of licensing masters and mates in the Thames, 8023–8026——Objection to home-trade passenger ships being exempt from the obligation to carry a licensed master or pilot, 8024–8026——Approval of exempting ships in the Thames up to 200 tons, 8027–8030. 8058.

Further statement that there would be increased risk to life and property if foreign-going ships were not compelled to take pilots, 8030–8033——Consideration of the question whether it would not be a misdemeanour under the Merchant Shipping Code to dispense with a pilot, as causing unseaworthiness, 8034–8044——Statement as to the Shipowners' Society of London not representing the shipowners of the port, 8051, 8052. 8101–8127. 8149.

Expediency of its being left to the local authorities to settle their own pilotage arrangements, 8053–8058. 8150——Improvement if there were a separate representative body for administering pilotage in the port of London, 8056–8058, 8142–8149——Objection to the owner rather than the pilot being responsible for damages done to barges in the Thames, 8059–8077. 8151–8156——Approval of the regulations in regard to separate pilots above and below Gravesend, 8078–8082.

Report, 1870—*continued.*

THAMES, THE (PORT OF LONDON):

I. *Long Period for which Compulsory Pilotage has existed.*

II. *Extent of the Compulsory District.*

III. *Generally as to the Pilotage Service; its Administration and Working:*

1. Particulars as to the various Classes of Pilots and the Number of each Class.
2. Pilots for the Home Trade Passenger Ships.
3. Qualifications of the Pilots.
4. Rates.
5. Question as to the Sufficiency of the Supply of Trinity Pilots.
6. Question of retaining a separate Station at Gravesend, or of licensing Pilots for the whole Distance to and from Dungeness.
7. Working of the Cruising Station at Dungeness.
8. Other Details generally.

IV. *As to the Thames Watermen:*

1. Details as to their Number, Qualifications, and Services.
2. Rates and Earnings.
3. Effect of the Bill as regards their Employment.

V. *Exemptions from Compulsory Pilotage.*

VI. *Accidents.*

VII. *Character of the Navigation.*

VIII. *Question of Compulsory or Voluntary Pilotage:*

1. Evidence favourable to Voluntary Pilotage in the Thames District generally.
2. Evidence opposed to the foregoing View.
3. Operation of the Voluntary System in the North Channel; Inferences drawn therefrom.

IX. *Question of Compensation.*

X. *Detailed Summary by the Committee, and Conclusions arrived at.*

I. *Long Period for which Compulsory Pilotage has existed:*

Existence of compulsory pilotage in the Thames as early as 1716, if not before, *Farrer* 39.

II. *Extent of the Compulsory District:*

Termination of the compulsory waters of the Thames at Dungeness, outwards as well as inwards; question hereon whether they might not as well terminate in the Downs, *Sir F. Arrow* 1536–1541.

III. *Generally as to the Pilotage Service; its Administration and Working:*

1. Particulars as to the various Classes of Pilots, and the Number of each Class:

Details relative to the several classes of pilots working in and out of London, there being seven or eight different classes, licensed or unlicensed; great inconvenience and collision by reason of so many conflicting interests, *Farrer* 114–135——Different set of licensed pilots for the river above Gravesend, and for the river below, *ib.* 114–116——Conflicting applications made to the Board of Trade for the protection of the several classes of Thames pilots, *ib.* 130–133.

Several classes of pilots in the Thames district, and number of each class, *Sir Frederick Arrow* 1378, 1379——There are seventy river pilots licensed for the district between London and Gravesend, *ib.*

Limitation of witness's services to the district between Dungeness and Gravesend, *Millen* 7455, 7456. 7490, 7491—— Different class of men outwards from Gravesend and inwards from Dungeness, *Mallett* 7583, 7584——Different class of unlicensed men above and below Gravesend, *Daines* 8530, 8535——Total of seventy river pilots, there being fifty stationed at Gravesend and twenty at London, *Pattison* 8736–8738——Long period for which Gravesend has been a separate pilot station, though only so established by law in 1854, *ib.* 8739.

There are fifty pilots licensed from London to the Downs, but these licenses are not renewed, and the number is gradually dying out, *Speeding* 9012–9014——Statement as to the river pilots unduly interfering with the employment of witness and other London pilots; interest of the former in steam-tugs adverted to hereon, *ib.* 9021. 9056–9094.

Return

Report, 1870—*continued.*

THAMES, THE (PORT OF LONDON)—continued.

III. *Generally as to the Pilotage Service; its Administration, &c.*—continued.

1. Particulars as to the various Classes of Pilots, &c.—*continued.*

Return of the number of pilots, average earnings, &c., licensed for the different parts of the London district, *App.* 558.

Total of 3774 pilots employed by vessels entering the Port of London by the South Channel in 1869, *App.* 580——Total of 1292 pilots employed by vessels entering the Port of London by the North Channel in 1869, *ib.*

2. Pilots for the Home-Trade Passenger Ships:

Comment upon the pilotage service in the case of the home-trade passenger ships and steam ships; refusal of the Trinity pilots to undertake this service in 1854, *Pattison* 8752–8761.

Explanation that the home-trade passenger vessels were required by the Act of 1854 to take pilots on account of several accidents having occurred through not taking pilots, the same men having been licensed for the purpose who used to be employed voluntarily, *Luton* 12546–12554. 12572, 12573. 12577. 12716–12726——Restriction of witness's license to the piloting of home-trade passenger ships; total of 22 pilots thus licensed, the number being kept up by apprentices, *ib.* 12551–12555. 12577. 12655–12657. 12662, 12663——Effect of the Merchant Shipping Code and of the Pilotage Bill to deprive witness and his brother pilots of the main part of their employment, *ib.* 12556–12580. 12599–12613——Payment of three guineas a year by witness for his license, in addition to income tax, 12577. 12630–12636. 12730–12739.

Power of a Trinity House pilot to supersede witness, save on board a home-trade pas-passenger ships; disadvantage on this score under the present Bill, *Luton* 12599–12613. 12674–12676——Statement as to the liability of the owner and pilot respectively in case of accident caused by a home-trade passenger ship, *ib.* 12614–12629. 12680–12682——Very small employment of witness's class in other than passenger vessels, *ib.* 12637–12654——Obstacle to witness being licensed for the entire navigation of the Thames, *ib.* 12658–12661. 12677–12679——Charges of witness's class as compared with the charges of the Trinity pilots and of the free watermen, *ib.* 12670–12673.

3. Qualifications of the Pilots:

Satisfaction given generally by the pilotage service in the Thames, though there is some room for improvement, *Sir F. Arrow* 1528. 1597–1599——Very few complaints against the Trinity House pilots, *ib.* 1733——Qualifications required in Trinity House pilots; necessary position as master or mate in the merchant service before they are licensed by the Trinity House, *Millen* 7252–7262——Great confidence placed by witness in the Trinity House pilots; especial value of their previous nautical experience as masters or mates, *Castle* 7698–7706.

Importance of the Thames pilots having served as masters or mates, *Tillman* 7765, 7766——Requirement as to the pilots between Gravesend and London having commanded vessels, *Pattison* 8879–8889——Several examinations passed by witness; previous service at sea, *Speeding* 9050–9052——Qualifications of witness's class adverted to, *Luton* 12664–12669.

4. Rates:

Opinion as to the present pilotage rates in the Thames not being excessive, *Sir F. Arrow*, 1851–1857——Different rates paid by steamers and by sailing ships, *Duncan* 9695–9679.

Scale of payment for one pilot from London to the Downs, and for two pilots for the same distance; saving in the former case, *App.* 531.

Order in Council dated 1st November 1862, together with Schedule attached thereto, relative to the rates of pilotage within the Trinity House district, *App.* 531–534.

5. Question as to the Sufficiency of the Supply of Trinity Pilots:

Inadequate supply of licensed pilots for all the vessels which want pilots in the Thames; facility with which any deficiency may be supplied by the Trinity House, *Farrer* 789–795. 818——Insufficiency of the licensed pilots above Gravesend; special and exceptional circumstances of this part of the pilotage, *ib.* 890 *et seq.* 1023.

Absence of change in the number of pilots in the Thames during the last ten years, though the number has been decreasing round the coast; belief as to the sufficiency of licensed pilots, *Sir F. Arrow*, 1521–1527. 1768–1770. 1863. 1918–1920——Occasional demand in the Thames for more pilots than are comprised in the licensed staff at Dungeness, &c.; use made of the services of Deal boatmen and of watermen on these occasions, *ib.* 1662–1664.

Report, 1870—*continued.*

THAMES, THE (PORT OF LONDON)—continued.

III. *Generally as to the Pilotage Service, its Administration, &c.*—continued.

5. Question as to Sufficiency of Supply of Trinity Pilots, &c.—*continued.*

Decrease since 1862 in the number of ships in the Thames, although the tonnage had largely increased; this partly accounts for the non-increase in the number of pilots, *Sir F. Arrow* 1768–1770——Large number of free watermen and of unlicensed pilots in the Thames above Gravesend, and large amount of pilotage work done by them; denial that this proves any insufficiency of licensed pilots, *ib.* 1862–1864. 1885–1900. 1907. 1918–1920——The licensed pilots could do more work than they now get, *ib.* 1898–1900. 1907. 1917.

Obstacles to the Trinity House licensing additional pilots, as interfering with the incomes and the efficiency of those in the service, *Millen* 7350–7357. 7501–7504——Decided inadequacy of the present staff of licensed pilots for the work in the Thames, so that there is ample room for the watermen, *Hinton*, 9455–9458. 9492–9496. 9527–9531——Disapproval of the attempted regulation of the number of pilots in the Thames, *Duncan* 9721–9725——Insufficient number of licensed pilots between Gravesend and London; complaint made to the Trinity House on the subject, *Robinson* 12762. 12832–12834.

6. Question of retaining a separate Station at Gravesend, or of licensing Pilots for the whole Distance to and from Dungeness:

Opinion favourable to pilots being licensed for the whole distance from London to the sea, instead of there being a break at Gravesend, *Sir F. Arrow* 1872——Approval of the regulations in regard to separate pilots above and below Gravesend, *Mallett* 7581, 7582; *Taylor* 8078–8082——Evidence favourable to the pilots below Gravesend being licensed to pilot also between London and Gravesend, *Barfield* 8366–8406. 8455–8458. 8477–8483. 8495, 8496——Objection to the pilots being compulsorily stationed at Gravesend; statement hereon as to a large number cruising to London in order to be selected for employment at Gravesend, *ib.* 8394–8405. 8420–8436. 8462–8465——Approval of a separate class of pilots inwards and outwards, *ib.* 8466–8476——Restriction by Act upon the same man piloting above and below Gravesend, *ib.* 8495, 8496.

Non-objection to the Gravesend pilots outwards being licensed to pilot all the way from London, *Daines* 8522–8529——Complaint as to the Bill abolishing the station at Gravesend, and permitting the same pilot to take a ship right through; great importance of a separate class above and below Gravesend, *Pattison* 8740–8751. 8774–8777. 8785–8789. 8800–8802. 8861–8864. 8874–8878. 8890–8903. 8953, 8954——Approval of pilots going both up and down within their own districts, *ib.* 8942–8951.

Witness submits grounds for the conclusion that he and other pilots licensed from London to the Downs should also be licensed to bring ships right through without break of pilotage at Gravesend, *Speeding* 9001 *et seq.*——Waste of time under the system of pilots acting outwards only, *ib.* 9132–9141.

7. Working of the Cruising Station at Dungeness:

Frequent complaint by shipowners that the pilots skulk under Dungeness, and that the ships cannot find them, *Farrer* 786——Employment of four pilot-cutters at Dungeness; maintenance of these by the Trinity House out of the "boarding money" paid to the pilots in addition to the pilotage rate, *Sir F. Arrow* 1427–1434. 1629–1633. 1854, 1855——Doubt whether there can be any improvement upon the present cruising ground at Dungeness, as by stationing the cutters farther to the west, *ib.* 1459. 1668, 1699.

Employment of four pilots cutters at Dungeness, *Millen* 7267–7269——Arrangements as to the maintenance and management of the cutters; improvement if the boats were owned by the pilots, *ib.* 7392–7409. 7480–7489——Cruising of the cutters between Dungeness and the Downs; expediency, if any alteration be made, of retaining compulsory pilotage from the Downs, *ib.* 7410–7415——Practice as to pilots at Dungeness being employed in turn, whilst in the case of vessels outwards selection prevails, *ib.* 7467–7469.

Disadvantage in the boats cruising further out instead of being stationed at Dungeness, *Mallett* 7664–7667——Advantage of Dungeness over Beachy Head as a cruising station, *Tillman* 7767–7769——Very satisfactory working of the pilot station at Dungeness, *Taylor* 7935, 7936.

Grievance in being compelled to take pilots at Dungeness, and in there being no power of selection in the case of ships inwards to London as there is in the case of ships outwards, *Duncan* 9550. 9562–9572. 9649–9662——Instances of witness's ships not being able to get pilots at Dungeness under the voluntary system, *ib.* 9638——Frequent com-

Report, 1870—*continued.*

THAMES, THE (PORT OF LONDON)—continued.

III. *Generally as to the Pilotage Service; its Administration, &c.*—continued.

7. Working of the Cruising Station at Dungeness—*continued.*

plaint as to pilots not being found at Dungeness or as far out as is desirable, *Robinson* 12754, 12755. 12847, 12848.

8. Other Details generally:

General practice of vessels in the upper waters of the Thames to take pilots, *Farrer* 796–798——System of superintendence and control to which the pilots are subject, *Sir F. Arrow* 1425, 1426——Average of 340 *l.* a year as the gross earnings of sixty-four of the pilots between Dungeness and Gravesend, *Millen* 7260. 7323–7325——Control exercised by the Trinity House over the pilots at Dungeness, &c. *ib.* 7391. 7452–7454——The great majority of vessels outwards get rid of their pilots in the Downs, *Millen* 7414 7415; *Mallett* 7537, 7538.

Approval of the system of licensing masters and mates in the Thames, *Taylor* 8023–8026——Voluntary employment of pilots by some large vessels from Dungeness to the Isle of Wight; probable reduction of such employment under the Bill, *Barfield* 8437–8454——Practice as to choice of pilots by captains and owners, as well as brokers and others; restriction desirable in the latter case, *Pattison* 8857–8860. 8895–8903. 8952. 8996–8999.

Witness and other pilots are employed by choice, and would not suffer under the Bill, *Speeding* 9021–9028. 9044, 9045——Objectionable practice in the employment of brokers' clerks and others for procuring ships for pilots, 9095–9109——Payment made to the Trinity House whenever a choice letter is granted for the employment of any pilot; return of this money if the pilot does not go with the ship, *ib.* 9206–9217.

Probability under the Bill that an increased number of masters and mates of coasting vessels will take out pilotage certificates, *Luton* 12573, 12574. 12692–12698. 12727–12729——Liability of all coasting steamers and other vessels carrying passengers to compulsory pilotage, *ib.* 12712–12715.

Statement showing the number of vessels that entered the port of London, and paid light, &c., duties during 1869, *App.* 580.

IV. *As to the Thames Watermen:*

1. Details as to their Number, Qualifications, and Services:

Large number of watermen who act as unlicensed pilots, *Farrer* 116. 123, 124. 128–130. 133–135——Absence of collision between the licensed pilots and the watermen as to the latter piloting small ships, *Sir F. Arrow* 1664. 1917——Qualifications of the Thames watermen as regards navigation between Gravesend and London adverted to; doubt as to shipowners taking a waterman on board as well as a pilot, in order to assist in the pilotage, *ib.* 1719–1723. 1892–1894.

Doubt as to the expediency of licensing the free watermen; approval rather of the licensed men being protected against their encroachments, *Sir F. Arrow* 1862. 1865–1868. 1885–1924——Exception taken on the score of qualification to the licensing of the free watermen, *ib.* 1901–1914.

Limited qualifications required in piloting between Gravesend and London, *Hills* 2924–2928——Comment upon the employment of watermen and Deal boatmen in piloting large ships; their liability to be superseded by the Trinity pilots, *Millen* 7333–7344. 7366–7372. 7499, 7500——Grievance to the licensed pilots on account of the evasion practised by unlicensed men, *Daines* 8513–8515.

Complaint in regard to the operation of a limited number of unlicensed pilots or free watermen between London and Gravesend; necessity of a more stringent law on this subject, *Pattison* 8762–8766. 8780–8784. 8791–8799. 8803–8811. 8832–8851. 8907–8917. 8921–8930——There are only ten or twelve unlicensed men employed between Gravesend and London, their earnings being about 900 *l.* a year, *ib.* 8838–8840. 8842–8844. 8911–8917——Doubt as to an increased licensing of men by the Trinity House doing away with the unlicensed men; lower charges of the latter adverted to hereon, *ib.* 8852–8856. 8904–8910——Non-objection to the employment of watermen between London and Gravesend if there were work enough for them, and if their qualifications were proved by examination, *ib.* 8962–8976——Unnecessary expense incurred by any owners who employ a waterman as well as a pilot, *ib.* 8977–8982.

Witness served an apprenticeship of seven years before being licensed by the Watermen's Company, *Hinton* 9224–9230——Previously to 1862 witness piloted sailing vessels and steamers, and has since piloted steamers only, *ib.* 9231–9233——Statement as to witness and other watermen pilots being frequently employed to navigate ships when there is also a Trinity pilot compulsorily taken; conclusion that this is done on account

Report, 1870—*continued.*

THAMES, THE (PORT OF LONDON)—continued.

IV. *As to the Thames Watermen*—continued.

1. Details as to their Number, Qualifications, and Services—*continued.*

of the superior skill of the watermen, *Hinton* 9234–9243. 9363–9373. 9418–9432. 9444–9449. 9472–9478. 9487–9491. 9521–9525. 9532–9537——Employment of from twenty to twenty-five free watermen in piloting steamships between London and Gravesend, there being from 400 to 500 employed in sailing ships, and the total earnings being calculated at 26,400*l.*, *ib.* 9253–9275. 9320–9331.

Obstacles to the great majority of the free watermen undergoing examination for Trinity pilotships, *Hinton* 9297–9301——Statement as to two free watermen having been appointed to pilot Government ships between London and Gravesend, having first passed an examination at the Trinity House, *ib.* 9302–9315. 9390–9396——Information as to the training which qualifies watermen as pilots: circumstance of no examination being passed, *ib.* 9373–9385. 9433–9443.

Facilities desirable as regards the examination of watermen in order to become licensed pilots, *Duncan* 9608–9619——Occasional employment by witness of a waterman as well as a pilot, the latter having charge of the ship, *ib.* 9701–9703.

Large number of free watermen disqualified for a license through not having been twelve months at sea, or through being over thirty-five years of age, *Wood* 12431, 12432. 12526, 12527——Non-objection to others besides free watermen having the privilege to pilot, if properly qualified: large number of watermen adverted to hereon, *ib.* 12498–12506. 12516–12523——Qualifications of the watermen pilots; witness would not object to the test of an examination, 12507–12515. 12524, 12525.

Occasional employment of free watermen to assist in the navigation or to pilot between London and Gravesend; doubt as to these having any grievance under the Bill, *Luton* 12582–12592.

2. Rates and Earnings:

Probable advantage if the rates of the watermen between London and Gravesend were fixed, *Farrer* 936——Much lower charges of the watermen than of the pilots, *ib.* 903——Circumstance of unlicensed pilots being frequently employed in the Thames, on account of the reduced charge, *Sir F. Arrow* 1517–1520. 1897——Large earnings of some of the watermen, *ib.* 1864. 1890, 1891. 1904.

Much lower charges of the watermen pilots than of the Trinity pilots, though this is not the reason of the employment of the former in preference to the latter, *Hinton* 9244–9249. 9370–9372. 9402–9417——Large earnings of witness and some other watermen pilots, one making 900*l.* a year; small earnings, however, of the great majority, *ib.* 9250–9252. 9265–9274. 9464–9469. 9483–9486——Efficiency and low charges of many of the Thames watermen as pilots, *Duncan* 9603–9607.

Varying earnings of free watermen as pilots, many not making more than 50*l.* a year, *Wood* 12433–12435. 12533, 12534——Very low rates of the watermen as compared with those of the licensed pilots; regulation of the charges in the former case by the owners and captains, *ib.* 12528–12530. 12533, 12534——The maximum charge for any ship is 2*l.*, *ib.* 12534.

3. Effect of the Bill as regards their Employment:

Non-interference of the Bill with the watermen of the Thames; question of their being superseded by the licensed pilots adverted to, *Farrer* 814–819——Consideration of the position and claims of the free watermen of the Thames with reference to pilotage between London and Gravesend; extent to which they may have a claim to be licensed, so as not to be superseded by the licensed pilots, *ib.* 890 *et seq.*; 946, 947.

Complaint as to the power of the Trinity pilots to supersede the watermen; grounds for apprehending that this power will be largely exercised if the Bill be passed, unless some protective clauses be inserted, *Hinton* 9276–9296. 9316 *et seq.*——Probability of the licensed pilots superseding Mr. Hinton and other watermen if the Bill be passed; great abuse at one time in this respect, *Duncan* 9718–9720.

Desire of the watermen to be allowed to retain the pilotage of coasters, colliers, and ships from the Baltic without undue interference on the part of the licensed men; apprehension as to the effect of the Bill in this respect, *Wood* 12457–12497——Information as to the liability of witness to be superseded on board by a Trinity House pilot; grounds for complaint on this score, *ib.* 12436 *et seq.*

V. *Exemptions from Compulsory Pilotage:*

Information as to the exemptions in the Thames; tendency to increased exemption on the part of the Trinity House, *Farrer* 67–73. 110. 221, 222. 461. 760–764; *Sir F. Arrow* 1372, 1373. 1413, 1414. 1737–1745. 11885–11887——Employment of by far the greater number of pilots in the Thames on work which is not compulsory, *Farrer* 116–128——Numerous exemptions in the district from compulsory pilotage, the exemptions being considered

Report, 1870—*continued.*

THAMES, THE (PORT OF LONDON)—continued.

V. *Exemptions from Compulsory Pilotage*—continued.

considered fully equivalent to the compulsory cases, *Sir F. Arrow* 1380–1388. 1406–1408.

Large number of coasters and other vessels exempt from pilotage from Dungeness; numerous accidents through pilots not being taken, *Millen* 7291–7299——Approval of exempting ships in the Thames up to 200 tons, *Taylor* 8027–8030. 8058.

Advantage if there were no exemptions in the Thames from the compulsory employment of licensed pilots, nearly all the collisions occurring when unlicensed men are employed, *Pattison* 8782–8784. 8865. 8923–8930. 8955–8961——The only effect of exemption is to lead to the employment of unlicensed in lieu of licensed pilots, *ib.* 8782, 8783. 8817–8820——Uniform rates charged to vessels, whether exempt or not, *ib.* 8985–8987.

Intention to extend exemption to all vessels trading between ports on the continent north and west of Brest and ports in Great Britain, *Sir F. Arrow* 11886, 11887——Complicated character of the present partial exemptions in the Thames, it being better to make exemption general, *Robinson* 12777–12779.

VI. *Accidents:*

Belief as to vessels for London being more frequently lost when without than when with pilots, *Tozer* 8182——Much more frequents accident in the Thames when unlicensed than when licensed pilots are employed, *Speeding* 9152–9158. 9205——Circumstance of the Trinity pilots acting only in the day time, so that they run less risk of accident than the watermen pilots, *Hinton* 9499, 9500.

Impression that a certain return of casualties to vessels without pilots on the Thames refers mainly to vessels of an inferior class not subject to compulsory pilotage, *Sir F. Arrow* 11904–11910——Statement as to there being as many accidents where licensed pilots as where free watermen are employed, *Wood* 12448–12456. 12474, 12475——Fewer accidents to witness's ships when not in charge of licensed pilots, *Robinson* 12871.

VII. *Character of the Navigation:*

Evidence as to the difficulties of the navigation, *Farrer* 347, 348. 799, 800; *Castle* 7736; *Tillman* 7772–7776; *Taylor* 7929, 7930; *Reynolds* 11016–11021; *Robinson* 12798——Careful watching of the sands and shoals in the estuary of the Thames and on the east coast, the changes being great and frequent, *Sir F. Arrow* 11850–11855——Peculiarly difficult character of the Thames district, *ib.* 1393–1395. 1482–1493. 1584–1594. 11840. 11846.

Special care and knowledge required in piloting large ships between the Ness and Gravesend, *Millen* 7263–7266——Great danger and difficulty in either steamers or sailing ships navigating the Thames, unless with a pilot or a captain who is well conversant with the channels, *Tillman* 7779, 7780. 7786–7798——Necessity of a pilot or waterman between Gravesend and London on account of the difficulty of the navigation, *Robinson* 12770–12774.

VIII. *Question of Compulsory or Voluntary Pilotage:*

1. Evidence favourable to Voluntary Pilotage in the Thames District generally:

Conclusions in favour of the abolition of compulsion in the Thames and generally, *Sir F. Arrow* 1389 *et seq.*——Belief that in the Trinity House district the abolition of compulsion would have no material effect upon the employment or earnings of the pilots, *ib.* 1443–1445. 1481. 1767. 1783–1791——Belief that under voluntary pilotage there would be no difficulty in keeping up the supply of pilots at Dungeness, *ib.* 1765–1767.

Approval on the whole of optional or free pilotage in the Thames, *Speeding* 9145–9150——Doubt as to the Bill leading to much reduction in the employment of pilots either inwards or outwards, *ib.* 9174–9182.

Probability of the great majority of vessels continuing to take pilots under a voluntary system, *Duncan* 9551–9561——Pilots under a voluntary system would go as far us Beachy Head and the Isle of Wight, *ib.* 9570. 9639——Very bad marking of the present pilotage system of the Thames, *ib.* 9671, 9672——Importance of abolishing compulsory pilotage, as well as of amending the pilotage authority, *ib.* 9678–9680.

Statement in support of the conclusion that it should be optional in witness to take a pilot in the Thames, *Chaddock* 11450–11465——Expectation that under an entirely free system the licensed men would continue to be employed by the same ships as at present, *Wood* 12531, 12532.

Very onerous expense upon small ships in the Thames, by reason of compulsory pilotage, *Robinson* 12757. 12788–12791. 12805, 12806——Valuable services rendered by the free watermen in piloting vessels between London and Gravesend, whereas they

THAMES, THE (PORT OF LONDON)—continued.

VIII. *Question of Compulsory or Voluntary Pilotage, &c.*—continued.

1. Evidence favourable to Voluntary Pilotage, &c.—*continued.*

are liable to be superseded by the licensed pilots; approval of the pilotage between Gravesend and London being thrown open, *Robinson* 12758–12766. 12871–12901. 12933–12935 ——Instance of the heavy charges for compulsory pilotage between Gravesend and the Downs, whereas witness does not consider any pilot necessary on this part of the navigation, *ib.* 12767–12769. 12775–12777.

2. Evidence opposed to the foregoing View:

Need for a system of police or compulsory pilotage in the Thames, *Henderson* 5097–5100. 5123–5129——Evidence in support of the conclusion that if pilotage were not compulsory from Dungeness, great risk and danger would result from vessels not taking pilots, and there would not be an adequate or efficient supply of pilots in bad weather, *Millen* 7270–7275. 7277–7283. 7289, 7290. 7311–7333.

Views of masters of ships as to the importance of compulsory pilotage in the South Channel of the Thames; very intricate and dangerous character of the navigation adverted to hereon, *Mallett* 7512–7518——Conclusion that many vessels by the South Channel would run great risk in order to save the pilotage rates, and that much loss of life and property would be the result; examination as to the grounds for this conclusion, *ib.* 7552, 7553. 7585 *et seq.*——Disapproval of the removal of all restrictions upon licensing and pilotage in the Thames, *ib.* 7570. 7687–7691 ——Probability of the pilots displaying more energy if the ownership and control of the boats rested with them, *ib.* 7654–7663.

Great danger of increased loss of life and property between Dungeness and London if compulsory pilotage were abolished, *Castle* 7709–7714——Unwillingness and unfitness of witness to navigate his ship through the Thames without an efficient pilot on board, *ib.* 7731–7736.

Increased loss of life and property, if watermen and irresponsible persons were employed instead of qualified pilots, *Tillman* 7751–7753——Belief that under a voluntary system the employment of pilots would fall off one-third, and that they often would not be obtainable in bad weather, *ib.* 7757, 7758. 7812–7839——Practice of witness to employ pilots in all weathers, and sometimes to take them far beyond Dungeness; doubt, however, as to captains generally acting in this way, *ib.* 7758–7762. 7801–7812. 7817, 7828.

Objection to the abolition of compulsory pilotage, *Ralph* 7868, 7869 —— Complaint as to the action of unlicensed men in piloting vessels in the Thames, this being likely to increase under a non-compulsory system, *Barfield* 8291–8294. 8407–8409——Importance of foreign-going ships being able to command the services of pilots who are constantly navigating the Thames, *Taylor* 7931, 7932. 8030–8033 ——Minimum of risk with which the pilotage service of London is now conducted, *ib.* 7937——Expediency of an extension rather than a reduction of compulsory pilotage in the Thames, *Tozer* 8174–8181.

Great reduction in the employment and income of pilots in the Thames, if compulsory pilotage be abolished; reference hereon to the large reduction consequent upon the exemptions from time to time, *Barfield* 8273–8279. 8320–8365. 8437–8454 ——Opinion that a good many large vessels outwards would not continue to employ pilots, *Daines* 8536–8547——Increased difficulty of the navigation by reason of numerous small vessels being in the hands of certificated masters, and not taking pilots; belief that under an entirely optional system this difficulty would be further enhanced, *Luton* 12683–12699.

3. Operation of the Voluntary System in the North Channel; inferences drawn therefrom:

Very satisfactory working of the voluntary system in the North Channel of the Thames, *Sir F. Arrow* 1406–1408. 1467–1471——Character of the vessels of the pilots who cruise in the North Channel; earnings of these pilots as compared with those of the South Channel, *ib.* 1925–1934.

Exceptions taken to the view that the experience of pilotage in the North Channel of the Thames is an argument in favour of voluntary pilotage in the Mersey, *Hill* 2835–2863——Experience of the Thames adverted to with reference to witness's view that, under an optional system in the Mersey, an efficient staff would not be available, *Danson* 3325–3332.

Practice of foreign vessels by the North Channel to take pilots, *Millen* 7311–7320—— Doubt as to the income of the North Channel pilots being nearly as much as that of the South Channel pilots, *ib.* 7321–7327——Rare instances of witness piloting in the North Channel though licensed for the purpose; belief that many unlicensed men are employed, *ib.* 7375–7386.

Much greater difficulty of the South than the North Channel; explanation hereon as to a large proportion of vessels by the North Channel taking pilots, *Mallett* 7585 *et seq.* ——Facility in obtaining pilots off the Ness in bad weather as well as in fair weather, *Tillman*

Report, 1870—*continued.*

THAMES, THE (PORT OF LONDON)—continued.

VIII. *Question of Compulsory or Voluntary Pilotage*—continued.

3. Operation of the Voluntary System in the North, &c.—*continued.*

Tillman 7749, 7750——Examination upon the question of the employment and supply of pilots in the North Channel of the Thames under the voluntary system; reasons for concluding that the same results would not follow in the South Channel, *Taylor* 7970–7998. 8087–8100. 8164.

Somewhat similar class of pilots in the North Channel and the South Channel, the earnings being much the same, *Barfield* 8489–8494——Effect of voluntary pilotage in reducing the employment of licensed pilots; statement hereon as regards the North Channel, that many foreign vessels are compelled by their insurance policies to take pilots, *Pattison* 8764, 8765. 8767–8774. 8812–8830. 8918–8920. 8983, 8984——Information relative to the class of persons who act as pilots in the North Channel under the voluntary system; deficient qualifications of some of these, *Speeding* 9029–9049. 9053–9055.

Satisfactory working of voluntary pilotage in the North Channel, *Duncan* 9592–9599. 9686–9694——Very few complaints as to the supply of pilots in the North Channel, where the pilotage is voluntary, *Sir F. Arrow* 11864–11867——Means of protection open to the licensed men in the North Channel against unlicensed men, *ib.* 11879–11884.

Letter from Mr. Speeding, North Channel pilot, suggesting certain alterations in the system of pilotage in the North Channel, *App.* 527——Letter from the secretary of the Trinity House to the secretary of the Board of Trade, with reference to the suggestions made by Mr. Speeding, *ib.*

IX. *Question of Compensation:*

Propriety of full faith being kept with the Trinity pilots, as regards the question of compensation, *Farrer* 484, 485——Particulars relative to the composition and administration of the Trinity House superannuation fund, the amount of which is now 88,000 *l.*, *Sir F. Arrow* 1435–1442. 1724–1728.

Several sources whence the superannuation fund is made up, *Millen* 7417–7422. 7440–7444——Each pilot contributes 6 *l.* a year to the fund, and the Cinque Port pilots also pay about 15 *l.* a year in dues, *ib.* 7417–7422. 7492–7494——Some of the out-port pilots pay nothing to, and yet are superannuated from, the pension fund, *ib.* 7430——The fund now amounts to about 90,000 *l.*, *ib.* 7440.

Contribution of 6 *l.* a year by the Cinque Ports pilots towards the superannuation fund, though not certain of being eventually superannuated, *Millen* 7522–7527——Compulsion upon the Trinity House to grant superannuation, save in case of misconduct, *ib.* 7528. 7553–7555. 7558–7563——Total contribution of between 16 *l.* and 17 *l.* a year by witness, *ib.* 7556. 7562. 7564——Good prospects given up in order to become pilots, *Castle* 7707, 7708.

Suggestions as to the compensation to be given to the London pilots, *Daines* 8509–8512——Claim of the Trinity pilots to more liberal superannuation out of the pension fund, *Speeding* 9197–9204.

Draft clauses submitted to the Secretary of the Board of Trade on the part of the Gravesend licensed river pilots, *App.* 527, 528——Several points submitted by deputation of Gravesend river pilots to the Board of Trade on 11th March 1870, *ib.* 528.

Statement of the claims of the Gravesend river pilots on the score of compensation for loss of employment, of protection against unlicensed pilots, of limit to personal liability, and of retention of Gravesend as a pilotage station. *App.* 529, 530.

Statement of the Trinity sea pilots as to their claims to compensation, &c. in the event of compulsory pilotage being abolished, *App.* 530.

X. *Detailed Summary by the Committee, and Conclusions arrived at:*

Exemption of ships employed in the coasting trade from compulsory pilotage, *Rep.* viii——Numerous exemptions within the district, whilst the principle of compulsion has still been retained; great anomaly in consequence, *ib.* viii, ix.

Statement of the number of inward pilots and outward pilots, respectively, by the South Channel; functions of each class, *Rep.* ix——Very numerous classes of pilots within the district; particulars hereon as to the number of pilots of each class, and as to the extent of jurisdiction in each case, *ib.* ix, x——Distinct class of pilots introduced in 1854 for vessels between London and Gravesend; number thus licensed, *ib.* x——Statement of the number of pilots licensed inwards and outwards, respectively, by the North Channel; functions of each class, *ib.*

Introduction of a class of licensed pilots for home-trade passenger ships in the Trinity House district in 1854; these pilots are twenty-two in number, *Rep.* x——Control of the Trinity House over the licensed pilots, who are bound to charge certain fixed rates, *ib.*——Large bodies of unlicensed pilots who live altogether or in part by the pilotage of

THAMES, THE (PORT OF LONDON)—continued.

X. *Detailed Summary by the Committee, and Conclusions, &c.*—continued.

the vessels trading to and from London, who are subject to no special rules, and have no special privileges, *Rep.* x, xi.

Efficiency and economy by the employment of unlicensed pilots in the North Channel and between London and Gravesend, *Rep.* x, xi——Large portion of the pilotage between London and Gravesend which is performed by unlicensed free watermen, *ib.* ——Grounds for concluding that efficiency and economy are secured by the employment of the watermen, *ib.* xi.

Numerous complaints on the part of shipowners and pilots as to the operation of the present compulsory system, *Rep.* xi, xii——Reference to the complaints by shipowners as to their having no choice of pilots at Dungeness, *ib.* xi ——Several complaints and difficulties adverted to as having arisen out of that part of the system which is compulsory and not out of that part which is voluntary, *ib.* xiii——Complaint by the unlicensed watermen as to the power of the licensed pilots to supersede them, *ib.*——Absence of complaints, save on the part of the pilots, against the existing exemptions, *ib.*

Conclusion of the Committee, based upon the experience of compulsory and voluntary pilotage in the Trinity House district, that the greater the freedom of contract the greater the prospect of satisfaction to employer and employed, *Rep.* xii.

Insertion by the Committee of a clause in the Bill enabling the Trinity House, or, in the event of their refusing, the Board of Trade, to license persons for the part of the river above Gravesend, *Rep.* xii, xiii——Suggestions on the subject of rates, *ib.*

Great consideration due to the pilots who have undertaken their present licenses on the faith of the present system, *Rep.* xiii.

Advantage if the sea pilots, whether by the North Channel or the South Channel, were licensed for the whole distance between London Bridge and the sea, *Rep.* xiii——Improvement if the Trinity House were by degrees to enlarge the number of unlicensed pilots by the North Channel, *ib.*

Suggestion as regards the South Channel whether some freer system should not be established with respect to the cruising ground of the pilots, *Rep.* xiii——Proposal that a maximum but not a minimum rate be fixed for sea-going pilots, *ib.*

Unjust principle upon which the superannuation fund is constituted and administered, *Rep,* xiii, xiv——Mischievous operation of the fund as tending to prevent reforms, *ib.* xiv——Conclusion that the system should be altered by winding up the fund; alternative modes in which this might be done, *ib.*

Evidence of the pilots adverted to as having reference rather to the amount of compensation they should receive than to the question of abolition of compulsion, *Rep.* xiv.

Conclusion of the Committee that no case has been made for continuing compulsory pilotage in the port of London, *Rep.* xiv——The first step to be taken is to free the shipowner from all obligation to take a pilot when he does not require one, *ib.*

Circumstance of no difficulty being experienced in the Thames in obtaining the services of efficient pilots, though a large proportion of the ships are free from compulsory pilotage, *Rep.* xxviii.

See also *Barges. Cinque Ports Pilots. Deal Boatmen. Licensed Pilots. Liverpool,* IV. *Out-ports. Penalties. Shipowners. "Spindrift," The. Trinity House. Tugs. Voluntary Pilotage.*

Tidal Harbours. Special police regulations necessary in the case of tidal harbours, in the absence of compulsory pilotage, *Farrer* 885, 886.

Tillman, Henry. (Analysis of his Evidence.)—Long experience of witness in command of ships in and out of London, 7748——Facility in obtaining pilots off the Ness in bad weather as well as fair weather, 7749, 7750——Increased loss of life and property if watermen and irresponsible persons were employed instead of qualified pilots, 7751-7753 ——Necessity of pilots for long-voyage vessels arriving in the Thames, 7754-7756. 7798.

Belief that under a voluntary system the employment of pilots would fall off one-third, and that they often would not be obtainable in bad weather, 7757, 7758. 7812-7839—— Practice of witness to employ pilots in all weathers, and sometimes to take them far beyond Dungeness; doubt, however, as to captains generally acting in this way, 7758-7762. 7801-7812. 7817-7828——Less efficiency if the present incomes were not maintained, 7763, 7764——Importance of the Thames pilots having served as masters or mates, 7765, 7766.

Advantage of Dungeness over Beachy Head as a cruising station, 7767-7769—— Probable employment of "hobblers" instead of licensed pilots, if there were no restriction, 7770, 7771. 7781-7785——Opinion that the navigation of the Thames is certainly more difficult than that of the Mersey, 7772-7776——Increased necessity for a pilot when

Report, 1870—*continued.*

Tillman, Henry. (Analysis of his Evidence)—*continued.*

when a tug is used, 7777, 7778——Great danger and difficulty in either steamers or sailing ships navigating the Thames, unless with a pilot or a captain who is well conversant with the channels, 7779, 7780. 7786–7798.

Tozer, Alfred. (Analysis of his Evidence.)—Is secretary of the Universal Marine Insurance Company, 8165–8167——Views of underwriters as to the great importance of an efficient pilotage service for the safety of ships and their cargoes, 8168–8173——Expediency of an extension rather than a reduction of compulsory pilotage in the Thames 8174–8181——Belief as to vessels for London being more frequently lost when without than when with pilots, 8182.

Suggestions for amending the present system as to liability for accident when there is a pilot in charge; opinion favourable to an increase of the immunity of the owner, 8183–8189. 8228–8231. 8235–8241——Expectation that if pilotage were not compulsory the employment and earnings of pilots would decrease, and a less efficient body of men would be the result, 8190, 8191. 8204–8219. 8232–8234——Exception taken to the employment of Deal boatmen instead of licensed pilots; statement hereon as to witness not having been aware that this is provided against under the Bill, 8191–8197. 8220, 8221.

Witness has not read the Bill, and is merely prepared to give his opinion in favour of compulsory pilotage, 8198–8206——Tendency of optional pilotage to enhance the insurance rates upon those ships which do not employ pilots, 8242–8253. 8265–8267——Tendency also of the probable action of the underwriters to lead indirectly to a sort of compulsory pilotage, 8253–8262—— Liability of the underwriter of a ship which runs down another ship, for three-fourths of the claim, one-fourth falling upon the owner, 8268, 8269.

Trinity House:

Great extent of coast comprised in the Trinity House district, the exemptions from compulsory pilotage being exceedingly numerous, *Farrer* 106, 109–113——Liberal action of the Trinity House in the matter of certificates to masters and mates, *ib.* 110–102——Various exemptions made by Order in Council, *ib.* 110——Exemption in the case of ships navigating in ballast, *ib.*

Important change of opinion on the part of the Trinity House relative to the question of exemption from compulsory pilotage; feeling now in favour of an extension of the exemptions, *Farrer* 221, 222. 461. 760–764.

Great extent of the pilotage district of the Trinity House, it being the largest district in the kingdom, *Sir Frederick Arrow* 1370. 1376, 1377——Explanation that on the question of compulsory pilotage witness speaks only for himself, having no authority to submit the views of the Elder Brethren, *ib.* 1372–1375. 1389——Readiness evinced by the Trinity House in granting exemptions, although some years since they were opposed, as a body, to the abolition of compulsion; the subject has not been discussed since 1862, nor has the present Bill been considered, *ib.* 1372–1374.

Very large examination of masters and mates by the Trinity House for pilotage certificates, the certificates being confined to the ships of the same owner, *Sir Frederick Arrow* 1409–1412——Further statement as to the Trinity House having for some years past acted in the direction of increased exemptions from compulsory pilotage, *ib.* 1413, 1414. 1737–1740. 1742–1745——Jurisdiction exercised by the Trinity House, not only as to the limits of the different pilotage districts, but as to the number of licensed pilots for each district, *ib.* 1418–1424.

Statement as to the pilotage committee of the Trinity House not having been consulted with reference to the Bill, *Sir F. Arrow* 1569–1574——Further explanation in regard to the Trinity Board not having discussed the question, nor recorded their opinion since 1862, *ib.* 1575–1580——Information relative to the examination of the Trinity House for pilotage certificates; qualifications required, *ib.* 1831–1834——Consideration of the constitution of the Trinity House with reference more especially to the question of representation of the mercantile and shipping interest at the Board, *ib.* 1703–1718. 1837–1839.

Improvement if there were a licensing pilotage authority, for the Trinity House district, distinct from the administrative authority, *Henderson* 4980–4989——Improvement if there were a separate representative body for administering pilotage in the port of London, *Taylor* 8056–8058. 8142–8149; *Robinson* 12835–12838——Expediency of the shipowners of London being properly represented in the pilotage, *Duncan* 9633. 9671–9678. 9698–9700. 9724.

Steps contemplated by the Trinity House far largely extending the exemptions in the Thames, irrespectively of the Bill, *Sir F. Arrow* 11885–11887.

Return of the several pilotage districts of the Trinity House, showing in each case the number of pilots, average earnings, and extent, *App.* 559.

Inference as to the Trinity House being favourable to the principle of the Bill, *Rep.* xiv.

Report, 1870—*continued.*

TRINITY HOUSE—continued.

Concurrence of the committee in the proposal that a distinct pilotage authority be created for the port of London, *Rep.* xiv.

See also *Outports. Thames, The.*

Triphook, Richard S. (Analysis of his Evidence.)—Commands one of the mail packets between Holyhead and Kingstown, 8551, 8552——Testifies to the efficiency of the Dublin pilot service under the compulsory system, but is not prepared to say the service would be less efficient under an optional system, 8553–8569. 8572, 8573——Considers that the pilots should be well compensated under the Bill, 8569. 8580–8584——The captains of the Holyhead packets are all certificated pilots, 8570, 8571——Coasters would dispense with pilots under an optional system, it being a hardship to force pilots upon them, 8574–8581.

TUGS:

Objection of steam tug owners to undertake the responsibility of piloting ships; question hereon as to the licensing of tug owners as pilots, *Farrer* 1001–1014——Interest of many of the licensed pilots of the Thames in steam tugs; proposal at one period by the Trinity House for prohibiting the pilots from owning tugs, *ib.* 1028, 1029——Invariable practice of the vessels which employ steam tugs up to Gloucester to take pilots also; deduction from the pilotage rate in such case, *Clegram* 1347–1350——Difficulty of the question of the captain of a steam tug being regarded as a licensed pilot, *Sir F. Arrow* 1807–1812. 1849, 1850——Objection to the plan of having the tug alongside in towing, *ib.* 1881–1884.

Difficulties in the way of accepting tug-boats as pilots, *Hills* 2792–2796——Necessity of a pilot when a steam tug is employed, *Danson* 3180. 3284–3287; *Henderson* 5094–5096. 5116–5122; *Alexander* 5505–5507; *Bouch* 10982–10991——Objection to reliance upon steam-tugs for the piloting of sailing vessels in the Mersey, *Shallcross* 3506–3511. 3518, 3519——Probability of many vessels in the Mersey trusting to steam-tugs without a pilot if there were no compulsion; danger thus incurred, *Lamport* 3584–3589. 3679–3681.

Expectation that under voluntary pilotage pilots and tugs will gravitate towards each other, and that extortionate demands would be the result, *Simpson* 4232–4237. 4525. 4549–4564. 4569——Non-reduction of rates at Liverpool in the case of vessels in charge of steam-tugs, *ib.* 4492——Practice as to the use of tugs in the Clyde, the vessels towed having compulsory pilots on board, *Turner* 4795–4800. 4863–4870.

Ample supply of steam-tugs in the Humber; doubt whether there would be an equally ample supply of pilots under an equally voluntary system, *Brewis* 5984–6005——Examination as to steam-tugs being found in the Humber whenever they are wanted, though witness expects that pilots would not be always forthcoming under a voluntary system; respects in which the two cases are not analogous, *Lumsden* 6154–6169. 6255–6258. 6269–6278.

Extended use of steam-tugs in the Thames if there were not compulsory pilotage, *Millen* 7274——Increased responsibilty of the pilot when a steam-tug is used; instances of danger through the employment of tugs, *Mallett* 7540–7543. 7676–7681——Increased necessity for a pilot when a tug is used; illustration of this, *Castle* 7712–7714; *Tillman* 7777, 7778.

Effect of voluntary pilotage at Liverpool in inducing tugs to go further down the Channel, *Taylor* 7994–8006. 8140, 8141——Probability of masters taking tugs and dispensing with pilots, without the owners being able always to prevent their doing so, *ib.* 8002–8006. 8013–8018. 8128–8141.

Frequent employment of tugs from beyond Dungeness up to London, *Barfield* 8484–8486——Limited employment of tugs in the north channel of the Thames, *ib.* 8487——Constant employment of tugs between London and Gravesend, *ib.* 8488——Expected use of tugs by vessels inwards for taking them past the pilotage ground, *Daines* 8536–8538.

Reduction in the rates in the Thames when tugs are employed, *Speeding* 9183–9189——Improbability of the Bill causing pilots to be dispensed with when tugs are employed, save in the case of unloaded vessels, *ib.* 9190–9196——Necessity of large ships taking pilots when employing tugs, *Duncan* 9586–9596——Absence of necessity for a pilot when a vessel is being towed out of Liverpool, most vessels using a tug both in and out of the Mersey, *Chaddock* 11548–11553.

Strong evidence before the Committee that steam tugs are no substitutes for pilots, *Rep.* xxvii.

Turner, Angus.—(Analysis of his Evidence.) Is Town Clerk of Glasgow; has been Parliamentary Secretary for more than thirty years to the Clyde Navigation Trustees, 4775–4781——Numerous accidents in the Clyde before 1825, when there was no pilotage in the river; necessity then shown for the introduction of compulsory pilotage, 4782. 4802, 4803.

Report, 1870—*continued.*

Turner, Angus. (Analysis of his Evidence)—*continued.*

4803. 4840——Clause in the Act obtained by the Clyde Trustees in 1825, showing the local powers under which pilotage was established, 4782——Regulations adopted by the Pilotage Board in 1826, in order to enforce compulsory pilotage at fixed rates, 4783, 4784.

Great improvement consequent upon the introduction of the compulsory system, 4785——Explanation relative to the Act obtained in 1858, and the provisions therein combining the pilot boards of Glasgow and Greenock into one pilotage authority for the river and firth of Clyde; powers given to the pilot board thus constituted, 4786–4788——Bye-laws passed by the board on the subject of licenses; practice of the Glasgow committee to license compulsory pilots, and of the Greenock committee to license non-compulsory or deep-sea pilots, 4789–4793.

Exemption of vessels above sixty tons, and also of vessels up to 100 tons, under certain conditions which have not been fulfilled, 4789. 4795–4798. 4861, 4862——Probability of the pilot board of Glasgow making improved regulations if left to themselves; opinion that one great improvement would be to remove the exemption of any vessel over thirty tons above Greenock, 4794. 4804, 4805.

Particulars relative to the enormous increase of traffic on the Clyde, and the exceedingly difficult character of the navigation above Greenock, so that witness advocates an extension rather than a diminution of compulsory pilotage on this part of the river, 4794. 4804–4843. 4858, 4859. 4878–4887——Practice as to the use of tugs in the river, the vessels towed having compulsory pilots on board, 4795–4800. 4863–4870——Very strong feeling in Glasgow against the present Bill, 4801, 4802. 4814.

Approval of non-compulsory pilotage below Greenock, 4806, 4807. 4838. 4871–4877——Absence of complaint against the compulsory pilotage rates or against the pilots, 4808, 4809——Statement of the circumstances under which the pilot board met at Glasgow instead of at Greenock, upon the occasion of the preparation of a petition against the Bill; there was nothing regular in the proceedings, 4844–4857.

Tyne, The. Considerable difficulty of a portion of the Tyne pilotage, *Farrer* 335——Doubt as to the voluntary system in the Tyne having been the cause of a large excess of pilots, *ib.* 612, 613——Efficiency of the pilot service of the Tyne under the voluntary system, *Sir F. Arrow* 1634–1638.

Reference to the Tyne ports and certain other ports, as comparitively free from difficulty, so that voluntary pilotage may well answer in them, *Hills* 2706–2716——Comparatively easy pilotage of the ports in the Tyne and Wear, so that voluntary pilotage may be found efficient there, *Shallcross* 3446–3450. 3469–3472. 3523–3531——Inadequate supply of pilots for the Tyne and Wear during the winter months, *Henderson* 5086–5091——Reasons why an ample supply of pilots may exist in the Tyne and Wear, under non-compulsory pilotage, though they would not be found in the Clyde, *Alexander* 5471–5478.

U.

Underwriters. Power of the underwriters to protect themselves by an increased premium, so that they would not suffer by the Bill, *Danson* 3394–3401——Doubt as to the underwriters in London being, as a body, opposed to compulsory pilotage; absence of analogy, however, between the Thames and Mersey, *ib.* 3420–3422——Statement as to its not being the practice of underwriters to make it a condition that a pilot must be employed, *Lumsden* 6143–6149. 6205–6210. 6250–6254——Views of underwriters as to the great importance of an efficient pilotage service for the safety of ships and their cargoes, *Tozer* 8168–8173——Exception taken to the views of the underwriters of Liverpool on the present question, *Inman* 10309–10311.

See also *Insurance.* *Lloyd's.*

Uniformity. Concurrences in the view that uniformity throughout the kingdom should, as far as possible, be adopted, the present Bill being a substantial instalment of what is required, *Farrer* 536–543——Doubt as to the expediency of any general or uniform principle being laid down by law on the subject of pilotage, *Danson* 3196–3203; *Lamport* 3619–3621. 3673–3675——Expediency of as much uniformity as possible in the pilotage system round the coast, *Henderson* 4972–4979.

See also *Anomalies of System.* *Local Authorities.* *Voluntary Pilotage.*

United States. Explanation relative to the law of the United States upon the question of liability as affected by compulsory pilotage, *Farrer* 84–86——Circumstance of the ship being liable in the United States, although there is compulsory pilotage, *ib.* 834–839——Obligation in America as to compulsory payment, whilst there is no immunity of the owner, *Lamport* 3667.

Report, 1870—*continued.*

United States—continued.

Official communications explanatory of the state of the law in the United States on the subject of the liability of owners for accidents when the ships have been in charge of pilots compulsorily employed, *App.* 516, 517.

Judgment of the Supreme Court of the United States upon the question of liability in the case of the "China," a British vessel, by which the tug "Kentucky" was sunk by collision in New York waters; decision that the owners of the "China" were liable, notwithstanding she was in charge of a licensed pilot, *App.* 517-522.

See also *New York.*

Unlicensed Pilots. Regulations under sections 360 and 361 of the Merchant Shipping Act in regard to unqualified pilots being superseded by qualified pilots, *Farrer* 24, 25 ——Objection to an unlicensed man taking charge of a vessel in port, but not at open sea, *Inman*, 10378, 10379.

See also *Pilots. Penalties.*

Unseaworthiness. Consideration of the question whether it would not be a misdemeanour under the Merchant Shipping Code to dispense with a pilot as causing unseaworthiness, *Taylor* 8034-8044——Doubt as to a ship being rendered unseaworthy in the eyes of the law, when a pilot is not employed in pilotage waters, *Duncan* 9681-9685.

V.

VOLUNTARY PILOTAGE:

1. *Evidence in Approval.*
2. *Evidence in Disapproval.*
3. *Conclusions of the Committee.*

1. *Evidence in Approval:*

General tendency of legislation in recent years towards the abolition or modification of the compulsory system; instances of this at Bristol and Newcastle, *Farrer* 11-20. 98-103——Report of Mr. Lindsay's Committee of 1860, cited as showing the conclusions then arrived at favourable to a system of voluntary pilotage; that is in most parts of the country, *ib.* 92-97——Several instances of voluntary ports where the staff of the pilots is as ample and efficient as in compulsory ports, *ib.* 211——Absence of any desire for any change, or of any complaint of want of pilots where voluntary pilotage is in force, *ib.* 213-215.

Approval of a voluntary system irrespectively of the question of liability, *Farrer* 270, 271——Opinion that the voluntary system will prove just as efficient at one port as another, as the supply will be in proportion to the demand, *ib.* 318. 324-338——Belief that pilots will be just as much employed if compulsion be abolished, and that the relation between employer and employed will be much more healthy, *ib.* 614. 861-864——Expectation that there will be no difficulty through pilots not being in attendance when wanted, *ib.* 671-675.

Probability of the same pilots being still employed, the chief or only difference being that the employment would be voluntary, *Farrer* 676-678. 681-683——Abundance of pilots expected to be found, wherever there is a demand for them, under the voluntary system, *ib.* 724. 729——Expectation that pilots will show greater zeal under the voluntary system, *ib.* 756, 757. 769. 782-788. 887——Objection to any local exceptions from the Bill, *ib.* 884-886.

Opinion that pilotage should either be entirely voluntary or entirely compulsory; grounds for concluding that the voluntary system should be adopted generally, *Sir F. Arrow* 1389-1408——Belief that on the whole pilots will be as much employed under a voluntary system, and that safety of life and property will not be jeopardised, *ib.* 1389. 1391, 1392——Equal employment of pilots under a voluntary system wherever the navigation is difficult, *ib.* 1443, 1444.

Tendency of the voluntary system to render the pilots more vigilant and zealous, *Sir F. Arrow*, 1457, 1458. 1465-1467——Expectation that under voluntary pilotage there will be equally good attendance at sea in bad weather, *ib.* 1464-1466. 1665-1667. 1758 1761——Witness repeats that he sees no necessity for exemptions from a non-compulsory system, *ib.* 1728-1732. 1759.

Approval of non-compulsory pilotage generally, the Clyde being altogether an exceptional case, *Allan* 5273-5278——Grounds for the conclusion that the competition under free pilotage would secure greater efficiency than now results from compulsory pilotage, *Duncan* 9550. 9570-9575. 9621-9625. 9638-9648. 9729. 9743——Belief as to the large employment of pilots, and the large earnings, under an optional system, *ib.* 9583-9602 ——Effect of a voluntary system to weed out the inefficient men, *ib.* 9601, 9602.

Tendency

Report, 1870—*continued.*

VOLUNTARY PILOTAGE—continued.

1. *Evidence in Approval*—continued.

Tendency of the competition under a voluntary system to cause the pilots to be more energetic and to go farther to sea, *Leyland* 9998–10000. 10017–10019. 10029, 10030. 10043. 10166–10171——Opinion favourable to voluntary pilotage, generally, witness attaching great importance to the right of selection of pilots, *Inman* 10238–10245. 10286–10297——Evidence in support of the conclusion that vessels would continue to employ pilots under a voluntary system; practice of witness in non-compulsory ports adverted to hereon, *ib.* 10259–1 270. 10428–10432. 10441–10444.

Decided approval of voluntary pilotage; belief that foreign vessels would equally continue to employ pilots, *Marwood* 10481–10486——Ample supply of pilots under a voluntary system, especially in bad weather, *Reynolds* 11026–11028——Inducement under a voluntary system for a better class of men to enter the service, *ib.* 11082.

Expectation that voluntary pilotage would probably lead to a reduction in the number of pilots, who would be of a better class and better paid, *Holt* 11089–11094. 11108–11112——Expediency of its being optional in every owner to secure the services of a pilot, whilst the latter should not have the right of refusal, *ib.* 11165–11173——Belief that there would be sufficient pilots to meet the demand under a voluntary system, *H. O. Johnson* 11315. 11318–11321.

Advantage to the better and more industrious class of pilots if pilotage were voluntary, *Beckett* 11588–11590. 11611, 11612. 11617–11621. 11746–11751. 11827–11836——Complaint as to compulsory pilots not being found in bad weather when wanted; grounds for concluding that under optional pilotage, much greater zeal would be shown, *Oates* 12192. 12197. 12201–12210. 12214–12221——Expectation that with optional pilotage efficient men will be fully employed and will make good earnings, *ib.* 12197–12210——Belief that under an optional system there would be a better class of men who would keep the sea more, *Capt. Johnson* 12249–12253. 12286, 12287.

Opinion that if compulsion were abolished pilots would be more efficient, and would be found farther at sea in bad weather, *Robinson* 12754–12756. 12830, 12831. 12845–12847——Belief that there will be as much employment of pilots after the Bill has passed, and that no compensation will be necessary, *ib.* 12799–12806. 12868. 12870.

2. *Evidence in Disapproval:*

Conclusion that there would be no certainty of employment under a non-compulsory system, and that therefore pilots would not incur risk, and would not be always found in bad weather, *Judkins* 2082–2093. 2097–2102. 2126–2129. 2137, 2138. 2194, 2195——Probability of compulsory pilotage not being necessary in many ports, such as the Clyde, though witness strongly advocates it in the Mersey, *Ballantine* 3113–3115.

Conclusion that under an optional system pilots would be less regularly employed, and would not always be found when most wanted, *Danson* 3168–3170. 3217–3226; *Shallcross* 3433. 3440–3445. 3458–3464.

Expectation that the employment of pilots would fall off chiefly in fine weather, if pilotage were optional, *Galloway* 4129–4140——Belief that under the Bill the uncertainty of employment would effect both the number and efficiency of the pilots, *Simpson* 4445, 4446——Grounds for the conclusion that under an optional system vessels would cease to employ pilots in fine weather, and that on the whole the employment would be much less, *ib.* 4516–4533.

Conclusion that under a voluntary system there would not be the same certainty of employment or remuneration, and that the pilots would no longer be of the same efficient class, *Henderson* 4935. 5023–5025. 5050–5062. 5097–5109. 5183–5187——Approval of non-compulsory pilotage round the coast generally, with the exception of Glasgow, Liverpool, Bristol, and Hull, *ib.* 4958–4962. 5028, 5029. 5136——Large experience of witness, without having found the voluntary system really efficient in any place, *ib.* 5201–5204.

Grounds for concluding that many vessels would try to save the pilotage rates under an optional system, *McKelvie* 5427–5435; *Alexander* 5457. 5461–5466——Expectation that efficient pilots would not be forthcoming if their employment were optional, and their remuneration uncertain, *Alexander* 5458–5469. 5486–5489——Belief that under the Bill there would be no longer the same inducement to efficient men to remain in the service, as there would not be the same regular employment, whilst a reduction of numbers would be prejudicial, *Bannister* 5587. 5598–5607. 5619–5622. 5701–5708. 5759–5762; *Brown* 5830–5841. 5849 *et seq.*; *Brewis* 5917–5926. 5989–6005. 6022–6052. 6067–6077.

Grounds for concluding that under a voluntary system many vessels would incur risk by not taking a pilot, *Bannister* 5626–5636. 5679–5689. 5721–5727——Belief that under voluntary pilotage many vessels would try to do without pilots, and that on account of

Report, 1870—*continued.*

VOLUNTARY PILOTAGE—continued

2. *Evidence in Disapproval*—continued.

the uncertainty of remuneration the supply of efficient pilots would greatly fall off, *Brown* 5830-5841. 5849 *et seq.*; *Brewis* 5917-5926. 5989-6005. 6022-6052. 6067-6077.

Expectation that in dangerous weather pilots would not be found when most wanted, if the pilotage were voluntary, *Brown* 5863-5867. 5876-5882——Practice of vessels to take pilots in bad weather, and to endeavour to do without them in fine weather, *Rosser* 7142-7150——Much less employment if the pilotage were not compulsory, *Millen* 7273.

Expectation that if the pilotage were voluntary the pilots would be a less efficient class, and that increased dangers would accrue to shipping, *Taylor* 7933, 7934. 7940 *et seq.* —— Probability, under a voluntary system, of many ships dispensing with pilots in fine weather, and of the uncertainty of employment and reduction of income having a very injurious effect, both as to number and efficiency, *ib.* 7940 *et seq.*——Grounds for the conclusion that the supply of pilots would not be always equal to the demand in bad weather, under an optional system, *ib.* 7947-7965. 8083-8086.

Expectation that if pilotage were not compulsory, the employment and earnings of pilots would decrease, and a less efficient body of men would be the result, *Tozer* 8190, 8191. 8204-8219. 8232-8234——Large reduction expected in the employment and earnings of the pilots, *Daines* 8503-8508. 8536-8550——Belief that if the Bill become law, there will be a great many wrecks in the winter time, and that the pilotage service will no longer be efficient, *ib.* 8502-8506.

3. *Conclusions of the Committee:*

Argument that the greater the freedom of contract and employment, the greater the prospect of satisfaction to employer and employed, *Rep.* xii.

Explanation as to the Committee not having thought it necessary to call for evidence from ports where pilotage is voluntary, *Rep.* xxvi, xxvii——Strong interest of the shipowners in voluntary ports in the abolition of the compulsory system in other ports, *ib.* xxvi —— Great change of opinion in recent years in favour of freedom in pilotage, *ib.* xxvii——Circumstance of many pilots being favourable to freedom in pilotage, *ib.*

Conclusion that pilots will not be less needed or less employed, if compulsion be abolished, *Rep.* xxvii——Much larger measure of freedom advocated by some witnesses than the Bill provides, *ib.*——Efficiency of the supply of pilots in non-compulsory districts, *ib.* xxviii.

Effect of the Bill to place matters in compulsory districts in the same position as matters in non-compulsory districts, *Rep.* xxix.

Free Trade. Hull. Insurance. Legislation. Leith Chamber of Commerce. Liability. Licensed Pilots. Light Dues. Liverpool,* viii. x. *Lloyd's. Local Authorities. Passenger Ships. Queenstown and Cork. Rates. Safety of Life. Salvage. Shipowners. Thames, The. Trinity House. Tugs. Tyne, The. Uniformity.*

W.

Waterford. Frequent want of pilots outside Waterford in bad weather, though the pilotage is compulsory, *Chaddock* 11442-11444.

Watermen (Thames). See *Thames, The,* iv. x.

Watson, William. (Analysis of his Evidence.)—Is managing director of the City of Dublin Steam Packet Company, 10679——Establishment of the company in 1823, it now having twenty steamers running from Dublin to Liverpool, Holyhead, &c., 10680-10683 ——Grievance felt by the company for some years after its formation, in having to pay compulsory pilotage rates at Dublin and Liverpool, 10684-10687——Arrangement made with the Dublin Ballast Board by which, on paying 150 *l.* a year for ten years, towards a superannuation fund, the company was relieved from pilotage charges on the port, 10688-10694.

Very great difficulty experienced by the company in getting its captains examined for pilotage certificates by the Liverpool authorities; examination hereon as to the grounds for this complaint, 10695. 10752-10765——Arrangement by which the company has paid a reduced rate at Liverpool, in consideration of their never employing the pilots of the port, their own captains acting as pilots; complaint as to this payment, which amounts to 400 *l.* a year, no services being rendered in return, 10696-10711. 10766-10772. 10828-10831.

Belief

Report, 1870—*continued.*

Watson, William. (Analysis of his Evidence)—*continued.*

Belief that the over-sea ships into Liverpool will continue to take pilots, if the Bill be passed, whilst it is unjust to force pilots on coasters that do not require them, 10712–10719. 10782–10785. 10876—— Statement showing that the Bill will have a very marked effect in decreasing the use of pilots at Dublin, and that speedy compensation is essential; suggestion hereon that the interval be reduced from two years to six months, 10720–10733. 10786–10798. 10851–10867——Approval of the Bill by the Dublin Docks and Harbour Board, save as regard the compensation clauses, 10720–10722. 10734–10742.

Opinion that the difficulties of the navigation of the Mersey has been grossly exaggerated before the Committee, and that the Thames is a far more difficult navigation, 10743–10746. 10751. 10837–10839——Much more extensive exemptions in Liverpool than in Dublin, 10747–10750—— Invariable employment of certificated captains on the vessels of witness's company going with passengers into Liverpool, 10770–10772—— Statement as to the captains receiving certificates from the Board of Trade on certain conditions without examination, 10773–10781. 10840–10845.

Suggestion that the compensation should be so arranged that the pilots' position should not be worse under the Bill, 10791–10793. 10868–10875——Approval of the superintendent of pilots in Dublin being maintained out of the pilotage fund, 10799, 10800. 10832–10836——Probable advantage if every vessel into Dublin had a licensed pilot, though coasters should not be compelled to take one, 10801–10804——Great improvement by transferring the pilotage of Dublin from the Ballast Board to the Port Board; constitution of the latter adverted to, 10805–10816——Approval of a general Bill dealing with pilotage, rather than of its being left to local authorities to take action in the matter, 10812–10824. 10848–10850.

Webb, William. (Analysis of his Evidence.)—As an Isle of Wight pilot, complains that he is not allowed to take certain steamship companies' vessels for Southampton into the port, being superseded by river pilots selected or privileged for the purpose, 8684–8715. 8730–8732—— Complains also that his employment and earnings would be seriously affected by the Bill, his earnings being very small already, 8716–8732.

Williams, Richard. (Analysis of his Evidence.)—Is a first-class pilot of Liverpool, 13025—— Explanation of the circumstances under which Mr. Beckett and witness were appointed by the Liverpool pilots to give evidence against the Bill, 13026–13045—— Information as to the views expressed by the pilots generally in opposition to the Bill; meetings on the subject adverted to, 13035–13055. 13086–13089.

Examination upon the question whether the pilots who are not boat-owners do not feel it a grievance in having to contribute to the boats, and whether they are not therefore favourable to a Bill as tending to break up the boat-owning system, 13056–13098.

Wood, William. (Analysis of his Evidence.)—Is a free waterman of the Thames, and has for years been engaged in pilotage above Gravesend, but is not eligible for a Trinity House license, 12424–12431——Large number of free watermen disqualified for a license through not having been twelve months at sea, or through being over thirty-five years of age, 12431, 12432. 12526, 12527——Varying earnings of free watermen as pilots, many not making more than 50 *l.* a year, 12433–12435. 12533, 12534——Information as to the liability of witness to be superseded on board by a Trinity House pilot; grounds for complaint on this score, 12436 *et seq.*

Statement as to there being as many accidents where licensed pilots as where free watermen are employed, 12448–12456. 12474, 12475——Desire of the watermen to be allowed to retain the pilotage of coasters, colliers, and ships from the Baltic without undue interference on the part of the licensed men; apprehension as to the effect of the Bill in this respect, 12457–12497——Non-objection to others besides free watermen having the privilege to pilot, if properly qualified; large number of watermen adverted to hereon, 12498–12506. 12516–12523.

Qualifications of the watermen pilots adverted to; witness would not object to the test of an examination, 12507–12515. 12524, 12525——Very low rates of the watermen as compared with those of the licensed pilots; regulation of the charges in the former case by the owners and captains, 12528–12530. 12533, 12534——Expectation that under an entirely free system the licensed men would continue to be employed by the same ships as at present, 12531, 12532.

Y.

Yarmouth Roads. Reduction by the Trinity House of the pilotage in the Yarmouth Roads to a nominal sum, *Farrer* 113——Steps taken by the Trinity House in the matter of the gateway pilotage going through Yarmouth Roads, *Sir F. Arrow* 1414.

SPECIAL

REPORT

FROM THE

SELECT COMMITTEE

ON THE

THAMES NAVIGATION BILL;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

MINUTES OF EVIDENCE,

AND APPENDIX.

Ordered, by The House of Commons, *to be Printed,*
30 *May* 1870.

Tuesday, 15*th March*, 1870.

Ordered, That the Thames Navigation Bill be read a second time.

Ordered, That the Bill be referred to a Select Committee of Ten Members, Five to be nominated by the Committee of Selection, and Five by The House.

Ordered, That all Petitions presented during the present Session against the Bill be referred to the Committee, and such of the Petitioners as pray to be heard by themselves, their Counsel, or Agents, be heard upon their Petitions if they think fit, and Counsel heard in favour of the Bill against the said Petitions.

Ordered, That the Committee have power to send for Persons, Papers, and Records.

Tuesday, 22*nd March* 1870.

Committee nominated of—

Mr. Locke.	Mr. Ward Jackson.
Mr. Goldney.	Mr. Ayrton.
Mr. Morley.	

Ordered, That Five be the Quorum of the Committee.

Wednesday, 23*rd March* 1870.

Members added by the Committee of Selection:—

Sir Thomas Bazley.	Mr. O'Neill.
Mr. Thomas Brassey.	Mr. Hanbury-Tracy.
Mr. Meyrick.	

Friday, 27*th May* 1870.

Ordered, That leave be given to the Committee to make a Special Report.

Monday, 30*th May* 1870.

Ordered, That the Committee have power to report the Minutes of Evidence taken before them on the 30th of May to The House.

APPENDIX - - - - - - - - - - - - - p. 17

SPECIAL REPORT.

THE SELECT COMMITTEE to whom the THAMES NAVIGATION BILL was referred;——HAVE agreed to the following SPECIAL REPORT:—

YOUR Committee having had before them an Act passed in 1855, "An Act "for the better Local Management of the Metropolis, in which the Metropolitan "Board of Works is directed to make such Sewers and Works as they may "think necessary for preventing all or any of the Sewage within the Metropolis "from flowing or passing into the River Thames in or near the Metropolis;" and the Act passed in 1858 to amend the same; also an Act passed in 1865, "For reclaiming from the Sea certain Lands on and near the Eastern and "South Eastern Coast of Essex, &c., and for utilising the Sewage of North Lon-"don, &c.," specially report, that it appears, on the evidence of Sir John Thwaites, and otherwise, that the Metropolitan Board have repeatedly had under consideration the best means of utilising the sewage of the Metropolis, but that nothing effectual has yet been done, and the sewage still flows into the River Thames; your Committee recommend that immediate attention should be given to the subject, in order that the sewage of the Metropolis should be utilised as far as practicable; and in the meantime, until this can be accomplished, your Committee have deemed it expedient to approve the Bill, which they have reported to the House, for preventing any obstruction to the navigation of the river from the flow of sewage from the metropolitan outfalls.

30 *May* 1870.

PROCEEDINGS OF THE COMMITTEE.

Monday, 30*th May* 1870.

MEMBERS PRESENT:

Mr. AYRTON in the Chair.

Mr. Locke.	Mr. Ward Jackson.
Mr. Brassey.	Sir Thomas Bazley.
Mr. O'Neill.	Mr. Hanbury-Tracy.
Mr. Morley.	Mr. Goldney.

Sir *John Thwaites* examined.

Room cleared.—The Committee deliberated.

SPECIAL REPORT read, as follows:—

"Your Committee having had before them an Act passed in 1855, 'An Act for the better Local Management of the Metropolis, in which the Metropolitan Board of Works is directed to make such Sewers and Works as they may think necessary for preventing all or any of the Sewage within the Metropolis from flowing or passing into the River Thames in or near the Metropolis'; and the Act passed in 1858 to amend the same; also an Act passed in 1865, 'For reclaiming from the Sea certain Lands on and near the Eastern and South Eastern Coast of Essex, &c., and for utilising the Sewage of North London, &c.,' specially report, that it appears, on the evidence of Sir John Thwaites, and otherwise, that the Metropolitan Board have repeatedly had under consideration the best means of utilising the sewage of the Metropolis, but that nothing effectual has yet been done, and the sewage still flows into the River Thames; your Committee recommend that immediate attention should be given to the subject, in order that the sewage of the Metropolis should be utilised as far as practicable; and in the meantime, until this can be accomplished, your Committee have deemed it expedient to approve the Bill, which they have reported to the House, for preventing any obstruction to the navigation of the river from the flow of sewage from the metropolitan outfalls"—and *agreed to.*

Ordered, To Report.

MINUTES OF EVIDENCE.

Monday, 30*th May* 1870.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Ward Jackson.
Sir Thomas Bazley.	Mr. Locke.
Mr. Thomas Brassey.	Mr. Morley.
Mr. Goldney.	Mr. O'Neill.
Mr. Hanbury-Tracy.	

THE RIGHT HONOURABLE ACTON SMEE AYRTON,
IN THE CHAIR.

Sir *John Thwaites*, called in; and Examined.

Sir *J. Thwaites.*
30 May 1870.

1. *Chairman.*] You are Chairman of the Metropolitan Board of Works?—Yes.

2. When was the work for the outfall of the drainage on the north side of the Thames, constructed under the Act relating to the Metropolitan Main Drainage, completed?—I think in 1864.

3. Can you explain generally the scope of that work as regards the arrangements at the outfall itself?—The general principle, of course, was to intercept the sewage at various levels in the metropolis, called the high, the middle, and the low level sewers, and to form a junction at Abbey Mills, discharging by gravitation, to the very utmost extent that we were capable, all the upper part; and, as to the lower part, when it arrived at Abbey Mills, we had to employ a mechanical lift, in order to raise it into a common channel, and discharge by gravitation at Barking.

4. How many miles does it run from the pumping station to the Barking outfall?—I should think five miles from Abbey Mills.

5. In how many channels does it run?—In three.

6. And at Barking it is poured into tanks?—It is poured into a reservoir, and then discharged at or near high water, so that it passes down 12 miles by the first tide.

7. It is allowed, is it not, to run out of the tanks from high water to low water?—Just as the tide is ebbing.

8. Then the reservoir is shut up during the flood tide?—Yes.

9. Does the sewage fill the reservoir?—Not usually, except in the case of a large quantity of storm water.

10. At present you have only two main drains emptying into Abbey Mills: the lower main drain is not complete, is it?—A very small section of what is called the low level in connection with the Thames Embankment is not yet completed. We have been delayed somewhat by the Railway Company, and that will very shortly be completed.

11. At present, in consequence of that break, all the low level sewage above the Thames Embankment goes into the Thames?—Yes; from a small area.

12. Mr. *W. Jackson.*] West of the Tower?—Yes.

13. *Chairman.*] West of Blackfriars-bridge?—Yes; but if you consider the area, you will perceive that the northern district is very much higher, and it

Sir *J. Thwaites.*
30 May 1870.

gradually falls towards the Thames; our great object was to secure as large an area as possible, of which the surface drainage should discharge by gravitation without a mechanical lift, as that is very expensive; and it is only the very small portion coming from the lower level, which, when it arrived at Abbey Mills, would be at such a depth that it could not be discharged by gravitation, but must be raised by a mechanical lift.

14. Do you know at what rate the sewage flows through the conduit to the outfall?—Perhaps two and a half miles per hour; something like that; it differs somewhat.

15. During that flow, does it carry with it everything, or is anything deposited?—It carries with it everything.

16. Is anything deposited in the main culverts?—In distinction from the old system of sewage, we have a series of catch pits in connection with the inlets from the streets, into which the detritus of the streets is washed. All our newly formed gratings and gullyholes have a pocket or catch pit; we catch as much as we can in those pockets, and lift it there, instead of its finding its way into the sewer, from which it would have to be lifted at a much increased cost.

17. Can you give us an idea of how much is taken out of all the catch pits?—I am unable to say.

18. Mr. *Ward Jackson.*] What is done with the deposit out of the catch pits?—It is carted away; it is an innocent deposit; there is no sewage mixed with it at all; it is simply the detritus from the roads washed into the gully, and then it falls into the pocket.

19. Mr. *Locke.*] Where is the catch pit; at the bottom?—In the gully at the bottom.

20. Mr. *Ward Jackson.*] What is the depth generally of the catch pits?—I should think about three feet; it depends upon the inclination. If they have to catch a large portion of detritus then they are increased in capacity.

21. *Chairman.*] Is there any solid matter deposited in the main culverts, leading from the Abbey Mills to the outfall at Barking?—I think very little.

22. Mr. *Ward Jackson.*] They are all circular pipes?—Brick culverts.

23. About 10 feet in diameter?—Yes, they vary; I think that the three are nine feet by nine feet in section.

24. *Chairman.*] Have you any record now of the quantity of sewage poured out between the tides?—I have not, but we can supply that.

25. Is a record kept?—It is returned every week in the Registrar General's Report, so that there would be no difficulty in supplying it.

26. On the southern side of the Thames, how far does the sewage go by gravitation?—On the southern side we take Brixton, Dulwich, and part of Camberwell and all the higher portions of the district by gravitation to Crossness. All the lower part connected with Bermondsey, and Southwark, and Lambeth, and Battersea, is what is called the low level, and is taken to Deptford by gravitation and then lifted into a higher tank, and has to pass off from there, and then has to be lifted again at the other end at Crossness.

27. Then it is discharged by pumping at Crossness?—It is pumped into a reservoir, and then discharged from that into the river at high water, so that it may pass 12 miles down the river at the same tide. And the reservoirs are generally of a capacity equal to the period of the tide; that is to say, when you have to lock up and not discharge, the reservoir is sufficient to hold it.

28. The reservoirs on both sides are sufficient to hold the sewage except in cases of storm?—Yes; and we have storm outlets at the upper part of the river, and immediately that the storm water masters the capacity of our tanks, then we let it out into the Thames at different parts, because it would be physically impossible to form channels to carry off the whole of the rain fall.

29. In the same way there is a registration of the discharge of sewage at Crossness, I suppose?—Yes.

30. When first, after the completion of the northern outfall, did the Metropolitan Board consider the expediency of utilising the sewage that was flowing by that outfall into the Thames?—Long prior to the completion of our main drainage the attention of the Board was directed to the utilisation of the sewage; not on the principle of saving the river from pollution, because we never dreamt then, nor do we dream now, that any evil consequences would arise from the discharge of the sewage, first because the sewage itself is mixed with

Sir *J. Thwaites.*

30 May 1870.

with 94 or 95 per cent. of water, and secondly because it is discharged into 400 times its volume, and therefore no mischief can arise. But our attention was mainly directed to it in the interests of the public ratepayers. It was alleged, and it had been alleged for years, that the sewage of the metropolis had a very great value, and probably there is no question on which more nonsense has been talked or written than the sewage question, some alleging that it has no value, which is perfectly inconsistent with the facts, and others alleging that the value of the sewage of the metropolis was something like 2,000,000 *l.* sterling per annum. I need hardly say that there is a mean between those two ideas. On the 20th of January 1860, just as we commenced, or a twelvemonth after we had commenced, the construction of the main drainage works, the Board had a Report from the Main Drainage Committee on the subject. The attention of the Board had been directed seriously to the question of the utilisation of the sewage. Of course it is not a desirable thing to discharge sewage into any river, and the Board thought first that it would be desirable that it should, if possible, be utilised on the land as a reproductive element, which in this country is so much needed; and secondly, that if it were of the value, or one-sixteenth of the value that was alleged, the public ratepayers would realise some advantage in relief of their rates; and that, having constructed these large culverts at a cost of between four and five millions, we should have some return from the application of sewage, if profitable, to land. Hence the attention of the Board was called to that subject. And I think it rather desirable to show that it was, because much has been said as to the action of the Board with regard to this matter, as if the Board were not sincerely desirous of developing that which will become ultimately a very great national question, and is now, in point of fact, because although the metropolis is happily situated on a river into which it can discharge its sewage without injury to public health, there are scores of large towns in the country that have no such advantage, and which therefore must, in some form or other, deal with their sewage. Therefore it becomes not only a large metropolitan question, but a large national question. In 1860 the Main Drainage Committee (a Committee on whom the Board conferred power to negotiate, and arrange, and carry out practically, reporting to the Board for its approval from time to time, all matters connected with the main drainage) submitted to the Board (and it was then we first commenced officially to deal with the question of the utilisation of sewage) a Report with reference to a proposal that we then had from the London Sewage Utilisation Company; and the Committee will observe, as I am passing through these Reports, reciting what the Board has done, and supplying the Committee with official documents with regard to the proposals, that the Board did, from time to time, receive a variety of proposals, most impracticable in their character, scarcely containing the outline of a proposal, but some wild scheme or other, to the effect that they were prepared by some chemical process to deal with the sewage, and to apply it to land, and to make it yield such and such a profit. Therefore our path has been somewhat perplexed for the want of definite business-like propositions for a certain rental, a certain payment to the Board in relief of the rates. There was a communication, the particulars of which I will hand in, from the London Sewage Utilisation Company, and in 1860, on the 20th June in that year, we had a Report from the Main Drainage Committee in reference to it.

31. Mr. *Ward Jackson.*] Was that before any steps were taken to remove the sewage from the Thames near the Houses of Parliament to Barking?—Yes; it was long before there was any interception at all of the sewage; we were just commencing our high level sewer at that time.

32. You had determined, in fact, on the removal at that time?—We had determined on it. You are aware that the First Commissioner of Works had a veto upon all our plans. The Act of 1855 came into operation on the 1st of January 1856. A long conference took place about that time with the First Commissioner, Sir Benjamin Hall, in fact, several conferences. We proposed three distinct plans for the main drainage of the metropolis, all of which he objected to. He ultimately called to his assistance three eminent engineers, and proposed a plan of his own, and submitted it to us. The cost of our plan was something under 4,000,000 *l.* With regard to the plan proposed by the referees, those three gentlemen appointed by Sir Benjamin Hall, we had the

Sir *J. Thwaites.*

30 May 1870.

quantities taken out and an estimate made of the cost, and it was between 10,000,000 *l.* and 11,000,000 *l.* We have since carried out an efficient system of main drainage for 4,200,000 *l.* So much for the action of a representative body, as compared with a central authority which was then alleged to be all important. The three gentlemen were Captain Galton, Mr. Simpson, and Mr. Blackwell. Independently of the enormous cost of this scheme of the referees, it involved a most objectionable feature, that is to say, for miles we literally had a river of sewage; instead of its being covered culverts, we had an open cutting of an immense width, and 10 or 12 feet deep; the sewage of the metropolis went through that culvert under every possible temperature, and, of course, decomposition, as we know, commences in about 24 hours if you have a certain temperature, and it must have poisoned the whole metropolis; and therefore that of itself, apart from the cost, would have been destructive of the system.

33. Was that culvert to take the sewage to a greater distance than Barking?—It was to take it to Higham Creek.

34. On the northern side it would be opposite Gravesend?—At Thames Haven. I ought to say that Parliament relieved us from these vetoes; we came to a dead lock, and the system was exposed, and it was manifestly clear to the public that it never could be adopted, and that this double working could never act. Therefore, in that hot summer of 1858, when the condition of the Thames was perfectly frightful in front of these Houses (in fact, the windows were obliged to be closed, and it was a very serious thing), the Government of the day, Lord Derby's Government, took it up, and the then Chancellor of the Exchequer, Mr. Disraeli, brought in a Bill repealing all these vetoes, setting the Board free, in point of fact, and in less than a month from the passing of the Act, we had completed our plan, and directed advertisements to be issued. That was in the latter part of 1858, and in 1859 the works were commenced, and in 1860 we investigated this question of the utilisation of sewage.

35. *Chairman.*] Will you go on to state what steps you took for the utilisation of sewage?—After considering the proposition of the London Sewage Utilisation Company, on the 27th of April 1860, the Board adopted a form of advertisement; and the form of advertisement was, I need hardly say, a rather important document, because, under the Act of 1858, we were bound not to commit a nuisance, and therefore it was very important that we should have such a form of advertisement that all parties tendering should tender for a scheme which could not result in creating a nuisance in any part of the district. In July of the same year tenders were sent in, four in number, namely, from the London Sewage Utilisation Company (the same company to which I have referred), Mr. John James Moore, Mr. George Shepherd, and Mr. Kirkman. These tenders were referred to the Main Drainage Committee, as was also a proposition from Mr. Thomas Ellis, which was laid before the Board on the 22nd of March 1861. The Committee reported to the Board on these several tenders, and stated that they had also had before them a tender from Messrs. Napier and Hope, for the dry weather sewage of the northern area of the metropolis, which they recommended to the favourable consideration of the Board. That was certainly the most business-like proposition that we had before us at the time. On the 10th of January 1862 the Board agreed to the principle of a concession to Messrs. Napier and Hope, provided they obtained a grant from the Crown and Parliamentary authority in the ensuing Session. On the 14th of February 1862 the attention of the Board was called, on proceeding to consider further the Report of the Committee as to the concession to Messrs. Napier and Hope, to a notice of motion given in the House of Commons by Dr. Brady, for a Select Committee to inquire into the best means of utilising the sewage of the cities and towns of England, and it was resolved that the further consideration of the Committee's Report should be adjourned until the Parliamentary Committee had reported. We felt that, as an inquiry instituted by this House, with power to call witnesses, would necessarily receive a vast amount of valuable consideration, it was wise on our part not to give up the interests of the ratepayers until we had seen what the result of that evidence was, and whether any new light would be thrown on the whole question. On the 27th of February of the following year the Board determined to issue fresh advertisements for tenders, and the form was approved by the Board, the tenders to be received on the 8th of May. Then on the 8th of May an extension of time was made. Some parties

parties complained that they had not had a sufficient time to survey the area for the application of the sewage, and they asked for an extension of time, and the Board granted it. On the 10th of July eight tenders were received from Mr. C. F. Kirkman, Mr. D. Curwood, Lord Torrington, Sir Charles Fox, and Mr. Hunt, Messrs. Napier and Hope, Dr. Thudicum, the London Sewage Utilisation Company, Mr. Thomas Ellis, Mr. J. J. Moore, and they were referred to the Main Drainage Committee for the purpose of examination. The Committee reported on the several tenders, and stated that none of them fully complied with the terms of the advertisement, and that three of them made no proposal in the nature of a tender. The tenders were ordered to be printed and sent to the vestries and district boards of the metropolis. I have a printed form of tender which I will hand in. On the 1st of December 1863, a special board was convened to consider the tenders, when they were again referred to the Committee to obtain detailed information, and to confer with the several parties, and to consider generally as to the utilisation of the sewage. On the 23rd of September 1864, the Board referred it to the Committee to arrange for an inspection by the Board of the sewage works at Croydon and Rugby; and on the 7th of October following they were instructed to arrange for an inspection of the works at Edinburgh and Carlisle. The Board felt that this question was a very large one, and that it was very desirable that we should have the best practical information; and therefore the Board did visit Croydon and Rugby, and Carlisle and Edinburgh, for the purpose of satisfying their minds as to the possibility of practically applying the sewage, and with what result it could be applied. The Committee so inspecting the several works made a Report, which I shall also hand in. On the 28th of October the Board ordered advertisements to be issued stating that they would be prepared on the 15th November following, to receive further communications as to the tenders for sewage. On the 15th of November a special board was held, and communications were presented from the vestry of St. Mary, Islington, and the Corporation of London, sending certain statements, and also the report of the Committee on the application of sewage at Rugby, Croydon, Carlisle, and Edinburgh. The Committee also presented a further report on the tenders, giving the results of interviews with the several parties, and recommending the scheme of Messrs. Napier and Hope for the north side of the Thames for approval. Time was requested for considering as to the southern sewage. The Board concurred with the Committee, and approved Messrs. Napier and Hope's scheme, and referred it back for negotiations as to the precise terms. The scheme itself was scheduled to the Act obtained by the Company.

36. Mr. *Goldney.*] When was the Act obtained?—In 1865. On the 24th of February 1865, the Committee reported, and submitted draft of agreement between the Board and Messrs. Napier and Hope, which was approved, ratified, and confirmed. A copy of the Metropolis Sewage and Essex Reclamation Bill was also presented. On the 21st of April 1865, the Board approved a form of license to the Sewage Utilisation and Essex Reclamation Company for applying sewage to certain pieces of land adjoining the Northern Outfall Sewer. It was felt on the part of the Company that it was very desirable, in order to float their shares and the scheme generally, that they should have some nearer point to which they could apply the sewage, and show to the metropolitan and other public that they could apply it usefully, especially that they could apply it with advantage on part of the Maplin Sands. You are aware that they proposed to carry their culverts down to Foulness on the Essex coast, and to apply over the larger part of it such sewage as should not be taken by the farmers right and left in its passage through Essex; that it should be poured on that sand, the effluent water passing off into the sea; and an arrangement was therefore made that they should bring up a quantity of this sand, and deposit it on a portion of land near the Barking outfall at a certain depth, and apply the sewage to it, proving that all that was required for certain crops was a simple mechanical stay for the root while it was being fed by the sewage; and we had samples of wheat and other crops from it which were very successful, I must say; and we granted a license to this Company for the purpose of testing the application of sewage at that point.

37. Was it a license to use it on the land?—On our land.

38. Mr. *Ward Jackson.*] Close to the works?—Yes.

39. *Chairman.*] Did the contract finally settled with the Essex Reclamation

Sir *J. Thwaites.*
30 May 1870.

Company provide that they should deposit with you a sum of 25,000 *l.* as guarantee for the execution of their works?—It did, and in Article 14 of the agreement it was provided that, in case the concessionaries fail to complete the main culverts within four years from the passing of an Act authorising the making of the same, the said sum of 25,000 *l.* shall be absolutely forfeited to, and become the property of, the Board."

40. The contract with the Board was to complete in four years the main culverts?—Yes.

41. And in Article 15 there is a certain relief, is there not, in the contract; the Secretary of State may afford a certain amount of relief in case they fail?—Yes.

42. He may determine "at what time, and on what terms, with respect to the purchase or not by the Board, of the works, property, and undertaking of the concessionaries, such forfeiture" shall take place; so that if you did determine to forfeit he was enabled to put upon you certain obligations, if he thought fit, in the interests of the Company?—Yes.

43. The main culvert as defined by your contract was to go from your outfall to the Maplin Sands, was it not?—Yes.

44. And the Company was to raise the capital that was necessary for the undertaking, was it not?—Yes.

45. They were to have a right to use the sewage for 50 years?—Yes.

46. And they were, by way of remuneration to the metropolis, to allow you a certain proportion of the profits which they might derive from the undertaking?—Yes; there is first a reserved dividend; I think it is of 5 per cent., and then the profits are to be divided according to a schedule, the scale being fixed; Article 24 is the article which fixes the scale.

47. This concession with the Bill was referred to a Select Committee of this House?—Yes.

48. Composed partly of selected Members, and partly of Members nominated?—Yes; it was a very hard fought Bill.

49. It was referred not to an ordinary Private Bill Committee, but to a public Committee?—I think it was a Committee of 15, if I remember rightly.

50. Then the Committee reported in favour of the Bill, did they not?—Yes.

51. And then the subject came under the consideration of the House on their report?—Yes.

52. On referring to the Bill as passed by the House of Commons, and now forming the Act of 1865, we find that the concession which you had granted was altered in a material particular, was it not, because in Clause 115 it is provided that the agreement recited between the Metropolitan Board of Works and Messrs. Napier and Hope is "hereby confirmed and ratified, except so far as the provisions thereof may be varied by this Act"?—Yes.

53. And then if you go on to Clause 116 you will see, "Article 15 of the said agreement, scheduled to this Act, is hereby annulled"?—Yes.

54. "And if the main culverts are not completed in the manner defined in Article 8 of the said agreement, within the time prescribed in that behalf by this Act, then notwithstanding anything in the said agreement, or in this Act, the concession made by the said agreement shall at the expiration of that time absolutely cease and determine"?—Yes.

55. "And Article 25 of the said agreement scheduled to this Act is altered by extending the power of the Board to inspect the vouchers to the books of account therein mentioned"?—Yes.

56. So that you see that Parliament altered your contract, and it absolutely annulled the agreement at the time fixed by the Act, and deprived the proposed Company of all claims whatever upon the Board or the ratepayers if they failed?—Yes.

57. Then in another clause of the Act, Parliament fixed the period for the concession at 10 years instead of four?—Yes, that is in the subsequent Act; the 8th section of the Act of 1866.

58. But in this Act there is a period fixed; Section 100 provides that the conduits shall be completed within 10 years from the passing of this Act, and on the expiration of that period the powers by this Act, or the Acts incorporated herewith

herewith granted to the Company, shall cease to be exercised, except as to so much of the said conduits as shall then be executed?—Yes. Sir *J. Thwaites.*

30 May 1870.

59. Then, by this Act, Parliament taking the matter out of the hands of the Metropolitan Board has altered this contract, extended the time from four to 10 years, and deprived the Company of any claim on the ratepayers in case of their failure; is that so?—Yes; but throughout these agreements and discussions it was always understood that the ratepayers should be held harmless from any failure that might arise.

60. By the Act of 1865 the Secretary of State was deprived of all power even of imposing any liability under the contract upon the ratepayers?—Clearly.

61. Then, this Act being passed, was the 25,000 *l.* deposited with you?—Yes, and we now hold it.

62. How long after the Act was passed was the money deposited?—I think it was on the 22nd of December 1865 that the deposit was made by the Company.

63. By the Act of 1865 also was a period granted of 14 years to complete the works on the Maplin Sands?—I am not quite sure as to the period; the deposit was made on the 22nd of December 1865.

64. Then, you say a further Act was passed in the next year?—Yes, in 1866; the 8th section of that Act extended the period.

65. What is Section 8?—Section 8 is this: "The conduit shall be completed within 10 years from the passing of this Act, and on the expiration of that period the powers of this Act granted to the Company for executing the conduit or otherwise in relation thereto, shall cease to be exercised, except as to so much thereof as shall then be completed."

66. Before that Act was passed, had the Company been established for the purpose of carrying out the previous Act; and is there any recital to that effect in that Act?—Yes.

67. In 1866 the Company had been completely established for the purpose of carrying out the Act of 1865?—Yes; and had paid their deposit.

68. Then, it would seem that they wished to make some alteration in the direction of the conduit?—Yes; and to have an extension of time.

69. This Act of 1866 allowed them to change, to some extent, the direction of the main conduit to the Foulness and other Sands, with powers for irrigation; and it is recited, that it is "expedient that the Company should be authorised to make a new conduit in lieu of certain parts of the said main conduit and Foulness Conduit." That seems to have been the object of passing this Act of 1866, to make a new conduit in lieu of the parts of the old conduit?—Yes.

70. Under the first Act you had power to appoint a person to inspect the accounts of the Company, had you not?—We had.

71. Therefore you have since then had complete access to the accounts and books of the Company?—Yes, and I hold a report of our accountant in my hand.

72. First, will you tell us what the Company has done in the way of works since the Act was passed?—I believe, as far as we can gather, there is considerable mystery as to where the money has gone to, because even in the accounts it is difficult to find who has had it. Their accounts, as far as we can judge, show expenditure of something like half a million.

73. What was its capital under the Act?—Two millions, I think.

74. Have you got any prospectus which will show what the Company proposed it to be?—Yes, this is the prospectus of the Company (*handing it in*). *Vide* Appendix.

75. Have you got the original prospectus?—No, we have not; 2,100 000 *l.* was the nominal capital on the establishment of the Company.

76. And did they invite applications for shares?—I suppose they did.

77. What was the first account which they re-entered on the 10th of August 1866?—It is an account up to the 30th of June 1866. (*The same was handed in.*) *Vide* Appendix.

78. In the Act of Parliament, there was a provision, was there not, that the persons who had obtained the concession should receive from any company established such a sum as Mr. Laing should fix?—I do not remember any such provision.

Sir *J. Thwaites.*

30 May 1870.

79. Mr. *Goldney.*] Section 115 of the Act of 1865, says, "The agreement hereinbefore recited between the Metropolitan Board of Works and Messieurs Napier and Hope, and which bears date the 24th day of February 1865 (a copy of which is inserted in the Schedule C. to this Act), is hereby confirmed and ratified, except so far as the provisions thereof may be varied by this Act, and the same, with all the benefits of the sewage thereby granted, and all other rights, privileges, benefits, and emoluments conferred thereby, or in any way resulting or to accrue therefrom, is hereby transferred to the Company; and all the obligations and engagements undertaken by such agreement, or consequent upon carrying the same into effect, are also hereby transferred from the said Messieurs Napier and Hope to the Company, so as to substitute the Company in all respects for the said Messieurs Napier and Hope; and the Company shall, in respect to and in consideration of the transfer of the said contract so hereby made, enter into a contract with the said Messieurs Napier and Hope, upon such terms and conditions, as well with respect to the consideration for such transfer, as for indemnifying the said Messieurs Napier and Hope, and in all other respects, as may be agreed upon between the said Company and the said Messieurs Napier and Hope, or, in default of agreement, as shall be settled and determined by Samuel Laing, Esq., or, him failing, by some person nominated, upon the request of either of the parties, by the Board of Trade, and the Company thereupon may and shall carry into effect such contract, and be subject to all the obligations incident thereto; and the consideration, whether agreed or settled by reference as above mentioned, may be either a sum in gross, or a fixed or fluctuating annual payment, or a per-centage upon the divisible profit, or partly in one and partly in any or either of those ways, and the referee shall have power to, and if required shall, determine in which of those ways the consideration is to be made, and the Company may apply a sufficient part of their capital or revenue (as the case may be) for that purpose." Did Mr. Laing take any reference, or make any order upon that?—I am not aware that he did; it is a matter quite apart from us.

80. You mean beyond what you have learnt from the accounts which your auditor had a right of inspecting?—Yes; as far as we can gather from the accounts, although there appears to be an expenditure of half a million sterling, they do not show for structural works more than about 75,000 *l.* to 80,000 *l.*

81. *Chairman.*] What are these structural works?—The culverts, and means of taking the sewage down to Foulness, and other works of that character.

82. Part of the undertaking authorised?—Yes.

83. And including an acre of experimental land?—Yes; that is a very small affair.

84. They had an experimental farm also?—Yes; I do not think that the experimental farm is a part of the Company's undertaking.

85. Have they not constructed works to put the sewage on the experimental farm?—They have constructed very small works indeed; it is a very short distance indeed from the culvert that they have constructed them.

86. There are works in connection with the permanent works to go towards Foulness?—Yes; they commence from our main culvert; they tap it at a certain point, and proceed eastwards towards Foulness.

87. How much length of drain have they made?—I have not the particulars now; but what we complain of is this: of course, we naturally supposed that there would be certain preliminary expenses connected with obtaining the Act, and a variety of matters of that kind; still that we had a right to expect that the larger portion of the capital so raised under the Act should be applied to the purpose of conveying the sewage to the point, or as near to the point as possible; and it is a matter of grievance with us that a company should profess to undertake this with high sounding expectations, so far as their prospectus and public statements were concerned, that great profits would be realised, and that they should expend this enormous sum, and yet really and practically, expend but 70,000 *l.* or 80,000*l.* for structural works; because it re-acts upon us, for we have yet to let the southern sewage, and we have been obliged to postpone taking immediate action for letting the southern sewage, in consequence of the collapse of this company. People say, "Here is the Essex Reclamation Company, with a large capital, and they have failed to make it answer;" and that is the popular impression still existing at this moment; whereas

whereas if the 500,000 *l.*, or a reasonable proportion of that sum, had been expended on structural works, they would have got down into Essex and have been able, right and left, to have served the farmers, and we should have had a different result.

88. Mr. *Locke.*] What have they done with the money?—I will put in the report of our accountant.

89. *Chairman.*] You will observe in the original account, which was presented in 1866, the capital is entered as being taken up to the extent of 2,050,000 *l.*, and 2 *l.* only has been paid on each share of 10 *l.*, that is one-fifth only has been paid up?—The result of the examination by our accountant up to 31st March 1869 is this, "To capital paid up on 27,450 registered shares, including 5,000 shares fully paid for concession, 128,900 *l.*; on 182,550 shares not registered, 2 *l.* per share, less 30 *l.* in arrear, 365,070 *l.* To interest received, 12,131 *l.* 12 *s.* 11 *d.*; to receipts for sewage, 83 *l.* 19 *s.* 2 *d.*; to rents, 26 *l.* 6 *s.* 6 *d.*;" making 506,211 *l.* 18 *s.* 7 *d.* professed receipts.

90. What do you understand by "shares not registered"?—I do not know; I suppose it is a marketable thing that goes from hand to hand.

91. If there are 182,550 shares on which 2 *l.* only has been paid up; what is the reason why the rest of the capital has not been paid up?—That I must leave to the Company to explain. I simply give an unvarnished account of what I find in their books.

92. Mr. *Goldney.*] I see that under article 25 that you have very full power for your accountants to go into the accounts, and "to inspect and examine all the books of account of the concessionaries, and to make such copies thereof or extracts therefrom as they think fit, without payment"?—Yes.

93. Mr. *Ward Jackson.*] It would appear that up to the 30th of June 1866, the greatest amount of the capital stated to have been raised, had been expended in Parliamentary and legal expenses, engineering and surveying, and in payments on account of contract?—Yes.

94. That is brought forward in June 1867, and it is in that account that you find the 75,000 *l.* that you refer to, as paid on account of contract, &c.?—Yes; the contractor has received no more than the 70 000 *l.* or 80,000 *l.*, but I believe that he received 30,000 *l.* to give up the contract, and of course there are no structural works represented by that 30,000 *l.*

95. Mr. *Goldney.*] The result of your auditors' account, as you understand it is this, that the sum of 500,000 *l.*, in round figures, is charged as against the company, but that the expenditure for structural works does not amount to more than 77,000 *l.*?—Yes.

96. *Chairman.*] And all the rest has gone in the general incidents of a Joint Stock Company?—Which we say, if applied to legitimate purposes by the company, would have developed the principle of the utilisation of sewage greatly to our advantage.

97. Have you received any explanation why the rest of the capital of the company has not been paid up, and why the works have not gone on?—We have received no information, except the want of ability to go on further with the works, as evidenced by their desire to get rid of the contractor by paying him 35,000 *l.* to give up his contract.

98. Has your accountant been able to discover whether the general public ever subscribed any shares to this undertaking?—I think from conversation which I have had with him, that it has been mainly in the hands of a few people.

99. Mr. *Ward Jackson.*] What was the amount of the contract for the cancelling of which 35,000 *l.* was given?—£. 1,800,000.

100. Mr. *Locke.*] Is there no book with the names of all the shareholders?—I suppose that there would be a book.

101. But the Metropolitan Board of Works are entitled to examine it, are they not?—I think we are; it is quite clear that they have refused to give our accountant admission to see this particular agreement with the International Financial Society, which was a very important agreement, because it involved an expenditure of 200,000 *l.*

102. *Chairman.*] Do you know whether it is a fact that the public applied very largely for shares in this concern, and that the directors refused to allot any shares to the public?—I do not.

Sir *J. Thwaites.*

30 May 1870.

103. At present no works are being carried on by the Company?—No works except this farm.

104. And nothing is being done in fact?—Nothing is being done so far as the structural works are concerned, and we feel as a Board in very great perplexity, because Parliament has extended the period, and that stops our path at this moment, preventing the Board from taking immediate action to put an end to this agreement. The forfeiture of the 25,000 *l.* will take place in July.

105. How do you make that out?—Under the agreement.

106. Is it not at the end of 10 years, as modified by the original Act?—No, it applies to certain culverts; we are so advised by our solicitor; if we were free from these engagements we should take steps immediately to obtain other tenderers and relet the sewage, because no one can be so much interested as the representatives of the metropolis in getting rid of the sewage instead of discharging it into the river; in other words wasting it.

107. Has not Parliament tied up your hands for 10 years?—Yes.

108. There are five years to run of that period?—Yes.

109. It is competent to the company if it can resuscitate itself and find capital, to carry out its original design during the next five years?—Yes; but the evil to us is this, that we are stopped from letting our southern sewage.

110. As regards the Metropolitan Board, Parliament has tied up its hands for five years to come?—That is so; rather more than five.

111. Now, with regard to the southern outfall; what steps have been taken to utilize the sewage of the southern outfall?—In April 1865 the Board referred the general question of the utilization of the southern sewage to a Committee, and advertisements were issued inviting tenders, and we received tenders from Mr. Wason, Mr. Shepherd, Mr. Kirkman, Mr. Smith, and Mr. Thomas Ellis, which were referred to the Committee for consideration and report; the engineer was also instructed to report to the Committee on them. I have the printed report of the engineer, and those tenders also, which I will put in for the information of the Committee. On the 17th of November 1865, the Committee reported to the Board on the tenders received on the 7th of July for the southern sewage, recommending that of Mr. Ellis for approval. The Board concurred, and referred the matter back to the Committee to negociate details. On the 22nd of December of the same year, the Committee reported the deposit by the Metropolitan Sewage and Essex Reclamation Company of the sum of 25,000 *l.*, to which I have referred. On the 5th of January 1866, the Committee reported to the Board the result of the communications and interviews with Mr. Ellis as to the details of his scheme, to the effect that before Mr. Ellis could apply to Parliament it would be necessary for him to make fresh surveys and prepare other plans and estimates. This report was ordered to be printed for the consideration of the Members, and its consideration was adjourned. On the 16th of February 1866, after discussion of the Report of the Committee, the subject of the proposed concession to Mr. Ellis was referred back to the Committee. On the 26th of October 1866, the Committee reported further as the proposed concession to Mr. Ellis, to the effect that, after repeated interviews, they had no doubt that Mr. Ellis would be unable to proceed to Parliament in the next Session, and recommending the Board to advertise for fresh tenders. The Board agreed with the views of the Committee, and referred it to the Committee to prepare a form of advertisement. On the 2nd of November 1866 the Committee submitted to the Board the form of advertisement, which was approved and ordered to be inserted in the English and Scotch newspapers. I may perhaps just say that we have expended a very large sum in advertising in the English and Scotch newspapers, in order that the greatest publicity might be given to the fact that the Board were desirous of entering into a contract with parties for the utilisation of the sewage. On 1st March 1867 six tenders were received from Messrs. Smith, Kirkman, Moore, Shields, Shepherd, and Ellis. You will observe that these names are repeated from time to time, as really the only parties who submitted tenders. Many of those were in such a form that we were quite unable to deal with them; and they were not tenders from organised companies, but rather tenders from what I might call speculators, who were anxious to obtain the concession in order to sell it to any company that they might be able to make terms with. On the 8th of January 1869 we had a report

Sir *J. Thwaites.*

30 May 1870.

a report of the Committee on Tenders, to the effect that the financial embarrassments consequent on the crisis of 1866 had so adversely influenced commercial schemes, and especially such as present new and comparatively untried features, that they were of opinion that it was advisable for the Board to postpone the question of utilising the southern sewage to a future time. The Board agreed with the views generally expressed by the Committee. Things were in such a condition at that time that it was impossible to raise capital. Then on the 23rd of December 1869 a deputation from the Native Guano Company for what is the A B C process, presented a memorial stating that they would treat for a concession of the southern sewage, which was referred to the Committee. On the 7th of January 1870 the Committee reported to the Board, on a circular from the British Association (referred to them on the 26th of November 1869), requesting the Board to co-operate with them in an investigation as to the uses, &c., of sewage; and on the 28th of the same month the Committee report, in reference to the application of the Native Guano Company, that they think the Board should make an inspection of the Company's works. This was agreed to by the Board, and the Clerk was directed to obtain all the information on the subject possible, to enable the Board more especially to examine the operation of this scheme of the A B C system. We proposed to go down to Leamington or Hastings for the purpose of seeing its operation. It is alleged, as you are aware, by the company, that they have succeeded in fixing the ammonia. They reduce it to a dry powder, which, of course, very much relieves parties from the difficulty of conveying the sewage having in it so large a per-centage of water. It is the bulk of the sewage, which really lessens its value to a great extent; and if they have, as alleged, fixed the ammonia in the dry powder which they offer to the public for sale, they have accomplished a very great chemical fact, and would solve at once the question of the utilization of sewage not only in London but elsewhere, because in that case it could be so dealt with as to be removed from one part of the country to another at a comparatively small cost. But I am very doubtful about that fact that they have so fixed the ammonia. That is really the only fertilising power in the sewage; the mere raking out the heavy matter in mechanical suspension and drying it accomplishes very little, because we had at Leicester a practical experiment. They reduced it to a dry brick, and the farmers living within half-a-mile of the premises objected to take it; thousands of tons were on the premises at the time. They simply detached the heavier matter, and that which was held in solution which was the most valuable portion passed off in the water. We are very anxious to solve this question. We have sent two able chemists to examine into it, and shall have their report, and we shall see how far it is applicable to the sewage of London; and so soon as we have obtained that information we shall take steps, I have no doubt, for the disposal of the southern sewage. But while the northern sewage remains in its present condition, it does very much interfere with our hope of success. I might say, generally, that there is no question in which my colleagues feel a deeper interest than that of the application of sewage. We fondly hoped from the little paragraphs that were constantly circulating in the papers, that the sewage was of such an enormous value that we should be relieved from taxing the ratepayers of the metropolis to a very large extent, and I believe that the public mind was impressed with the same idea; but up to this time we have received no such return, and we have been obliged to tax the ratepayers for the purpose of carrying out our improvements. But so soon as we are released from these obligations which have been imposed upon us by Parliament with regard to the Essex Reclamation Company, we shall take steps to re-let the sewage. I hope when the Committee see the agreement entered into with Messrs. Hope & Napier they will consider that that agreement is marked by care and attention to the interests of the ratepayers: first we give 5 per cent. preference dividend to the shareholders of that company to enable them to raise their capital; then we mutually share, according to the Schedule, in the profits, plus the 5 per cent. thus payable to the shareholders.

112. Mr. *Ward Jackson.*] On the co-operative principle, in fact?—Partly so. And there is one point which I am rather anxious to state to the Committee. With regard to the utilization of sewage generally, of course there are two parties; there are the parties who are anxious to dispose of their sewage either for sanitary reasons without a commercial profit, or at a profit in relief of the

Sir *J. Thwaites.*
30 May 1870.

rates paid by the parties whom they represent; then there are the landed proprietors, who are a very interested body of men in this question. Take, for example, the owners of property in Essex; it will answer the purpose remarkably well of the owners of property in Essex to get the ratepayers of the metropolis into the humour to expend two or three millions of money in making large culverts, and taking manure to every man's farm; but it becomes a question of whether it is an obligation on the part of the ratepayers of large towns that they should enter into such an expenditure which would give so great a practical advantage to the owners of land. Now, I will just illustrate what I mean. Since the Chairman was good enough to intimate to me that I should be required to give evidence upon this point, I sent an officer down to Croydon for the purpose of ascertaining the value of the land to which the sewage is applied at the time when the land was first taken, its progressive value, and its present condition. I have seen the engineer this morning; he was good enough to call upon me, and he told me that they have now something like 320 or 330 acres under the irrigation process, and that they will shortly have between 400 and 500 acres under that process; that the natural value of the land in question at the time when this Company first rented the farm for the purpose of applying the sewage of Croydon to it was 30 *s.* per acre, but that as soon as the owners of the land found that they required it for the purpose of applying the sewage, the land being very well adapted for that purpose, having a natural inclination towards the river, so that they could put the sewage on field A, and it would pass on to field B, and then run off pretty clear water into the river without doing any mischief, they were unable to make terms at less than 4 *l.* per acre. At the time that they took this ground they took it for eight or nine years, and some portion of it for 14 years; there has since that period been a retaking of the whole of the ground, I suppose, for an extended term; they have taken most of the ground at 6 *l.* per acre, rising to 10 *l.* per acre, by reason of giving up an unexpired term. I suppose some little compromise was entered into between them; at all events, it gradually rises from 6 *l.* to 10 *l.* an acre, and the new land, not subject to the prior condition which reduced the price to 6 *l.* has been taken at 10 *l.*, an acre, and is now let to a company, and the thing carried on very successfully. I need hardly say that that single example is a sufficient proof that if sewage were properly applied the value of land would greatly increase. Then it becomes a query whether the ratepayers of this metropolis or the ratepayers of any particular town, should have the whole cost of the mechanical arrangements necessary for the conveyance and distribution of the sewage cast on them, the owners of land, whose property will be greatly increased in value, paying no quantum of that cost.

113. *Chairman.*] In point of fact the landowner in the neighbourhood of Croydon has appropriated to himself the whole of the profit that could be derived from the charges imposed upon the ratepayers of Croydon?—Yes.

114. Mr. *Locke.*] Whereabouts is this land situated at Croydon?—It is going into Croydon on the right, running off to the River Wandle.

115. It is very near Croydon then?—Not far from Croydon.

116. Was any portion of that building land?—I do not know.

117. Sir *T. Bazley.*] Are you aware of the agricultural results of that at Croydon?—I think that it has been very successful at Croydon.

118. What is the nature of the success?—I was informed this morning by the engineer that they have a very fine crop of potatoes. That is a department that I feel more especially interested in, because the production of rye grass is well established; there is no doubt whatever that it can be produced and in enormous quantities; but other crops have not been so successfully managed. He told me this morning that the crop of potatoes is certainly the finest crop in the county, and that is a very important fact if it be so; and they are growing beet and other things.

119. Mr. *Ward Jackson.*] All market-garden produce, I suppose?—Yes; I saw cabbages growing there very successfully, and other produce.

120. Sir *T. Bazley.*] Were there any onions?—Yes.

121. *Chairman.*] Unless the town proceeds with great caution and reserve, the effect is to cast all the expense upon the town, and to put all the profit into the pockets of the adjoining landed proprietors?—It would be so.

122. Are you aware whether it is now considered that, as a general rule, an acre

acre of land is required for every 100 inhabitants for the purpose of sewage irrigation?—Well, that is rather dependent on the mode of application. There are a variety of modes. Some put on a very large quantity, and others think that a moderate dressing is the natural course; it depends on the nature of the soil.

123. You consider it the duty of the Metropolitan Board to protect the ratepayers and the inhabitants of the metropolis from being thrown into such a position as would enable the landed proprietors of Essex to double, treble, or quadruple their rental at the expense of the ratepayers?—Clearly. First of all, we have an outfall which we allege, with great confidence, is unobjectionable. We are further watching and taking very great care for the purpose of securing the profitable application of sewage to land; and we shall therefore protect the interests of the ratepayers, and so soon as we are released from this Essex obligation we shall take other steps.

124. Is not it one of the main principles of the Essex Company that they should stand intermediately between you and the landed proprietors; that they should undertake the expense of the works, and that the landed proprietors should pay a rental for the sewage in return?—Yes.

125. And the surplus after they had done that, they proposed to distribute on land to be acquired for themselves on the sea coast, or on the Maplin Sands?—Yes; and I understood the principle of the scheme to be that they should have one large culvert cutting through the centre of Essex, and that it was the proposition of the parties to tap that culvert at various points at right angles, delivering the sewage to farmers as they might be disposed to take it, and as their principle of cropping would permit them to take it. Then they had this special advantage, that they could throw any quantity of sewage on to this sand, running off without injuring anybody. It is not a question of not using it to-day and keeping it for to-morrow; you must use it every day; you must have an outlet for it. That is the great difficulty, because there are times when you cannot apply it at all to agricultural land.

126. Therefore you must have a system of farming adapted to the irrigation of some field throughout the whole year?—Yes.

127. Mr. *Goldney.*] As regards most pasture land you might use it all the year round, might you not, where there is no question of making hay but only cutting the fodder?—If you applied it to an ordinary pasture, about the second or third year you must lose all your finer plants, and you would simply have a coarse root left. We saw a very striking example of that at Rugby; there was a very fine piece of land where the sewage had been applied, and all the best plants had gone.

128. *Chairman.*] That was an experiment made by the Government, in which they undertook to farm 300 acres of land, and destroyed the land to a large extent?—Yes, it was done by the Board of Health.

129. Mr. *Morley.*] You have spoken of a period of 10 years; in the event of this Essex Reclamation Company utterly failing and suspending its operations, I suppose they consider themselves out of the field really, do not they?—There are legal points about which it would be rather inconvenient for me to express an opinion here perhaps, but we shall take such steps as we can to get released.

130. *Chairman.*] Parliament in the abstract has passed an Act that they shall have 10 years, and subject to any legal power which you may have of cancelling or putting an end to that contract, that is the period during which your powers were suspended in favour of the Company?—Yes.

131. Mr. *T. Brassey.*] Assuming the Essex Reclamation Company to be removed from your path, do you see any reason why the Metropolitan Board of Works should not itself undertake the same kind of operation which the Essex Reclamation Company proposed to carry out?—I do not know about the same kind of operation; of course we should have to consider carefully that point, but I think it preferable as a general principle, if you wish my opinion upon that point, if you can accomplish the same object, that a commercial body should undertake that duty rather than a representative body; failing that, of course we must do the best we could.

132. Is there not some difficulty in a commercial body negociating on terms sufficiently favourable with the Metropolitan Board of Works at the present time, because though the experiments have been numerous, still there have been

Sir *J. Thwaites.*

30 May 1870.

been no corresponding results of the attempts to utilise sewage; and therefore any commercial body appearing before you would have to negociate with you on terms too favourable perhaps, in order to cover the risk of speculation?—Just now there has been an attempt to circulate ideas that it is the duty of the Metropolitan Board to assist these bodies for the purpose of utilizing the sewage, and it has been alleged, in order to strengthen that argument, that the discharge at a certain point is a nuisance, which ought to be removed; but we understand who are who; we know exactly where these paragraphs proceed from, and we know their object. Persons must not be permitted to blow hot and cold at the same time; the very parties circulating these reports are the very parties on the other hand that are holding up the application of sewage as one of the most profitable things you can find in this metropolis or elsewhere; and if it be so profitable, then why not apply it, because there is no difficulty in this country in getting men to invest capital, if they can prove that it is of the value that they allege. But it may suit parties who are desirous of getting a concession, and getting up a company, and securing the interests of that concession, to have the guarantee of a public representative body, and to involve the rates of the metropolis in a semi-commercial concern which ought never to be admitted as a principle.

133. Mr. *Locke.*] Do you think that the plan proposed to be adopted by this Essex Reclamation Company would be the best?—I thought it was a very good scheme as a whole, having the advantage of supplying sewage to the farmers in Essex, right and left, and having the advantage of an outlet, where it is applied to the sands, and thus getting rid of the large quantity which they must take.

134. Then the excess, if I may use the word, or what was over and above that which would be used along the side of the river, would be thrown on that sand?—Yes.

135. And there would be an opportunity of supplying all the farmers down the whole length of it to the sand?—Yes; if the system had been carried out there would have been that advantage.

136. There would have been an outlet from it all the way down to the Maplin Sands?—I should suppose, in the interests of the commercial association, that they would tap it at as many points as possible for the purpose of obtaining the largest amount of customers.

137. However, nothing has been done but the attempt to make one culvert?—Yes; they have been extremely industrious in spending the money.

138. And they have no money now?—I do not know, I am sure.

139. Are you aware whether there have been any calls upon their shareholders?—I am not aware.

140. In point of fact, are they not at a stand-still entirely?—Collapsed, I understand, now.

141. And have been for how long?—For many months.

142. Mr. *O'Neill.*] Might I ask you if you know what system of utilisation of sewage produces the most valuable manure; the irrigation system, such as is pursued at Croydon, or the A B C system, such as is carried on at Leamington and Hastings, supposing that both succeeded?—With regard to the A B C process, as I have already explained to the Committee, if they really have succeeded in fixing the ammonia, the fertilising property of the sewage, then undoubtedly that would be a more convenient system, because you would not be burdened with the bulk, but you could convey it from one place to another without difficulty; but I am very sceptical on that point at present.

143. You do not know whether the result produced at Hastings by the A B C system brings from 4*l.* to 5*l.* an acre?—Yes, I know that; but there is other information which I have obtained which somewhat accounts for that. It requires very close investigation before one pronounces a decided opinion.

144. I do not know whether it comes within the limits of the Committee, and whether they could have that information which qualifies the statements with regard to the various manures under the A B C system?—It is a question of mixing. When they have dried the material, if they mix sulphate of ammonia or other things of that kind with it, then they may make a valuable manure of almost anything; but if it is the result of simple sewage, then of course it answers the whole question that we have to investigate.

145. Mr. *Locke.*] Then it would be a question of expense?—Yes.

146. It

146. It would not be a fair system to take what they might sell it for now; it would not be a paying concern if they had to put that into it?—Clearly not.

147. It is only done as an experiment at the present time, and they do not tell you how much it costs?—We are having that point investigated.

148. It is suggested that there is this put into it to make the thing all right, but that without that it is a question whether it would not be all wrong?—Yes.

149. Mr. *Morley.*] When do you expect to find this process at Leamington ready for your investigation?—I think they are ready, but now we have great pressure of business upon us at present.

150. Some of us are anxious to see that; when would be the right time?—The right time would be when nobody knows anything about it, except the party going; let there be no show day, but let us see actually what is done. It ought to be watched carefully, because if there is any system of mixing, as has been hinted, then that ought to be explained, because the cost of that would of course add to mere filth, and make it a valuable manure, but if it is entirely the results of sewage, then it is an important question to ascertain its fertilising power.

151. Mr. *Ward Jackson.*] As a last resort, supposing a commercial company (which I am inclined to admit with you would be the best plan) not really to be successful in taking the sewage, would it in your mind be desirable for a town to become the purchasers of land for the purpose of utilising the sewage at a cost which would be remunerative to the ratepayers, rather than expend money in pipes alone to convey sewage to an unprofitable undertaking?—That is somewhat dependent on the fact whether the town in question has or has not an outfall. Now London happily has an outfall. If you ask me a question with regard to a provincial town, that is a different matter.

152. I speak of London; assuming that it is desirable to keep the sewage out of the River Thames as much as it can be accomplished, then would it not as a commercial matter be better for the ratepayers to spend their capital on that which would be remunerative, rather than on that which would not be remunerative?—That is assuming that we are not in the condition in which we are; that a necessity for removing the sewage from the river has been made out, which we entirely deny. You may take it for granted that at as early a period as possible when the Board can see its way to dispose of the sewage, even to give it away if necessary for a time to some parties who are prepared to apply it to land, or to dispose of it at a profit to the relief of the rates, we shall do so rather than waste it by throwing it into the river. But if you ask me the abstract question whether it would not be better for a representative corporation to go into the question of taking land, and applying sewage, merely for the purpose of getting rid of it out of the river, I say unhesitatingly, it would not.

153. The sewage as it passed into the Thames previous to 1864, was a nuisance?—It passed into the Thames here into the centre of three millions of people; it was the object of the Act to intercept it from flowing in here where it was oscillating in front of this House and at other places, and that going on at all times of the tide. We intercept it, and discharge it at high water, so that it passes down 12 miles below the point of discharge; and if we had gone lower down we should have faced the sea water, which is the worst element into which you can pass sewage; it does not break up so well in sea water as it does in fresh water.

154. It is a difficult question, and the solution of it may come from the inquiries which you are making whether there is not some good mode of applying the sewage?—We are only too anxious to solve it, and I have a conscientious belief that in a few years we shall find out means of disposing of it not to the disadvantage of the ratepayers.

155. Mr. *Goldney.*] How long is it that the discharge takes place from the outfall; for what period every tide does the discharge take place?—About an hour and three-quarters before to an hour and three-quarters after high water; perhaps two hours at the outside.

156. Do you know whether there is much difference between the character of the early part of the discharge and that of the last part?—I do not know.

157. I mean whether the deposit in the tank is there long enough to keep the heavier particles for the last portion of the discharge, or whether it all goes out in the same state as it flows in?—I should think that the rush would take it pretty fairly mixed.

Sir *J. Thwaites.*

30 May 1870.

158. That is, you do not consider that the lighter particles go off first, and the heavier particles in the last part of the discharge?—I suppose if any portion of the detritus (it cannot be very much) from the catch pits gets in, it would necessarily be the last part to be discharged. The specific gravity of sewage is such that it would not deposit unless it were held down by the detritus.

159. Therefore the detritus would be the last part discharged in the two hours?—Yes.

160. How far would the latter portion go down before it reached the returning tide?—It might be 10 miles.

161. Twelve miles would be the distance that the first part would go?—Yes.

162. Has the question been raised whether Barking is within the metropolis or not; I mean your outfall discharge?—There can be no question on that, because the landmark is fixed.

163. Has the question been raised?—We fixed on that point because it was beyond all question; there was a great deal of discussion on the matter.

164. Has the question been raised whether the existing outfall is within the limits of the metropolis or not?—I never heard it questioned yet.

165. You fixed it because you considered it certainly out of the limits?—Yes.

166. How far is it without the boundary?—A very short distance. There is a small portion of land on the Essex side, which really forms a portion of the county of Kent.

167. What distance beyond the boundary is it, do you suppose?—Very short. I am unable to say at this moment what it is.

168. It is a distance to be measured by yards?—Yes.

169. Under the original agreement the grant of the sewage was for 50 years, was it not?—Yes.

170. If they complete their works, then the 50 years would remain?—Yes.

171. But unless they complete their works within the 10 years, that concession is entirely gone?—Yes.

172. *Chairman.*] Have you taken any precaution in your examination of the works at Leamington to secure the samples, without any possibility of anybody interfering with them?—Dr. Odling and Dr. Miller have been down there for the purpose of examining, and we ought to have their report very shortly.

173. Have you taken precautions, besides sending the doctors to examine the samples, to see that the samples are what they profess to be, samples of the actual materials?—We shall take care, in going down to examine, that we have the process put into operation on the sewage pure and simple. I might state that the Rivers Pollution Commissioners have very carefully gone into the A B C process, and made a very valuable report. (*The Witness handed in Extracts from the Annual Reports of the Board on the Utilisation of the Sewage.*)

Vide Appendix.

Charles Joseph Lambert, Esq.
Joseph S. Lescher, Esq.
The Hon. Henry W. Petre.
Lachlan Mackintosh Rate, Esq.
J. W. Perry Watlington, Esq.

Second Ordinary General Meeting of Shareholders, to be held at 34, Clement's Lane, Lombard Street, E.C., on Friday, 10th August, 1866, at 2.30 p.m. precisely.

REPORT OF THE DIRECTORS.

THE directors have the pleasure to submit to the shareholders a statement of receipts and expenditure for the year ending 30th June 1866.

The directors, as was explained at the Wharncliffe Meeting, held on the 18th May, applied to Parliament for permission to make certain deviations in the line of the main culvert. The Bill has passed both Houses of Parliament, and, with the sanction of the Metropolitan Board of Works, an extension of one year has been given for the execution of the culvert.

The additional advantages sought to be obtained have consequently been secured to the company.

The directors are happy to state that the tedious and expensive works connected with the junction of the Company's sewer with the Main Outfall Sewer of the Metropolitan Board of Works, the passage across the Barking Marshes, underneath the navigable tributary to the Thames, known as the Barking Creek, the crossing of the Tilbury and Southend Railroad, and the first pumping station at Five Elms, have all been authorised, and the work is being carried forward by the contractor in a very satisfactory manner.

In order to demonstrate the truth of statements made before Parliament and elsewhere, that Maplin sand irrigated by sewage would produce luxuriant crops of grass, the directors caused upwards of 3,000 tons of sand to be brought up in barges from the Maplins, taken from a spot about one and a half miles out to sea, and spread two feet deep over an acre of land at the outfall reservoir at Barking Creek.

The plot was spread in the early part of March last, was sown with Italian rye grass on the 14th April, and was fertilised exclusively with sewage.

The first cutting was made on the 20th June, from a portion of the acre, which was again cut on the 17th July, and the grass, exhibited at the Essex Agricultural Show on that day, representing as it did only 27 days' growth, weighed at the rate of 14 tons an acre. Another portion of the sand plot, which was cut for the first time on the 7th July, weighed at the rate of 16 to 20 tons an acre.

With the further object of proving the value of sewage, the directors have leased a farm near Barking, to which an iron pipe is now being laid in advance of the main culvert, and they hope very shortly to show the Essex farmers, that by laying out a moderate portion of their land for irrigation, they would not only derive a profit from the increase in their stock (which seven or eight annual cuttings of grass will enable them to make), but they would have the opportunity highly and profitably to manure the remainder of their land worked in the ordinary manner.

Appendix.

It is hoped that the example thus set will be immediately followed by the Essex farmers as soon as the works shall have advanced sufficiently to enable the company to supply them with sewage.

In conclusion, the directors congratulate the shareholders on the growing appreciation of the value of sewage, which is proved by the number of provincial towns that are following the example of the Metropolis.

Mr. Guthrie, having retired from the board on the 15th December last, the directors, in the exercise of their power, elected Lord Gort in his place.

The directors retiring at the ensuing meeting, are—The Lord Richard Browne, Mr. James P. Currie, Mr. George Baden Crawley, Mr. Maurice Drummond, who, being eligible, offer themselves for re-election.

The retiring auditor, Mr. Harvey, offers himself for re-election.

Warren De Tabley, Chairman.

Metropolis Sewage and Essex Reclamation Company.

(Incorporated by Special Act of Parliament, 28 & 29 Vict. c. 120.)

METROPOLITAN BOARD OF WORKS.

REPORT on ACCOUNTS of the METROPOLIS SEWAGE and ESSEX RECLAMATION COMPANY.

(Ordered by the Works, &c., Committee to be printed, 5th July 1869.)

METROPOLIS SEWAGE and ESSEX RECLAMATION COMPANY.

IN obedience to the order of your Honourable Board of the 19th of March last (No. 9), to report "as to the state of the accounts of the Company, and on the references made to the late accountant on the same subject," I beg to state that I have examined the accounts of the Company, and gone through the vouchers under the more important headings since the Company's formation, and I now present a statement of the total receipts and expenditure up to the 31st of March last.

Dealing first with expenditure, I find that the total amounts expended in each year have been as follows:—

	£.	s.	d.
In 1865–66 - - - - - - - - (Including 205,000 *l.* to the International Financial Society.)	313,455	12	5
In 1866–67 - - - - - - - -	101,682	–	10
In 1867–68 - - - - - - - -	52,379	–	2
In 1868 (three quarters to 31st March 1869) -	11,899	14	2
Total - - - £.	479,416	7	7

The principal items of expenditure calling for remark in the present report are as follows:—

1. *A Payment to the International Financial Society of* 205,000 *l.*—Not having had access to the contract upon which this payment was made, I cannot state its exact conditions, but I have learned that the facts are as follows:—

The International Financial Society agreed to float the Sewage Company, finding all necessary money, and their remuneration was to consist of a commission upon the amount of Webster's contract. But, instead of the commission being paid on sums actually paid to Webster, a large portion of the total commission, viz., the sum of 205,000 *l.*, was issued to the International Financial Society in advance. Whether the fact of Webster having been paid only 113,276 *l.*, instead of 1,853,448 *l.*, as at first contemplated, affects the amount of commission payable to the International Financial Society under their agreement, I cannot, of course, say, not having been allowed a perusal of the agreement.

2. *Payments to Webster* on account of his contract for culvert and pumping stations. The contract, as stated in the Company's prospectus, was for 1,853,448 *l.*, but the total sum paid has only amounted to 113,276 *l.*, and this sum includes 35,650 *l.* paid in April 1868, when the contract was cancelled. The amounts paid in each quarter were as follows:—

	£.	s.	d.
Quarter, 30th September 1866 - - -	22,000	–	–
„ 31st December „ - - -	30,000	–	–
„ 31st March - 1867 - - -	8,400	–	–
„ 30th June - „ - - -	10,640	–	–
„ 30th September „ - - -	4,200	–	–
„ 31st December „ - - -	2,200	–	–
„ 31st March - 1868 - - -	186	–	–
Payment, 23rd April 1868, on an agreement releasing both sides from the contract - -	35,650	–	–
Total - - - £.	113,276	–	

According to the last certificate of the engineer, on which the sum of 186 *l.* was paid to Mr. Webster (*see* March 1868), the value of the work done was 77,356 *l.*

3. The three next items to be mentioned are the following:—

	£.	s.	d.
Works for irrigation purposes - - -	894	7	8
Machinery - - - - - - - -	794	19	2
Fuel, Wages, &c. - - - - - -	420	7	7
Total - - - £.	2,109	14	5

Appendix.

This account began from April 1868, when Webster's contract was cancelled, and the Company executed works on their own account. The expenditure includes the cost of constructing troughs, &c., for carrying sewage, an additional pump at Barking Creek, and repairs.

4. *Engineering and Surveying.*—This item includes 3,000 *l.* to the engineers (Messrs Hemans and Bateman), reimbursed to the International Financial Society, who had advanced this sum in July 1868. The resolution of the Company closes all contracts and engagements with Messrs. Hemans and Bateman "for the present and future," on payment of this 3,000 *l.*

5. The next items, *Directors' Fees, Salaries, Rent, and Furniture,* are principally for expenditure at the central office.

6. *The Farm Account* begins in June 1866. It includes premium on taking the farm, purchase of stock, cost of building, irrigation, and drainage works.

	£.	s.	d.
In June 1866 the expenditure was - -	3,859	11	4
In the next twelve months (1866-67) the expenditure, less receipts from sale of produce, was - - - - - - - - -	12,228	13	3
	16,088	4	7
In 1867-68 the receipts exceeded the expenditure by - - £. 229 13 9			
During nine months, from March 1868, till March 1869, receipts exceeded expenditure by - 1,133 10 1			
	1,363	3	10
Net cost of Farm Account - - £.	14,725	-	9

7. The last item is for expenditure on the *Maplin Sands Experiments at Barking Creek.*

	£.	s.	d.
In 1865-66 this amounted to - - -	1,248	9	8
1866-67 „ „ - - -	269	13	6
1867-68 „ „ - - -	26	1	1
	1,544	4	3
1868-69 receipts over expenditure - -	20	9	1
Net cost of Experiments - - £.	1,523	15	2

Turning to the receipt side, I have examined the share register and register of transfers. Not having seen the agreement between the International Financial Society and the Sewage Company, I can only arrive at a general conclusion as to the extent to which the latter is in the hands of the former, but I believe it would be safe to assume that of the 128,900 *l.* received on registered shares, close upon two-thirds are in the hands of the International Financial Society, and, as the amount received on shares not registered (365,070 *l.*) was subscribed before June 1866, and has borne no interest up to the present time, and it is understood that the Financial Society agreed to find the necessary money, it may be assumed that this sum was entirely subscribed by them. It should also be stated that the *transfers* of shares have principally been *to* the International Financial Society; and, when fresh money is required, instead of a call being made on the proprietary generally, the International Society pays up instalments on some of the registered shares. Mr. R. A. Heath, chairman of the International Society, is also chairman of the Sewage Company, and three of the directors of the former are connected with the latter.

During the last nine months, as showing financially, the scale of the present operations of the Company, the receipts have been as follows:—

	£.	s.	d.
From Farm - - - - - - - -	1,133	10	1
„ Sewage - - - - - - -	54	19	2
Barking Creek - - - - - - -	20	9	1
Rents - - - - - - - - -	26	6	6
Interest - - - - - - - -	145	17	9
Payments "in full" on 1,250 shares - -	10,000	-	-
Total - - - £.	11,381	2	7

And

Appendix.

And the Expenditure—

	£.	s.	d.	£.	s.	d.
Engineers (including 3,000 *l.* to Messrs. Hemans and Bateman, on the termination of engagement)				3,105	–	–
Land	234	14	–			
Machinery	794	19	2			
Fuel	420	7	7			
Irrigation	485	5	6

Appendix.

Metropolitan Board of Works.

EXTRACTS from the Annual Reports of the Board on the Utilization of the Sewage.

REPORT, 1862.

Utilization of the Sewage.

Whilst the Board have been pressing on with all possible speed the work of intercepting drainage, they have not been unmindful of the important subject of utilizing the sewage. The subject involves many considerations of a sanitary, financial, and scientific character.

The Board have, during the latter part of the year 1861, given considerable attention to the question, and have had before them several applications for taking the sewage for extended periods.

The House of Commons, however, early in February of the present year, having appointed a Committee to inquire—

> "Into the best means of utilizing the Sewage of the Cities and Towns of England, with a view to the reduction of Local Taxation, and the benefit of Agriculture."

The Board determined to defer the further consideration of the subject until that Committee should present their Report.

The Committee have met on many occasions, and, at the date of this Report, had not concluded their labours.

REPORT, 1862-63.

Utilization of the Sewage.

Among the more important questions which have received the attention of the Board, has been that of the application of the sewage to agricultural purposes. The subject, however, is one not of easy solution, and involves many difficulties which do not appear on a mere cursory glance. The vast quantity of sewage to be dealt with; the adoption of any scheme combining proper safeguards to the public health, and the prevention of any depreciation of property, combined with a prospect of adequate remuneration to the promoters, and of ultimate revenue to the metropolitan ratepayers, are amongst those considerations which the Board have to deal with; and, it may also be mentioned that, beyond the ordinary legal remedies given by the general law, the Act authorising the construction of the main drainage works, contains provisions giving to the Secretary of State stringent summary powers, in the event of nuisance arising.

In the Report of last year, reference was made to the proceedings of a Committee of the House of Commons on the subject, then sitting. That Committee was appointed to inquire "into the best means of utilising the Sewage of the Cities and Towns of England, with a view to the reduction of Local Taxation and the benefit of Agriculture," and, in the autumn of last year, they issued their Report. The conclusions arrived at by the Committee were—

> "That it appears, from the evidence laid before them, that the value of the sewage of the cities and towns varies greatly, according to the extent to which the manure and other fertilising refuse of the place is discharged into, and mixed with, the town drainage, and to the extent of the area of rainfall which flows into the town drains; but when these fertilising matters are not diluted in an unusual degree, the sewage is of great agricultural value.
>
> "That the cost of the application of this sewage depends upon the relation of the town to the surrounding agricultural lands, and to their value and quality; but when these relations are not unusually adverse to the application of the sewage, it can be applied for agricultural purposes, with profit either to the town or to the owners of the land.
>
> "That evidence has also been laid before your Committee to show that town manure can be collected before it is mixed with the drainage, and profitably applied to agricultural purposes; but this application has been too limited to admit of your Committee expressing any opinion on the subject.
>
> "Your Committee think the information now obtained will enable the authorities in each city or town to deal with the sewage in the manner most suitable to the particular circumstances of the place; but your Committee desire to add, that the municipal authorities have not at present sufficient powers to enable them to rent, or otherwise deal with, lands in their neighbourhood, for the most profitable application of the sewage in relief of local taxation."

The

The Board, in the early part of the present year, invited by advertisements in the public newspapers and scientific journals, circulating in the town and country, applications for taking the sewage, and the month of May was the period limited for their reception. Several proposals were received, but it having been found that other parties were desirous of making offers to the Board, who were precluded from doing so from want of sufficient time to enable them to prepare their plans, the Board extended the period for receiving tenders until the present month, when communications were received which are now under investigation by a committee. The information which the parties have been enabled to acquire on the question since last year, will, it is hoped, assist in the settlement of this important question, by the production of a plan for the utilisation of the sewage, whereby the productive qualities of the soil will be assisted, a remunerative profit afforded to its projector, and some pecuniary means provided for the reduction of the burthens of metropolitan taxation, thereby assisting the Board to carry out many works of public improvement urgently required in the metropolis.

REPORT, 1864.

Utilization of the Sewage.

It may be convenient here to recapitulate briefly the steps which have from time to time been taken in regard to this important subject. Soon after the commencement of the works, for the main drainage of the metropolis, the question of the profitable application of the London sewage was taken up by the Board. At that time considerable differences of opinion existed as to its value as a regenerator of the soil, and whether it could ever be made commercially profitable, and a source of revenue to the metropolitan ratepayers. On the one hand there were many persons who were persuaded that it possessed high fertilising properties, and on the other there were those who did not hesitate to express an entirely opposite view. The Board considered that it was their primary duty to settle and carry out with the utmost dispatch, consistent with the peculiar nature of their works, their plan for the purification of the Thames, for above all other considerations, that of the health of the people stands paramount; but they have never been unmindful of the question of the utilisation of the sewage, and it will have been observed in the previous part of this Report, having reference to the main drainage works, that they have been designed so as to carry the sewage into the country, to such points on the Thames as will prevent its becoming a source of annoyance to a large population, and which if need be, facilitate its application to agricultural purposes. The question of its utilisation frequently engaged the anxious consideration of the Board; and in the latter part of the year 1859 they determined to invite by public advertisements in the leading papers and scientific journals, proposals for taking the sewage. These appeared in the month of January 1860, and the period given to the parties tendering was six months. In July five proposals were opened; and subsequently two proposals from other parties were made to the Board. These several propositions were referred to the Main Drainage Committee, who carefully examined the same, and the result of their deliberations is embodied in the following extract from their Report, which was laid before the Board on the 3rd January 1862.

> "The directors of the London Sewage Utilization Company propose to take so much of the sewage from the outfall sewer on the north side of the river as they shall require and be able to employ, for a preliminary term of two years, at a rental of 5 *l.* per annum; and on the expiration of such term, if the company should desire it, that the Board should concede to them all such sewage conveyed by the outfall sewers, on both sides of the river (except the western district sewage), as they shall require, for a term of 21 years from the expiration of the preliminary term before mentioned, at a rental of 5 *l.* per annum; that at the end of such 21 years, if the company should require it, the Board shall grant them an extension of the term, at a rent or royalty to be agreed upon; and that in estimating the amount thereof, and the length of the extended term, regard shall be had in favour of the company to the originally speculative nature of the undertaking and to the outlay thereon. The company also propose to reserve to themselves the right of relinquishing the sewage at any time, on giving to the Board two years' notice to that effect.
>
> "The propositions made by Mr. John James Moore embrace the taking of the whole of the sewage of the metropolis for its application to agricultural purposes, for a term of 90 years, or other reasonable period, the Board receiving a nominal or peppercorn rent for the first 14 years, and at the expiration of that time one-half of the profits which may be derived from the sale of the sewage, after deducting 10 per cent. on account of the capital invested, or such reasonable return as may be awarded by arbitrators, to be appointed by Her Majesty's Secretary of State.
>
> "Mr. George Shepherd proposes, on behalf of a company to be formed, to take the sewage of London for agricultural purposes, for a term of 50 years in the first

Appendix.

instance, the company to be entitled, out of the revenue arising from the scale of the sewage, on all occasions, to a preference of 7½ per-cent. per annum, on the capital employed; that all proceeds, beyond such per-centage, shall be equally divided between them and the Board; and that at the expiration of the 50 years the company shall receive a preference of 5 per cent. on their capital, the surplus being divided as before.

"Mr. Charles F. Kirkman states that he has devised a plan for deodorising and utilising the sewage to its fullest extent, and will be prepared to submit to the Board a description of such plan, if an adequate remuneration be secured to him for it.

"The propositions made by Mr. Ellis on behalf of a company to be formed, are: That the company shall take the sewage of London from the reservoirs at the outfalls, and raise it by pumping to elevated positions on both sides of the river, with a view to distribute it from thence for agricultural purposes; the sewage, previously to its application to the land, being freed from offensive smell, if so required by the Board; that the Board shall be empowed at any time to have the power of suspending the further distribution of the sewage, if found likely to cause a nuisance; that in the event of accident to the machinery, or from any other cause, the company should be unable to apply the whole or any portion of the sewage to the land, they should be empowered to pump the same into the river, having previously deodorised and precipitated it; that from the revenue derived from the sale of the sewage, the company shall receive a preference dividend of 5 per cent. on the amount of their paid-up capital, the remainder of the revenue being divided between them and the board; that the management of the company be vested in a Court of Directors, one-half of such directors being elected by the shareholders, the other half being nominated by the board from their own body, and that the board shall concede the sewage to the company in perpetuity, or for such term as they have power to grant. Mr. Ellis has furnished your committee with additional explanations on the subject of his propositions, and has also laid before them estimates of the cost of the necessary works, the working expenses, and the anticipated revenue.

"The communications from the Honourable William Napier and Mr. Hope, on behalf of a company about to be formed, were for taking the dry weather sewage of the northern area of the metropolis, from which it appears that it is contemplated to reclaim certain tracts of land on the Essex coast, to the extent of about 20,000 acres, and to render them productive by irrigating them with the sewage. The cost of the works for carrying out the plan is estimated at 2,000,000 *l.*; and it is intended to incorporate a company under an Act of Parliament for the subscription of the capital, and the working of the scheme, should the necessary grants of the land and the sewage be obtained from the Crown and this Board. The propositions made to the Board on behalf of the proposed company are as follows:—

"The grant of the sewage to be conditional on the ratification by Parliament of the grant by the Crown of the land upon which it is proposed to operate.

"The right of the company to the sewage to be absolute and exclusive for a period of 50 years, commencing from such time as may be fixed upon by the board, and sanctioned by Parliament, for the completion of the works.

"The works of the Company to be capable of taking the ordinary dry-weather discharge, as estimated by the officers of the Board, at 10,000,000 cubic feet per diem.

"All net profits realised by the Company in excess of 10 per cent. on their total outlay, to be equally divided between the Company and the Board, such profits to be verified by the Company's auditors, in conjunction with an auditor to be appointed by the Board of Trade. Should the net profits in any year, within five years after the completion of the works, not be equal to 10 per cent. on the outlay, the Company to be compensated from the profits of the following years.

"In the event of the Company making sales of the land, and realising more than the original cost of their whole works, together with the stipulated 10 per cent, per annum, all profit over and above the sum thus standing at debit on the books of the Company, to be divided between the Company and the Board. All money realised by such sales of land to go to the credit of the capital account of the Company.

"On giving seven years' notice, the Board to have the right to take over at the expiration of the grant of 50 years, the whole of the Company's works and land at a valuation, such valuation in no case to be below the total original cost, as passed by the auditors above mentioned. In the event of the Board not wishing to exercise this right, a new concession of the sewage to be granted to the Company for 50 years on the same terms.

"The Board to be represented in the management of the Company by two directors, who shall have all the powers of ordinary directors, with the same fees.

"Your

"Your committee have inspected a plan showing the lines of culvert to be constructed for the conveyance of the sewage to the lands to be irrigated, and have also received verbal explanations from Mr. Hope and Mr. Hemans, the engineer of the promoters, as to the nature of the scheme, and the revenue expected to be derived therefrom.

"Your committee, in deliberating on the various propositions, have been mainly guided by the fact that two very material points were necessary to be secured; the first, the absolute necessity for guarding the Board against the consequences which would arise in the event of a nuisance being created by the application of the sewage; and the second, the desirability of adopting, if possible, a scheme which should hold out a prospect of some benefit, in a financial point of view, ultimately accruing to the ratepayers of the metropolis. These objects are, in the opinion of your committee, more likely to be effectually attained by the scheme propounded by the Honourable William Napier and Mr. Hope, than by either of the others which have been submitted to your honourable Board.

"The promoters of that undertaking have complied with the Standing Orders of Parliament, as to the deposit of plans, &c., and have made arrangements for prosecuting a Bill during the coming Session for enabling them to carry out their proposal. Your committee have conferred with your engineer on the practicability of the scheme, and the sufficiency of the estimates for the works, and he is of opinion, after examining the detailed drawings and the estimates, that the works are well designed, and the estimates fair and sufficient. Your committee have also considered the Draft Bill, prepared by the promoters. It may be proper to observe, that the question, whether the Board are empowered, under the provisions of their Acts, to enter into an arrangement of the nature now under consideration, is not free from doubt; but as the Bill will require modification, in order effectually to secure the interests of the Board, that point can be provided for during its passage through Parliament. Your committee beg to submit a copy of the Reports of your solicitor and engineer with reference to the scheme, and the Draft Bill, which Reports have, by direction of your committee, been printed, and a copy supplied to each member of your honourable Board; and they also beg to submit a copy of the Parliamentary plans deposited by the promoters.

"Your committee, being fully impressed with the great importance of the subject entrusted to their consideration, have devoted considerable time and careful attention thereto, and have arrived at the conclusion that it is desirable your honourable Board should entertain favourably the proposition for dealing with the sewage of the northern area of the metropolis, contained in the communications from the Honourable William Napier and Mr. Hope, and that they should assent to the principle of a concession of the sewage of that area for a term of 50 years; provided the requisite authority be granted by the Legislature for that purpose, and subject to the introduction of all necessary Clauses in the Bill, for the protection of the Board and of the public interests confided to them, and for ensuring the fulfilment by the Company of the obligations undertaken by them.

"It is essential, in order to enable the promoters to proceed with their arrangements, and to deposit the amount required by the Standing Orders of Parliament, that your honourable Board should, without delay, come to a decision on their propositions; and, with that view, your committee submit their Report, in order that it may be entered on the Minutes of the proceedings of the Board; and they suggest that your honourable Board should defer the further consideration thereof until their meeting on the 10th instant; and, in the meantime, each member will, no doubt, avail himself of the opportunity thus afforded of possessing himself of the information contained therein."

On the bringing up of the Report of the Committee, a proposition was made by one of the members of the Board to accept the offer of Messrs. Napier and Hope, but the Board's attention having been called to the appointment by the House of Commons, on the motion by Dr. Brady, of a Select Committee "to inquire into the best means of utilising the Sewage of the Cities and Towns of England, with a view to the reduction of Local Taxation, and the benefit of Agriculture," they felt that they would be wanting in respect to that House were they further to proceed in the matter until the Committee had concluded its labours.

The Committee laid their Report and the Evidence taken by them, before the House in the month of July 1862, and the Board considering that the evidence obtained by the Committee might afford additional information to the parties tendering, and perhaps induce others to send in proposals, determined to issue further advertisements, inviting tenders. The tenders received were opened in the month of July 1863, and it was found that, in addition to the parties who had tendered in 1860 and who renewed their tenders, three others responded to the advertisement; these were Mr. David Curwood, Lord Torrington, Sir Charles Fox, and Mr. Hunt, and Dr. Thudichum. The particulars of these communications were as follow:—

Appendix.

Dr. Thudichum proposed, by a mechanical arrangement, so to separate the house drainage, as to retain that which he considered most valuable, and he gave a sketch of his closet and drains, and tables of analysis of the constituents of fluid sewage. He estimated the cost of the works for carrying out his process at one million and a half, and the net profit at one million per annum; of this he proposed that he should receive a percentage; and that one half of the balance should be paid to the Board, and one half to the shareholders of a company to be formed for carrying out the system.

Mr. Daniel Curwood did not tender; but he suggested the separation of the solid from the liquid sewage.

Lord Torrington, Sir C. Fox, and Mr. Thornton Hunt regretted their inability to comply with the conditions of the advertisement, on the grounds of the impolicy of publicly declaring the land with which they proposed to deal, but expressed their willingness to discuss the matter with the Main Drainage Committee, and enter into a provisional arrangement for prosecuting a Bill in Parliament during the then ensuing Session.

These communications were all referred to the Main Drainage Committee, who reported the result of their examination on the 7th of August 1863.

The Report of the Committee, and all subsequent communications on the subject, were laid before a Board specially convened for the purpose on the 1st December 1863, when, after a full discussion, they resolved to confer with the several parties as to other conditions named in the advertisements, upon which their proposals are neither full nor explicit, and generally to consider as to the utilisation of sewage.

It should be stated that, since the receipt of their tender in July 1863, Messrs. Napier and Hope have modified their plans by abandoning, for the present, the reclaiming of the Dengie Flats, and now confining themselves to operations on the Maplin Sands, and to entering into arrangements with agriculturists, along the line of the culvert, for supplying them with the sewage for irrigation. They have also modified the terms on which they proposed to deal with the profits. Instead of giving to their company a preference dividend of 10 per cent., they now propose one of 7½ per cent., and that all the profit realised, above 7½ per cent. on the capital, shall belong to this Board, until it shall also obtain an equal sum with the company, after which profits are to be equally divided.

Proceeding on this reference, the Main Drainage Committee addressed themselves to the reconsideration of the whole subject. They have also had before them the several parties making the tenders, and have received from them verbal explanations of their plans. This investigation was about to be brought to a close, when Lord Robert Montagu obtained the appointment of another Select Committee of the House of Commons, "to inquire into any plans for dealing with the Sewage of the Metropolis and other large Towns, with a view to its utilisation to Agricultural purposes." The consideration of the subject was thereupon again postponed, the Board being desirous of availing themselves of such new facts and information as the larger powers of the Parliamentary Committee to take evidence might be likely to obtain.

The Select Committee has already sat for 18 days, and has taken a large amount of evidence, which it is understood will be printed in the course of a short time, when copies will be placed in the hands of each of the members of the Board, and an early day fixed for the further consideration, and, it is hoped, final discussion of the subject.

REPORT, 1864–5.

Utilization of the Sewage.

North Side of the Thames.

The important question of dealing with the sewage of the metropolis has again, during the past year, received considerable attention from the Board. In their last Annual Report they referred to the various steps they had taken since 1859, in connection with this subject, which has been beset with more than ordinary difficulties in consequence of the various opinions entertained with regard to the commercial value of the sewage as a fertiliser, and the practicability of rendering it available for agricultural purposes. The Board have, in answer to the advertisements which they have on several occasions inserted in the public journals, received tenders, each of which, with one or two exceptions, contained a proposal that they should participate in the anticipated profits arising from the sale of the sewage, with a view to reducing the taxation of the metropolis. These several tenders were referred by the Board to one of their committees for investigation; previously, however, to its completion, namely, on 27th of April 1864, a Parliamentary Committee was appointed to inquire into plans for dealing with sewage, and this circumstance induced the Board to postpone their further consideration of the subject until that Committee should have made its Report. At the date of the Board's last report, the Parliamentary Committee were still engaged in the inquiry; they subsequently made a Report, in which they intimated their opinion, from the evidence adduced before them, that it was not only possible to utilise the sewage of towns by conveying it in a liquid state through mains and pipes to the country, but that such an undertaking might be made to result in pecuniary benefit to the ratepayers of the towns whose sewage was thus utilised. Looking to the difference of opinion which existed on some of the main points connected

connected with the question, and deeming it desirable that they should obtain further information on the subject, the Board, shortly after receiving the Report of the Select Committee, determined on visiting some of the towns in which sewage had been utilised, and several of its members accordingly visited Croydon, Rugby, Edinburgh, and Carlisle. They inspected the operations in those towns for the utilisation of the sewage, and examined the lands to which the sewage was applied, and having received explanations from the authorities as to the methods adopted, and their results, the information was embodied in a Report presented to the Board by their Main Drainage Committee (*see* Appendix C. to this Report), and that committee, at the same time, reported upon the tenders which had been made by the following parties, viz.:—

Dr. Thudichum.
Mr. D. Curwood.
Lord Torrington, Sir C. Fox, and Mr. Hunt.
Mr. Jno. Jas. Moore.
The London Sewage Utilization Company.
Mr. Shepherd.
Mr. C. F. Kirkman.
Mr. T. Ellis.
Hon. W. Napier and Mr. W. Hope.

The Board, feeling that the scheme would be further tested in respect to its engineering and financial details by the inquiry before the Parliamentary Committee, assented to the principles enunciated by their committee, and recorded their opinion that the tender of Messrs. Hope and Napier for dealing with the sewage on the north side of the Thames, so far as the general scheme was concerned, offered the greatest advantages, and thereupon authorised the committee to negotiate with those gentlemen the precise terms upon which the concession of the northern sewage might be granted to them.

The proposition of Messrs. Hope and Napier is to construct works for enabling them to irrigate with sewage a portion of the Maplin Sands, on the coast of Essex, and to enter into arrangements with agriculturists along the line of their works, for the supply of sewage to them. The capital to be raised is 2,100,000 *l.*

Much consideration was given by the committee to the terms upon which the concession should be made, and after considerable negotiation with the promoters of the scheme, the committee submitted to the Board an agreement (*see* Appendix D. to this Report), which they considered the Board might, with a due regard to the interests of the public, accede to.

By this agreement the Board were to grant to Messrs. Hope and Napier (who are described as the concessionaries), and their legal representatives, the absolute and exclusive right and property in the sewage of the northern area of the metropolis, collected in the Northern Main Outfall Sewer, including the sewage deposit and residuum in the reservoirs, for a period of 50 years, to be computed from the expiration of four years after the passing of an Act for ratifying the concession.

The concessionaries were, within six calendar months after the passing of the Act, to deposit with the Board the sum of 25,000 *l.*, as a guarantee for the due execution of their works, and were to construct brick culverts of not less than nine feet six inches in diameter, for conveying the sewage to the Sands to be operated upon; and on the completion of those culverts, the Board were to return them the 25,000 *l.* In the event, however, of the concessionaries failing to complete the culverts within four years from the passing of an Act authorising their construction, the money was to be forfeited to the Board.

The agreement provided for the delivery of the sewage at a certain point in the outfall sewer, near Abbey Mills, or at such other point in that sewer as might be agreed upon by the Board and the concessionaries.

The concessionaries were to be bound to take, at all times and in all weathers, during the subsistence of the concession, so much of the sewage collected in the outfall sewer, as a culvert of the above-mentioned dimensions was capable of passing; the quantity, however, was in no case to exceed twelve million cubic feet in twenty-four hours.

The concessionaries were to have the right to use, and the property in, so much of the sewage collected in the outfall sewer as could be received and utilized by them during the four years immediately after the passing of the Act.

The Board, on giving to the concessionaries not less than five years' notice in writing, were to have the right to take over, at the end of the concession, the whole of the works and land of the concessionaries at a fair valuation by arbitration.

After deduction of the annual charge for money borrowed and rent-charges (if any) granted by the concessionaries in accordance with the agreement, and of their working and establishment expenses, the net profits of the concessionaries were to be applied and divided as follows:—

"The net profits, sufficient to pay interest not exceeding the rate of five per centum per annum on the share capital for the time being, shall belong to the concessionaries.

"The net profits, after payment of such interest at the rate of five per centum, until they would be sufficient to pay, in addition to such interest, on the average of the year, a sum at the rate of 10 per centum on the share capital aforesaid, shall be divided equally between the concessionaries and the Board.

"The net profits, after payment of such interest at the rate of five per centum, until they would be sufficient to pay, in addition to such interest, on the average of

Appendix.

the year, a sum at the rate of 20 per centum on the share capital aforesaid, shall, as to so much as exceeds 10 per centum, but does not exceed 20 per centum, be divided between the concessionaries and the Board, in the proportion of one-fourth to the concessionaries and the residue to the Board."

"Any further net profits shall be divided equally between the concessionaries and the Board."

The proportion of net profits were to be payable to the Board half-yearly, without any deduction, except in respect of income tax.

On giving to the concessionaries not less than two years' notice in writing before the determination of the first 30 years of the full term of the concession, the Board were to have the right, on the termination of those 30 years, to require a revision by arbitration, of the stipulations of the agreement, with respect to the apportionment of profits.

The money from time to time paid to or recovered by the Board in respect of net profits was to belong to them, for the benefit of the ratepayers of the metropolis; but they were not to be liable as partners with the concessionaries, by reason of any payment to or for their benefit out of the profits of the undertaking, or by reason of any other matter stipulated for in the agreement.

The agreement also provided that if at any time during the subsistence of the con cession, Her Majesty's Principal Secretary of State for the Home Department, on the application of the Board, or of the concessionaries, was of opinion, and certified that the operations of the concessionaries had failed to accomplish the end contemplated, the Board, or the concessionaries, were to be at liberty to make application to Parliament for the revision of the concession, and of the provisions of the Act.

Other stipulations were contained in the agreement, but they related for the most part to matters of detail, and such as were considered necessary for protecting the interests of the Board. The Board, after consideration, ratified this agreement; and Messrs. Hope and Napier subsequently introduced a Bill into Parliament for confirming it, and enabling a company to carry out the scheme. This Bill met with some opposition, and was very fully discussed before a Select Committee of the House of Commons, who were instructed by that House "to inquire into the most useful and profitable means of disposing of the Metropolitan Sewage on the North side of the Thames"; and the Committee having taken evidence on the subject, submitted to Parliament a Report, in which they state their conclusions, as follows:—

"From this evidence it appears to your Committee that the scheme brought before them by Messrs. Hope and Napier, and embodied in the Bill before the House, fulfils the following requisitions:—

"It provides, in the first place, for the complete removal from the River Thames of the whole of the ordinary sewage of the northern part of the metropolis, leaving only, on the occasion of heavy rains, a portion of the sewage still to flow into the river, but so small and exceptional that it may, for all practical purposes, be left out of consideration.

"It provides, in the next place, for the irrigation, by sewage in whatever quantities may be found useful, of a considerable area, particularly well adapted for such a purpose, inasmuch as the natural character of the soil is light and favourable.

"Moreover, the low level of the district enables the sewage to be applied with very little mechanical aid, and in fact mainly by gravitation. It may also be observed that an extension of this area might be made by pumping the sewage to a moderate elevation.

"Lastly, with respect to whatever portion of the sewage may not be disposed of in its course, the scheme proposes to apply it in the reclamation of a barren portion of land on the coast, in a manner recommended by experience.

"The combination of these different modes of using the sewage is of great consequence in insuring at all times and seasons the beneficial application of the whole of the sewage, with the small exception above mentioned on the occasion of heavy rains.

"Upon this evidence your Committee are of opinion that the scheme which has been submitted to them is a useful and profitable mode of applying the sewage of the northern portion of the metropolis, and they have no reason to suppose that any more useful or profitable scheme could be devised."

The Bill, which effected a slight modification in the conditions of the agreement above referred to, received the Royal Assent on the 19th June last, and the Board have reason to believe that the company will very shortly be formed, and their works for carrying the scheme be commenced and completed with all possible speed.

The Board cannot refrain from expressing their satisfaction at the successful issue of their endeavours to obtain a scheme for utilising the northern sewage, which, while it offers the advantages of avoiding the discharge of sewage into the river at Barking Creek, and renders it available for the purposes of agriculture, holds out a prospect of being the means of contributing to the financial resources of the Board, and thus alleviating the burdens of the metropolitan ratepayers.

South Side of the Thames.

The completion of the works for intercepting and conveying the sewage of the south side of the Thames to the outfall at Crossness, has induced the Board to turn their attention to the question of the means of utilizing the sewage of that portion of the metropolis, and, acting on the experience gained with regard to the northern sewage, they have caused advertisements to be inserted in the public journals inviting propositions for dealing with the sewage.

The Board, in reply to their advertisements, received, on the 7th instant, tenders from Mr. Rigby Wason, Mr. George Shepherd, Mr. C. F. Kirkman, Mr. B. Smith, and Mr. Thomas Ellis, which tenders they have referred to their Main Drainage Committee for consideration, with a request that they will report thereon at the earliest possible period; and they have also instructed the engineer to report to the Committee upon the engineering features of each scheme; and the Board entertain the hope that, in their next annual Report, they will be enabled to state that the southern sewage has also been advantageously disposed of.

REPORT, 1865-6.

Utilization of the Sewage.

North Side of the Thames.

The Board in their last Report set forth the steps they had taken in reference to this important subject. They also gave the particulars of the arrangements they had entered into with Messrs. Napier and Hope, the promoters of the scheme for the reclamation of a large portion of the Maplin Sands, near the mouth of the River Crouch on the Essex coast, and the utilization of the northern sewage in connection with that scheme.

The terms on which the concession of the northern sewage was made, were as follows:—

The Board were to grant to the concessionaries and their legal representatives the absolute and exclusive right and property in the sewage of the northern area of the metropolis, for a period of 50 years, to be computed from the expiration of four years after the passing of an Act for ratifying the concession.

The concessionaries were, within six calendar months after the passing of the Act, to deposit with the Board the sum of 25,000 *l.*, as a guarantee for the due execution of their works, and were to construct brick culverts of not less than 9 feet 6 inches in diameter, for conveying the sewage to the sands to be operated upon; and on the completion of those culverts the Board were to return them the 25,000*l.* In the event, however, of the concessionaries failing to complete the culverts within four years from the passing of an Act authorising their construction, the money was to be forfeited to the Board.

The concessionaries were to be bound to take at all times, during the existence of the concession, so much of the sewage collected in the outfall sewer as a culvert of the above-mentioned dimensions was capable of passing; the quantity, however, was in no case to exceed 12,000,000 cubic feet in 24 hours.

The concessionaries were to have the right to use, and the property in so much of the sewage collected in the outfall sewer as could be received and utilized by them during the four years immediately after the passing of the Act.

The Board, on giving not less than five years' notice, in writing, were to have the right to take over, at the end of the concession, the whole of the works and land at a fair valuation by arbitration.

After deduction of the annual charge for money borrowed, and rentcharges, and of the working and establishment expenses, the net profits of the concessionaries were to be applied and divided as follows:—

The net profits sufficient to pay interest, not exceeding the rate of 5 per centum per annum, on the share capital for the time being, to belong to the concessionaries.

The net profits, after payment of such interest at the rate of 5 per centum per annum, until they would be sufficient to pay in addition to such interest, on the average of the year, a sum at the rate of 10 per centum on the share capital aforesaid, to be equally divided between the concessionaries and the Board.

The net profits, after payment of such interest at the rate of 5 per centum per annum, until they would be sufficient to pay in addition to such interest, on the average of the year, a sum at the rate of 20 per centum on the share capital aforesaid, should, as to so much as exceeds 10 per centum, but does not exceed 20 per centum, be divided between the concessionaries and the Board, in the proportion of one-fourth to the concessionaries and the residue to the Board.

Any further net profits to be divided equally between the concessionaries and the Board.

The proportion of net profits are to be payable to the Board half-yearly, without any deduction, except in respect of income-tax.

Appendix.

On giving to the concessionaries not less than two years' notice, in writing, before the determination of the first 30 years' of the full term of the concession, the Board are to have the right, on the termination of those 30 years, to require a revision, by arbitration, of the stipulations of the agreement, with respect to the apportionment of profits.

The money from time to time paid to the Board, in respect of net profits, is to belong to them for the benefit of the ratepayers of the Metropolis; but they are not to be liable as partners with the concessionaries by reason of any payment to or for their benefit out of the profits of the undertaking, or by reason of any other matter stipulated for in the agreement.

The agreement also provides that, if at any time during the existence of the concession, Her Majesty's Principal Secretary of State for the Home Department, on the application of the Board, or of the concessionaries, is of opinion, and certifies that the operations of the concessionaries have failed to accomplish the end contemplated, the Board or the concessionaries are to be at liberty to make application to Parliament for the revision of the concession, and of the provisions of the Act.

The Board having ratified the agreement, Messrs. Napier and Hope subsequently introduced their Bill into Parliament for confirming the agreement, and the formation of a company to carry out the scheme.

The Bill, after being very fully discussed in a Select Committee of the House of Commons, was passed, and received the Royal Assent on the 19th June 1865.

The Board have now the satisfaction to report that the Company has been formed in conformity with the provisions of the Act, and that the sum of 25,000 *l.* has been deposited in accordance with the terms of the agreement, as a guarantee for the due execution of their works, and that the Company have lately entered into a contract with the contractor, Mr. Webster, for the construction of the culverts and other works, which are now in active progress.

Doubts having been expressed by Baron Liebig, and other persons of scientific eminence, as to the feasibility of Messrs. Napier and Hope's scheme, the Company have, during the past year, instituted a series of experiments to demonstrate the effect of the sewage on the sands to be reclaimed and acted upon; and to afford facilities to persons who might wish to see some practical test of its merits, have entered into an arrangement with the Board to rent from them about 10 acres of land, adjacent to the Northern Outfall Sewer at Barking, for the purpose of making a series of experiments. This land, which was in a very rough and uncultivated state, has been covered with sand taken from the area proposed to be reclaimed from the sea, to the depth of about a foot, and on this rye grass has been sown. This has been irrigated with sewage taken from the Northern Outfall Sewer, and samples of the crops grown have been sent to the office of the Board; and judging from what has already been done, the theories of Baron Liebig and others are in no way borne out, and there appears to be no reason whatever to doubt the ultimate success of the larger undertaking to be carried out by the Company on the Maplin Sands.

South Side of the Thames.

The disposal of the southern sewage had also been under the consideration of the Board prior to the date of their last Report. They felt that experience had been gained in connection with the question of the northern sewage, and they trusted that, by inviting tenders for the southern sewage, they might be enabled speedily to arrange for a concession of that area also, and thus utilize the whole of the sewage under their control for the regeneration of the soil, and rescue it for ever from the river.

The Board, as was briefly stated in their last Report, advertised for tenders for the southern sewage, and, on the 7th July 1865, they received five tenders from the undermentioned persons, viz.:—

Mr. Rigby Wason.
Mr. George Shepherd.
Mr. C. F. Kirkman.
Mr. B. Smith.
Mr. T. Ellis.

These tenders were, on the same day, referred to the Main Drainage Committee, for their consideration and report at the earliest possible period, and the engineer was instructed to report to the committee on the engineering features of each scheme.

The committee made their report to the Board on the 17th November 1865. They stated that none of the tenders received complied strictly with the terms of the advertisement, but that they were mostly suggestions unaccompanied by plans, sections, or other particulars necessary to show what works were intended, or the cost of them, and that they had found much difficulty, therefore, in judging of the relative merits and advantages of the several schemes.

The principal features of each proposal were, shortly, as follows—

Mr. Rigby Wason proposed to draw off the sewage from the Board's sewer at various points along its line by means of syphons, and to raise it to a height most convenient for distribution into the country through brick culverts 2 ft. in diameter. He considered it impossible, however, to give any details of the scheme, such as the points at which the sewage should be taken, the daily quantities to be utilized, the number of gallons to be supplied

supplied per acre, &c. He estimated the cost of the works at 163,000 *l.* and proposed to raise a capital of 500,000 *l.*; and did not propose to receive any profit from the concession, should it be granted to him, until the ratepayers and the Company had received between them 15 per cent. upon the capital of the Company.

Mr. George Shepherd proposed to pump the sewage, solid and liquid, undeodorised, at Deptford and Crossness, to various elevations, the highest being about 400 feet, so as to irrigate the high lands, for which he considers sewage is more in demand than for low lands. He proposed a system of district reservoirs about 20 in number, into which the sewage, after being pumped, would flow by gravitation through main pipes laid along the public roads, and in which it would be allowed to ferment and be stored for use, thus being always ready and in reserve, each reservoir to irrigate from four to five square miles. He also proposed to purchase from the Board the pumping-stations at Crossness and Deptford, by which, he states, he could furnish a large quantity of sewage to farmers within six months. He further proposed to collect on the route the sewage of every town near London. He estimates the south side sewage at 55,000 tons daily, and is of opinion that it may be diluted with 60 or 70 million tons of water. He proposed to make this available for from 40,000 to 50,000 acres, and thinks 300 tons per acre will be ample for each dressing. His capital would not exceed 600,000 *l.*; and he was of opinion that it would not be safe to estimate a profit of more than 10 per cent.; but he did not state how he proposed to apportion this.

Mr. Charles F. Kirkman proposed to adopt the solid, or dry system; to take the sewage from the Southern Outfall at Crossness, to deodorise it and separate the solid from the liquid, discharging the latter in an inoffensive form into the river. He described the process of separation, and proposed a contract of 21 years' duration from the completion of the works, which were to be ready for use within one year, and to be completed within two years from the date of the contract. He also proposed that the Board should receive a nominal rent for the first seven years of the term, and that a rent or royalty for the remainder of the term should be settled by the Secretary of State, or Chief Commissioner of Works. He gave no estimate of the cost, and stated that he could not tender in compliance with the terms of the advertisement, as they appear only to apply to persons interested in a liquid distribution of sewage.

Mr. Richard Smith proposed to force the sewage, by steam-power, to pumping stations at Deptford and Erith, thence through pipes to reservoirs situated respectively at Westwood, Hayes-common, Bagshot-heath, and Leatherhead-common. He intended to erect six reservoirs in all, each to contain about 220,000 gallons; to use the sewage partly by irrigation and partly by hose and jet, and to form about 300 acres of osier beds for the purpose of filtering the sewage after it had been used upon the higher levels, to absorb the remainder of its valuable properties and allow it, thus rendered clear and inoffensive, to run into the various streams. Mr. Smith estimated the cost of his scheme at about 400,000 *l.*; proposed a 60 years' lease of the sewage, the Board to receive 2½ per cent. after the shareholders have received 7½ per cent.; any further profits beyond this 10 per cent. to be equally divided between the Company and the Board.

Mr. Thomas Ellis proposed to conduct the sewage by a brick culvert, 11 feet 6 inches in diameter, from the Crossness reservoir to an outlet into the river at Higham Creek, about two miles below Gravesend, and 30 miles below London Bridge. This culvert to have a discharge into the river at the outfall, at low water, by gravitation, and to take the drainage from Erith, Dartford, and Gravesend, on its way. Near the proposed outfall a pumping station was to be erected, and the sewage forced through a culvert two miles in length, to an elevation of about 280 feet, whence it was to flow by gravitation through pipes, to the area proposed to be irrigated, which was stated to comprise about 196,000 acres, but the locality is not defined. At convenient points along the line of pipes the sewage to be distributed by hose and jet, or by open channels. Mr. Ellis also proposed that his company should take on lease about 4,000 acres of land, for the purpose of cultivation, on which to use any excess of the sewage. He assumed the quantity of sewage to be about nine and a half million cubic feet per diem, equal to about 98 million tons per annum, which would give 500 tons per acre on the area over which he proposed to utilize it. Mr. Ellis expressed his desire to accept the same terms of concession as those granted to Messrs. Napier and Hope; and estimated the cost of the scheme at about 1,600,000 *l.*, and his working expenses at 115,442 *l.*

The whole of these tenders, and the communications referred to in them, together with the engineer's report on the several schemes, were printed and circulated amongst the members of the Board, and the committee reported, as the conclusion at which they had arrived after mature deliberation and full discussion on the merits of the various tenders, that the plan of Mr. Ellis, imperfect as it was, contained the most favourable features, and was most capable of being so improved and developed as to meet the ends in view. They pointed out, however, one important modification, which it appeared to them should be especially required with regard to the outfall at Higham, where, in the judgment of the committee, it appeared to be absolutely necessary, in the event of the concession being granted to Mr. Ellis, that he should construct a reservoir, with pumping power, so that the discharge into the river might take place, as at Crossness, soon after high water.

The committee concluded by stating that, "in their opinion, the tender of Mr. Thomas Ellis, so far as his general scheme is concerned, offered the greatest advantages, but that

Appendix.

they were of opinion that he should be required to construct a reservoir at the point of discharge into the river on the same principle as that at Crossness, viz., to discharge at high water," and recommended that the subject should be referred back to them, to negotiate the precise terms on which a concession should be granted to him.

The Board, after discussion, agreed to the conclusion arrived at by the committee, and the subject was accordingly referred back to the committee, to negotiate the precise terms on which a concession should be granted to Mr. Ellis, and the decision of the Board was communicated to Mr. Ellis the same day before the rising of the Board, in order that he might be in a position, should he desire to do so, to give the requisite Parliamentary notices, a course which was in strict accordance with that taken with reference to the proposal of Messrs. Napier and Hope.

The Board felt strongly that the object in view in granting a concession of the sewage was not simply to prevent its flowing into the Thames, but that they had an important duty connected with it in relation to the ratepayers of the metropolis, namely, that they should agree to such a plan as would ensure a probable substantial return in relief of the burden of taxation. With this view they considered it essential to ascertain that the estimates which Mr. Ellis had submitted were not only sufficient, but, at the same time, not in excess of the amount which should be expended in connection with his plan. This was the more important, as there was a considerable discrepancy between the estimate furnished by Mr. Ellis and that arrived at by the engineer of the Board. It was therefore arranged that Mr. Ellis's engineer and the engineer of the Board, should confer on the differences between their respective estimates, in order that antagonistic evidence before a Parliamentary Committee might, if possible, be prevented.

The committee, in order that no time might be lost, and to enable Mr. Ellis to proceed to Parliament this Session, at once proceeded with the consideration of the subject, and had several interviews with Mr. Ellis, and received from him further information with respect to his plans and estimates. At the meeting of the committee on the 15th May 1866, Mr. Ellis stated that it had become evident to his friends that, after the financial crisis which had taken place, and according to the state of the money market, it would be impossible to raise funds for the object in view, and he suggested that either the concession should be granted to him on the condition that if he did not proceed to Parliament next Session it should be forfeited, or that the committee should adjourn the matter. After careful consideration, the committee, while deeply regretting the delay of another Session, felt that they had no alternative but to comply with the request for an adjournment, and they accordingly adjourned the consideration of the subject for two months.

Note.—On the 23rd July 1866, Mr. Ellis, accompanied by one of his friends (Colonel Kennedy), attended the committee, and stated that a leading capitalist had been consulted on the subject of raising funds for carrying out his scheme, but that they had been advised to postpone any steps in the matter till the money market was in a more favourable condition, and Mr. Ellis stated that, considering the present financial crisis, it would not be possible for him to proceed to Parliament in the present Session, and he therefore requested a further adjournment of the subject.

The committee, on consideration, consented to adjourn the subject for a further period, and the chairman informed Mr. Ellis that the committee had agreed to adjourn the matter till the first week in October next, when they would hear any statement he might be prepared to make, but that they would hold themselves free to issue fresh advertisements for tenders, when Mr. Ellis would be required to send in his proposition, with others who might be prepared with plans.

REPORT, 1866–7.

Utilization of the Sewage.

North Side of the Thames.

It was reported last year that the Board had granted a concession of the northern sewage to Messrs. Napier and Hope, as the representatives of the Metropolis Sewage and Essex Reclamation Company, formed in accordance with the provisions of the "Metropolis Sewage and Essex Reclamation Act, 1865," which authorised the construction of the necessary culverts and works for the purpose of conveying the sewage from the works of the Board at Barking. Under the powers of their Act, the Company have commenced the formation of the culvert for taking the sewage down to the Maplin Sands, and for the distribution of so much of it as may be required by the farmers of Essex, whose lands lie in proximity to the line of the culvert.

It was also mentioned in the last Report that an experimental plot of about 10 acres of land, adjacent to the Northern Outfall at Barking, had been rented from the Board by the Company, for the purpose of forming artificial beds of Maplin sand for testing the value of sewage irrigation on crops of a kind suitable for culture on the sands; their original intention being to confine the produce of the Maplin Sands to one description of crop, namely, grass, as at Craigentinny, of which they proposed to have many different varieties, some being suitable as food for cows, others for fattening cattle, and others for converting into hay. They also proposed to divide the area of the sands into dairy farms of convenient sizes, with a view to supplying the inhabitants of London with pure and wholesome milk and other dairy produce.

During

During the past year the Company have extended the range of their experiments, in order to test more fully the value of the sewage applied to land. Wheat and mangolds, as well as grass, have been tried on the sand with considerable success. A farm of about 210 acres of poor land, with a gravelly subsoil, has also been leased by the Company, with the view of showing the value of sewage applied to crops on the ordinary irrigation system. Much of the land is extremely poor, with the subsoil coming in places almost to the surface. No manure, sheepfold, or fertiliser of any kind, it is stated, was used to put the land in condition for the seed. The surface was laid out with carriers along the highest lines through which the sewage runs from the tank receiving it from the pump, either into furrows and along the ridge lines of wide lands over which it is thus made to trickle, or into channels placed as concentric or contour lines, at intervals of 10 or 15 yards on the natural slope. By the first method ordinary water-meadow irrigation is obtained, by the latter the process called catch-water irrigation.

The principal crop grown is Italian rye grass, and it is stated that, on one piece which was sown in August 1866, and which has received about 4,000 tons of sewage per acre, the crops cut were as follows:—eight tons per acre early in April, 10 tons in the middle of May, and about 12 tons in the week ending the 22nd of June. On other pieces the crops were even heavier.

It appears, also, that great success has attended the growth of mangolds, potatoes, flax, lucerne, cabbage, celery, and strawberries. One of the most promising experiments, however, is in the case of a wheat crop: two parts of a field with a poor soil have been treated with sewage; in both, the stalks of the plants stand strong and thick, with ears plentiful and large, and the area of these plots and the other parts is clearly traceable by the state of the crops. The sewage, it appears, was poured upon them three or four times during the early growth of the crops.

The Company are also making an experiment in cowkeeping, with a view to the requirements of the London market. Upwards of 250 milch cows are kept in sheds constructed on the most approved principles; the cows are fed on grass and other produce raised by means of irrigation on the farm; the daily consumption of the produce is, of course, considerable, but a large surplus of grass is left, and is supplied to horsekeepers in the metropolis.

These experiments are, no doubt, of considerable importance, as they must in the end show the real commercial value of the sewage; and, looking to what has already been done, there seems good reason to hope that success will attend this enterprise, and that eventually it will be found that sewage irrigation is not only a proper thing, but a profitable application of that which has hitherto run to waste.

South Side of the Thames.

The Board reported last year the reception of tenders, for a concession of the southern sewage, from Mr. Rigby Wason, Mr. George Shepherd, Mr. C. F. Kirkman, Mr. R. Smith, and Mr. T. Ellis, and that, after careful examination, they found that none of them complied strictly with the terms of the advertisement; that they were for the most part suggestions, unaccompanied by plans, sections, or other particulars, and that, consequently, they had experienced considerable difficulty in forming a judgment of their relative merits; but that they were of opinion that the tender of Mr. T. Ellis, so far as his general scheme was concerned, offered the greatest advantages, but that he should be required to form a reservoir at the outfall, on the principle of that at Crossness, to discharge at high water; and, with this suggestion, the tender was referred to a committee to negotiate the precise terms on which a concession should be granted to Mr. Ellis.

The committee had several interviews with Mr. Ellis and his supporters, and it was ultimately found that, owing to the state of the money market, in consequence of the financial crisis which had taken place, there was no hope of his being able to raise the necessary funds for carrying out his project, and the Board consequently determined to advertise for fresh tenders. Accordingly, on the 2nd November 1866, the Board approved a form of advertisement, which was inserted in the leading London and one of the principal Scotch papers.

On the 1st March 1867, six tenders were received by the Board from the undermentioned parties:—Mr. R. Smith, 8, Roman-terrace, Roman-road, Barnsbury Park; Mr. C. F. Kirkman, 43, Parliament-street; Mr. John James Moore. Great Meadow, Castle Town, Isle of Man; Mr. F. W. Sheilds, 3, Delahay-street, Westminster; Mr. George Shepherd, 26, Throgmorton-street; Mr. Thomas Ellis, 76, Warwick-square, Belgravia; and the Board thereupon directed the tenders to be printed, and copies sent to the members of the Board, and referred them to the Works and General Purposes Committee for consideration and report.

Mr. R. Smith's tender is a modification of that described in the last Report of the Board. He then proposed to force the sewage to pumping stations at Deptford and Erith, and thence to reservoirs, to contain about 220,000 gallons each, at West Wood, Hayes Common, Bagshot Heath, and Leatherhead Common. The sewage he proposed to use partly by means of catch-water irrigation, and partly by hose and jet. He also proposed to form osier beds for the filtration of the residue of sewage water after the irrigation of the higher levels, so that it might run into the various streams clear and inoffensive. The cost of carrying out this scheme was estimated at about 400,000 *l.*; and Mr. Smith asked for a 60 years' lease of the sewage, on the understanding that the Board

Appendix.

should receive 2½ per cent. profit after the shareholders had received 7½ per cent. Any profit beyond this 10 per cent. to be divided equally between the Company and the Board Mr. Smith now modifies his previous tender by abandoning, for the present, his mains to Bostall Heath and Hayes Common, and adding a new line from Crossness to Dagenham Saltings. Along this line it appears to be Mr. Smith's intention to utilize the storm overflow of the metropolis, and the sewage of Dartford, Gravesend, and other towns; and to distribute the dry-weather flow of the metropolis over the commons and waste lands of the western district. He stipulates for a payment of one halfpenny per ton for any water, except sewage water, admitted into the sewers. The terms he proposes are generally those of his previous tender.

Mr. Kirkman's tender is substantially the same as that sent in last year. He proposes to adopt the solid or dry system; to take the sewage from the Crossness Pumping Station, to deodorize it and separate the liquid from the solid, the liquid to be discharged through channels into the river, if necessary, and the solid matter to be removed without nuisance. He asks for a concession for 21 years, to date from the completion of the works. For the first seven years of the term a nominal rent is proposed to be reserved, subject to a rent or royalty for the remaining 14 years; such rent to be determined by the Secretary of State or First Commissioner of Works, on the basis of effective production.

Mr. Moore repeats his former proposal, which was to pay the Board one farthing per ton for pumping the sewage by their engines to the height required for its transmission to the land, which he fixes at 200 feet; thus he is of opinion that two most desirable objects would be effected, namely, the obtaining payment for the sewage at the very small outlay required for working the Board's surplus engine power, and also leaving power available on all occasions to prevent the inundation of the low grounds, so subject to flooding, on the south side of the Thames.

Mr. Sheilds proposes to utilize the sewage over the marsh lands from Crossness to the Isle of Grain, by extending the outfall sewer to Cliffe, where he proposes to lift the sewage about 30 feet, and to convey it thence by a covered channel, and an embankment along the marshes, to the extremity of the Isle of Grain. He also submits, as an alternative proposition, the substitution of iron pipes to the Isle of Grain, and thence to the outlet, and to force the sewage through these pipes, by pumping to a height of 50 feet. He further proposes to purchase about 5,000 acres of land below Gravesend, and suggests that there are about 1,200 acres of saltings, adjacent to the Isle of Grain, available for reclamation at a moderate expense, and that there are 3,000 acres in the Woolwich and Dartford Marshes, and in those below Gravesend, besides 9,000 acres in the Isle of Grain, available for irrigation, and that, if the iron pipe alternatively be adopted, this area can be extended.

Mr. Sheilds points out the advantages which his scheme presents from the low level of the lands through which his conduit would pass, and of that over which he proposes to distribute the sewage. That these lands are unoccupied by habitations, and that the proximity of the North Kent Railway offers facilities for the conveyance of produce to the metropolis. He estimates the entire cost of his scheme at 1,200,000 *l.*, including the acquisition of the 5,000 acres of land above referred to, and the drainage and preparation of the lands to be irrigated. He is of opinion that this estimate will not be materially affected by the adoption of either of the systems he has submitted.

Mr. Shepherd asks the Board to accept his previous tender, the main features of which were as follows:—

To pump the sewage undeodorized at Deptford and Crossness to various elevations, the maximum being about 400 feet, with a view to the irrigation of the high lands, for which he considers the sewage to be most in demand. He also proposes to form a system of about 20 distinct reservoirs, into which the sewage, after being pumped to the summit level, would flow by gravitation through pipes laid along the public roads. Each of these reservoirs, he calculates, would irrigate from four to five square miles. He also proposes to purchase the Board's pumping stations at Crossness and Deptford, and, further, to collect the sewage of every town near London. He estimates the quantity of the southern sewage at 55,000 tons daily, which he is of opinion may be diluted with 60 or 70 million tons of water. This he proposes to distribute over from 40,000 to 50,000 acres, at the rate of 300 tons per acre at each dressing. Mr. Shepherd limits the capital to be raised for carrying out his scheme to 600,000 *l.*, and he estimates the profit to be derived from the undertaking at 10 per cent. He does not, however, say how he proposes to apportion it.

Mr. Ellis states that his plan for the utilization of the southern sewage, submitted with his second tender, is the same as that sent into the Board last year, with the exception that an outfall reservoir, as required by the Board, is added, and that the estimates also have been consequently modified; and he tenders for a concession of the sewage for such term of years, and upon such conditions as the Board, upon consideration, shall think proper to grant.

With the addition just mentioned, Mr. Ellis's plan contemplates the construction of a brick culvert, 11 feet 6 inches in diameter, from the Crossness Reservoir to Higham Creek, about three miles below Gravesend. This would take the drainage from Erith, Dartford,

Dartford, and Gravesend, and discharge into the river at low water by gravitation. Near the outfall, a pumping station is proposed to be erected to force the sewage by means of a culvert to a summit reservoir on Shorne Hill, at an elevation of 280 feet, and at a distance of two miles from the outfall. From this reservoir the sewage would be distributed, by means of pipes laid under the roads, over an area of about 196,000 acres. It is also contemplated to distribute the sewage by hose and jet, or by open channels, at convenient points along the line of the pipes. It is further proposed to take on lease about 4,000 acres of land, to be cultivated by the Company, on which any excess of sewage might be used.

The assumed quantity of sewage to be dealt with is about nine and a half million cubic feet per diem, or 98 million tons per annum. This quantity is calculated to give 500 tons per acre for each acre of the area over which it is proposed to use it.

The estimates for the works, as revised by Mr. Ellis for his second tender, are as follows:—

	£.
Conduit - - - - - -	430,000
Engines and buildings - - - -	227,880
Pumping mains - - - - -	71,040
Summit reservoir - - - - -	125,000
Outfall reservoir and works for the manufacture of superphosphate of lime.	200,000
Distributing mains - - - -	620,568
Reserve area - - - - -	70,000
	1,744,488
Contingencies, 10 per cent. - - -	174,448
£.	1,918,936

He estimates the cost of working the engines for the lift to the summit reservoir at the rate of 7-10ths of a farthing per ton, including every expense, on which basis the cost of lifting 98,019,326 tons 300 feet vertical would be 68,614 *l.*, which is the estimated annual expense under this head.

These several tenders have been carefully examined as to their engineering details, and reported on by the engineer of the Board, and have been considered by a committee of the whole Board on several occasions.

The committee have also had an interview with one of the parties tendering, but up to the date of this Report they have been unable to come to any definite arrangement, and it is feared that, owing to the condition of the money market, and the consequent difficulty in raising funds for carrying out works by public companies, no steps will be taken in the ensuing Session.

REPORT, 1867–8.

Utilization of the Sewage.

North Side of the Thames.

In the year 1865 the Board granted to the Metropolis Sewage and Essex Reclamation Company a concession of the sewage of the northern part of the metropolis for a period of 50 years, subject to certain terms and conditions which, in the interests of the ratepayers, they considered it desirable to impose. The sewage irrigating operations at Barking, which the Board described somewhat fully in their last Report, have been continued by the Company as experiments during the past year, and they have recently sent for the Board's inspection duplicate samples of some of their crops which they have exhibited at various Agricultural Shows, and which it is stated are quite unprecedented. The sample of wheat sent to the Board was grown on land which bore a wheat crop last season, and the oats were produced by means of the unexhausted manure remaining in the land after 4,000 tons of sewage per acre had been applied to it last year, the same land having produced 71 tons of grass per acre last season. The results obtained by these operations have so far tended to confirm the previously expressed opinion of the Board with regard to the value of the sewage as a fertilizer of the soil; the question as to its value in a commercial point of view, however, is one which still remains to be solved.

One of the stipulations of the concession above referred to is that the Company shall within four years construct and complete certain brick culverts and works for conveying the sewage from the Main Drainage Outfalls to the Maplin Sands on the Essex coast for the purposes of irrigation, and they have deposited with the Board, in pursuance of the agreement, a sum of 25,000 *l.* as a guarantee for the due execution of such works. Recently the Board's attention has been directed to the circumstance that the construction of these works has been in abeyance for some time, and they have referred it to one of their committees to inquire and report as to the position of the Company and the present con-

Appendix.

dition of their works. The Board have also, under the power given by their agreement, instructed their accountant, who is one of the auditors of the Company, to investigate the Company's accounts, and to report generally as to their financial proceedings.

South Side of the Thames.

The Board in their last Report stated that propositions for utilizing the southern sewage had been made to them by the following parties:—viz., Mr. R. Smith, Mr. C. F. Kirkman, Mr. J. J. Moore, Mr. F. W. Sheilds, Mr. Geo. Shepherd, and Mr. Thos. Ellis: that they had referred these proposals to a committee for consideration and report, that the committee had on several occasions considered them, but that up to the date of that Report the committee had been unable to come to any definite arrangement, and that the Board feared that, owing to the condition of the money market, and the consequent difficulty in raising funds for carrying out works by public companies, no Parliamentary steps would be taken in the Session of 1868 for dealing with the question. This anticipation has been fulfilled, and at the present time the subject of dealing with the southern sewage remains undisposed of, but the Board are not without hope that the delay will ultimately afford the means of obtaining experience as to the most profitable mode of utilizing the sewage.*

REPORT, 1868-9.

Utilization of Sewage.

North Side of the Thames.

It will be remembered that in the year 1865 the Board granted a concession of the sewage of the northern portion of the metropolis to the Metropolis Sewage and Essex Reclamation Company, upon the understanding that the Company would construct culverts for the purpose of conveying the sewage from the outfalls at Barking Creek, for distribution on sands to be reclaimed from the sea at Maplin on the Essex coast; and that the Company deposited with the Board the sum of 25,000 *l.* as a guarantee for the due execution of the works within four years from the passing of the Act; that is to say, the works were to be completed by June in the present year; but by an amending Act which the Company obtained in 1866, the time for the completion of the works was extended till July 1870.

The Company entered into a contract for the construction of the culvert to convey the sewage to Maplin, in accordance with their agreement with the Board, and a portion of the culvert was constructed. The Board, however, regret to state that the Company have not been able to continue the works.

South Side of the Thames.

At the date of their last Report, the Board had before them proposals from certain persons who were desirous of obtaining the concession of the southern sewage. The Board then stated that active steps in the matter had been delayed in consequence of the difficulty experienced in raising funds for public companies. Those proposals were the subject of a report of a committee to the Board on the 8th January in the present year. The committee stated that many circumstances tended to prevent their recommending the acceptance of either of the proposals. Mainly, however, this result was attributed to the financial depression consequent on the crisis of 1866, which more or less affected adversely all commercial schemes, but particularly such as partook of a new or experimental character. The committee stated that they had several times adjourned the consideration of the tenders in the hope that the Board might be able to deal satisfactorily with them, but as that was not the case, and as the works of the Company who had the concession of the sewage on the north side of the Thames had been for some time in abeyance, it appeared desirable to postpone for the present the consideration of the question of the southern sewage.

The Board, however, trust that this postponement of the question will be only temporary, and that a revival of enterprise and the re-establishment of more favourable financial conditions will enable the subject to be successfully dealt with at some future period.

---

* It may be useful here to observe that the recent statutes of 1865, 1866, and 1868, for promoting the utilization of sewage by the various local authorities in towns and other places, are causing an active and practical degree of attention to be given to this important subject, which must, ere long, beneficially influence the question as it affects the metropolis.

SPECIAL
